No. 88 May 6, 2024

Pages 37059–37964

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Proclamation 10744 of May 1, 2024

National Day of Prayer, 2024

By the President of the United States of America

A Proclamation

On this National Day of Prayer, we recognize the power of prayer to strengthen our spirits, draw us together, and create hope for a better tomorrow.

The right to practice our faiths freely and openly is enshrined in the Constitution and remains at the core of our American spirit. For centuries, Americans of every religion and background have come together to lift up one another and our Nation in prayer. Throughout America's history, faith and prayer have helped fuel some of the greatest moral missions of our time—from the abolition of slavery to the fight for voting rights and the Civil Rights Movement. Many of our Nation's greatest leaders have been motivated by faith to push all of us toward a more perfect Union and to bend the arc of the moral universe toward justice.

Prayer is also deeply personal: For the First Lady and me, and so many across this Nation, prayer has helped us find solace during tough times and stay grounded in good ones. Prayer has helped the bravest among us—including our Nation's service members and their caregivers, survivors, and families—summon the courage to make great sacrifices for our democracy. It has guided the hands of medical professionals, who heal our loved ones, and steeled the nerves of our first responders, who put everything on the line to keep the rest of us safe. We will never know the full impact of prayer on our Nation or the world, but we remain confident that it makes a profound difference each and every day.

Scripture tells us to rejoice in hope, be patient in tribulation, and be constant in prayer. This year, my prayer for our Nation is that we keep faith that our best days are ahead of us and continue to believe in honesty, decency, dignity, and respect. May we see each other not as enemies but as fellow human beings, each made in the image of God and each precious in His sight. May we leave no one behind, give everyone a fair shot, and give hate no safe harbor. May we remember that nothing is beyond our capacity if we act together.

The Congress, by Public Law 100–307, as amended, has called on the President to issue each year a proclamation designating the first Thursday in May as a ''National Day of Prayer.''

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim May 2, 2024, as a National Day of Prayer. I call upon the citizens of our Nation to give thanks, in accordance with their own faith and conscience, for our many freedoms and blessings, and I invite all people of faith to join me in asking for God's continued guidance, mercy, and protection.

IN WITNESS WHEREOF, I have hereunto set my hand this first day of May, in the year of our Lord two thousand twenty-four, and of the Independence of the United States of America the two hundred and forty-eighth.

48 CFR Parts 1602 and 1609

RIN 3206–AO43

Postal Service Reform Act; Establishment of the Postal Service Health Benefits Program

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: This rule finalizes an interim final rule that established the Postal Service Health Benefits (PSHB) Program for Postal Service employees, Postal Service annuitants, and their eligible family members, pursuant to the Postal Service Reform Act of 2022. This Program will include health benefits plans available to United States Postal Service (Postal Service) employees, Postal Service annuitants, and their eligible family members starting January 1, 2025. For these individuals, eligibility for enrollment or coverage in FEHB plans based on Postal Service employment will end on December 31, 2024, and they will be able to enroll in or be covered only by PSHB plans after that time. Open Season for enrollee selection of PSHB plans will occur from November 11 through December 9, 2024. OPM will publish the negotiated PSHB plan rates and benefits for the 2025 plan year in September 2024. This rule adopts the provisions of the interim final rule with minor clarifications on the Office of Personnel Management's (OPM) implementation of the PSHB Program.

DATES: Effective July 5, 2024.

FOR FURTHER INFORMATION CONTACT: Louise Dyer Yinug, Senior Policy Analyst, at (202) 972–0913.

SUPPLEMENTARY INFORMATION:

Executive Summary

On April 6, 2023, OPM issued an interim final rule (88 FR 20383) to establish the Postal Service Health Benefits (PSHB) Program within the Federal Employees Health Benefits (FEHB) Program as required by the Postal Service Reform Act of 2022 (PSRA), Public Law 117–108. The interim final rule amended subparts A, C, and E of 5 CFR part 890 related to the FEHB Program and 48 CFR chapter 16, the OPM Federal Employees Health Benefits Acquisition Regulation (FEHBAR). The interim final rule also added a new subpart P to 5 CFR part 890 regulating the new PSHB Program within the FEHB Program.

OPM is making several changes between the interim final rule and this final rule:

- In § 890.1604, OPM is clarifying the requirements to enroll in Medicare Part B by expressly providing that the exceptions referring to events occurring ''as of January 1, 2025'' includes events that occur on January 1, 2025.
- Section 890.1604(c) is reserved in anticipation of future rulemaking.
- In § 890.1604(e), OPM is clarifying that a Postal Service annuitant or their family member who is required to be enrolled in Medicare Part B must promptly notify OPM or the Postal Service, in writing, if they choose not to enroll in or to disenroll from Medicare Part B.
- In § 890.1604, OPM is removing reference to the Postal Service as the entity to receive documentation of overseas residency to qualify for an exception to the Part B enrollment requirement.
- In § 890.1606(e), OPM is correcting a typographical error by removing the word ''the'' before ''January 1 of the next year.''

These changes do not affect OPM's estimation of the regulatory impact of the PSHB Program.

To the greatest extent possible, OPM aligned the rules pertaining to PSHB plans with the regulations governing FEHB plans. Where there was no existing rule applicable to FEHB plans, OPM implemented rules to provide the greatest flexibility for Postal Service employees, Postal Service annuitants, and their family members. An example of this is the rules pertaining to disenrollment from PSHB for Medicare eligible annuitants who are not enrolled in Medicare Part B despite the requirement to be so enrolled. OPM is defining such a circumstance as a termination of coverage, with rights to a temporary extension of coverage and conversion rights, rather than a cancellation of coverage.

The PSHB Program includes health benefits plans available to Postal Service employees, Postal Service annuitants, and their eligible family members starting January 1, 2025. For these individuals, eligibility for enrollment or coverage in FEHB plans based on Postal Service employment will end after December 31, 2024, and they will be able to enroll in or be covered only by PSHB plans starting January 1, 2025. Subject to limited exceptions, Postal Service annuitants who retire and become entitled to Medicare Part A after January 1, 2025, and their family members who are entitled to Medicare Part A will be required to enroll in Medicare Part B as a condition of eligibility to enroll in the PSHB Program.

The exceptions to the Medicare Part B enrollment requirement for PSHB enrollment described at § 890.1604 are:

- Individuals who are Postal Service annuitants on or before January 1, 2025, and who are not both entitled to Medicare Part A and enrolled in Medicare Part B on January 1, 2025;
- Individuals who, on January 1, 2025, are Postal Service employees and are aged 64 and over;
- Postal Service annuitants and family members residing outside the United States and its territories who demonstrate their residency;
- Postal Service annuitants and their family members enrolled in certain Department of Veterans Affairs (VA) health care benefits. This exemption is derived from 5 U.S.C. 8903c(e)(3)(A)(iv)(II), which refers to individuals ''enrolled in health care benefits provided by the VA under subchapter II of chapter 17 of title 38, United States Code.'' Subchapter II of chapter 17 of title 38, U.S.C. governs who is eligible for various VA health care benefits, including eligibility for VA hospital care and medical services. There is a limited class of veterans who are not required to enroll in the system of patient enrollment referred to in 38 U.S.C. 1705(a) in order to receive VA benefits described in subchapter II of chapter 17 of title 38, United States

Code. As such, this regulation is drafted to include all veterans described in 38 U.S.C. 1710, including those who are not required to enroll in the VA's system of patient enrollment referred to in 38 U.S.C. 1705(a);

- Postal Service annuitants and family members eligible for health services provided by the Indian Health Service; and
- A family member of a Postal Service annuitant who is not required to enroll in Medicare Part B, based on a statutory exception, in order to be eligible for PSHB coverage.

OPM will contract with carriers to offer two categories of health benefits plans through the broad umbrella of the FEHB Program, established under 5 U.S.C. 8901 *et seq*. OPM's authority to contract for FEHB plans and OPM's authority to contract for PSHB plans are in separate parts of the FEHB statute. First, pursuant to 5 U.S.C. 8902, OPM may contract with carriers to offer FEHB plans. Second, pursuant to 5 U.S.C. 8903c, OPM may now contract with carriers to offer PSHB plans through the PSHB Program within the FEHB Program. The broad umbrella of the FEHB Program comprises both FEHB plans and PSHB plans. OPM started the process of approving carrier participation in the PSHB Program when the interim final rule became effective on June 5, 2023.

This rule finalizes the interim final rule at 88 FR 20383 with minimal changes, as discussed further in the preamble, due to comments received during the 60-day comment period and a minor technical correction.

Background

Section 101 of the PSRA adds new section 8903c to 5 U.S.C. chapter 89 and directs OPM to establish the PSHB Program within the FEHB Program for Postal Service employees, Postal Service annuitants, and their eligible family members. OPM will administer the PSHB Program in accordance with 5 U.S.C. chapter 89, and implementing regulations (5 CFR parts 890 and 892 and 48 CFR chapter 16), including these amended regulations. In general, the provisions of the FEHB Program apply to the PSHB program; however, there are a number of provisions that are unique to the PSHB program. See 5 U.S.C. 8903c(c)(3).

The PSHB Program was authorized under the Title I Postal Service Financial Reforms provisions in the PSRA in furtherance of Congress's objective to ''improve the financial position of the Postal Service while increasing transparency and accountability of the Postal Service's operations, finances, and performance.'' [1] OPM issued an interim final rule to set forth standards to implement section 101 of the PSRA to establish the PSHB Program. The first Open Season for the PSHB Program will begin on November 11, 2024, and run through December 9, 2024, and the first contract year will begin January 2025.

Section 102 of the PSRA (''The USPS Fairness Act'') amends 5 U.S.C. 8909a, which was established in the Postal Accountability and Enhancement Act of 2006 (Pub. L. 109–435), and required the Postal Service to pre-fund health benefits costs for its retirees. Section 102 of the PSRA repeals the requirement to pay actuarially determined normal cost and amortization payments into the Postal Service Retiree Health Benefits Fund (PSRHBF) established at 5 U.S.C. 8909a, and cancels any unpaid amounts previously required to be paid under section 8909a.[2] Section 102(b) requires OPM to calculate an amount that the Postal Service will pay annually into the PSRHBF using a formula set forth at 8909a(d)(1). This amount will be calculated by June 30 of each year beginning in 2026.

A. Legislative Requirements for Establishing the PSHB Program

Section 101 of Title I of the PSRA directs OPM to ''establish the Postal Service Health Benefits Program within the Federal Employees Health Benefits Program'' under 5 U.S.C. chapter 89. The PSRA specifies that ''[e]xcept as otherwise provided . . . any [PSHB] contract . . . shall be consistent with the requirements of this chapter for contracts under section 8902 with carriers to offer health benefits plans.'' Therefore, generally, the requirements of the FEHB Program will apply to the PSHB Program, unless otherwise set forth in the PSRA or in 5 CFR part 890.

The PSHB Program is required by statute to begin in January 2025 and will be the health benefits program available to Postal Service employees, Postal Service annuitants, and their eligible family members. Further, Medicare-eligible Postal Service annuitants and their Medicare-eligible family members will be required to enroll in Medicare Part B as a condition of enrollment in PSHB. There are several statutory exceptions to the Medicare Part B enrollment requirement, including current Postal Service annuitants and their family members who are not enrolled in Part B, Postal Service employees who have reached the age of 64 and their family members, Postal Service annuitants and their family members residing abroad, and Postal Service annuitants and their family members eligible for VA health care or Indian Health Service services.

The PSRA requires OPM to direct PSHB Carriers to coordinate PSHB coverage with Medicare for enrollees and their family members covered by Medicare. This coordination must include Part D prescription drug coverage for Medicare Part D-eligible individuals. In the initial contract year, the PSRA requires OPM to contract with health insurance carriers to provide coverage with benefits and cost-sharing equivalent to FEHB plans offered by the same carrier, except to the extent needed to integrate Medicare Part D prescription drug benefits.

The PSRA requires OPM to share information with other agencies to implement the statutory requirements, including the Medicare Part B enrollment requirement and the Medicare Part B special enrollment period administered by the Social Security Administration (SSA).

B. PSHB Program Background Information

The PSRA establishes the PSHB Program within the FEHB Program. The FEHB Program was established in 1960 and provides a choice of health plans, including fee-for-service plans and health maintenance organizations, to approximately 8.2 million covered individuals including employees of the Federal Government, Federal retirees (referred to as annuitants due to their eligibility for an annuity), members of their families, former spouses, and other groups statutorily eligible as enumerated in 5 U.S.C. 8901 or set forth in other authorizing legislation. Currently, Postal Service employees, Postal Service annuitants, and their family members are also eligible for FEHB pursuant to 39 U.S.C. 1005.

Health benefits plans offered under the FEHB Program cover a wide range of health services including routine physical exams, primary and specialist provider visits, inpatient hospital care, outpatient care, surgery, laboratory and diagnostic tests, prescription drugs, and mental health services. Required benefits are listed in broad categories at

[1] H. Rept. 117–89- Postal Service Reform Act of 2021, H.Rept.117–89, 117th Cong. (2023), *https://www.congress.gov/congressional-report/117th-congress/house-report/89/1*.

[2] The requirement for pre-funding payments into the PSRHBF was established by the 2006 Postal Accountability and Enhancement Act (Pub. L. 109–435) and required the Postal Service to pre-fund future health benefits costs for its retirees through fixed payments from 2007 and 2016. Pursuant to the Postal Accountability and Enhancement Act, these fixed payments ended in 2016 and were replaced with annual normal costs payments and amortization payments for the estimated unfunded liability.

5 U.S.C. 8904 and include ''hospital benefits'', ''surgical benefits'', ''medical care and treatment'', and ''obstetrical benefits'', among others. Eligible individuals, including Postal Service employees, Postal Service annuitants, and their eligible family members, can have additional dental and vision coverage through the Federal Employees Dental and Vision Insurance Program.

OPM negotiates the benefits, coverage, and premium details of each plan in the FEHB Program with health benefits carriers each year. Each year, OPM issues guidance for health benefits carriers preparing health benefits plan proposals. The guidance for the 2025 plan year is available here: *https://www.opm.gov/healthcare-insurance/carriers/fehb/2024/2024-04.pdf.* This guidance references OPM's commitment to ensuring that the Federal Government offers competitive, comprehensive health insurance benefits and includes OPM's policy goals and initiatives for the year. The guidance outlines technical requirements for each proposal, including benefit package details such as actuarial value, benefit changes from the previous year, and the drug formulary.

Carriers offering PSHB plans, as part of the FEHB Program, will be subject to the same or similar guidance as is issued to FEHB plans. The PSRA requires that carriers offering PSHB plans will, to the greatest extent practicable, offer benefits and cost-sharing (*e.g.,* deductibles, copayments, and coinsurance) equivalent to the benefits and cost-sharing for FEHB plans for that carrier in the initial contract year.

Generally, an enrollment in a health benefits plan under the FEHB Program may be continued into retirement if the enrollee has been enrolled in a health benefits plan under the FEHB Program for five years before retiring or, if less than five years, for all periods in which they were eligible to enroll. Enrollees in an FEHB plan can also enroll in Medicare when they become eligible for Medicare regardless of whether they are retired or still actively employed. Medicare is the primary payer for annuitants who are enrolled in an FEHB plan and covered by Medicare. The rules for continuing a PSHB enrollment into retirement parallel those applicable for FEHB but the Medicare enrollment requirements differ for PSHB as discussed in the next section.

C. PSHB Program Eligibility

Under the PSRA, Postal Service employees whose Government contribution under chapter 89 is paid by the Postal Service, Postal Service annuitants whose Government contribution under chapter 89 is required to be paid under 5 U.S.C. 8906(g)(2), and family members of those Postal Service employees and Postal Service annuitants are eligible for coverage under the PSHB Program. Starting January 2025, these Postal Service employees and Postal Service annuitants may not enroll in an FEHB plan. The major difference in eligibility between PSHB plans and FEHB plans is that, generally, as a condition of eligibility in the PSHB Program, the PSRA requires that Postal Service annuitants and their eligible family members who are entitled to Medicare Part A (also referred to as ''covered Medicare individuals''), must enroll in Medicare Part B, unless an exception applies. Those exceptions are described in the Executive Summary and at § 890.1604 and are discussed more fully in the section ''Regulatory Changes in This Final Rule.''

A ''covered Medicare individual'' under section 8903c(a)(1) means an individual who is entitled to Medicare Part A, excluding an individual who is eligible to enroll under section 1818 or 1818A of the Social Security Act (42 U.S.C. 1395i–2, 1395i–2a). Individuals entitled to Medicare Part A under 1818 are individuals age 65 or older who are not otherwise entitled to premium-free Medicare Part A, typically due to not having the required work history for premium-free Part A. Individuals entitled to enroll under 1818A are disabled individuals who lose Medicare coverage solely because they have exceeded the amounts allowed for substantial gainful work.[3] These individuals are exempt from the Medicare Part B enrollment requirement that applies to most other Postal Service annuitants and their family members.

For purposes of the FEHB Program, 5 U.S.C. 8901(5) defines a ''member of family'' of employees and annuitants to include spouses and children under 22 years of age, subject to exception, including natural children, adopted children, stepchildren, and foster children. The enactment of the Affordable Care Act in 2010 required health insurers to cover dependents until age 26. At that time, OPM issued updates to its regulations codified at 5 CFR 890.302(b) and (c) to reflect that change, which defines FEHB covered family members to include such children until they reach the age of 26, subject to exception. The PSHB Program will align with 5 CFR part 890 regarding the definition of family members for all purposes, including the Medicare SEP opportunity.

The PSRA adds new definitions to chapter 89. Section 8903c(a)(9) defines a Postal Service employee as ''an employee of the Postal Service enrolled in a health benefits plan under this chapter whose Government contribution is paid by the Postal Service.'' Under section 8903c(a)(8), a Postal Service annuitant ''means an annuitant enrolled in a health benefits plan under this chapter whose Government contribution is required to be paid under section 8906(g)(2).'' Therefore, individuals not meeting the statutory definition of a Postal Service annuitant or Postal Service employee are not eligible to enroll in a PSHB plan. If such individuals are eligible for enrollment in an FEHB plan, they may enroll or continue enrollment in such plan.

The PSRA does not establish a distinct category for Postal Service compensationers, those employees who sustain workplace-related illness or injury, receive workers' compensation payments through the Department of Labor's Office of Workers' Compensation Programs (OWCP) because of that illness or injury, and who are determined by the Secretary of Labor to be unable to return to duty. Section 8901 of title 5, U.S.C. includes ''an employee who receives monthly compensation under subchapter I of chapter 81 of this title and who is determined by the Secretary of Labor to be unable to return to duty'' in the definition of annuitant.[4] However, the PSRA definition of Postal Service annuitant is limited to those who are enrolled in a health benefits plan under 5 U.S.C. chapter 89, whose Government contribution is required to be paid under section 8906(g)(2).

Section 8906(g)(2) authorizes Government contributions for health benefits for individuals who become Postal Service annuitants ''by reason of retirement'' and their survivors. These contributions are paid first by the Postal Service Retiree Health Benefits Fund with any remaining amount paid by the Postal Service. The description in 8906(g)(2) does not include Postal Service compensationers, as they have not become annuitants by reason of retirement. Postal Service compensationers are more closely aligned with the 8903c(a) definition of Postal Service employee, whose Government contribution is paid by the Postal Service.

The definition of Postal Service employee, rather than Postal Service

[3] For more information, see SSA's amounts for Substantial Gainful Activity at *https://www.ssa.gov/oact/cola/sga.html.*

[4] 5 U.S.C. 8901(3)(C).

annuitant, will include Postal Service compensationers. Postal Service compensationers will not be subject to the Medicare Part B enrollment requirement, regardless of Medicare Part A entitlement.

D. Centralized Enrollment

The FEHB Program's enrollment functions are decentralized processes that utilize independent systems at different Federal agencies. For purposes of the PSHB Program, OPM will shift certain responsibilities from the employing office to a centralized enrollment system which will be administered by OPM. The centralized enrollment system will be an electronic enrollment solution for all PSHB stakeholder groups including enrollees, the Postal Service and other employing offices, and PSHB Carriers. The centralized enrollment system will include an online portal to enter and process enrollment transactions (*e.g.,* uploading verification of eligibility), robust decision support tools, and a customer support center to assist enrollees via phone, email, or online chat. Persons who are unable to access the online portal will be able to enroll through other means such as phone, fax, or mail. The interim final rule included regulatory provisions in §§ 890.1605, 890.1606, 890.1608, and 890.1614 specifying that OPM will assume responsibility for the following health benefits actions for the PSHB Program: enrollment, changes of enrollment, correction of errors, election not to enroll, and disenrollment of enrollees and removal of family members.

Comments Received on the Interim Final Rule and OPM's Responses

OPM received a total of 71 comments on the interim final rule. Most of these were from individual Postal Service employees, Postal Service annuitants, and their family members. There were also several detailed comment letters from stakeholders including health insurers and employee organizations. In addition to comments supporting the policies in the interim final rule, OPM received comments raising questions or expressing concerns with aspects of the interim final rule, mostly from individual Postal Service employees, Postal Service annuitants, and their family members.

Many public comments expressed support for the alignment between the FEHB and PSHB Programs. Commenters expressed support for issues in the rule including the January 1—December 31 plan year for PSHB plans, OPM's approach to automatic enrollment of Postal Service employees and Postal Service annuitants who do not elect a PSHB plan during the transitional Open Season, OPM's integration of Medicare Part D prescription drug benefits for Medicare enrollees, OPM's member-centric approach allowing for an additional enrollment opportunity for Postal Service annuitants or family members who are inadvertently not enrolled in Medicare Part B, despite the requirement as a condition to maintain PSHB enrollment, and OPM's establishment of centralized enrollment through a new electronic enrollment system for PSHB.

In reviewing comments received in response to the interim final rule and feedback received, OPM determined a need to provide additional specification on several topics that were beyond the scope of the interim final rule. Accordingly, OPM will soon issue a proposed rule that further explains and expands on the implementation of the PSHB Program to provide clarity for PSHB Carriers, other agencies, and Postal Service employees, annuitants, and their family members before the Program begins enrollment for 2025. Topics OPM plans to address in more detail in the proposed rule include: reconsideration of initial decisions concerning PSHB eligibility; application of the Medicare Part B requirement and associated exceptions in specific scenarios; allocation of Reserves credits; calendar year alignment of government contribution requirements; financial reporting and actuarial calculations; premium payment prioritization from the Postal Service Retiree Health Benefits Fund; and Medicare Part D integration. A summary of the comments received during the 60-day comment period and OPM's responses follows; however, OPM notes that additional details on the topics listed above will be provided through the new rulemaking.

A. Transition From FEHB Plans to PSHB Plans

The interim final rule detailed the process by which Postal Service employees, Postal Service annuitants, and their family members will transition from FEHB plan coverage to PSHB plan coverage for plan year 2025. Medicare covered Postal Service annuitants who retire after January 1, 2025, and the Medicare covered members of family are required to enroll in Medicare Part B to remain enrolled in a PSHB plan, with limited exceptions.

Comments: OPM received several comments with concerns about the effect of the new program on Postal Service annuitants and their family members. Specifically, the commenters are concerned about two new requirements: the requirement to transition from an FEHB plan to a PSHB plan and the requirement for most Postal Service annuitants and their Medicare-covered family members to enroll in Medicare Part B to maintain enrollment in the PSHB Program. A theme of the concerns is that many Postal annuitants plan their retirement based on the benefits packages available at the time of their employment and the PSHB Program changes those plans involuntarily.

Response: Pursuant to 5 U.S.C. chapter 89, the PSHB Program must include Postal Service employees, Postal Service annuitants, and their eligible family members. The law also requires that Medicare covered Postal Service annuitants, with limited exceptions as described in the Executive Summary, enroll in Medicare Part B to maintain enrollment in the PSHB. OPM is required to implement these statutory provisions and is not able to modify these mandates by regulation. As such, OPM will not make a regulatory change in response to these comments.

Comment: A commenter asked that OPM consider creating a hardship exception allowing individuals to continue in their chosen FEHB plan after the PSHB Program begins, should that plan not be offered in PSHB. The commenter stated that some small regional plans may not be available, creating a potential loss of access to coverage under those plans due to the creation of PSHB.

Response: OPM does not have the statutory authority to allow a hardship exception as requested by the commenter. Where a small regional plan is no longer available in the PSHB Program, coverage will nonetheless always be available under one of the nationwide PSHB plans.

Comments: Several commenters requested that Postal annuitants who retired under the Civil Service Retirement System, rather than the Federal Employees Retirement System, be allowed to maintain coverage under an FEHB plan.

Response: OPM does not have the statutory authority to allow an exception based on a Postal Service annuitant's retirement system.

Comments: Several commenters asked why employees of the United States Postal Inspection Service would be required to transition to PSHB.

Response: The United States Postal Inspection Service is part of the United States Postal Service as defined by statute. While certain individuals may receive other Federal benefits, those benefits are not relevant to the

definition of Postal Service employee under 5 U.S.C. 8903c(a)(9).

Comments: Several commenters asked if PSHB Program enrollment will count towards the five-year FEHB Program enrollment requirement to retire with FEHB coverage from another agency.

Response: Yes, the five-year requirement under the FEHB Program will continue to be in effect for the PSHB Program. An individual is eligible to continue enrollment in a PSHB plan into retirement if they meet the five-year requirement and were enrolled in a PSHB plan immediately before retirement. The five-year requirement does not change and is not changed by the Medicare Part B enrollment requirement for certain Postal Service annuitants enrolled in PSHB.

A Postal Service annuitant, whose Government contribution is required to be paid under 5 U.S.C. 8906(g)(2), is not eligible to continue enrollment in an FEHB plan. *See* section 8903c(d). As stated in the preamble of the interim final rule, in order to continue coverage into retirement, enrollees in the PSHB Program will be subject to the FEHB Program requirement of being covered by a plan for the 5 years of service immediately before retirement, or if less than 5 years, for all service since their first opportunity to enroll. See § 890.306.

A Postal Service annuitant who (at the time the individual becomes an annuitant) was enrolled in a health benefits plan under chapter 89, including under section 8903c, can meet that 5-year requirement if they were so enrolled as a Postal Service employee, as an employee defined at 5 U.S.C. 8901(1), or a mix of both in order to maintain health benefits after retirement. Similarly, an annuitant who is not a Postal Service annuitant, whose Government contribution is not required to be paid under 8906(g)(2), may meet the 5-year requirements for continuing FEHB coverage into retirement, if they were enrolled in a plan under chapter 89 as both an employee defined at 5 U.S.C. 8901(1) and as a Postal Service employee.

Comment: One commenter asked if a Postal Service annuitant is eligible to enroll under their spouse's FEHB eligibility rather than moving to the PSHB.

Response: Yes, the PSHB Program does not affect the eligibility of any Postal Service employee or Postal Service annuitant to be covered as a family member under an FEHB plan. In this circumstance, the spouse of the Postal Service annuitant would need to cover the Postal Service annuitant under their FEHB plan during Open Season 2024. The Postal Service annuitant would also need to elect not to enroll in a PSHB plan during the transitional Open Season to avoid automatic enrollment in a PSHB plan.

B. Medicare Part B Enrollment Requirement for Postal Service Annuitants

Many commenters asked about the details of the Medicare Part B enrollment requirement for Postal Service annuitants enrolled in a PSHB plan. OPM is taking the opportunity to clarify in this preamble and regulatory text some details about how the Medicare Part B requirement will be enforced after the launch of the PSHB Program.

The PSRA authorized a Medicare Part B Special Enrollment Period (SEP) for certain Postal Service annuitants and their family members. Codified at section 1837(o) of the Social Security Act (42 U.S.C. 1395p), the six-month special enrollment period will run from April 1 through September 30, 2024. Postal Service annuitants and their family members who are entitled to Medicare Part A but not enrolled in Medicare Part B as of January 1, 2024 are eligible to enroll in Medicare Part B during the SEP. The PSRA allows the Postal Service to pay any applicable Medicare Part B late enrollment penalties for individuals who enroll during this SEP.

As explained below in the section of the preamble discussing the changes included in this final rule, OPM is amending § 890.1604 to clarify the timing aspects of several exceptions that are statutorily required to apply ''as of January 1, 2025''.

Comment: A commenter said that many Postal Service annuitants may be unaware of the requirement to enroll in Medicare Part B to maintain PSHB coverage. The commenter requested that such annuitants be automatically enrolled in Medicare Part B.

Response: OPM and the Postal Service are working together on educational materials to explain the transition to PSHB and the Medicare Part B enrollment requirements. They include plain language written materials such as fact sheets and tri-fold mailers, multi-media activities such as a five-part video series available at *https://www.keepingposted.org/postal-service-health-benefits.htm,* and regular ''lunch and learn'' virtual seminars. The Postal Service and OPM have been engaged in ongoing communication with Postal Service employees, annuitants, and their family members since late 2022 when OPM published FAQs on its website at *https://www.opm.gov/healthcare-insurance/pshb/.*

OPM does not have the authority to enroll Postal Service annuitants in Medicare Part B automatically and will not make a regulatory change in response to this comment. Postal Service annuitants or their family members who enroll in Medicare Part B during the Special Enrollment Period may be subject to a Medicare Part B late enrollment penalty.[5] The PSRA allows the Postal Service to pay such late enrollment penalty on behalf of the annuitant or family member.

Comment: Some commenters asked when family members of disabled Postal Service annuitants are required to enroll in Medicare Part B.

Response: A family member of a disabled Postal Service annuitant is required to enroll in Medicare Part B if the family member themselves are a Medicare covered individual. As described in the interim final rule, the Medicare Part B enrollment requirement applies regardless of how the Postal Service annuitant becomes entitled to Medicare Part A, such as age, end stage renal disease or receiving Social Security disability payments for 24 months. A family member of a PSHB enrollee who is a disabled Postal Service annuitant is required to enroll in Medicare Part B if both the Postal Service annuitants and the family member are Medicare covered individuals (meaning that both are entitled to Medicare Part A), unless the family member qualifies for an individual exception as listed in the Executive Summary and at § 890.1604 and discussed more fully in the section ''Regulatory Changes in This Final Rule.''

Comment: A commenter asked whether a family member must maintain Part B coverage if the family member is enrolled in Medicare Part B prior to January 1, 2025, but the Postal Service annuitant, under whose PSHB enrollment the family member is covered, is not required to enroll in Part B.

Response: No, a Medicare covered family member is required to be enrolled in Medicare Part B only if the Postal Service annuitant under whose PSHB enrollment the family member is covered, is required to be enrolled in Medicare Part B. OPM is amending § 890.1604 to clarify the requirements and exceptions for enrolling in Medicare Part B, as described in the Executive Summary and in the section

[5] Explanation of Medicare late enrollment penalties available here: *https://www.medicare.gov/basics/costs/medicare-costs/avoid-penalties.*

''Regulatory Changes in this Final Rule.''

C. Exceptions to the Medicare Part B Enrollment Requirement

OPM received several comments regarding the details of the requirement for Postal Service annuitants to enroll in Medicare Part B. The interim final rule addressed the requirement in § 890.1604, including several statutory exceptions to that requirement described in the Executive Summary and in the section ''Regulatory Changes in This Final Rule.''

Comment: A commenter expressed support for OPM's rule to allow self-attestations as proof of eligibility for health services from the Indian Health Service (IHS). The same commenter asked OPM to confirm that PSHB Carriers will not be responsible for determining whether PSHB enrollees qualify for the exception based on eligibility for IHS health services.

Response: OPM is not authorizing PSHB Carriers to determine whether an individual is excepted from the Medicare Part B enrollment requirement under the IHS exception or any other exceptions under § 890.1604. Under part 890, a carrier may only verify an individual's relationship to the enrollee to confirm whether they are an eligible family member.

Comment: Several commenters requested clarification regarding how the PSHB Program will affect enrollees residing outside the United States especially as it relates to Medicare coverage.

Response: The interim final rule included a list of exceptions to the Medicare Part B enrollment requirement at 5 CFR 890.1604(c). These exceptions included an exception for Medicare covered Postal Service annuitants and Medicare covered members of family residing outside the United States. The PSRA and this final rule requires that individuals residing outside the United States will demonstrate such residency. OPM and the Postal Service are working together to operationalize the details of how individuals will demonstrate residency outside the United States. OPM is amending § 890.1604 to clarify the requirements and exceptions for enrolling in Medicare Part B.

D. Changes To Coverage and Premium Costs Due to the Medicare Part B Enrollment Requirement

Comment: OPM received several comments from Postal Service employees and Postal Service annuitants currently enrolled in FEHB plans seeking more information about anticipated changes to their medical, physician, and pharmaceutical coverage and health insurance premiums when they are required to enroll in Medicare Part B to maintain coverage under the PSHB Program.

Response: OPM negotiates health benefits and premiums each year with carriers. As delineated in the interim final rule, a carrier's PSHB plan must provide equivalent benefits and cost-sharing to the carrier's FEHB plan in the 2025 contract year. Approved PSHB Carriers will submit benefit and rate proposals for PSHB plans by the end of May 2024. OPM expects that full benefits and premium information for 2025 PSHB plans will be available in September 2024.

OPM is asking carriers to focus on Medicare coordination in both FEHB plans and PSHB plans for 2025. The call letter for the 2025 FEHB and PSHB plan year [6] states ''All Carriers must implement a multi-pronged educational outreach effort to eligible enrollees focused on Medicare coordination. . . . FEHB and PSHB Program members for whom Medicare is primary must receive medical and drug coverage equal to or greater than the medical and drug coverage they would have received without Medicare Advantage Prescription Drug Plan (MA–PD) EGWP or Prescription Drug Plan (PDP) EGWP.''

The call letter further ensures robust coordinated coverage by directing carriers that ''The PSRA requires PSHB Carriers, in the initial contract year, to provide benefits and cost-sharing that are equivalent to the benefits and cost-sharing of that Carrier's 2025 FEHB plan option, except to the extent needed to integrate Medicare Part D prescription drug benefits. PDP EGWP formularies must, at a minimum, include the same covered drugs under the plan's formulary. Furthermore, every drug covered under a plan option's formulary must be covered at the same or lower cost-share by the plan's PDP EGWP formulary. In circumstances where equivalent drug benefits and cost-sharing (not actuarial equivalence) cannot be met due to limitations in integrating Medicare Part D prescription drug benefits, PSHB Carriers must provide justification explaining why they cannot meet this standard.''

E. Continuity of Costs and Coverage Between FEHB Plans and PSHB Plans

Comment: OPM received many comments regarding changes in premium costs and benefits between FEHB plans and PSHB plans. There were questions about specific covered services and requesting information about whether such services will be covered in a similar way after the launch of the PSHB Program. Several commenters raised concerns about possible cost increases after the launch of the new program.

Response: The PSRA requires that, in the initial contract year, a carrier offering PSHB plans must offer coverage with equivalent benefits and cost-sharing to FEHB plans offered by that carrier, except to the extent needed to integrate Medicare Part D prescription drug benefits. This requirement was codified in the interim final rule at § 890.1610 ''Minimum standards for PSHB Program plans and Carriers.''

OPM is approving carriers for participation in the PSHB Program. Approved carriers will submit plan benefit and rate proposals by the end of May 2024, the plan premiums will be made public in September 2024, and more detailed plan brochures will be available prior to Open Season 2024 at *https://www.opm.gov/healthcare-insurance/open-season.*

In order to ensure that the drug coverage under a PSHB plan's Medicare Part D EGWP is equal to the drug coverage under the PSHB plan, OPM has required that PSHB plans' ''PDP EGWP formularies must, at a minimum, include the same covered drugs under the plan's formulary. Furthermore, every drug covered under a plan option's formulary must be covered at the same or lower cost-share by the plan's PDP EGWP formulary.'' *See supra* note 6.

F. Information Sharing

The interim final rule outlined a process for agencies to share relevant information for OPM's administration of the PSHB Program. This included implementing a statutory requirement for OPM and the SSA to share information necessary to identify individuals who may be eligible to enroll in Medicare Part B during the 6-month Medicare special enrollment period (SEP) from April 1, 2024, to September 30, 2024.

Comment: A commenter suggested that coordination of benefits with Medicare at 5 U.S.C. 8910(d) requires OPM to expand PSHB information sharing regulations at 5 CFR 890.1612 to the entire FEHB Program and allow carriers to access that information for coordination and reporting purposes.

Response: OPM agrees that information sharing between agencies is critical to administer the PSHB Program effectively. OPM is not expanding our information sharing effort to the entire FEHB Program since the PSRA's

[6] *https://www.opm.gov/healthcare-insurance/carriers/fehb/2024/2024-04.pdf.*

information sharing provisions are intended to implement the PSHB Program and its Medicare enrollment requirement for certain Postal Service annuitants and their family members. Similarly, OPM does not intend to provide the information that is the subject of interagency information sharing agreements to carriers, except in limited circumstances required to operate the PSHB Program as permitted under the Privacy Act.

G. Centralized Enrollment System

The interim final rule explained that OPM will develop and implement a centralized enrollment system for the PSHB Program. The centralized enrollment system will be an electronic enrollment solution for PSHB enrollees, the Postal Service and other employing offices (including OPM's Retirement Services office for Postal Service annuitants), and PSHB Carriers. The centralized enrollment system will include an online portal to be used to process enrollment transactions and will include decision support tools and customer support to assist enrollees and their family members.

Comment: Several commenters made specific recommendations about the mechanics and operations of OPM's PSHB central enrollment system. Commenters requested elements such as specific data fields, a total cost calculator, and filtering capabilities.

Response: OPM appreciates the comments and will consider the recommendations in the system design. In July 2023, OPM awarded a contract for the development of the PSHB System. The scope of the project includes enrollment functions and a customer support center that will service PSHB employees, annuitants, and family members. The center will provide services such as eligibility determinations, enrollment support, and enrollment and premium reconciliation and a decision support tool.

That request for proposal (RFP) is available at *https://sam.gov/opp/94b39c9c3e504c02ae593ab3fab7a342/view.*

The RFP includes nearly 300 distinct requirements, including determining eligibility based on listing all necessary data fields to manage eligibility and enrollment, the ability for users to calculate total costs, and sort and filter plan information. OPM is on track with development of the system and is determining how and when these functionalities will be rolled out.[7]

Comment: One commenter requested that OPM continue to provide periodic updates to carriers as the centralized enrollment system is developed, so that carriers can make appropriate adjustments to their systems and processes.

Response: OPM intends to continue regular communications with carriers as OPM's plans for the central enrollment system development. Carriers may contact their OPM contract representatives with specific questions.

H. PSHB Contracting

The interim final rule included several provisions related to contracting, including requirements for PSHB Carriers and PSHB plans.

Comment: Several commenters had specific recommendations about contracts, including details about the contract effective date and several comments related to accounting principles.

Response: OPM appreciates the comments and notes that PSHB contracting details are outside the scope of the regulation.

I. Automatic Enrollment

The interim final rule implemented the requirement that Postal Service employees and Postal Service annuitants who do not make an PSHB plan election during the transitional Open Season in 2024 will be automatically enrolled in a PSHB plan with coverage effective January 1, 2025.

Comment: A commenter requested clarification on 5 CFR 890.1605(c), regarding how automatic enrollment will work for a carrier that has three FEHB plan options but intends to offer only two PSHB plan options.

Response: In the interim final rule at § 890.1605(c)(2), when a carrier offers more than one PSHB plan or option in 2025, the individual will be automatically enrolled in the PSHB plan and option offered by the carrier that provides equivalent benefits and cost sharing to the individual's 2024 FEHB plan and option, as determined by OPM. In a case where the carrier is not offering a PSHB plan, the individuals enrolled in the carrier's FEHB plan in 2024 will be automatically enrolled in the lowest-cost nationwide PSHB plan option that is not a high deductible health plan and does not charge an association or membership fee. *See* § 890.1605(c)(3). OPM will apply the FEHB regulation at 5 CFR 890.301(n) to determine the lowest-cost nationwide plan. Per that regulation, OPM can designate an alternate plan for automatic enrollments if circumstances dictate this. All automatic enrollments will be into a PSHB plan of the same enrollment type (self only, self and family, or self plus one) as the 2024 FEHB plan. OPM plans to provide additional details regarding specific automatic enrollment circumstances in future rulemaking.

Comment: One commenter asked for clarity regarding the definition of a carrier for purposes of automatic enrollment and recommended that OPM allow automatic enrollment into the same carrier as under FEHB, regardless of whether the plans available in the PSHB Program are offered under a different contract than the enrollee's current FEHB plan.

Response: In the interim final rule, OPM defined ''PSHB Carrier'' at 48 CFR 1602.170–20, as follows: ''PSHB Carrier means a carrier that enters into a contract with OPM under 5 U.S.C. 8902 to offer a health benefits plan in the PSHB Program.'' The interim final rule provided that the enrollee is automatically enrolled into a PSHB plan offered by the same carrier. This is true even though the PSHB plan is under a different contract with OPM than the enrollee's 2024 FEHB plan. OPM will automatically enroll the enrollee into a PSHB plan offered by a different carrier (the lowest-cost nationwide PSHB plan option that is not a high deductible health plan and does not charge an association or membership fee) if the carrier of the enrollee's 2024 FEHB plan does not offer a PSHB plan in 2025.

J. Health Benefits Education Program

Comment: One commenter requested that OPM provide outreach and education to Postal Service annuitants and their families regarding the changes to their coverage options under the PSHB Program.

Response: The Postal Service is coordinating with OPM and other agency partners to inform Postal Service employees, Postal Service annuitants, and their family members about the transition to the PSHB Program and

[7] From the PSHB System Performance Work Statement (*https://sam.gov/api/prod/opps/v3/opportunities/resources/files/81805a8de14f4084b5650da08d347e42/download?&status=archived&token=*) ''Starting in the fall of 2024, the system will process all enrollments and changes in enrollments for PSHB, including open season transactions, qualifying life events, and enrollments for newly eligible. The fully functional system will provide an account-based, one-stop-shop where enrollees can: (1) compare and learn about PSHB plan options, including benefits, provider networks, formulary, cost-sharing, and total out-of-pocket expenses, (2) select a plan that fits the unique needs of their family, and (3) complete the enrollment process. The system will also serve as the authoritative source for PHSBP enrollment data, ensure enrollee eligibility by exchanging data with relevant Federal agencies, and provide real-time enrollment and premium transaction information to all employing agencies and participating PSHBP health insurance issuers (herein referred to as Carriers).''

their coverage options. This education has been ongoing since late 2022 when OPM published FAQs on its website at *https://www.opm.gov/healthcare-insurance/pshb/.* Under 5 U.S.C. 8903c(l), the Postal Service is responsible for establishing a Health Benefits Education Program. The Postal Service's Health Benefits Education Program notifies eligible individuals about the PSHB Program, coverage options, and the Medicare Part B enrollment requirement.

In October 2023, USPS published a bulletin announcing an update to its Employee and Labor Relations Manual (ELM) to incorporate the Health Benefits Education Program at *https://about.usps.com/postal-bulletin/2023/pb22634/html/welcome.htm.* This Program included notifications of PSHB options, Medicare enrollment requirements, links to submit inquiries from employees and annuitants, and navigator activities for program education. The updates included in the October 2023 Postal Bulletin were effective immediately and were incorporated in the ELM as of March 31, 2024.

OPM and the Postal Service have been collaborating on education materials since 2022. Those informational materials include plain language written materials such as fact sheets and tri-fold mailers. There are also multi-media activities such as a five-part video series available at *https://www.keepingposted.org/postal-service-health-benefits.htm* and regular ''lunch and learn'' virtual seminars.

The Postal Service's Health Benefits Education Program notifies eligible individuals about the PSHB Program and provides information about coverage options, and the Medicare Part B enrollment requirement.

Additionally, PSHB plan premiums will be made public in September 2024, and more detailed plan brochures will be available prior to Open Season 2024 at *https://www.opm.gov/healthcare-insurance/open-season.*

K. Prescription Drug Benefits and Integration of Medicare Part D

As noted in the preamble to the interim final rule, PSHB plans must provide prescription drug benefits through Medicare Part D to Part D-eligible Postal Service annuitants and their Part D-eligible family members. Under 5 U.S.C. 8903c(h), PSHB plans are required to provide prescription drug benefits to these individuals through ''employment-based retiree health coverage'' either through a ''prescription drug plan (PDP)'' or a contract with a ''PDP sponsor'' of a prescription drug plan, as these terms are defined in sections 1860D–22(c)(1), 1860D–41(a)(14), and 1860D–41(a)(13) of the Social Security Act, respectively. A carrier providing prescription drug benefits may, subject to OPM's approval, provide a Medicare Advantage plan with prescription drug benefits (MA–PD) so long as the carrier also provides a PDP.

Comment: Several commenters asked about how the timing of Medicare Part D coverage will align with the January 1–December 31 plan year of the PSHB Program. One commenter requested that OPM review the Centers for Medicare & Medicaid Services (CMS) rules to determine if Medicare Part D coverage needs to begin on the first day of the following month in a PSHB retroactive enrollment to avoid violation of CMS requirements.

Response: OPM appreciates the comment and is actively engaged with key stakeholders to ensure that enrollees and covered family members experience a seamless enrollment process. OPM notes that the proposed rule will provide more information regarding PSHB Program implementation of Medicare Part D coverage.

Comment: One commenter requested that OPM address perceived conflicts between the Internal Revenue Service (IRS) requirements for high deductible health plans with health savings accounts and CMS guidance around Part D prescription drug plans.

Response: OPM, through its guidance, rate and benefits negotiations, contract administration and negotiations process, will ensure that carriers' plan proposals are in compliance with all applicable requirements.

Comment: One commenter raised a concern about OPM's method for automatically enrolling members who do not choose a PSHB plan during the transitional Open Season in 2024. This commenter was concerned about whether members may be automatically enrolled into a plan with a standalone PDP, and whether an MA–PD plan may be more advantageous for such members.

Response: As directed by the PSRA, PSHB Carriers must integrate Medicare Part D into their PSHB plan design through a PDP or a contract with a PDP sponsor. OPM will also consider approving a carrier's MA–PD plan so long as the carrier provides a PDP. Whether a carrier provides Medicare Part D through a PDP or through a PDP and MA–PD does not affect automatic enrollment into a PSHB plan during the transitional Open Season. If an individual wants to be covered by a PDP or MA–PD, if available, under a PSHB plan enrollment then the enrollee may choose a PSHB plan with the desired prescription drug benefits during the transitional Open Season. OPM notes that the proposed rule will provide more information regarding program implementation, including group enrollment and Medicare Part D plans including MA–PD plans.

Comment: One commenter asked that OPM encourage or require PSHB plans to offer health reimbursement arrangements (HRAs) with sufficient funds to offset the cost of any Medicare Part D income-related monthly adjusted amount (IRMAA), or alternatively, to reduce the costs of Part B premiums or other out-of-pocket expenses if not subject to IRMAA.

Response: PSHB Carriers may propose to offer HDHPs with an HRA, and individuals may enroll in such a plan and use the HRA to help pay for qualified medical expenses, Medicare premiums including any applicable IRMAA, and other qualified medical expenses. As demonstrated in the Federal Employees Health Benefits and Postal Service Health Benefits Programs Call Letter for 2025, OPM is working with carriers to inform enrollees about the possible impact of the IRMAA.

L. Medicare Part B Special Enrollment Period (SEP)

The PSRA authorized a 6-month Medicare Part B SEP that will run from April 1 through September 30, 2024. This SEP is codified in the Social Security Act and will allow enrollment in Medicare Part B for Postal Service annuitants who are entitled to Medicare Part A and their family members who are entitled to Medicare Part A and not already enrolled in Medicare Part B. In the interim final rule, OPM included a process to share information with SSA to identify individuals who may be eligible to enroll in Medicare Part B during the SEP.

Medicare-eligible individuals may have several opportunities to sign up for Medicare. More information is available at the CMS website here: *https://www.medicare.gov/basics/get-started-with-medicare/sign-up/when-can-i-sign-up-for-medicare.* If an individual does not enroll in Medicare Part B at their earliest opportunity, they may be subject to a permanent Medicare Part B late enrollment penalty.[8] The PSRA allows the Postal Service to pay any applicable Medicare Part B late enrollment penalty on behalf of individuals who enroll during the SEP in 2024. If a Medicare-eligible Postal

[8] *https://www.medicare.gov/basics/costs/medicare-costs/avoid-penalties.*

Service annuitant or covered family member not enrolled in Medicare Part B declines to enroll during the PSRA-authorized SEP in 2024, they may be subject to the Medicare late enrollment penalty if they choose to enroll in Medicare Part B at a later date. Such individual may also be eligible other SEPs due to extenuating circumstances. For example, Medicare Part B has an SEP for individuals impacted by an emergency or natural disaster.[9]

Comment: A commenter asked if OPM and SSA will include any additional criteria to determine who is eligible for the SEP.

Response: OPM does not have the authority to establish eligibility criteria for the Medicare Part B SEP. Under the PSRA, the SEP is available to a Postal Service annuitant who is entitled to Medicare Part A and who is an annuitant as of January 1, 2024 and their family members who are entitled to Medicare Part A, excluding those eligible to enroll in Medicare under section 1818 or 1818A of the Social Security Act.

Comment: A commenter requested further clarification regarding the SEP for PSHB, asking specifically if OPM intends to create an appeals process for those who believe that they are eligible for SEP but were misinformed or were never informed.

Response: OPM is coordinating with SSA and the Postal Service to prepare for the 6-month Medicare Part B SEP. The PSRA requires that OPM establish a process to provide information to SSA about Postal Service annuitants and covered family members who may be eligible for Medicare Part B during the PSRA SEP. Any appeals related to an individual's eligibility to enroll in Medicare Part B would be handled by SSA according to that agency's procedures. OPM does not have the authority to enroll individuals in Medicare Part B or to handle appeals of SSA's enrollment decisions.

Comment: A commenter requested clarification as to whether any PSHB plan information will be available at the beginning or during the SEP to allow individuals eligible to enroll in Medicare Part B during the SEP to consider the PSHB plans in deciding whether to enroll in Part B.

Response: The PSRA authorized a 6-month Medicare Part B SEP that will run from April 1 through September 30, 2024. OPM expects to make PSHB premium rate information available in September 2024. PSHB plan benefit information, including detailed plan brochures, will be ready according to OPM's standard schedule for releasing such information before Open Season begins. Due to the plan application and contract negotiation schedule, there is no opportunity to make this information available sooner.

Comment: A commenter asked if OPM would consider extending the SEP to ensure Medicare Part B decisions and PSHB decisions can be made at the same time.

Response: The Medicare Part B SEP is established by statute under the PSRA and is administered by SSA. The authorizing language for the SEP, codified in the Social Security Act at section 1837(o)(1)(B) (42 U.S.C 1395p(o)(1)(B)) states that eligible individuals ''may elect to be enrolled under this part during a special enrollment period during the 6-month period beginning on April 1, 2024.'' OPM does not have the legal authority to extend the Medicare Part B SEP.

Comment: A commenter asked when individuals would be notified about SEP eligibility.

Response: OPM is coordinating with SSA and the Postal Service to identify individuals who may be eligible to enroll in Medicare Part B during the 2024 SEP. In January 2024, the Postal Service mailed informational postcards that included information about the PSRA Medicare Part B SEP to Postal Service annuitants and family members who were not enrolled in Medicare Part B. The Postal Service mailed notifications to eligible individuals in March 2024.

M. OPM Administration of PSHB

Comment: A commenter made a recommendation about the timing of the maximum Government contribution calculation and recommends that OPM release the maximum Government contribution earlier to create fair competition between all carriers.

Response: In the interim final rule, OPM addressed the Postal Service contribution at § 890.1613(b). OPM must determine the Government contribution consistent with the timing requirements at 5 U.S.C. 8906 and 5 CFR 890.501. OPM will endeavor to release PSHB and FEHB rates as soon as possible, no later than September 2024, and in a manner that does not impede fair competition.

N. Allocation of Carrier Reserves

Comment: One commenter recommended that OPM promote fair allocation of carrier reserves.

Response: OPM issued Carrier Letter 2023–13 (CL 2023–13) in July 2023 available at *https://www.opm.gov/healthcare-insurance/carriers/fehb/2024/2024-04.pdf* outlining a methodology to allocate FEHB plan reserves from FEHB plans to PSHB plans. In short, reserves will be allocated based on 2024 premium income attributable to the Postal Service and non-Postal Service populations for each plan option. OPM considered incorporating a risk component in the allocation of reserves; however, OPM determined the method outlined in CL 2023–13 is most consistent with current FEHB practice. As explained in CL 2023–13, OPM intends to use a similar approach for allocating medical loss ratio (MLR) credits between FEHB plans and PSHB plans offered by the same carrier.

Comment: One commenter inquired about the effect of PSHB on Postal Service annuitants who are eligible to continue their health insurance plan and pay the employee share of premium out of pocket directly to the National Finance Center and not as a deduction from their annuity.

Response: All payment options that are available for FEHB plans, including direct pay, will be available for enrollees in PSHB plans. Note that, if an annuitant pays both the employee share and the Government's share of premium, then the annuitant is not within the statutory definition of a Postal Service annuitant and is not subject to transition to a PSHB plan and will remain eligible for enrollment in an FEHB plan.

Regulatory Changes in This Final Rule

OPM is amending § 890.1604 in response to comments requesting clarification around the requirements for certain Postal Service annuitants and their family members to enroll in Medicare Part B, as discussed in the previous section. Specifically, OPM is clarifying how we are implementing the statutory language at 5 U.S.C. 8903c(e).

OPM is making this change to provide more clarity as to the applicability of exceptions to the Medicare Part B enrollment requirement under 5 CFR 890.1604. The statutory language in 5 U.S.C. 8903c(e), ''as of'' January 1, 2025, can be interpreted to either include or exclude events occurring on January 1, 2025. To avoid potential confusion and to ensure that Postal Service employees and annuitants can make informed decisions about their health coverage during important life events, OPM is revising the regulatory text to provide additional clarity on eligibility for the Medicare Part B exceptions.

Therefore, OPM is clarifying timing aspects of several exceptions to the requirement to enroll in Medicare Part

[9] *https://www.medicare.gov/basics/get-started-with-medicare/sign-up/when-does-medicare-coverage-start#SEP.*

B. Specifically, OPM is clarifying that the statutory exception at 5 U.S.C. 8903c(e)(3)(A)(i), which applies to individuals ''as of'' January 1, 2025, includes individuals who are annuitants ''on or before'' January 1, 2025, and who were not both entitled to Medicare Part A and enrolled in Medicare Part B ''on'' January 1, 2025. OPM is making this change to ensure that the regulations are clear and specific when the exceptions are applicable so that all individuals can make informed decisions. For example, a Postal Service employee's last day of service is December 31, 2024. Because this individual will be an annuitant on January 1, 2025, the individual is eligible for an exception to the requirement to enroll in Medicare Part B under 5 CFR 890.1604(d)(1)(i). This clarification also applies to employees age 64 on or before January 1, 2025. For example, a Postal Service employee turning age 64 on January 1, 2025, is eligible for an exception to the Medicare Part B requirement under 5 CFR 890.1604(d)(1)(ii) because they will be age 64 on January 1, 2025. This clarification is included in § 890.1604(d)(1)(i) and (ii).

OPM is revising the regulatory text of § 890.1604 related to demonstrating residency outside the United States to provide more operational flexibility to the Postal Service and OPM by removing the specific entity that will receive information about overseas residency. These changes are in § 890.1604(d)(1)(iii) for annuitants and § 890.1604(d)(2)(ii) for family members.

We are reserving § 890.1604(c) in anticipation of future rulemaking.

OPM is revising § 890.1604(e) (now codified at § 890.1604(f) due to insertion of the new, reserved paragraph (c)) to clarify that a Postal Service annuitant or their family member who is required to be enrolled in Medicare Part B must promptly notify OPM or the Postal Service, in writing, if they choose not to enroll in or to disenroll from Medicare Part B as described in § 890.1608(e). This implements the PSRA requirement codified at 5 U.S.C. 8903c(g)(3)(D) that OPM issue regulations allowing individuals to cancel coverage in writing to the Postal Service, while allowing flexibility for OPM to also take these cancellations in writing.

Under part 890, OPM has imposed similar responsibilities on individuals to inform OPM of any changes that may affect their or their family member's eligibility or coverage, for instance, if an individual is covered under another insurance plan. (*See* 5 CFR 890.302(a)(2)(ii), ''To ensure that no person receives benefits under more than one enrollment, each enrollee must promptly notify the insurance carrier as to which person(s) will be covered under his or her enrollment; *see* also 5 CFR 890.1605(d)(2) ''The enrollee must affirmatively notify the PSHB Carrier, employing office, or OPM of any changes to members of family;'' and § 890.808(b)(4), ''The former spouse will be required to certify that he or she meets the requirements . . . and that he or she will notify the employing office within 31 days of an event that results in failure to meet one or more of the requirements.'').

OPM is correcting a typo in § 890.1606(e) by removing the word ''the'' before ''January 1 of the next year.'' This correction does not affect the PSHB Program or policy.

The changes outlined in this section do not affect OPM's estimation of the regulatory impact of the PSHB Program.

Regulatory Impact Analysis

A. Need for Regulatory Action

This final rule follows an interim final rule implementing sections 101 and 102 of the PSRA, which direct OPM to establish the PSHB Program for Postal Service employees, annuitants, and their eligible family members. These sections of the PSRA amend 5 U.S.C. chapter 89, which identifies: the individuals who, starting in January 2025, will be eligible to enroll in a PSHB plan and may not remain in an FEHB plan under their Postal Service employment or retirement; those who must enroll in Medicare Part B to maintain enrollment in PSHB; the health benefits plans that should be offered to the greatest extent practicable; PSHB plan requirements; the need for automatic enrollment in certain circumstances; contributions by the Postal Service; how reserves for PSHB plans are to be structured; requirements for information sharing; and other requirements necessary for PSHB Program implementation.

The PSHB Program is contained within chapter 89, which governs the FEHB Program generally. The PSRA confirms that PSHB plans are subject to the same provisions as FEHB plans unless they are inconsistent with the PSRA. OPM is given the discretion to make such determinations.

Section 101 of the PSRA, codified at 5 U.S.C. 8903c, directs OPM to issue regulations establishing the PSHB Program and gives OPM the discretion to include ''any provisions necessary to implement this section.'' Section 8903c(g) addresses the topics for which Congress specifically instructed OPM to promulgate rules, clarifies how existing rules for the FEHB Program will apply to the PSHB Program, and provides new requirements regarding eligibility and enrollment, information sharing with other agencies, PSHB Carrier requirements, and other rules that will govern the PSHB Program. This rule finalizes the provisions of the interim final rule and provides transparency into how OPM is implementing the PSRA, memorializes processes and procedures that will apply, and give individuals who will be impacted as much information about the PSHB Program as early as possible.

B. Summary of Impacts

Overall, the PSRA and the PSHB Program, through this final rule, promote the financial stability and long-term viability of the Postal Service, which provides a crucial role for society with respect to communication, commerce, and political participation. The Postal Service was established as a basic and fundamental service for the public to provide prompt, reliable, and efficient nationwide postal services, including mail and package delivery. With the Postal Service's wide reach in providing essential services to nearly everyone in the U.S. in some form, its long-term stability is crucial. The PSRA helps improve the Postal Service's financial position. Ultimately, a financially sustainable Postal Service ensures that it can continue to fulfill its universal service mission and make the investments needed to support service excellence and network efficiency and to introduce enhanced products and services for its customers.

This societal benefit will result primarily from the removal of the prefunding obligation related to future retiree health benefits and the shifting of insurance coverage costs away from the Postal Service to Medicare, and ultimately to taxpayers, who together with beneficiaries, fund Medicare. The Postal Service is generally self-funded, and the Postal Service, along with its employees, pay taxes to fund Medicare each year, but many of its employees do not enroll in Medicare after they retire. Therefore, unlike other employers who offer retiree health benefits and pay Medicare taxes, the Postal Service has not been able to ensure that its retiree health care program fully utilizes Medicare. Enabling the Postal Service to generally require its annuitants who are entitled to Medicare Part A to enroll in Medicare Part B when eligible ensures that the Postal Service can utilize Medicare in a similar manner as other employers, which strengthens its financial position and therefore its ability to continue its critical public service mission.

From a societal perspective, the primary costs associated with the implementation of the PSHB Program will be administrative and operational costs necessary to initiate and maintain the program, including development of information technology (IT) systems, education and outreach, and additional administrative staffing for the design, maintenance, and oversight of the increased quantity of health plans. These costs will be largest in the initial start-up phase and will be borne by Federal agencies, as well as carriers offering both FEHB plans and PSHB plans. The PSRA appropriated $94 million in implementation funding for OPM and other Federal agencies for these administrative and operational costs. Pursuant to section 101(d)(4) of the PSRA, the Postal Service deposited the appropriated funds into the Treasury as a miscellaneous receipt from the Postal Service Fund in fiscal year 2022.

Most of the impact from the PSRA and this regulation will occur via distributional effects. The principal transfer will be the shifting of premium costs from the Postal Service and PSHB members to Medicare as a result of the Medicare Part B enrollment requirements and the integration of Medicare Part D coverage into PSHB plans. This Part D integration could also result in a portion of costs being transferred to the pharmaceutical industry via the statutory manufacturer discounts provided to Part D, in conjunction with discounts negotiated with individual FEHB plans. Further, integrating Part D coverage into PSHB plans may result in a transfer of costs to carriers, particularly those with little Medicare experience, who may need to contract with third-party vendors to assist with integration, increasing administrative costs. The segmentation of the current FEHB risk pool will result in premiums reflective of each separate risk pool's health care utilization and costs, which are estimated to be higher for Postal Service enrollees compared with non-postal.[10] This may result in a slight reduction in FEHB premiums following implementation.

Ultimately, the total costs and benefits associated with the PSRA and this final rule are highly uncertain because enrollee and carrier reactions to the effects on Medicare, the FEHB Program, and the new PSHB Program are unknown. In accordance with Office of Management and Budget (OMB) Circular A–4, the following sections outline the benefits, costs, and transfers associated with section 101 of the PSRA and this final rule in more detail. Where specific costs were quantifiable, they are included in table 1. As described below, the rule is expected to result in estimated average annualized costs of $50.6 million at a 3% discount rate and $50.2 million at a 7% discount rate over the eleven-year period of 2022–2032. In addition, the rule is expected to result in estimated average annualized net transfers from the Postal Service to Medicare of $347 million at a 3% discount rate and $343.3 million at a 7% discount rate over the eight-year period of 2025–2032.

C. Regulatory Baseline

The regulatory baseline for the final rule is the FEHB Program as it is currently administered, as the eligible population under both programs will largely remain the same. Postal Service employees, Postal Service annuitants, and their eligible family members are currently eligible for FEHB coverage. This population totals approximately 915,000 enrollees and 1.9 million total covered lives. There are nearly 700,000 Postal Service annuitants, including about 123,000 survivor annuitants. Of the Postal Service annuitants, about 500,000 are currently enrolled in the FEHB Program. A majority of these are Self-Only enrollments while 200,000 are Self Plus One or Self and Family enrollments.

Beginning in the 2025 plan year, the PSHB Program will be the only health benefits program available through the Postal Service to Postal Service employees, Postal Service annuitants, and their eligible family members. Unless they meet a specified exception, as previously outlined, Postal Service Medicare covered annuitants and their Medicare covered members of family will be required to enroll in Part B or will risk losing their eligibility to continue enrollment in the PSHB Program. Once an annuitant loses eligibility for enrollment in PSHB, it cannot be reinstated. As with the regulatory baseline, those covered by a PSHB plan will also be responsible for Medicare premiums.

Currently, Postal Service annuitants and their family members who are participating in FEHB are not required to enroll in Medicare Part B, regardless of Medicare eligibility status. Based on 2021 data, OPM estimates that 75% of Postal Service annuitants aged 65 and over have enrolled in Medicare Part B. There will be approximately 121,000 Postal Service annuitants and their eligible family members eligible to enroll in Part B during the six-month SEP beginning April 1, 2024.

Prior to the PSRA, the Postal Service paid the Government contribution for all Postal Service employees and annuitants enrolled in FEHB. The Government contribution was paid directly by the Postal Service for employees and from the PSRHBF for annuitants. In addition, the Postal Service was required under the Postal Accountability and Enhancement Act of 2006 to fully prefund retiree health benefits. Section 102 of the PSRA (''The USPS Fairness Act'') amended 5 U.S.C. 8909a to remove this prefunding requirement and replace it with a new calculation for annual payments into the PSRHBF beginning in 2026. The law maintains the requirement that the Postal Service continue to pay the Government contribution—directly for employees or through the PSRHBF for annuitants. The Postal Service is also required to pay the Medicare Part B late enrollment penalty for any Medicare covered annuitants and members of family who enroll in Part B during the 2024 SEP. As with the regulatory baseline, there is no Government contribution towards Part B premiums.

Carriers that participate in the PSHB Program will generally be subject to the same minimum requirements for plan design that exist for FEHB plans under the FEHB Program, but PSHB plans will be required to integrate Part D prescription drug benefits for Postal Service Medicare covered annuitants and Medicare covered members of family. In addition, carriers that are offering both PSHB plans and FEHB plans will need to offer equivalent benefits and cost sharing in the initial year, other than as needed to integrate Part D coverage.

D. Benefits of Regulatory Action and Implementation

The interim final rule implemented the requirements of the PSRA. That rule built on the statute by offering clarity and efficient implementation. The timely promulgation of the interim final rule allowed other Federal agencies, PSHB Carriers, and enrollees to begin necessary education and deliberation. This final rule corrects a typographic error in the interim final rule and clarifies some exceptions to the Medicare Part B enrollment requirement.

The Postal Service will benefit from fewer costs because of the removal of the past-due pre-funding payments and future pre-funding obligations related to the retiree health benefits costs and from having a retiree health benefits program in which more annuitants are

[10] *H.R. 3076, Postal Service Reform Act of 2021—Cost Estimate,* Congressional Budget Office (CBO) (2021). *https://www.cbo.gov/system/files/2021-07/hr3076.pdf.*

enrolled in Medicare. With fewer costs for retiree health benefits, the Postal Service will be better positioned to improve its financial stability. A more financially stable Postal Service would benefit the country overall. The Postal Service plays a critical role in the nation's communications, commerce, and voting infrastructure. In rural and remote communities especially, many of which lack adequate broadband access and rely heavily on mail service, the Postal Service's universal service mandate ensures crucial access to essentials including medicine and food.[11]

Within these communities, the Postal Service is often the only delivery service carrier with a door-to-door network and is heavily relied on by other delivery service carriers to provide ''last mile'' deliveries. According to the Postal Service Office of Inspector General, the Postal Service provided vital services during the COVID–19 pandemic, including the delivery of critical items such as medications, stimulus payments, election ballots, and record levels of home package deliveries.[12] A Government Accountability Office Report found that the Postal Service experienced a 9 percent decline in total mail volume in 2020 when compared to 2019, but package volume rose by 32 percent over the same period.[13] This underscores the importance of a stable Postal Service to the Nation.

With greater financial stability for the Postal Service, current Postal Service employees, Postal Service annuitants, and their family members will also see greater stability in their future health insurance coverage and other benefits.

Medicare covered annuitants may be eligible, depending on whether they meet statutory income and resource thresholds, for the low-income cost-sharing subsidies and premium subsidies that are part of the Medicare part D program, under section 1860D–14 of the Social Security Act.

E. Costs of Regulatory Action and Implementation

Implementation of the PSRA and this final rule necessitates the administration and oversight of new health benefits plans, including substantial member education and outreach efforts, additional interagency coordination and the creation of new IT processes to satisfy new statutory eligibility and enrollment requirements, creating startup and ongoing costs to agencies, enrollees, and carriers. Table 1 summarizes the assessment of the administrative costs associated with this regulatory action.

This table illustrates OPM's best estimate of costs, including startup and ongoing maintenance costs given the information available from OPM and other agencies at this time. The costs are still subject to modification as the program implementation continues. For the purposes of this regulatory impact assessment (RIA), *Startup Costs* were defined as upfront, non-recurring costs associated with the PSRA implementation, including regulatory review costs, and are represented as aggregate total expenditures for the years leading up to and immediately following the PSHB implementation. *Ongoing Costs* were defined as recurring costs (*e.g.,* salary costs) beginning in the years preceding or immediately following the PSRA implementation and expected to persist through at least FY2032. All ongoing costs are presented as fully loaded, annual totals. Given that onboarding and development will occur during the run-up period, ongoing costs are expected to gradually ramp up between FY2022–FY2025 and become fully loaded by the beginning of FY2026. These estimates for ongoing costs are preliminary, and funding for ongoing costs would be subject to the annual budget process.

TABLE 1—ESTIMATED ADMINISTRATIVE AND IMPLEMENTATION COSTS ASSOCIATED WITH THIS FINAL RULE

Agency/category	Startup costs	Ongoing costs [1]
OPM [2]	$81,680,944	$49,315,703
Personnel	.....	24,434,476
IT and IT Contracts	68,307,195	20,961,759
Non-IT Contracts	3,600,000	1,735,695
General (Supplies, Equipment, Communications, Training)	9,773,749	2,183,773
Postal Service	11,500,000	1,425,000
Implementation costs (updating systems, developing training materials, etc.)	11,500,000	.....
Personnel (4 Program and 2 IT full-time employees (FTEs))	.....	$925,000
Communications	.....	500,000
Department of Labor	72,500	2,000
Training and Communication	72,500	.....
Additional support and communication for separate Open Season	.....	2,000
Department of Veterans Affairs	395,000	.....
IT Contracts	395,000	.....
Social Security Administration	7,327,764	407,881
Staffing and Overhead	5,161,138	407,881
System Updates	2,166,626	.....
Ongoing Data Exchange	.....	TBD
Indian Health Service	.....	.....
Carriers	Unknown	Unknown
Total Known Administrative and Implementation Costs	100,976,208	51,150,584

[1] Ongoing costs represented as fully loaded annual costs beginning in FY2026 and remaining consistent through at least FY2032. Given that development and onboarding will occur during run-up period to PSHB implementation, ongoing costs will likely cross multiple fiscal periods and gradually ramp up between FY2022 and FY2025, although all costs are expected to become fully realized beginning in FY2026. All costs are represented based on 2022 dollars and pay scales and are subject to change based on PSHB enrollment and carrier participation following implementation.

[2] Table 1 does not utilize estimates from OPM's FY 2025 Congressional Budget Justification (CBJ). The FY 2025 CBJ estimates would reflect $80.1 million startup and $51.7 million ongoing costs.

Table 2 depicts the projected allocation of total startup and ongoing costs by year for fiscal years (FY) 2022 through 2032. Given that operations and maintenance activities are occurring in the run-up period, albeit at a different intensity, and a portion of start-up costs were allocated for go-live and post go-live support (*e.g.,* call centers), the expected costs for FY2022–FY2025 are composed of both startup and ongoing costs. Beginning in FY2026, expected costs are all attributable to recurring operational and maintenance activities.

TABLE 2—PROJECTED TOTAL ADMINISTRATIVE AND IMPLEMENTATION COSTS BY YEAR—ALL AGENCIES, FY2022–2032
[$ Millions]

Type of Cost [1]	FY2022	FY2023	FY2024	FY2025	FY2026	FY2027	FY2028	FY2029	FY2030	FY2031	FY2032
Startup Costs	$3.68	$48.49	$46.74	$2.06	.....	.....	.....	.....	.....	.....	.....
Recurring Costs	3.69	17.98	28.39	50.47	51.15	51.15	51.15	51.15	51.15	51.15	51.15
Total Costs	7.38	66.47	75.14	52.53	51.15	51.15	51.15	51.15	51.15	51.15	51.15

[1] Annual cost projections are in terms of 2022 dollars and pay scales and *do not* reflect any adjustments for inflation, discounting, staffing promotions, etc. This table is intended only to summarize the expected timing of the costs outlined in table 1 and is not meant to reflect budgetary expectations.

Detailed Startup and Ongoing Cost Related to the PSRA

The following sections contain underlying details for the cost estimates presented in table 1, including, where appropriate, the assumptions and methodology used by individual agencies in preparing them. For the purposes of this regulatory impact assessment (RIA), *Startup Costs* were defined as upfront, non-recurring costs associated with the PSRA implementation, including regulatory review costs, and are represented as aggregate total expenditures for the years leading up to and immediately following the PSHB implementation. *Ongoing Costs* were defined as recurring costs (*e.g.,* salary costs) beginning in the years preceding or immediately following the PSRA implementation and expected to persist through at least FY2032. All ongoing costs are presented as fully loaded, annual totals. These estimates for ongoing costs are preliminary, and funding for ongoing costs would be subject to the annual budget process.

OPM

Startup Costs: OPM estimates a total of $81.6 million in start-up costs for the development and administration of the PSHB Program. This estimate includes $68.3 million of IT and IT contract costs for system development and updates, including the creation of the centralized enrollment system. The centralized enrollment system will consolidate data from multiple agencies, including the Postal Service, SSA, CMS, IHS, and VA, to create a centralized platform for verifying eligibility and processing enrollments. While a centralized enrollment system was not mandated by the PSRA, it will create efficiencies through the elimination of decentralized duplicative and manual processes and improve interagency communication. It is expected to yield long term cost-savings that will help offset significant upfront costs of development. Additional IT and IT contract costs are anticipated for updating existing systems, including Benefits Plus and the audit resolution tracking system, and developing new resources to improve customer experience, including the creation of an enrollment Decision Support Tool.

The remaining $13.4 million in estimated startup costs include $3.6 million for non-IT contractor support and regulatory review throughout implementation and $9.8 million for additional supplies, equipment, training, and communication related to the PSRA. All costs were estimated based on 2022 dollars and contract rates.

Ongoing Costs: As this is a new program, additional staffing and resources will be essential to establish and administer the PSHB. OPM estimates a total of $49.3 million in annual, ongoing costs related to the PSRA. This estimate consists of $24.4 million in annual salary costs for additional full-time employees (FTEs) necessary for contract oversight, program operations, systems maintenance, customer service, policy support, and general support. Additionally, OPM anticipates $21 million in annual IT and IT contract costs for ongoing system development and maintenance support, and an additional $1.7 million in annual, non-IT contract costs related to oversight and management of the increased number of health benefits plans within the PSHB and FEHB populations. Finally, OPM estimates an additional $2.2 million in annual costs for training, communications and overhead related to the PSHB program and the annual Open Season period.

The above costs are represented as fully loaded annual projections based on 2022 dollars. Salaries and overhead (benefits, equipment, etc.) were based on 2022 pay tables and Washington, DC metro area locality adjustment, an overhead percentage of 34%, and award and transit subsidies. This adjustment factor was used in lieu of a standard wage rate to more accurately reflect the historical trends in benefit costs for OPM employees, based on the anticipated locations and experience-levels of the aforementioned positions. Additionally, the wage rate is meant to capture overhead costs which were already represented in separate categories. All recurring costs are projected to be fully loaded beginning in FY2025 and to persist through at least FY2032. Given that development and onboarding will occur in the run-up to the PSHB implementation, OPM anticipates that annual costs related to the PSRA will increase steadily between FY2022 and FY2024.

Postal Service

Startup Costs: The Postal Service estimates $11.5 million in start-up costs for updating systems, development of training materials, and the development and maintenance of the Health Benefits Education Program. These estimates were calculated based on anticipated system configuration and assumed effort level and are subject to change based on additional requirements that may be required of the Postal Service.

Ongoing Costs: In preparation for and following implementation of the PSHB, the Postal Service estimates an additional $1.4 million in annual costs for increased staffing and communication needs. Specifically, the Postal Service estimates $0.9 million in

salary costs for 6 additional FTEs, including 4 Program and 2 IT FTEs, and an additional $0.5 million towards increased outreach, education, and communication. Given the general retirement eligibility ages in comparison to the Medicare eligibility age, there will be a 3- to-5-year gap between the time of retirement until Medicare enrollment. It will be critical during the initial implementation of the Program and for the subsequent 5–10 years to send constant communications regarding plan options and healthcare costs, along with information about Medicare Part B eligibility periods and how and when to enroll. Additional resources will also be needed to monitor enrollee compliance for the Medicare Part B enrollment exceptions requirements on an ongoing basis. Although recruitment, onboarding, and development costs will gradually ramp up preceding implementation, the ongoing costs are expected to become fully realized beginning in FY25 and will likely persist for a period of 5–10 years following implementation, at which point the Postal Service will reevaluate resourcing needs. All costs were estimated in terms of 2022 dollars and pay scales.

Department of Labor—Office of Workers' Compensation Programs (OWCP)

Startup Costs: OWCP estimates a total of $72,500 in startup costs related to the PSRA. These include an estimated $50,000 in staff time for training on the PSRA changes and implementation, and $22,500 for pre- and post-implementation mailings to approximately 12,500 claimants and beneficiaries regarding changes to health benefit coverage. All costs were estimated based on 2022 dollars and pay scales.

Ongoing Costs: Beginning in 2025, OWCP estimates an additional $2,000 of annual, recurring costs for the creation and distribution of mailing announcements and customer service response letters related to the PSHB Open Season.

Department of Veterans Affairs (VA)

Startup Costs: The VA anticipates startup costs for system updates and development to meet the information sharing requirements outlined in § 890.1612 of the regulation. In total, the VA estimates $395,000 worth of IT contractor development work will be needed to integrate the existing Veteran Verification process with the centralized Enrollment and Eligibility System. The estimated costs are based on the anticipated number of scrum teams and sprints required to build this functionality and the projected firm-fixed-price contract rates. All costs were estimated in 2022 dollars.

Social Security Administration (SSA)

Startup Costs: SSA estimates $7.3 million in startup costs for staffing support and system updates related to the PSHB implementation. These include an estimated $5.16 million in staffing costs for project management, policy and business process development, and additional technician support for the initial SEP. Additionally, SSA anticipates $2.17 million in up-front costs for system enhancements that will be necessary to support data exchanges and the initial SEP.

Ongoing Costs: SSA anticipates approximately 3 FTEs will be needed to support the PSHB following implementation, with estimated salary and overhead costs totaling $408,000 annually. These costs are based on the anticipated workload for processing annual enrollments and exceptions related to the Medicare coverage requirements for postal annuitants and family members. Additionally, SSA anticipates a small cost for the ongoing data exchange with OPM, although this cost cannot be determined until the data exchange is completed and will ultimately be reimbursed by OPM.

Indian Health Service

Indian Health Service (IHS) estimates de minimis costs for PSHB implementation. This is based upon the assumption that self-attestation will be utilized for Postal Service annuitants and family members to provide proof of eligibility for IHS health services for purposes of an exception to the Medicare Part B requirement.

Carriers (Not Quantified)

Carriers will also have startup costs to participate in the PSHB Program, although the magnitude of these costs is unknown and will likely vary by carrier. Based on the 2021 FEHB headcount, OPM estimates that 41 FEHB Carriers provide coverage to Postal Service enrollees, and they will therefore be impacted by implementation of the PSHB Program. OPM has received applications for participation in the PSHB Program from 36 carriers, all of which currently participate in the FEHB Program. These carriers are expected to incur additional costs associated with the creation and administration of separate PSHB plans. These costs will likely be incurred for internal training, updating enrollment processes and information systems, updating financial systems, and development of proposals specific to the PSHB Program.

In developing plan options for the PSHB, carriers will not simply be able to duplicate FEHB plan designs as the requirement to integrate Part D coverage is substantively different. While large carriers may be able to leverage existing experience integrating Medicare Part D coverage in their other books of business, the need to apply and submit a different PSHB proposal will be a cost to carriers. PSHB Carriers will continue to incur annual costs to offer plans as there will need to be two sets of proposals, contract negotiations, and enrollment processing for carriers offering both PSHB and FEHB plans. This will likely create additional staffing costs on an ongoing basis.

Postal Service Annuitants (Not Quantified)

Existing and future Postal Service annuitants may incur additional costs in navigating both Medicare and PSHB enrollment decisions, particularly in the initial years following implementation. Prior to the PSHB Program Open Season, a six-month SEP will be offered to provide Postal Service annuitants and their family members who are entitled to Medicare Part A with the opportunity to enroll in Medicare Part B. This enrollment window will take place before PSHB benefits and premiums are set, meaning participants will not know the details of the PSHB premiums when making their Medicare election during the SEP. This could create additional burden and confusion for participants and may result in suboptimal enrollment decisions.

As with the training and communications costs for the first year, Postal Service employees may continue to need training as they approach retirement. They may generally experience new costs associated with interacting with a new set of options, especially if they have already planned to take certain actions upon retirement which are now infeasible under the PSRA. Additionally, as is true currently under FEHB, retirement will not be a PSHB qualifying life event. Postal Service annuitants will need to understand how their PSHB plan election will work with the Part B requirement upon retirement or wait for Open Season alignment in both Medicare and the PSHB to make a suitable choice for their health care insurance needs.

Transfers

The main impact of section 101 of the PSRA and these rules will be a transfer of costs from the Postal Service to

Medicare, which is funded by taxpayers, including the Postal Service and its beneficiaries. Additionally, a portion of prescription drug costs will likely be transferred to pharmaceutical manufacturers due to applicable point-of-sale discounts received by Medicare Part D enrollees. Table 3 summarizes the projected changes in annual premium expenditures for each of the primary stakeholders. These projections were obtained from separate, independent analyses performed by CMS, the Postal Service, and OPM, which were produced at different points in time and with different underlying methods and assumptions and are therefore intended to summarize the directional transfer of costs among the different stakeholders, not the overall budgetary impacts of the PSRA. Additionally, all estimates were based on FEHB and Medicare coverage as of 2023, and do not incorporate any changes expected from the Inflation Reduction Act or Carrier Letter 2023–02.[14] Details on the methods and assumptions utilized by each agency are provided in the table 3 footnotes.

The estimated costs in this table were aggregated from multiple, independent analyses conducted by separate agencies, and are intended only to represent the directional flow of costs between various stakeholders. Due to the differences in assumptions and methodology employed by each agency (as detailed below), the cumulative impacts represented in this table do not directly align with the general expectation, as detailed in the narrative below, that aggregate premium payments will be lower post-PSRA due to the transfer of costs to drug manufacturers via mandatory Part D discounts. All estimates are based on coverage provisions as of 2023 and *do not* reflect expected changes to pharmaceutical coverage from the Inflation Reduction Act or Carrier Letter Number 2023–04, the 2023 FEHB Call Letter.

Sources and methodology:

[1] Projected Medicare costs for additional Part B and Part D enrollment were provided by CMS.

[a] Part B projections were based on an assumption that about 7,000 new retirees plus spouses would enroll in Part B in 2025, and growth would be consistent with aged enrollment. Additionally, CMS assumed that roughly 14,000 existing retirees would enroll in 2025, which would degrade over time due to deaths. Expected costs and premiums for additional enrollees were assumed to be consistent with current average Part B beneficiaries.

[b] CMS estimated additional Part D costs based on projected annual headcounts of Postal Service annuitants. Annual headcounts were estimated using the 2021 Postal Service annuitant enrollment total (approximately 515,000) and applying an annual growth rate based on the number of new postal retirees in 2021. Growth estimates were trended by the projected annual growth in overall Part A and/or Part B enrollment and were decremented yearly by the annual mortality rates from SSA for ages 70–75. Using this methodology, CMS estimated that approximately 603,000 postal retirees would join Part D in 2025 and that this population would grow to 797,000 by 2032. To project annual Part D spending on Postal retirees, CMS assumed a 90/10 split between PDP–EGWP and MAPD–EGWP, and annual costs consistent with current beneficiaries in each of these enrollment categories.

[2] Based on estimates provided by USPS actuaries and budget analysts. Projected savings on PSHB premiums are based on the expected reduction in the portion of retirees' medical costs that will be paid by PSHB plans, which is expected to lower overall costs in the combined pool of annuitants and employees and reduce premiums. USPS assumed that 30% of grandfathered annuitants would enroll in Part B during the SEP, resulting in 30,000 new enrollments in 2025. Annual projections for current and annuitant Postal enrollee populations were based on mortality and retirement projections for the postal population, which were developed by OPM.

[3] Estimates from OPM Office of Administration (OA) Budget Summary as of January 2023. Assumed 30% of grandfathered annuitants and family members would join during SEP and stable population of total annuitants from 2025–2032 (annual new retirees + family members ≈ deaths in Postal annuitant population). Differential costs of FEHB and PSHB population was estimated using age distribution in the two populations, which skews slightly higher for Postal, and historical average costs by age band for the joint FEHB population. OA estimates a 5.8% reduction in average PSHB premiums beginning in 2025, which is attributed to the Part B and Part D requirements, and a 0.4% reduction in average FEHB premiums. Annual projections assumed a 4.8% medical inflation rate.

The mandatory Medicare Part B enrollment for all future Postal Service Medicare covered annuitants enrolled in PSHB starting in 2025, as well as the optional Part B enrollment for current annuitants who are entitled to Part A, will shift a portion of Government share of premium costs for these individuals away from the Postal Service and will shift some of their healthcare costs to Medicare.

Medicare Part B enrollment and the shift of healthcare costs to Medicare will lower the aggregate costs among the PSHB population as Medicare will cover a larger portion of healthcare costs for Postal Service annuitants and family members that would have previously been covered by a plan. Given that premiums are based on average per member costs of the combined pool of

[14] FEHB Program Carrier Letter Number 2023–02, *FEHB and Medicare Part D Prescription Drug Coordination* (published January 25, 2023), available at *https://www.opm.gov/healthcare-insurance/carriers/fehb/2023/2023-02.pdf.*

annuitants and employees, this will likely result in lower premiums for PSHB plans compared to current FEHB premium amounts. This will reduce costs for the Postal Service and Postal Service employees. Currently in FEHB, approximately 75% of retirees from the Postal Service are enrolled in Medicare Part B and pay the Part B premium. Some of the 25% of the retirees from the Postal Service without Medicare Part B may decide to enroll in Part B to coordinate with their PSHB coverage that starts in 2025. Those individuals and their family members will incur an increased cost for Part B premium that they otherwise would not incur if the retiree chose not to enroll in Part B. Because these individuals will ultimately be subject to premiums for both Medicare and PSHB plans, on net their premiums may be higher than FEHB premiums. At the same time, being covered by Medicare in conjunction with a PSHB plan may also reduce out-of-pocket expenses (*e.g.,* co-payments and co-insurance) for Postal Service annuitants compared to those that would otherwise have been incurred. In addition, because Medicare will pay primary for the costs of medical coverage, for those enrolled in Part B, costs of coverage are expected to be lower for the PSHB Program and could result in lower PSHB premiums than they would have been without the integration of Medicare. Furthermore, we anticipate that some PSHB plans will reimburse all or part of Part B premiums, as is currently the case with some FEHB plans.

As required in the PSRA, the Postal Service will need to pay to HHS the monthly late enrollment penalties for any Medicare Part B enrollments that occur during the 2024 SEP. These late enrollment penalties are assessed to enrollees as a monthly increase in Medicare Part B premiums. We estimate that approximately 100,000 Postal Service annuitant aged 65+ currently enrolled in the FEHB Program are not enrolled in Medicare Part B and, thus, would be eligible for the SEP. For these individuals, the late enrollment penalties will be paid by the Postal Service.

Uncertainty and Directional Effects Related to Enrollment, Utilization, and Carrier Participation

The summary above is based on baseline assumptions that plan enrollment, carrier participation, and healthcare utilization will remain consistent following implementation of the PSHB Program. It is likely that implementation of the PSHB Program and the additional Medicare enrollment requirements will impact some or all of these baseline assumptions, which will have downstream effects for cost and utilization within both the PSHB and FEHB populations. The magnitude and directionality of these effects will depend on several factors that are presently uncertain.

Individual carriers will likely weigh the costs and benefits of offering FEHB plans and PSHB plans. Shifting enrollment numbers and additional implementation costs may lead some carriers to scale back or discontinue offering both FEHB and PSHB plans. This would impact the number of available plan options for both PSHB and FEHB enrollees, as well as the likelihood that enrollees will be able to remain enrolled in a plan with the same carrier and have a consistent choice of plans and options from year to year. However, as noted below, it is likely that the PSRA will increase the total number of plans covering the Postal Service and non-Postal Service population notwithstanding that plan choices for each population may vary.

PSHB enrollees required to enroll in Medicare Part B would be subject to additional premiums, which may impact the likelihood of their enrollment in PSHB plans. It is estimated that around 25% of Postal Service annuitants who are otherwise eligible for Part B are not currently enrolled. It is possible they declined Part B coverage because they were satisfied with their FEHB coverage or felt that the additional Medicare premium costs were too high, although it is also possible that they were not fully aware of the benefits of Medicare enrollment on their overall health care expenses over the course of their lifetimes. Assuming that a similar percentage of future Postal Service annuitants would have made a similar determination, these individuals may now be required to enroll as a condition of PSHB eligibility. This may result in some Postal Service annuitants dropping PSHB coverage altogether if they determine that PSHB and Part B coverage together is unaffordable or duplicative for their health care circumstances, though this number may be limited since it would require those annuitants to forgo PSHB coverage for the rest of their lifetimes unless individuals enroll in a Medicare Advantage plan. This could potentially result in adverse selection within the PSHB plans, referring to the tendency for individuals with higher health risks to disproportionately elect more generous coverage. Ultimately, this would increase the average risk and costs within the PSHB enrolled population, creating upward pressure on premiums. Additionally, some carriers may elect not to offer or discontinue PSHB plans if they anticipate or experience lower than expected enrollment.

The additional Medicare Part B and Part D coverage may also induce a moral hazard effect due to the more robust coverage and lower cost-sharing. Moral hazard refers to the tendency of individuals to increase health care utilization and spending in response to greater coverage or lower out-of-pocket costs. If an individual is required to enroll in Medicare, they may feel more compelled to utilize the benefits, increasing overall health care consumption. This effect could increase utilization of both necessary and unnecessary health services upon introduction of increased coverage and lower cost sharing. Increased utilization among these individuals would increase the overall per member costs within the PSHB plans which may result in higher premiums and potentially impact health outcomes.

Because not all carriers will offer both FEHB plans and PSHB plans, the result is smaller risk pools within each plan option, which could lead to greater uncertainty with respect to costs. With smaller risk pools, each enrollee's health status has a larger impact on total costs. This can create greater variability in annual premiums. Smaller risk pools increase individual plans' exposure to high-cost outlier events, as there are fewer low or average-cost enrollees to offset these costs. Administrative costs would also be spread across smaller risk pools. To ensure financial solvency in such scenarios, plans may seek to price this additional risk exposure into premiums, resulting in an increase in the aggregate costs for all PSHB plan and FEHB plan enrollees compared to the baseline.

At present, there remains a great deal of uncertainty with respect to the longer-term impacts on plan enrollment, carrier participation, plan design, and plan premiums. It is possible that a number of FEHB Carriers will elect not to participate in the PSHB Program or to drop their current FEHB plan offerings. Consolidation within the FEHB and PSHB markets would likely benefit larger carriers and may yield some efficiencies through greater economies of scale, although on aggregate, it is expected that PSHB implementation will result in a greater number of total plans across both the FEHB and PSHB Programs and increased administrative costs and premiums. Fewer options within the PSHB Program may also simplify plan choice for employees and

annuitants, saving time on plan comparisons.

Enrollment in the PSHB Program, particularly among individuals who are required to enroll in Medicare Part B, is also uncertain. For future Postal Service annuitants, the requirement to enroll in Part B after retirement represents an additional cost. This will likely factor into individual retirement planning decisions and could potentially lead to employees remaining in the workforce longer to delay these additional costs. Likewise, lower-risk individuals may determine that their Medicare coverage, including Part B coverage is sufficient for their health care needs and opt out of PSHB enrollment. These aspects could impact PSHB Program risk pools and influence carriers' decisions on whether to continue offering plans in the PSHB Program. Each of these scenarios could trigger potential downstream effects on utilization and premiums and will be important to monitor.

F. Alternatives

There are no feasible alternatives to the final rule as it implements section 8903c, as added by the PSRA, which establishes the PSHB Program and is mandated by the law. Therefore, OPM does not have the discretion to forego issuing regulations altogether. However, we considered alternatives to certain aspects of this regulation.

Initial Enrollment in the PSHB Program and Medicare Part B

OPM recognizes that, for a small portion of Postal Service annuitants and their family members who take advantage of the Medicare Part B SEP from April 1 to September 30, 2024, there may be confusion about having two separate health plan enrollment opportunities given that the PSHB Program Open Season for plan year 2025 will occur from November 11 through December 9, 2024. As with FEHB plans, however, OPM's rate review process for PSHB plans will not be completed until September 2024, which makes simultaneous enrollment in Medicare Part B and PSHB plans impossible. If OPM were to open PSHB plan enrollment at the same time as the Medicare SEP, without completing the PSHB rate review process, enrollees would be selecting PSHB plans without knowing the monthly cost of their PSHB plan premium, which does not resolve the conflict.

We explored an opportunity for Postal Service annuitants to ''pre-enroll'' in PSHB plans prior to OPM completing its PSHB rate review process. Combining the opportunity to pre-enroll in a PSHB plan with the Medicare SEP would allow Postal Service annuitants to complete both actions simultaneously. Alternatively, Postal Service annuitants could be automatically enrolled in a PSHB plan at the same time they enroll in Medicare Part B. Automatic pre-enrollment in PSHB would relieve these Postal Service annuitants from two separate enrollment periods. However, we found both of these options would be undesirable for enrollees and their family members for several reasons.

Allowing individuals to pre-enroll in PSHB plans during the SEP means they would sign up for a plan without knowing their PSHB premium obligation. Similarly, because OPM will not have certified the PSHB plans by the time the Medicare SEP occurs, there would be no way for an individual to know whether a given carrier will be participating in the PSHB Program for the next plan year, let alone what the final contract would look like. In general, while allowing those annuitants taking advantage of the Medicare SEP to simultaneously pre-enroll in a PSHB plan seems like it could reduce confusion and frustration from having two separate enrollment obligations, the timing of simultaneous PSHB pre-enrollment and the Medicare SEP would mean choosing a PSHB plan with unknown benefits and premiums and likely having to review the selection again during the PSHB Open Season period to ensure that the plan an individual pre-enrolled in actually makes sense for them once plan details are finalized and approved by OPM.

Much of the rationale for considering PSHB plan pre-enrollment can be achieved by providing information about automatic enrollment to Postal Service employees, Postal Service annuitants, and their family members. Postal Service annuitants who wish to keep their plan or take as little action as possible can have their needs met as easily with automatic enrollment after Open Season ends instead of OPM implementing a new pre-enrollment or automatic pre-enrollment. In addition, under 5 CFR 890.301(f)(2), the OPM Director has the authority to modify the dates for Open Season or hold additional Open Seasons. These authorities and flexibilities exist under current regulations and may be exercised without needing to make any specific provisions under this rulemaking.

Centralized Enrollment

OPM is developing a centralized enrollment system simultaneously with the implementation of the PSHB Program. As explained above, the centralized enrollment system will shift certain responsibilities from the employing office to a new system which will function as an electronic enrollment solution for all PSHB stakeholder groups. Developing a centralized enrollment system for the PSHB Program allows OPM to take advantage of IT solutions and create a modern enrollment system for Postal Service employees, Postal Service annuitants, and their family members. OPM considered maintaining the existing enrollment processes that apply to enrollment in FEHB plans but ultimately determined that the establishment of the PSHB provided an ideal opportunity to utilize new technologies and centralization processes that will improve the experience of PSHB stakeholders.

PSHB Plan Coverage Effective Date

OPM considered keeping the effective date of coverage for coverage under PSHB Plans as the first day of the first pay period of the calendar year for Postal Service employees, as it is for FEHB Plans. Keeping the same effective date of coverage for PSHB Plans as the effective date of coverage for FEHB Plans that Postal Service employees are familiar with would not result in implementation costs or risk confusing existing enrollees.

The benefits of a January 1 effective date, however, outweigh the costs and risks of implementation and educating enrollees, as implementation costs are incurred only one time and after several years there will be little to no ongoing enrollee education needs. Conversely, the benefits of the January 1 date will remain indefinitely. A calendar year start date is convenient and is consistent with the industry standard and many similar programs, including health savings accounts, the Federal Employees Dental and Vision Insurance Program, and the cutoff date for certain exceptions to the Medicare Part B enrollment requirement for Postal Service Medicare covered annuitants and their covered members of family who qualify for an exception.

Regulatory Review

OPM has examined the impact of this rule as required by Executive Orders 12866, 13563, and 14094, which direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Office of Management and Budget has determined that this

rule is a ''significant regulatory action'' under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094.

Regulatory Flexibility Act

The Director of OPM certifies this regulation will not have a significant economic impact on a substantial number of small entities.

Federalism

OPM has examined this rule in accordance with Executive Order 13132, Federalism, and has determined that this rule will not have any negative impact on the rights, roles and responsibilities of State, local, or Tribal governments.

Civil Justice Reform

This regulation meets the applicable standard set forth in Executive Order 12988, Civil Justice Reform.

Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending by State, local, and Tribal governments in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold was approximately $183 million. This final rule does not mandate any requirements for State, local, or Tribal governments, or for the private sector.

Congressional Review Act

Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act) (5 U.S.C. 801 *et seq.*) requires rules (as defined in 5 U.S.C. 804) to be submitted to Congress before taking effect. OPM will submit to Congress and the Comptroller General of the United States a report regarding the issuance of this action before its effective date, as required by 5 U.S.C. 801. OMB's Office of Information and Regulatory Affairs has determined that this rule meets the criteria in 5 U.S.C. 804(2).

Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35)

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA), unless that collection of information displays a currently valid OMB Control Number.

In the interim final rule, OPM requested comment on what, if any, information collection activities may be required by this rulemaking, including any comments on whether to create a new information collection or revise the information collection for SF–2809, *Health Benefits Election Form,* under OMB Control number 3206–0160. A commenter recommended that OPM update the existing Standard Form (SF) 2809 for Postal Service employees and Postal Service annuitants rather than developing a new form under PSHB to accommodate the needs of the PSHB Program. OPM agrees with this suggestion and will update the SF–2809 to include PSHB enrollments. OPM notes that there is a corresponding health benefits election form for retirees, OPM 2809 (OMB control number 3206–0141). OPM will also update the OPM–2809 to include PSHB enrollments. The revised forms would be made available prior to Open Season for the PSHB Program, which will begin on November 11, 2024. OPM is publishing a separate notice regarding modifications to these forms and will provide opportunities to comment as required by the PRA. An initial notice of proposed changes to these information collections with a 60-day comment period is published elsewhere in this issue of the **Federal Register**. In that notice, in addition to the changes to the forms, OPM proposes to combine OMB Control number 3206–0160 and OMB Control number 3206–0141 into a single information collection.

The information collection for form SF–2809 (OMB Control Number 3206–0160) is currently approved with an estimated public burden of 9,000 hours. The information collection (OMB Control number 3206–0141) associated with that form is currently approved with an estimated public burden of 11,667 hours.

A list of routine uses associated with these forms can be found in the Privacy Act System of Records Notice (SORN), OPM/CENTRAL 1 Civil Service Retirement and Insurance, available at *https://www.opm.gov/information-management/privacy-policy/sorn/opm-sorn-central-1-civil-service-retirement-and-insurance-records.pdf.*

Participants in the 6-month Medicare Part B SEP will use form CMS 40B, Application for Enrollment in Medicare—Part B (Medical Insurance) (OMB control number 0938–1230) to enroll in Medicare Part B.

List of Subjects in 5 CFR Part 890

Administrative practice and procedure, Government employees, Health facilities, Health insurance, Health professions, Postal Service employees, Reporting and recordkeeping requirements, Retirement.

Office of Personnel Management.

Kayyonne Marston,

Federal Register Liaison.

For reasons stated in the preamble, OPM is adopting the interim rule amending 5 CFR part 890 published on April 6, 2023, at 88 FR 20383, as final with the following changes:

PART 890—FEDERAL EMPLOYEES HEALTH BENEFITS PROGRAM

■ 1. The authority citation for part 890 continues to read as follows:

Authority: 5 U.S.C. 8913; Sec. 890.102 also issued under sections 11202(f), 11232(e), and 11246 (b) of Pub. L. 105–33, 111 Stat. 251; Sec. 890.111 also issued under 36 U.S.C. 5522; Sec. 890.112 also issued under 2 U.S.C. 2051; Sec. 890.113 also issued under section 1110 of Pub. L. 116–92, 133 Stat. 1198 (5 U.S.C. 8702 note); Sec. 890.301 also issued under 26 U.S.C. 9801; Sec. 890.302(b) also issued under 42 U.S.C. 300gg–14; Sec. 890.803 also issued under 50 U.S.C. 3516 (formerly 50 U.S.C. 403p) and 22 U.S.C. 4069c and 4069c–1; subpart L also issued under section 599C of Pub. L. 101–513, 104 Stat. 2064 (5 U.S.C. 5561 note); subpart M also issued under 10 U.S.C. 1108 and 25 U.S.C. 1647b; and subpart P issued under 5 U.S.C. 8903c.

Subpart P—Postal Service Health Benefits Program

■ 2. Revise § 890.1604 to read as follows:

§ 890.1604 Medicare enrollment requirement for certain Postal Service annuitants and eligible family members.

(a) *Annuitant.* A Postal Service annuitant who is entitled to Medicare Part A must be enrolled in Medicare Part B to enroll or continue enrollment in a health benefits plan under this subpart, except as otherwise provided by paragraph (d)(1) of this section.

(b) *Member of family.* A Postal Service Medicare covered annuitant's member of family who is entitled to Medicare Part A must be enrolled in Medicare Part B to be covered or continue coverage in a health benefits plan under this subpart, unless:

(1) The Postal Service Medicare covered annuitant is excepted from the requirement to enroll in Medicare Part B as provided by paragraphs (d)(1)(i) through (v) of this section; or

(2) The member of family is excepted from the requirement to enroll in

Medicare Part B as provided by paragraphs (d)(2)(i) through (iv) of this section.

(c) [Reserved]

(d) *Exceptions.* The Medicare Part B enrollment requirements provided in paragraphs (a) and (b) of this section do not apply:

(1) To a Postal Service Medicare covered annuitant who—

(i) Was a Postal Service annuitant on or before January 1, 2025, and who was not both entitled to Medicare Part A and enrolled in Medicare Part B on January 1, 2025;

(ii) Was a Postal Service employee and was 64 years of age or older on January 1, 2025;

(iii) Resides outside the United States (which includes the States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands), provided that the individual demonstrates such residency;

(iv) Is enrolled in health care benefits provided by the Department of Veterans Affairs (VA) under 38 U.S.C. chapter 17, subchapter II, including individuals who are not required to enroll in the VA's system of patient enrollment referred to in 38 U.S.C. 1705(a), subject to the documentation requirements in paragraph (e)(2) of this section; or

(v) Is eligible for health services from the Indian Health Service, subject to the documentation requirements in paragraph (e)(3) of this section.

(2) To a Medicare covered member of family who—

(i) Is eligible for PSHB coverage under the PSHB enrollment of a Postal Service Medicare covered annuitant who is not required to enroll in Medicare Part B, as provided in paragraphs (d)(1)(i) through (v) of this section;

(ii) Resides outside the United States (which includes the States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands), provided that the individual demonstrates such residency;

(iii) Is enrolled in health care benefits provided by the VA under 38 U.S.C. chapter 17, subchapter II, including individuals who are not required to enroll in the VA's system of patient enrollment referred to in 38 U.S.C. 1705(a) to receive VA hospital care and medical services, subject to the documentation requirements in paragraph (e)(2) of this section; or

(iv) Is eligible for health services from the Indian Health Service subject to the documentation requirements in paragraph (e)(3) of this section.

(e) *Documentation requirements.* To qualify for an exception under paragraph (d) of this section, a Postal Service Medicare covered annuitant, or a Medicare covered member of family must meet one of the following documentation requirements:

(1) Documentation or information in a form, manner, and frequency as prescribed by OPM demonstrating qualification, satisfactory to the Postal Service, for the exceptions at paragraph (d)(1)(iii) or (d)(2)(ii) of this section;

(2) Documentation from the Department of Veterans Affairs in a form, manner, and frequency as prescribed by OPM demonstrating the individual meets an exception identified in paragraph (d)(1)(iv) or (d)(2)(iii), of this section; or

(3) Documentation from the Indian Health Service (IHS) in a form, manner, and frequency as prescribed by OPM in consultation with IHS demonstrating the individual meets an exception identified in paragraph (d)(1)(v) or (d)(2)(iv) of this section.

(f) *Notification of non-enrollment in Part B.* A Postal Service Medicare covered annuitant or a Medicare covered member of family who is required to be enrolled in Medicare Part B must promptly notify the Postal Service or OPM, in writing, if they choose not to enroll in or to disenroll from Medicare Part B as described in § 890.1608(e).

(g) *Effect of non-enrollment in Part B.* Failure to enroll or disenrollment from Medicare Part B will have the effect of a termination of PSHB coverage, as described in § 890.1608(b).

■ 3. Amend § 890.1606 by revising paragraph (e) to read as follows:

§ 890.1606 Opportunities to enroll, change enrollment, or reenroll; effective dates.

* * * * *

(e) Under this subpart, an enrollment, change of enrollment, or reenrollment made during Open Season takes effect on January 1 of the next year.

* * * * *

BILLING CODE 6325–63–P

DEPARTMENT OF ENERGY

10 CFR Chapter III

RIN 1901–ZA02

Interpretation of Foreign Entity of Concern

AGENCY: Office of Manufacturing and Energy Supply Chains (MESC), U.S. Department of Energy.

ACTION: Notification of final interpretive rule.

SUMMARY: On December 4, 2023, the U.S. Department of Energy (DOE or the Department) published in the **Federal Register** for public comment a proposed interpretive rule on DOE's interpretation of the statutory definition of ''foreign entity of concern'' (FEOC) in the Infrastructure Investment and Jobs Act, also known as the Bipartisan Infrastructure Law (BIL), which applies to multiple programs related to the battery supply chain. This statutory definition provides that, among other criteria, a foreign entity is a FEOC if it is ''owned by, controlled by, or subject to the jurisdiction or direction of a government of a foreign country that is a covered nation.'' In this final interpretive rule, DOE responds to public comments, clarifying the term ''foreign entity of concern'' by providing interpretations of the following key terms: ''government of a foreign country;'' ''foreign entity;'' ''subject to the jurisdiction;'' and ''owned by, controlled by, or subject to the direction.''

DATES: This final interpretive rule is effective May 6, 2024.

FOR FURTHER INFORMATION CONTACT: Widad Whitman, U.S. Department of Energy, Office of Manufacturing and Energy Supply Chains at Email: *FEOCguidance@hq.doe.gov,* Telephone: (202) 586–3302.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background and Purpose

Section 40207 of BIL (42 U.S.C. 18741) provides DOE $6 billion to support domestic battery material

processing, manufacturing, and recycling. Section 40207(b)(3)(C) directs DOE to prioritize material processing applicants that will not use battery material supplied by or originating from a ''foreign entity of concern'' (FEOC). Similarly, section 40207(c)(3)(C) directs DOE to prioritize manufacturing applicants who will not use battery material supplied by or originating from a FEOC and prioritize recycling applicants who will not export recovered critical materials to a FEOC. FEOC is defined in BIL section 40207(a)(5). The relevant paragraph lists five grounds upon which a foreign entity is considered a FEOC, described in subparagraphs (A) through (E). Subparagraphs (A), (B), and (D) address entities designated as foreign terrorist organizations by the Secretary of State, included on the Specially Designated Nationals and Blocked Persons List (SDN List) maintained by the Department of the Treasury's Office of Foreign Assets Control (OFAC), and alleged by the Attorney General to have been involved in various illegal activities, including espionage and arms exports, for which a conviction was obtained, respectively. Subparagraph (C) states that a foreign entity is a FEOC if it is ''owned by, controlled by, or subject to the jurisdiction or direction of a government of a foreign country that is a covered nation (as defined in [10 U.S.C. 4872(d)(2)]).'' The ''covered nations'' are the People's Republic of China (PRC), the Russian Federation, the Democratic People's Republic of North Korea, and the Islamic Republic of Iran (10 U.S.C. 4872(d)(2)). BIL section 40207(a)(5) provides no further definition of the term ''foreign entity'' or of the terms used in subparagraph (C).

Subparagraph (E) of BIL section 40207(a)(5) provides an additional means by which an entity may be designated to be a FEOC: a foreign entity is a FEOC if it is ''determined by the Secretary [of Energy], in consultation with the Secretary of Defense and the Director of National Intelligence, to be engaged in unauthorized conduct that is detrimental to the national security or foreign policy of the United States.'' The Secretary of Energy has not exercised this authority, as of this date.

In addition to affecting which entities DOE will prioritize as part of its BIL section 40207 Battery Materials Processing and Battery Manufacturing and Recycling Grant Programs, the ''Foreign Entity of Concern'' term is cross-referenced in section 30D of the Internal Revenue Code (IRC) (26 U.S.C. 30D), as amended by the Inflation Reduction Act of 2022 (IRA). Section 30D provides a tax credit for new clean vehicles, including battery electric vehicles. Section 30D(d)(7) excludes from the definition of ''new clean vehicle'' ''(A) any vehicle placed in service after December 31, 2024, with respect to which any of the applicable critical minerals contained in the battery of such vehicle (as described in [section 30D(e)(1)(A)]) were extracted, processed, or recycled by a [FEOC] (as defined in section 40207(a)(5) [of BIL] (42 U.S.C. 18741(a)(5))), or (B) any vehicle placed in service after December 31, 2023, with respect to which any of the components contained in the battery of such vehicle (as described in section 30D(e)(2)(A)) were manufactured or assembled by a [FEOC] (as so defined).''

On December 4, 2023, DOE published in the **Federal Register** its notice of proposed interpretive rule and request for comments related to the definition of FEOC contained in section 40207(a)(5) of BIL (88 FR 84082). The comment period closed on January 3, 2024.

After careful consideration of available information related to the battery supply chain and comments received, DOE is now issuing this final guidance regarding which foreign entities qualify as FEOCs, under BIL 40207(a)(5)(C), as a result of being ''owned by, controlled by, or subject to the jurisdiction or direction of a government of a foreign country that is a covered nation.'' For the purposes of this document, DOE uses the term ''interpretive rule'' and ''guidance'' interchangeably. At a future date, DOE may decide to initiate a separate rulemaking to implement the Secretary's ''determination authority'' contained in BIL section 40207(a)(5)(E) (42 U.S.C. 18741(a)(5)(E)).

To get the benefit of input from the public and interested stakeholders, the Department specifically requested comments on its proposed interpretation of the terms discussed in its proposed interpretive rule (88 FR 84082). The proposed interpretive rule was intended to solicit public feedback on DOE's interpretation to better understand stakeholder perspectives prior to implementation of finalized guidance. The Department considered all comments received during the public comment period and modified its proposed approach, as appropriate, based on public comment as described in section III of this document.

This final guidance proceeds as follows: Section II of this document provides a discussion of comments received and DOE's response to those comments; section III of this document provides an explanation of final interpretation and changes from the proposed interpretive rule; section IV of this document provides information on Regulatory Review of this interpretive guidance; section V of this document provides DOE's final interpretive rule on the definition of Foreign Entity of Concern; and section VI of this document provides the approval of the Office of the Secretary.

II. Discussion of Comments

A. Summary of Comments

DOE received 84 comment submissions in response to the proposed interpretive rule. Comments were received from original equipment manufacturers; cell producers; materials suppliers; component suppliers; trade organizations; a nonprofit organization; a consultant; foreign governments; and individuals. Forty-two—half of the total comments received—were from anonymous sources. Several comments included confidential business information, along with a non-confidential version to be uploaded to the docket for public viewing. Additionally, at the request of the governments of the Republic of Korea, Chile, and Australia, DOE met with delegations from each country. Meeting notes of these ex parte communications have been posted to the public docket. Commenters generally expressed support for the issuance of guidance, welcoming additional clarity on the definition of the term ''foreign entity of concern.'' Many comments raised specific concerns about the feasibility of compliance without bright-line administrable standards to govern which entities qualify as FEOCs. Many other submissions raised specific concerns about rules that too narrowly construe the term FEOC, raising concerns about manipulation of the battery supply chain by covered nations. Other submissions were more general in nature and did not provide specific comments on the proposed interpretive rule itself. All submissions were carefully reviewed, and DOE thanks the public for its engagement. DOE's responses to comment within the scope of this interpretive rule have been grouped by the topic area to which they pertain and are summarized as follows.

B. Foreign Entity

Comment: Multiple commenters sought clarity on how the guidance intends to treat a U.S.-headquartered company with its principal place of business in the United States but operating in a covered nation. Specifically, the commenters questioned whether such a U.S. entity's operations within a covered nation can be considered a FEOC under the guidance

even if the U.S. entity does not fall into the definition of ''foreign entity.''

Response: The guidance includes in the definition of ''foreign entity'' any ''partnership, association, corporation, organization, or other combination of persons organized under the laws of or having its principal place of business in a foreign country.'' If a U.S.-headquartered company has operations in a foreign country but has not organized under the laws of that country, then the guidance would not consider them to be a foreign entity. However, entities that operate within covered nations are typically required to be organized under the laws of that nation, and if that is the case, then such entities will be considered foreign entities, and thus subject to the jurisdiction of the covered nation's government. In this scenario, even though the operations of the U.S. entity located in the covered nation are considered a FEOC, this designation would not flow back to the U.S. entity's operations in the United States or other third-party countries.

C. Government of a Foreign Country

Comment: One commenter requested that DOE provide a definitive list of individuals who are considered to be current or former senior government officials and therefore considered part of the ''government of a foreign country.'' The commenter argued that determining which officials are considered ''senior'' and whether their family members hold interests in a company will not always be readily apparent.

Response: While DOE understands the commenter's concern, DOE declines to make this change. Compiling a complete list of current and former senior government officials would prove challenging given that the list would likely be subject to frequent change, difficult to predict, and very likely underinclusive. Furthermore, DOE does not have the resources to do so for every company that may be in the battery supply chain; however, individual participants in the battery supply chain will be in a position to individually analyze their specific upstream suppliers and ask those suppliers to provide information necessary for such an evaluation. DOE's guidance provides additional clarity for such evaluation by identifying markers of when an individual official should be considered ''senior,'' and in the case of the People's Republic of China (PRC), identifying particular Chinese Communist Party (CCP) entities whose current and former members should be considered senior foreign political figures.

Comment: Several other commenters requested that DOE provide greater clarity for the definition of ''senior foreign political figure,'' particularly regarding whether (a) there is a time period that may pass after which a former official can no longer be considered a part of the government of a foreign country; (b) what level an official must be to be considered ''senior;'' and (c) for the PRC, whether ''senior foreign political figure'' is limited to individuals with membership on the CCP entities identified in the guidance.

Response: There is no designated amount of time for how long an individual may be a former official and avoid being considered a ''senior foreign political figure.'' The concerns that arise from representing the government in a senior role and from membership on the CCP bodies identified in the guidance, for which former membership is considered, do not dissipate over time just because an individual no longer represents that government or political body.

The standard for determining whether a particular individual is a ''senior'' figure under the guidance is whether the individual exercises ''substantial authority over policy, operations, or the use of government-owned resources.'' In the context of the PRC, the guidance identifies particular CCP entities whose members should be considered to be senior officials of a ''dominant or ruling foreign political party.'' These bodies do not constitute all senior foreign political figures in the PRC, however. Apart from roles within a dominant political party, a senior official who works for the government of a covered nation in an official capacity, whether at a government ministry, for a state-owned enterprise (SOE), or within the military, may also be considered a ''senior foreign political figure.'' DOE declines to specify particular government positions that qualify as ''senior,'' but believes the standard provided (*i.e.,* ''a position of substantial authority over policy, operations, or the use of government-owned resources'') provides a reasonable standard with which to evaluate companies in the battery supply chain.

Comment: Other commenters argued that a determination of senior political figure ownership and involvement in private companies would be unduly onerous and may not be feasible. Relatedly, one commenter asked for greater clarity on what level of diligence and processes companies are expected to undertake to determine whether individuals or their family members who control entities within their supply chain qualify as senior foreign political figures.

Response: DOE's guidance has been drafted to provide a reasonable interpretation of the statutory definition of FEOC contained in 42 U.S.C. 18741(a), while taking into account administrability concerns. While outside the scope of this guidance, for the purposes of determining eligibility for the 30D tax credit, the Treasury Department's final regulations on Clean Vehicle Credits under Sections 25E and 30D; Transfer of Credits; Critical Minerals and Battery Components; Foreign Entities of Concern published elsewhere in this issue of the **Federal Register** and associated guidance (Rev. Proc. 2023–38) identify due diligence measures, including the potential for attestations of compliance from companies within a manufacturer's supply chain, that can be used to provide reasonable assurance that an entity's supply chain is free of FEOCs, including control by senior foreign political figures.

Comment: One commenter noted that the proposed interpretive rule suggests that local or subnational government-owned enterprises are considered to be part of the ''government of a foreign country'' and questioned whether all SOEs should be considered part of the ''government of a foreign country'' such that an entity controlled by an SOE at a level of 25% or more would also be a FEOC.

Response: DOE agrees that all SOEs, whether local or national, should be considered to be instrumentalities of a national or subnational government, and thus part of the ''government of a foreign country.'' As such, a national SOE's voting rights, equity interests, or board seats in an entity can be combined with a local SOE's ownership of the same entity to reach the 25% FEOC threshold for control of that entity.

Comment: One commenter asked for clarity as to whether, with respect to the PRC, a ''dominant or ruling political party'' in the interpretation of ''government of a foreign country'' refers only to the central party, or to local party apparatuses as well.

Response: The guidance includes local and subnational government officials in the definition of government of a foreign country, and therefore senior government officials at the local and subnational level should be considered to be part of the government of a foreign country. When it comes to senior officials from a dominant or ruling party, DOE's final interpretive guidance also makes clear that the list of specific CCP entities that are

considered part of the ''government of a foreign country,'' includes current, but not former, members of local or provincial Chinese People's Political Consultative Conferences (CPPCC).

D. Subject to the Jurisdiction

Comment: One commenter urged DOE to clearly define the term ''principal place of business'' in the guidance.

Response: DOE intends for the term ''principal place of business'' to be interpreted consistent with standard practice. The guidance is informed by the United States Supreme Court's formulation in *Hertz Corp.* v. *Friend,* in which a principal place of business is considered to be the ''place where a corporation's officers direct, control, and coordinate the corporation's activities [and] in practice it should normally be the place where the corporation maintains its headquarters—provided that the headquarters is the actual center of direction, control, and coordination, *i.e.,* the 'nerve center.' '' 559 U.S. 77, 92–93 (2010).

Comment: Multiple commenters argued that all subsidiaries of FEOCs should be considered FEOCs themselves, even when the parent entity is only a FEOC via jurisdiction due to it being headquartered within a covered nation.

Response: DOE declines to make this change. DOE's interpretive guidance is intended to clarify the statutory terms in a way that gives effect to the purpose of the statutory provisions to which it applies. The term FEOC within section 40207, as it applies to both DOE's battery materials processing and battery manufacturing and recycling grant programs and to the 30D tax credit, is intended to both reduce reliance upon covered nations in the battery supply chain and provide a pathway for companies in the United States and third-party countries to increase production of critical minerals, battery components, and battery materials. At this time, DOE concludes that United States or third-party country subsidiaries of entities that are headquartered within a covered nation do not necessarily pose the same risk to the battery supply chain as subsidiaries that are FEOCs by virtue of the government of a covered nation holding, directly or indirectly, 25% or more of the equity interests, board seats, or voting rights of the subsidiary. This is due to: (a) their location within the United States or third-party countries; and (b) the lack of direct control by the government of a covered nation. In addition, DOE's interpretation serves the intended purpose of the statute by providing a pathway for the onshoring and friend-shoring of critical minerals, battery components, and battery materials. This contrasts with the primary purpose of the CHIPS and Science Act of 2022, and the implementation of the Department of Commerce's substantially similar FEOC provision, which concerns the prevention of transfers of semiconductor technology to covered nation governments.

Comment: More than one of the commenters that urged that all subsidiaries of FEOCs be considered FEOCs themselves, expressed concern that companies headquartered in the PRC, even when privately held with no formal control by the government of the PRC, may receive significant government subsidy, grants, and debt financing to pursue expansion outside of the PRC. One of these commenters urged DOE to aggressively assess whether such companies are actually private or are engaged in activities designed to avoid FEOC designation.

Response: DOE considered whether to expand the definition of ''control'' under this interpretive rule to incorporate companies that are controlled by the government of a covered nation by virtue of significant investments by that government of the kind identified by the commenters (*e.g.,* subsidies, grants, or debt financing) from the government of a covered nation. However, DOE has not yet identified a sufficiently bright-line rule for such investments that would be administrable by entities in the battery supply chain or by vehicle manufacturers. Accordingly, DOE declines to make this change to the interpretive guidance at this time. With respect to its evaluation of applications for domestic battery material processing, manufacturing, and recycling grants under section 40207 of BIL, DOE notes that it will conduct a holistic risk evaluation process related to research, technology, and economic security. Such evaluation will include consideration of financial support by countries of concern, including the PRC. In addition, DOE may consider government investment as part of its exercise of the Secretary of Energy's authority under BIL section 40207(a)(5)(E) to designate an entity a FEOC if it is ''engaged in unauthorized conduct that is detrimental to the national security or foreign policy of the United States.'' Furthermore, DOE will continue to monitor the battery supply chain market and may consider revisiting this issue in the future through updated interpretive guidance defining control by the government of a covered nation based on significant investments from that government. Any information that may assist DOE in monitoring the battery supply chain market may be submitted to the email address identified in the ''For Further Information'' section of this document.

E. Owned by, Controlled by, or Subject to the Direction

Comment: Several commenters asked whether, when calculating an entity's voting rights, equity interests, or board seats held by the government of a covered nation, the guidance requires that these calculations be made in combination or independently.

Response: DOE responds with the following clarification. The 25% threshold applies to each metric independently, not in combination. For example, and assuming no other relevant circumstances, if an entity has 20% of its voting rights, 10% of its equity interests, and 15% of its board seats each held by the government of a covered nation, these percentages would not be combined to equal 45% control, but would each be evaluated independently, resulting in the entity being controlled at the level of the highest metric (*i.e.,* 20%) and thus not considered a FEOC. That said, DOE recognizes that significant levels of government control in all three metrics may still raise concerns. As such, as indicated above in response to a previous comment, DOE may incorporate such considerations into its evaluation of applications for grants under section 40207 of BIL, through utilization of the Secretary's authority under BIL section 40207(a)(5)(E), or through revisions to the interpretive guidance upon evidence of evasive gamesmanship with respect to the 25% threshold.

Comment: One commenter asked for greater clarity on what constitutes voting rights, equity interests, and board seats for the purposes of calculating whether a 25% controlling interest exists. Specifically, the commenter asked (a) whether DOE intended to refer to ''traditional voting rights belonging to common stockholders or the voting rights of owners'' or to ''the voting rights of a board;'' (b) how to calculate the value of an individual board seat; and (c) what constitutes equity interests for the purposes of the guidance.

Response: As previously stated, DOE notes that each of these metrics of control is intended to be calculated independently. For ''voting rights,'' DOE intends to refer to the voting rights of owners, as suggested by the commenter. This means that the voting power of owners of different types of stock, to the

extent this information is reasonably ascertainable, should be considered in calculating whether a FEOC controls 25% of the voting rights in an entity. For ''board seats,'' DOE intends for the value of a board seat to equal the value of its voting power on the board. So, if one board seat is held by a representative of the government of a covered nation and that seat holds 25% of the board voting power, then that entity would be considered a controlled FEOC. For ''equity interests,'' DOE intends to refer to percent value of the ownership interest, to include capital or profit interests and contingent equity interests, in the company held by an individual or entity, with the amount of contingent interest that can be reasonably determined included for the purpose of determining FEOC compliance.

Comment: Several commenters raised concerns that the analysis required to evaluate the FEOC compliance of a manufacturer's supply chain, including the voting rights, board seats, and equity interests for privately held companies, will be unduly burdensome and create administrability problems. Other commenters, however, stated that the FEOC guidance is stringent but, for the most part, workable.

Response: DOE's guidance has been drafted to give a reasonable interpretation to the statutory definition of FEOC contained in 42 U.S.C. 18741(a), while taking into account administrability concerns. The due diligence measures required for determining FEOC compliance for purposes of determining eligibility for the 30D tax credit and for DOE's BIL 40207 grant programs are outside the scope of this guidance.

Comment: One commenter stated that the 25% threshold for control is too bright-line and will allow an entity to drop its covered nation government ownership stake to 24.9% to avoid being deemed a controlled FEOC. Several other commenters stated their support for the 25% bright-line threshold and the guidance's alignment with the Department of Commerce's FEOC definition in its Final Rule on Preventing the Improper Use of CHIPS Act Funding (CHIPS Rule) as published in the **Federal Register** on September 25, 2023 (88 FR 65600).

Response: DOE declines to make a change. The guidance attempts, to the greatest degree possible, to establish bright-line rules to allow individual entities seeking to take advantage of BIL section 40207 and IRC section 30D to readily evaluate whether their upstream suppliers should or should not be considered FEOCs. Without that clarity, individual entities would be unable to properly evaluate their supply chains. To the extent that an entity changes its ownership structure to fall below the 25% threshold, DOE views such restructuring as a desirable dilution of covered nation government control, consistent with the purposes of the FEOC restrictions in BIL section 40207 and IRC section 30D, as DOE understands them.

Comment: Similarly, another commenter stated that DOE's interpretation of indirect control allows for an entity to alter its ownership structure to skirt the FEOC ban, by nesting control and allowing control to defuse through levels of subsidiaries.

Response: DOE declines to make a change. First, not all ownership stakes dilute in a tiered ownership structure. Specifically, DOE notes that the guidance makes clear that the controlling stake of a parent company with 50% or more interest in a subsidiary does not attenuate. Thus, the covered nation government's level of control would not attenuate in a situation where there exist tiers of subsidiaries that are owned at a level of 50% or more. Second, DOE's approach to calculating indirect control recognizes the reality that, in the case of multiple tiers of minority control by a covered nation government, the actual ability of the covered nation government to influence the operations of a subsidiary may become materially attenuated.

Comment: One commenter asked for clarification on why DOE used the parenthetical phrase ''(including the government of a foreign country that is a covered nation)'' in the interpretation of ''control,'' since the focus of the guidance relates to control by the government of a covered nation.

Response: The interpretation of ''control'' in the guidance is meant to encompass both situations where the government directly controls an entity and when the government may indirectly control an entity through another entity that is not itself the government of a covered nation. In addition, the ''control'' definition is also embedded into the interpretation of ''foreign entity,'' to identify situations where a U.S. entity is considered to be ''foreign'' as a result of control. The parenthetical is intended to make clear that ''control'' refers to both direct and indirect control by the government, and control within the interpretation of ''foreign entity.''

Comment: Several commenters asked for clarification on how to evaluate levels of control within a joint venture. Specifically, the commenters questioned whether a joint venture should be evaluated using the licensing and contracting provision of the guidance or if joint ventures should be evaluated solely under the 25% control prong.

Response: DOE responds by clarifying that whether a FEOC holds a controlling interest in a JV entity (through voting rights, equity interests, or board seats) is determined under the 25% control threshold. Thus, a separate entity that exists as a 50–50 JV, in which one of the members of the JV is a FEOC, would be considered to be a FEOC. In a situation where a FEOC maintains less than 25% control of a JV, the JV agreement would not confer ''effective control'' of the JV entity unless, by its terms, it gives a FEOC the right to determine the quantity or timing of production; to determine which entities may purchase or use the output of production; to restrict access to the site of production to the contractor's own personnel; or the exclusive right to maintain, repair, or operate equipment that is critical to production.

Comment: One commenter asked for clarification as to whether the ''effective control'' definition only applies when the other entity (licensor/contractor) is a FEOC.

Response: DOE responds that the ''effective control'' definition in the guidance is only relevant as it relates to licenses and contracts with an entity considered to be a FEOC. The language of the guidance has been edited to clarify.

Comment: Multiple commentors asked for clarification on whether the ''effective control'' test in the definition of ''owned by, controlled by, or subject to the direction'' applies only when the licensor or contractor is a FEOC because it is subject to at least 25% control by the government of a covered nation or also when the licensor or contractor is a FEOC due to being ''subject to the jurisdiction'' of a covered nation.

Response: DOE responds by clarifying that an entity can be subject to effective control through a license or contract with any entity that is deemed a FEOC, whether via the 25% threshold for control or via jurisdiction. The proximity of a FEOC to the government of a covered nation, even when the government does not have a controlling stake in the company, raises similar concerns in the context of a license or contract with a non-FEOC, and the non-FEOC should retain the identified rights to avoid effective control by the FEOC.

Comment: One commenter suggested that DOE modify the fifth right to be reserved within a license or contract with a FEOC, which requires that IP and technology that is the subject of the

contract be accessible to the non-FEOC entity ''notwithstanding any export control or other limit on the use of intellectual property imposed by a covered nation subsequent to execution.'' The commenter suggested that the provision could be interpreted to call for the defiance of foreign laws.

Response: To ensure that a license or contract with a FEOC does not result in effective control, a non-FEOC should reserve the listed rights at the time of entering into the license or contract. DOE's view is that new export controls would not be applicable to IP that has already been transferred, *i.e.,* IP licenses with an effective date prior to implementation of a new export control. That said, it is not DOE's intent that this language place a manufacturer in the position of having to violate a foreign law. Therefore, DOE has edited the fifth right to state that the parties to the given license or contract commit that the non-FEOC party will retain access to and use of any intellectual property, information, and data critical to production ''for the duration of the contractual relationship.''

Comment: One commenter requested confirmation on their understanding of the first and fifth rights identified by DOE to be retained by a non-FEOC entity entering into a license or contract with a FEOC. Specifically, the commenter stated its understanding that the first right would allow the non-FEOC entity to acquire information from the FEOC related to the quantity of critical minerals or components necessary to manufacture a battery or battery component, and the fifth right would allow the non-FEOC entity to obtain assistance from the FEOC in operating, maintaining, and repairing equipment critical to production.

Response: The commenter is correct that the non-FEOC entity would be able to obtain information and assistance from the FEOC as described above. The determining factor as to whether the retained rights have prevented ''effective control'' by a FEOC under the guidance is whether the non-FEOC entity has the right of access and the authority to make decisions. In order to fully exercise those rights, however, it may be necessary for the non-FEOC entity to obtain information and assistance from the FEOC entity.

Comment: In the context of the ''effective control'' definition and the safe harbor rights identified in the guidance, one commenter requested that DOE provide a limited exception or transition period for licenses and contracts that were signed between enactment of the IRA and the issuance of DOE's proposed interpretive guidance, if the non-FEOC entity can establish that the FEOC entity does not have effective control through alternate means.

Response: DOE's guidance is limited to providing an interpretation of the statutory term ''foreign entity of concern,'' and related terms. Whether to provide an exception or transition period to eligibility for a particular program or incentive is out of scope of this interpretive guidance.

F. Other Comments

i. General Comments Related to Proposed Interpretive Rule

Comment: Several commenters urged DOE to create a definitive list of entities considered to be FEOCs.

Response: DOE declines to make this change. The criteria for ''foreign entities of concern'' were articulated in the Infrastructure Investment and Jobs Act (IIJA). DOE recognizes that, for some of the criteria, in particular the criteria related to foreign entities that have been alleged by the Attorney General to have been involved in certain activities for which a conviction was obtained, there may not be a consolidated, readily available list. For the criteria that are the subject of this guidance (*i.e.,* a foreign entity that is ''owned by, controlled by, or subject to the jurisdiction or direction of the government of a covered nation''), DOE is not in a position to provide a comprehensive list of every entity that qualifies as a FEOC. Providing a definitive list of FEOCs could result in attempts to evade the rule through corporate restructuring that does not change actual control and would be overly burdensome on DOE to create and maintain such a list for the entire battery supply chain. Accordingly, the guidance provides standards to assist companies in determining whether the particular entities in their battery supply chain are FEOCs. These companies are better positioned than DOE to conduct due diligence on and obtain certifications from entities within their supply chain, with whom they maintain a contractual relationship. DOE expects that, given the guidance provided in this final interpretive rule, relevant entities can exercise appropriate diligence to identify entities that fall within the criteria articulated in the IIJA.

Comment: Several commenters urged DOE to establish a voluntary pre-review process to allow manufacturers to submit to DOE potential licenses and contracts with FEOCs to determine whether it would lead to effective control by the FEOC. Several of the commenters also requested that such a pre-review process be structured in a confidential manner.

Response: While DOE requested comment on the desirability of establishing and the potential structure of a pre-review process for licenses and contracts, DOE is declining to establish such process at this time. Instead, as established in the Treasury Department's 30D rule and associated guidance, DOE will play a pivotal role in reviewing all of the documentation that is provided to the IRS for the purpose of determining eligibility for the 30D tax credit. DOE's review of licenses and contracts for effective control will take place through that process.

Comment: Multiple commenters urged DOE to use the determination authority provided in section 40207(a)(5)(E) of BIL to allow the Secretary of Energy, in consultation with the Secretary of Defense and the Director of National Intelligence, to designate an individual entity as a FEOC ''engaged in unauthorized conduct that is detrimental to the national security or foreign policy of the United States.''

Response: DOE responds that it continues to consider whether and how to use the determination authority in BIL section 40207(a)(5)(E).

ii. Comments Related to Treasury's 30D Rule

Comment: One commenter urged DOE to clearly define the terms of ''critical minerals,'' ''components,'' and ''materials'' in this guidance.

Response: DOE declines to make this change. The definitions identified by the commenter are relevant to DOE's interpretative guidance only insofar as it applies to eligibility for the 30D tax credit. The Treasury Department has defined these terms in the relevant regulations.

Comment: Several commenters suggested that the U.S. Government should consider providing extensions of time for compliance with FEOC sourcing rules or waivers of any penalties involving 'unintentional' transactions with entities later determined to be FEOCs as the industry tries to implement these new rules. Another commenter expressed strong support for phasing out the Treasury Department's transition rule for non-traceable critical minerals.

Response: DOE's guidance is limited to providing an interpretation of the statutory term ''foreign entity of concern,'' and related terms. As such, comments related to extensions of time to allow for a transition period, waiver of penalties associated with an

unintentional interaction with a FEOC, or transition rule phase-outs are outside the scope of this interpretive guidance.

Comment: One commenter expressed concerns that the Federal government has failed to provide a harmonized definition of the term ''foreign entity of concern,'' specifically noting its belief that DOE and the Treasury Department, for the purposes of the 30D tax credit, do not have a common definition of FEOC.

Response: DOE and the Treasury Department have harmonized their FEOC definitions for the purposes of implementing the 30D tax credit, as Treasury has incorporated DOE's FEOC guidance into its 30D rule.

Comment: One commenter expressed concern that some critical minerals producers would not be able to certify compliance with FEOC rules because they use a mixture of ingredients from FEOC and non-FEOC sources that cannot be separated physically.

Response: DOE's guidance is limited to providing an interpretation of the statutory term ''foreign entity of concern,'' and related terms. This comment is out of scope of this interpretive guidance.

Comment: Several commenters requested clarification from DOE as to what sort of documentation and materials DOE would deem sufficient to certify FEOC compliance with the Internal Revenue Service for the purposes of the 30D tax credit and for the battery ledger identified in the Treasury Department's 30D rule. For instance, one commenter asked whether a guarantee letter from a third-party manufacturer or supplier that confirms it is a non-FEOC is sufficient to substantiate its non-FEOC status to the IRS.

Response: DOE's guidance is limited to providing an interpretation of the statutory term ''foreign entity of concern'' and related terms, and this comment is outside the scope of this interpretive guidance. The due diligence measures required for determining FEOC compliance for purposes of determining eligibility for the 30D tax credit and for DOE's BIL 40207 grant programs are outside the scope of this guidance.

iii. Comments Related to the Inflation Reduction Act

Comment: DOE received several comments, both positive and negative, about the relative merits of the Inflation Reduction Act. Some of these commenters stated that the IRA will support energy reliability, clean energy production, and a variety of other goals. Other commenters stated that IRA provisions limiting eligibility for government incentives (*e.g.,* excluding new clean cars from eligibility if they source from FEOCs) is discriminatory, protectionist, and violates basic principles of the World Trade Organization.

Response: DOE notes that all of these comments are directed at the underlying statute, which is outside the scope of this interpretive guidance.

III. Explanation of Final Interpretation and Changes From the Proposed Interpretive Rule

A. Purpose

The term FEOC, as used in both BIL section 40207 and IRC section 30D, is intended to address upstream supply chains of individual entities that may benefit from direct or indirect Federal government financial support. As such, the interpretations proposed here are intended to be structured as, to the greatest degree possible, bright-line rules that allow individual entities to readily evaluate whether their supply chain includes FEOCs. In the case of the Battery Materials Processing and Battery Manufacturing and Recycling Grants programs in BIL section 40207, a bright-line rule will afford eligible entities using their grants for battery materials processing or advanced battery component manufacturing greater clarity in avoiding using battery materials supplied by or originating from a FEOC; similarly, such a rule will afford those eligible entities using their grants for battery recycling greater clarity in avoiding the export of recovered critical materials to a FEOC.

B. Foreign Entity

DOE's final interpretive rule does not make any changes to its interpretation of the term ''foreign entity.'' To be considered a FEOC under BIL section 40207(a)(5) (42 U.S.C. 18741(a)(5)), the statute requires that the entity be a ''foreign entity.'' However, section 40207 does not define ''foreign entity.''

The interpretation of ''foreign entity'' in this final guidance aligns closely with the definition of ''foreign entity'' contained in the 2021 National Defense Authorization Act (NDAA) (15 U.S.C. 4651(6)), which informs certain Department of Commerce programs related to semiconductors. Both the interpretation in this guidance and the 2021 NDAA definitions define foreign entities to include three main categories of entities: (1) a government of a foreign country and a foreign political party; (2) a natural person who is not a lawful permanent resident of the United States, citizen of the United States, or any other protected individual (as such term is defined in 8 U.S.C. 1324b(a)(3) (addressing unfair immigration-related employment practices)); or (3) a partnership, association, corporation, organization, or other combination of persons organized under the laws of or having its principal place of business in a foreign country.

DOE's interpretation specifically provides that entities organized under the laws of the United States that are subject to the ownership, control, or direction of another entity that qualifies as a foreign entity will also qualify as ''foreign entities'' for the purposes of BIL section 40207(a)(5)(C). The 2021 NDAA definition of foreign entity allows for U.S. entities to be considered foreign in this way and also provides an additional list of criteria by which such persons may be considered foreign due to their relationship with the three main categories of foreign entities. While these criteria are relevant for the purposes of the Department of Commerce programs at issue, which are primarily concerned with preventing the transfer of semiconductor technology to covered nation governments, DOE assesses that the criteria are not necessary for the purpose of evaluating covered nation-associated risk to the battery supply chains, because the natural persons and corporate entities that are relevant to the battery supply chain are already encompassed in the identified criteria for ''foreign entity.'' DOE's interpretation ensures that the government of a covered nation cannot evade the FEOC restriction simply by establishing a U.S. subsidiary, while otherwise maintaining ownership or control over that subsidiary.

C. Government of a Foreign Country

DOE's final interpretive rule makes minor, clarifying changes to its interpretation of the term ''government of a foreign country.'' The term ''government of a foreign country'' is a term used to determine whether an entity is ''owned by, controlled by, or subject to the jurisdiction or direction of a government of a foreign country.'' It is also used in the interpretation of ''foreign entity'' in paragraph (i) of section V.B of this document.

DOE's interpretation of the term ''government of a foreign country'' contained within this notice includes subnational governments, which can have significant ownership or control of firms in the vehicle supply chain. In the covered nations at issue here, there exist many subnational and local government-owned entities, that play a large role in their nation's economies,

and local SOEs are a large driver of regional economies. This term also includes instrumentalities, which include separate legal entities that are organs of a state but where ownership may be unclear, such as a utility or public financial institution. This interpretation aligns with the definition of ''foreign government'' promulgated by the Department of the Treasury in its regulations implementing the Committee on Foreign Investment in the United States (CFIUS) program (31 CFR 800.221). That definition includes ''national and subnational governments, including their respective departments, agencies, and instrumentalities.''

DOE's interpretation of the term ''government of a foreign country'' also includes senior foreign political figures. This inclusion recognizes the reality of government influence over business entities in covered nations, which is often exercised through individuals representing the government on corporate boards or acting at the direction of the government or to advance governmental interests when serving as an equity owner or through voting rights in an otherwise privately held business. This interpretation aligns with the Defense Department's National Industrial Security Program Operating Manual (NISPOM) regulatory definition of ''foreign interest'' (32 CFR 117.3) and associated ''foreign ownership, control or influence'' (FOCI) regulations (32 CFR 117.11), which recognize as FOCI the influence of a representative of a foreign government with the power to direct or decide issues related to a U.S. entity. In addition, in order to deal with the situation in which officials leave their official positions in order to exert the same type of influence on behalf of the government, the interpretation also includes former senior government officials and former senior party leaders. Inclusion of former officials is consistent with regulatory definitions in other contexts. As stated in response to comments above, the guidance does not limit the ''former'' designation to a particular period of time, as the concerns arising from membership on the CCP bodies identified below, do not dissipate over time just because an individual no longer serves as a member of that body. For example, the Bank Secrecy Act (BSA) private banking account regulations (relating to due diligence program requirements for private banking accounts established, maintained, administered, or managed in the United States for foreign persons) administered by the Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) include both current and former officials in the definition of ''senior foreign political figure'' (31 CFR 1010.605(p)). Those regulations provide further interpretation of the term ''senior official'' that DOE has also included to provide additional clarity.

DOE's final interpretive rule clarifies that ''senior foreign political figure'' includes both individuals who are senior officials in the government and senior officials within a dominant or ruling political party, as well as family members of such individuals. In the specific context of the PRC, DOE considers ''senior foreign political figure'' to include (a) individuals currently or formerly in senior roles within the PRC government, at the central and local levels; (b) individuals currently or formerly in senior roles within the Chinese Communist Party (CCP) and bodies and commissions under the Central Committee; (c) current and former members of the CCP Central Committee, the Politburo Standing Committee, the Politburo, the National People's Congress and Provincial Party Congresses, and the national Chinese People's Political Consultative Conference (CPPCC); and (d) current but not former members of local or provincial CPPCCs.

Finally, the inclusion of immediate family members of senior foreign political figures in the interpretation of ''government of a foreign country'' aligns with the BSA private banking regulation. Those regulations include the immediate family members of a senior foreign political figure in their definition of ''senior foreign political figure'' (31 CFR 1010.605(p)(1)(iii)). Immediate family members in those regulations mean spouses, parents, siblings, children, and a spouse's parents and siblings (31 CFR 1010.605(p)(2)(ii)).

D. Subject to the Jurisdiction

DOE's final interpretive rule does not make any changes to its interpretation of the term ''subject to the jurisdiction.'' If an entity is ''subject to the jurisdiction'' of a government of a foreign country that is a covered nation, the entity is a FEOC. DOE's interpretation provides an objective standard, consistent with the common understanding of ''jurisdiction,'' rather than a subjective standard that relies upon an individual nation's understanding of its own jurisdictional reach. As such, the interpretation first recognizes that any organization formed under the laws of the government of a covered nation is a national of that nation and therefore subject to its direct legal reach. *Cf.* 28 U.S.C. 1332(c)(1) (noting that, for the purposes of diversity jurisdiction, ''a corporation shall be deemed to be a citizen of every . . . foreign state by which it has been incorporated and of the . . . foreign state where it has its principal place of business''). In addition and as stated above in response to comments, determining an entity's principal place of business under the guidance should be guided by the United States Supreme Court's formulation in *Hertz Corp.* v. *Friend,* in which a principal place of business is considered to be the ''place where a corporation's officers direct, control, and coordinate the corporation's activities [and] in practice it should normally be the place where the corporation maintains its headquarters—provided that the headquarters is the actual center of direction, control, and coordination, *i.e.,* the 'nerve center.' '' 559 U.S. 77, 92–93 (2010).

Second, DOE's interpretation accounts for the fact that several critical segments of the battery supply chain today are predominantly processed and manufactured within covered nation boundaries,[1] and recognizes that a covered nation will be able to exercise legal control (potentially forcing an entity to cease production or cease exports) over an entity with respect to any critical minerals that are physically extracted, processed, or recycled, any battery components that are manufactured or assembled, and any battery materials that are processed within those boundaries, even if the entity is not legally formed under the laws of the covered nation. *See* Fourth Restatement (Foreign Relations) (2018) section 408 (stating that ''[i]nternational law recognizes a state's jurisdiction to prescribe law with respect to persons, property, and conduct within its territory''). At the same time, DOE's interpretation recognizes that such an entity, which is not legally formed in a covered nation but has production activities *inside* a covered nation, may also have separate production activities that occur *outside* the covered nation. In that case, the covered nation does not have jurisdiction over those outside production activities. Therefore, under the guidance, an entity that is not legally incorporated in a covered nation could nevertheless be considered a FEOC under the jurisdiction prong with respect to the particular critical minerals, battery components, or battery materials that are subject to the jurisdiction of a covered nation. But the entity would not be considered a FEOC

[1] *100-day-supply-chain-review-report.pdf* (*whitehouse.gov*).

with respect to its activities related to other critical minerals, battery components, or battery materials that are not subject to the jurisdiction of a covered nation.

Finally, when an entity is a FEOC due to it being ''subject to the jurisdiction'' of a covered nation, subsidiaries of the FEOC are not automatically considered to be FEOCs themselves based solely on their parent being a covered nation jurisdictional entity. A subsidiary entity would be considered a FEOC itself, however, if it is also either (1) ''subject to the jurisdiction'' of the covered nation, pursuant to section V.D of this document, or (2) ''controlled by'' a covered nation government (including via direct or indirect control, such as through joint ventures, or via contracts that confer effective control to a FEOC), pursuant to section V.E of this document.

DOE's interpretation is supported by statutory and regulatory choices made in similar contexts, including: the 2021 NDAA definition of ''foreign entity'' (15 U.S.C. 4651(6)); and the NISPOM regulatory definition of ''foreign interest'' (32 CFR 117.3). The interpretation of ''subject to the jurisdiction'' provides clarity to original equipment manufacturers (OEM) that removing FEOCs from their supply chain will require removal of any critical minerals, battery components, and battery materials that are directly produced within the boundary of a covered nation.

E. Owned by, Controlled by, or Subject to the Direction

DOE's interpretive rule is largely consistent with the proposal but makes some clarifying edits in response to comments. If an entity is ''owned by, controlled by, or subject to the direction'' (hereinafter ''control'') of a government of a foreign country that is a covered nation, the entity is a FEOC. The term is also used in paragraph (iv) of DOE's interpretation of foreign entity to account for situations where a U.S. entity is sufficiently controlled to be considered foreign. DOE's interpretation provides for both (1) control via the holding of 25% or more of an entity's board seats, voting rights, or equity interest, and (2) control via license or contract conferring rights on a person that amount to a conferral of control.

As previously stated in response to comments, DOE considered whether to expand the definition of ''control'' under this interpretive rule to incorporate companies that are controlled by the government of a covered nation by virtue of significant investments by that government of the kind identified by commenters (*e.g.,* subsidies, grants, or debt financing). However, DOE has not yet identified a sufficiently bright-line rule for such investments that would be administrable by vehicle manufacturers in the context of the Treasury Department's 30D tax credit. Accordingly, DOE declines to make a change to the interpretive guidance at this time, but may incorporate consideration of such government investments into its evaluation of applications for domestic battery material processing, manufacturing, and recycling grants under section 40207 of BIL, or through utilization of the Secretary's exercise of her authority under BIL section 40207(a)(5)(E) to designate an entity a FEOC if it is ''engaged in unauthorized conduct that is detrimental to the national security or foreign policy of the United States.'' Furthermore, DOE will continue to monitor the battery supply chain market and may consider revisiting this issue in the future through updated interpretive guidance defining control by the government of a covered nation based on significant investments from that government. Any information that may assist DOE in monitoring the battery supply chain market may be submitted to the email address identified in the ''For Further Information'' section of this document.

i. Control via 25% Interest

DOE's interpretation of control is informed by careful analysis of corporate structure within the battery supply chain. In the battery industry, the primary methods by which a parent entity, including the government of a foreign country, exercises control over another entity is through voting rights, equity interests, and/or its boards of directors. Parent entities may exercise control via majority equity interest, voting rights, or board seats, and also through minority holdings. Furthermore, parent entities may act in concert with other investors to combine minority holdings in order to exercise control. As a result, an effective measure of control is one that considers multiple permutations of majority and minority holdings of equity interest, voting rights, and board seats that can cumulatively confer control. In response to comments, DOE's final interpretation clarifies that each of these metrics—voting rights, equity interests, and board seats—are evaluated independently. As noted above, and assuming no other relevant circumstances, if an entity has 20% of its voting rights, 10% of its equity interests, and 15% of its board seats each held by the government of a covered nation, these percentages would not be combined to equal 45% control, but would result in the entity being controlled at the level of the highest metric (*i.e.,* 20%), and thus, not considered a FEOC. That said, DOE recognizes that significant levels of government control in all three metrics may still raise concerns. As such, as indicated above in response to comments, DOE may incorporate such considerations into its evaluation of applications for grants under section 40207 of BIL, through utilization of the Secretary's designation authority under BIL section 40207(a)(5)(E), or through revisions to the interpretive guidance upon evidence of evasive gamesmanship with respect to the 25% threshold.

While there are several prominent companies within the battery supply chain that are majority-owned by covered nation governments, particularly in the upstream mining segment, the predominant form of state ownership and influence in most segments of the battery supply chain is through minority shareholding, voting rights, or board seats. DOE has evaluated a range of supply chain entities for which covered nation governments and officials with cumulative holdings between 25% and 50% have meaningful influence over corporate decision-making, even in cases of subsidiary entities operating in other jurisdictions and in the case of multiple minority shareholders acting in concert. However, DOE's assessment of the battery supply chain strongly suggests that minority control can attenuate with multiple tiers of separation between the state and the firm performing the covered activity.

DOE recognizes that a bright-line metric for control will be necessary to ensure that OEMs can feasibly evaluate the presence of FEOCs within their supply chains. Informed by empirical evidence in the battery supply chain and choices made in other regulatory contexts, as discussed further below, DOE's interpretation establishes a 25% threshold and guidance on calculating the attenuation of control in a tiered ownership structure. In the case of majority control by a covered nation government, that control is not diluted such that outright ownership (50%+) confers full control. This ensures that a covered nation government is still considered to control, indirectly, a majority-owned subsidiary of a government-controlled company. However, multiple layers of minority control by a government may become so attenuated that an entity would no longer be classified as a FEOC. This

bright-line threshold and guidance on how to calculate control will enable an evaluation of battery supply chains and facilitate any required reporting or certification of whether that supply chain includes products produced by a FEOC. This same analysis applies to joint ventures, such that if the government of foreign country that is a covered nation controls, either directly or indirectly, 25% or more of a joint venture, then that joint venture is a FEOC.

DOE's interpretation is supported by choices made in a variety of statutory and regulatory regimes, while the identified methods of control account for specific circumstances present in the battery industry. DOE takes a broad approach to the interests that count towards the 25% threshold, considering board seats, voting rights, or equity interest. This is consistent with FOCI regulations, which evaluate ownership based on equity ownership interests sufficient to provide ''the power to direct or decide issues affecting the entity's management or operations'' (32 CFR 117.11(a)(1)). The interpretation that the interests of two entities with an agreement to act in concert may be combined to establish a controlling interest is similar to concepts in Securities and Exchange Commission rules defining beneficial ownership in instances of shareholders acting in concert (17 CFR 240.13d–5) and CFIUS regulations that consider arrangements to act in concert to determine, direct, or decide important matters affecting an entity as one means by which two or more entities may establish control over another entity (31 CFR 800.208(a)). Different thresholds of control are used in different statutory and regulatory contexts (*see, for example,* 26 U.S.C. 6038(e)(2), (3) (defining control with respect to a corporation to mean actual or constructive ownership by a person of stock possessing more than 50% of the total combined voting power of all classes of stock entitled to vote or 50% of the total value of shares of all classes of stock of a corporation, and control with respect to a partnership to generally mean actual or constructive ownership of a more than 50% capital or profit interest in a partnership); and 26 U.S.C. 368(c) (defining control with respect to certain corporate transactions to mean the ownership of stock possessing at least 80% of the total combined voting power of all classes of stock entitled to vote and at least 80% of the total number of shares of all other classes of stock of the corporation)). However, there are a number of analogous regulatory contexts in which a 25% threshold for considering an entity controlled is used. For instance, the Department of Commerce's CHIPS Rule, implementing a very similar FEOC provision, uses a 25% threshold with respect to voting interest, board seats, or equity interest. The State Department, in its International Traffic in Arms Regulation (ITAR) regulations, established a presumption of foreign control where foreign persons own 25% or more of the outstanding voting securities of an entity, unless one U.S. person controls an equal or larger percentage (22 CFR 120.65). FinCEN's BSA private banking account regulations (31 CFR 1010.605(j)(1)(i)) and Beneficial Ownership Reporting Rule (31 CFR 1010.380(d)) also contain 25% ownership thresholds. *See also* 15 CFR 760.1(c) (defining ''controlled in fact'' using a 25% threshold for cases where no other person controls an equal or larger percentage of voting securities). In some of these other contexts, the 25% calculation is based on a particular form of control (*e.g.,* only voting rights). DOE's interpretation broadens the ways in which an entity can be controlled at a 25% level, because doing so accords with statutory concerns related to the corporate structure of the battery industry.

In response to comments above, DOE also clarified that ''equity interests'' refers to all ownership interests, including capital or profit interests and contingent equity interests. ''Contingent equity interests'' is a defined term in the CFIUS regulations (31 CFR 800.207), and DOE intends for the concept of contingent equity interests in the interpretive rule to be understood largely consistent with the CFIUS regulations. For the purpose of determining FEOC compliance, the amount of the contingent interest that can be reasonably determined, as understood in 31 CFR 800.308(a)(3), should be included in the 25% control calculation, without consideration of whether conversion is imminent or within the control of the equity-owning entity as set forth in 31 CFR 800.308(a)(1–2).

DOE's interpretation of indirect control includes guidance on how to calculate the attenuation of control in a tiered ownership structure. In the case of majority control at any level, that control is not attenuated such that outright ownership (50%+) confers full control. The proposed approach recognizes the reality that a parent entity that holds a majority of the voting rights, equity interests, or board seats in a subsidiary has unilateral control over that subsidiary and can direct that subsidiary's ability to exercise influence and control over its own subsidiaries. However, in the case of multiple tiers of minority control by a government, the actual ability of the government to influence the operations of a subsidiary may become materially attenuated. This understanding of how to calculate a parent entity's indirect ownership and control of sub-entities is similar to OFAC's 50% Rule, under which ''any entity owned in the aggregate, directly or indirectly, 50% or more by one or more blocked persons is itself considered to be a blocked person.'' *See* U.S. Dept. of the Treasury, Revised Guidance on Entities Owned by Persons Whose Property and Interests in Property are Blocked (Aug. 13, 2014).

As previously stated, when calculating whether an entity is a FEOC based on whether the government of a covered nation directly or indirectly holds 25% or more of its voting rights, equity interest, or board seats, DOE's interpretation would not factor in any voting share, equity interest, or board seats held by an entity that is a FEOC solely by virtue of being subject to the covered nation's jurisdiction.

The following scenarios illustrate indirect control in a multi-tiered ownership structure, which could contain more tiers than illustrated here. For simplicity, these examples only evaluate control via voting rights and assume no other relevant circumstances.

1. If Entity A cumulatively holds 25% of Entity B's voting rights, then Entity A directly controls Entity B. If Entity B cumulatively holds 50% of Entity C's voting rights, then Entities B and C are treated as the same entity, and Entity A also indirectly controls Entity C.

○ If Entity A is the government of a foreign country that is a covered nation, Entities B and C are both FEOCs.

2. If Entity A cumulatively holds 50% of Entity B's voting rights, then Entity A is the direct controlling ''parent'' of Entity B, and Entities A and B are treated as the same entity. If Entity B cumulatively holds 25% of Entity C's voting rights, then Entity C is understood to be directly controlled by Entity B and indirectly controlled by Entity A.

○ If Entity A is the government of a foreign country that is a covered nation, Entities B and C are both FEOCs.

3. If Entity A cumulatively holds 25% of Entity B's voting rights, then Entity A directly controls Entity B. If Entity B cumulatively holds 40% of Entity C's voting rights, then Entity B directly controls Entity C. However, because Entity A does not hold 50% of the voting rights of Entity B, and Entity B does not hold 50% of the voting rights of Entity C, Entity A's indirect control

of Entity C is calculated proportionately (25% × 40% = 10%). Based on that proportionate calculation, Entity A will be considered to hold only a 10% interest in Entity C, which is insufficient to meet the 25% threshold for control contemplated under this proposed guidance.

○ If Entity A is the government of a foreign country that is a covered nation, Entity B is a FEOC. But Entity A holds only a 10% interest in Entity C, which is less than the 25% threshold requirement to deem Entity C controlled by Entity A. Therefore, Entity C is not a FEOC via the indirect control of Entity A.

ii. Control via Licensing and Contracting

DOE is concerned that if its interpretation of the term ''control'' covered only direct and indirect holding of board seats, voting rights, and equity interest by the government of a covered nation, then a government may seek to evade application of the rule by instead exercising its control over a FEOC that enters into a license or contract with a non-FEOC entity such that the non-FEOC serves as the producer of record while the FEOC maintains effective control over production. Because such arrangements would defeat congressional intent, DOE's interpretation of ''control'' includes ''effective control'' through contracts or licenses with a FEOC that warrant treating the FEOC as if it were the true entity responsible for any production. DOE's interpretive rule clarifies that ''effective control'' through a license or contract can be exercised by any entity designated as a FEOC, whether through 25% control by the government of a covered nation or through jurisdiction. The proximity of a FEOC to the government of a covered nation, even when the government does not have a controlling stake in the company, raises similar concerns in the context of a license or contract with a non-FEOC, and the non-FEOC should retain the identified rights to avoid effective control by the FEOC.

Many contractual and licensing arrangements do not raise these concerns. Therefore, to provide a reasonably bright-line test for evaluation of battery supply chains that may include numerous contracts and licenses, DOE's interpretation in section V.E of this document contains a safe harbor for evaluation of ''effective control.'' A non-FEOC entity that can demonstrate that it has reserved certain rights to itself or another non-FEOC through contract would not be deemed to be a FEOC solely based on its contractual relationships.

DOE also recognizes that even if an entity's contractual relationship with a FEOC confers effective control over the production of particular critical minerals, battery components, or battery materials, for purposes of determining eligibility for the 30D tax credit and for and DOE's BIL 40207 grant program, the contracting entity would not necessarily be controlled by the government of a covered nation for critical minerals, battery components, or battery materials that were not produced pursuant to that contract or license. Therefore, under the guidance, an entity could be considered a FEOC with respect to the particular critical minerals, battery components, or battery materials that are effectively produced by the FEOC under a contract or license but not with respect to other critical minerals, battery components, or battery materials that are produced by the entity outside the terms of the contract or license with a FEOC.

The concept that an entity can be controlled via contract is supported by choices made in various regulatory contexts, including CFIUS regulations that include an understanding that control can be established via contractual arrangements to determine, direct, or decide important matters affecting an entity (31 CFR 800.208(a)). Further, intellectual property can be licensed restrictively, or even misused, to give the intellectual property owner rights beyond the typical ability to exclude others from making, using, selling, and/or copying the intellectual property for a limited time. In this scenario, even if a non-FEOC entity owns a facility, which is not separately 25% controlled by the government of a covered nation, the facility and/or its operations could still be effectively controlled by a FEOC licensor or contractor through other mechanisms. Accordingly, DOE's definition of effective control identifies criteria that would indicate that a license or contract provides the licensor or contractor with the ability to make business or operational choices that otherwise would rest with the licensee or principal. The criteria selected reflect various known mechanisms in restrictive or overreaching licenses, such as lack of access by the licensee or principal to information and data (*e.g.,* control parameters or specification and quantities of material input for equipment) that are necessary to operate equipment critical to production at necessary quality and throughput levels. This lack of access could be tantamount to the licensor or contractor having effective control over the licensee or principal.

IV. Regulatory Review

DOE considers this guidance to be a final interpretive rule under the Department's authority to interpret section 40207(a)(5) of the Infrastructure Investment and Jobs Act (42 U.S.C. 18741(a)(5)). As an interpretive rule, this rule is exempt from the notice-and-comment rulemaking requirements of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)(A)). Because no notice of proposed rulemaking is required, the Regulatory Flexibility Act does not require an initial or final regulatory flexibility analysis (5 U.S.C. 603(a), 604(b)).

This interpretive rule is significant guidance under Executive Order 12866 because of the substantial public interest and policy importance with respect to the interpretation of the definition of a FEOC. It also affects a variety of entities and other Federal agencies. This interpretive rule has, thus, been reviewed by the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA).

The Department has determined that this final interpretive rule does not impose any new or revise any existing recordkeeping, reporting, or disclosure requirements on the public that would be considered information collections requiring approval by the OMB in accordance with the Paperwork Reduction Act (44 U.S.C. 3501–3521).

Finally, as required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this interpretive rule prior to its effective date. The report will state that OIRA has determined that the rule does not meet the criteria set forth in 5 U.S.C. 804(2).

V. Final Interpretive Rule on the Definition of Foreign Entity of Concern

A. Overview

DOE clarifies the term ''foreign entity of concern'' by providing interpretations for the following terms within BIL section 40207(a)(5)(C) (42 U.S.C. 18741(a)(5)(C)): ''foreign entity;'' ''government of a foreign country;'' ''subject to the jurisdiction;'' and ''owned by, controlled by, or subject to the direction.'' These terms are interpreted separately, recognizing that the terms have unique meaning. DOE also interprets additional terms as necessary to provide clarity.

For DOE's final guidance, an entity is determined to be a FEOC under BIL section 40207(a)(5)(C) if it meets the definition of a ''foreign entity,'' (section V.B of this document) and either is ''subject to the jurisdiction'' of a covered nation government (section V.D of this

document) or is ''owned by, controlled by, or subject to the direction'' (section V.E of this document) of the ''government of a foreign country'' (section V.C of this document) that is a covered nation.

B. Foreign Entity

DOE interprets ''foreign entity'' to mean:

(i) A government of a foreign country;

(ii) A natural person who is not a lawful permanent resident of the United States, citizen of the United States, or any other protected individual (as such term is defined in 8 U.S.C. 1324b(a)(3));

(iii) A partnership, association, corporation, organization, or other combination of persons organized under the laws of or having its principal place of business in a foreign country; or

(iv) An entity organized under the laws of the United States that is owned by, controlled by, or subject to the direction (as interpreted in subsection E) of an entity that qualifies as a foreign entity in paragraphs (i)–(iii).

C. Government of a Foreign Country

DOE interprets ''government of a foreign country'' to mean:

(i) A national or subnational government of a foreign country;

(ii) An agency or instrumentality of a national or subnational government of a foreign country;

(iii) A dominant or ruling political party (*e.g.,* Chinese Communist Party (CCP)) of a foreign country; or

(iv) A current or former senior foreign political figure.

Senior foreign political figure means (a) a senior official, either in the executive, legislative, administrative, military, or judicial branches of a foreign government (whether elected or not), (b) a senior official of a dominant or ruling foreign political party, and (c) an immediate family member (spouse, parent, sibling, child, or a spouse's parent and sibling) of any individual described in (a) or (b). In order to be considered ''senior,'' an official should be or have been in a position of substantial authority over policy, operations, or the use of government-owned resources.

D. Subject to the Jurisdiction

DOE interprets that a foreign entity is ''subject to the jurisdiction'' of a covered nation government if:

(i) The foreign entity is incorporated or domiciled in, or has its principal place of business in, a covered nation; or

(ii) With respect to the critical minerals, components, or materials of a given battery, the foreign entity engages in the extraction, processing, or recycling of such critical minerals, the manufacturing or assembly of such components, or the processing of such materials, in a covered nation.

E. Owned by, Controlled by, or Subject to the Direction

DOE interprets that an entity is ''owned by, controlled by, or subject to the direction'' of another entity (including the government of a foreign country that is a covered nation) if:

(i) 25% or more of the entity's board seats, voting rights, or equity interest, with each metric evaluated independently, are cumulatively held by that other entity, whether directly or indirectly via one or more intermediate entities; or

(ii) With respect to the critical minerals, battery components, or battery materials of a given battery, the entity has entered into a licensing arrangement or other contract with another entity (a contractor) that entitles that other entity to exercise effective control over the extraction, processing, recycling, manufacturing, or assembly (collectively, ''production'') of the critical minerals, battery components, or battery materials that would be attributed to the entity.

Cumulatively held. For the purposes of determining control by a foreign entity (including the government of a foreign country), control is evaluated based on the combined interest in an entity held, directly or indirectly, by all other entities that qualify under the above interpretation of ''foreign entity.'' Additionally, if an entity that qualifies as a ''government of a foreign country that is a covered nation'' enters into a formal arrangement to act in concert with another entity or entities that have an interest in the same third-party entity, the cumulative board seats, voting rights, or equity interests of all such entities are combined for the purpose of determining the level of control attributable to each of those entities.

Indirect control. For purposes of determining whether an entity indirectly holds board seats, voting rights, or equity interest in a tiered ownership structure:

- If a ''parent'' entity (including the government of a foreign country) directly holds 50% or more of a ''subsidiary'' entity's board seats, voting rights, or equity interest, then the parent and subsidiary are treated as equivalent in the evaluation of control, as if the subsidiary were an extension of the parent. As such, any holdings of the subsidiary are fully attributed to the parent.
- If a ''parent'' entity directly holds less than 50% of a ''subsidiary'' entity's board seats, voting rights, or equity interest, then indirect ownership is attributed proportionately.

Section III.E.i of this document, contains multiple examples illustrating how to determine when an entity is indirectly controlled under this interpretive rule.

Effective control means the right of the FEOC contractor, whether the entity is a FEOC via 25% control or via jurisdiction, in a contractual relationship to determine the quantity or timing of production; to determine which entities may purchase or use the output of production; to restrict access to the site of production to the contractor's own personnel; or the exclusive right to maintain, repair, or operate equipment that is critical to production.

In the case of a contract with a FEOC, a contractual relationship will be deemed to not confer effective control to the FEOC if the applicable agreement(s) reserves expressly to one or more non-FEOC entities all of the following rights:

(i) To determine the quantity of critical mineral, component, or material produced (subject to any overall maximum or minimum quantities agreed to by the parties prior to execution of the contract);

(ii) To determine, within the overall contract term, the timing of production, including when and whether to cease production;

(iii) To use the critical mineral, component, or material for its own purposes or, if the agreement contemplates sales, to sell the critical mineral, component, or material to entities of its choosing;

(iv) To access all areas of the production site continuously and observe all stages of the production process; and

(v) At its election, to independently operate, maintain, and repair all equipment critical to production and to access and use any intellectual property, information, and data critical to production, for the duration of the contractual relationship.

VI. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this notification of final interpretive rule.

Signing Authority

This document of the Department of Energy was signed on April 18, 2024, by Giulia Siccardo, Director, Office of Manufacturing and Energy Supply Chains, pursuant to delegated authority

from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on April 22, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF THE TREASURY

Office of Financial Research

12 CFR Part 1610

Ongoing Data Collection of Non-Centrally Cleared Bilateral Transactions in the U.S. Repurchase Agreement Market

AGENCY: Office of Financial Research, Treasury.

ACTION: Final rule.

SUMMARY: The Office of Financial Research (the ''Office'') within the U.S. Department of the Treasury (''Treasury'') is adopting a final rule (the ''Final Rule'') establishing a data collection for certain non-centrally cleared bilateral transactions in the U.S. repurchase agreement (''repo'') market. This collection requires daily reporting to the Office by certain brokers, dealers, and other financial companies with large exposures to non-centrally cleared bilateral repo (''NCCBR''). The collected data will be used to support the work of the Financial Stability Oversight Council (the ''Council''), its member agencies, and the Office to identify and monitor risks to financial stability.

DATES:

Effective date: July 5, 2024.

Compliance Dates: See the amendment to 12 CFR 1610.11(e).

FOR FURTHER INFORMATION CONTACT: Michael Passante, Chief Counsel, Office of Financial Research, (202) 921–4003, *michael.passante@ofr.treasury.gov,* Sriram Rajan, Associate Director of Financial Markets, Office of Financial Research, (202) 594–9658, *sriram.rajan@ofr.treasury.gov,* or Laura Miller Craig, Senior Advisor, Office of Financial Research, (202) 927–8379, *laura.craig@ofr.treasury.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

The Office is adopting the Final Rule to establish an ongoing data collection for certain non-centrally cleared bilateral transactions in the U.S. repo market. The Final Rule will require reporting by certain covered reporters for repo transactions that are not centrally cleared and have no tri-party custodian. The purpose is to enhance the ability of the Council, Council member agencies, and the Office to identify and monitor risks to financial stability. Under the Dodd-Frank Wall Street Reform and Consumer Protection Act (the ''Dodd-Frank Act''), the Office is authorized to issue rules and regulations to collect and standardize data that supports the Council in fulfilling its duties and purposes, such as identifying risks to U.S. financial stability. In a 2022 statement on nonbank financial intermediation, the Council supported a recommendation that the Office consider ways to obtain better data on the NCCBR market segment, and in July 2022 and February 2024, the Office consulted with the Council on efforts to collect NCCBR data.[1]

This collection requires reporting on NCCBR transactions, which currently comprise the majority of repo activity by several key categories of financial companies, such as hedge funds. This collection will provide visibility and transparency into a crucial segment of the U.S. repo market, the one remaining market segment for which transaction-level data is not available to regulators.[2]

Collection of information on the NCCBR segment of the repo market is critical to understanding potential financial stability risks. The data to be collected under the Final Rule will enable the Office to monitor risks in this market. Because the Council's duties relate to monitoring and responding to potential financial stability risks, the collection will support the Office's statutory mandate to support the work of the Council.

The Office issued its Notice of Proposed Rule Making (''NPRM'' or ''proposed rules'') for a 60-day public comment period, ending on March 10, 2023.[3] In response, the Office received more than 30 comment letters conveying a range of perspectives.[4] Although the majority of commenters supported the proposed collection, noting the potential benefits to the monitoring of risks to financial stability, several identified issues that the Office has addressed in the discussion below and, in some cases, through regulatory text changes reflected in the Final Rule. In making these changes, the Office intends to minimize the burden of the Final Rule while ensuring that the purposes of the collection as expressed in the NPRM and below are met.

Since the publication of the NPRM, two new regulations were adopted that are relevant to the Office's collection. The Office believes that one of these will materially affect this collection. On December 13, 2023, the U.S. Securities and Exchange Commission (SEC) adopted rules under the Securities Exchange Act of 1934 (''Exchange Act'') to amend the standards applicable to covered clearing agencies for U.S. Treasury securities. The final rules require that every direct participant of the covered clearing agency submit for clearance and settlement all repo activity collateralized by U.S. Treasury securities to which it is a counterparty (the ''SEC's central clearing rules'').[5] On February 6, 2024, the SEC also adopted new rules to further define the phrase ''as part of a regular business'' as used in the statutory definitions of ''dealer'' and ''government securities dealer.''[6] The Office has considered the likely

impact of these rules on its NCCBR collection, as described below.

II. Background and Description of the Final Rule

The following discussion summarizes the proposed rules, the comments received, and the Office's responses to those comments, including modifications reflected in the Final Rule.

II(a) Structure of the Repo Market and Purpose of the Final Rule

As noted in the NPRM, the collection of data pursuant to this Final Rule will support the Council, its member agencies, and the Office in carrying out their responsibilities through the use of the data to identify and monitor potential financial stability risks in the U.S. repo market.

The repo market can be divided into four segments, which span the different combinations of centrally cleared and non-centrally cleared, tri-party, and bilateral repo.[7] For three of these segments, data are currently collected by regulators. The collection under the Final Rule has been designed to fill a critical gap in regulators' information on the overall repo market by collecting data on the NCCBR segment, the last segment for which regulators do not have a transaction-level data source.

As noted in the NPRM, the need for a collection of data on this segment of the market to assist policymakers' understanding of the repo market has been recognized by the Council since 2016, when it first called for the Office to establish a permanent repo data collection.[8] This lack of visibility was felt acutely following two recent episodes of stress in repo markets. The first of these recent episodes involved a spike in repo market rates in September 2019 and the second a decline in Treasury prices, which spilled over to the repo market through higher rates, in March 2020. For both of these episodes, substantial portions of activity in these crucial funding markets could not be observed. In the wake of these episodes, market participants and the official sector have pointed to this segment as a critical blind spot in a market that plays a key role in financial stability.[9]

Both of these episodes illustrate that the NCCBR market segment may be subject to the systemic vulnerabilities discussed below and perhaps has become even more central to the functioning of U.S. securities and short-term funding markets. Though these vulnerabilities are present to a greater or lesser extent across the four segments of the repo market, certain characteristics of the NCCBR segment may be especially prone to such vulnerabilities and exacerbate the risks in other segments.

II(b) NCCBR Market Segment Characteristics That May Increase Financial Stability Risks

In the NPRM, the Office noted the framework set forth in its centrally cleared repo rule[10] for understanding activity in the overall repo market and the associated vulnerabilities across five functions that repo provides: (1) a low-risk cash investment, (2) monetization of assets, (3) transformation of collateral, (4) facilitation of hedging, and (5) more generally, a support for secondary market liquidity and pricing efficiency.[11]

Certain characteristics of the NCCBR market segment may increase the potential for risks to financial stability relative to other segments. However, data gaps have limited the ability of financial regulators to monitor risks and vulnerabilities in this segment. Additionally, because abrupt changes in these characteristics can have financial stability consequences, addressing data gaps is important.

The NPRM highlighted collateral risk as a key motivation for the collection. The NCCBR market segment generally involves riskier collateral than other repo segments, because centrally cleared markets are limited to Fedwire-eligible collateral, such as Treasuries and agency bonds. Data from the Federal Reserve Bank of New York's Primary Dealer Statistics show that 95% of primary dealer repo lending against non-Fedwire-eligible collateral (including asset-backed securities, corporate debt, and other securities) is conducted through the NCCBR market segment. These collateral types are riskier than Treasury and agency securities. Supported by riskier collateral, the NCCBR market segment may be more exposed to the risks associated with monetizing assets.

The NCCBR market segment also has counterparty complexity that warrants attention. Many counterparties in this market are not as active in the centrally cleared or tri-party repo markets, which are market segments about which more data are available to financial regulators. The NCCBR market segment facilitates a large amount of cash borrowing by highly leveraged entities such as hedge funds.[12] As a result, financial regulators and market participants do not have sufficient information on the overall complexity and extent of hedge funds' daily repo borrowing to assess potential risks. For instance, financial regulators did not have access to sufficient data to understand the risk management practices of Long-Term Capital Management (LTCM).[13] LTCM, a hedge fund that failed in 1998, built up large counterparty exposures through NCCBR.[14] The firm conducted its repo and reverse-repo transactions with 75 different counterparties, many of which were reportedly unaware of the nature of LTCM's total exposure. These large exposures created through repo were a key source of systemic stress from LTCM's failure, as liquidations of the

underlying collateral in bankruptcy could have resulted in significantly depressed prices and broader market disruptions.[15] While transparency into other segments of the repo market has increased since 1998, the NCCBR market segment has remained opaque.

NCCBR market participants engage in varying risk management conventions, but insufficient information regarding these conventions is available to enable an assessment of their efficacy. These conventions include, but are not limited to, margining and settlement practices. For instance, the variation in margining practices across competing intermediaries may create competitive pressures that drive margins to lower levels than what prudent risk management would indicate.[16] There may also exist widely subscribed margining practices which could exacerbate financial stability vulnerabilities in times of stress. For instance, the cross-margining of repo, derivatives, and futures exposures could result in lower precautionary risk buffers, even in the presence of leverage, than if cross-margining practices were not in place. In times of stress, inadequate margins may be insufficient to buffer payment failures between firms and can result in consequential financial contagion. Additionally, risks exist in relation to operational aspects of the transaction lifecycle. For instance, the Treasury Market Practices Group found that settlement practices vary widely and expressed concern that ''bespoke bilateral processes may reflect differences in the level of understanding among market participants of the inherent risks of Securities Financing Transaction (SFT) clearing and settlement.'' [17] Collectively, NCCBR risk management concerns interrelationships between firms within this and other markets and spans risks that are not uniquely contained in the NCCBR segment.

Activity across the different segments of the repo market is linked. For example, the NCCBR market segment can serve as a close substitute for centrally cleared bilateral repo. This is particularly the case in the sponsored segment of the market for customers that are not direct clearing members of the Fixed Income Clearing Corporation (FICC), a subsidiary of the Depository Trust & Clearing Corporation, such as hedge funds and money market funds. These customers can participate in transactions with clearing members and have such transactions submitted to FICC for central clearing. As a result, migration to and from sponsored repo is also an area of interest for regulators concerned with a proper assessment of dealer balance sheets. Activity may move between sponsored repo and NCCBR in times of stress or in response to incentives created by financial reporting dates. Dealers' decisions to transact in NCCBR or in sponsored repo may also be affected by factors that affect the degree to which various constraints are binding for the dealers, including regulatory ratios and counterparty credit limits. Examples of these factors include changes in the supply of cash to the repo market from money market funds and the netting benefits provided by sponsored repo. To understand these shifts between NCCBR and sponsored repo, data on outstanding commitments in the NCCBR market segment are required.

The development of guaranteed repo is another factor that may affect flows between NCCBR and sponsored repo. A guaranteed repo is a repo in which the performance of one or both counterparties are guaranteed by a third-party guarantor. This is typically, but not exclusively, used to account for potential variation in value of the collateral provided by the cash borrower. Because guaranteed repo replicates the profile of offsetting legs of the same repo transaction with different counterparties yet has different balance sheet implications, guaranteed repo may be an alternative to sponsored repo. Since guaranteed repos would represent a similar exposure to offsetting repo transactions, it is essential to include these activities in this collection to gain a full understanding of the NCCBR segment of the repo market.

In addition to the specific data gaps noted above, because the NCCBR market segment has no central counterparty or tri-party custodian and due to the lack of transparency, lack of standardized risk management practices, the presence of riskier collateral underlying some trades, and counterparties with large exposures in the market, these data will provide insights into potential financial system vulnerabilities.[18] Many of the counterparties involved in the NCCBR segment, such as non-banks and non-primary dealers, are difficult to monitor with existing regulatory collections. Transaction-level data will provide the official sector with the granularity necessary to understand the exposures of market participants on a high-frequency basis. This is essential in a market where monthly or quarterly reporting may not provide timely indications of future stress or provide detailed data on recent periods of stress. Additionally, data on collateral will enable regulators to monitor exposures to particular classes of securities, margining practices that protect participants from fluctuations in collateral values, and the potential transmission of stress from the repo markets to securities markets or other markets. Timestamps and details of trading venues will allow regulators to monitor activity in a market that is often segmented and in which intraday liquidity concerns can play a key role in the creation or propagation of stress.

Thus, the collection of transaction-level data on the NCCBR segment of the repo market marks a significant step in carrying out the Council's recommendation to expand and make permanent the collection of data on the U.S. repo market.[19] It will assist the Council's effective identification and monitoring of emerging threats to the stability of the U.S. financial system by closing the remaining gap in coverage of the U.S. repo market, following the Office's previous rulemaking on the centrally cleared repo market. By collecting data from certain brokers, dealers, and other financial companies with more than $10 billion in extended guarantees and outstanding NCCBR cash borrowing, the Office initially expects to observe more than 90% of NCCBR transactions by volume, with approximately 40 covered reporters in Category 1 (as discussed below) expected at the time of publication of the Final Rule.

II(c) Effects of Recent Regulations on the Office's Collection

On December 13, 2023, the SEC adopted a final rule on central clearing in the U.S. Treasury market, and on February 12, 2024, the SEC adopted a

final rule expanding dealer registration. This section discusses the effects of these rules on the Office's collection under the Final Rule.

II(c)(1) SEC's Central Clearing Rules

The SEC's central clearing rules, adopted December 13, 2023, are designed to facilitate additional clearing of transactions involving U.S. Treasury securities. The rules require covered clearing agencies in the U.S. Treasury market to require that any direct participant of such covered clearing agency submit for clearance and settlement all the eligible secondary-market transactions to which the direct participant is a counterparty.[20] The compliance date for the SEC's requirements for the central clearing of repo transactions is June 30, 2026. After that date, the Office anticipates that a large portion of Treasury repo transactions will migrate from the NCCBR segment to the centrally cleared segments.

The Office has considered the effect of the SEC's central clearing rules on the riskiness of transactions that will remain in the NCCBR segment, the size of the NCCBR segment, the Office's coverage of the NCCBR segment, and the Office's coverage of repo transactions overall.

The Office expects transparency and financial stability of the repo market to improve following the implementation of the SEC's central clearing rules. However, the Office's collection will continue to be essential for monitoring a substantial portion of the riskiest trades in the repo market and will provide visibility into a segment that may grow and change in response to future developments.

Impact on the riskiness of NCCBR transactions: One reason that the collection of data from the NCCBR segment will remain important is that this segment will retain substantially all of the risks described above. While Treasury repo trades by financial companies that are members of covered clearing agencies will largely be centrally cleared as a result of the SEC's central clearing rules, the remaining trades will likely be riskier, such as those backed with lower-quality collateral or those with smaller, riskier financial companies that currently cannot be members of clearing agencies. Because the FICC is limited to Fedwire-eligible collateral, considerable volume in the NCCBR segment is backed by collateral that is generally considered to be riskier, such as private-label asset backed securities (ABS) and corporate debt.[21] [22] This collateral will comprise a larger share of the NCCBR segment after the migration of Treasury repo to central clearing. Similarly, the FICC imposes certain limits on direct membership that ensure only sounder counterparties can become direct and sponsoring members. Thus, after the SEC's central clearing rules are fully implemented, the remaining trades in the NCCBR segment will generally be conducted by riskier counterparties.

Impact on the size of the NCCBR segment: The Office expects the size of the NCCBR segment to shrink significantly when most Treasury -collateralized repo activity moves to central clearing. Although there is uncertainty associated with the effect of the SEC's central clearing rules on the structure of the repo market, the Office expects the rules to change the scope of the transactions reported under the Final Rule due to the reduction in the total volume of transactions in the NCCBR segment. In the NPRM, the Office estimated that the proposed rules' coverage of the NCCBR segment would be greater than 90%; using the same methodology, this segment coverage would decline to 75% after implementation of the SEC's central clearing rules.

However, because the NCCBR segment will materially change following full implementation of the SEC's central clearing rules, different estimation methodologies might be warranted. Accordingly, the Office developed two additional estimates. The first estimate assumes that all Treasury-collateralized repo activity moves into central clearing following full implementation of the SEC's central clearing rules. The second estimate assumes a modest amount of Treasury-collateralized repo remains in NCCBR. Certain exemptions to the SEC's central clearing rules make this modest amount realistic, as discussed below.

In the first estimate, the collection would cover 56% of the remaining NCCBR segment volume. The Office believes that this scenario is unlikely because it assumes that all Treasury repo will migrate to central clearing. In the second estimate, the collection would cover 75% of NCCBR volume if as little as 15% of the Treasury volume remains in the NCCBR segment. The assumption that 15% of volume remains is reasonable because certain Treasury-collateralized repo transactions are exempt from the SEC central clearing rules, including certain inter-affiliate trades. The Office's 2022 NCCBR pilot data collection suggests that the percentage of total NCCBR trading volume that is inter-affiliate may be much greater than 15%.

In addition, other Treasury repo transactions may be exempt from central clearing because they are not allowed under the FICC's sponsored clearing model. For example, trades with embedded optionality, such as open repos, are not allowed in sponsored repo, and it is uncertain how many of those trades will remain in the NCCBR segment after full implementation of the SEC's central clearing rules. Exceptions to the SEC's central clearing rules could therefore result in the collection covering more than 75% of the remaining NCCBR volume.

Under these two estimates, the NCCBR market segment would shrink from $2.3 trillion daily outstanding volume as of Q4 2021 to between roughly $300 billion and $600 billion daily outstanding volume. Although this will be a significant reduction in the size of the NCCBR segment, the Office believes a market of this size is large enough to warrant continued monitoring in light of the risks particular to this segment, as highlighted above and considered further below. A number of multibillion-dollar market segments are important to financial stability and are subject to reporting. For example, the Office currently collects information on the centrally cleared tri-party segment of the market, conducted under FICC's General Collateral Finance (GCF) Repo Service, which had $450 billion outstanding on January 22, 2024. While the GCF segment is similar in magnitude to what the Office projects for the NCCBR collection subsequent to the implementation of the SEC's central clearing rules, collateral quality is much lower in the NCCBR segment, because GCF is limited to Treasury and agency collateral. Further, counterparty risk in NCCBR is higher both because of the presence of a central counterparty in

[20] The definition of the term ''eligible secondary market transaction'' lists certain transactions that may be excluded from central clearing. Two notable exclusions are inter-affiliate trades and trades in which the direct member is a facilitator or agent rather than a direct counterparty. 89 FR 2829, *https://www.federalregister.gov/d/2023-27860.*

[21] For more detailed information on the use of non-Treasury collateral in the NCCBR market segment, see Baklanova, Caglio, Cipriani, and Copeland. ''The Use of Collateral in Bilateral Repurchase and Securities Lending Agreements.'' ''Why is so much Repo Not Centrally Cleared?'' Brief no. 23–01, Washington, DC: Office of Financial Research, May 12, 2023: *https://www.financialresearch.gov/briefs/2023/05/12/why-is-so-much-repo-not-centrally-cleared/.*

[22] FICC is currently the sole provider of clearance and settlement services for U.S. Treasury securities.

GCF and because FICC imposes limits on direct membership.

Additionally, although the sizes of exposures to the NCCBR segment are likely to be smaller once the SEC's central clearing rules are implemented, exposures of this scale can still pose risks to financial stability. For example, the Council's Hedge Fund Working Group found that the failure of Archegos Capital, which had approximately $30 billion in capital borrowed through total return swaps that are in many ways similar to NCCBR transactions, ''transmitted material stress to large, interconnected financial institutions.'' [23]

Impact on the collection's coverage of the NCCBR segment: As stated above, the Office expects that the collection will cover between 56% and 75% of the transaction volume that remain in the NCCBR market segment. Because overall volumes in the NCCBR segment will decrease, the Office also expects the number of covered reporters to decrease. The Office estimates the number of covered reporters to decrease from 40 to 6 to 15, respectively, under the two estimates described above.

Notwithstanding these changes, the Office believes collecting this data remains important. The remaining entities in this market will continue to be the largest participants in the repo market, and this market will still make up a material portion of their balance sheets, so capturing this exposure will be important for monitoring how financial stress in the NCCBR segment might spill over into the other segments of the repo market. The Office continues to view the $10 billion exposure threshold as a reasonable size for a financial company to be considered material in this segment and notes that although the NPRM included a question on this threshold, no commenters expressed concern with this number. Additionally, the Office believes that reporting by Category 1 and Category 2 covered reporters (as discussed below) with exposures above this threshold will provide material coverage of the NCCBR segment to monitor risks without imposing undue reporting burdens on the industry.

As further support for maintaining the $10 billion materiality threshold proposed in the NPRM, the Office notes that even exposures below the $10 billion threshold can have financial stability consequences, especially in short-term funding markets such as the repo market where run risk is present. For instance, the run on the Reserve Primary Fund, a money market mutual fund that failed to redeem investors at the $1.00 net asset value per share in September 2008 following the collapse of Lehman Brothers, was triggered by the fund's exposure to $785 million of commercial paper issued by Lehman Brothers. This exposure was far less than the Office's aggregate repo cash borrowing threshold of $10 billion in NCCBR, yet the Reserve Primary Fund contributed materially to a crisis of confidence in the financial system. The risks were illustrated by a 2013 study that found an additional 20 money market mutual funds faced par redemption challenges similar to the Reserve Primary Fund during the same week.[24] While those money market mutual fund exposures may have varied, the financial instability resulted from a source much smaller than the materiality threshold in the Final Rule.

Impact on the Office's overall coverage of the repo market: The combination of the SEC's central clearing rules and the Office's NCCBR data collection will significantly improve visibility into transactions that currently take place in the NCCBR segment. While the SEC's rules will have the effect of channeling more Treasury repo transactions into central clearing, the Office's Final Rule will cover data gaps that currently exist and could develop in NCCBR. Additionally, the Final Rule will provide transparency with respect to potential future market changes. An example of such a change is guaranteed repo, which could emerge as an alternative to centrally cleared repo. The Final Rule will provide insight into any changes in the size of the NCCBR market segment. Further, the Final Rule will provide transparency into repo activity involving collateral that is not eligible for central clearing. Therefore, after the implementation of the SEC's central clearing rules, the NCCBR collection will continue to fill a critical data gap because without the collection, regulators would have limited insight into risks in this segment.

II(c)(2) SEC's Expansion of Dealer Registration Requirements

On February 6, 2024, the SEC adopted new rules to further define the phrase ''as a part of a regular business'' as used in the statutory definitions of ''dealer'' and ''government securities dealer.'' [25] These new rules could affect the collection under the Final Rule because, as described in the NPRM and below, registered dealers and government securities dealers are subject to the requirement to report their transactions to the Office if their NCCBR activity exceeds the materiality threshold in the Final Rule. While the SEC's recent amendments will expand the population of dealers and government securities dealers, those changes are unlikely to expand the number of NCCBR covered reporters at this time, because companies that are newly defined as dealers or government securities dealers are unlikely to pass the materiality threshold in the Final Rule. The Office expects that substantially all newly registered dealers and government securities brokers and dealers will be either principal trading firms (PTFs) or hedge funds employing high-frequency trading (HFT) strategies. In both cases, these firms employ strategies that involve rapid trading throughout the day, matching buyers and sellers, and exploiting spreads between bid and ask prices. For firms that do not carry significant inventories, like some PTFs or HFTs, participation in repo is likely negligible since they have no inventories to fund. As a result, the Office expects that few, if any, of the additional firms registering as dealers or government securities dealers under the SEC's recent amendments will be subject to NCCBR reporting, so the implementation of these SEC rules should have limited effect on the NCCBR collection.

II(d) Uses of the Data Collection

The data to be collected pursuant to the Final Rule will be used by the Office to fulfill its purpose, responsibilities, and duties under Title I of the Dodd-Frank Act, including improving the Council's and Council member agencies' monitoring of the financial system and identification and assessment of potential financial stability risks. The data reported in this collection will facilitate the identification and evaluation of potential repo market vulnerabilities and trends that could be destabilizing or indicate stresses in the financial system. For example, risks might be reflected in indicators of the volume or cost of funding in the repo market, differentiated by the type and credit quality of participants, quality of underlying collateral, and tenor of

[25] Further Definition of 'As a Part of a Regular Business,' 89 FR 14938. *https://www.federalregister.gov/d/2024-02837*.

transactions. Analyzing the collateral data from this collection together with other available data will enable a clearer understanding of collateral flows in securities markets and associated potential financial stability risks.

One use of the data will be to monitor the transition between the time that the NCCBR collection commences and when, under the SEC's central clearing rules, certain Treasury repo trades will be required to migrate to central clearing.[26] The NCCBR collection will provide contemporaneous information to regulators and policymakers on the progress of market participants in moving to central clearing. Because the SEC's central clearing rules will involve significant changes in market structure and there is uncertainty regarding how markets will respond to its implementation, this information on progress and risks associated with the transition will be invaluable.

The Office may also use the data to sponsor and conduct additional research. This research may include using these data to help fulfill the Office's duties and purposes under the Dodd-Frank Act relating to the responsibility of the Office's Research and Analysis Center to support the Council.[27] For example, access to data on NCCBRs will allow the Office to conduct research related to the Council's monitoring of potential risks arising from securities financing activities and nonbank financial companies.

As noted in the NPRM, and consistent with the Dodd-Frank Act, the Office may share the data collection and information with the Council, Council member agencies, and the Bureau of Economic Analysis and will also make the data available to the Council and member agencies as necessary to support their regulatory responsibilities. The NPRM also noted that data and information shared as described above must be maintained with at least the same level of security as used by the Office and may not be shared with any individual or entity without the permission of the Council. Such sharing will be subject to the confidentiality and security requirements of applicable laws, including the Dodd-Frank Act.[28] Pursuant to the Dodd-Frank Act, the submission of any non-publicly available data to the Office under this collection will not constitute a waiver of or otherwise affect any privilege arising under federal or state law to which the data or information is otherwise subject.[29]

After consulting with Council member agencies as consistent with the Dodd-Frank Act, the Office further advised in the NPRM that certain data, including aggregate or summary data from this collection, may be provided to financial industry participants and the general public to increase market transparency and facilitate research on the financial system. In doing so, it is important that intellectual property rights are not violated, business confidential information is properly protected, and the sharing of such information poses no significant threats to the U.S. financial system.[30]

Commenters identified concerns about data privacy and security, anonymization, and aggregation of the data when disclosing data as described above. One commenter encouraged the Office to require in the Final Rule that data be anonymized and aggregated prior to being disclosed to the public. One commenter stated that anonymization and aggregation of publicly reported data was required to prevent covered reporters from violating privacy regulations or contractual confidentiality terms. Other commenters indicated that disclosure of data not anonymized or aggregated could lead to negative effects for markets and market participants and depending on the timing and nature of the disclosure, disclosure of even aggregate repo transactions could inadvertently reveal proprietary information of financial companies. One comment letter recommended that the Office consult in advance with market participants regarding the timing and granularity of any disclosure. Another commenter recommended that public disclosure occur after two business days from the date of the report.

The Office reiterates that data will be available to the public and financial industry participants only to the extent that intellectual property rights are not violated, business confidential information is properly protected, and the sharing of such information poses no significant threats to the U.S. financial system.[31] The Office further confirms that it will not disclose raw data to the public and that any work product disclosed to the public will consist only of anonymized, aggregated, or otherwise masked data.

One comment letter requested that the Office clarify how it will anonymize the aggregated data for public reporting. The Office employs a number of techniques to protect underlying raw data from public disclosure, including the use of anonymization, summaries, aggregation, masking, compliance with applicable data security and privacy laws, and compliance with internal review and approval protocols designed to protect the underlying data from public disclosure.

One commenter recommended that when sharing data from the collection with other regulators, the Office should make clear that the information is confidential and subject to all applicable laws and regulations regarding subsequent sharing of the information. The commenter also recommended that Office employees and consultants be subject to additional confidentiality requirements regarding the use or dissemination of data collected under the Final Rule. Another comment letter requested that the Office specify any IT security protocols that will be used to guarantee the security of the data that will be collected. The Office has a statutory responsibility to ensure that data collected by the Office is kept securely and protected from unauthorized disclosure; and data shared with other regulatory agencies must be maintained with at least the same level of security as is used by the Office.[32] Additionally, for purposes of preventing unauthorized access to data or loss of data, the Federal Information Security Modernization Act of 2014 (FISMA) requires that federal agencies, including the Office and federal regulatory agencies, provide information security protections commensurate with the risk and magnitude of harm resulting from unauthorized access, use, or disclosure of information collected by or on behalf of an agency. The information collected pursuant to the Final Rule will be handled in accordance with the Office's data access, security, and control policies and procedures. The Office will comply with applicable privacy and data protection laws and regulations, including but not limited to FISMA, and will require that any regulatory agencies that receive business confidential information utilize appropriate confidentiality and security protocols in

[26] The Final Rule requires that a ''covered reporter whose volume falls below the $10 billion threshold for at least four consecutive calendar quarters would have its reporting obligations cease.'' As a result, the Office expects to collect data from approximately 40 reporters until as late as June 2027, 12 months after the SEC's June 30, 2026, compliance date for central clearing of Treasury repo trades.

[27] 12 U.S.C. 5344(c) discusses the various uses of data by the Office's Research and Analysis Center, and 12 U.S.C. 5344(b) discusses the duties of the Office's Data Center, on behalf of the Council.

compliance with FISMA and other applicable laws.

III. Collection Design

The regulatory text lists the requirements specifically relevant to this collection. This includes a table describing the data elements that covered reporters will be required to submit. As outlined below, the Office is publishing reporting instructions and technical guidance on the Office's website regarding matters such as data submission mechanics and formatting in connection with the Final Rule.

III(a) Scope of Entities

The Final Rule establishes the scope of entities subject to reporting. Specifically, reporting is required by financial companies (as defined in the Final Rule) that fall within either of two categories:

- *Category 1:* a securities broker, securities dealer, government securities broker, or government securities dealer whose average daily outstanding commitments to borrow cash and extend guarantees in NCCBR transactions with counterparties over all business days during the prior calendar quarter is at least $10 billion,[33] and
- *Category 2:* any financial company that is not a securities broker, securities dealer, government securities broker, or government securities dealer and that has over $1 billion in assets or assets under management, whose average daily outstanding commitments to borrow cash and extend guarantees in NCCBR transactions, including commitments of all funds for which the company serves as an investment adviser, with counterparties that are not securities brokers, securities dealers, government securities brokers, or government securities dealers over all business days during the prior calendar quarter is at least $10 billion.

The Office intends to consider a financial company to have assets or assets under management exceeding $1 billion if the company meets one or more of the following criteria:

- if the firm is an investment adviser registered pursuant to the Investment Advisers Act of 1940 provides continuous and regular supervisory or management services to securities portfolios valued in the aggregate at $1 billion or more in assets under that law;
- if the firm files a required disclosure of its balance sheet with a federal or state financial regulator and has more than $1 billion in assets under any such disclosure;
- if the firm discloses its assets to investors or creditors in audited financial statements, and has more than $1 billion in assets under that disclosure;
- if the firm has disclosed assets in filings with the Internal Revenue Service and has more than $1 billion in assets under that disclosure.

As noted in the NPRM, the Office distinguishes between assets and assets under management in the criteria above in light of the manner in which an agent acts on the part of other parties. Investment advisers provide investment management services as fiduciaries, using a wide variety of models and vehicles. They engage in activities such as entering into repo, acting as cash borrowers, and buying and selling derivatives on behalf of clients. These activities can take place at the managed fund or portfolio level or at the adviser level with the resulting trades subsequently allocated to their managed funds or portfolios. Unlike other financial companies, the value of these assets is not fully reflected on the balance sheet of the adviser. As a result, the use of assets under management better represents the market value of investment activities provided and should be used in the threshold computation.

The Office received several comments relating to investment advisers within the framework of the proposed rules. One commenter stated that reporting by an investment adviser based on its aggregate assets under management is inappropriate, as investment advisers merely execute investment strategies on behalf of their managed funds, with each fund having an individualized strategy that may include repo transactions. It further stated that trading of fund assets and positions is never executed with the adviser as the principal obligor, but rather must be allocated to the appropriate fund as the principal obligor. The commenter suggested that the Office instead use the assets under management of individual funds since, notwithstanding any execution of trades on a bunched or similar basis, each individual fund is the principal obligor, and the investment adviser must act consistent with each fund's investment strategy. As the commenter acknowledged, trading may be executed on a bunched basis across multiple funds to obtain consistent pricing for each fund with allocation to individual funds to follow, consistent with the Office's stated reasoning for aggregating assets across funds in the calculation of assets under management. These transactions are conducted on the adviser level, and the Office believes that limiting the threshold calculation to individual funds would lead to an incomplete picture of the repo market, because the data would no longer contain the necessary context for determining the financial stability risks implied by an investment adviser's transactions. For example, margining practices are a risk the collection may be used to monitor. Since haircuts are a transaction term often negotiated at the level of the investment adviser, it is important to have the full set of transactions negotiated with a given haircut to assess the riskiness of margining practices. For these reasons, the Office does not consider the issue of principal obligor status to be important for the purposes of this type of monitoring.

Another commenter asserted that investment advisers to private funds are already subject to significant oversight and compliance obligations and, in the context of systemic risk, report extensive information on Form PF regarding collateral and counterparty exposures, among other information. They also stated that the scope of entities covered by the proposed rules would result in duplicative and costly reporting requirements on investment advisers, which, in turn, would dilute the quality of the data reported and increase costs to funds' investors. However, although investment advisers may be subject to other oversight and compliance obligations as noted in the NPRM, based on its review of existing data collections, the Office has found no other transaction-level, daily collection of this data. Moreover, commenters on the NPRM did not identify a duplicative data collection at this level of granularity and frequency that would otherwise enable the Office adequately to monitor financial stability risks in this market.

Another commenter similarly suggested that registered investment advisers (RIAs) be excluded from eligibility for Category 2 reporting, and that Category 1 be extended to include banking entities. The commenter stated that if Category 1 were to be extended in such a manner, an RIA would be unlikely to undertake covered transactions with a financial company that was not in Category 1, and as a result, the inclusion of RIAs in Category 2 would be redundant. It also asserted that if Category 1 were not extended to include banking entities, the potential for an RIA to become subject to Category

[33] The terms broker and dealer are defined in 15 U.S.C. 78c(a)(4) and (5), respectively. Broker and dealer registration requirements are contained in 15 U.S.C. 78o. The terms government securities broker and government securities dealer are defined in 15 U.S.C. 78c(a)(43) and (44), respectively. Government securities broker and government securities dealer registration requirements are contained in 15 U.S.C. 78o–5.

2 reporting could lead to Category 2 entities generally preferring to transact with Category 1 entities (where this does not impact the price at which they transact), leading to distortions. Accordingly, it suggested that excluding RIAs from Category 2 would not ultimately reduce the effectiveness of the Office's data collection. However, this commenter provided no data to support this assertion, and the Office sees such concerns about trading preferences as speculative in nature. In relation to this commenter's proposal to extend the definition of Category 1 covered reporters, the Office has declined to add banking entities to the enumerated categories of entities contained in Category 1, as discussed below. Additionally, given the gaps in visibility into this market, the risks from leveraged funds that are operated by RIAs, and the potential for future developments in this market that shift activity away from traditional intermediaries, the Office continues to view the collection of data from RIAs as essential to its ability to effectively monitor financial stability risks.

Several commenters stated that inter-affiliate repo transactions should not be required to be reported and should not count toward the Category 1 and Category 2 covered reporter thresholds. One commenter noted that inter-affiliate transactions occur for operational reasons, and another commenter noted that these transactions are typically risk transfers with no market impact. They additionally suggested that data on transactions between affiliates would not be useful for understanding the repo market. The Office believes that reporting on these trades can provide insight into the fragilities and sources of financing within entities and between financial companies. Additionally, in contrast to the views expressed by the commenters, recent research shows that transactions between affiliates can play an important role in repo markets.[34] Information on these transactions is important for risk monitoring purposes. For instance, large transfers of cash from banks to affiliated dealers can indicate decreasing liquidity for dealers that could be an early warning indicator of stress. Another example of inter-affiliate transactions that are important to monitor from a financial stability perspective are those in which broker-dealers engage in centrally cleared trades on behalf of affiliated asset managers and then conduct back-to-back non-centrally cleared legs between the broker-dealers and the affiliated asset managers. While one commenter stated that collecting data on these types of transactions would be duplicative of information already collected by FICC, it is in fact an example of the importance of collecting inter-affiliate transactions, because exposures to repo would be incorrectly attributed to broker-dealer affiliates instead of asset managers without data on this back-to-back leg. As the Office's intention is to collect information on the full scope of financial activity in repo markets and inter-affiliate transactions are valuable for financial stability monitoring, inter-affiliate transactions are to be considered when calculating Category 1 and Category 2 reporting thresholds and should be reported.

Another commenter suggested that other categories of potential covered reporters be removed from the rules' coverage. The commenter stated that subjecting buy-side entities, such as advisers of private funds that predominantly enter into transactions with financial intermediaries like broker-dealers or banks or their affiliates, to reporting would be unwarranted. The Office understands that, at present, the majority of NCCBR transactions involving private funds, funds managed by RIAs, and other buy-side entities is likely conducted with Category 1 counterparties. However, as noted in the NPRM, without a comprehensive collection, the extent of transactions without a Category 1 counterparty is not knowable. Additionally, even if today it is unlikely that an investment adviser, adviser to a private fund, or other buy-side financial company would undertake a transaction with a non-Category 1 financial company, the NPRM explicitly noted the Office's intention to cover potential future changes in repo market structure. These may include peer-to-peer repo that bypasses Category 1 financial companies.

Another commenter suggested that money market funds and mutual funds be exempted from reporting because such funds do not generally enter repo transactions in the role of borrower and are unlikely to have outstanding commitments to borrow cash in the bilateral repo markets that meet the reporting threshold. The Office agrees that money market funds are generally unlikely to borrow cash in repo markets and generally do not play roles resembling intermediaries in these markets, and the Office does not generally expect money market funds to fall within the scope of Category 1 or Category 2. However, mutual funds have been known to borrow in repo markets. To the extent an adviser for mutual funds may manage a number of investment vehicles or relationships that in the aggregate could exceed the reporting threshold, including them in the data collection would enhance the ability of the collection to provide information regarding run risks and liquidity risks.[35]

Several commenters suggested that the Office add banks to the set of financial companies covered by Category 1. One commenter stated that while U.S. broker-dealers represent a significant proportion of market activity, sizable positions are also maintained by foreign and domestic banks, including U.S. branches of foreign banks. Another commenter stated that there would be duplicative reporting from asset managers and funds if banks are included in Category 1. The Office has attempted in the structure of the Final Rule to limit duplicative reporting by financial companies. For instance, the exclusion of brokers and dealers from the reporting threshold calculation for Category 2 limits the scope of Category 2 covered reporters. However, requiring Category 2 companies to remove transactions with Category 1 companies from their reports under the Final Rule could increase their reporting burdens. In some cases, determining whether a transaction has already been reported may be more costly for covered reporters than simply reporting the duplicate transaction. Additionally, the Office notes that reducing the potential for dual reporting by assigning reporting responsibility solely to the dealer would not be possible in cases where the dealer is not subject to reporting requirements, such as a dealer that is not a U.S. financial company. Therefore, in the interest of keeping the determination of reporting obligations clear, the Office will continue with the reporting structure as outlined in the NPRM.

Another commenter suggested that the reporting burden would be lower if banks were included in Category 1 because banks may be affiliated with other Category 1 covered reporters. Commenters noted that if banks were

included in Category 1, transactions with banks would be excluded from the Category 2 threshold calculation, making it less likely that certain financial companies would qualify as Category 2 covered reporters. Two comment letters also asserted that if Category 1 is not expanded to include banks, it could lead to migration of repo trades from other entities to Category 1 financial companies.

The NPRM included within Category 1 SEC-registered brokers, dealers, government securities brokers, and government securities dealers. While many repo transactions by financial companies occur with counterparties other than those types of entities included in Category 1, the Office believes that the vast majority of transactions occur with Category 1 entities.

Analysis by the Office of data from call reports suggests that over 90% of gross repo by U.S. depository institutions is conducted by depository institutions that are registered as government securities dealers. Therefore, as stated in the NPRM, the Office continues to believe that nearly all NCCBR trades are intermediated by either dealers or are intermediated by financial companies that may be required to report under the Category 1 criteria, such as government securities dealers.[36] As such, the Office believes that any duplicative reporting from asset managers and others resulting from the exclusion of banks from Category 1 would be minimal. Additionally, unless incorporated or organized under federal or state law, U.S. branches of foreign banks are not considered financial companies as defined under the Final Rule. As a result, submissions by Category 2 covered reporters under the Final Rule would be the only way these trades would be reported to the Office. Additionally, in relation to the repo activities for foreign banks, as the NPRM noted, because of the lack of transparency in the existing market and the possibility of trades that bypass traditional intermediaries,[37] it is essential to include financial companies that are large cash borrowers from sources other than Category 1 to ensure a robust framework for monitoring financial stability in the repo market going forward.

One commenter suggested that RIAs be excluded from the Final Rule if Category 1 were extended to include banking entities. The commenter also noted that it would be unlikely that a fund managed by an RIA would undertake a covered transaction with an entity that was not in Category 1 and therefore, the inclusion of RIAs in Category 2 would be redundant. As discussed above, the Office has not added banking entities to Category 1. Nevertheless, the Office understands that it may be likely that RIAs currently conduct the majority of their NCCBR transactions with Category 1 financial companies, including banking entities' affiliates that are registered government securities dealers. However, without a comprehensive data collection, the extent of transactions without a Category 1 counterparty is unknown. Additionally, even if it is unlikely a fund managed by an RIA would undertake a transaction with a non-Category 1 financial company, the Office in the NPRM explicitly stated its intention to cover potential future expansions in repo such as peer-to-peer repo that bypasses Category 1 financial companies. To the extent that funds managed by RIAs engage in repo transactions exclusively with Category 1 entities, they would not be covered reporters under Category 2. However, if RIAs were to be excluded entirely from the Final Rule, any transactions with counterparties outside of Category 1 would not be captured, leaving a crucial gap in the ability of regulators to effectively monitor financial stability risks in this market.

The same commenter asserted that banking entities should be added to Category 1 because the definition of ''financial company'' used in 12 U.S.C. 5381 is limited because it relates to the operation of the Orderly Liquidation Authority under Title II of the Dodd-Frank Act. As a result, the commenter stated, such term should instead reference the definition in 12 U.S.C. 5344. For the reasons stated above, the Office has declined to add banking entities to Category 1.

One commenter also requested clarification on several points of interpretation related to Category 1 financial companies. First, the commenter incorrectly asserted that the NPRM's preamble text indicated that the reporting requirements would only apply in the context of a covered reporter that is a cash borrower, and that they believed that the Office intended to limit Category 1 to the enumerated financial companies when acting as cash borrowers and requested confirmation of such an understanding. Notwithstanding the fact that the same section of the NPRM also explicitly included the extension of guarantees within the transactional threshold applicable to Category 1 financial companies, the regulatory text in both the NPRM and the Final Rule makes clear that Category 1 is not limited to financial companies when acting as cash borrowers, but also includes financial companies when extending guarantees.

Second, the commenter noted that one instance of the description of Category 1 financial companies in the preamble to the NPRM did not explicitly reference the $10 billion materiality threshold and asked whether the Office intended to include a materiality threshold in both categories of financial companies. The NPRM and the Final Rule make clear that the $10 billion threshold applies to both Category 1 and Category 2 financial companies.

Third, the commenter requested clarification as to whether Category 1 is intended to cover only principal transactions (and not agency transactions) by financial companies. Consistent with the explanation in the NPRM, the Category 1 calculation should include obligations of the financial company and guarantees extended by the financial company. For purposes of calculating the Category 1 threshold, a financial company should exclude transactions in which it acts as an agent—such that it incurs no obligation and extends no guarantee. Unlike investment advisers, the Office is not aware of dealers, brokers, government securities dealers, or government securities brokers that package their trades together with those of their clients that use the dealers or brokers as their agent. The case in which a Category 1 financial company acts as an agent for a customer but not as an investment adviser is therefore distinct from the case of investment advisers conducting batched trades on behalf of the funds they advise as described above.

Fourth, the commenter requested clarification as to whether, when a financial company is registered as a government securities broker or dealer for certain limited activities, the proposed rules would apply only to those certain limited activities of the registered financial company or whether all activity of the financial company would be captured by the Category 1 calculation. As set forth in the regulatory text in both the NPRM and the Final Rule, all commitments to borrow cash or extend guarantees in NCCBR transactions should be included in the determination of total commitments for the purposes of reporting, regardless of whether the firm is acting in its capacity as a government securities broker or dealer or in some other capacity. Similarly, all

[36] 88 FR 1154, 1163.

[37] Id.

commitments to borrow cash or lend cash in repo or transactions where guarantees are extended by the firm should be reported to the Office.

Finally, the commenter requested clarification, for the purpose of determining the $10 billion threshold in Category 2, about whether foreign banks and foreign broker-dealers should be treated as Category 1 financial companies and how transactions should be considered if the foreign entity is an affiliate of a U.S. bank or broker-dealer. As set forth in the Final Rule, for purposes of calculating the $10 billion threshold, potential Category 2 covered reporters should exclude repo borrowing and guarantees extended to counterparties that are securities brokers, securities dealers, government securities brokers, or government securities dealers (as each such term is defined in the Final Rule), regardless of whether those counterparties are Category 1 covered reporters. If a counterparty is an affiliate of a securities broker, securities dealer, government securities broker, or government securities dealer (as each such term is defined in the Final Rule), but is not one of these types of financial companies, transactions with the counterparty should be included in the calculation of the Category 2 threshold.

III(b) Scope of Transactions

Consistent with the NPRM, the Final Rule defines a non-centrally cleared bilateral repurchase agreement transaction as an agreement in which one party agrees to sell securities to a second party in exchange for the receipt of cash, and the simultaneous agreement of the former party to later reacquire the same securities (or any subsequently substituted securities) from that same second party in exchange for the payment of cash; or an agreement of a party to acquire securities from a second party in exchange for the payment of cash, and the simultaneous agreement of the former party to later transfer back the same securities (or any subsequently substituted securities) to the latter party in exchange for the receipt of cash. In all cases, the agreement neither involves a tri-party custodian nor is cleared through a central counterparty. This definition includes, but is not limited to, transactions that are executed under a Master Repurchase Agreement (MRA) or Global Master Repurchase Agreement (GMRA), or which are agreed to by the parties as subject to the provisions of 11 U.S.C. 559. Notwithstanding the above, transactions conducted under a Securities Lending Agreement (SLA), a Master Securities Lending Agreement (MSLA), or Global Master Securities Lending Agreement (GMSLA) are not considered repurchase agreements, nor are repurchase agreements arising from either participation in a commercial mortgage loan or the initial securitization of a residential mortgage loan. The Office has chosen to exclude SLA, MSLA, and GMSLA transactions from the Final Rule because reporting of data related to such transactions to the Office could be redundant (and therefore unnecessary) in light of the required reporting of securities lending information to a registered national securities association as provided for in the SEC's recent securities lending transparency rules.[38]

The NPRM requested comment on whether sell/buy-back transactions should be excluded from the Final Rule. While sell/buy-back agreements accomplish similar goals to repo transactions, the Office proposed not to include sell/buy-back agreements with the understanding that these agreements are recorded differently from MRA, GMRA, MSLA, and GMSLA agreements and may have different characteristics and names from the preceding types.[39] In response, one commenter noted that sell/buy-backs are now almost entirely documented (*e.g.,* under the Buy/Sell Back Annex to the GMRA and a similar annex to the SIFMA MRA). Further, this commenter noted that differences in methods of quoting and terminology of sell/buy-back agreements are legacies that are insubstantial and have dwindled in importance. Excluding sell/buy-backs from the Final Rule could be costly in requiring covered reporters to distinguish between nearly identically documented agreements and might also enable covered reporters to avoid disclosing a transaction by executing such economically similar transactions under a different form of agreement. Therefore, sell/buy-back agreements are included within the scope of transactions covered under the Final Rule.

Several commenters posed questions regarding guarantees, specifically with respect to the calculation of reporting thresholds and whether various guarantee arrangements fall within the scope of reporting. As noted in the NPRM, the extension of a guarantee to a repo transaction replicates the profile of traditional repo intermediation by offsetting direct transactions with the counterparties to the guaranteed repo, and therefore its inclusion in the data collection is essential to providing regulators a complete picture of the repo market. Guarantees encompass any agreement pursuant to which a financial company that is not one of the two direct counterparties to a repo transaction commits to provide protection against the risk of a failure to perform for that repo transaction under the terms of the repo by one of the direct counterparties. For every transaction, including guaranteed repo transactions, all the data elements should be reported as detailed below and in the reporting instructions.

One commenter asked whether, for purposes of determining if a financial company has met the position thresholds to be a covered reporter, the financial company should aggregate the repos in which the firm is a cash borrower together with the repos for which the firm is a guarantor on behalf of a cash borrower, and whether a separate file should be submitted for guarantee arrangements. The same commenter also asked whether a firm would be considered a covered reporter if its repo cash borrowings exceed the applicable threshold for the prior quarter, but the firm does not guarantee any repos (or the firm's repo guarantees do not exceed the applicable threshold). Data on guarantee arrangements should be submitted in the same file. The $10 billion threshold for Category 1 or Category 2 is calculated based on the aggregate combined amount of a financial company's cash borrowings in NCCBR transactions and the guarantees extended by the financial company in NCCBR transactions.

One commenter asked whether the $10 billion threshold calculation include repo transactions with and guarantees extended to affiliates. A repo transaction or an extension of a guarantee to an affiliate creates an exposure of the covered reporter to its affiliate. The resulting risks are within scope of the Final Rule's purpose, and the transaction should be reported and included in the total transaction volume used for the Category 1 and Category 2 thresholds.

Another commenter asked whether indemnified repo entered into as part of cash collateral reinvestment associated with securities lending should be included under guarantees. Because these transactions replicate the profile of offsetting legs between a securities lender and the securities lending agent and between the securities lending agent and a third party, and because the resulting risks are within scope of the Final Rule's purpose, this would be reported to the Office. However, the commenter asserted that nearly all of

[38] Securities and Exchange Commission. *Reporting of Securities Loans,* Final Rule, 88 FR 75644 (Nov. 3, 2023). *https://www.federalregister.gov/d/2023-23052.*

[39] 88 FR 1154, 1164.

the indemnified repo is done with Category 1 financial companies as counterparties or is centrally cleared. The Office notes that guarantees extended to centrally cleared repo transactions, sponsored repo transactions, and tri-party transactions are not covered by the scope of this Final Rule, and that transactions with Category 1 financial companies are not included in the calculation of reporting thresholds for Category 2 financial companies, reducing the potential for duplicative reporting associated with indemnified repo.

Two commenters requested clarification around whether ''shortfall guarantees,'' transactions in which a financial company offers a guarantee only on the uncollateralized portion of a repo, would be considered guarantees and if so, whether reporters should consider the full amount of the repo transaction being guaranteed or only the size of the shortfall guarantee when calculating their repo commitments. A shortfall guarantee replicates the exposure of an intermediary standing between a cash borrower and a cash lender, since repo transactions are all collateralized and the loss the intermediary is exposed to is the size of the uncollateralized portion of the repo transaction. As such, the resulting risks are within scope of the Final Rule's purpose and should be included in reporting and, since the exposure replicated is the same as the exposure the intermediary would undertake if it were intermediating the full amount of the transaction, the amount used to calculate a potential covered reporter's transaction volume should be the full amount. To illustrate, for $95 lent against a market value of $90 in collateral, the measurement of guarantee obligations used to calculate transaction volume should be reported as $95 rather than a shortfall exposure. Since the cash amount being guaranteed is the $95, rather than the shortfall value, this is considered the exposure for the purpose of the threshold calculation. This exposure would then be added to the total commitments by the borrower to borrow cash or lend cash in repo transactions for the purposes of calculating the total threshold based on repo exposure, and the repo transaction would be reported in the same file as other transactions. One of the commenters requested clarification on the manner by which a covered reporter should report the various data elements for a guarantee that does not have a specified cap, or a guarantee on behalf of a non-U.S. entity. For all guarantee transactions, regardless of the existence of any cap or whether the relevant entity is a U.S. entity, the reported data elements should cover the entirety of the underlying transaction.

The NPRM noted that some transactions covered under the proposed rules would likely be with counterparties outside of the United States, noting the potential benefit of greater information on cross-border exposures associated with repo borrowing and the concern of potential circumvention.[40] This would include transactions by the covered reporter settled internationally or denominated in currencies other than in U.S. dollars. Some commenters sought clarification of how the rules would apply to a U.S. branch of a foreign financial company, a foreign branch or affiliate of a U.S. financial company, or a transaction conducted internationally. As noted in the NPRM, the definition of ''financial company'' includes only entities that are incorporated or organized under Federal or state law, including subsidiaries. Entities that are not incorporated or organized under Federal or state law, or branches of entities that are not incorporated or organized under Federal or state law, are not subject to the Final Rule's reporting requirements. However, as stated in the NPRM, transactions conducted outside the United States by covered reporters are within scope, because their exclusion could allow covered reporters to avoid reporting by settling a transaction outside the U.S., and these transactions contain information on cross-border exposures that are relevant for financial stability monitoring.[41] Therefore, transactions conducted by financial companies (as defined in the Final Rule) that are settled or otherwise take place outside of the United States as well as transactions settled in currencies other than the U.S. dollar are included both in the transactions reported to the Office and in the volumes used to determine the Category 1 and Category 2 thresholds.

One commenter suggested that the rules should exclude transactions by non-U.S. sub-advisers under the management of a U.S. adviser as well as *de minimis* transactions between Category 2 financial companies denominated in currencies other than U.S. dollars. This commenter suggested these transactions be excluded from the collection because such information is not relevant to regulators' understanding of the U.S. repo market and *de minimis* transactions pose little systemic risk to the United States. Also, they suggested that the burden of reporting these transactions outweighs the benefit. The Office does not agree with these reasons. Financial companies can flexibly utilize financing from sources outside the United States as needed. Excluding transactions of a non-U.S. sub-adviser under the management of a U.S. adviser or transactions denominated in other currencies could eliminate important information about cross-border exposures relevant to financial stability. Additionally, the practice of structuring transactions into smaller cash amounts does not remove their relevance to financial stability analysis. As a result, the Office declines to exclude these transactions. These transactions should be included both in the transactions reported to the Office and in the volumes used to determine Category 1 and Category 2 disclosure thresholds.

III(c) Information Required

Pursuant to § 1610.11(c) of the Final Rule, covered reporters must submit information on all NCCBR transactions in which the covered reporter participates. The word ''all'' should be interpreted broadly; the set of transactions to be included in a covered reporter's disclosures is wider than that used to determine whether a financial company is a covered reporter. Transactions should be reported regardless of whether the covered reporter is a cash lender or cash borrower, a direct participant, guarantor, or other relevant third party. Further, covered reporters should report transactions in this market segment regardless of the tenor, optionality, or the collateral underlying the transaction. Additionally, covered reporters should report transactions regardless of the domicile of the other entities taking part in the transaction or the location in which the transaction is settled. Additionally, the covered reporter should report all transactions that occur within the larger organization (including affiliates and subsidiaries of the covered reporter) to which the covered reporter participates. Along the same lines, Category 2 reporters should report any transactions that occur with potential or actual Category 1 reporters.

III(c)(1) Line Items

The Final Rule requires reporting on NCCBR trades, including detailed reporting about the securities used to collateralize these trades and contractual details of the underlying repurchase agreements.

As adopted, the required data elements are listed in the table in section § 1610.11(c) of the Final Rule's

[40] 88 FR 1154, 1164.

[41] Id.

text. The table is tailored to capture information regarding covered transactions in a manner that the Office believes largely reflects the data generated by covered reporters in the ordinary course of business. This table lists each required element and a brief description of that element.

While commenters addressed the data elements in varying ways, for ease of reference, the following discussion follows the order of the data elements as they appear in the table of data elements in the NPRM. Additional instructions relating to data submission mechanics and the formatting of individual data elements will be contained in reporting instructions published concurrently with the Final Rule.

Cash Lender Name and Cash Borrower Name

One commenter suggested that these elements were unnecessary because the Legal Entity Identifiers (LEIs) of the cash lender and cash borrower were to be collected and, because LEIs are unambiguous values, LEIs should be sufficient to identify the parties to the transaction. LEIs are not available in every circumstance and the Office has therefore determined that the cash lender and cash borrower names should remain as required data elements.

Guarantee

Two commenters requested more guidance on the meaning of this element and the manner of reporting. Guarantees in the context of this element are to be understood as having the same meaning as stated above in section III.b ''Scope of Transactions.'' As proposed in the NPRM, guarantees must be reported simply with an indicator for whether the covered reporter issued a guarantee with respect to the transaction. The Office will provide further clarification on data submission mechanics in the reporting instructions.

Netting Set

Two commenters asked that this field be dropped from the collection. As discussed below in this section under ''Risk Management,'' the Office is not including the netting set data element in the collection at this time.

Transaction ID

One commenter asked for clarification of the word ''respondent'' in the data element explanation provided in the NPRM. This term means ''covered reporter'' in this instance, and the Office has made corresponding changes in the Final Rule.

Trading Platform

One commenter asked if this field would be a free-text field or if the Office would provide specific values for a covered reporter to select. It is a free-text field for the name of the trading platform used to perform/submit the corresponding transaction. The Office will provide examples in the reporting instructions.

End Date

One commenter asked for clarification on the use of this element in the cases of open and evergreen repos and made a suggestion about the ability to distinguish between open and evergreen repos. For the purposes of this collection, the Office will collect the Minimum Maturity Date for all transactions. To preserve the granularity between repos with different optionality structures, the Office will provide a field for special instructions, notes, or comments that should be used, among other things, to differentiate between these different transaction types. Examples and clarifications will be provided in the reporting instructions.

Cash Lender Internal Identifier and Cash Borrower Internal Identifier

One commenter requested clarification as to whether the cash lender internal identifier or cash borrower internal identifier should be reported when the covered reporter itself is the relevant counterparty. This field should always be reported, including when the covered reporter is the direct counterparty to the transaction. Covered reporters are free to develop their own internal identifiers for self-identification.

Start Leg Amount

One commenter suggested removing this element because some financial companies do not track this value on a historical basis and the Office would have this information previously reported by the firm (and associated to the same transaction identifier reported by the firm) as long as the firm was a covered reporter as of the inception of the repo. However, removing this field would mean that it would never be collected, even for the date the transaction was initiated. On this basis, the Office deems the suggestion unworkable. The element is retained in the collection.

Close Leg Amount

Two commenters questioned how to calculate this value for floating-rate repos. The Office clarifies in the Reporting Instructions that it does not expect this value to be calculated for floating-rate repos. The field should still be provided in accordance with the reporting instructions.

Current Cash Amount

One commenter requested that accrued interest not be included in daily reporting of this element or that including accrued interest in this field be optional, with the addition of another field for reporters to indicate whether accrued interest was included. The commenter stated that the Office could calculate the accrued interest data based on the start leg amount and the spread and benchmark for the applicable transaction identifier. The Office understands that this element is not solely composed of start leg cash value and accrued interest and may also contain other adjustments. Moreover, the purpose of this field is to collect the reporter's assessment of its current cash amounts without having to infer these adjustments. The Office therefore does not see the need for a separate data element and declines to change the reporting of the field.

Rate

One commenter requested confirmation that this field would be reportable for both fixed- and floating-rate repo transactions and, if so, whether a firm would report the sum of the benchmark rate and the spread in this field in the case of a floating-rate transaction. The Office will clarify this in the reporting instructions.

Floating Rate

One commenter requested clarification as to whether this field was intended to identify the benchmark used for determining the rate for the floating-rate transaction and if so, suggested renaming the field. The Office confirms that the identification of the benchmark name is the data to be reported and has made clarifying revisions in the Final Rule.

Securities Identifier Type

One commenter asked if this is a free-text field. It is not. The Office will enumerate the choices available for this field in the reporting instructions.

Securities Value at Inception

One commenter suggested removing this element because some financial companies do not track this value on a historical basis and the Office would have this information previously reported by the firm (and associated to the same transaction identifier reported by the firm) as long as the firm was a covered reporter as of the inception of the repo. However, removing this field

would mean that it would never be collected, even for the date the transaction was initiated. On this basis, the Office deems the suggestion unworkable. The element is retained in the collection.

Haircut

One commenter suggested removing this element because some financial companies do not track this value on a historical basis and that the Office would have this information previously reported by the firm (and associated with the same transaction identifier reported by the firm) as long as the firm was a covered reporter as of the inception of the repo. However, removing this field would mean that it would never be collected, even for the date the transaction was initiated. On this basis, the Office deems the suggestion unworkable. The element is retained in the collection.

As noted above, some commenters addressed data element issues on a more thematic basis. One commenter requested clarification as to whether matching unique transaction identifiers (UTIs) with a counterparty would be necessary for reporting. It is not contemplated for this collection that matching elements across reporters, including UTIs, will be necessary.

III(c)(2) Collateral Information

Several commenters stated that the collection of data should be restricted to transactions that use U.S. Treasuries as the underlying collateral, due to the operational complexity and burden of reporting trades backed by other collateral. Two of these commenters incorrectly asserted that the Office's interest in the proposed collection was driven solely by stability and liquidity in the U.S. Treasury securities market and that the operational build-out to cover non-U.S. dollar-denominated securities, U.S. agency debt, or U.S. corporate debt would provide questionable insight into overall systemic stability in U.S. or global financial markets. The collection is intended to fill a critical gap in regulators' information on the repo market by collecting data on the NCCBR market segment, in order to provide a comprehensive view of the last segment for which regulators do not have a transaction-level data source.[42] The NPRM specifically contemplated collateral other than U.S. Treasuries by noting the need to better understand collateral risk, which has implications for financial stability, and that the NCCBR market segment generally contains riskier collateral than other segments because the cleared market segments are limited to Fedwire-eligible collateral.[43]

As additionally noted in the NPRM, collecting data on collateral will provide valuable insight into financial stability matters because vulnerabilities associated with two of the five repo market functions–monetization of assets and transformation of collateral–allow for the propagation of shocks from the repo market to the secondary market for the underlying collateral or for a shock in one of these securities markets to propagate to the repo market and then potentially spread into other markets.[44] The collateral underlying a repurchase agreement is crucial to assessing the exposures and risk management in the repo market. Information about securities delivered into repo will allow the Office to assess common risk exposures across counterparties. The fields proposed will also allow the Office to assess the extent to which specific securities are tied to the repo market and therefore the potential for spillovers from the repo market into the underlying securities market, with potential effects on liquidity and price efficiency. The Office continues to believe that understanding paths of potential spillovers through various collateral classes is critical to monitoring stability in the repo market.

One commenter stated that there would be additional complexity of reporting trades that use other collateral on the basis that these trades are less standardized. While standardization is not the primary purpose of this collection, as noted in the NPRM, standardization in this decentralized market as a result of the Final Rule's reporting process may also improve the ability to reconcile records between financial companies in the event of severe market stresses.[45]

Additionally, the Office believes that the reporting thresholds established by the Final Rule will restrict the collection to large, sophisticated financial companies for which the cost of reporting information on all trades will be relatively minor. Further, as discussed below, the compliance timelines for both Category 1 and Category 2 covered reporters have been lengthened in the Final Rule compared to those proposed in the NPRM, which the Office believes will allow covered reporters ample time to set up and test for reporting.

Finally, one commenter suggested a staged approach to reporting, in which the collection is initially limited to trades backed by U.S. Treasury securities and would provide the Office with a significant portion of the remaining segment of the repo market for which it currently does not have information, without imposing unduly burdensome reporting obligations on market participants. It also asserted that such an approach would prove less disruptive to the orderly operation of the repo market and give the Office valuable information regarding the compliance costs of implementing a repo reporting regime before it imposes additional reporting obligations. For the same reasons as noted above, the Office has an interest in collecting data with respect to all types of collateral, and in light of the anticipated sophistication of covered reporters and the additional time provided for a newly qualifying financial company to begin reporting, the Office declines to adopt a two-stage reporting timeline with respect to collateral type. For all of the reasons noted above, the Office is not limiting the collection of data in the Final Rule only to those transactions that use U.S. Treasuries as the underlying collateral.

III(c)(3) Risk Management

In the NPRM, the Office proposed to collect information on a covered reporter's risk management practices. The Office sought to collect information on whether the covered reporter nets counterparty exposures across asset classes and instruments outside of repo and the terms on which netting occurs when the covered reporter does not net counterparty exposures across asset classes and instruments outside of repo.

The Office received two comments on its proposal to collect data on netting. One commenter stated that reporting the field as proposed was not workable because netting is not captured on a trade-by-trade basis and does not represent an economic term of a trade like the other proposed fields. It also stated that if the Office intends to review netting as it relates to capital, other existing rules govern the collections of that information by federal financial regulators.

The other commenter stated that given the various netting arrangements that could apply, reporting as proposed would require financial companies to make subjective and complex interpretations for each reported position. It also stated that netting could be based on a written agreement or the specific course of dealing and policies and procedures of each party. Finally, the commenter requested that the Office

[42] 88 FR 1154, 1156.

[43] 88 FR 1154, 1158.

[44] 88 FR 1154, 1157.

[45] 88 FR 1154, 1160.

provide additional clarity as to the specific types of netting that the Office intended to cover and how netting should be reported in order to achieve consistent reporting across covered reporters.

The Office has concluded that while additional information on netting arrangements, including cross-product margining, would be useful for financial stability monitoring, the range of netting practices and documentation, along with the resultant potential inconsistency in reporting, suggest that other means of gathering such information might be more effective. Therefore, the Final Rule does not include this field. However, the financial stability rationale for the collection of information on netting arrangements and other risk management practices was not contested by comment letters. Such a collection may be addressed by the Office in the future.

III(d) Submission Process and Implementation

In its NPRM, the Office stated that it was reviewing options for the submission process and implementation of the collection and, should the proposed rules be adopted, may require submission either through the Office or through a collection agent.[46]

Two commenters suggested that the Office consider using a collection agent, although they identified different candidates. Based on the Office's experience with the Ongoing Data Collection of Centrally Cleared Transactions in the U.S. Repurchase Agreement Market, the Office has determined it has the ability to efficiently manage the collection of data under the Final Rule. The Office has developed and launched a data collection utility and specifies under the Final Rule that covered reporters are required to submit data directly to the Office rather than through a collection agent. However, the Office reserves the option to designate a collection agent in the future.

One commenter requested clarification as to whether, when a firm reports data for a particular observation date, it should report its positions as of the close of business on that observation date, whether a repo that is opened and closed on the same day is reportable, and whether reporting applies only to U.S. business days. The Office has considered this issue and made changes to the regulatory text in the Final Rule to include the definition of a business day. In addition to transactions that are opened or rolled over, the NPRM was clear that transactions that open and close on the same day must be reported as part of that business day's data submission. The Final Rule also adds a definition of File observation date, and this definition is consistent with the usage in the NPRM.

One commenter asked whether a covered reporter's reporting responsibilities under the rules could be delegated to a counterparty or platform in order to manage reporting costs and provided an explanation of potential benefits of doing so. The Office distinguishes between trade-by-trade delegation to a counterparty or trading platform and delegation of its daily data submission (and any corrections thereto) to a provider of outsourced processing. The Office acknowledges that outsourcing certain business processes is an accepted industry practice for some financial companies, including those that may be covered reporters under the Final Rule. On the other hand, delegation that might spread the daily data submission of a covered reporter across several filings or from day to day among various entities is unworkable from an operational perspective and could create risks of errors in reported data. In light of these considerations, the Office will allow covered reporters to use a third party to submit data on their behalf, subject to the following constraints:

- The covered reporter may delegate a maximum of one third party at a time for daily file submission and corrections.
- The completed file is consistently submitted from a single source (either the covered reporter or the delegated third party), and the source may not change without advance notice to the Office.
- The covered reporter provides the Office at least 90 days advance notice of any proposed change to the submitter of the daily file.

Adherence to the above-listed constraints will allow covered reporters to use third parties to meet operational needs while furthering data quality. In any case, the covered reporter will remain fully responsible for the data submission and compliance with the Final Rule; any issues will be addressed directly between the covered reporter and the Office.

Under the NPRM, covered reporters were to submit the required data for each business day by 11 a.m. Eastern Time on the following business day. Several commenters stated that this reporting deadline should be extended for reasons of data quality and burden. One of these commenters also stated that financial companies also should have the ability to report between T+1 and T+3 because for some financial companies the positions would have matured off their system after T+1, and it would be difficult to determine what was outstanding three days before the filing deadline. Two commenters mentioned cross-border transactions as difficulties to T+1 reporting, with one commenter additionally asserting that a T+1 reporting requirement could discourage covered reporters from entering into NCCBR transactions, particularly with respect to repo transactions with non-U.S. counterparties.

Taking concerns regarding burdens and data quality and availability into account, the Office believes that 11 a.m. Eastern Time T+1 is an appropriate reporting deadline. Non-U.S. trades are likely to take place earlier in the 24-hour cycle than U.S. transactions, because most non-U.S. markets close earlier in the 24-hour cycle than U.S. markets, so for any given day a transaction on a foreign market already has more time for processing. Since this deadline occurs after most international financial exchanges have closed for the evening, the Office does not believe that this reporting cadence will materially affect choice of venue or otherwise distort the market.

Additionally, following the same logic out of consideration of the operating hours of international financial exchanges, the Final Rule defines ''business day'' as the period beginning at 6 p.m. Eastern Time on any day that the Fedwire Funds Service is open to 6 p.m. Eastern Time on the next day that the Fedwire Funds Service is open.[47] For example, the business day of January 24, 2024, began at 6 p.m. Eastern Time on January 23, 2024, and ended at 6 p.m. Eastern Time on January 24, 2024.

One commenter additionally noted the need for some covered reporters to build reporting systems to comply with the rules and therefore recommended T+3 should be used. The Office rejects this reasoning because a T+1 system should generally be similar in implementation to a T+3 system. Further, another commenter noted that existing systems for some covered reporters would be burdened by waiting until T+3 to report.

Overall, the Office has concluded that the T+1 proposal of the NPRM to be appropriate for both covered reporters

[46] 88 FR 1154, 1167).

[47] Refer to the schedule published on the *FRBservices.org* website, currently available at *https://www.frbservices.org/resources/financial-services/wires/operating-hours.html,* but subject to change.

and the Office. Allowing transactions to be submitted across multiple days would affect the ability of the Office to manage submissions, resubmissions due to errors, and overall data quality. This conclusion is based in part on the Office's experience with the cleared repo data collection, which has been that even a relatively high-volume system—one with more transactions per day than any one covered reporter under the Final Rule will have—works efficiently at a T+1 cadence.

The NPRM stated that if the proposal were to be adopted, the Final Rule would go into effect 60 days after its publication in the **Federal Register** and that covered reporters would be required to comply with the Final Rule 90 days after its effective date. The Office believed this implementation period would provide adequate time for covered reporters to comply with the proposed requirements but sought public comment on this matter.

Five commenters responded to the Office's questions related to the implementation timeline. Each requested more time to allow for building infrastructure and resources to meet compliance and reporting requirements. Several provided examples of activities that would need to be completed before compliance, such as changes to user interfaces, databases, and other existing systems, as well as implementing systems for processing rejections, resubmissions, and modifications and automating the process for generating and reporting the daily file.

Two of these commenters stated that the Office should allow 18 months for covered entities to begin reporting, in part due to the need to calculate the reporting thresholds. Both stated that the Office should consider a tiered or incremental approach for reporting, with one citing the European Securities and Markets Authority's (ESMA's) Securities Financing Transactions Regulation (SFTR) as an example. The other commenter recommended that the Office start with imposing a reporting obligation on Category 1 covered reporters, suggesting that after receiving their data for a period of time, the Office may learn that it has sufficient visibility into the repo market such that Category 2 entities would no longer need to report. Two of these commenters stated that the Office should allow 12 months for covered entities to begin reporting. Two commenters also pointed out that a longer implementation timeline was needed because the rules would add to several other global regulatory changes underway that will affect financial companies' reporting obligations. Several commenters tied their requests for additional implementation time to the date the Office finalizes technical specifications or reporting instructions that cover matters like report formats and connectivity protocols.

One commenter asserted as another reason for an extended reporting implementation timeline that the Office's collection of centrally cleared repo transactions allowed for a longer implementation timeframe while covering only a single reporting entity, as opposed to the multiple reporting parties expected under the Office's proposed collection of NCCBR transactions. However, the Office's centrally cleared repo collection is not an analogous basis for comparison. The Office's earlier collection required more than 70 data elements across three separate data file submissions. In comparison, this collection requires only a single data file to be submitted with 32 data elements.

Two commenters noted that the NPRM did not specify whether the Office or a collection agent would receive the data submissions. One asserted that once the collection agent is specified, the Office should issue technical details for notice and comment to maximize efficiency and consistency. The Office has previously engaged on these topics with market participants, regulators responsible for financial data collections, and industry associations through its NCCBR data collection and outreach pilot of 2022.[48] It is with this knowledge that the Office's Technical Guidance, including such matters as data submission mechanics and formatting, have been developed and are being published in concert with the Final Rule at *https://www.financialresearch.gov/data/non-centrally-cleared-bilateral-repo-data/.*

[48] The OFR secured the voluntary participation of nine dealers for its pilot data collection. These dealers include primary dealers and nonprimary dealers, bank affiliated and nonbank affiliated dealers, and both purely domestic dealers and dealers that are affiliates of foreign institutions. Hempel, Samuel J., R. Jay Khan, Robert Mann, and Mark Paddrik. 2022. The OFR Blog (blog). ''OFR's Pilot Provides Unique Window into the Non-centrally Cleared Bilateral Repo Market.'' December 5, 2022. *https://www.financialresearch.gov/the-ofr-blog/2022/12/05/fr-sheds-light-on-dark-corner-of-the-repo-market/.*

The Office does not intend to solicit additional public input on its Reporting Instructions nor its Technical Guidance at this time. These documents, along with the Final Rule, confirm that covered reporters will be required to submit their data directly to the Office. Additionally, the Technical Guidance will provide information on how to transmit data to the Office in the manner described in the Reporting Instructions.

Two commenters discussed the need for testing, with one requesting that the Office provide details regarding testing facilities and processes. This commenter further recommended that one month be allocated for testing submissions. The Office has considered this comment and will accept covered reporter data as of the Final Rule's effective date. The Office agrees that testing is important and expects that most covered reporters will use the time between the effective date and compliance date to submit data on a test basis. The Office encourages all covered reporters to test submissions as early as possible but at least 90 days before their compliance deadline.

The Office acknowledges that covered entities may need to establish or adapt their infrastructure to comply with their reporting obligations. However, as stated in the NPRM, the collection of these data is key to the Council's effective identification and monitoring of emerging threats to the stability of the U.S. financial system and any significant delay to reporting would hinder such efforts. To strike a balance in addressing these competing concerns, the Office is extending the amount of time that covered reporters have to comply with the Final Rule. The timeline has been extended in the Final Rule for Category 1 covered reporters by approximately 66%, from the proposed 90 days after the effective date to 150 days after the effective date, and for Category 2 covered reporters by 200%, from the proposed 90 days after the effective date to 270 days after the effective date. The Office believes that by extending the overall implementation timeline, as well as establishing staggered compliance dates, with an additional 120 days for Category 2 covered reporters compared to Category 1 covered reporters, it has appropriately addressed the identified concerns. The effective date of the rule remains as proposed at 60 days after the Final Rule is published.

TABLE 1—TIMELINE FOR FINANCIAL COMPANIES THAT MEET REPORTING THRESHOLDS AS OF THE EFFECTIVE DATE OF THE FINAL RULE

	Publication date	Effective date	Compliance date
Category 1 covered reporter	T	T+60 days	Effective Date + 150 days.
Category 2 covered reporter	T	T+60 days	Effective Date + 270 days.

One commenter requested clarification of the basis for determining whether financial companies meet reporting thresholds based on various compliance date scenarios. Consistent with the NPRM, the reporting threshold is met when a financial company's average daily total outstanding commitments to borrow cash and extend guarantees through NCCBR contracts over all business days during the prior calendar quarter is at least $10 billion.[49]

One commenter had questions about implementation time for financial companies that begin to meet reporting thresholds after the Final Rule's effective date. The NPRM stated that any financial company that becomes a covered reporter after the effective date of this section shall comply with the reporting requirements pursuant to this section on the first business day of the third full calendar quarter following the calendar quarter when such financial company becomes a covered reporter.[50] In light of the revised timeline for financial companies that qualify as covered reporters as of the Final Rule's effective date, and to improve consistency and clarity, the Office is also revising the timeline for financial companies that become covered reporters after the Final Rule's effective date. For a Category 1 company that becomes a covered reporter after the effective date, the compliance date has been revised to 150 days after the last day of the calendar quarter when the company becomes a covered reporter. For a Category 2 company that becomes a covered reporter after the Final Rule's effective date, the timeline has been revised to 270 days after the last day of the calendar quarter when the company becomes a covered reporter.

The Final Rule enumerates all compliance timelines in terms of days, and not quarters, to eliminate any confusion when interpreting the compliance timelines discussed above. Where the NPRM previously instructed financial companies that become covered reporters after the Final Rule's effective date to comply on the first business day of a quarter, the Final Rules will now articulate a compliance date that is a set number of days after the last day of the calendar quarter when such financial company becomes a covered reporter. The following table illustrates these timelines.

TABLE 2—TIMELINE FOR FINANCIAL COMPANIES THAT MEET REPORTING THRESHOLDS AFTER THE EFFECTIVE DATE OF THE FINAL RULE

	Last day of threshold quarter *	Compliance date
Category 1 covered reporter	T	T+150 days.
Category 2 covered reporter	T	T+270 days.

* The threshold quarter is the calendar quarter when the financial company first exceeds the thresholds stated in 12 CFR 1610.11(b)(2).

One commenter requested clarification on what happens when a covered reporter falls below the reporting thresholds and subsequently meets the thresholds again. As the NPRM stated, a covered reporter whose volume falls below the $10 billion threshold for at least four consecutive calendar quarters would have its reporting obligations cease.[51] However, if that same financial company once again meets the reporting threshold, it is subject to the same requirements as any financial company that becomes a covered reporter after the Final Rule's effective date, as illustrated in Figure 2.

As contemplated in the NPRM, the Office is publishing concurrently with the Final Rule specific reporting instructions and technical guidance on the Office's website at *https://www.financialresearch.gov/data/non-centrally-cleared-bilateral-repo-data/* regarding matters such as data submission mechanics and formatting. The Office may update these materials from time to time and will publish any updates on its website.

VI. Administrative Law Matters

VI(a) Paperwork Reduction Act

The information collection contained in the Final Rule has been reviewed and approved by the Office of Management and Budget (''OMB'') under OMB Control No. 1505–0279. In accordance with the requirements of the Paperwork Reduction Act (the ''PRA''), the Office may not conduct or sponsor, and a covered reporter is not required to respond to, an information collection unless it displays a currently valid OMB control number.

Commenters on the proposed rules generally acknowledged the need for the Office to collect certain information on repo transactions in support of the work of the Council, its member agencies, and the Office in connection with identifying and monitoring risks to financial stability.

Commenters also requested various modifications to, or relief from, aspects of the proposed rules that they stated would entail burdens that outweighed the benefits to the Office. This included recommendations from expected covered reporters for a phased implementation process over a longer period of time than the Office had proposed. However, none of the commenters provided comments, empirical data, estimates of costs or benefits, or other analyses directly addressing matters pertaining to the PRA discussion.

The Office's ability to collect non-centrally cleared repo data through this collection derives in part from the authority to promulgate regulations regarding the type and scope of financial transaction and position data from financial companies on a schedule determined by the Director of the Office

[49] 88 FR 1154, 1162.

[50] 88 FR 1154, 1170.

[51] 88 FR 1154, 1163.

in consultation with the Council.[52] In a 2022 statement on nonbank financial intermediation, the Council supported a recommendation made by the Council's Hedge Fund Working Group that the Office consider ways to collect NCCBR data[53] and, in July 2022 and February 2024, the Office consulted with the Council on efforts to collect NCCBR data.[54]

The Office also has authority to promulgate regulations pursuant to the Office's general rulemaking authority under Dodd-Frank Act section 153, which authorizes the Office to issue rules, regulations, and orders to the extent necessary to carry out certain purposes and duties of the Office.[55] In particular, the purposes and duties of the Office include supporting the Council in fulfilling its purposes and duties, and supporting Council member agencies, by collecting data on behalf of the Council and providing such data to the Council and Council member agencies, and standardizing the types and formats of data reported and collected.[56] The Office must consult with the Chairperson of the Council prior to the promulgation of any rules under section 153[57]—these consultations occurred both before and after the publication of the NPRM.

As noted above, commenters generally did not provide comments, empirical data, or other analyses directly addressing the Office's estimates in the PRA discussion. As outlined in detail above, the Final Rule incorporates changes from the proposed rules to provide for a phased implementation process over a longer period of time than the Office had proposed. However, this change does not impact the scope of financial companies subject to the requirements of the Final Rule, nor the estimated annual burden on a covered reporter once the Final Rule is fully implemented.

As a result, the Office's estimate of an annual burden of 756 hours per covered reporter remains unchanged. This figure is arrived at by estimating the daily reporting time to be approximately 3 hours for each submission and multiplying that figure by an average of 252 business days in a year, the typical number of days per year that do not fall either on weekends or on holidays widely observed by the market.

To estimate hourly wages for purposes of this Final Rule, the Office used data from the May 2022 Bureau of Labor Statistics Occupational Employment Statistics for credit intermediation and related activities (NAICS 522000). For hourly compensation, a figure of $91 per hour was used, which is an average of the 90th percentile wages in seven different categories of employment (compliance officers, accountants and auditors, lawyers, management occupations, financial analysts, software developers, and statisticians), plus an additional 44.5 percent to cover subsequent wage gains and non-wage benefits, which yields an estimate of $131 per hour.

In addition, and as described in the NPRM, each covered reporter must also obtain and maintain an LEI. Those costs have reduced since the publication of the NPRM, with the initial application now costing $50 and the annual renewal costing $40.

Using these assumptions, the Office estimates the recurring total estimated annual cost to a covered reporter is $99,076.

VI(b) Regulatory Flexibility Act

Congress enacted the Regulatory Flexibility Act (the ''RFA'') to address concerns related to the effects of agency rules on small entities.[58] The Office is sensitive to the impact its rules may impose on small entities. The RFA requires agencies either to provide an initial regulatory flexibility analysis with a proposed rule for which general notice of proposed rulemaking is required, or to certify that the proposed rule will not have a significant economic impact on a substantial number of small entities.[59] In accordance with section 3(a) of the RFA, the Office is certifying that the Final Rule will not have a significant economic impact on a substantial number of small entities.

As discussed above, this collection will apply to certain brokers, dealers, and other financial companies whose average daily outstanding commitments to borrow cash and extend guarantees in NCCBR with certain counterparties over all business days during the prior calendar quarter is at least $10 billion.

Under regulations issued by the Small Business Administration, a ''small entity'' includes those firms within the ''Finance and Insurance'' sector with asset sizes that vary from $15 million in assets up to $850 million in assets.[60] For purposes of the RFA, entities that are banks are considered small entities if their assets are less than or equal to $850 million. The level of the activity-based threshold under the Final Rule ensures that any respondent will be well beyond these small entity definitions.

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 605(b), it is hereby certified that this final rule will not have a significant economic impact on a substantial number of small entities.

VI(c) Congressional Review Act

This rule is not a major rule pursuant to the Congressional Review Act (CRA), 5 U.S.C. 801 *et seq.*

List of Subjects in 12 CFR Part 1610

Banks, Banking, Confidential business information, Securities.

For the reasons stated in the preamble, the Office of Financial Research amends 12 CFR part 1610 as follows:

PART 1610—REGULATORY DATA COLLECTIONS

■ 1. The authority citation for part 1610 continues to read as follows:

Authority: 12 U.S.C. 5343 and 5344.

■ 2. Add § 1610.11 to read as follows:

§ 1610.11 Non-centrally Cleared Bilateral Repurchase Agreement Data.

(a) *Definitions.* The terms used in this section have the following meanings:

Business day is the period beginning at 6 p.m. Eastern Time on any day that the Fedwire Funds Service is open to 6 p.m. Eastern Time on the next day that the Fedwire Funds Service is open.

Covered reporter means any financial company that meets the criteria set forth in paragraph (b)(2) of this section; provided, however, that any covered reporter shall cease to be a covered reporter only if it does not meet the dollar thresholds specified in paragraph (b)(2) of this section for at least four consecutive calendar quarters.

File observation date means the date on which any business day ends.

Financial company has the same meaning as in 12 U.S.C. 5341(2).

[52] 12 U.S.C. 5344(b)(1)(B)(iii).

[56] 12 U.S.C. 5343(a). The Council's purposes and duties include identifying risks to U.S. financial stability; responding to emerging threats to the stability of the U.S. financial system; monitoring the financial services marketplace in order to identify potential threats to U.S. financial stability; making recommendations in such areas that will enhance the integrity, efficiency, competitiveness, and stability of the U.S. financial markets; and identifying gaps in regulation that could pose risks to the financial stability of the United States. 12 U.S.C. 5322(a).

[57] 12 U.S.C. 5343(c)(1).

[58] 5 U.S.C. 601 *et seq.*

[59] 5 U.S.C. 603(a).

[60] 13 CFR 121.201.

Government securities broker means any financial company registered as a government securities broker under the Securities Exchange Act of 1934.

Government securities dealer means any financial company registered as a government securities dealer under the Securities Exchange Act of 1934.

Investment adviser means any financial company registered as an investment adviser with the Securities and Exchange Commission under the Investment Advisers Act of 1940.

Non-centrally cleared bilateral repurchase agreement transaction means an agreement of one party to sell securities to a second party in exchange for the receipt of cash, and the simultaneous agreement of the former party to later reacquire the same securities (or any subsequently substituted securities) from that same second party in exchange for the payment of cash; or an agreement of a party to acquire securities from a second party in exchange for the payment of cash, and the simultaneous agreement of the former party to later transfer back the same securities (or any subsequently substituted securities) to the latter party in exchange for the receipt of cash. The agreement does not involve a tri-party custodian and is not cleared with a central counterparty. This definition includes, but is not limited to, transactions that are executed under a Master Repurchase Agreement (MRA) or Global Master Repurchase Agreement (GMRA), or which are agreed to by the parties as subject to the provisions of 11 U.S.C. 559. Notwithstanding the above, transactions conducted under a Securities Lending Agreement (SLA) or a Master Securities Lending Agreement (MSLA) are not considered repurchase agreements, nor are repurchase agreements arising from either participation in a commercial mortgage loan or the initial securitization of a residential mortgage loan.

Outstanding commitment means the amount of financial obligations entered into pursuant to any repurchase agreement that opens on any business day or is outstanding as of the end of any business day, including transactions which both opened and closed on the same business day. These financial obligations include all of those that exist prior to netting.

Securities broker means any financial company registered as a broker with the Securities and Exchange Commission under the Securities Exchange Act of 1934.

Securities dealer means any financial company registered as a dealer with the Securities and Exchange Commission under the Securities Exchange Act of 1934.

(b) *Purpose and scope*—(1) *Purpose.* The purpose of this data collection is to require the reporting of certain information to the Office about non-centrally cleared bilateral repurchase agreement transactions. The information will be used by the Office to fulfill its responsibilities under Title I of the Dodd-Frank Wall Street Reform and Consumer Protection Act, including support of the Council and Council member agencies by facilitating financial stability monitoring and research consistent with support of the Council and its member agencies.

(2) *Scope of application.* Reporting under this section is required by any financial company that participates in a non-centrally cleared bilateral repurchase agreement transaction and that is:

(i) A securities broker, securities dealer, government securities broker, or government securities dealer whose average daily outstanding commitments to borrow cash and extend guarantees in non-centrally cleared bilateral repurchase agreement transactions with counterparties over all business days during the prior calendar quarter is at least $10 billion, or

(ii) Any other financial company with over $1 billion in assets or assets under management whose average daily outstanding commitments to borrow cash and extend guarantees in non-centrally cleared bilateral repurchase agreement transactions, including commitments of all funds for which the company serves as an investment adviser, with counterparties that are not securities brokers, securities dealers, government securities brokers, or government securities dealers over all business days during the prior calendar quarter is at least $10 billion.

(c) *Data required.* (1) Covered reporters shall report trade and collateral information on all non-centrally cleared bilateral repurchase agreement transactions, subject to paragraph (c)(2) of this section, in accordance with the prescribed reporting format in this section.

(2) Covered reporters shall only report trade and collateral information with respect to any non-centrally cleared bilateral repurchase agreement transaction which opens on, or is outstanding at any time during the business day, including transactions which both opened and closed during the business day.

(3) Covered reporters shall submit the following data elements for all transactions:

TABLE 1 TO PARAGRAPH (c)(3)

Data element	Explanation
File observation date	The date on which the business day ends.
Covered reporter LEI	The Legal Entity Identifier of the covered reporter.
Cash lender LEI	The Legal Entity Identifier of the cash lender.
Cash lender name	The legal name of the cash lender.
Cash borrower name	The legal name of the cash borrower.
Cash borrower LEI	The Legal Entity Identifier of the cash borrower.
Guarantee	Indicator for whether the covered reporter issued a guarantee with respect to the transaction.
Transaction ID	The covered reporter-generated unique transaction identifier in an alphanumeric string format.
Unique transaction ID	If available, the Unique Transaction Identifier (UTI).
Trading platform	For transactions arranged using an outside vendor's platform, the provider of the platform.
Trade timestamp	The timestamp that the trade became an obligation of the covered reporter or the covered reporter's affiliate or subsidiary.
Start date	The start date of the repo.
End date	The date the repo matures.
Minimum maturity date	The earliest possible date on which the transaction could end in accordance with its contractual terms (taking into account optionality).
Cash lender internal identifier	The internal identifier assigned to the cash lender by the covered reporter, if the covered reporter is not the cash lender.
Cash borrower internal identifier	The internal identifier assigned to the cash borrower by the covered reporter, if the covered reporter is not the cash borrower.

TABLE 1 TO PARAGRAPH (c)(3)—Continued

Data element	Explanation
Start leg amount	The amount of cash transferred to the cash borrower on the open leg of the transaction at the inception of the transaction.
Close leg amount	The amount of cash to be transferred by the cash borrower on the end date of the transaction.
Current cash amount	The amount of cash to be transferred by the cash borrower, inclusive of principal, accrued interest and other adjustments, as of the end of the business day.
Start leg currency	The currency which is used in the Start leg amount field.
Rate	The rate of interest paid by the cash borrower on the transaction, expressed as an annual percentage rate on an actual/360-day basis.
Floating rate benchmark	The name of the benchmark interest rate upon which the transaction is based.
Floating rate reset frequency	The time period, in calendar days, describing the frequency of the floating rate resets.
Spread	The contractual spread over (or below) the benchmark rate referenced in the repurchase agreement.
Securities identifier type	The identifier type for the securities transferred between cash borrower and cash lender.
Security identifier	The identifier of securities transferred between the cash borrower and the cash lender in the repo.
Securities quantity	The number of units (e.g., shares, bonds, bills, notes) transferred to the cash lender as of the end of the business day.
Securities value	The market value of the transferred securities as of the end of the business day, inclusive of accrued interest.
Securities value at inception	The market value of the transferred securities at the inception of the transaction, inclusive of accrued interest.
Securities value currency	The currency used in the Securities value and Securities value at inception fields.
Haircut	The difference between the market value of the transferred securities and the purchase price paid at the inception of the transaction.
Special instructions, notes, or comments	The covered reporter may characterize any detail of the transaction with special instructions, notes, or comments.

(d) *Reporting process.* Covered reporters shall submit the required data for each business day by 11 a.m. Eastern Time on the following business day. The Office may either collect the data itself or designate a collection agent for that purpose.

(e) *Compliance date.* (1) Any financial company that meets the criteria set forth in paragraph (b)(2)(i) of this section as of the effective date of this section shall comply with the reporting requirements pursuant to this section 150 days after the effective date of this section. Any such covered reporter's first submission shall be submitted on the first business day after such compliance date.

(2) Any financial company that meets the criteria set forth in paragraph (b)(2)(ii) of this section as of the effective date of this section shall comply with the reporting requirements pursuant to this section 270 days after the effective date of this section. Any such covered reporter's first submission shall be submitted on the first business day after such compliance date.

(3) Any financial company not described in subparagraph (e)(1) or (2) of this section that meets the criteria set forth in paragraph (b)(2)(i) of this section after the effective date of this section shall comply with the reporting requirements pursuant to this section 150 days after the last day of the calendar quarter in which such financial company becomes a covered reporter.

(4) Any financial company not described in subparagraph (e)(1) or (2) of this section that meets the criteria set forth in paragraph (b)(2)(ii) of this section after the effective date of this section shall comply with the reporting requirements pursuant to this section 270 days after the last day of the calendar quarter in which such financial company becomes a covered reporter.

James D. Martin,

Acting Director.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Rolls-Royce Deutschland Ltd & Co KG (RRD) Model Trent 1000–A, Trent 1000–A2, Trent 1000–AE, Trent 1000–AE2, Trent 1000–C, Trent 1000–C2, Trent 1000–CE, Trent 1000–CE2, Trent 1000–D, Trent 1000–D2, Trent 1000–E, Trent 1000–E2, Trent 1000–G, Trent 1000–G2, Trent 1000–H, Trent 1000–H2, Trent 1000–J2, Trent 1000–K2, and Trent 1000–L2 engines. This AD was prompted by reports of wear in the combining spill valve (CSV) assembly of certain hydro-mechanical units (HMUs). This AD requires removing certain HMUs from service and replacing with a serviceable part. This AD also prohibits the installation of certain HMUs unless the HMU is a serviceable part or the CSV assembly has been replaced, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 10, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 10, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at regulations.gov under Docket No. FAA–2024–0036; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

FOR FURTHER INFORMATION CONTACT: Sungmo Cho, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7241; email: *sungmo.d.cho@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all RRD Model Trent 1000–A, Trent 1000–A2, Trent 1000–AE, Trent 1000–AE2, Trent 1000–C, Trent 1000–C2, Trent 1000–CE, Trent 1000–CE2, Trent 1000–D, Trent 1000–D2, Trent 1000–E, Trent 1000–E2, Trent 1000–G, Trent 1000–G2, Trent 1000–H, Trent 1000–H2, Trent 1000–J2, Trent 1000–K2, and Trent 1000–L2 engines. The NPRM published in the **Federal Register** on January 24, 2024 (89 FR 4582). The NPRM was prompted by EASA AD 2023–0113, dated June 1, 2023 (EASA AD 2023–0113) (also referred to as the MCAI), issued by EASA, which is the Technical Agent for the Member States of the European Union. The MCAI states that occurrences have been reported of finding wear in the CSV assembly of certain HMUs. This wear can reduce the fuel flow output when the engine is operated at high power conditions and lead to thrust reduction. To address this unsafe condition, the manufacturer published service information that specifies procedures to remove certain HMUs from service and replace with a serviceable part. The MCAI also specifies an implementation schedule, based on engine flight-hour (EFH) limits, for replacement of each affected part with a serviceable part and prohibits installation or reinstallation of affected HMUs that have exceeded the allowable EFH limit unless the HMU is a serviceable part or the CSV assembly has been replaced.

In the NPRM, the FAA proposed to require removing certain HMUs from service and replacing with a serviceable part. The NPRM also proposed to prohibit installation of certain HMUs unless the HMU is a serviceable part or the CSV assembly has been replaced. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at regulations.gov under Docket No. FAA–2024–0036.

Discussion of Final Airworthiness Directive

Comments

The FAA received one comment from Boeing which supported the NPRM without change.

Conclusion

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting the AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, this AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed EASA AD 2023–0113, which specifies procedures for removing certain part-numbered HMUs from service and replacing with a serviceable part. The MCAI also specifies prohibiting installation or reinstallation of an affected HMU on any engine unless the HMU is a serviceable part.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Costs of Compliance

The FAA estimates that this AD affects 28 engines installed on airplanes, of U.S. registry.

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replace the HMU	7 work-hours × $85 per hour = $595	$552,000	$552,595	$15,472,660

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–08–06 Rolls-Royce Deutschland Ltd & Co KG: Amendment 39–22739; Docket No. FAA–2024–0036; Project Identifier MCAI–2023–00731–E.

(a) Effective Date

This airworthiness directive (AD) is effective June 10, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Rolls-Royce Deutschland Ltd & Co KG Model Trent 1000–A, Trent 1000–A2, Trent 1000–AE, Trent 1000–AE2, Trent 1000–C, Trent 1000–C2, Trent 1000–CE, Trent 1000–CE2, Trent 1000–D, Trent 1000–D2, Trent 1000–E, Trent 1000–E2, Trent 1000–G, Trent 1000–G2, Trent 1000–H, Trent 1000–H2, Trent 1000–J2, Trent 1000–K2, and Trent 1000–L2 engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7300, Engine Fuel and Control.

(e) Unsafe Condition

This AD was prompted by reports of wear in the combining spill valve (CSV) assembly of certain hydro-mechanical units (HMUs). The FAA is issuing this AD to prevent thrust reduction. The unsafe condition, if not addressed, could result in reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Except as specified in paragraph (h) of this AD: Perform all required actions within the compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2023–0113, dated June 1, 2023 (EASA AD 2023–0113).

(h) Exceptions to EASA AD 2023–0113

(1) Where EASA AD 2023–0113 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Table 1 of EASA AD 2023–0113 specifies ''15 June 2023'', replace that text with ''As of the effective date of this AD.''

(3) Where Table 1 of EASA AD 2023–0113 specifies ''01 January 2025'', replace that text with ''Within 4 months after the effective date of this AD or January 1, 2025, whichever occurs later.''

(4) Where the service information referenced in EASA AD 2023–0013 specifies to discard certain parts, this AD requires those parts to be removed from service.

(5) This AD does not adopt the Remarks paragraph of EASA AD 2023–0113.

(i) Definitions

For the purposes of this AD, the ''implementation date'' is defined as the date that the applicable engine flight hour limit takes effect.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520 Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the AIR–520 Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to: *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Additional Information

For more information about this AD, contact Sungmo Cho, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7241; email: *sungmo.d.cho@faa.gov.*

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0113, dated June 1, 2023.

(ii) [Reserved]

(3) For EASA AD 2023–0113, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locationsoremailfr.inspection@nara.gov.*

Issued on April 17, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Airworthiness Directives; CFM International, S.A. Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for CFM International, S.A. (CFM) Model LEAP–1A23, LEAP–1A24, LEAP–1A24E1, LEAP–1A26, LEAP–1A26CJ, LEAP–1A26E1, LEAP–1A29, LEAP–1A29CJ, LEAP–1A30, LEAP–1A32, LEAP–1A33, LEAP–1A33B2, and LEAP–1A35A engines. This AD was prompted by detection of melt-related freckles in the billet, which may reduce the life of certain high-pressure turbine (HPT) rotor interstage seals. This AD requires removing the affected HPT rotor interstage seals from service and replacing with a part eligible for installation. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 10, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 10, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at regulations.gov under Docket No. FAA–2024–0030; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

• For service information identified, contact CFM International, S.A., GE Aviation Fleet Support, 1 Neumann Way, M/D Room 285, Cincinnati, OH 45215; phone: (877) 432–3272; email: *aviation.fleetsupport@ge.com.*

• You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *regulations.gov* under Docket No. FAA–2024–0030.

FOR FURTHER INFORMATION CONTACT: Mehdi Lamnyi, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7743; email: *mehdi.lamnyi@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to CFM Model LEAP–1A23, LEAP–1A24, LEAP–1A24E1, LEAP–1A26, LEAP–1A26CJ, LEAP–1A26E1, LEAP–1A29, LEAP–1A29CJ, LEAP–1A30, LEAP–1A32, LEAP–1A33, LEAP–1A33B2, and LEAP–1A35A engines. The NPRM published in the **Federal Register** on January 11, 2024 (89 FR 1847). The NPRM was prompted by detection of melt-related freckles in the billet, which may reduce the life of certain HPT rotor interstage seals. In the NPRM, the FAA proposed to require removing the affected HPT rotor interstage seals from service and replacing with a part eligible for installation. The FAA is issuing this AD to address the unsafe condition on these products.

Discussion of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, this AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed CFM Service Bulletin LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00, dated April 6, 2023, which provides the serial numbers of the affected HPT rotor interstage seals and specifies procedures for replacement of the HPT rotor interstage seal. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 1 engine installed on an airplane of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Remove HPT rotor interstage seal	225 work-hours × $85 per hour = $19,125	$168,000	$187,125	$187,125

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–07–02 CFM International, S.A.: Amendment 39–22722; Docket No. FAA–2024–0030; Project Identifier AD–2023–01066–E.

(a) Effective Date

This airworthiness directive (AD) is effective June 10, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to CFM International, S.A. (CFM) Model LEAP–1A23, LEAP–1A24, LEAP–1A24E1, LEAP–1A26, LEAP–1A26CJ, LEAP–1A26E1, LEAP–1A29, LEAP–1A29CJ, LEAP–1A30, LEAP–1A32, LEAP–1A33, LEAP–1A33B2, and LEAP–1A35A engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by detection of melt-related freckles in the billet, which may reduce the life of certain high-pressure

turbine (HPT) rotor interstage seals. The FAA is issuing this AD to prevent failure of the HPT rotor interstage seal. The unsafe condition, if not addressed, could result in release of uncontained debris, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

For engines with an affected HPT rotor interstage seal installed, before exceeding the applicable threshold specified in Table 1 of paragraph 3.E., Compliance, of CFM Service Bulletin (SB) LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00, dated April 6, 2023 (CFM SB LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00), or at the next HPT rotor module exposure, whichever occurs first after the effective date of this AD, remove the affected HPT rotor interstage seal from service and replace it with a part eligible for installation.

(h) Definitions

(1) For the purpose of this AD, an ''affected HPT rotor interstage seal'' is any HPT rotor interstage seal having part number 2466M68P02 and a serial number listed in Table 1 of paragraph 3.E., Compliance, of CFM SB LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00.

(2) For the purpose of this AD, a ''part eligible for installation'' is any HPT rotor interstage seal having a serial number that is not listed in Table 1 of paragraph 3.E., Compliance, of CFM SB LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00.

(3) For the purpose of this AD, an ''HPT rotor module exposure'' is an engine shop visit during which the HPT rotor assembly is fully removed from the engine core.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520 Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the AIR–520 Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (j) of this AD and email to *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Additional Information

For more information about this AD, contact Mehdi Lamnyi, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7743; email: *mehdi.lamnyi@faa.gov*.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) CFM International, S.A. Service Bulletin LEAP–1A–72–00–0492–01A–930A–D, Issue 001–00, dated April 6, 2023.

(ii) [Reserved]

(3) For service information, contact CFM International, S.A., GE Aviation Fleet Support, 1 Neumann Way, M/D Room 285, Cincinnati, OH 45215; phone: (877) 432–3272; email: *aviation.fleetsupport@ge.com.*

Uniform Procedures for State Highway Safety Grant Programs

AGENCY: National Highway Traffic Safety Administration (NHTSA), Federal Highway Administration (FHWA), U.S. Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule amends the uniform procedures implementing the State Highway Safety Grant Program to waive, for Fiscal Year (FY) 2025, the requirement that targets for the common performance measures be identical to targets in the State Highway Safety Improvement Program. This final rule makes a corresponding change to a similar requirement in the FHWA's performance management regulation.

DATES: This final rule is effective May 6, 2024.

ADDRESSES: This document may be viewed online through the Federal eRulemaking portal at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded by accessing the Office of the Federal Register's website at: *www.federalregister.gov* and the U.S. Government Publishing Office's website at: *www.GovInfo.gov.*

FOR FURTHER INFORMATION CONTACT:

For FHWA: Kelly Morton, Office of Safety, (202) 366–8090 or via email at *kelly.morton@dot.gov* or Dawn Horan, Office of the Chief Counsel, (202) 366–9615 or via email at *dawn.horan@dot.gov*. Office hours are from 8 a.m. to 4:30 p.m., E.T., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Background

The NHTSA and the FHWA share three common performance measures in their highway safety programs—total fatalities, rate of fatalities, and total serious injuries—and have shared these common performance measure for many years. Both NHTSA and FHWA regulations require States to submit identical targets for the three common performance measures—in NHTSA's triennial Highway Safety Plan (HSP) and in FHWA's Highway Safety Improvement Program (HSIP) annual report. See 23 CFR 1300.11(b)(3)(ii)(C) and 490.209(a)(1), respectively.

On November 15, 2021, the President signed into law the ''Infrastructure Investment and Jobs Act'' (known also as the Bipartisan Infrastructure Law, or BIL), Public Law 117–58. The BIL provided additional grant funds to States and changed several requirements to support States in their efforts to

strengthen their highway safety programs. Among other things, the BIL required that all performance targets submitted to NHTSA in the triennial HSP demonstrate constant or improved performance. 23 U.S.C. 402(d)(4)(A)(ii).

The NHTSA published a final rule implementing the Highway Safety Grant Program under the BIL on February 6, 2023, at 88 FR 7780. The rule provides direction to States on procedures for meeting the statutory requirements governing their highway safety grant programs and applications. In addition to changing from performance targets submitted to NHTSA in an annual HSP to a triennial HSP, the rule requires States to submit constant or improved targets for the common performance measures and that these targets be identical to the targets that are reported by the State department of transportation (State DOT) in the HSIP annual report. See 23 CFR 1300.11(b)(3)(ii)(B).

On June 5, 2023, NHTSA and FHWA amended the uniform procedures implementing the State Highway Safety Grant Program to waive, for FY 2024, the requirement that targets for the common performance measures be identical to targets in the State Highway Safety Improvement Program. 88 FR 36472. The amendment was in response to questions from stakeholders about the interplay between NHTSA's and FHWA's current regulations.

On January 25, 2024, FHWA released a notice of proposed rulemaking concerning its performance measures that addresses and seeks comment on this issue. 89 FR 4857. Stakeholders continue to raise questions about the interplay between NHTSA's and FHWA's current regulations; however, the FHWA has not yet completed a new regulation implementing any changes to its performance measures since the passage of BIL.

II. Waiver of Identical Targets for Common Performance Measures

In this rulemaking, FHWA amends 23 CFR 490.209(a)(1) to waive, for FY 2025, the requirement that the State DOT targets shall be identical to the targets established by the State Highway Safety Office (HSO) for common performance measures reported in the State's HSP. The NHTSA amends 23 CFR 1300.12 to revise paragraph (b)(1)(ii) to provide that States may update the triennial HSP to amend common performance measures only if necessary, in order to submit identical performance targets to FHWA in the HSIP annual report. As a result of FHWA's waiver in this document, this amendment will mean that States may not amend the common performance targets submitted in the FY 24 triennial HSP in the FY 25 Annual Grant Application. With these changes, State HSOs will continue to use the non-identical targets submitted in the FY 24 triennial HSP and State DOTs have the flexibility to submit non-identical targets for the common performance measures for FY 2025 in the 2024 HSIP annual reports.

While NHTSA and FHWA are affording States flexibility to continue to use non-identical targets for FY 2025 highway safety programs, HSOs and State DOTs are nevertheless encouraged to continue to collaborate as they work together to implement a Safe System Approach and reduce deaths and serious injuries on our roadways.

III. Waiver of Notice and Comment

The NHTSA and FHWA find good cause to issue, without notice and comment, and to make effective immediately, this time-limited waiver of the requirement for identical targets, in accordance with 5 U.S.C. 553(b)(B) and 5 U.S.C. 553(d)(1). The Administrative Procedure Act provides that when an agency, for good cause, finds that notice and public comment are impractical, unnecessary, or contrary to the public interest, the agency may issue a final rule without providing notice and an opportunity for public comment (5 U.S.C. 553(b)(B)). For the same reason, the rule can become effective immediately. See 5 U.S.C. 553(d)(1). The safety programs of NHTSA and FHWA are governed by different statutory provisions, and FHWA has not completed its notice and comment rulemaking on the National Performance Management Measures since the passage of BIL. The NHTSA and FHWA recognize the importance of allowing time for States to provide comments on the FHWA program, but also recognize that HSOs must meet the upcoming statutory August 1 deadline to submit their Annual Grant Applications, which includes amendments to their triennial HSPs for the NHTSA program and State DOTs must meet the August 31 deadline to submit their safety performance targets in their HSIP annual reports. States' efforts to develop their FY 2025 Annual Grant Applications are underway at this time, and it is critical that States be provided certainty about application criteria. With these considerations in mind, NHTSA finds it in the public interest to amend the regulation to clarify that, States may only amend common performance targets only if necessary to submit identical targets to FHWA in the HSIP, and to make this amendment effective immediately.

Likewise, FHWA finds it in the public interest to waive the regulatory requirement in 23 CFR 490.209(a)(1) that the State DOT targets shall be identical to the targets established by the State HSO for the common performance measures, for fiscal year 2025, and to make this waiver effective immediately.

IV. Regulatory Analyses and Notices

A. Executive Order (E.O.) 12866 (Regulatory Planning and Review), E.O. 13563, and DOT Regulatory Policies and Procedures

The NHTSA and FHWA have considered the impact of this rulemaking action under E.O. 12866 (as amended by E.O. 14094), E.O. 13563, and the DOT's regulatory policies and procedures. This rulemaking document was not reviewed by the Office of Management and Budget (OMB) under E.O. 12866. This action is not expected to impose any costs because it makes limited revisions to the uniform procedures implementing State highway safety grant programs. This rulemaking has been determined to be not ''significant'' under the DOT's regulatory policies and procedures and the policies of OMB.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980 (5 U.S.C. 601 *et seq.*) requires agencies to evaluate the potential effects of their proposed and final rules on small businesses, small organizations, and small governmental jurisdictions. Section 605 of the RFA allows an Agency to certify a rule, in lieu of preparing an analysis, if the proposed rulemaking is not expected to have a significant economic impact on a substantial number of small entities. The Small Business Regulatory Enforcement Fairness Act amended the RFA to require Federal agencies to provide a statement of the factual basis for certifying that an action would not have a significant economic impact on a substantial number of small entities.

This final rule makes limited revisions to the uniform procedures implementing State highway safety grant programs, which were previously determined to not have a significant impact on a substantial number of small entities. The grant programs impacted by this rule will affect only State governments, which are not considered to be small entities as that term is defined by the RFA. Therefore, the Agencies certify that this action will not have a significant impact on a substantial number of small entities and

find that the preparation of a Regulatory Flexibility Analysis is unnecessary.

C. Executive Order 13132 (Federalism)

Executive Order 13132 on ''Federalism'' requires NHTSA and FHWA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' 64 FR 43255 (August 10, 1999). ''Policies that have federalism implications'' are defined in the E.O. to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Under E.O. 13132, an Agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute unless the Federal Government provides the funds necessary to pay the direct compliance costs incurred by State and local governments or the agency consults with State and local governments in the process of developing the proposed regulation. An Agency also may not issue a regulation with federalism implications that preempts a State law without consulting with State and local officials.

The Agencies have analyzed this rulemaking action in accordance with the principles and criteria set forth in E.O. 13132. The limited revisions made by this rulemaking provide flexibility to State applicants. The Agencies have therefore determined that this final rule would not have sufficient federalism implications as defined in the order to warrant formal consultation with State and local officials or the preparation of a federalism summary impact statement.

D. Executive Order 12988 (Civil Justice Reform)

Pursuant to E.O. 12988 (61 FR 4729 (February 7, 1996)), ''Civil Justice Reform,'' the Agencies have considered whether this rule would have any retroactive effect. The Agencies conclude that it would not have any retroactive or preemptive effect, and judicial review of it may be obtained pursuant to 5 U.S.C. 702. That section does not require that a petition for reconsideration be filed prior to seeking judicial review. This action meets applicable standards in sections 3(a) and 3(b)(2) of E.O. 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

E. Paperwork Reduction Act

Under the procedures established by the Paperwork Reduction Act of 1995, a person is not required to respond to a collection of information by a Federal Agency unless the collection displays a valid OMB control number. This rulemaking does not establish any new information collection requirements.

F. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires Agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in expenditures by State, local or Tribal governments, in the aggregate, or by the private sector, of more than $100 million annually (adjusted annually for inflation with base year of 1995). This rulemaking would not meet the definition of a Federal mandate because any potential resulting annual State expenditures would not exceed the minimum threshold. The program is voluntary and States that choose to apply and qualify would receive grant funds.

G. National Environmental Policy Act

The NHTSA and FHWA have considered the impacts of this rulemaking action for the purposes of the National Environmental Policy Act. The Agencies have determined that this rulemaking would not have a significant impact on the quality of the human environment and qualifies for the categorical exclusion at 23 CFR 771.117(c)(20).

H. Executive Order 13211

Executive Order 13211 (66 FR 28355, May 18, 2001) applies to any rulemaking that: (1) is determined to be economically significant as defined under E.O. 12866, and is likely to have a significantly adverse effect on the supply of, distribution of, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. This rulemaking is not likely to have a significantly adverse effect on the supply of, distribution of, or use of energy. This rulemaking has not been designated as a significant energy action. Accordingly, this rulemaking is not subject to E.O. 13211.

I. Executive Order 13175 (Consultation and Coordination With Indian Tribes)

The Agencies have analyzed this rulemaking under E.O. 13175 and have determined that this action would not have a substantial direct effect on one or more Indian Tribes, would not impose substantial direct compliance costs on Indian Tribal governments, and would not preempt Tribal law. Therefore, a Tribal summary impact statement is not required.

J. Privacy Act

Please note that anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR19477) or you may visit *https://dms.dot.gov.*

List of Subjects

23 CFR Part 490

Bridges, Highway safety, Highways and roads, Reporting and recordkeeping requirements.

23 CFR Part 1300

Administrative practice and procedure, Alcohol abuse, Drug abuse, Grant programs-transportation, Highway safety, Intergovernmental relations, Motor vehicles-inmotorcycles, Reporting and recordkeeping requirements.

Issued in Washington, DC, under authority delegated in 49 CFR 1.81, 1.85, and 1.95 and 49 CFR 501.5.

Shailen P. Bhatt,

Administrator, FHWA.

Sophie Shulman,

Deputy Administrator, NHTSA.

In consideration of the foregoing, NHTSA and FHWA amend 23 CFR parts 490 and 1300 as follows:

PART 490—NATIONAL PERFORMANCE MANAGEMENT MEASURES

■ 1. The authority citation for part 490 continues to read as follows:

Authority: 23 U.S.C. 134, 135, 148(i), and 150; 49 CFR 1.85.

Subpart B—National Performance Management Measures for the Highway Safety Improvement Program

■ 2. Amend § 490.209 by revising the second sentence in paragraph (a)(1) to read as follows:

§ 490.209 Establishment of performance targets.

(a)

* * * * *

(1) * * * For Fiscal Year 2025 only, the performance targets submitted under

this paragraph are not required to be identical to the targets established by the State Highway Safety Office for the common performance measures.

* * * * *

PART 1300—UNIFORM PROCEDURES FOR STATE HIGHWAY SAFETY GRANT PROGRAMS

■ 3. The authority citation for part 1300 continues to read as follows:

Authority: 23 U.S.C. 402; 23 U.S.C. 405; Sec. 1906, Pub. L. 109–59, 119 Stat. 1468, asamended by Sec. 25024, Pub. L. 117–58, 135 Stat. 879; delegation or authority at 49 CFR 1.95.

Subpart B—Triennial Highway Safety Plan and Annual Grant Application

■ 4. Amend § 1300.12 by revising paragraph (b)(1)(ii) to read as follows:

* * * * *

(b) * * *

(1) * * *

(ii) The State may add performance measures based on updated traffic safety problem identification or as part of an application for a grant under section 405, but may not amend existing performance targets. Provided, however, that States may amend common performance targets developed under § 1300.11(b)(3)(iv) only if necessary to submit identical targets to FHWA in the HSIP annual reports.

BILLING CODE 4910–59–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Parts 26, 301, and 602

[TD 9996]

RIN 1545–BH63

Relief Provisions Respecting Timely Allocation of GST Exemption and Certain GST Elections

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final rule.

SUMMARY: This document contains final regulations that provide guidance describing the circumstances and procedures under which an extension of time will be granted to make certain allocations and elections related to the generation-skipping transfer (GST) tax. The statutory provision underlying these rules was enacted as part of the Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA). The guidance affects individuals (or their estates) who failed to make a timely allocation of GST exemption, a timely election out of the GST automatic allocation rules, or certain other timely GST elections.

DATES:

Effective date: These regulations are effective on May 6, 2024.

Applicability date: For dates of applicability, *see* §§ 26.2642–7(j), 301.9100–2(f)(2), and 301.9100–3(g)(2).

FOR FURTHER INFORMATION CONTACT: Mayer R. Samuels at (202) 317–6859 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document contains final regulations in 26 CFR parts 26, 301, and 602 that provide guidance on the application of section 2642(g)(1) of the Internal Revenue Code (Code), which describes the circumstances and procedures under which an extension of time will be granted to make certain allocations and elections related to the GST tax.

Congress added section 2642(g)(1) to the Code by enacting section 564 of the EGTRRA, Public Law 107–16, section 564, 115 Stat. 91 (2001). Section 2642(g)(1) directs the Secretary of the Treasury or her delegate (Secretary) to issue regulations prescribing the circumstances and procedures under which an extension of time will be granted to make an allocation of GST exemption, as described in section 2631 of the Code, to a transfer, and the following three elections under section 2632 of the Code: (1) an election under section 2632(b)(3) not to have the deemed (automatic) allocation of GST exemption apply to a direct skip (generally, a transfer subject to gift or estate tax made to a person more than one generation below the transferor); (2) an election under section 2632(c)(5)(A)(i) not to have the deemed (automatic) allocation of GST exemption apply to an indirect skip or to transfers made to a particular trust; and (3) an election under section 2632(c)(5)(A)(ii) to treat any trust as a GST trust for purposes of section 2632(c). In determining whether to grant relief, section 2642(g)(1) directs that all relevant circumstances be considered, including evidence of intent contained in the trust instrument or the instrument of transfer.

The legislative history accompanying section 2642(g)(1) indicates that Congress believed that, in appropriate circumstances, an individual should be granted an extension of time to allocate GST exemption regardless of whether any period of limitations had expired. Those circumstances include situations in which the taxpayer intended to allocate GST exemption and the failure to allocate the exemption was inadvertent. H.R. Conf. Rep. No. 107–84, 202 (2001).

After the enactment of section 2642(g)(1), the IRS issued Notice 2001–50 (2001–2 CB 189), which provided guidance for transferors seeking an extension of time to make an allocation of GST exemption or an election described in sections 2632(b)(3) or (c)(5). Notice 2001–50 provides, generally, that relief will be granted under § 301.9100–3 of the Procedure and Administration Regulations (regarding requests of extensions of time for certain regulatory elections) if the taxpayer satisfies the requirements of those regulations and establishes to the satisfaction of the Commissioner of Internal Revenue or his delegate (Commissioner) that the taxpayer acted reasonably and in good faith and that a grant of the requested relief will not prejudice the interests of the government. If relief is granted under § 301.9100–3 and the allocation is made, the amount of GST exemption allocated to the transfer is the Federal gift or estate tax value of the property as of the date of the transfer and the allocation is effective as of the date of the transfer. Notice 2001–50 will be made obsolete upon the publication of this Treasury decision in the **Federal Register**.

On August 2, 2004, the IRS issued Rev. Proc. 2004–46 (2004–2 CB 142), which provides a simplified alternate method to obtain an extension of time to allocate GST exemption in certain situations. Generally, this method is available only with respect to an inter vivos transfer to a trust from which a GST may be made and only if each of the following requirements is met: (1) The transfer qualified for the gift tax annual exclusion under section 2503(b) of the Code; (2) the sum of the amount of the transfer and all other gifts by the transferor to the donee in the same year did not exceed the applicable annual exclusion amount for that year; (3) no GST exemption was allocated to the transfer; (4) the taxpayer has unused GST exemption to allocate to the transfer as of the filing of the request for relief; and (5) no taxable distributions or taxable terminations have occurred as of the filing of the request for relief.

On August 9, 2004, the IRS issued Rev. Proc. 2004–47 (2004 CB 169), which provides alternative relief for taxpayers who failed to make a reverse qualified terminable interest property (QTIP) election on an estate tax return.

On April 17, 2008, proposed regulations (REG–147775–06) were published in the **Federal Register** (73 FR 20870). The proposed regulations provided guidance on the application of section 2642(g)(1) by identifying the standards that the IRS will apply in determining whether to grant a transferor or a transferor's estate an extension of time to make an allocation of GST exemption, as described in section 2631, to property transferred by the transferor and the following three elections under section 2632: (1) an election under section 2632(b)(3) not to have the automatic allocation of GST exemption apply to a direct skip; (2) an election under section 2632(c)(5)(A)(i) not to have the automatic allocation of GST exemption apply to an indirect skip or to transfers made to a particular trust; and (3) an election under section 2632(c)(5)(A)(ii) to treat any trust as a GST trust for purposes of section 2632(c). In addition to proposing these standards, the proposed regulations included procedural requirements for establishing eligibility for the requested relief, including identification of the various persons from whom affidavits would be required.

In order to evaluate the necessity for and determine the burden imposed by the requirement to produce affidavits under proposed § 26.2642–7(h), the proposed regulations requested comments specifically as to (1) whether the affidavits are necessary for the proper performance of the functions of the IRS, including whether the information provided by the affidavits will have practical utility, (2) the accuracy of the estimated burden associated with preparing the affidavits, (3) how the quality, utility, and clarity of the information to be provided by the affidavits may be enhanced, (4) how the burden of providing the affidavits may be minimized, including through the application of automated collection techniques or other forms of information technology, and (5) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide the affidavits.

The proposed regulations also identified situations that do not satisfy the standards for granting relief, and thus when the IRS will not grant the requested relief.

The IRS received a total of five comments, three of which explicitly addressed the procedural requirements of proposed § 26.2642–7(h), redesignated in the final regulations as § 26.2642–7(i). After careful consideration of the comments received on the proposed regulations, this Treasury decision adopts the proposed regulations with clarifying changes and additional modifications in response to comments as described in the Summary of Comments and Explanation of Revisions. Relief provided under section 2642(g)(1) will be granted through the IRS private letter ruling program.

Section 301.9100–1 generally provides that the Commissioner has the discretion to grant a reasonable extension of time under the rules set forth in §§ 301.9100–2 and 301.9100–3 to make a regulatory election under all subtitles of the Code, except subtitles E, G, H, and I (section 9100 provisions). On and after the date of publication of these final regulations, relief under section 2642(g)(1) no longer will be granted under § 301.9100–3. In addition, because these final regulations provide a replacement for the automatic six-month extension under § 301.9100–2(b) without substantive difference, the extension under § 301.9100–2(b) no longer will be available to transferors or transferor's estates qualifying for relief under proposed § 26.2642–7(h)(1), redesignated in the final regulations as § 26.2642–7(i)(1), on and after the date of publication of these final regulations. Accordingly, the final regulations amend §§ 301.9100–2(b) and 301.9100–3 to provide that relief under section 2642(g)(1) cannot be obtained through the provisions of §§ 301.9100–2(b) and 301.9100–3. However, requests that are pending with the IRS on the date of publication of these final regulations will continue to be processed under the section 9100 provisions unless the taxpayer requesting relief opts to withdraw the request and instead seek relief under these final regulations. In that case, the taxpayer's user fee will be refunded and a new user fee will be required with the new request. Furthermore, the procedures contained in Revenue Procedure 2004–46 and Revenue Procedure 2004–47 will remain effective for transferors within the scope of those revenue procedures.

The Department of the Treasury (Treasury Department) and the IRS are mindful that the proposed regulations were issued 16 years ago on April 17, 2008. Insofar as there have been no intervening legislative or regulatory changes regarding allocations of GST exemption or GST elections and because the issues addressed by the commenters on the proposed regulations continue to remain relevant, the Treasury Department and the IRS have determined that a new notice of proposed rulemaking or a further opportunity for public comment would be unlikely to generate different comments and, moreover, would unnecessarily delay further this rulemaking to the continued detriment of taxpayers seeking relief. In addition, the IRS has a ruling position that, because of the provisions of the 2008 proposed regulations, relief cannot be granted in certain otherwise appropriate situations until the 2008 proposed regulations have been superseded by the issuance of these final regulations. For such situations, the issuance of a new notice of proposed rulemaking or a reopening of the comment period would further delay, and in some cases prevent, the grant of needed relief to taxpayers.

The Treasury Department and the IRS currently are developing a new rulemaking that will complement these final regulations. In contrast to these final regulations, which address the standards for granting relief under section 2642(g)(1) for a failure to make a timely allocation or election, the forthcoming proposed regulations would address the practical effect of a grant of relief and would clarify the interplay between affirmative allocations and automatic allocations. Paragraphs in these final regulations have been reserved to accommodate the forthcoming proposed regulations.

Summary of Comments and Explanation of Revisions

I. Scope of Authority To Issue Regulations

Section 2642(g)(1) gives the Secretary the authority to issue regulations setting forth the ''circumstances and procedures'' under which extensions of time will be granted to make certain allocations of GST exemption and elections, taking into consideration all relevant circumstances, including evidence of intent contained in the trust instrument or instrument of transfer and such other factors as the Secretary deems relevant. Section 2642(g)(1) makes the late allocations and elections referenced in that section eligible for consideration for relief. Because deadlines prescribed by statute are not eligible for relief under § 301.9100–3, section 2642(g)(1)(B) concludes with the sentence, for purposes of determining whether to grant relief under this paragraph, the time for making the allocation (or election) shall be treated as if not expressly prescribed by statute. Some commenters maintained that this sentence, creating eligibility for a grant of relief, limits the authority of the Treasury Department and the IRS to issue regulations that provide standards for relief that are more restrictive than those under § 301.9100–3. Neither the statute nor its legislative history suggests that the standards for relief

under section 2642(g)(1) are required to be equivalent or limited to the standards set forth in § 301.9100–3, nor is there any implication that the enactment of section 2642(g) prohibits or forecloses the possibility of any future change to the regulatory standards in § 301.9100–3. Nevertheless, the final regulations adopt burden reducing provisions as explained later in this preamble.

II. Proposed § 26.2642–7(d)(2)—Reasonableness and Good Faith

Proposed § 26.2642–7(d)(2) provides a nonexclusive list of circumstances (the underlying facts of which may be either helpful or harmful to the taxpayer's request for relief) that the IRS will consider in determining whether the transferor or the transferor's executor acted reasonably and in good faith.

Commenters requested that the Treasury Department and the IRS modify proposed § 26.2642–7(d)(2) to provide that the transferor or the executor of the transferor's estate will be deemed to have acted reasonably and in good faith if the taxpayer establishes the existence of any one of the various factors listed in § 26.2642–7(d)(2). Alternatively, commenters requested that § 26.2642–7(d)(2) be clarified to denote the sufficiency or relative importance of the factors listed.

Section 2642(g)(1) directs the Treasury Department and the IRS to issue regulations that ''prescribe such circumstances and procedures'' under which the IRS will grant relief. Since the enactment of section 2642(g) and through the IRS private letter ruling program, the IRS has applied a facts and circumstances methodology in considering requests for relief. Given the inherent complexity of the GST exemption rules, no single factor can be determinative. While § 301.9100–3(b)(1) deems the reasonableness and good faith requirements to have been met if the taxpayer establishes any one of the factors therein, that rule is expressly made subject to the requirement of the absence of the use of hindsight and the other factors described in § 301.9100–3(b)(3) and (c), and thus is not a one-factor test. Accordingly, proposed § 26.2642–7(d)(2) seeks to delineate the many factors implicit in such a facts and circumstances inquiry, and the final regulations adopt the same methodology.

The IRS's experience with requests for relief under section 2642(g)(1) indicates that no one factor has more importance in all cases than any other factor. Further, the satisfaction of one factor alone may or may not be sufficient, in the context of the facts and circumstances of that particular taxpayer, to persuade the IRS that relief under section 2642(g)(1) is warranted. Therefore, the recommendation to allow one factor to be determinative has not been adopted in the final regulations. Nevertheless, the final regulations clarify that not all of these factors may be relevant in a particular situation (and those that are not relevant would not need to be addressed in the request for relief). In addition, based on all the facts and circumstances, a single factor listed in § 26.2642–7(d)(2) may (or may not) be determinative.

Section 301.9100–3(b)(1)(i) provides that a taxpayer is deemed to have acted reasonably and in good faith if the taxpayer requests relief before the failure to make the regulatory election is discovered by the IRS. A commenter requested that this circumstance be added to the factors listed in this provision. Thus, a taxpayer would be considered to have acted reasonably and in good faith if the taxpayer's request for relief was filed before the failure to make the allocation or regulatory election is discovered by the IRS. For purposes of section 2642(g)(1), the Treasury Department and the IRS have determined that this circumstance is not material because, in the context of a request for relief under section 2642(g)(1), the Treasury Department and the IRS believe that the party that first discovers the failure to make the allocation or election (be it the IRS or the taxpayer) generally has no correlation with the taxpayer's good faith or reasonable action. Particularly because of the significant length of time that often elapses between the transfer and the discovery of a missed GST election or allocation, the discovery by the IRS does not necessarily signify a lack of good faith or reasonable action by the taxpayer. At the same time, the taxpayer's discovery generally does not guarantee the existence of good faith and reasonable action by the taxpayer. Therefore, this factor has not been added to the final regulations. However, a delay in requesting relief, after the need for relief is discovered, may have an adverse effect on the availability of relief. See, for example, the circumstances described in § 26.2642–7(d)(3)(ii) and (e)(3).

III. Proposed § 26.2642–7(d)(2)(iv)—Consistency

Proposed § 26.2642–7(d)(2)(iv) provides that one of the factors to be considered in determining whether the taxpayer has acted reasonably and in good faith is whether the transferor acted consistently with regard to the allocation of the transferor's GST exemption. Section 26.2642–7(d)(2)(iv) is designed to elicit information relevant to the intent of the transferor with regard to allocating exemption or making an election. For instance, a transferor's pattern of allocating GST exemption in an amount equal to the value of transfers to a trust in three or more years (whether or not consecutive) tends to support an assumption that the transferor intended to have that trust be exempt from GST tax and thus supports a presumed intent to allocate exemption to a transfer to that same trust taking place in a year in which an allocation in fact was not made.

A commenter requested that this provision be clarified to provide that the enactment of the statute itself be deemed to be a change in circumstance that could explain any post-enactment deviations from pre-enactment decisions regarding the allocation of GST exemption. In response to this comment, § 26.2642–7(d)(2)(iv) has been modified in the final regulations to confirm that relief under this provision will not be denied merely because a pattern does not exist or because the existing pattern changed at some point, whether in response to the enactment of a statute or to some other factor unrelated to either a lack of reasonableness or good faith or prejudice to the interests of the government.

IV. Proposed § 26.2642–7(d)(3)—Prejudice to the Interests of the Government

One commenter queried the placement of two of the factors under § 26.2642–7(d)(3) pertaining to whether a grant of relief would prejudice the interests of the government. These two factors are (i) the extent to which the requested relief is an attempt to benefit from hindsight, and (ii) the extent to which a delay in the filing of the request for relief was an attempt to deprive the IRS of sufficient time to challenge the claimed identity of the transferor of the transferred property that is the subject of the request for relief, the value of that transferred property for Federal gift or estate tax purposes, or any other aspect of the transfer that is relevant for Federal gift or estate tax purposes. The commenter recommended that these two factors, to the extent they deal with the transferor's subjective intentions, be moved from proposed § 26.2642–7(d)(3) to proposed § 26.2642–7(d)(2), which relates to reasonableness and good faith.

While these two factors may reflect unreasonableness or bad faith on the part of the transferor or the transferor's executor, each of these factors also represents an instance in which granting relief would prejudice the interests of

the government. Therefore, the Treasury Department and the IRS have not adopted this suggestion in the final regulations.

V. Proposed § 26.2642–7(d)(3)(i)—Hindsight

Proposed § 26.2642–7(d)(3)(i) provides, in part, that one of the relevant factors in determining whether the government's interests would be prejudiced is whether the grant of the requested relief would permit an economic advantage or other benefit that would not have been available if the allocation or election had been timely made. A commenter suggested that the definition of the term ''economic advantage'' is vague and may be overbroad, in that no request for relief is ever made unless the grant of relief will be advantageous to the taxpayer by producing an economic advantage in the form of a reduction of tax liability. This provision, however, is intended to limit the reference to economic advantage to an advantage that may not have been available through a timely allocation or election. One example of an economic advantage that would not have been available at the time of a timely allocation of GST exemption would be a request to allocate exemption to only one of two trusts (specifically, to the trust with the greater appreciation) if the two trusts were created on the same date with the same beneficiaries but with different assets. Therefore, the Treasury Department and the IRS have not adopted this suggestion in the final regulations.

VI. Proposed § 26.2642–7(d)(3)(ii)—Timing of the Request for Relief

Proposed § 26.2642–7(d)(3)(ii) provides, in part, that the expiration of any period of limitations on the assessment or collection of transfer taxes prior to the filing of a request for relief will not by itself prohibit a grant of relief. The proposed regulation further states that the combination of the expiration of a period of limitations with the fact that the asset or interest was valued with the use of a valuation discount will not by itself prohibit a grant of relief. A commenter indicated that the relevance of the use of valuation discounts and the period of limitations in determining whether to grant section 2642(g)(1) relief is not clear. The commenter stated that the use of valuation discounts that are consistent with established valuation methods neither prejudices the government nor constitutes an act of bad faith and therefore should not be considered, even in combination with other factors, in determining whether relief should be granted. The commenter also stated that any consideration given to the expiration of the period of limitations is contrary to the legislative history of section 2642(g), which clearly directs that the IRS is to disregard the expiration of any period of limitations in considering requests for relief. The commenter maintains that the IRS should not use hindsight to deny relief simply because the IRS failed to challenge the valuation of transferred property or any other aspect of the transaction reported on a return prior to the expiration of a limitations period.

The sentences of proposed § 26.2642–7(d)(3)(ii) that discuss the expiration of the period of limitations and the use of valuation discounts as factors that are considered for relief are removed from the final regulations. Section 26.2642–7(d)(3)(iv) is added to the final regulations to confirm that, subject to the considerations related to the timing of the request for relief described in § 26.2642–7(d)(3)(ii), the expiration of the period of limitations on the assessment or collection of transfer taxes prior to the filing of a request for relief generally is not relevant to the determination of whether the requirements for a grant of relief under section 2642(g)(1) have been met. Section 26.2642–7(d)(3)(iv) provides, however, that if the IRS concludes that the value of the transferred asset or assets as reported by the transferor or the executor of the transferor's estate on the Federal gift or estate tax return was so understated that it is likely to have satisfied the definition of a ''gross valuation misstatement'' as defined in section 6662(h)(2)(C) of the Code, the IRS will consider the purported transfer tax undervaluation in determining whether a grant of relief would prejudice the interests of the government. This provision is tied to the definition of a gross valuation misstatement to confirm that the perceived understatement in value would have to be exceptional in degree to raise the possibility of prejudice to the interests of the government. This provision is relevant only if the period of limitations on assessment or collection for transfer tax purposes expired before the filing of the request for relief.

VII. Proposed § 26.2642–7(d)(3)(iii)—Intervening Taxable Events

Proposed § 26.2642–7(d)(3)(iii) provides that the occurrence and effect of an intervening taxable termination or taxable distribution will be considered in determining whether the interests of the government would be prejudiced by granting relief. The proposed regulations further state that the interests of the government may be prejudiced if a taxable termination or taxable distribution occurred between the time for making a timely allocation of GST exemption or a timely election described in section 2632(b)(3) or (c)(5) and the time at which the request for relief under this section was filed. A commenter requested that this language be removed from the final regulations and replaced with a sentence or example indicating that the existence of a GST tax liability when relief is requested is not relevant in determining whether relief under section 2642(g)(1) will be granted. Alternatively, the commenter requested that the final regulations provide that these rules not apply if the period of limitations on the assessment of resulting GST tax has not expired when relief is requested. In addition, the commenter requested that the final regulations provide transferors with the option of paying the GST tax resulting from the taxable termination or taxable distribution occurring prior to submission of the request for relief, or of forfeiting any refund of GST tax to which the transferor otherwise would be entitled upon the grant of relief.

These recommendations have not been adopted in the final regulations. Although an intervening taxable distribution or taxable termination itself does not necessarily bar a grant of relief under section 2642(g)(1), it may be relevant in identifying the existence of hindsight or in ascertaining the intent of the transferor. In addition, the difficulty and complexity of making all of the related adjustments caused by a grant of relief (including, for example, the grantor's willingness to pay any GST tax liability and any transfer tax consequences of that payment), some of which might also impact other taxpayers, will be a factor to be considered in determining whether the government's interests would be prejudiced.

VIII. Proposed § 26.2642–7(e)(1)—Timely Allocations and Elections

Proposed § 26.2642–7(e)(1) provides that relief will not be granted to decrease or revoke a timely allocation of GST exemption as described in § 26.2632–1(b)(4)(ii)(A)(*1*), or to revoke an election under section 2632(b)(3) or (c)(5) made on a timely filed Federal gift or estate tax return. Section 2631(b) provides that an allocation of GST exemption under section 2631(a), once made, is irrevocable. No statute, however, provides that an election made under section 2632(b)(3) or (c)(5) is irrevocable.

Accordingly, proposed § 26.2642–7(e)(1), redesignated in the final regulations as § 26.2642–7(e)(2), does not include the statement that relief is not available to revoke an election under section 2632(b)(3) or (c)(5) made on a timely filed Federal gift or estate tax return. Such relief may be available provided that the requirements of § 26.2642–7 of these final regulations are satisfied. Further, as described below, the final regulations, as they pertain to timely allocations, include three narrow exceptions that allow for relief from affirmative allocations of GST exemption.

Proposed § 26.2642–7(e)(1), redesignated in the final regulations as § 26.2642–7(e)(2), has been further modified to clarify that the allocation and election referred to is an affirmative (not an automatic) allocation or election. The Treasury Department and the IRS will address the effect of a grant of relief on automatic allocations in future guidance to be issued under section 2642(g).

A commenter indicated that it is not clear whether proposed § 26.2642–7(e)(1) also applies to allocations of GST exemption with respect to transfers made at death. This rule has been clarified in the final regulations to encompass transfers made at death and confirms that relief will not be granted to decrease or revoke an affirmative allocation (as opposed to an automatic allocation) of GST exemption, regardless of whether the transfer or the allocation of exemption was made during a transferor's life or upon the transferor's death.

The commenter further requested that the provision be modified to provide that affirmative allocations (as opposed to automatic allocations) of exemption or elections made on a timely filed estate tax return of the estate of a decedent dying prior to 2001 be exempted from this provision because section 2642(g)(1) relief was not available before December 31, 2000. Although this recommendation has not been adopted in the final regulations for all such allocations of exemption, relief from the problem raised by this comment is provided by the third of the exceptions included in the final regulations, as described in the following paragraphs.

The final regulations have been modified to include three narrow exceptions that allow for relief from affirmative allocations and elections. The first exception is that an allocation of GST exemption to a transfer or a trust (other than a charitable lead annuity trust (CLAT) or a trust subject to an estate tax inclusion period (ETIP) before the termination of the lead interest or ETIP, respectively) is void to the extent that the amount allocated exceeds the amount necessary to obtain an inclusion ratio of zero. *See* § 26.2632–1(b)(4)(i). (The allocation of exemption to a CLAT upon its creation may turn out to be insufficient or excessive for the purpose of making the CLAT fully GST exempt, but the allocation will not be voided. The allocation of exemption to a trust subject to an ETIP does not become irrevocable until the termination of the ETIP.)

The second exception is that an allocation is void if the allocation is made with respect to a trust that, at the time of the allocation, has no GST potential with respect to the transferor making the allocation. For this purpose, a trust has GST potential even if the possibility of a GST is so remote as to be negligible. *See* § 26.2632–1(b)(4)(i).

The third exception is that a late allocation (as defined in section 2642(b)(3)) will be deemed to be void as part of the relief granted under section 2642(g) if the late allocation was made in an effort to mitigate the tax consequences of the missed allocation that is the subject of the grant of relief and that was not eligible for relief prior to the enactment of section 2642(g)(1). Specifically, such a late allocation is deemed to be void if (1) prior to December 31, 2000, a transfer was made to a trust with GST potential with respect to the transferor; (2) a timely allocation of GST exemption to the trust was not made; (3) prior to December 31, 2000, a late allocation of GST exemption was made to the trust; (4) the late allocation is disclosed as part of the request for relief or during the IRS's consideration of that request; and (5) relief under section 2642(g)(1) is granted to make a timely allocation to the transfer made prior to December 31, 2000.

Finally, the commenter questioned what effect a grant of relief under section 2642(g)(1) has on a timely allocation (whether affirmative or automatic) of the same transferor's GST exemption to a transfer made subsequent to the transfer for which relief is requested. The commenter suggested that, if relief is granted under section 2642(g)(1) to timely allocate GST exemption to an earlier transfer, the GST exemption timely allocated (whether affirmatively or automatically) to a later transfer could be reduced or eliminated. The commenter suggested that the grant of relief for the earlier transfer could be conditioned on payment of the GST tax that may be due if the inclusion ratio with respect to the subsequent transfer is increased by the grant of relief. The Treasury Department and the IRS believe that, because the response to this comment may go beyond the scope of the proposed regulations, this issue is among those they intend to address in subsequent guidance.

IX. Proposed § 26.2642–7(f)—Period of Limitations Under Section 6501

Proposed § 26.2642–7(f), redesignated in the final regulations as § 26.2642–7(g), provides that a request for relief does not reopen, suspend, or extend the period of limitations on assessment or collection of any estate, gift, or GST tax under section 6501 of the Code. Thus, the IRS may request that the transferor or the transferor's executor consent under section 6501(c)(4) to an extension of the period of limitations on assessment or collection of any or all gift and GST taxes.

A commenter requested that the references to gift tax be removed from this provision, apparently in an effort to eliminate the possibility that the grant of relief might be conditioned on the taxpayer's agreement to extend the gift tax period of limitations. The commenter's rationale for this request is that the request for relief relates only to the GST tax. The references to gift tax in this provision, however, complement § 26.2642–7(d)(3)(ii) of the final regulations, in effect, by allowing the taxpayer to avoid a finding of prejudice to the interests of the government by agreeing to an extension of the gift tax period of limitations. An agreement to extend the period of limitations is voluntary and declining to agree to an extension would not necessarily mean that relief would be denied, but it is a factor that may be taken into consideration. By retaining this reference to the gift tax, the government would be given adequate time to consider the reported identity of the transferor, the valuation of the transferred interest that will eventually determine the amount of GST exemption that may be allocated to the transfer, or any other aspect of the transfer that is relevant for Federal gift or estate tax purposes. Therefore, this reference has not been deleted from the final regulations.

A taxpayer who seeks relief under section 2642(g)(1) will not be regarded as having filed a claim for refund or credit merely by requesting such relief.

X. Proposed § 26.2642–7(h)(2) and (3)—Affidavits and Declarations

Commenters recommended against requiring affidavits that provide more information than is required under § 301.9100–3(e)(2) and (3). One

commenter characterized the proposed procedural requirements as more burdensome than the corresponding procedural requirements under the section 9100 provisions and stated that these ''more burdensome'' requirements for relief are inconsistent with the statutory mandate in section 2642(g). Since the enactment of section 2642(g), the IRS has issued a significant number of private letter rulings granting relief under section 2642(g)(1). After considering the circumstances in the requests, the IRS has concluded that certain information in addition to that specified in § 301.9100–3(e)(2) and (3) is necessary to determine whether relief should be granted. Accordingly, based on the IRS's experience in evaluating such requests for relief, the Treasury Department and the IRS have not adopted this recommendation in the final regulations.

Another commenter maintained that the affidavits required by proposed § 26.2642–7(h) are not necessary for the proper performance of the functions of the IRS and, therefore, the quality, utility, and clarity of the information to be provided by the affidavits cannot be enhanced. In support, the commenter argued that the affidavits demand more substantiation from taxpayers than is contemplated by section 2642(g)(1)(B). In addition, the commenter asserted that the IRS can grant relief under section 2642(g)(1) without requiring these affidavits if the IRS focuses on the government's interest and the transferor's intent as evidenced in the transfer documents and other supporting documents. Finally, the commenter stated that the IRS could determine from the documents previously filed with the IRS that the period of limitations had expired or that a taxable termination or distribution had occurred, both factors that may be indicative of prejudice to the government.

In the course of issuing private letter rulings under § 301.9100–3, the IRS has determined that, while transfer instruments and other relevant documents provided by the transferor or the transferor's executor provide useful information, these documents do not necessarily provide all of the information needed to evaluate properly a request for relief under section 2642(g)(1). Accordingly, the final regulations retain the requirement that requests for relief include detailed affidavits. However, after consideration of the comments and review of the proposed regulations, the Treasury Department and the IRS have modified the regulations by decreasing the amount of information required in affidavits in order to replicate more closely the requirements of § 301.9100–3(e)(2) and (3). As a result, the final regulations reduce the burden the proposed regulations would have imposed.

Commenters also requested a narrowing of the categories of individuals from whom affidavits will be required. In addition to individuals involved in the preparation of the tax return, proposed § 26.2642–7(h)(3) also includes in this group each tax professional who advised or was consulted on ''any aspect of the transfer'' or on the trust, and each agent or legal representative of the transferor who participated ''in the transaction.'' Commenters noted that this group may include advisors, agents, or legal representatives of the transferor who had nothing to do with preparing the return or with the decision or failure to allocate exemption or to make an election on that return.

In response to these comments, the Treasury Department and the IRS have modified the regulations by narrowing the categories of individuals required to submit affidavits under proposed § 26.2642–7(h)(3), redesignated in the final regulations as § 26.2642–7(i)(4). Specifically, the final regulations do not include in this group of required affiants any tax professional unless that professional participated in or provided advice with regard to the GST tax exemption allocation or election, or with regard to the preparation of the return. As a result, the final regulations reduce the burden the proposed regulations would have imposed.

The final regulations, however, also have been modified to confirm that the IRS, consistent with current procedures in the IRS private letter ruling program, may require affidavits and copies of writings from persons not included in the more narrow group described in § 26.2642–7(i)(4) in cases in which the IRS believes additional information is required or would be helpful in making the determination as to whether relief under section 2642(g)(1) will be granted.

XI. Proposed § 26.2642–7(h)(3)(iii)—Affidavits of Other Parties

Proposed § 26.2642–7(h)(3)(iii) provides that a party making an affidavit must attach to each affidavit copies of any writing (including, without limitation, notes and emails) and other contemporaneous documents within the possession of the affiant relevant to the transferor's intent with regard to the application of GST tax to the transaction. A commenter requested that this provision be modified to provide that a lawyer or accountant is not deemed to possess any documents that are in the possession of his or her law firm or accounting firm. In response to this comment, this provision of the final regulations, redesignated in the final regulations as § 26.2642–7(i)(4)(iii), clarifies that the writings to be submitted under these regulations are those that the affiant discovers by conducting, in good faith, a reasonably diligent search of records in the possession of or accessible to the affiant, or subject to the affiant's control. A reasonably diligent search generally would include, without limitation, a review of the records in the possession or control of the affiant or the firm with which the affiant is employed or associated relating to the transaction or tax return at issue.

XII. Proposed § 26.2642–7(h)(3)(v)—Death or Incapacity

Proposed § 26.2642–7(h)(3)(v) provides that, if a person who would be required to provide an affidavit under proposed § 26.2642–7(h)(3)(i) has died or is not competent, the transferor or the transferor's executor must include a statement to that effect in the affidavit of that transferor or executor.

A commenter suggested that this proposed provision would require the transferor or the transferor's executor to determine the competency of a person and that such a requirement would be inappropriate. Further, the commenter noted that, in addition to death and incompetence, serious physical illness or other physical impairment also could render a person unable to provide an affidavit. The commenter recommended that this provision be modified to provide that the transferor or the transferor's executor may satisfy the requirements of this provision with a statement that such transferor or executor, despite his or her best efforts in good faith, was unable to obtain the affidavit required under proposed § 26.2642–7(h)(3)(i) and an explanation of the basis for the transferor's or executor's conclusion, based on his or her best knowledge and reasonable belief that such affidavit was not obtainable.

The corresponding provision in the final regulations (§ 26.2642–7(i)(4)(vi)) has been modified to apply to persons who have died or who are unwilling or unable to provide the required affidavit at the time relief is requested. For purposes of this provision, the term *unwilling* refers to a person who does not (other than one who is unable to) provide the required affidavit, despite the best efforts of the transferor or the transferor's executor, made in good faith, to obtain the required affidavit.

The unwillingness of certain persons to provide an affidavit, however, may be considered by the IRS in determining whether or not to grant the requested relief. In addition, for purposes of this provision, the term *unable* refers to a permanent condition such as physical or mental incapacity that prevents a person from providing the required affidavit, but not a temporary condition such as a temporary physical or mental incapacity or a person's inability due to a leave of absence, travel, or a contractual requirement such as a confidentiality agreement.

XIII. User Fee and Estimated Burden

A commenter noted that taxpayers have to pay a user fee when seeking relief under section 2642(g)(1) through the IRS private letter ruling program. The commenter proposed that, given the complexity of the rules and the frequency of changes to the rules, relief under section 2642(g)(1) should be granted without charging a user fee. The commenter noted that, under other circumstances, the IRS has developed simplified procedures that do not necessitate a private letter ruling request and suggested that the compliance burden would be eased significantly if a simplified procedure to administer relief under section 2642(g)(1) were developed.

The Treasury Department and the IRS believe that the most efficient way to address these requests for relief continues to be through the IRS private letter ruling program. The user fee is imposed to recover the government's full cost for providing the service. The Treasury Department and the IRS agree that the compliance burden would be eased significantly if it was possible to develop a simplified procedure to administer relief under section 2642(g)(1). For instance, Rev. Proc. 2004–46 (2004–2 CB 142) and Rev. Proc. 2004–47 (2004–2 CB 169) identify situations in which the Treasury Department and the IRS believe that relief may be granted without adversely affecting the interests of the government. *See* § 601.601(d)(2)(ii)(*b*). The Treasury Department and the IRS are prepared to issue additional revenue procedures or other guidance when they identify situations for which simplified or automatic relief under section 2642(g)(1) would be appropriate and administrable. Until such guidance is issued, however, the IRS private letter ruling program will continue to allow the IRS to obtain and evaluate the information necessary to identify such situations. The user fee would follow the same schedule and amount as rulings under § 301.9100–1. See Appendix A of Rev. Proc. 2024–1, 2024–1 I.R.B. 1, 85.

The IRS had estimated in the proposed regulations that the annual burden to prepare the affidavits was two hours. Many commenters mentioned that the estimated burden was drastically underestimated due to the numerous requirements of the proposed regulations. In response to these comments, the IRS has reconsidered this estimate of the annual burden and has increased the estimated annual burden to 20 hours.

Effect on Other Documents

Notice 2001–50, 2001–2 CB 189, is obsolete as of May 6, 2024.

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* (PRA), information collection requirements contained in these final regulations are in § 26.2642–7(i)(3) and (4). These provisions require transferors or the executors of transferors' estates to provide one or more affidavits when requesting relief under section 2642(g)(1) of the Internal Revenue Code. The IRS will use the information in the affidavits to determine whether to grant a transferor or a transferor's estate an extension of time to (1) allocate GST exemption as defined in section 2631, (2) elect under section 2632(b)(3) not to have the automatic allocation of GST exemption apply to a direct skip, (3) elect under section 2632(c)(5)(A)(i) not to have the automatic allocation of GST exemption apply to an indirect skip or to transfers made to a particular trust, and (4) elect under section 2632(c)(5)(A)(ii) to treat any trust as a GST trust for purposes of section 2632(c).

The reporting burden associated with the information collection in the final regulations are included in the aggregate burden estimates for OMB control number 1545–2116. The estimated number of respondents, who are mainly attorneys representing the taxpayers, for each year is estimated to be 50. The estimated burden for each respondent to prepare the private letter ruling request and the accompanying affidavits is 20 hours per respondent. Thus, the total annual burden is estimated to be 1000 hours. It should be noted that the burden is not an annual burden for each taxpayer, as taxpayers do not need to request a private letter ruling each year.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

Books or records relating to a collection of information must be retained as long as their contents might become material in the administration of any Internal Revenue law. Generally, tax returns and tax information are confidential, as required by 26 U.S.C. 6103.

III. Regulatory Flexibility Act

It is hereby certified that these regulations will not have a significant economic impact on a substantial number of small entities. The applicability of these regulations is limited to individuals (or their estates) and trusts, which are not small entities as defined by the Regulatory Flexibility Act (5 U.S.C. 601). Although it is anticipated that there may be a beneficial economic impact for some small entities, including entities that provide tax and legal services that assist individuals in the IRS private letter ruling program, any benefit to those entities would be indirect. Further, this indirect benefit will not affect a substantial number of these small entities because only a limited number of individuals (or their estates) and trusts would submit a private letter ruling request under this rule. Therefore, only a small fraction of tax and legal services entities would generate business or benefit from this rule. Accordingly, a regulatory flexibility analysis is not required.

Pursuant to section 7805(f) of the Internal Revenue Code, the notice of proposed rulemaking preceding these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business and no comments were received in response.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated

annually for inflation. This rule does not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. These proposed regulations do not have federalism implications and do not impose substantial direct compliance costs on State and local governments or preempt State law within the meaning of the Executive order.

Drafting Information

The principal author of these regulations is Mayer R. Samuels, Office of the Associate Chief Counsel (Passthroughs and Special Industries), IRS. However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects

26 CFR Part 26

Estate taxes, Reporting and recordkeeping requirements.

26 CFR Part 301

Employment taxes, Estate taxes, Excise taxes, Gift taxes, Income taxes, Penalties, Reporting and recordkeeping requirements.

26 CFR Part 602

Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, the Treasury Department and the IRS amend 26 CFR parts 26, 301, and 602 as follows:

PART 26—GENERATION-SKIPPING TRANSFER TAX REGULATIONS UNDER THE TAX REFORM ACT OF 1986

■ **Paragraph 1.** The authority citation for part 26 is amended by adding an entry for § 26.2642–7 in numerical order to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 26.2642–7 also issued under 26 U.S.C. 2642(g).

* * * * *

■ **Par. 2.** Section 26.2642–7 is added to read as follows:

§ 26.2642–7 Relief under section 2642(g)(1).

(a) *In general.* Under section 2642(g)(1)(A) of the Internal Revenue Code (Code), the Secretary of the Treasury or her delegate (Secretary) has the authority to issue regulations describing the circumstances in which a transferor, as defined in section 2652(a) of the Code, or the executor of a transferor's estate, as defined in section 2203 of the Code, will be granted an extension of time to allocate generation-skipping transfer (GST) exemption as described in section 2642(b)(1) and (2). The Secretary also has the authority to issue regulations describing the circumstances under which a transferor or the executor of a transferor's estate will be granted an extension of time to make the elections described in section 2632(b)(3) and (c)(5) of the Code. Section 2632(b)(3) provides that an election may be made by or on behalf of a transferor not to have the transferor's GST exemption automatically allocated under section 2632(b)(1) to a direct skip, as defined in section 2612(c), made by the transferor during life. Section 2632(c)(5)(A)(i) provides that an election may be made by or on behalf of a transferor not to have the transferor's GST exemption automatically allocated under section 2632(c)(1) to an indirect skip, as defined in section 2632(c)(3)(A), or to any or all transfers made by such transferor to a particular trust. Section 2632(c)(5)(A)(ii) provides that an election may be made by or on behalf of a transferor to treat any trust as a GST trust, as defined in section 2632(c)(3)(B), for purposes of section 2632(c) with respect to any or all transfers made by that transferor to the trust. This section generally describes the factors that the Internal Revenue Service (IRS) will consider when an extension of time is sought by or on behalf of a transferor to timely allocate GST exemption or to make an election under section 2632(b)(3) or (c)(5). If the time period for an automatic six-month extension under paragraph (i)(1) of this section has passed, relief provided under this section can be requested through the IRS private letter ruling program. See paragraph (i) of this section.

(b) *Effect of relief*—(1) *In general.* If an extension of time to allocate GST exemption is granted under this section, the allocation of GST exemption, once made, will be considered effective as of the date of the transfer. Further, the amount of the transferor's GST exemption required to be allocated in order to produce a zero inclusion ratio solely with regard to that transfer will be the value of the property transferred for purposes of chapter 11 or chapter 12 of the Code as of the date of the transfer. If an extension of time to elect out of the automatic allocation of GST exemption under section 2632(b)(3) or (c)(5)(A)(i) is granted under this section, the election, once made, will be considered effective as of the date of and immediately prior to the transfer. If an extension of time to elect to treat any trust as a GST trust under section 2632(c)(5)(A)(ii) is granted under this section, the election, once made, will be considered effective as of the date of and immediately prior to the first (or each) transfer covered by that election. See paragraph (h) of this section with regard to preserving a taxpayer's eligibility for a refund generated by a grant of relief, if applicable.

(2) [Reserved]

(3) *Effect on other transfers.* Except as otherwise provided in paragraph (e)(2)(ii) of this section, an allocation of exemption or an election made pursuant to a grant of relief under this section does not reduce or eliminate any affirmative allocation or void any election made with respect to any other transfer occurring contemporaneously with or subsequent to the transfer or transfers for which relief has been granted.

(c) *Limitation on relief.* The amount of GST exemption that may be allocated to a transfer as the result of relief granted under this section in no event may exceed the amount of the transferor's unused GST exemption under section 2631(c) of the Code as of the date of the transfer. Thus, if, by the time of the making of the allocation or election pursuant to relief granted under this section, the GST exemption amount under section 2631(c) has increased to an amount in excess of the amount in effect for the date of the transfer, no portion of the increased amount may be applied to that earlier transfer by reason of the relief granted under this section.

(d) *Basis for determination*—(1) *In general.* Requests for relief under this section will be granted when and to the extent that the transferor or the executor of the transferor's estate provides evidence (including the affidavits described in paragraph (i) of this section) establishing to the satisfaction of the IRS that the transferor or the executor of the transferor's estate acted reasonably and in good faith, and that the grant of relief will not prejudice the interests of the government. Paragraphs (d)(2) and (3) of this section set forth nonexclusive lists of factors the IRS will consider in determining whether this

standard of reasonableness, good faith, and lack of prejudice to the interests of the government has been met so that such relief will be granted. In making this determination, the IRS will consider those factors set forth in paragraphs (d)(2) and (3) of this section, as well as all other facts and circumstances not specifically set forth herein that are relevant to the particular situation. Paragraph (e) of this section sets forth some situations in which this standard is not met and, as a result, in which relief under this section will not be granted.

(2) *Reasonableness and good faith.* The following is a nonexclusive list of factors that will be considered in determining whether the transferor or the executor of the transferor's estate acted reasonably and in good faith for purposes of this section. Not all of these factors may be relevant in a particular situation (and those that are not relevant are not required to be addressed in the request for relief made in accordance with paragraph (i) of this section). Further, it is possible that the evidence relating to any one of these factors, in the context of all of the facts and circumstances of the particular situation, may be sufficient to persuade the IRS that the grant of relief under section 2642(g)(1) would be appropriate. However, as a general rule, no single factor (whether listed or not) will be determinative in all cases. The factors are as follows:

(i) *Intent.* The intent of the transferor to timely allocate GST exemption to a transfer or to timely make an election under section 2632(b)(3) or (c)(5), as evidenced in the trust instrument, the instrument of transfer, or other relevant documents contemporaneous with the transfer, such as Federal gift and estate tax returns and correspondence. This may include evidence of the intended GST tax status of the transfer or the trust (for example, exempt, non-exempt, or partially exempt), or more explicit evidence of intent with regard to the allocation of GST exemption or the election under section 2632(b)(3) or (c)(5).

(ii) *Intervening events.* Intervening events beyond the control of the transferor or of the executor of the transferor's estate that caused the failure to allocate GST exemption to a transfer or the failure to make an election under section 2632(b)(3) or (c)(5).

(iii) *Lack of awareness.* Lack of awareness, despite the exercise of reasonable diligence, by the transferor or the executor of the transferor's estate of the need to allocate GST exemption to the transfer, taking into account the experience of the transferor or the executor of the transferor's estate and the complexity of the GST tax issue, as the cause of the failure to allocate GST exemption to a transfer or to make an election under section 2632(b)(3) or (c)(5).

(iv) *Consistency.* Consistency by the transferor with regard to the allocation of the transferor's GST exemption to one or more trusts or skip persons. For example, the transferor's consistent pattern of allocation of GST exemption to transfers (whether or not made in consecutive years) to skip persons or to a particular trust, or the transferor's consistent pattern of electing not to have the automatic allocation of GST exemption apply to transfers (whether or not made in consecutive years), will be taken into consideration. Evidence of consistency may be less relevant if there has been a change of circumstances or a change of trust beneficiaries that otherwise would explain a deviation from prior GST exemption allocation decisions. Relief under this section will not be denied merely because a pattern of allocation or election does not exist or because the existing pattern changed at some point, whether in response to the enactment of section 2642(g) or to some other factor unrelated to either a lack of reasonableness or good faith or prejudice to the interests of the government.

(v) *Qualified tax professional.* Reasonable reliance by the transferor or the executor of the transferor's estate on the advice of a qualified tax professional retained or employed by one or both of them and either the failure of the tax professional, or, in reliance on or consistent with (or in the absence of) that tax professional's advice, the failure of the transferor or the executor, to allocate GST exemption to the transfer or to make an election described in section 2632(b)(3) or (c)(5). Reliance on a qualified tax professional will not be considered to have been reasonable if the transferor or the executor of the transferor's estate knew or should have known that the professional either—

(A) Was not competent to render advice on the GST exemption; or

(B) Was not aware of all relevant facts.

(3) *Prejudice to the interests of the government.* The following is a nonexclusive list of factors that will be considered to determine whether the interests of the government would be prejudiced for purposes of this section:

(i) *Hindsight.* An attempt to benefit from hindsight will be deemed to prejudice the interests of the government. A factor relevant to this determination is whether the grant of the requested relief would permit an economic advantage or other benefit that would not have been available if the allocation or election had been timely made. For example, there may be prejudice if a grant of the requested relief would permit an economic advantage or other benefit that results from the selection of one out of a number of alternatives (other than whether or not to make an allocation or election) that were available at the time the allocation or election could have been timely made, if hindsight makes the selected alternative more beneficial than the other alternatives. Prejudice also would exist if the transferor failed to make the allocation or election in order to wait to see (thus, with the benefit of hindsight) whether making an allocation of exemption or election would be more beneficial than not making the allocation or election. For instance, assume that a transferor funds several trusts with different property interests on the same date, and does not allocate GST exemption to any trust. Several years later, the transferor seeks relief to allocate GST exemption to the trust that enjoyed the greatest asset appreciation and thus constitutes the most effective use of the transferor's GST exemption. Relief will not be granted because the transferor attempted to benefit from hindsight and thereby acquire an economic advantage.

(ii) *Timing of the request for relief.* The timing of the request for relief will be considered in determining whether the interests of the government would be prejudiced by granting relief under this section. The interests of the government would be prejudiced if delay by the transferor or the executor of the transferor's estate in the filing of the request for relief was intended to deprive the IRS of a sufficient period of time in which to challenge any element of the transfer that is the subject of the request for relief, such as the value of the transferred property for Federal gift or estate tax purposes, the claimed identity of the transferor of the transferred property, or any other aspect of the transfer that is relevant for Federal gift or estate tax purposes. For this purpose, such intent will be presumed, but may be rebutted by evidence persuasive to the IRS of the existence of other reasons for or circumstances causing the delay.

(iii) *Intervening taxable events.* The occurrence and effect of an intervening taxable termination or taxable distribution will be considered in determining whether and to what extent the interests of the government would be prejudiced by a grant of relief under this section. The interests of the government may be prejudiced if a taxable termination or a taxable

distribution occurred between the time for making a timely allocation of GST exemption or a timely election described in section 2632(b)(3) or (c)(5) and the time at which the request for relief under this section was filed. The impact of a grant of relief on (and the difficulty of adjusting) the GST tax consequences of that intervening termination or distribution will be considered in determining whether the occurrence of a taxable termination or taxable distribution constitutes prejudice.

(iv) *Closed years.* Subject to the considerations described in paragraph (d)(3)(ii) of this section, the expiration of any period of limitations on the assessment or collection of transfer taxes prior to the filing of a request for relief under this section generally is not relevant to the determination of whether the requirements for a grant of relief under this section have been met. If that period has expired, however, and if the IRS concludes that the value of the transferred asset or assets as reported on a Federal gift or estate tax return by the transferor or the executor of the transferor's estate is likely to have satisfied the definition of a gross valuation misstatement as defined in section 6662(h)(2)(C) of the Code, the IRS will consider the purported undervaluation in determining whether a grant of relief will prejudice the interests of the government.

(e) *Situations in which the standard of reasonableness, good faith, and lack of prejudice to the interests of the government has not been met*—(1) *In general.* Relief under this section will not be granted if the IRS determines that the transferor or the executor of the transferor's estate has not acted reasonably and in good faith, or that the grant of relief would prejudice the interests of the government. The following situations illustrate some circumstances in which the standard of reasonableness, good faith, and lack of prejudice to the interests of the government has not been met, and as a result, in which relief under this section will not be granted.

(2) *Affirmative allocations*—(i) In general, relief will not be granted under this section to the extent that it would decrease or revoke an affirmative (but not automatic) allocation of GST exemption under section 2632(a) or 2642(b) that was made on a Federal gift or estate tax return, regardless of whether the transfer or the allocation of exemption was made during the transferor's life or upon the transferor's death.

(ii) There are three exceptions to this general rule, as follows. No request for relief is required for either of the first two exceptions:

(A) An allocation of GST exemption is void to the extent the amount allocated exceeds the amount necessary to obtain an inclusion ratio of zero with respect to the property transferred or to the trust. This provision does not apply to charitable lead annuity trusts, nor does it apply to an allocation made to a trust subject to an estate tax inclusion period before the termination of that period. *See* § 26.2632–1(b)(4)(i).

(B) An allocation is void if the allocation is made with respect to a trust that, at the time of the allocation, has no GST potential with respect to the transferor making the allocation. For this purpose, a trust has GST potential even if the possibility of a GST is so remote as to be negligible. *See* § 26.2632–1(b)(4)(i).

(C) A late allocation of GST exemption, as described in section 2642(b)(3), to a transfer or to a trust will be deemed void upon the grant of relief under this section if—

(*1*) Prior to December 31, 2000, a transfer is made that is subject to GST tax or to a trust that has GST potential with respect to the transferor;

(*2*) A timely allocation of GST exemption was not made to the transfer or the trust, and this missed allocation was not eligible for relief prior to the enactment of section 2642(g)(1);

(*3*) Prior to December 31, 2000, a late allocation of GST exemption was made to the transfer or the trust;

(*4*) The late allocation is disclosed as part of the request for relief or during the IRS's consideration of that request; and

(*5*) Relief under this section is granted to make a timely allocation to the transfer or the trust described in paragraph (e)(2)(ii)(C)(*1*) of this section.

(3) *Timing.* Relief will not be granted with regard to a transfer reported on the transferor's gift tax return in the situation in which the transferor filed the request for relief shortly after the expiration of the period during which an assessment of gift tax could be made with respect to that transfer, the IRS reasonably concludes that the transferor intentionally delayed that filing for the purpose of preventing an IRS examination of the reported value of the property subject to that transfer or the claimed identity of the transferor or other fact relevant for transfer tax purposes, and the transferor is unable to produce evidence sufficient to convince the IRS that the filing delay was attributable to some other reason or purpose.

(4) *Failure after being accurately informed.* Relief will not be granted under this section if the decision made by the transferor or the executor of the transferor's estate (who had been accurately informed in all material respects by a qualified tax professional retained or employed by either (or both) of them with regard to the allocation of GST exemption or an election described in section 2632(b)(3) or (c)(5)) was reflected or implemented by the action or inaction that is the subject of the request for relief.

(5) *Hindsight.* Relief under this section will not be granted if the IRS determines that the requested relief is an attempt to benefit from hindsight by waiting to see which of multiple transfers, made at substantially the same time but consisting of different property interests, enjoyed the greatest appreciation and thus would constitute the most effective use of the transferor's GST exemption.

(f) [Reserved]

(g) *Period of limitations under section 6501.* A request for relief under this section does not reopen, suspend, or extend the period of limitations on assessment or collection of any estate, gift, or GST tax under section 6501 of the Code. The IRS may request that the transferor or the transferor's executor consent, under section 6501(c)(4) and prior to the expiration of that period of limitations, to an extension of the period of limitations on assessment or collection of any or all gift and GST taxes for the transfer or transfers that are the subject of the requested relief. The transferor or the transferor's executor has the right to refuse to extend the period of limitations, or to limit any such extension to particular issues or to a particular period of time. *See* section 6501(c)(4)(B). Because a consent to an extension (whether or not limited) may eliminate prejudice to the interests of the government described in paragraphs (d)(3)(ii) and (e)(3) of this section, a refusal to consent to an extension is a factor that may adversely impact the availability of the requested relief.

(h) *Refunds.* The filing of a request for relief under section 2642(g)(1) with the IRS does not constitute a claim for refund or credit of an overpayment and no implied right to refund will arise from the filing of such a request for relief. Similarly, the filing of such a request for relief does not extend the period of limitations under section 6511 of the Code for filing a claim for refund or credit of an overpayment. If the grant of relief under section 2642(g)(1) results in the decrease of a trust's inclusion ratio or a reduction in the amount of a direct skip, and thus in a potential claim for refund or credit of an overpayment of tax, no such refund or credit will be

allowed to the taxpayer or to the taxpayer's estate if the period of limitations under section 6511 for filing a claim for a refund or credit of the Federal gift, estate, or GST tax that was reduced by the granted relief has expired, unless a claim for refund or credit was filed before the expiration of that period. The taxpayer or the taxpayer's estate is responsible for preserving any potential claim for refund or credit.

(i) *Procedural requirements*—(1) *Automatic 6-month extension.* An automatic extension of 6 months from the due date of the gift or estate tax return, or of the Form 8939, *Allocation of Increase in Basis for Property Acquired From a Decedent,* of a decedent dying in calendar year 2010, (in each case, excluding extensions) is granted to file a supplemental return or Form 8939 on which the transferor or the executor of the transferor's estate may allocate GST exemption or make an election under section 2632(b)(3) or (c)(5). This extension, however, is available only if the transferor (or the executor of a transferor's estate) both timely filed the gift or estate tax return or the Form 8939 on which the GST exemption should have been allocated or the election should have been made, and, within that 6-month extension period, files a supplemental return or other supplementary filing. On the supplemental return or other filing, the taxpayer must comply with all of the requirements for allocating GST exemption under section 2632 or for making the election under section 2632(b)(3) or (c)(5) for the year the allocation or election should have been made to make a valid allocation or election. Any supplemental return filed pursuant to this paragraph must say *FILED PURSUANT TO § 26.2642–7(i)(1)* on the front page of the return or the Form 8939, and must be sent to the same address that a timely return or Form 8939 on which the allocation or election should have been made would have been sent, subject to address changes in future forms or instructions or guidance published in the Internal Revenue Bulletin. *See* § 601.601(d)(2) of this chapter. No request for a private letter ruling is required and, as a result, no user fee is required to be paid.

(2) *Private letter ruling program.* Except for the automatic 6-month extension provided in paragraph (i)(1) of this section, the relief described in this section is provided through the IRS's private letter ruling program. Requests for relief may be submitted in accordance with the applicable procedures for requests for a private letter ruling.

(3) *Affidavit and declaration of transferor or the executor of the transferor's estate.* (i) The transferor or the executor of the transferor's estate must submit a detailed affidavit describing the events that led to the failure to timely allocate GST exemption to a transfer or the failure to timely elect under section 2632(b)(3) or (c)(5), and the events that led to the discovery of the failure. In situations described in paragraph (i)(4)(vi) of this section, this affidavit also must include the additional information and statements described in that paragraph. If the transferor or the executor of the transferor's estate relied on a tax professional for advice with respect to the allocation or election, the affidavit also must describe—

(A) The scope of the engagement;

(B) The responsibilities the transferor or the executor of the transferor's estate believed the professional had assumed; and

(C) The extent to which the transferor or the executor of the transferor's estate relied on the professional.

(ii) Attached to each affidavit must be copies of any writings (including, without limitation, notes and emails) and other contemporaneous documents within the possession or control of the affiant relevant to the determination of the transferor's intent with regard to the application of GST tax to the transaction for which relief under this section is requested.

(iii) The affidavit must be accompanied by a dated declaration, signed by the transferor or the executor of the transferor's estate, that states:

Under penalties of perjury, I declare that I have examined this affidavit, including any attachments thereto, and to the best of my knowledge and belief, this affidavit, including any attachments thereto, is true, correct, and complete. In addition, under penalties of perjury, I declare that I have examined all the documents included as part of this request for relief, and that, to the best of my knowledge and belief, these documents collectively contain all the relevant facts relating to the request for relief and such facts are true, correct, and complete.

(4) *Affidavits and declarations from other parties.* (i) The transferor or the executor of the transferor's estate must submit detailed affidavits from the individuals specified in paragraphs (i)(4)(i)(A) through (D) of this section and other individuals who have knowledge or information about the events that led to the failure to allocate GST exemption or to elect under section 2632(b)(3) or (c)(5), or to the discovery of the failure. These individuals may include individuals whose knowledge or information is not within the personal knowledge of the transferor or the executor of the transferor's estate. The individuals described in this paragraph must include—

(A) Each agent or legal representative of the transferor who participated in the consideration of, or the decision with regard to, the allocation of GST exemption or the election under section 2632(b)(3) or (c)(5), or the preparation of the return for which relief is being requested;

(B) The preparer of the relevant Federal estate or gift tax return or returns;

(C) Each individual (including an employee of the transferor or of the executor of the transferor's estate) who provided information or advice with regard to, or otherwise made a significant contribution to, the decision concerning the allocation of GST exemption, the election under section 2632(b)(3) or (c)(5), or the preparation of the relevant Federal estate and/or gift tax return or returns; and

(D) Each tax professional who advised or was consulted by the transferor or the executor of the transferor's estate with regard to the allocation of GST exemption, the election under section 2632(b)(3) or (c)(5), or the preparation of the relevant Federal estate or gift tax return or returns.

(ii) Each affidavit must describe the scope of the engagement and the responsibilities of the individual as well as the advice or service the individual provided to the transferor or the executor of the transferor's estate.

(iii) Attached to each affidavit must be a copy of each writing (including, without limitation, notes and emails) and other contemporaneous documents within the possession of the affiant relevant to the transferor's intent or the affiant's advice with regard to the application of GST tax to the transaction for which relief under this section is requested. The documents that the affiant discovers by conducting in good faith a reasonably diligent search of records in the possession of or accessible to the affiant, or subject to the affiant's control, will be sufficient to satisfy the requirements of this paragraph (i)(4)(iii). A reasonably diligent search generally would include, without limitation, a review of the records in the possession or control of the affiant or the firm at which the affiant is employed or associated relating to the transaction or tax return at issue.

(iv) The IRS may require additional affidavits from persons not set forth in paragraph (i)(4)(i) of this section as well

as additional documents when additional information or documents with respect to a transfer is believed by the IRS to be required or helpful in making its determination as to whether relief under this section should be granted.

(v) Each affidavit also must include the name and current address of the affiant, and must be accompanied by a dated declaration signed by the affiant that states:

Under penalties of perjury, I declare that I have personal knowledge of the information set forth in this affidavit, including any attachments thereto. In addition, under penalties of perjury, I declare that I have examined this affidavit, including any attachments thereto, and, to the best of my knowledge and belief, the affidavit contains all the relevant facts and the attachments include copies of all relevant writings or other documents resulting from a reasonably diligent search, conducted in good faith, of all records within my possession, accessible to me, or subject to my control, relating to the allocation of GST exemption, the election under section 2632(b)(3) or (c)(5), and the preparation of the tax return at issue in the request for relief filed by or on behalf of [*transferor or executor of transferor's estate*], and such facts and attached documents are true, correct, and complete.

(vi) If an individual who would be required to provide an affidavit under paragraph (i)(4)(i) of this section has died or is unwilling or otherwise unable to provide the required affidavit, the affidavit required under paragraph (i)(3) of this section must include a statement to that effect, as well as a statement describing the relationship between that individual and the transferor or the executor of the transferor's estate; the information or knowledge the transferor or the executor of the transferor's estate believes that individual had about the events that led to the failure to make the allocation or the election or to the discovery of that failure; and, in cases other than the death of the individual, a detailed description of the efforts made to obtain the affidavit from the individual. The unwillingness of certain affiants to provide an affidavit, however, may be considered by the IRS in determining whether to grant the requested relief. For purposes of this paragraph (i)(4)(vi), the term *unwilling* refers to a person who is apparently able but refuses or otherwise fails, despite the best efforts, made in good faith, of the transferor or the transferor's executor, to provide the required affidavit. In addition, for purposes of this paragraph, the term *unable* refers to a permanent or potentially long-term condition such as physical or mental incapacity that prevents the person from providing the required affidavit, but not a temporary condition such as a temporary physical or mental incapacity or a person's inability due to a leave of absence, travel, or a contractual requirement such as a confidentiality agreement.

(5) *Additional rules regarding relief.* For purposes of relief under paragraphs (i)(1) and (2) of this section, the grant of relief in the form of an extension of time is not a determination that the taxpayer is otherwise eligible to make the election. In addition, notwithstanding the provisions of this section, an extension of time will not be granted under this section if alternative relief is provided by a statute, a regulation published in the **Federal Register**, or a revenue ruling, revenue procedure, notice, or announcement published in the Internal Revenue Bulletin (see § 601.601(d)(2) of this chapter).

(j) *Applicability date.* This section applies to requests for relief to which section 2642(g)(1) applies that are filed on or after May 6, 2024, regardless of the date of the transfer.

PART 301—PROCEDURE AND ADMINISTRATION

■ **Par. 3.** The authority citation for part 301 continues to read in part as follows:

Authority: 26 U.S.C. 7805.

■ **Par. 4.** Section 301.9100–2 is amended by adding paragraph (f) to read as follows:

§ 301.9100–2 Automatic extensions.

* * * * *

(f) *Automatic 6-month extension for certain generation-skipping transfer tax allocations and elections*—(1) *Availability.* Paragraph (b) of this section is not available to obtain an automatic 6-month extension to allocate generation-skipping transfer (GST) exemption to a transfer pursuant to section 2632 or to make an election under section 2632(b)(3) or (c)(5). An automatic 6-month extension to allocate GST exemption under section 2632 or to make an election under section 2632(b)(3) or (c)(5) is available to transferors or the executors of transferors' estates pursuant to § 26.2642–7(i)(1) of this chapter if the requirements of that provision are satisfied.

(2) *Applicability date.* Paragraph (f) of this section applies to any gift or estate tax return or Form 8939, *Allocation of Increase in Basis for Property Acquired from a Decedent,* for which the date prescribed for filing is on or after May 6, 2024 (excluding extensions), regardless of the date of the transfer.

■ **Par. 5.** Section 301.9100–3 is amended by adding paragraph (g) to read as follows:

§ 301.9100–3 Other extensions.

* * * * *

(g) *Relief under section 2642(g)(1)*—(1) *Procedures.* The procedures set forth in this section are not applicable for requests for relief under section 2642(g)(1). For requests for relief under section 2642(g)(1), *see* § 26.2642–7 of this chapter.

(2) *Applicability date.* This paragraph (g) applies to requests for relief to which section 2642(g)(1) applies that are filed on or after May 6, 2024, regardless of the date of the transfer.

PART 602—OMB CONTROL NUMBERS UNDER THE PAPERWORK REDUCTION ACT

■ **Par. 6.** The authority citation for part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

■ **Par. 7.** In § 602.101, amend the table in paragraph (b) by adding an entry in numerical order for ''§ 26.2642–7(i)(3) and (4)'' to read as follows:

§ 602.101 OMB Control numbers.

* * * * *

(b) * * *

CFR part or section where identified and described	Current OMB control No.
* * * * *	
26.2642–7(i)(3) and (4)	1545–2116
* * * * *	

Douglas W. O'Donnell,

Deputy Commissioner.

Approved: March 12, 2024.

32 CFR Part 310

[Docket ID: DoD–2024–OS–0047]

RIN 0790–AL77

Privacy Act of 1974; Implementation

AGENCY: Office of the Secretary of Defense, Department of Defense (DoD).

ACTION: Direct final rule with request for comments.

SUMMARY: The Department of Defense (DoD or Department) is giving concurrent notice of a new system of records titled ''All-domain Anomaly Resolution Office (AARO) Report System,'' AARO–0001, and this rulemaking, which exempts portions of this system of records from certain provisions of the Privacy Act of 1974, as amended, because of national security. This rule is being published as a direct final rule as the Department does not expect to receive any adverse comments. If such comments are received, this direct final rule will be withdrawn and a proposed rule for comments will be published.

DATES: The rule will be effective on July 15, 2024 unless comments are received that would result in a contrary determination. If significant adverse comments are received, the DoD will publish a timely withdrawal of the rule in the **Federal Register**. Comments will be accepted on or before July 5, 2024.

ADDRESSES: You may submit comments, identified by docket number, Regulation Identifier Number (RIN), and title, by any of the following methods.

* *Federal Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

* *Mail:* Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Attn: Mailbox 24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name and docket number or RIN for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *https://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Rahwa Keleta, *OSD.DPCLTD@mail.mil,* (703) 571–0070.

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with the Privacy Act of 1974, DoD is establishing a new system of records titled ''All-domain Anomaly Resolution Office (AARO) Report System,'' AARO–0001. This system of records describes the AARO's collection, use, and maintenance of correspondence and reports submitted from current or former U.S. government employees, service members, or contractors with direct knowledge of U.S. Government programs or activities related to Unidentified Anomalous Phenomenon (UAP) dating back to 1945. This system also includes correspondence and reports submitted from members of the general public and government-affiliated personnel on events related to UAP. The submitted information will be used to carry out AARO's mission, including to inform AARO's congressionally directed Historical Record Report.

II. Privacy Act Exemption

The Privacy Act permits Federal agencies to exempt eligible records in a system of records from certain provisions of the Act, including the provisions providing individuals with a right to request access to and amendment of their own records and accountings of disclosures of such records. If an agency intends to exempt a particular system of records, it must first go through the rulemaking process to provide public notice and an opportunity to comment on the exemption. The Office of the Secretary is amending 32 CFR part 310 to add a new Privacy Act exemption rule for this system of records. The DoD is claiming an exemption for this system of records because some of its records may contain classified national security information and providing notice, access, amendment, and disclosure of accounting of those records to an individual, as well as certain record-keeping requirements, may cause damage to national security and reveal sensitive sources and methods. The Privacy Act, pursuant to 5 U.S.C. 552a(k)(1), authorizes agencies to claim an exemption for systems of records that contain information properly classified pursuant to executive order. DoD is claiming an exemption from several provisions of the Privacy Act, including various access, amendment, disclosure of accounting, and certain record-keeping and notice requirements, to prevent disclosure of any information properly classified pursuant to executive order, as implemented by DoD Instruction 5200.01, ''DoD Information Security Program and Protection of Sensitive Compartmented Information (SCI)'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodi/520001p.PDF?ver=cF1II-jcFGP6jfNrnTr8lQ%3d%3d*); DoD Manual 5200.01, Volume 1, ''DoD Information Security Program: Overview, Classification, and Declassification'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/520001m_vol1.pdf?ver=2020-08-04-092500-203;* and DoD Manual 5200.01, Volume 3, ''DoD Information Security Program: Protection of Classified Information'' (available at *https://www.esd.whs.mil/Portals/54/Documents/DD/issuances/dodm/520001m_vol3.pdf?ver=MJfVD-nRd2HTyLSzDse9VQ%3d%3d*).

III. Direct Final Rulemaking

This rule is being published as a direct final rule as the Department does not expect to receive any significant adverse comments. If such comments are received, this direct final rule will be cancelled and a proposed rule for comments will be published. If no such comments are received, this direct final rule will become effective ten days after the comment period expires.

For purposes of this rulemaking, a significant adverse comment is one that explains (1) why the rule is inappropriate, including challenges to the rule's underlying premise or approach; or (2) why the rule will be ineffective or unacceptable without a change. In determining whether a significant adverse comment necessitates withdrawal of this direct final rule, the Department will consider whether the comment raises an issue serious enough to warrant a substantive response had it been submitted in a standard notice-and-comment process. A comment recommending an addition to the rule will not be considered significant and adverse unless the comment explains how this direct final rule would be ineffective without the addition.

This direct final rule adds to the DoD's Privacy Act exemptions for systems of records found in 32 CFR 310.29. Records in this system of records are only exempt from the Privacy Act to the extent the purposes underlying the exemption pertain to the record.

A notice of a new system of records for AARO–0001 is also published in this issue of the **Federal Register**.

Regulatory Analysis

Executive Order 12866, ''Regulatory Planning and Review,'' as Amended by Executive Order 14094, ''Modernizing Regulatory Review'' and Executive Order 13563, ''Improving Regulation and Regulatory Review''

Executive Orders 12866 (as amended by Executive Order 14094) and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is

necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distribute impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. It has been determined that this rule is not a significant regulatory action under these Executive Orders.

Congressional Review Act (5 U.S.C. 804(2))

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. DoD will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule may take effect no earlier than 60 calendar days after Congress receives the rule report or the rule is published in the **Federal Register**, whichever is later. This direct final rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Section 202, Public Law 104–4, ''Unfunded Mandates Reform Act''

Section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532) requires agencies to assess anticipated costs and benefits before issuing any rule whose mandates may result in the expenditure by State, local and tribal governments in the aggregate, or by the private sector, in any one year of $100 million in 1995 dollars, updated annually for inflation. This rule will not mandate any requirements for State, local, or Tribal governments, nor will it affect private sector costs.

Public Law 96–354, ''Regulatory Flexibility Act'' (5 U.S.C. 601 et seq.)

The Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency has certified that this rule is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. This rule is concerned only with the administration of Privacy Act systems of records within the DoD. Therefore, the Regulatory Flexibility Act, as amended, does not require DoD to prepare a regulatory flexibility analysis.

Public Law 96–511, ''Paperwork Reduction Act'' (44 U.S.C. Chapter 501 et seq.)

The Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) was enacted to minimize the paperwork burden for individuals; small businesses; educational and nonprofit institutions; Federal contractors; State, local and tribal governments; and other persons resulting from the collection of information by or for the Federal government. The Act requires agencies obtain approval from the Office of Management and Budget before using identical questions to collect information from ten or more persons. This rule does not impose reporting or recordkeeping requirements on the public.

Executive Order 13132, ''Federalism''

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that has federalism implications, imposes substantial direct requirement costs on State and local governments, and is not required by statute, or has federalism implications and preempts State law. This rule will not have a substantial effect on State and local governments.

Executive Order 13175, ''Consultation and Coordination With Indian Tribal Governments''

Executive Order 13175 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct compliance costs on one or more Indian Tribes, preempts tribal law, or affects the distribution of power and responsibilities between the Federal Government and Indian Tribes. This rule will not have a substantial effect on Indian Tribal governments.

List of Subjects in 32 CFR Part 310

Privacy.

Accordingly, 32 CFR part 310 is amended as follows:

PART 310—PROTECTION OF PRIVACY AND ACCESS TO AND AMENDMENT OF INDIVIDUAL RECORDS UNDER THE PRIVACY ACT OF 1974

■ 1. The authority citation for part 310 continues to read as follows:

Authority: 5 U.S.C. 552a.

■ 2. Amend § 310.29 by *adding paragraph (c)(29) to read as follows:*

§ 310.29 Office of the Secretary of Defense (OSD) exemptions.

* * * * *

(c) * * *

(29) *System identifier and name.* AARO–0001, All-domain Anomaly Resolution Office (AARO) Report System.

(i) *Exemptions.* This system of records is exempt from 5 U.S.C. 552a(c)(3); (d)(1), (2), (3), and (4); (e)(1); (e)(4)(G), (H), and (I); and (f).

(ii) *Authority.* 5 U.S.C. 552a(k)(1).

(iii) *Exemption from the particular subsections.* Exemption from the particular subsections of the Privacy Act of 1974, as amended, pursuant to exemption (k)(1) is justified for the following reasons:

(A) *Subsections (c)(3) and (d)(1) and (2).* Records in this system of records may contain information concerning individuals that is properly classified pursuant to executive order. Application of exemption (k)(1) for such records may be necessary because access to and amendment of the records, or release of the accounting of disclosures for such records, could reveal classified information. Disclosure of classified records to an individual may cause damage to national security and reveal sensitive sources and methods. Accordingly, application of exemption (k)(1) may be necessary.

(B) *Subsections (d)(3) and (4).* These subsections are inapplicable to the extent an exemption is claimed from (d)(2).

(C) *Subsection (e)(1).* Records within this system may be properly classified pursuant to executive order. In the collection of information for AARO reporting and analysis purposes, it may not always be possible to conclusively determine the relevance and necessity of particular information in the early stages of these types of activities. Additionally, disclosure of classified records to an individual may cause damage to national security and reveal sensitive sources and methods. Accordingly, application of exemption (k)(1) may be necessary.

(D) *Subsections (e)(4)(G) and (H) and subsection (f).* These subsections are inapplicable to the extent exemption is claimed from the access and amendment provisions of subsection (d). Because portions of this system are exempt from the individual access and amendment provisions of subsection (d) for the reasons noted in paragraphs (c)(29)(iii)(A) and (B) of this section, DoD is not required to establish requirements, rules, or procedures with respect to such access or amendment provisions. Providing notice to individuals with respect to the existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which

individuals may access, view, and seek to amend records pertaining to themselves in the system would potentially undermine national security and the confidentiality of classified information. Accordingly, application of exemption (k)(1) may be necessary.

(E) *Subsection (e)(4)(I).* To the extent that this provision is construed to require more detailed disclosure than the broad information currently published in the system notice concerning categories of sources of records in the system, an exemption from this provision is necessary to protect national security and the confidentiality of sources and methods, and other classified information.

(iv) *Exempt records from other systems.* In the course of carrying out the overall purpose for this system, exempt records from other systems of records may in turn become part of the records maintained in this system. To the extent that copies of exempt records from those other systems of records are maintained in this system, the DoD claims the same exemptions for the records from those other systems that are entered into this system, as claimed for the prior system(s) of which they are a part, provided the reason for the exemption remains valid and necessary.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2024–0299]

Special Local Regulations; Montlake Cut, Lake Washington, Seattle, Washington

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce special local regulations for the Windermere Cup on May 4, 2024, from 8 a.m. to 12 p.m. to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Thirteenth Coast Guard District identifies the regulated area for this event on the Montlake Cut and Union Bay Reach between Portage Bay and Webster Point on Lake Washington in Seattle, WA. During the enforcement period, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

DATES: The regulations in 33 CFR 100.1311 will be enforced May 4, 2024, from 8 a.m. to 12 p.m.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or Lieutenant Junior Grade Kaylee K. Lord, Sector Puget Sound Waterways Management Division, Coast Guard; telephone 206–217–6045, email *SectorPugetSound@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulations in 33 CFR 100.1311 for the Windermere Cup on May 4, 2024, from 8 a.m. to 12 p.m. This action is being taken to provide for the safety of life on navigable waterways during this one-day event. Our regulation for marine events within the Thirteenth Coast Guard District, § 100.1311(a), specifies the location of the regulated area for the Windermere Cup which encompasses waters from Montlake Cut and Union Bay Reach between Portage Bay and Webster Point on Lake Washington in Seattle, WA. During the enforcement period, as reflected in § 100.1311, if you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period and modifications, if any, via the Local Notice to Mariners and marine information broadcasts.

Dated: May 1, 2024.

Mark. A. McDonnell,

Captain, U.S. Coast Guard, Captain of the Port Sector Puget Sound.

Coast Guard

33 CFR Part 147

[Docket Number USCG–2024–0356]

RIN 1625–AA00

Safety Zone; Revolution Wind Farm Project Area, Outer Continental Shelf, Lease OCS–A 0486, Offshore Rhode Island, Atlantic Ocean

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing 16 temporary safety zones around the construction of each facility during the development of the Revolution Wind Farm project area within Federal waters on the Outer Continental Shelf, specifically in the Bureau of Ocean Energy Management Renewable Energy Lease Area OCS–A 0486, approximately 15 nautical miles offshore southeast of Point Judith, Rhode Island. This action protects life, property, and the environment during construction of each facility from May 1, 2024, to May 31, 2024. When enforced, only attending vessels and vessels with authorization are permitted to enter or remain in the temporary safety zones.

DATES: This rule is effective without actual notice from May 6, 2024, through 11:59 p.m. on May 31, 2024. For the purposes of enforcement, actual notice will be used from May 1, 2024, until May 6, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0356 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email Mr. Craig Lapiejko, Waterways Management, at Coast Guard First District, telephone 617–603–8592, email *craig.d.lapiejko@uscg.mil.*

NPRM Notice of Proposed Rulemaking
OCS Outer Continental Shelf
NAD 83 North American Datum of 1983
NM Nautical Mile

RWF Revolution Wind Farm
§ Section
U.S.C. United States Code
WTG Wind Turbine Generator

II. Background, Purpose, and Legal Basis

On February 2, 2024, Orsted, an offshore wind farm developer, notified the Coast Guard that they plan to begin construction of the Revolution Wind facilities in the Revolution Wind Farm (RWF) project area within federal waters on the Outer Continental Shelf (OCS), specifically in the Bureau of Ocean Energy Management (BOEM) Renewable Energy Lease Area OCS–A 0486, approximately 15 nautical miles (NM) offshore southeast of Point Judith, Rhode Island, 32 NM southeast of the Connecticut coast and 12 NM southwest of Martha's Vineyard, Massachusetts. Hence, after determining that establishment of safety zones was necessary to provide for the safety of life, property, and the environment during the anticipated construction of the structures, on March 21, 2024, the Coast Guard published a notice of proposed rulemaking (NPRM) titled ''Safety Zone; Revolution Wind Farm Project Area, Outer Continental Shelf, Lease OCS–A 0486, Offshore Rhode Island, Atlantic Ocean'' (89 FR 20150) to begin construction on June 1st. There we explained the basis for the NPRM and invited comments on our proposed regulatory action related to the establishment of safety zones around the construction of 65 Wind Turbine Generators (WTG) and two Offshore Sub Stations (OSS) located in the RWF project area. 86 comments were received during the comment period that ended April 22, 2024, that are currently being considered before the safety zones are modified or extended.

The Coast Guard is issuing this temporary rule under authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when, for good cause, the agency finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists to not complete notice and comment procedures in this case because it would be impracticable and contrary to the public interest of ensuring the safety of mariners transiting the area. After the aforementioned March 21, 2024 NPRM was published, the Coast Guard was informed that construction of RWF project area could begin as soon as May 1, 2024, leaving insufficient time to consider the received comments, and issue a final rule by this anticipated date of construction.

Under 5 U.S.C. 553(d)(3), the Coast Guard also finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register** considering the anticipated start of construction on May 1, 2024. Delaying the effective date of this rule would be contrary to public interest because immediate action is needed to respond to the potential safety risks associated with the extremely complex and unusually hazardous construction of these OCS facilities including hydraulic pile driving hammer operations, heavy lift operations, overhead cutting operations, potential falling debris, increased vessel traffic, and stationary barges in close proximity to the facilities and each other, occurring at times within 12 NM of shore.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority provided in 14 U.S.C. 544, 43 U.S.C. 1333, and Department of Homeland Security (DHS) Delegation No. 00170.1, Revision No. 01.3. As an implementing regulation of this authority, 33 CFR part 147 permits the establishment of safety zones for non-mineral energy resource permanent or temporary structures located on the OCS for the purpose of protecting life and property on the facilities, appurtenances and attending vessels, and on the adjacent waters within the safety zone (see 33 CFR 147.10). Accordingly, a safety zone established under 33 CFR part 147 may also include provisions to restrict, prevent, or control certain activities, including access by vessels or persons to maintain safety of life, property, and the environment.

IV. Discussion of Rule

This rule establishes 16 temporary 500-meter safety zones around the construction of 16 WTGs on the OCS from May 1, 2024, through 11:59 p.m. on May 31, 2024.

The construction of these facilities is expected to repeatedly include the installation of the monopile type foundations followed by the installation of the upper structures for all 16 facilities. Major construction activity could take place at several locations simultaneously in the lease area for these 16 facilities. The Coast Guard will make notice of each enforcement period via the Local Notice to Mariners and issue a Broadcast Notice to Mariners via marine channel 16 (VHF–FM) as soon as practicable in response to an emergency or hazardous condition.

Additional information about the construction process of the RWF can be found at *https://www.boem.gov/renewable-energy/state-activities/revolution-wind.*

The 16 temporary 500-meter safety zones around the construction of the WTGs are in the RWF project area, specifically in the BOEM Renewable Energy Lease Area OCS–A 0486, approximately 15 nautical NM offshore southeast of Point Judith, Rhode Island, 32 NM southeast of the Connecticut coast and 12 NM southwest of Martha's Vineyard, Massachusetts.

The positions of each individual safety zone are referred to using a unique alpha-numeric naming convention outlined in the ''Rhode Island and Massachusetts Structure Labeling Plot (West) [1]''.

Aligning with authorities under 33 CFR 147.15, the temporary safety zones will include the area within 500-meters of the center point of the positions provided in the table below expressed in Degrees (°) Minutes (') (DM) based on North American Datum 1983 (NAD 83).

Name	Facility type	Latitude	Longitude
AE06	WTG	41°13.555′ N	71°10.367′ W
AE07	WTG	41°13.575′ N	71°09.050′ W
AE10	WTG	41°13.652′ N	71°05.081′ W
AE11	WTG	41°13.676′ N	71°03.763′ W
AF05	WTG	41°12.528′ N	71°11.647′ W
AG06	WTG	41°11.554′ N	71°10.302′ W
AJ02	WTG	41°09.452′ N	71°15.530′ W

[1] The Rhode Island and Massachusetts Structure Labeling Plot (West) is an attachment to the Conditions of Construction and Operations Plan Approval Lease Number OCS–A 0517 (boem.gov) and can be found at *https://www.boem.gov/sites/default/files/documents/renewable-energy/state-activities/SFWF-COP-Terms-and-Conditions.pdf.*

Name	Facility type	Latitude	Longitude
AK12	WTG	41°08.699′ N	71°02.260′ W
AL21	WTG	41°07.887′ N	70°50.387′ W
AM21	WTG	41°06.904′ N	70°50.325′ W
AN13	WTG	41°05.675′ N	71°00.836′ W
AN16	WTG	41°05.792′ N	70°56.911′ W
AP13	WTG	41°04.731′ N	71°00.873′ W
AP14	WTG	41°04.746′ N	70°59.423′ W
AP15	WTG	41°04.766′ N	70°58.180′ W
AP16	WTG	41°04.788′ N	70°56.858′ W

When enforced, no unauthorized vessel or person would be permitted to enter the safety zone without obtaining permission from the First Coast Guard District Commander or a designated representative. Requests for entry into the safety zone would be considered and reviewed on a case-by-case basis. Persons or vessels seeking to enter the safety zone must request authorization from the First Coast Guard District Commander or designated representative via VHF–FM channel 16 or by phone at 617–603–1560 (First Coast Guard District Command Center). If permission is granted, all persons and vessels shall comply with the instructions of the First Coast Guard District Commander or designated representative.

The Proposed Regulatory Text Appears at the End of This Document.

IV. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the rule has not been reviewed by the Office of Management and Budget (OMB).

Aligning with 33 CFR 147.15, the safety zones established would extend to a maximum distance of 500-meters around the OCS facility measured from its center point. Vessel traffic would be able to safely transit around the proposed safety zones, which would impact a small, designated area in the Atlantic Ocean, without significant impediment to their voyage. This safety zone would provide for the safety of life, property, and the environment during the construction of each structure, in accordance with Coast Guard maritime safety missions.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

This rule may affect owners or operators of vessels intending to transit or anchor in the RWF, some of which might be small entities. However, these safety zones would not have a significant economic impact on a substantial number of these entities because they are temporarily enforced, allow for deviation requests, and do not impact vessel transit significantly. Regarding the enforcement period, although these safety zones would be in effect from May 1, 2024, through May 31, 2024, vessels would only be prohibited from the regulated zone during periods of actual construction activity in conjunction with the period of enforcement. We expect the enforcement period at each location to last for a short period. Additionally, vessel traffic could pass safely around each safety zone using an alternate route. Use of an alternate route likely will cause minimal delay for the vessel in reaching their destination depending on other traffic in the area and vessel speed. Vessels would also be able to request deviation from this rule to transit through a safety zone. Such requests would be considered on a case by-case basis and may be authorized by the First Coast Guard District Commander or a designated representative. For these reasons, the Coast Guard expects any impact of this rulemaking establishing a temporary safety zone around these OCS facilities to be minimal and have no significant economic impact on small entities.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism

principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of a safety zone around an OCS facility to protect life, property, and the marine environment. It is categorically excluded from further review under paragraph L60 of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 147

Continental shelf, Marine safety, Navigation (waters).

For the reasons discussed in the preamble, the Coast Guard is amending 33 CFR part 147 as follows:

PART 147—SAFETY ZONES

■ 1. The authority citation for part 147 continues to read as follows:

Authority: 14 U.S.C. 544; 43 U.S.C. 1333; 33 CFR 1.05–1; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 147.T01–0356 to read as follows:

§ 147.T01–0356 Safety Zone; Revolution Wind Farm Project Area, Outer Continental Shelf, Lease OCS–A 0486, Offshore Rhode Island, Atlantic Ocean.

(a) *Description.* The area within 500-meters of the center point of the positions provided in the table below is a safety zone:

Name	Facility type	Latitude	Longitude
AE06	WTG	41°13.555′ N	71°10.367′ W
AE07	WTG	41°13.575′ N	71°09.050′ W
AE10	WTG	41°13.652′ N	71°05.081′ W
AE11	WTG	41°13.676′ N	71°03.763′ W
AF05	WTG	41°12.528′ N	71°11.647′ W
AG06	WTG	41°11.554′ N	71°10.302′ W
AJ02	WTG	41°09.452′ N	71°15.530′ W
AK12	WTG	41°08.699′ N	71°02.260′ W
AL21	WTG	41°07.887′ N	70°50.387′ W
AM21	WTG	41°06.904′ N	70°50.325′ W
AN13	WTG	41°05.675′ N	71°00.836′ W
AN16	WTG	41°05.792′ N	70°56.911′ W
AP13	WTG	41°04.731′ N	71°00.873′ W
AP14	WTG	41°04.746′ N	70°59.423′ W
AP15	WTG	41°04.766′ N	70°58.180′ W
AP16	WTG	41°04.788′ N	70°56.858′ W

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the First Coast Guard District Commander in the enforcement of the safety zones.

(c) *Regulations.* No vessel may enter or remain in this safety zone except for the following:

(1) An attending vessel as defined in 33 CFR 147.20;

(2) A vessel authorized by the First Coast Guard District Commander or a designated representative.

(d) *Request for permission.* Persons or vessels seeking to enter the safety zone must request authorization from the First Coast Guard District Commander or a designated representative. If permission is granted, all persons and vessels must comply with lawful instructions of the First Coast Guard District Commander or designated representative via VHF–FM channel 16 or by phone at 617–603–1560 (First Coast Guard District Command Center).

(e) *Effective and enforcement periods.* This section will be effective from May 1, 2024, through 11:59 p.m. on May 31, 2024. But it will only be enforced during active construction or other instances which may cause a hazard to navigation deemed necessary by the First Coast Guard District Commander. The First Coast Guard District Commander will make notification of the exact dates and times in advance of each enforcement period for the locations in paragraph (a) of this section to the local maritime community through the Local Notice to Mariners and will issue a Broadcast Notice to Mariners via marine channel 16 (VHF–FM) as soon as practicable in response to an emergency. If the project is

completed before May 31, 2024, enforcement of the safety zones will be suspended, and notice given via Local Notice to Mariners. The First Coast Guard District Local Notice to Mariners can be found at: *http://www.navcen.uscg.gov.*

Dated: April 30, 2024.

J.W. Mauger,

Rear Admiral, U.S. Coast Guard, Commander, First Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0295]

RIN 1625–AA00

Safety Zone; Presque Isle Bay, Erie, PA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a 210-foot radius of Bicentennial Tower at Dobbins Landing in Erie, PA. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by the fireworks display. During the enforcement period, no person or vessel may enter the respective safety zone without the permission of the Captain of Port Eastern Great Lakes or a designated representative.

DATES: The rule is effective from 8:30 p.m. through 10:30 p.m. on June 23, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0295 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email LT William Kelley, Waterways Management at Sector Eastern Great Lakes, U.S. Coast Guard; telephone 716–843–9343, email *D09-SMB-SECBuffalo-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule under authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the event sponsor did not submit notice of the fireworks display to the Coast Guard with sufficient time remaining before the event to publish an NPRM. Delaying the effective date of this rule to wait for a comment period to run would be impracticable and contrary to the public interest by inhibiting the Coast Guard's ability to protect spectators and vessels from the hazards associated with this firework display.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, waiting for a 30-day notice period to run would be impracticable and contrary to the public interest.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Eastern Great Lakes (COTP) has determined that fireworks over the water presents significant risks to public safety and property. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the fireworks display is taking place.

IV. Discussion of the Rule

This rule establishes a safety zone from 8:30 p.m. through 10:30 p.m. on June 23, 2024. The safety zone will cover all navigable waters within a 210-foot radius of land launched fireworks over the Presque Isle Bay in Erie, PA at 42°08′19.87″ N 80°05′29.54″ W. The duration of the zone is intended to protect spectators, vessels, and the marine environment in these navigable waters during the fireworks display. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on size, location, duration and time of day of the regulated area The safety zone will encompass a 210-foot radius of land launched fireworks in the Presque Isle Bay in Erie, PA lasting approximately two hours during the evening when vessel traffic is normally low. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental

jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves safety zone lasting approximately two hours that will prohibit entry within a 210-foot radius in Presque Isle Bay in Erie, PA for a fireworks display. It is categorically excluded from further review under paragraph L[60a] of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T09–0295 to read as follows:

§ 165.T09–0295 Safety Zone; Presque Isle Bay, Erie, PA.

(a) *Location.* The following area is a safety zone: All waters of Presque Isle Bay, from surface to bottom, encompassed by a 210-foot radius around 42°08′19.87″ N 80°05′29.54″ W.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Eastern Great Lakes (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) In accordance with the general regulations in section § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the COTP or a designated representative.

(2) Vessel operators desiring to enter or operate within the safety zone must contact the COTP or their designated representative to obtain permission to do so. The COTP or their designated representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the COTP, or their designated representative.

(d) *Enforcement period.* The regulated area described in paragraph (a) of this section is effective from 8:30 p.m. through 10:30 p.m. on June 23, 2024.

Dated: April 29, 2024

M.I. Kuperman,

Captain, U.S. Coast Guard, Captain of the Port Eastern Great Lakes.

[FR Doc. 2024–09753 Filed 5–3–24; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF AGRICULTURE

Forest Service

36 CFR Part 219

RIN 0596–AD60

Planning

AGENCY: Forest Service, USDA.

ACTION: Final rule.

SUMMARY: The United States Department of Agriculture (Department), Forest Service is making technical revisions to clarify regulations governing National Forest System Land Management Planning (planning). These purely technical changes to the names and definitions of terms used to describe information accrued by Tribes and Indigenous people align with guidance from the Executive Office of the President and are more consistent with language used in regulations of other Federal agencies.

DATES: This rule is effective May 6, 2024.

ADDRESSES: Information on this final rule may be obtained via written request addressed to the Director, Policy Office, at USDA Forest Service, 201 14th Street SW, Washington, DC 20250–1124 or by email to *nicholas.diprofio@usda.gov.*

FOR FURTHER INFORMATION CONTACT: Nick DiProfio, Senior Land Management Planner, Ecosystem Management Coordination, at (202) 253–0640 or *nicholas.diprofio@usda.gov.* Individuals who use telecommunication devices for the hearing impaired may call the Federal Relay Service at (800) 877–8339 between 8:00 a.m. and 5:00 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: This final rule makes purely technical, clarifying revisions to the Forest Service's existing planning regulations at 36 CFR 219.4(a)(3) and at 36 CFR 219.19. These purely technical, clarifying revisions do not formulate standards, criteria, or guidelines applicable to Forest Service programs and therefore do not require public notice and opportunity to comment under section 14(a) of the Forest and Rangeland Renewable Resources Planning Act of 1974 (16 U.S.C. 1612(a)).

36 CFR Part 219, Subpart A

The Department is revising text in § 219.4(a)(3) and § 219.19 to adhere to guidance set forth by the Office of Science and Technology Policy and the Council on Environmental Quality within the Executive Office of the President on November 30, 2022, titled *Guidance for Federal Departments and Agencies on Indigenous Knowledge* (*https://www.whitehouse.gov/wp-content/uploads/2022/12/OSTP-CEQ-IK-Guidance.pdf*). The Department is changing the term Native Knowledge to Indigenous Knowledge and updating the associated definition to conform precisely with this guidance. The revised definition is substantially similar in substance to the existing definition and will have no discernable impact on how this concept is applied in Forest Service operations.

Regulatory Certifications

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Consistent with Executive Order (E.O.) 12866, the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget will determine whether proposed, interim, and final rules that impose, eliminate, or modify requirements on non-Forest Service parties are significant and will review any proposed, interim, or final rules that OIRA has designated as significant. This final rule does not impose, eliminate, or modify requirements on non-Forest Service parties and therefore does not require a significance determination by OIRA. E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the Nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The Department has developed this final rule consistent with E.O. 13563.

Congressional Review Act

Because this final rule does not impose, eliminate, or modify requirements on non-Forest Service parties, it is not a major rule as defined by the Small Business Regulatory Enforcement Fairness Act of 1996 (known as the Congressional Review Act, 5 U.S.C. 804(2)).

National Environmental Policy Act

This final rule will make only technical, clarifying revisions to existing Forest Service regulations at 36 CFR part 219, subpart A. Forest Service regulations at 36 CFR 220.6(d)(2) (73 FR 43093) exclude from documentation in an environmental assessment or environmental impact statement ''rules, regulations, or policies to establish service-wide administrative procedures, program processes, or instructions.'' The Department has concluded that this final rule falls within this category of actions and that no extraordinary circumstances exist which would require preparation of an environmental assessment or environmental impact statement.

Regulatory Flexibility Act Analysis

The Department has considered this final rule under the requirements of the Regulatory Flexibility Act (5 U.S.C. 602 *et seq.*). This final rule will not have any direct effect on small entities as defined by the Regulatory Flexibility Act. The final rule will not impose recordkeeping requirements on small entities; will not affect their competitive position in relation to large entities; and will not affect their cash flow, liquidity, or ability to remain in the market. Therefore, the Department has determined that this final rule will not have a significant economic impact on a substantial number of small entities pursuant to the Regulatory Flexibility Act.

Federalism

The Department has considered this final rule under the requirements of E.O. 13132, *Federalism.* The Department has determined that the final rule conforms with the federalism principles set out in this E.O.; will not impose any compliance costs on the states; and will not have substantial direct effects on the states, on the relationship between the Federal Government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, the Department has concluded that the final rule does not have federalism implications.

Consultation With Tribal Governments

The Department has reviewed this final rule in accordance with the requirements of E.O. 13175, *Consultation and Coordination with Indian Tribal Governments.* The Department has determined that national Tribal consultation is not necessary for the final rule. The final rule, which will make only technical, clarifying revisions to existing Forest Service regulations in 36 CFR part 219, subpart A, does not impose, eliminate, or modify requirements on non-Forest Service parties and therefore does not have any direct effects on Tribes.

Environmental Justice

The Department has considered the final rule under the requirements of E.O. 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations.* The final rule, which will make only technical, clarifying revisions to existing Forest Service regulations in 36 CFR part 219, subpart A, does not impose, eliminate, or modify requirements on non-Forest Service parties and therefore will not result in disproportionately high and adverse impacts on minority or low-income populations or the exclusion of minority and low-income populations from meaningful involvement in decision making.

No Takings Implications

The Department has analyzed the final rule in accordance with the principles and criteria in E.O. 12630, *Governmental Actions and Interference With Constitutionally Protected Property Rights.* The Department has determined that the final rule will not pose the risk of a taking of private property.

Energy Effects

The Department has reviewed the final rule under E.O. 13211, *Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.* The Department has determined that the final rule will

not constitute a significant energy action as defined in E.O. 13211, and OIRA has not otherwise designated the final rule as a significant energy action.

Civil Justice Reform

The Department has analyzed the final rule in accordance with the principles and criteria in E.O. 12988, *Civil Justice Reform.* Upon issuance of the final rule, (1) all state and local laws and regulations that conflict with the final rule or that impede its full implementation will be preempted, (2) no retroactive effect will be given to this final rule, and (3) it will not require administrative proceedings before parties may file suit in court challenging its provisions.

Unfunded Mandates

Pursuant to Title II of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538), signed into law on March 22, 1995, the Department has assessed the effects of the final rule on state, local, and Tribal governments, and the private sector. The final rule will not compel the expenditure of $100 million or more by any state, local, or Tribal government or anyone in the private sector. Therefore, a statement under section 202 of the Act is not required.

Controlling Paperwork Burdens on the Public

The final rule does not contain information collection requirements as defined in 5 CFR part 1320 that are not already required by law or not already approved for use. Accordingly, the review provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and its implementing regulations at 5 CFR part 1320 do not apply.

List of Subjects in 36 CFR Part 219

Administrative practice and procedure, Environmental impact statements, Indians, Intergovernmental relations, National forests, Reporting and recordkeeping requirements, Science and technology.

Therefore, for the reasons set forth in the preamble, the Department is amending chapter II of title 36 of the Code of Federal Regulations as follows:

PART 219—PLANNING

■ 1. The authority citation for part 219 continues to read as follows:

Authority: 5 U.S.C. 301; 16 U.S.C. 1604, 1613.

■ 2. Amend § 219.4 by revising paragraph (a)(3) to read as follows:

§ 219.4 Requirements for public participation.

(a) * * *

(3) *Indigenous knowledge and land ethics.* As part of tribal participation and consultation as set forth in paragraphs (a)(1)(v) and (a)(2) of this section, the responsible official shall request information about Indigenous Knowledge, land ethics, cultural issues, and sacred and culturally significant sites.

* * * * *

■ 3. Amend § 219.19 by removing the definition ''Native knowledge'' and adding the definition ''Indigenous knowledge'' in alphabetical order to read as follows:

§ 219.19 Definitions.

* * * * *

Indigenous knowledge. A body of observations, oral and written knowledge, innovations, practices, and beliefs developed by Tribes and Indigenous Peoples through interaction and experience with the environment. It is applied to phenomena across biological, physical, social, cultural, and spiritual systems. Indigenous Knowledge can be developed over millennia, continues to develop, and includes understanding based on evidence acquired through direct contact with the environment and long-term experiences, as well as extensive observations, lessons, and skills passed from generation to generation. Indigenous Knowledge is developed by Indigenous Peoples including, but not limited to, Tribal Nations, Native Americans, Alaska Natives, and Native Hawaiians. Each Tribe or Indigenous community has its own place-based body of knowledge that may overlap with that of other Tribes. Indigenous Knowledge is based in ethical foundations often grounded in social, spiritual, cultural, and natural systems that are frequently intertwined and inseparable, offering a holistic perspective. Indigenous Knowledge is inherently heterogeneous due to the cultural, geographic, and socioeconomic differences from which it is derived, and is shaped by the Indigenous Peoples' understanding of their history and the surrounding environment. Indigenous Knowledge is unique to each group of Indigenous Peoples and each may elect to utilize different terminology or express it in different ways. Indigenous Knowledge is deeply connected to the Indigenous Peoples holding that knowledge.

* * * * *

Homer Wilkes,

Under Secretary, Natural Resources and Environment.

BILLING CODE 3411–15–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2022–0494; FRL–9931–02–R9]

Air Plan Approval; Nevada; Clark County Department of Environment and Sustainability; Nonattainment New Source Review; 2015 Ozone Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a state implementation plan (SIP) revision submitted by the State of Nevada addressing the nonattainment new source review (NNSR) requirements for the 2015 ozone National Ambient Air Quality Standards (NAAQS). This SIP revision addresses the Clark County Department of Environment and Sustainability (''Department'') portion of the Nevada SIP. This action is being taken pursuant to the Clean Air Act (CAA or ''Act'') and its implementing regulations.

DATES: This rule is effective on June 5, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–2022–0494. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information. If you need assistance in a language other than English or if you are a person with disabilities who needs a reasonable accommodation at no cost to you, please

contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Amita Muralidharan, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105. By phone: (415) 947–4140 or by email at *muralidharan.amita@epa.gov*.

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

Table of Contents

I. Proposed Action

On February 2, 2024 (89 FR 7318), the EPA proposed to approve the SIP revision listed in table 1 of this document, addressing the NNSR requirements for the 2015 ozone NAAQS for the Department.

TABLE 1—SUBMITTED CERTIFICATION LETTER

Air pollution control agency	Adoption date	Submittal date [1]
Clark County Department of Environment and Sustainability	7/20/2021	8/5/2021

[1] The submitted certification letter was dated August 3, 2021. The electronic submittal was received by EPA on August 5, 2021.

We proposed approval of the submitted SIP revision because we determined that the 2015 ozone certification submitted by the Department fulfills the 40 CFR 51.1314 revision requirement and meets the requirements of CAA sections 110, 172(c)(5), 173, 182(a)(2)(c), 193, and the minimum SIP requirements of 40 CFR 51.165. Our proposed action contains more information on the SIP revision and our evaluation.

II. Public Comments and EPA Responses

The EPA's proposed action provided a 30-day public comment period. During this period, we received one comment in support of this action. The comment outlines the air quality improvements that will result from finalizing this action. The EPA has considered this comment in its final decision to approve the Department's SIP revision.

III. EPA Action

One favorable comment was received during the 30-day public comment period. Therefore, as authorized in section 110(k)(3) of the Act, the EPA is approving this certification into the Nevada SIP as proposed.

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on Tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. The EPA defines environmental justice (EJ) as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' The EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.''

The State did not evaluate environmental justice considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Order 12898 of achieving environmental justice for people of color, low-income populations, and Indigenous peoples.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 5, 2024. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for

the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2))

List of Subjects in 40 CFR part 52

Environmental protection, Air pollution control, Incorporation by Reference, Intergovernmental relations, Nitrogen oxides, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: April 22, 2024.

Martha Guzman Aceves,

Regional Administrator, Region IX.

For the reasons stated in the preamble, EPA amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart DD–Nevada

■ 2. Amend § 52.1470, in paragraph (e), by adding an entry to the table for ''Revision to the Nevada State Implementation Plan for the 2015 Ozone NAAQS: Nonattainment Major NSR Requirements: Las Vegas Valley Nonattainment Area'' after the entry for ''Revision to Nevada 2015 Eight-Hour Ozone Plan, Emissions Inventory Requirement for the Las Vegas Valley Nonattainment Area, Clark County, NV (October 15, 2020)'' to read as follows:

§ 52.1470 Identification of plan.

* * * * *

(e) * * *

EPA-APPROVED NEVADA NONREGULATORY PROVISIONS AND QUASI-REGULATORY MEASURES

Name of SIP provision	Applicable geographic or nonattainment area	State submittal date	EPA approval date	Explanation
Air Quality Implementation Plan for the State of Nevada [1]				
* * *	*	*	*	*
Revision to the Nevada State Implementation Plan for the 2015 Ozone NAAQS: Nonattainment Major NSR Requirements: Las Vegas Valley Nonattainment Area.	Las Vegas Valley, Clark County.	8/5/2021	[INSERT **FEDERAL REGISTER** CITATION], 5/6/2024.	This is an approval of Clark County's certification that the existing Nonattainment New Source Review program is at least as stringent as the requirements of 40 CFR 51.165 for the 2015 ozone NAAQS.
* * *	*	*	*	*

[1] The organization of this table generally follows from the organization of the State of Nevada's original 1972 SIP, which was divided into 12 sections. Nonattainment and maintenance plans, among other types of plans, are listed under Section 5 (Control Strategy). Lead SIPs and Small Business Stationary Source Technical and Environmental Compliance Assistance SIPs are listed after Section 12 followed by nonregulatory or quasi-regulatory statutory provisions approved into the SIP. Regulatory statutory provisions are listed in 40 CFR 52.1470(c).

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 635

[Docket No. 220919–0193; RTID 0648–XD926]

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries; Closure of the Angling Category Southern New England Area Trophy Fishery for 2024

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS closes the Angling category southern area fishery for large medium and giant (''trophy'' (*i.e.,* measuring 73 inches (185 centimeters (cm)) curved fork length or greater)) Atlantic bluefin tuna (BFT). The southern New England area trophy fishery is defined as south of 42° N lat. and north of 39°18′ N lat. This action applies to Highly Migratory Species (HMS) Angling and HMS Charter/Headboat permitted vessels when fishing recreationally.

DATES: Effective 11:30 p.m., local time, May 2, 2024, through December 31, 2024.

FOR FURTHER INFORMATION CONTACT: Larry Redd, Jr., *larry.redd@noaa.gov,* or Ann Williamson, *ann.williamson@noaa.gov,* 301–427–8503.

SUPPLEMENTARY INFORMATION: BFT fisheries are managed under the 2006 Consolidated HMS Fishery Management Plan (FMP) and its amendments, pursuant to the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) and consistent with the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*). HMS implementing regulations are at 50 CFR part 635. Section 635.27 divides the U.S. BFT quota, established by the International Commission for the Conservation of Atlantic Tunas (ICCAT) and as implemented by the United States among the various domestic fishing categories, per the allocations established in the 2006 Consolidated HMS FMP and its amendments. NMFS is required under the Magnuson-Stevens Act at 16 U.S.C. 1854(g)(1)(D) to provide U.S. fishing vessels with a reasonable

opportunity to harvest quotas under relevant international fishery agreements such as the ICCAT Convention, which is implemented domestically pursuant to ATCA.

Under § 635.28(a)(1), NMFS files a closure notice with the Office of the Federal Register for publication when a BFT quota (or subquota) is reached or is projected to be reached. Retaining, possessing, or landing BFT under that quota category is prohibited on and after the effective date and time of a closure notice for that category, for the remainder of the fishing year, until the opening of the subsequent quota period or until such date as specified.

The 2024 BFT fishing year, which is managed on a calendar-year basis and subject to an annual calendar-year quota, began January 1, 2024. The Angling category season opened January 1, 2024, and continues through December 31, 2024. As described in § 635.27(a), the current baseline U.S. BFT quota is 1,316.14 metric tons (mt) (not including the 25 mt ICCAT allocated to the United States to account for bycatch of BFT in pelagic longline fisheries in the Northeast Distant Gear Restricted Area per § 635.27(a)(3)). The Angling category baseline quota is 297.4 mt, of which 9.2 mt (3.1 percent of the annual Angling category quota) is sub-allocated for the harvest of large medium and giant (trophy) BFT by vessels fishing under the Angling category quota, with 2.3 mt (25 percent of the annual large medium and giant BFT Angling category quota) allocated for each of the following areas: North of 42° N lat. (the Gulf of Maine area); south of 42° N lat. and north of 39°18′ N lat. (the southern New England area); south of 39°18′ N lat., and outside of the Gulf of Mexico (the southern area); and the Gulf of Mexico region. Trophy BFT measure 73 inches (185 cm) curved fork length or greater. This closure action applies to the southern New England area.

Angling Category Large Medium and Giant Southern New England ''Trophy'' Fishery Closure

Based on landings data from the NMFS Automated Catch Reporting System, as well as average catch rates and anticipated fishing conditions, the Angling category southern New England area trophy BFT subquota of 2.3 mt has been reached and exceeded. Therefore, retaining, possessing, or landing large medium or giant (*i.e.,* measuring 73 inches (185 cm) curved fork length or greater) BFT south of 42° N lat. and north of 39°18′ N lat. by persons aboard HMS Angling and HMS Charter/Headboat permitted vessels (when fishing recreationally) must cease at 11:30 p.m. local time on May 2, 2024. This closure will remain effective through December 31, 2024. This action applies to HMS Angling and HMS Charter/Headboat permitted vessels when fishing recreationally for BFT, and is taken consistent with the regulations at § 635.28(a)(1). This action is intended to prevent further overharvest of the Angling category southern New England area trophy BFT subquota.

If needed to ensure available quotas or subquotas are not exceeded or to enhance fishing opportunities, subsequent Angling category adjustments or closures will be published in the **Federal Register** per §§ 635.27(a)(7) and 635.28(a)(1). Information regarding the Angling category fishery for Atlantic tunas, including daily retention limits for BFT measuring 27 inches (68.5 cm) to less than 73 inches (185 cm), and any further Angling category adjustments, is available at *https://www.hmspermits.noaa.gov.* During a closure, fishermen aboard HMS Angling and HMS Charter/Headboat permitted vessels when fishing recreationally may continue to catch and release (or tag and release) BFT of all sizes, subject to the requirements of the catch-and-release and tag-and-release programs at § 635.26. All BFT that are released must be handled in a manner that will maximize survival, and without removing the fish from the water, consistent with requirements at § 635.21(a)(1). For additional information on safe handling, see the ''Careful Catch and Release'' brochure available at *https://www.fisheries.noaa.gov/resource/outreach-and-education/careful-catch-and-release-brochure/.*

Monitoring and Reporting

NMFS will continue to monitor the BFT fisheries closely. Per § 635.5(c)(1), HMS Angling and HMS Charter/Headboat permitted vessel owners are required to report the catch of all BFT retained or discarded dead, within 24 hours of the landing(s) or end of each trip, by accessing *https://www.hmspermits.noaa.gov,* using the HMS Catch Reporting app, or calling (888) 872–8862 (Monday through Friday from 8 a.m. until 4:30 p.m.).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act (16 U.S.C. 1855(d)) and regulations at 50 CFR part 635, and this action is exempt from review under Executive Order 12866.

The Assistant Administrator for NMFS (AA) finds that pursuant to 5 U.S.C. 553(b)(B), it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons. Specifically, the regulations implementing the 2006 Consolidated HMS FMP and its amendments provide for inseason retention limit adjustments and fishery closures to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. Providing for prior notice and opportunity to comment is impracticable and contrary to the public interest as this fishery is currently underway and, based on landings information, the Angling category southern New England area fishery subquota has been reached and exceeded. Delaying this action could result in further excessive trophy BFT landings that may result in future potential quota reductions for the Angling category, depending on the magnitude of a potential Angling category overharvest. NMFS must close the southern New England area trophy BFT fishery before additional landings of these sizes of BFT occur. Taking this action does not raise conservation and management concerns, and would support effective management of the BFT fishery. NMFS notes that the public had an opportunity to comment on the underlying rulemakings that established the U.S. BFT quota and the inseason adjustment criteria.

For all of the above reasons, the AA also finds that pursuant to 5 U.S.C. 553(d), there is good cause to waive the 30-day delay in effectiveness.

Authority: 16 U.S.C. 971 *et seq.* and 1801 *et seq.*

Dated: May 1, 2024.

Everett Wayne Baxter,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 89, No. 88
Monday, May 6, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF HOMELAND SECURITY

6 CFR Part 26

[Docket No. CISA–2022–0010]

RIN 1670–AA04

Cyber Incident Reporting for Critical Infrastructure Act (CIRCIA) Reporting Requirements; Extension of Comment Period

AGENCY: Cybersecurity and Infrastructure Security Agency, DHS.

ACTION: Proposed rule; extension of comment period.

SUMMARY: On April 4, 2024, the Cybersecurity and Infrastructure Security Agency (CISA) published a proposed rule in the **Federal Register**, the Cyber Incident Reporting for Critical Infrastructure Act of 2022 (CIRCIA), which proposes regulations implementing the statute's covered cyber incident and ransom payment reporting requirements for covered entities. CISA is extending the public comment period for the proposed rulemaking for an additional 30 days through July 3, 2024, in response to comments received from the public requesting additional time.

DATES: The comment period for the proposed rulemaking published on April 4, 2024, at 89 FR 23644 is extended an additional 30 days. Comments and related material must be submitted on or before July 3, 2024.

ADDRESSES: You may send comments, identified by docket number CISA–2022–0010, through the Federal eRulemaking Portal available at *http://www.regulations.gov.*

Instructions: All comments received must include the docket number for this rulemaking. All comments received will be posted to *https://www.regulations.gov,* including any personal information provided. If you cannot submit your comment using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions. For detailed instructions on sending comments and additional information on the types of comments that are of particular interest to CISA for this proposed rulemaking, see the **SUPPLEMENTARY INFORMATION** section of the proposed rulemaking document.

Docket: For access to the docket and to read background documents mentioned in this proposed rule and comments received, go to *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Todd Klessman, CIRCIA Rulemaking Team Lead, Cybersecurity and Infrastructure Security Agency, *circia@cisa.dhs.gov,* 202–964–6869.

SUPPLEMENTARY INFORMATION:

Background and Discussion

On April 4, 2024, CISA published a notice of proposed rulemaking, ''Cyber Incident Reporting for Critical Infrastructure Act Reporting Requirements'' (89 FR 23644), which proposes a rulemaking required by the Cyber Incident Reporting for Critical Infrastructure Act of 2022 (CIRCIA). See 6 U.S.C. 681–681g; Public Law 117–103, as amended by Public Law 117–263 (Dec. 23, 2022). The proposed rule provided for a 60-day comment period which was scheduled to close on June 3, 2024.

CISA received comments requesting that the agency consider extending the comment period for an additional 30 days. Requesters cited the complexity inherent in addressing cybersecurity within critical infrastructure sectors, the potential impact of this rulemaking on each critical infrastructure sector, and the need for additional time to sufficiently review and comment. In response to these requests, CISA has decided to extend the public comment period by 30 days. The comment period is now open through July 3, 2024.

Public Participation and Requests for Comments

CISA is including in the docket a draft privacy and civil liberties guidance document that would apply to CISA's retention, use, and dissemination of personal information contained in a CIRCIA Report and guide other Federal departments and agencies with which CISA will share CIRCIA Reports. CISA encourages interested readers to review this draft guidance and to submit comments on it. Commenters should clearly identify which specific comment(s) concern the draft guidance document.

CISA will accept comments no later than the date provided in the **DATES** section of this document. Interested parties may submit data, comments, and other information using any of the methods described in the **ADDRESSES** section of this document. To ensure appropriate consideration of your comment, indicate the specific section of this proposed rule and, if applicable, the specific comment request number associated with the topic to which each comment applies; explain a reason for any suggestion or recommendation; and include data, information, or authority that supports the recommended course of action. Comments submitted in a manner other than those described above, including emails or letters sent to Department of Homeland Security or CISA officials, will not be considered comments on the proposed rule and may not receive a response from CISA.

Instructions to Submit Comments. If you submit a comment, you must submit it to the docket associated with CISA Docket Number CISA–2022–0010. All submissions may be posted, without change, to the Federal eRulemaking Portal at *www.regulations.gov* and will include any personal information that you provide. You may choose to submit your comment anonymously. Additionally, you may upload or include attachments with your comments. Do not upload any material in your comments that you consider confidential or inappropriate for public disclosure. Do not submit comments that include trade secrets, confidential commercial or financial information, Protected Critical Infrastructure Information, Sensitive Security Information, or any other protected information to the public regulatory docket. Please submit comments containing protected information separately from other comments by contacting the individual listed in the **FOR FURTHER INFORMATION CONTACT** section below for instructions on how to submit comments that include protected information. CISA will not place comments containing protected information in the public docket and will handle them in accordance with applicable safeguards and restrictions on access. CISA will hold such

comments in a separate file to which the public does not have access and place a note in the public docket documenting receipt. If CISA receives a request for a copy of any comments submitted containing protected information, CISA will process such a request consistent with the Freedom of Information Act (FOIA), 5 U.S.C. 552, and the Department's FOIA regulation found in part 5 of title 6 of the Code of Federal Regulations (CFR).

To submit a comment, go to *www.regulations.gov,* type CISA–2022–0010 in the search box and click ''Search.'' Next, look for the CIRCIA **Federal Register** notice of proposed rulemaking in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your comment by using *https://www.regulations.gov,* call or email the point of contact in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Viewing material in docket. For access to the docket and to view documents mentioned in the CIRCIA NPRM as being available in the docket, go to *https://www.regulations.gov,* search for the docket number provided in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in the docket and can be viewed by following instructions on the Frequently Asked Questions web page *https://www.regulations.gov/faq.* The Frequently Asked Questions page also explains how to subscribe for email alerts that will notify you when comments are posted or if another **Federal Register** document is published. CISA will review all comments received. CISA may choose to withhold information provided in comments from public viewing or to not post comments that CISA determines are off-topic or inappropriate.

Jennie M. Easterly,

Director, Cybersecurity and Infrastructure Security Agency, Department of Homeland Security.

BILLING CODE 9110—P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–1288; Project Identifier MCAI–2024–00063–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus SAS Model A330–243, –302, –343, and –941 airplanes. This proposed AD was prompted by a determination that a certain aft bulkhead cover panel may have been made with a non-conforming material. This proposed AD would require replacing the aft bulkhead cover panel and prohibit the installation of affected parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 20, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1288; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website *ad.easa.europa.eu.* It is also available at *regulations.gov* under Docket No. FAA–2024–1288.
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3229; email: *vladimir.ulyanov@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2024–1288; Project Identifier MCAI–2024–00063–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this

NPRM. Submissions containing CBI should be sent to Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3229; email: *vladimir.ulyanov@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2024–0023, dated January 23, 2024 (EASA AD 2024–0023) (also referred to as the MCAI), to correct an unsafe condition on certain Airbus SAS Model A330–243, –302, –343, and –941 airplanes. The MCAI states that a certain aft bulkhead cover panel may have been made with a non-conforming material. This panel is installed in galley G4 and does not meet the heat release requirements. This condition, if not corrected, represents a non-compliance with certification requirements that could result in injury to occupants and reduced evacuation capacity from the airplane in case of an emergency.

The FAA is proposing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–1288.

Related Service Information Under 1 CFR Part 51

EASA AD 2024–0023 specifies procedures for replacing the aft bulkhead cover panel installed in galley G4 and prohibits the installation of affected parts. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2024–0023 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2024–0023 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2024–0023 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2024–0023 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2024–0023. Service information required by EASA AD 2024–0023 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–1288 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 25 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
3.5 work-hours × $85 per hour = $298	Up to $123,000	Up to $123,298	Up to $3,082,450.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus SAS: Docket No. FAA–2024–1288; Project Identifier MCAI–2024–00063–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 20, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus SAS Model A330–243, –302, –343, and –941 airplanes, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2024–0023, dated January 23, 2024 (EASA AD 2024–0023).

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a determination that a certain aft bulkhead cover panel may have been made with a non-conforming material. The FAA is issuing this AD to address the non-conforming aft bulkhead cover panel. The unsafe condition, if not addressed, could result in injury to occupants, and reduced evacuation capacity from the airplane in case of an emergency.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0023.

(h) Exceptions to EASA AD 2024–0023

(1) Where EASA AD 2024–0023 refers to its effective date, this AD requires using the effective date of this AD.

(2) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0023.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact Vladimir Ulyanov, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3229; email: *vladimir.ulyanov@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2024–0023, dated January 23, 2024.

(ii) [Reserved]

(3) For EASA AD 2024–0023, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this EASA AD on the EASA website *ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 26, 2024.

James D. Foltz,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–1289; Project Identifier MCAI–2023–01049–T]

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. This proposed AD was prompted by a report that at various lavatory and galley locations within the airplane, incorrect terminal lugs were installed which are not compatible with the associated wire gauge. This proposed AD would require removing and replacing existing lug terminals at various lavatory and galley locations, as specified in a Transport Canada AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 20, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–1289; or in person at

Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For Transport Canada material, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca.* You may find this material on the Transport Canada website at *tc.canada.ca/en/aviation.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: William Reisenauer, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2024–1289; Project Identifier MCAI–2023–01049–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to William Reisenauer, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

Transport Canada, which is the aviation authority for Canada, has issued Transport Canada AD CF–2023–67, dated October 4, 2023 (Transport Canada AD CF–2023–67) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. The MCAI states that at lavatory and galley locations within the airplane, incorrect terminal lugs have been installed which are not compatible with the associated wire gauge.

The FAA is proposing this AD to address incorrect terminal lugs that may become loose causing a loss of electromagnetic interference protection, which could result in false alarms of the lavatory smoke detectors, false alarms of low crew oxygen pressure, loss of automatic control of automatic cabin temperature control, and loss of lavatory flush. The unsafe condition, if not corrected, could result in an increase in crew workload, including diversions and descent to below 10,000 feet or the lowest safe altitude.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–1289.

Related Service Information Under 1 CFR Part 51

Transport Canada AD CF–2023–67 specifies procedures for removing existing terminal lugs and installing new terminal lugs at lavatories A, C1, C2, C3, D2, D4, and E, and galleys G2A, G2G, and G4, including replacing the ground wires for new terminal lugs if the ground wire length is not sufficient; and installing the service bulletin incorporation placards.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in Transport Canada AD CF–2023–67 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate Transport Canada AD CF–2023–67 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with Transport Canada AD CF–2023–67 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Service information required by Transport Canada AD CF–2023–67 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–1289 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 66 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 81 work-hours × $85 per hour = Up to $6,885	(*)	Up to $6,885	Up to $454,410.

*The FAA has received no definitive data on which to base the cost estimates for the parts specified in this proposed AD.

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.): Docket No. FAA–2024–1289; Project Identifier MCAI–2023–01049–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 20, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (type certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc) Model BD–500–1A10 and BD–500–1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–67, dated October 4, 2023 (Transport Canada AD CF–2023–67).

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a report that at lavatory and galley locations within the airplane, incorrect terminal lugs have been installed which are not compatible with the associated wire gauge. The FAA is issuing this AD to address incorrect terminal lugs that may become loose causing a loss of electromagnetic interference protection, which could result in false alarms of the lavatory smoke detectors, false alarms of low crew oxygen pressure, loss of automatic control of automatic cabin temperature control, and loss of lavatory flush. The unsafe condition, if not corrected, could result in an increase in crew workload, including diversions and descent to below 10,000 feet or the lowest safe altitude.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–67.

(h) Exception to Transport Canada AD CF–2023–67

(1) Where Transport Canada AD CF–2023–67 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF–2023–67 refers to hours air time, this AD requires using flight hours.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to: *9-AVS-NYACO-COS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Airbus Canada Limited Partnership's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(j) Additional Information

For more information about this AD, contact William Reisenauer, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email *9-avs-nyaco-cos@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2023–67, dated October 4, 2023.

(ii) [Reserved]

(3) For Transport Canada AD CF–2023–67, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email *TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca.* You may find this Transport Canada AD on the Transport Canada website at *tc.canada.ca/en/aviation.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations,* or email *fr.inspection@nara.gov.*

Issued on April 26, 2024.

James D. Foltz,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Parts 2 and 38

[Docket No. RM05–5–031]

Standards for Business Practices and Communication Protocols for Public Utilities

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Energy Regulatory Commission proposes to amend its regulations to incorporate by reference, with certain exceptions, the latest version (Version 004) of the Standards for Business Practices and Communication Protocols for Public Utilities adopted by the Wholesale Electric Quadrant of the North American Energy Standards Board.

DATES: Comments are due July 5, 2024.

ADDRESSES: Comments, identified by docket number, may be filed in the following ways. Electronic filing through *http://www.ferc.gov,* is preferred.

- *Electronic Filing:* Documents must be filed in acceptable native applications and print-to-PDF, but not in scanned or picture format.
- For those unable to file electronically, comments may be filed by USPS mail or by hand (including courier) delivery.

○ *Mail via U.S. Postal Service Only:* Addressed to: Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

○ *Hand (Including Courier) Delivery:* Deliver to: Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

The Comment Procedures Section of this document contains more detailed filing procedures.

John O. Sillin (technical issues), Office of Energy Policy and Innovation, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, (202) 502–6548

Veronica Norman (legal issues), Office of the General Counsel, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, (202) 502–8751

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Overview

1. The Federal Energy Regulatory (Commission) proposes to amend its regulations at 18 CFR 38.1(b) to incorporate by reference, with certain enumerated exceptions,[1] the latest

[1] In addition to the standards discussed below that are not proposed for incorporation by reference, the Commission is not proposing to incorporate by reference the following: (1) the WEQ–009 Standards of Conduct for Electric Transmission Providers, which NAESB has eliminated as they duplicate the Commission's regulations; and (2) the WEQ–014 WEQ/WGQ eTariff Related Business Practice Standards, which provide an implementation guide describing the various mechanisms, data tables, code values/

Continued

version (Version 004) of the Standards for Business Practices and Communication Protocols for Public Utilities adopted by the Wholesale Electric Quadrant (WEQ) of the North American Energy Standards Board (NAESB) (WEQ Version 004 Standards) applicable to the wholesale electric industry. NAESB is an American National Standards Institute-accredited, non-profit standards development organization formed for the purpose of developing voluntary standards and model business practices that promote more competitive and efficient natural gas and electric markets. On July 31, 2023, NAESB filed a notice that it had approved and published the WEQ Version 004 Standards to replace the currently incorporated version (Version 003.3) of those business practice standards (Informational Report).[2] The revisions made by NAESB in the WEQ Version 004 Standards are designed to aid public utilities with the consistent and uniform implementation of requirements promulgated by the Commission as part of the *pro forma* Open Access Transmission Tariff.

II. Background

2. Since 2006, the Commission has adopted in its regulations NAESB's business practice standards and communication protocols for public utilities, promulgated in the Order No. 697 series of orders,[3] wherein the Commission incorporated by reference the standards for public utilities developed by NAESB's WEQ. Upon incorporation by reference, this version of the standard will replace the currently incorporated version (Version 003.3) of those business practice standards.

3. On July 31, 2023, NAESB filed a report informing the Commission that it had approved and published the WEQ Version 004 Standards. NAESB states that the WEQ Version 004 Standards include newly created standards, as well as modifications to existing standards, developed through the NAESB standards development process. WEQ Version 004 Standards build upon WEQ Version 003.3 Standards and include standards developed in response to the directives from Order Nos. 676–I and 676–J,[4] business practice standards developed to support cybersecurity for the wholesale electric industry, modifications to complement the NERC Reliability Standards, the new NAESB Base Contract for Sale and Purchase of Voluntary Renewable Energy Certificates (NAESB REC Contract), and standards to identify definitions for common grid services to support distributed energy resource interactions in response to a request submitted by the Department of Energy (DOE), Lawrence Berkeley National Laboratory (Berkeley Lab), and Pacific Northwest National Laboratory (PNNL). Additionally, WEQ Version 004 Standards include modifications applied to Open Access Same-Time Information Systems (OASIS) Business Practice Standards, the Coordinate Interchange Business Practice Standards, and the Abbreviations, Acronyms, and Defined Terms.

4. The Informational Report includes an overview of all standard additions, modifications, and reservations applied to Version 004 of the WEQ Business Practice Standards and summarizes the deliberations that led to the changes. It also identifies changes to the existing standards that were considered but not adopted.[5]

III. Discussion

5. In this notice of proposed rulemaking (NOPR), we propose to incorporate by reference into the Commission's regulations at 18 CFR 38.1(b) the WEQ Version 004 Standards as developed by NAESB, with certain exceptions.[6] In the subsections that follow, we provide the summary required by the Office of **Federal Register** regulations. As an initial matter, we note that the WEQ Version 004 Standards include modifications, reservations, and additions to the following set of existing WEQ Standards, *i.e.,* the Version 003.3 Business Practice Standards.

Standard No.	Business practice standards
WEQ–000	Abbreviations, Acronyms, and Definition of Terms.
WEQ–001	OASIS.
WEQ–002	OASIS Standards and Communication Protocol (S&CP).
WEQ–003	OASIS Data Dictionary.
WEQ–004	Coordinate Interchange.
WEQ–005	Area Control Error Equation Special Cases.
WEQ–006	Manual Time Error Correction.
WEQ–008	Transmission Loading Relief (TLR)—Eastern Interconnection.
WEQ–010	Contracts Related Business Practice Standards.
WEQ–012	Public Key Infrastructure (PKI).
WEQ–013	OASIS Implementation Guide.
WEQ–015	Measurement and Verification of Wholesale Electricity Demand Response.
WEQ–021	Measurement and Verification of Energy Efficiency Products.
WEQ–022	Electric Industry Registry.
WEQ–023	Modeling.

6. Additionally, the WEQ Version 004 Business Practice Standards include two new sets of standards:

reference tables, and technical specifications used in the submission of electronic tariff filings to the Commission, which the Commission has not incorporated as these submittals are governed by the Commission's eTariff regulations.

[2] *See* NAESB WEQ Business Practice Standards Version 004 Report, Docket No. RM05–5–31, (filed July 31, 2023).

[3] This series of orders began with the Commission's issuance of *Standards for Bus. Practices & Commc'n Protocols for Pub. Utils.,* Order No. 676, 71 FR 26,199 (May 4, 2006), 115 FERC ¶ 61,102 (2006).

[4] *See Standards for Bus. Practices & Commc'n Protocols for Pub. Utils.,* Order No. 676–I, 85 FR 10571 (Feb. 25, 2020), 170 FERC ¶ 61,062 (2020); *Standards for Bus. Practices & Commc'n Protocols for Pub. Utils.,* No. 676–J, 86 FR 29,491 (Jun. 2, 2021), 175 FERC ¶ 61,139 (2021).

[5] Since the publication of WEQ Version 003.3, sixteen standards development efforts have resulted in recommendations from WEQ subcommittees for no action.

[6] In the discussion below, we identify the NAESB WEQ Version 004 Standards that we propose *not* to incorporate by reference.

WEQ–024	Cybersecurity.
WEQ–025	Grid Services Supporting Wholesale Electric Interactions.

7. As the Commission found in Order No. 676, adoption of consensus standards is appropriate because the consensus process helps ensure the reasonableness of the standards by requiring that the standards draw support from a broad spectrum of all segments of the industry. Moreover, since the industry itself conducts business under these standards, the Commission's regulations should reflect those standards that have the widest possible support. In section 12(d) of the National Technology Transfer and Advancement Act of 1995, Congress affirmatively requires Federal Agencies to use technical standards developed by voluntary consensus standards organizations, such as NAESB, as a means of carrying out policy objectives or activities unless use of such standards would be inconsistent with applicable law or otherwise impractical.[7]

8. We discuss below some specific aspects of NAESB's informational report. The following paragraphs describe NAESB's proposed modifications, reservations, and additions to its existing standards, which collectively produce NAESB's proposed WEQ Version 004 Standards. The paragraphs also describe relevant background information and impetuses for the changes.

A. Modifications to Previous Version of Standards

1. Modifications in Response to Commission Order Nos. 676–I and 676–J

9. WEQ Version 004 contains modifications made in response to directives contained in Order Nos. 676–I and 676–J and related industry-submitted standards requests under three separate standards development efforts related to standards for redirection of transmission, time error correction, and contract path management. As part of these efforts, NAESB modified the WEQ–000 Abbreviations, Acronyms, and Definition of Terms, WEQ–001 OASIS Business Practice Standards, WEQ–003 OASIS Data Dictionary Business Practice Standards, WEQ–006 Manual Time Error Correction Business Practice Standards, WEQ–013 OASIS Implementation Guide Business Practice Standards, and WEQ–023 Modeling Business Practice Standards.

a. Standards for Redirection of Transmission Service

10. In response to Order No. 676–I,[8] NAESB revised the WEQ–001, WEQ–003, and WEQ–013 standards to provide greater specificity regarding the transmission service reservation process that applies to redirection of transmission service (redirects) on a firm and non-firm basis, consistent with the Commission's *Dynegy*[9] policy addressing a customer's right to keep its contractual rights to point-to-point firm transmission service on the original path it has reserved while the customer's request for a redirect is pending.[10] In *Dynegy Power Marketing, Inc.* v. *Southwest Power Pool, Inc.,* the Commission held that a transmission customer receiving firm transmission service does not lose its rights to its original path until the redirect request satisfies all of the following criteria: (1) it is accepted by the transmission provider; (2) it is confirmed by the transmission customer; and (3) it passes the conditional reservation deadline under section 13.2 of the transmission provider's OATT.

11. In Order No. 676–I, the Commission incorporated by reference the NAESB standards, except for the preambles in WEQ–001–9 and WEQ 001–10. The Commission declined to incorporate by reference the two preambles because they appeared to permit transmission providers the option to implement their own entity-specific procedures, which would not have ensured consistency across the bulk power system.[11] The Commission also specified which firm parent reservations would be afforded the protection of the *Dynegy* policy and limited the *Dynegy* policy to redirects from unconditional firm service.[12]

12. In response to Order No. 676–I, NAESB conducted a full review of both the WEQ–001–9 and WEQ–001–10 NAESB Standards to identify any shortcomings and modifications needed to comply with the Commission's conclusions and with *Dynegy.* The proposed standards provide additional details regarding the treatment of redirects from unconditional and conditional parent transmission service reservations, require redirects of non-firm transmission service to be from unconditional parent transmission service reservations, and require resales of transmission service to be from unconditional parent transmission service reservations. Further, the modified standards establish a mechanism to allow capacity to be returned from a redirect of firm transmission service to the parent transmission service reservation.

b. Time Error Correction

13. In Order No. 676–I, the Commission found that NAESB had not provided sufficient justification for retiring the Time Error Correction standard (WEQ–006), as it had proposed. The Commission instead left in place the incorporation by reference of the time error correction standard in the prior version of the standards (WEQ Version 003.1).[13] The Commission requested that public utilities work through the NAESB business practices development process to revisit the rationale for removing the Time Error Correction standards to determine whether they should be retained or revised.

14. In response to the Commission in Order No. 676–I, NAESB revised WEQ–006 Manual Time Error Correction Business Practice Standards to address commercial requirements for entities calling for manual time error corrections in accordance with the NERC Time Monitoring Reference Document Version 5.[14] Under the revised standards, Interconnection Time Monitors are required to monitor Time Error and make a reasonable effort to initiate or terminate corrective action orders according to the table in the standards when the time is slow or fast. The standards further require that, when any balancing authority has been separated from the Interconnection, after reconnection, it is required to adjust its Time Error devices to coincide with the Time Error of the Interconnection Time Monitor. These requirements do not apply to balancing authorities and Interconnection Time

Monitors that use automatic Time Error Correction procedures.

c. Contract Path Management

15. In Order No. 676–J, the Commission incorporated by reference all the WEQ–023 Modeling Business Practice Standards as included in WEQ Version 003.3 Standards, which had two new standards—WEQ–023–1.4 and –1.4.1—related to contract path management not previously included in the NERC MOD A Reliability Standards. Those standards limited the amount of firm transmission service granted on an Available Transfer Capability (ATC) Path and limited the interchange schedule (both firm and non-firm) between balancing authority areas to the contract path limit for that given path, respectively. Bonneville Power Administration (BPA) and the ISO/RTO Council objected to these standards, contending that the standards interfere with the way service providers schedule their systems and that the standards may result in less efficient use of ATC. Notwithstanding these objections, the Commission incorporated these standards by reference, finding that declining to adopt these standards could loosen the requirements for non-discriminatory calculation of ATC. However, the Commission urged NAESB to consider the issues raised as to whether revisions to the standards would be warranted.[15]

16. In response, NAESB modified the WEQ–023 Modeling Business Practice Standards to allow the contract path limit to be exceeded for a certain period of time prior to the start of flow.[16] Specifically, the revisions to WEQ–023–1.4 and WEQ–023–1.4.1 were modified to better accommodate individual transmission provider business practices that may, for scheduling efficiency purposes, allow a contract path limit to be exceeded for a certain period prior to the implementation of the interchange schedule.[17] The modification to WEQ–023–1.4.1 stipulates that when a transmission provider is determining whether to approve a request for firm transmission service, the transmission provider will consider the methodology used by other transmission providers and determine whether there is agreement between the methodologies.

17. The modifications to WEQ–023–1.4.1 provide clarity by establishing a cutoff time by which transmission providers must ensure that the net interchange schedule does not exceed the contract path limit. The revisions also include changes to ensure consistency with WEQ–023–1.4, as well as changes to clarify that entities using conditional firm transmission service may exceed the firm limit transfers in accordance with WEQ–001.21.

18. The revised standards proposed for incorporation by reference provide increased flexibility for transmission providers to maximize the use of the transmission system while still preventing the allocation of firm transmission service that exceeds transfer capability.

2. Modifications To Support Cybersecurity for the Wholesale Electric Industry

19. In addition to the addition of a new set of standards, WEQ–024 Cybersecurity Business Practice Standards (*see* section III.B.1 below), NAESB made modifications to WEQ–012 to support the issuance of server-side or transport layer security certificates by NAESB Authorized Certification Authorities (ACA).

20. The modifications to WEQ–012 standards incorporate best industry practices regarding the issuance of server-side or transport layer security server certificates by a certificate authority and allow a NAESB ACA to issue code-signing certificates that can be used to verify software and other executables in support of the NERC CIP–010 Security—Configuration Change Management and Vulnerability Assessments Reliability Standard. As part of these modifications, any digital certificate issued by a NAESB ACA must clearly and uniquely identify the organizational affiliation of the certificate holder. Identification is done through the inclusion of the company's Entity Code, an alphanumeric code that uniquely identifies an entity registered in the NAESB Electric Industry Registry (EIR), in the Organization Unit field of the certificate. Recent changes to industry practices facilitated through the Certification Authority Browser Forum have halted use of the Organization Unit field in server-side/transport layer security certificates issued by any certificate authority.

21. Additional modifications were made to the NAESB Accreditation Requirements for ACAs. The modifications will allow NAESB ACAs to issue code signing certificates that can be used by industry to authenticate software and other executable computer files from third parties. The modifications are supportive of Reliability Standard CIP–010 Cyber Security—Configuration Change Management and Vulnerability Assessments Reliability Standards require verification of the identity of a software source.

3. Modifications To Complement NERC Reliability Standards

22. WEQ Version 004 Standards include revisions to complement the NERC Reliability Standards, including modifications to be consistent with the NERC Glossary. The revisions modified WEQ–005–1.2.1 and WEQ–005–1.2.2 and created four new standards—WEQ–005–1.2.1.1, WEQ–005–1.2.1.2, WEQ–005–1.2.2.1, and WEQ–005–1.2.2.2. The changes were made to provide further clarity on the incorporation of jointly owned units into the ACE equation and to ensure consistency in the use of terminology between the WEQ Business Practice Standards and the NERC Dynamic Transfer Reference Document, which provides reliability guidance on the use of pseudo-ties and dynamic schedules in a balancing authority's ACE equations.[18] Changes ensuring consistency in terminology were also made to WEQ–000.

23. NAESB also modified the definition for System Operating Limit in WEQ–000 to ensure consistency with the proposed changes to the definition in the NERC Glossary. As the term appears in WEQ–001, WEQ–004, WEQ–008, and WEQ–023, the review of the modified definition was coordinated with four WEQ subcommittees.

4. Modifications to the WEQ OASIS Business Practice Standards

24. In addition to the OASIS modifications referenced previously, NAESB completed nine final actions modifying the OASIS suite of Business Practice Standards.

a. Eligibility and Treatment of Rollover Rights

25. NAESB developed modifications to the WEQ OASIS suite of Business Practice Standards to address the eligibility and treatment of rollover rights[19] as part of the standards

[15] Order No. 676–J, 175 FERC ¶ 61,139 at P 30.

[16] Informational Report at 8.

[17] *Id.*

[18] North American Electric Reliability Corporation, *Dynamic Transfer Reference Document, Version 4* (2019).

[19] A Rollover Right is the option held by an existing firm transmission service customer to continue to take transmission service after a contract term expires. The contract ''rolls over'' or is, in effect, renewed. *Promoting Wholesale Competition Through Open Access Non-Discriminatory Transmission Servs. by Pub. Utils.; Recovery of Stranded Costs by Pub. Utils. & Transmitting Utils.,* Order No. 888, 61 FR 21540 at 21604 (May 10, 1996), FERC Stats. & Regs. ¶ 31,036 (1996) (cross-referenced at 75 FERC ¶ 61,080), *order on reh'g,* Order No. 888–A, 62 FR 12274 (Mar. 14, 1997), FERC Stats. & Regs. ¶ 31,048 (cross-referenced at 78 FERC ¶ 61,220), *order on reh'g,* Order No. 888–B, 81 FERC ¶ 61,248 (1997), *order*

supporting Network Integration Transmission Service (NITS).[20] The recommendation includes new and revised standards that define if and when rollover rights are assigned, update posting requirements and establish supporting template structures, and create dynamic notifications within OASIS for rollover rights. In developing the recommendation, one area of major discussion within the subcommittee was the impact of a termination of transmission service on rollover rights. The subcommittee reached consensus that indefinite termination of transmission service will result in an automatic termination of rollover rights associated with that service. The resulting standards revisions, including template structures, were applied to WEQ–001, WEQ–002, WEQ–003, and WEQ–013.

b. Submission of Variables Associated With NITS

26. Several modifications were made to WEQ–002 and WEQ–003 to allow users the ability to submit specific lists of variables associated with NITS as part of the query/response functionality in OASIS templates. The revisions include changes to standards language in WEQ–002 and the addition of five new data elements to WEQ–003. No new NITS query variables were developed as part of these revisions.

c. Provide Consistency Between Standards Language

27. NAESB developed modifications to WEQ–001 to provide greater consistency between the standards language included in WEQ–001–9.2 and WEQ–001–9.4.3 and WEQ–001–B Appendix B—Redirect Business Practice Standards Examples. Specifically, the changes revise several of the illustrative examples included as part of the appendix to clarify that transmission service? requests submitted before the capacity is committed, or outside the time frame of the parent reservation, should be denied, consistent with WEQ–001–9.2 and WEQ–001–9.3. The changes also ensure consistency between the reservation processes that apply to redirects on firm and non-firm bases.

d. Improvements for OASIS Node Users

28. NAESB revised WEQ–002, WEQ–003, and WEQ–013 to establish a mechanism that enables OASIS node users to identify—in a single location—all service modifications made to an original transmission service request reservation. Specifically, the revisions include modifications to WEQ–002–4.3.4.3, the addition of nine new data elements in WEQ–003, and revisions to illustrative examples included in WEQ–013 Example 8.

e. Better Support Posting Requirements

29. NAESB developed modifications to WEQ–001 to better support posting requirements, included as part of 18 CFR 37.6, by adding specificity regarding the treatment of consolidations of transmission service requests. Consolidations of transmission service requests allow customers to combine capacity from like transmission service requests into a single request to promote efficient scheduling activities. When transmission service requests are consolidated, the consolidated request inherits attributes from the parent reservation, including the product code. The revisions to the standards ensure parity between consolidated and non-consolidated transmission service requests. The modifications are intended to eliminate the potential for a service increment to be created through consolidation that would otherwise be unavailable under a transmission provider's existing tariff processes, such as requests that have been consolidated into a daily transmission service request but inherited a monthly product code from one of the original parent reservations. The changes modify WEQ–001–24.2.4 and include two new standards, WEQ–001–24.2.4.1 and WEQ–001–24.2.4.2.

f. Provide Greater Clarity Regarding Priorities Between a Firm Transmission Service Request and a Previously Queued Non-Firm Request

30. NAESB modified WEQ–001 by modifying Table 25–3, Priorities for Competing Reservations or Requests, to better describe how a competition is conducted between a firm transmission service request and a previously queued non-firm request or reservation.

g. Response Timing Standards

31. The WEQ OASIS Subcommittee recommended certain modifications to extend response times for some functions to account for human performance.[21] As a result, the proposed revisions include revisions modifying the timing tables included in WEQ–001–4.13, WEQ–001–25.1.8, and WEQ–001–105.1.5 to extend specific timing criteria for instances in which systems are not fully automated. These changes will be utilized by transmission providers and operators who do not have automated systems for responding to transmission service requests. The benefits include extending timing requirements that are deemed unreasonably strict for non-automated implementations. Subjects covered include point-to-point transmission service, right of first refusal response processing, and Network Integration Transmission Service requests.

h. Provide Greater Clarity for Transmission Customers

32. NAESB also modified the WEQ OASIS suite of Business Practice Standards to provide greater clarity for transmission customers on which redirect requests would qualify for the conveyance of rollover rights. As part of the revisions, transmission customers are required to explicitly indicate their intent to convey rollover rights to the redirect path by expressly opting-in or opting-out of the conveyance, eliminating the possibility that rollover rights could be unintentionally redirected. Prior to ratification of these standards, the default option was to grant the conveyance automatically. The standards revisions include modifications to WEQ–001–9.7.3.1 and WEQ–002–4.3.6.2, as well as the creation of three new standards—WEQ–001–9.7.3.3, WEQ–001–9.7.3.4, and WEQ–001–9.7.3.3—and consistency changes to WEQ–003 and WEQ–013.

i. Improve Efficiencies by Creating a Tracking and Audit Mechanism for Transmission Service Reservations

33. Finally, NAESB revised the WEQ OASIS suite of Business Practice Standards to improve efficiencies by creating a tracking and audit mechanism for transmission service reservations that allows transmission providers and customers to easily assess changes that occur as a result of the preemption and right-of-first-refusal process. The standards revisions modify WEQ–001–25.4.6.5.3, WEQ–002–4.3.6.2, WEQ–002–4.3.6.3, and WEQ–013–6.3, and add two new data elements to WEQ–003.

5. Modifications To Coordinate Interchange Standards

34. NAESB revised the WEQ–004 Coordinate Interchange Business Practice Standards to promote efficiency by streamlining the procedures entities should follow in the event of a system failure of the primary communication

on reh'g, Order No. 888–C, 82 FERC ¶ 61,046 (1998), *aff'd in relevant part sub nom. Transmission Access Pol'y Study Grp.* v. *FERC,* 225 F.3d 667 (D.C. Cir. 2000), *aff'd sub nom. New York* v. *FERC,* 535 U.S. 1 (2002).

[20] The standards addressing rollover rights for point-to-point transmission service were included in the WEQ Version 003.2 Standards publication and were incorporated by reference through Order No. 676–I.

[21] Informational Report at 15.

method used to manage interchange transactions—electronic tags (e-Tags). The revised WEQ–004, specifically WEQ–004–2.1 and WEQ–004–A, clarify the existing back-up procedures for e-Tagging and remove the requirements supporting outdated communication methods.

35. NAESB also modified the WEQ–000 and WEQ–004 standards. The revisions add a new appendix to WEQ–004 to provide guidance and best practices to entities in the Eastern Interconnection that automate the net scheduled interchange checkout process. The standards are intended to support and complement the NERC Reliability Standard INT–009–3 Implementation of Interchange, which requires balancing authorities to communicate net interchange information on a periodic basis with adjacent balancing authorities. The WEQ Coordinate Interchange Scheduling Subcommittee discussed the development of a data specification that would include all data required to automate the net scheduled interchange checkout process. The subcommittee's participants drafted standards to provide guidance for the implementation of such automation. In the recommendation containing the standards revisions, the subcommittee noted that the Western Interconnection's use of the Western Electricity Coordinating Council Interchange Tool would not be impacted by the automation efforts for the Eastern Interconnection.

6. Modifications to Abbreviations, Acronyms, and Defined Terms

36. In addition to the consistency changes described above regarding WEQ–000, the WEQ Version 004 Standards publication includes a new cross-reference column displaying the abbreviations, acronyms, and definition of terms with their corresponding NAESB WEQ Standards. Additional changes to ensure consistency in the use of abbreviations, acronyms, and defined terms were made to the WEQ OASIS Suite of Standards, WEQ–004 Coordinate Interchange Business Practice Standards, WEQ–008 TLR—Eastern Interconnection Business Practice Standards, WEQ–012 PKI Business Practice Standards, WEQ–022 EIR Business Practice Standards, and WEQ–023 Modeling Business Practice Standards.

7. Voluntary Renewable Energy Certificates Contract

37. The Informational Report also includes a newly developed NAESB REC Contract, an accompanying *Frequently Asked Questions* document, and associated technical implementation standards containing data dictionaries and code values. These documents and standards are included in WEQ–010 Contracts Business Practice Standards to support the use of the NAESB REC Contract with digital technologies, such as blockchain, in the retail and wholesale markets.

8. Minor Corrections

38. Since the publication of WEQ Version 003.3 standards, NAESB processed ten minor corrections applicable to the WEQ Business Practice Standards through its Minor Correction Process, and incorporated them into the WEQ Version 004 Standards.[22]

B. New Sets of Standards

1. WEQ–024 Cybersecurity

39. In the WEQ Version 004 Standards, NAESB established a new set of Cybersecurity-related business practice standards in WEQ–024. This new set of standards reorganizes existing NAESB cybersecurity business practice standards into a new suite of NAESB standards. NAESB explained that it responded to an informal recommendation from DOE and Sandia National Laboratories (Sandia Labs) that arose from the 2019 Surety Assessment of cybersecurity elements contained in the NAESB Business Practice Standards. This consolidation should make the NAESB and Commission processes for revising NAESB cybersecurity business practice standards easier and faster to help match the fast pace of changes in cybersecurity practices. NAESB considered this consolidation a minor correction process; no new standards development efforts arose from this consolidation.

2. WEQ–025 Grid Services Supporting Wholesale Electric Interactions

40. In the WEQ Version 004 Standards, NAESB also established as a new suite of standards, WEQ–025 Grid Services Supporting Wholesale Electric Interactions Business Practice Standards, to promote greater consistency in wholesale market interactions and communication exchanges by flexible, ''grid-edge'' resources such as distributed energy resources and batteries. NAESB developed the standards in response to DOE, Berkeley Lab, and PNNL, which proposed that NAESB define a common list of grid services for electric market interactions in support of the DOE's Grid Modernization Laboratory Consortium efforts to modernize the nation's electric grid.

41. The WEQ–025 standards identify six categories of operations-based grid services used within the wholesale electric markets: (1) Energy Grid Service; (2) Reserve Grid Service; (3) Regulation Grid Service; (4) Frequency Response Grid Service; (5) Voltage Management Grid Service; and (6) Blackstart Grid Service. The standards also describe the types of attributes, such as location, timing, and performance determinations, that may be used by System Operators to define the unique requirements for services within their wholesale electricity markets. Due to regional variation and different markets, System Operators have varying names for operational objectives for the same or similar grid services. The new standards establish a technology-neutral framework that describes the operational objective of common types of market services and identifies the different physical capabilities to consume and/or inject electricity on the grid that a resource must be technically capable of providing.

42. According to the Informational Report, the framework introduced by these standards can enable regulators to easily compare market information regarding the use of transmission grid services across multiple jurisdictions. The changes are also designed to help market participants identify types of market services their resources may be able to provide and to create greater consistency in communications between resource owners participating in multiple markets and working with several System Operators to improve commercial transaction efficiencies.[23]

C. Standards the Commission Proposes Not To Incorporate by Reference

1. WEQ–010 Contracts Related Business Practice Standards

43. We propose to not to incorporate by reference WEQ–010, which includes the NAESB REC Contract, the accompanying Frequently Asked Questions document, and the associated technical implementation standards containing data dictionaries and code values contained in WEQ–010. This approach is consistent with our past practice[24] of not incorporating by reference into our regulations any

[22] As noted above, NAESB also used its minor correction process to compile the existing WEQ Cybersecurity Standards into a new book, WEQ–024 Cybersecurity Business Practice Standards.

[23] Informational Report at 12.

[24] *See, e.g., Standards for Bus. Practices of Interstate Nat. Gas Pipelines,* Notice of Proposed Rulemaking, 86 FR 12879 (Mar. 5, 2021), 174 FERC ¶ 61,103, at P 19 (2021) (*Version 3.2 NOPR*).

optional model contracts and related documents because we do not require the use of these contracts.[25]

2. WEQ–025 Grid Services Supporting Wholesale Electric Interactions

44. Although we support NAESB's standards development for grid services, we do not believe that it is necessary for the Commission to incorporate the WEQ–025 standards and the related changes to the WEQ–000 standards by reference. We note that the proposed NAESB standards use terms similar to but different from terms in the *pro forma* OATT that could introduce confusion if the Commission were to incorporate these standards by reference. Under the *pro forma* OATT, a transmission provider must provide a set of ancillary services, including reactive supply and voltage control (Schedule 2), regulation and frequency response (Schedule 3), and spinning and supplemental reserves (Schedules 5 & 6). The grid services set forth in the WEQ–025 set of standards address similar services; they include voltage, regulation, frequency response, and reserves. Also, the WEQ–025 standards are discretionary for system operators; thus, consistent with past practice,[26] we will not incorporate these standards by reference into our regulations.

D. Proposed Implementation Procedures

45. The Commission proposes that transmission providers whose tariffs do not automatically incorporate by reference all new NAESB standards submit compliance filings on the proposed NAESB standards nine months after publication of a final rule in the **Federal Register**. Those compliance filings must reflect the requirements of the final rule, any new waiver requests to comply with a part of the final rule, and any request to preserve any existing waivers.

46. The Commission proposes separate implementation schedules for the NAESB cybersecurity business practice standards and for all the remaining WEQ Version 004 Standards. Transmission providers will be required to implement the NAESB cybersecurity business practice standards within 12 months from the date of publication in the **Federal Register** of any final rule.[27] Transmission providers will be required to implement all other WEQ Version 004 Standards adopted in a final rule within 18 months from the date of publication in the **Federal Register** of any final rule. The Commission proposes implementation of the NAESB cybersecurity business practice standards on an expedited basis consistent with the Commission's implementation schedule previously adopted for the WEQ Version 003.3 Standards.[28] In that order, the Commission noted DOE's request that cybersecurity standards in that version be enacted on an expedited basis and that the stand-alone nature of the standards permitted expedited implementation.

47. This 18-month implementation timeline for the other WEQ Version 004 standards is consistent with Business Practice Standards WEQ 002–6, which states that transmission providers shall have 18 months from publication of a final rule in the **Federal Register** to implement all changes required to support the Business Practice Standards for OASIS version 004. Business Practice Standards WEQ 002–6 also state that: (a) OASIS Node changes required to support the version 004 OASIS template format must be made available to transmission customers no later than nine months after publication in the **Federal Register** and (b) OASIS Nodes shall maintain support for version 003.3 format queries and uploads for the full 18-month implementation period.

IV. Notice of Use of Voluntary Consensus Standards

48. Office of Management and Budget Circular A 119 (section 11) (February 10, 1998) provides that federal agencies should publish a request for comment in a NOPR when the agency is seeking to issue or revise a regulation proposing to adopt a voluntary consensus standard or a government-unique standard. In this NOPR, the Commission is proposing to incorporate by reference the WEQ Version 004 Standards, with the exception of WEQ–010 Contracts Related to Business Practice Standards, which includes the NAESB REC Contract, and WEQ–025 Grid Services Supporting Wholesale Electric Interactions. The WEQ Version 004 Standards were adopted by NAESB under NAESB's consensus procedures.[29]

V. Incorporation by Reference

49. The Office of the Federal Register requires agencies proposing to incorporate material by reference to discuss the ways that the materials it incorporates by reference are reasonably available to interested parties and how interested parties can obtain the materials.[30] The regulations also require agencies to summarize, in the preamble of the final rule, the materials that it incorporates by reference. The Commission proposes to incorporate by reference standards that consist of suites of NAESB WEQ business practice standards that address a variety of topics and are designed to aid public utilities with the consistent and uniform implementation of requirements promulgated by the Commission as part of the *pro forma* Open Access Transmission Tariff. We summarize these standards below.

50. The WEQ–000 Abbreviations, Acronyms, and Definition of Terms Business Practice Standards provide a single location for all abbreviations, acronyms, and defined terms referenced in the WEQ Business Practice Standards. These standards provide common nomenclature for terms within the wholesale electric industry, thereby reducing confusion and opportunities for misinterpretation or misunderstandings among industry participants.

51. The OASIS suite of business practice standards (WEQ–001 Open Access Same-Time Information Systems (OASIS), WEQ–002 OASIS Standards and Communication Protocols, WEQ–003 OASIS Data Dictionary, and WEQ–013 OASIS Implementation Guide) support the FERC posting and reporting requirements that provide information about each transmission provider's performance of the requirements of its *pro forma* OATT. The OASIS system is used for scheduling transmission on the bulk power system, comprises the computer systems and associated communications facilities that public utilities are required to provide for the purpose of making available to all transmission users comparable interactions, and provides transmission service information and any back-end supporting systems or user procedures that collectively perform the transaction processing functions for handling requests on OASIS. These standards establish business practices and communication protocols that provide

[25] *Id.; Standards for Bus. Practices of Interstate Nat. Gas Pipelines,* Order No. 587–V, 77 FR 43711 (Jul. 26, 2012), 140 FERC ¶ 61,036, at P 11 n.11 (2012).

[26] *See, e.g.,* Version 3.2 NOPR 174 FERC ¶ 61,103 at P 19.

[27] A complete list of the specific cybersecurity business practice standards is included at Appendix I.

[28] Order No. 676–J, 175 FERC ¶ 61,139 at P 11.

[29] Under this process, to be approved a standard must receive a super-majority vote of 67% of the members of the WEQ's Executive Committee with support from at least 40% from each of the five industry segments—transmission, generation, marketer/brokers, distribution/load serving entities, and end users. For final approval, 67% of the WEQ's general membership must ratify the standards.

[30] 1 CFR 51.5 (2022). *See* Incorporation by Reference, 79 FR 66267 (Nov. 7, 2014).

for consistent implementation across OASIS sites as well as consistent methods for posting to OASIS.

52. The WEQ–001 OASIS Business Practice Standards define the general and specific transaction processing requirements and related business processes required for OASIS. The standards detail requirements related to standard terminology for transmission and ancillary services, attribute values defining transmission service class and type, ancillary and other services definitions, OASIS registration procedures, procurement of ancillary and other services, path naming, next hour market service, identical transmission service requests, redirects, resales, transfers, OASIS postings, procedures for addressing ATC or AFC methodology questions, rollover rights, conditional curtailment option reservations, auditing usage of Capacity Benefit Margin, coordination of requests for service across multiple transmission systems, consolidation, preemption and right-of-first refusal process, and NITS requests.

53. The WEQ–002 OASIS Standards and Communication Protocols Business Practice Standards define the technical standards for OASIS. These standards detail network architecture requirements, information access requirements, OASIS and point-to-point interface requirements, implementation, and NITS interface requirements.

54. The WEQ–003 OASIS Data Dictionary Business Practice Standards define the data element specifications for OASIS.

55. The WEQ–004 Coordinate Interchange Business Practice Standards define the commercial processes necessary to facilitate interchange transactions via Request for Interchange (RFI) and specify the arrangements and data to be communicated by the entity responsible for authorizing the implementation of such transactions (the entities responsible for balancing load and generation).

56. The WEQ–005 Area Control Error (ACE) Equation Special Cases Business Practice Standards define commercial-based requirements regarding the obligations of a balancing authority to manage the difference between scheduled and actual electrical generation within its control area. Each balancing authority manages its ACE in accordance with the NERC Reliability Standards. These standards detail requirements for jointly owned utilities, supplemental regulation service, and load or generation transfer by telemetry.

57. The WEQ–006 Manual Time Error Correction Business Practice Standards define the commercial based procedures to be used for reducing time error to within acceptable limits of true time consistent with the guidance in Version 5 of NERC Time Monitoring Reference Document.

58. The WEQ–007 Inadvertent Interchange Payback Business Practice Standards define the methods in which inadvertent energy is paid back, mitigating the potential for financial gain through the misuse of paybacks for inadvertent interchange. Inadvertent interchange is interchange that occurs when a balancing authority cannot fully balance generation and load within its area. The standards allow for the repayment of any imbalances through bilateral in-kind payback, unilateral in-kind payback, or other methods as agreed to.

59. The WEQ–008 Transmission Loading Relief—Eastern Interconnection Business Practice Standards define the business practices for cutting transmission service during a Transmission Loading Relief (TLR) event. These standards detail requirements for the use of interconnection-wide TLR procedures, interchange transaction priorities for use with interconnection-wide TLR procedures, and the Eastern Interconnection procedure for physical curtailment of interchange transactions.

60. The WEQ–011 Gas/Electric Coordination Business Practice Standards define communication protocols intended to improve coordination between the gas and electric industries in daily operational communications between transportation service providers and gas-fired power plants. The standards include requirements for communicating anticipated power generation fuel for the upcoming day as well as any operating problems that might hinder gas-fired power plants from receiving contractual gas quantities.

61. The WEQ–012 Public Key Infrastructure (PKI) Business Practice Standards establish the cybersecurity framework for parties partaking in transactions via a transmission provider's OASIS or e-Tagging system. The NAESB PKI framework secures wholesale electric market electronic commercial communications via encryption of data and the electronic authentication of parties to a transaction using a digital certificate issued by a NAESB certified certificate authority. The standards define the requirements for parties utilizing the digital certificates issued by the NAESB certificate authorities.

62. The WEQ–013 OASIS Implementation Guide Business Practice Standards detail the implementation of the OASIS Business Practice Standards. The standards detail requirements related to point-to-point OASIS transaction processing, OASIS template implementation, preemption and right-of-first-refusal processing, NITS application and modification of service processing, and secondary network transmission service.

63. The WEQ–015 Measurement and Verification of Wholesale Electricity Demand Response Business Practice Standards define a common framework for transparency, consistency, and accountability applicable to the measurement and verification of wholesale electric market demand response practices. The standards describe performance evaluation methodology and criteria for the use of equipment, technology, and procedures to quantify the demand reduction value—the measurement of reduced electrical usage by a demand resource.

64. The WEQ–021 Measurement and Verification of Energy Efficiency Products Business Practice Standards define a common framework for transparency, consistency, and accountability applicable to the measurement and verification of wholesale electric market energy efficiency practices. The standards establish energy efficiency measurement and verification criteria and define requirements for energy efficiency resource providers for the measurement and verification of energy efficiency products and services offered in the wholesale electric markets.

65. The WEQ–022 EIR Business Practice Standards define the business requirements for entities utilizing the NAESB managed EIR, a wholesale electric industry tool that serves as the central repository for information needed in the scheduling of transmission through electronic transactions. The standards describe the roles within EIR, registration requirements, and cybersecurity.

66. The WEQ–023 Modeling Business Practice Standards provide technical details concerning the calculation of ATC for wholesale electric transmission services. The WEQ–023 standards are intended to address the aspects of certain of the NERC MOD A Reliability Standards relating to modeling, data, and analysis that are included in NERC's proposed retirement of its MOD A Reliability Standards.

67. The WEQ–024 Cybersecurity Business Practice Standards is a new suite to include and maintain all cybersecurity related requirements not included within the PKI business standards to be incorporated within this

single suite to better facilitate the incorporation by reference process.[31]

68. The following standards are listed for informational purposes as non-mandatory guidance:

69. WEQ–016, Specifications for Common Electricity Product and Pricing Definition standards address the business objectives and context for capturing the attributes associated with electricity price and product signals as part of the Smart Grid implementation, which is called for by NIST standards.

70. WEQ–017, Specifications for Common Schedule Communication Mechanism standards contain a set of specifications relating to the use of date and time based data elements that are commonly used in transactions for Demand Response programs.

71. WEQ–018, Specifications for Wholesale Standard Demand Response Signals standards address the business objectives and context for standardizing signals for demand response and distributed energy resources as part of the Smart Grid implementation, which is called for by NIST standards.

72. WEQ–019, Customer Energy Usage Information Communication standards establish the Business Practice Standards for end-use energy usage information communication.

73. WEQ–020, Smart Grid Standards Data Element Table standards contain the list of data elements used in Business Practice Standards WEQ–016 and WEQ–018.

74. Commission regulations provide that copies of the standards incorporated by reference may be obtained through purchase or otherwise from the North American Energy Standards Board, 801 Travis Street, Suite 1675, Houston, TX 77002, Phone: (713) 356–0060, website: *http://www.naesb.org/.* The standards can also be reviewed without purchasing them.

75. The procedures used by NAESB make its standards reasonably available to those affected by Commission regulations, which generally is comprised of entities that have the means to acquire the information they need to effectively participate in Commission proceedings. Participants can join NAESB, for an annual membership cost of $8,000, which entitles them to full participation in NAESB and enables them to obtain these standards at no additional cost. Non-members may obtain any of the individual WEQ standards manuals for $250 per manual. Non-members also may obtain the complete set of Standards Manuals for $2,000.

76. NAESB provides ample opportunities for non-members, including agents, subsidiaries, and affiliates of NAESB members, to obtain access to the copyrighted standards through a no-cost limited copyright waiver. The limited copyright waivers are issued by the NAESB office and are granted to non-members on a case-by-case basis for the purpose of evaluating standards prior to purchase and/or reviewing the standards to prepare comments to a regulatory agency. Following the granting of a limited copyright waiver, the non-member is provided with read-only access to the standards through the end of the comment period or some other set period of time via Locklizard Safeguard Secure Viewer.[32] NAESB will grant one limited copyright wavier per company for each set of standards or final actions. Any entity seeking a limited copyright waiver should contact the NAESB office.

VI. Information Collection Statement

77. The following collection of information contained in this proposed rule is subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995, 44 U.S.C. 3507(d).[33] OMB's regulations require approval of certain information collection requirements imposed by agency rules.[34] Upon approval of a collection(s) of information, OMB will assign an OMB control number and an expiration date. Respondents subject to the filing requirements of this rule will not be penalized for failing to respond to these collections of information unless the collections of information display a valid OMB control number.

78. The Commission solicits comments on the Commission's need for this information, whether the information will have practical utility, the accuracy of the provided burden estimates, ways to enhance the quality, utility, and clarity of the information to be collected, and any suggested methods for minimizing respondents' burden, including the use of automated information techniques.

79. The following burden estimate is based on the projected costs for the industry to implement the new and revised business practice standards adopted by NAESB and proposed to be incorporated by reference in this NOPR.[35] The NERC Compliance Registry, as of December 2023, identifies approximately 216 entities in the United States that are subject to this proposed rulemaking.

DOCKET NOS. RM05–5–031

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden (hrs.) & cost ($) per response	Total annual burden hrs. & total annual cost ($)
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)
FERC–516E	216	1	216	6 hrs.; $600	1,296 hrs.; $129,600.
FERC–717	216	1	216	30 hrs.; $3,000	6,480 hrs.; $648,000.
Total				$3,600	7,776 hrs.; $777,600.

Costs To Comply With Paperwork Requirements

The estimated annual costs are as follows:

FERC–516E: 216 entities × 1 response/entity × (6 hours/response × $100.00/hour) = $129,600

FERC–717: 216 entities × 1 response/entity × (30 hours/response × $100.00/hour) = $648,000

Titles: FERC–516E, Electric Rate Schedule and Tariff Filings and FERC–717, Standards for Business Practices and Communication Protocols for Public Utilities.

[31] Informational Report at 21.

[33] 44 U.S.C. 3507(d).

[34] 5 CFR 1320.11.

[35] Commission staff estimates that industry is similarly situated in terms of hourly cost (wages plus benefits). Based on the Commission average cost (wages plus benefits) for 2024, $100.00/hour is used.

Action: Proposed amendment to regulations pertaining to the existing collections of information FERC–516E and FERC–717.

OMB Control Nos: 1902–0290 (FERC–516E) and 1902–0173 (FERC–717).

Respondents: Business or other for-profit, and not-for-profit institutions.

Frequency of Responses: On occasion.

Necessity of the Information: This proposed rule, if implemented, will amend the Commission's regulations to incorporate by reference, with certain enumerated exceptions, the NAESB WEQ Version 004 Standards. The standards include those that were developed in accordance with recommendations of the DOE-sponsored cybersecurity surety assessment of the NAESB Business Practice Standards that was conducted in 2019. Additional standards were developed in response to the directives from Order Nos. 676–I and 676–J. NAESB undertook two standards development efforts to update the WEQ–004 Coordinate Interchange Standards in the WEQ Version 004 Standards publication. The first set of modifications clarify existing back-up procedures for e-Tagging, improve efficiencies by removing requirements that supported outdated methods of communication, and streamline the processes following system communication failures. Through the second effort, NAESB modified WEQ–004 to provide guidance to balancing authorities in the Eastern Interconnection seeking to automate their net scheduled interchange checkout process. The revisions made by NAESB in the WEQ Version 004 Standards are designed to aid public utilities with the consistent and uniform implementation of requirements promulgated by the Commission as part of the *pro forma* Open Access Transmission Tariff.

Internal review: The Commission has reviewed NAESB's proposal and has made a preliminary determination that the Version 004 standards the Commission proposes to adopt by reference are both necessary and useful. In addition, the Commission has determined through internal review that there is specific, objective support for the burden estimates associated with the information requirements.

80. Interested persons may obtain information on the reporting requirements by contacting the Federal Energy Regulatory Commission, Office of the Executive Director, 888 First Street NE, Washington, DC 20426 [Attention: Kayla Williams, email: *DataClearance@ferc.gov,* phone: (202) 502–8663].

81. Comments concerning the information collections proposed in this NOPR and the associated burden estimates should be sent to the Commission at this docket and be emailed to the Office of Management and Budget, Office of Information and Regulatory Affairs [Attention: Desk Officer for the Federal Energy Regulatory Commission]. For security reasons, comments should be sent by email to OMB at the following email address: *oira_submission@omb.eop.gov.* Please refer to the appropriate docket number of this notice of proposed rulemaking, Docket No. RM05–5–031, and OMB Control Nos. 1902–0290 (FERC–516E) and 1902–0173 (FERC–717), in your submission.

VII. Environmental Analysis

82. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[36] The actions proposed here fall within categorical exclusions in the Commission's regulations for rules that are clarifying, corrective, or procedural, for information gathering, analysis, and dissemination, and for sales, exchange, and transportation of electric power that requires no construction of facilities.[37] Therefore, an Environmental Assessment is unnecessary and has not been prepared for this NOPR.

VIII. Regulatory Flexibility Act

83. The Regulatory Flexibility Act of 1980 (RFA) [38] generally requires a description and analysis of proposed rules that will have significant economic impact on a substantial number of small entities. The Commission is not required to make such an analysis if proposed regulations would not have such an effect.

84. The Small Business Administration (SBA) revised its size standards (effective January 22, 2014) for electric utilities from a standard based on megawatt hours to a standard based on the number of employees, including affiliates. Under SBA's standards, some transmission owners will fall under the following category and associated size threshold: electric bulk power transmission and control, at least 500 employees.[39] The Commission estimates that 24 of the 216 respondents, or 11% of the respondents affected by this NOPR, are small businesses under SBA standards.

85. The Commission estimates that the impact on these entities is consistent with the paperwork burden of $3,600 per entity used above.[40] The Commission does not consider $3,600 to be a significant economic impact. Based on the above, the Commission certifies that implementation of the proposed Business Practice Standards will not have a significant impact on a substantial number of small entities. Moreover, these requirements are designed to benefit all customers, including small businesses that must comply with them. Further, as noted above, adoption of consensus standards helps ensure the reasonableness of the standards by requiring that the standards draw support from a broad spectrum of industry participants representing all segments of the industry. Because of that representation and the fact that industry conducts business under these standards, the Commission's regulations should reflect those standards that have the widest possible support.

86. Accordingly, pursuant to section 605(b) of the RFA,[41] the regulations proposed herein should not have a significant economic impact on a substantial number of small entities.

IX. Comment Procedures

87. The Commission invites interested persons to submit comments on the matters and issues proposed in this notice to be adopted, including any related matters or alternative proposals that commenters may wish to discuss. Comments are due July 5, 2024. Comments must refer to Docket No. RM05–5–031, and must include the commenter's name, the organization they represent, if applicable, and their address in their comments. All comments will be placed in the Commission's public files and may be viewed, printed, or downloaded remotely as described in the Document Availability section below. Commenters on this proposal are not required to serve copies of their comments on other commenters.

88. The Commission encourages comments to be filed electronically via the eFiling link on the Commission's website at *https://www.ferc.gov.* The

[36] *Reguls Implementing the Nat'l Envt'l Pol'y Act,* Order No. 486, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. ¶ 30,783 (1987) (cross-referenced at 41 FERC ¶ 61,284).

Commission accepts most standard word processing formats. Documents created electronically using word processing software should be filed in native applications or print-to-PDF format and not in a scanned format. Commenters filing electronically do not need to make a paper filing.

89. Commenters that are not able to file comments electronically may file an original of their comment by USPS mail or by courier or other delivery services. For submission sent via USPS only, filings should be mailed to: Federal Energy Regulatory Commission, Office of the Secretary, 888 First Street NE, Washington, DC 20426. Submission of filings other than by USPS should be delivered to: Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

X. Document Availability

90. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*).

91. From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

92. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

List of Subjects

18 CFR Part 2

Electric utilities, Natural gas, Pipelines, Reporting and recordkeeping requirements.

18 CFR Part 38

Conflicts of interest, Electric power plants, Electric utilities, Incorporation by reference, reporting and recordkeeping requirements.

By direction of the Commission.

(S E A L)

Issued: April 25, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

In consideration of the foregoing, the Commission proposes to amends part 2 and part 38, chapter I, title 18, Code of Federal Regulations, as follows:

PART 2—GENERAL POLICY AND INTERPRETATIONS

■ 1. The authority citation for Part 2 continues to read as follows:

Authority: 5 U.S.C. 601; 15 U.S.C. 717–717z, 3301–3432; 16 U.S.C. 792–828c, 2601–2645; 42 U.S.C. 4321–4370h, 7101–7352.

■ 2. Revise and republish § 2.27 to read as follows:

§ 2.27 Availability of North American Energy Standards Board (NAESB) Smart Grid Standards as non-mandatory guidance.

The Commission informationally lists the following NAESB Business Practices Standards as non-mandatory guidance:

(a) WEQ–016, Specifications for Common Electricity Product and Pricing Definition, (WEQ Version 004, July 31, 2023);

(b) WEQ–017, Specifications for Common Schedule Communication Mechanism for Energy Transactions (WEQ Version 004, July 31, 2023;

(c) WEQ–018, Specifications for Wholesale Standard Demand Response Signals (WEQ Version 004, July 31, 2023;

(d) WEQ–019, Customer Energy Usage Information Communication (WEQ Version 004, July 31, 2023); and

(e) WEQ–020, Smart Grid Standards Data Element Table (WEQ Version 004, July 31, 2023).

(f) Copies of these standards may be obtained from the North American Energy Standards Board, 801 Travis Street, Suite 1675, Houston, TX 77002, Phone: (713) 356–0060; *https://www.naesb.org/.* Copies may also be obtained from the Federal Energy Regulatory Commission's website, *https://www.ferc.gov.*

PART 38—STANDARDS FOR PUBLIC UTILITY BUSINESS OPERATIONS AND COMMUNICATIONS

■ 3. The authority citation for Part 38 continues to read as follows:

Authority: 16 U.S.C. 791–825r, 2601–2645; 31 U.S.C. 9701; 42 U.S.C. 7101–7352.

■ 4. Amend § 38.1 by revising paragraphs (b)(1) through (17) to read as follows:

§ 38.1 Incorporation by reference of North American Energy Standards Board Wholesale Electric Quadrant standards.

* * * * *

(b) * * *

(1) WEQ–000, Abbreviations, Acronyms, and Definition of Terms (Version 004, July 31, 2023);

(2) WEQ–001, Open Access Same-Time Information Systems (OASIS) (WEQ Version 004, July 31, 2023);

(3) WEQ–002, Open Access Same-Time Information Systems (OASIS) Business Practice Standards and Communication Protocol (S&CP) (WEQ Version 004, July 31, 2023);

(4) WEQ–003, Open Access Same-Time Information Systems (OASIS) Data Dictionary (WEQ Version 004, July 31, 2023);

(5) WEQ–004, Coordinate Interchange (WEQ Version 004, July 31, 2023);

(6) WEQ–005, Area Control Error (ACE) Equation Special Cases (WEQ Version 004, July 31, 2023);

(7) WEQ–006, Manual Time Error Correction (WEQ Version 004, July 31, 2023);

(8) WEQ–007 Inadvertent Interchange Payback (WEQ Version 004, July 31, 2023);

(9) WEQ–008, Transmission Loading Relief (TLR)—Eastern Interconnection (WEQ Version 004, July 31, 2023);

(10) WEQ–011, Gas/Electric Coordination (WEQ Version 004, July 31, 2023);

(11) WEQ–012, Public Key Infrastructure (PKI) (WEQ Version 004, July 31, 2023);

(12) WEQ–013, Open Access Same-Time Information Systems (OASIS) Implementation Guide (WEQ Version 004, July 31, 2023);

(13) WEQ–015, Measurement and Verification of Wholesale Electricity Demand Response (WEQ Version 004, July 31, 2023);

(14) WEQ–021, Measurement and Verification of Energy Efficiency Products (WEQ Version 004, July 31, 2023);

(15) WEQ–022, Electric Industry Registry (EIR) (WEQ Version 004, July 31, 2023);

(16) WEQ–023, Modeling (WEQ Version 004, July 31, 2023);

(17) WEQ–024, Cybersecurity (Version 004, July 31, 2023).

[FR Doc. 2024–09438 Filed 5–3–24; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 809

[Docket No. FDA–2024–D–0083]

Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration Under Section 564; Draft Guidance for Laboratory Manufacturers and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of the draft guidance entitled ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564.'' In the context of emergent situations involving chemical, biological, radiological, or nuclear (CBRN) threats, there may be a public health need for certain in vitro diagnostic devices (IVDs) to be available for immediate response purposes. When finalized, this guidance will describe the Agency's enforcement policy for certain laboratory manufacturers offering certain unauthorized IVDs for immediate response to CBRN agents in the absence of a declaration applicable to IVDs under the Federal Food, Drug, and Cosmetic Act (FD&C Act). This draft guidance is not final nor is it for implementation at this time.

DATES: Submit either electronic or written comments on the draft guidance by July 5, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–0083 for ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the draft guidance document entitled ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564'' to the Office of Policy, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Toby Lowe, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 3416, Silver Spring, MD 20993–0002, 301–796–6512.

SUPPLEMENTARY INFORMATION:

I. Background

When finalized, this guidance will describe the Agency's enforcement policy for certain laboratory manufacturers offering certain unauthorized IVDs for immediate response to CBRN agents in the absence of a declaration applicable to IVDs under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (hereafter referred to as an ''applicable 564 declaration'').[1] In the context of

[1] The Office of the Federal Register has published this document under the category ''Proposed Rule''

emergent situations involving CBRN threats, there may be a public health need for certain IVDs to be available for immediate response purposes. An emergent situation is, for purposes of this guidance, the period of time between detection of the exposure or outbreak and, either, resolution of the exposure or outbreak or issuance of an applicable 564 declaration. In the past, during this period of time, laboratory manufacturers offered laboratory developed tests (LDTs) for which FDA has had a general enforcement discretion approach. However, as discussed in the preamble to the final rule amending FDA regulations to make explicit that IVDs are devices under the FD&C Act including when the manufacturer of the IVD is a laboratory (LDT Final Rule),[2] FDA is phasing out this general enforcement discretion approach for LDTs. Accordingly, FDA is issuing this guidance with our enforcement policy for ''immediate response'' tests.

This guidance, when finalized, will describe the Agency's enforcement policy for certain laboratory manufacturers offering certain unauthorized IVDs for immediate response to CBRN agents in the absence of an applicable 564 declaration. FDA does not intend to object to the offering of ''immediate response'' tests, as defined in the guidance, when the test is manufactured and offered by certain laboratory manufacturers, the test has been appropriately validated, FDA is notified, appropriate transparency is provided, the test is labeled for prescription use only, and there is no applicable 564 declaration, as described in the guidance. Prior to an emergent situation and after an emergent situation has been resolved, when there might not be a critical need for a coordinated and immediate public health response and where the implications of false results may not have as serious implications for public health decision-making, such tests may fall within the enforcement discretion policies described in section V.B of the preamble to the LDT Final Rule.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/guidance-documents-medical-devices-and-radiation-emitting-products.* This guidance document is also available at *https://www.regulations.gov* or *https://www.fda.gov/regulatory-information/search-fda-guidance-documents.* Persons unable to download an electronic copy of ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number GUI00007032 and complete title to identify the guidance you are requesting.

III. Paperwork Reduction Act of 1995

While this guidance contains no new collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in the following table have been approved by OMB:

21 CFR part or guidance	Topic	OMB control No.
''Emergency Use Authorization of Medical Products and Related Authorities''.	Emergency Use Authorization	0910–0595
807, subpart E	Premarket notification	0910–0120
814, subparts A through E	Premarket approval	0910–0231
814, subpart H	Humanitarian Use Devices; Humanitarian Device Exemption	0910–0332
812	Investigational Device Exemption	0910–0078
860, subpart D	De Novo classification process	0910–0844
''Administrative Procedures for CLIA Categorization'' and ''Recommendations: Clinical Laboratory Improvement Amendments of 1988 (CLIA) Waiver Applications for Manufacturers of In Vitro Diagnostic Devices''.	CLIA Administrative Procedures; CLIA Waivers	0910–0607

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc. No. AMS–AMS–24–0016]

2024/2025 Rates Charged for AMS Services

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice.

SUMMARY: The Agricultural Marketing Service (AMS) is announcing the 2024/2025 rates it will charge for voluntary grading, inspection, certification, auditing, and laboratory services for a variety of agricultural commodities including meat and poultry, fruits and vegetables, eggs, dairy products, rice, and cotton and tobacco. The 2024/2025 regular, overtime, holiday, and laboratory services rates will be applied at the beginning of the crop year, fiscal year or as required by law depending on the commodity. Other starting dates are added to this notice based on cotton industry practices. This action establishes the rates for user-funded programs based on costs incurred by AMS. This year, cost-based analyses indicated the need to increase user fee rates when current rates are insufficient to cover the costs of providing the service. While cost-saving measures have and will continue to be implemented, user fee rate increases are necessary to offset rising operational costs. In cases where current rates are sufficient to cover the costs of providing the service, user fee rates remain unchanged.

DATES: May 7, 2024.

FOR FURTHER INFORMATION CONTACT: Melissa Bailey, Associate Administrator, AMS, USDA, Room 2036–S, 1400 Independence Ave. SW, Washington, DC 20250; Telephone (202) 205–9356, or Email *melissa.bailey@usda.gov.*

SUPPLEMENTARY INFORMATION: The Agricultural Marketing Act of 1946, as amended (AMA) (7 U.S.C. 1621–1627), provides for the collection of fees to cover costs of various inspection, grading, certification, or auditing services covering many agricultural commodities and products. The AMA also provides for the recovery of costs incurred in providing laboratory services. The Cotton Statistics and Estimates Act (7 U.S.C. 471–476) and the U.S. Cotton Standards Act (7 U.S.C. 51–65) provide for classification of cotton and development of cotton standards materials necessary for cotton classification. The Cotton Futures Act (7 U.S.C. 15b) provides for futures certification services, and the Tobacco Inspection Act (7 U.S.C. 511–511s) provides for tobacco inspection and grading. These Acts also provide for the recovery of costs associated with these services.

On November 13, 2014, the U.S. Department of Agriculture (Department) published in the **Federal Register** a final rule that established standardized formulas for calculating the fees charged by AMS user-funded programs (79 FR 67313). On the basis of rates calculated using these formulas, AMS is to determine the fee rates necessary to sustain program services. Every year since then, the Department has published in the **Federal Register** a notice announcing the rates for its user-funded programs.

This notice announces the 2024/2025 fee rates for voluntary grading, inspection, certification, auditing, and laboratory services for a variety of agricultural commodities including meat and poultry, fruits and vegetables, eggs, dairy products, rice, and cotton and tobacco on a per-hour rate and, in some instances, the equivalent per-unit cost. The per-unit cost is provided to facilitate understanding of the costs associated with the service to the industries that historically used unit-cost basis for payment. Fee rates will be effective at the beginning of the fiscal year, crop year, or as required by specific laws.

Rates reflect direct and indirect costs of providing services. Direct costs include the cost of salaries, employee benefits, and, if applicable, travel and some operating costs. Indirect or overhead costs include the cost of Program and Agency activities supporting the services provided to the industry. The formula used to calculate these rates also includes operating reserve, which may add to or draw upon the existing operating reserves.

These services include the grading, inspection, or certification of quality factors in accordance with established U.S. Grade Standards or other specifications; audits or accreditation according to International Organization for Standardization (ISO) standards and/or Hazard Analysis and Critical Control Point (HACCP) principles; and other marketing claims. The quality grades serve as a basis for market prices and reflect the value of agricultural commodities to both producers and consumers. AMS' grading and certification, audit and accreditation, plant process and equipment verification, and laboratory approval services are voluntary tools paid for by the users on a fee-for-service basis. The agriculture industry can use these tools to promote and communicate the quality of agricultural commodities to consumers. Laboratory services are provided for analytic testing, including but not limited to chemical, microbiological, biomolecular, and physical analyses. AMS is required by statute to recover the costs associated with these services.

As required by the Cotton Statistics and Estimates Act (7 U.S.C. 471–476), consultations regarding the establishment of the fee for cotton classification with U.S. cotton industry representatives are held in the beginning of the year when most industry stakeholder meetings take place. Representatives of all segments of the cotton industry, including producers, ginners, bale storage facility operators, merchants, cooperatives, and textile manufacturers were informed of the fees during various industry-sponsored forums.

Rates Calculations

AMS calculated the rate for services, per hour per program employee, using the following formulas (a per-unit base is included for programs that charge for services on a per-unit basis):

(1) *Regular rate.* The total AMS grading, inspection, certification, classification, audit, or laboratory service program personnel direct pay divided by direct hours for the previous year, which is then multiplied by the next year's percentage of cost of living increase, plus the benefits rate, plus the operating rate, plus the allowance for

bad debt rate. If applicable, travel expenses may also be added to the cost of providing the service.

(2) *Overtime rate.* The total AMS grading, inspection, certification, classification, audit, or laboratory service program personnel direct pay divided by direct hours, which is then multiplied by the next year's percentage of cost of living increase and then multiplied by 1.5, plus the benefits rate, plus the operating rate, plus an allowance for bad debt. If applicable, travel expenses may also be added to the cost of providing the service.

(3) *Holiday rate.* The total AMS grading, inspection, certification, classification, audit, or laboratory service program personnel direct pay divided by direct hours, which is then multiplied by the next year's percentage of cost of living increase and then multiplied by 2, plus the benefits rate, plus the operating rate, plus an allowance for bad debt. If applicable, travel expenses may also be added to the cost of providing the service.

All rates are per-hour except when a per-unit cost is noted. The specific amounts in each rate calculation are available upon request from the specific AMS program.

2024/2025 RATES

	Regular	Overtime	Holiday	Includes travel costs in rate	Start date
Cotton Fees					
7 CFR Part 27—Cotton Classification Under Cotton Futures Legislation Subpart A—Requirements; §§ 27.80–27.90 Costs of Classification and Micronaire					
Cotton Standardization:					
Certification for Futures Contract (Grading services for samples submitted by CCC-licensed samplers).	$4.75/bale			X	August 1, 2024.
Transfer of Certification Data to New Owner or Certified Warehouse (Electronic transfer performed).	$0.20/bale or $5.00 per page minimum			X	August 1, 2024.
7 CFR Part 28—Cotton Classing, Testing, and Standards Subpart A—Regulations Under the United States Cotton Standards Act; §§ 28.115–28.126 Fees and Costs Subpart D—Cotton Classification and Market News Service for Producers; § 28.909 Costs; § 28.910 Classification of Samples and Issuance of Classification Data; § 28.911 Review Classification.					
Cotton Grading:					
Form 1: Grading Services for Producers (submitted by licensed sampler).	$3.00/bale			X	July 1, 2024.
Form 1 Review (new sample submitted by licensed sampler).	$3.00/bale			X	July 1, 2024.
Form A Determinations (sample submitted by licensed warehouse).	$3.00/bale			X	July 1, 2024.
Form C Determinations (sample submitted by non-licensed entity; bale sampled under USDA supervision).	$3.00/bale			.....	July 1, 2024.
Form D Determination (sample submitted by owner or agent; classification represents sample only).	$3.00/bale			X	July 1, 2024.
Foreign Growth Classification (sample of foreign growth cotton submitted by owner or agent; classification represents sample only).	$6.00/sample			X	August 1, 2024.
Arbitration (comparison of a sample to the official standards or a sample type).	$6.00/sample			X	August 1, 2024.
Practical Cotton Classing Exam (for non-USDA employees).	Exam: $150/applicant; Reexamination: $130/applicant			X	July 1, 2024.
Special Sample Handling (return of samples per request)	$0.50/sample			X	July 1, 2024.
Electronic Copy of Classification Record	$0.05/bale ($5.00/month minimum with any records received)			X	July 1, 2024.
Form A Rewrite (reissuance of Form 1, Form A, or Futures Certification data or combination).	$0.15/bale or $5.00/page minimum			X	August 1, 2024.
Form R (reissuance of Form 1 classification only)	$0.15/bale or $5.00/page minimum			X	July 1, 2024.
International Instrument Level Assessment	$4.00/sample			X	July 1, 2024.

Domestic Permissive Inspection and Certification (re-grading of domestic tobacco for processing plants, retesting of imported tobacco, and grading tobacco for research stations.).	$55.00	$64.00	$72.00	.....	July 1, 2024.

2024/2025 RATES—Continued

	Regular	Overtime	Holiday	Includes travel costs in rate	Start date
Export Permissive Inspection and Certification (grading of domestic tobacco for manufacturers and dealers for duty drawback consideration).	$0.0025/pound			X	July 1, 2024.
Grading for Risk Management Agency (for Tobacco Crop Insurance Quality Adjustment determinations).	$0.015/pound			X	July 1, 2024.
Pesticide Test Sampling (collection of certified tobacco sample and shipment to AMS National Science Laboratory for testing).	$0.0065/kg or $0.0029/pound			X	July 1, 2024.
Pesticide Retest Sampling (collection of certified tobacco sample from a previously sampled lot for re-testing at the AMS National Science Laboratory; fee includes shipping).	$115.00/sample and $55.00/hour			X	July 1, 2024.
Standards Course (training by USDA-certified instructor on tobacco grading procedures).	$1,250.00/person			.....	July 1, 2024.
Import Inspection and Certification (grading of imported tobacco for manufacturers and dealers).	$0.0170/kg or $0.0080/pound			X	July 1, 2024.
Rice Fees					
7 CFR Part 868—General Regulations and Standards for Certain Agricultural Commodities Subpart A—Regulations; §§ 868.90–868.92 Fees					
Contract (per hour per Service representative) [3]	$79.30	$119.00	$158.60	.....	Oct 1, 2024.
Noncontract (per hour per Service representative) [3]	$99.10	$148.70	$198.30	.....	Oct 1, 2024.
Export Port Services [4]	$0.047/cwt			.....	Oct 1, 2024.
Inspection for quality (per lot, sublot, or sample inspection):					
Rough rice	$69.20			.....	Oct 1, 2024.
Brown rice for processing	$65.00			.....	Oct 1, 2024.
Milled rice	$57.70			.....	Oct 1, 2024.
Factor analysis for any single factor (per sample):					
Milling yield (Rough or Brown rice)	$54.00			.....	Oct 1, 2024.
All other factors (all rice)	$41.90/factor			.....	Oct 1, 2024.
Total oil and free fatty acid	$62.30			.....	Oct 1, 2024.
Faxed and extra copies of certificates	$1.90/copy			.....	Oct 1, 2024.
Stowage examination (service-on-request):					
Ship	$49.40 (per stowage space, minimum 5 spaces per ship)			.....	Oct 1, 2024.
Subsequent ship examinations	$49.40 (per stowage space, minimum 3 spaces per ship)			.....	Oct 1, 2024.
Barge	$51.60/examination			.....	Oct 1, 2024.
All other carriers	$18.40/examination			.....	Oct 1, 2024.
Aflatoxin (Rapid Test Kit)	$47.90/test			.....	Oct 1, 2024.
All Other Mycotoxins (Rapid Test Kit)	$54.00/test			.....	Oct 1, 2024

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Forest Service

White River National Forest; Colorado; Sweetwater Lake Recreation Management and Development Project

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Forest Service, U.S. Department of Agriculture, is preparing an environmental impact statement to evaluate the potential environmental impacts associated with the Sweetwater Lake Recreation Management and Development Project. This project encompasses 832 acres, including 488 acres acquired by the Forest Service in 2021, located on the White River National Forest on lands surrounding Sweetwater Lake in northeastern Garfield County, Colorado. The Forest Service proposes to improve recreation access and facilities and authorize a long-term special use permit to the Colorado Parks and Wildlife to manage the area. This project may require an amendment to the White River National Forest Land and Resource Management Plan (forest plan).

DATES: Comments concerning the scope of the analysis must be received by August 5, 2024. The draft environmental impact statement is expected February 2025, and the final environmental impact statement is expected February 2026.

ADDRESSES: Send written comments to Scott Fitzwilliams, White River National Forest Supervisor, c/o Leanne Veldhuis, District Ranger Eagle-Holy Cross Ranger District, White River National Forest, P.O. Box 190, Minturn, CO 81645. Comments may also be submitted electronically at *https://cara.fs2c.usda.gov/Public//CommentInput?Project=64047* or submitted via facsimile to 970–827–9343.

FOR FURTHER INFORMATION CONTACT: Additional information related to the project can be obtained from the project web page at *https://www.fs.usda.gov/project/whiteriver/?project=64047* or by contacting Leanne Veldhuis, District Ranger, Eagle-Holy Cross Ranger District, 24747 U.S. Hwy. 24, P.O. Box 190, Minturn, CO 81645. Ms. Veldhuis can be reached by phone at 970–827–5715 or by email at *leanne.veldhuis@usda.gov.* Individuals who use telecommunications devices for the hearing impaired may call 711 to reach the Telecommunications Relay Service, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION: A successful grassroots effort within the local community, which included donations from Eagle County and the Town of Gypsum, was able to protect the area around Sweetwater Lake from private development with a purchase by The Conservation Fund. The Forest Service purchased the 488 acres surrounding Sweetwater Lake from The Conservation Fund to facilitate public access and maintain the natural resource-based recreational opportunities at the site.

Purpose and Need for Action

The purpose of the proposed action is to provide the public a natural resource-based recreational and educational experience at Sweetwater Lake that is reflective of the culture and history of the area while managing visitation at the appropriate scale for the long-term viability of the 832 acres surrounding the lake and its resources.

The actions proposed in the Sweetwater Lake Recreation Management and Development Project are needed to:

- Enhance and provide sustainable management of the public lands around Sweetwater Lake.
- Provide updated and sustainable nature-based recreational services to the public that are appropriate to the environment and are responsive to the recreational needs of the public.
- Improve the site's existing recreation infrastructure while providing updated facilities in alignment with applicable laws, policies, and known best practices.
- Develop and implement management strategies to reduce or mitigate potential impacts on the site's natural and cultural resources from public visitation.
- Provide for year-round on-site management, including oversight and management for all the site's resources and facilities.
- Provide public recreational, interpretative, and educational opportunities.

Proposed Action

The White River National Forest is proposing multiple actions to meet the purpose and need of the project, as described below.

Authorize a 20-year special use permit to Colorado Parks and Wildlife, under the Granger-Thye Act, to implement and maintain improvements described below and manage the area consistent with the purpose and need.

Redesign the current site to promote recreational opportunities at a scale that is compatible with the capacity of the project area, its resources, and the surrounding area. The proposed site design would minimize impacts to wildlife and natural resources by utilizing those areas and lands that have been previously disturbed and would include the following actions.

- Evaluate existing structures for retention with an emphasis on those buildings that provide the best opportunity to interpret the rich history at Sweetwater. If feasible, some structures may be restored to the historic character of their 1920-to-1940 construction and used as part of the cultural interpretative program for the site. Existing structures that are in a state of severe deferred maintenance and out of compliance with various laws, regulations, and policies may be removed.
- Develop a new campground area to provide 15 to 20 campsites in a historically disturbed area that currently contains little native vegetation (''lower pasture'').
- Construct 8 to 12 new cabins to provide an overnight recreation opportunity similar to that which historically existed in the vicinity. These cabins would be constructed with materials and architecture designed to provide a ''rustic'' western character similar to the styles of other cabins and lodges in the Flat Tops area of Colorado.
- Construct equestrian facilities in the ''middle pasture.'' Proposed facilities would include barn and stable operation, 4 to 7 overnight equestrian camping sites, and extra day-use parking for equestrian users. This area could also provide overnight parking and access to the surrounding Flat Tops Wilderness Area. This location is previously disturbed and is proposed

[1] Travel costs outside the United States will be added to the fee, if applicable.

[2] Global Food Safety Initiative (GFSI) Certification Fee—$250 per GFSI audit to recoup the costs associated with attaining technical equivalency to the GFSI benchmarking requirements.

[3] Original and appeal inspection services include Sampling, grading, weighing, and other services requested by the applicant when performed at the applicant's facility.

[4] Services performed at export locations on lots at rest.

for equestrian facilities to minimize the impact to the natural resources, while separating use between equestrians and other visitors.

- Develop additional lake access points. Any new access will include minimal disturbance to the lakeshore and lakeside willows by utilizing perpendicular-only paths through the willows to fishing docks or watercraft launching docks to minimize any disturbance on the lake edge.
- Convert the existing Forest Service campground and parking to day-use individual or group picnic sites and maintain the existing day-use trailhead and lake-access parking in this area.
- Construct a new lodge with administrative, educational, and interpretive spaces to enhance the visitor experience through site amenities and services. This new lodge building may offer small-scale food service capabilities such as a small coffee and pie shop or limited prepackaged food offerings that would align with Forest Service policies for providing food service on National Forest System lands while not necessitating an increase in wastewater accommodation. The construction of a group picnic site with a possible food truck or mobile kitchen parking will also be explored in this area for small events or day-to-day operations.
- Evaluate establishing day-use hiking and equestrian trails on the northeast side of the lake. These trails would provide loop trails and connections between the existing Ute Trail, to the new equestrian area, and the Keep Ditch Trail. These trails could provide an additional access to the Flat Tops Wilderness Area other than the existing Hilltop trailhead north of the project area. Evaluate establishing trails to a new overlook on the southwest side of the lake to provide an additional scenic overlook of the lake. Evaluate additional trails within the project area to highlight the historical significance of the site and its buildings as part of an interpretive trail system or provide other recreational opportunities.
- Construct appropriate maintenance facilities, equipment storage, and personnel housing necessary for management and maintenance.
- For the cave within the project area, develop a cave management plan in consultation with the tribes to ensure the vital cultural history is preserved and incorporate the plan into the proposed special use permit.

A map of the proposed project boundary and draft proposed action conceptional diagram are available on the project web page at *https://www.fs.usda.gov/project/whiteriver/?project=64047.*

The Forest Service would close the wetlands and the historic pasture north of the lake to human entry to preserve delicate ecologic resources. In addition, the proposed action will evaluate the need for ecosystem restoration in this area and authorize restoration actions, if needed.

The proposed action may require amending the forest plan. The project areas currently bounding the newly purchased property includes Management Area 5.41—Deer and Elk Winter Range to the north and Management Area 5.4—Forested Flora and Fauna Habitats to the south. Land acquisitions to the National Forest System generally adopt the adjacent management area prescription. The proposed action will be evaluated for forest plan consistency to determine the need for a plan amendment which could require modifications to some plan components or other plan content.

Lead and Cooperating Agencies

The lead agency for this project proposal is the Forest Service. Cooperating agencies include Garfield County, Eagle County, the Town of Gypsum, and Colorado Parks and Wildlife.

Responsible Official

The responsible official is Mr. Scott Fitzwilliams, White River National Forest Supervisor, White River National Forest, 900 Grand Ave., P.O. Box 948, Glenwood Springs, CO 81601.

Scoping Comments and the Objection Process

This notice of intent initiates the scoping process, which guides the development of the environmental impact statement. In this process the Forest Service is requesting comments on potential alternatives and impacts, and identification of any relevant information, including comments on aspects of the White River National Forest Land and Resource Management Plan (2002) that may guide or constrain activities described in the proposed action, or other studies or analyses concerning impacts affecting the quality of the human environment.

Multiple public engagement opportunities were held to inform the public and help shape this proposal. Online comment forms were available on the Eagle Valley Land Trust website from October 2021 to May 2023 and an online public survey was conducted in March 2023. Multiple public meetings in different locations were held in January and February 2022. A virtual ''NEPA 101'' training was provided in November 2022 and a virtual public meeting was held in November 2022. Forest Service and Colorado Parks and Wildlife leaders also met with twelve community members in a bi-weekly working group format (13 meetings) from October 2022 to May 2023 to bring community interest and ideas to the project as well as report back to the broader community. Forest Service and Colorado Parks and Wildlife leaders also conducted interviews with multiple stakeholders in the area and met regularly with the outfitter and guide who operated on the site under multiple private owners for almost 40 years. From July 2023 to January 2024, the Forest Service and the cooperating agencies have met approximately once a month for a total of seven (7) meetings to work through the project issues and address known public concerns in preparation for the scoping process. The scoping process will include three (3) public meetings in addition to the electronic or written comments to the Forest Service. Dates, times, and locations of the public meetings will be announced on the project web page at *https://www.fs.usda.gov/project/whiteriver/?project=64047.*

It is important that reviewers provide their comments at such times and in such manner that they are useful to the Agency's preparation of the final environmental impact statement; therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions. Commenting during scoping and any other designated opportunity to comment provided by the responsible official as prescribed by the applicable regulations will also govern eligibility to object once the final environmental impact statement and draft record of decision have been published. Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered; however, they will not be used to establish eligibility for the objection process.

Objections will be accepted only from those who have previously submitted specific written comments regarding the proposed project during scoping or other designated opportunity for public comment in accordance with 36 CFR 218.5(a), 219.16, and 219.52, as applicable. Issues raised in objections must be based on previously submitted timely, specific written comments regarding the proposed project unless

based on new information arising after designated opportunities.

Permits, Licenses, or Other Authorizations Required

This proposed action will consider the authorization of a long-term special use permit to Colorado Parks and Wildlife to operate and manage the site.

Nature of Decision To Be Made

Given the purpose and need, the responsible official will determine whether the proposed action complies with all applicable laws governing Forest Service actions and with the applicable standards and guidelines found in the forest plan; whether the environmental impact statement has sufficient site-specific environmental analysis to make an informed decision; and whether the proposed action meets the purpose and need for action. With this information, the responsible official must decide whether to select the proposed action or one of any other potential alternatives that may be developed, and what, if any, additional actions should be required.

Substantive Provisions

The following substantive provisions of the 2012 Planning Rule (36 CFR 219.8–11) may be directly related to the proposed forest plan amendment (219.13(b)(5)): 36 CFR 219.8(a) Ecological sustainability; 36 CFR 219.8 (b) Social and economic sustainability; 36 CFR 219.9(a) Ecosystem plan components; 36 CFR 219.9(b) Additional, species specific plan components; 36 CFR 219.9(c) Species of conservation of concern; 36 CFR 219.10(a) Integrated resource management for multiple use; and 36 CFR 219.10(a) Lands not suited for timber production.

Gregory C. Smith,

Associate Deputy Chief, National Forest System.

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

[Docket No. NRCS–2024–0004]

Proposed Revisions to Section 1 of the Field Office Technical Guides for Louisiana and Wisconsin

AGENCY: Natural Resources Conservation Service, U.S. Department of Agriculture.

ACTION: Notice of availability, request for comments.

SUMMARY: NRCS is giving notice that it is proposing revisions to Section 1—General Resource References of the Field Office Technical Guides in Louisiana and Wisconsin to include revised State Offsite Methods for Food Security Act Wetland Identification (SOSM). The proposed changes will replace the existing SOSMs in Louisianna and Wisconsin, which have been in use since June 2015 and October 2016. The revisions are needed to clarify procedures and improve consistency in application. SOSM are used in completing wetland determinations for USDA program eligibility purposes.

DATES: We will consider comments that we receive by June 5, 2024.

ADDRESSES: We invite you to submit comments in response to this notice. You may submit your comments through:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and search for Docket ID NRCS–2024–0004. Follow the online instructions for submitting comments;

All comments received will be made publicly available on *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: For Louisiana: Kris Davis; telephone: (318) 473–7680; email: *kris.davis@usda.gov* and for Wisconsin: Josh Odekirk; telephone: (608) 662–4422; email: *josh.odekirk@usda.gov.*

SUPPLEMENTARY INFORMATION: Guidance contained in each state's SOSM will be part of the technical documents and procedures that NRCS uses to determine if wetlands are present on agricultural land as required by 16 U.S.C. 3822. NRCS is required by 16 U.S.C. 3862 to make available for public review and comment all proposed revisions to standards and procedures used to carry out highly erodible land and wetland provisions of the law.

There are separate SOSM documents for each state. To fully understand the proposed revisions, commenters are encouraged to compare the revised SOSMs with each state's current version, as shown in Section 1 of the NRCS Field Office Technical Guide at *https://efotg.sc.egov.usda.gov/#/.* The electronic copies of each state's SOSM are available through *http://www.regulations.gov* by accessing Docket ID NRCS–20240004. Requests for paper versions or inquiries may be directed to the specific State Conservationist as identified in the **FOR FURTHER INFORMATION CONTACT** section above.

In general, both new documents have similar language and technical methodologies with some variations based on natural resource information available and state-specific considerations.

All comments will be considered. If no comments are received, guidance contained in each state's SOSM will be considered final at the end of the comment period for this notice.

USDA Non-Discrimination Policy

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family or parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Individuals who require alternative means of communication for program information (for example, braille, large print, audiotape, American Sign Language, etc.) should contact the responsible Agency or the USDA TARGET Center at (202) 720–2600 (voice and text telephone (TTY)) or dial 711 for Telecommunicaions Relay Service (both voice and text telephone users can initiate this call from any phone). Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD–3027, found online at *https://www.usda.gov/oascr/how-to-file-a-program-discrimination-complaint* and at any USDA office or write a letter addressed to USDA and provide in the letter all the information requested in the form. To request a copy of the complaint form, call (866) 632–9992. Submit your completed form or letter to USDA by: (1) mail to: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250–9410; (2) fax: (202) 690–7442; or (3) email: *OAC@usda.gov.USDA* is an

equal opportunity provider, employer, and lender.

Terry Cosby,

Chief, Natural Resources Conservation Service.

BILLING CODE 3410–16–P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Arizona Advisory Committee

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of virtual business meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act (FACA) that a web briefing of the Arizona Advisory Committee (Committee) to the U.S. Commission on Civil Right will convene via ZoomGov on Thursday, May 23, 2024, from 2 p.m.–3:30 p.m. Arizona time. The purpose of the meeting is to debrief testimony received during web briefings focused on pediatric health care disparities in Arizona.

DATES: The meeting will take place on: Thursday, May 23, 2024, from 2 p.m.–3:30 p.m. Arizona time.

ADDRESSES:

Webinar Zoom Link to Join (Audio/Visual): https://www.zoomgov.com/webinar/register/WN_C-uOoAMwTgW-uOWC-rJtSA.

Telephone (Audio Only) Dial: 1–833–435–1820 (US Toll-free); Webinar ID: 161 521 3288.

FOR FURTHER INFORMATION CONTACT: Ana Fortes, DFO, at *afortes@usccr.gov* or (202) 681–0857.

SUPPLEMENTARY INFORMATION: Committee meetings are available to the public through the videoconference link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodations, please email Angelica Trevino, Support Services Specialist, at *atrevino@usccr.gov* at least 10 business days prior to the meeting.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the meeting. Written comments can be sent via email to Ana Fortes (DFO) at *afortes@usccr.gov.*

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Arizona Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *atrevino@usccr.gov.*

Agenda

I. Welcome, Roll Call, and Announcements
II. Debrief
III. Public Comment
IV. Next Steps
V. Adjournment

Dated: April 30, 2024.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meetings of the Puerto Rico Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: Commission on Civil Rights.

ACTION: Announcement of three virtual panel briefings.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that three panel briefings of the Puerto Rico Advisory Committee to the Commission will convene virtually by web conference to hear from experts on the civil rights impacts of the Insular Cases and the Non-Incorporation Doctrine on the Residents of Puerto Rico.

DATES:

Panel 1 The Right to Vote at the Federal Level—Perspectives from Community Advocates: Tuesday, May 21, 2024; 3:30 p.m. Atlantic Time/Eastern Time

Panel 2 The Right to Vote at the Federal Level—Public Policy, Government, and Political Party Perspectives: Thursday, May 30, 2024; 3:30 p.m. Atlantic Time/Eastern Time

Panel 3 The Right to Vote at the Federal Level—Perspectives from Academics & Researchers: Tuesday, June 4, 2024; 3:30 p.m. Atlantic Time/Eastern Time

ADDRESSES: Panel briefings will be held via Zoom.

Panel 1 May 21 Registration Link (Audio/Visual): http://tinyurl.com/5xdz9nx2; password, if needed: USCCR–PR

Panel 1 Phone (Audio Only): 1–833 435 1820 USA Toll Free; Meeting ID: 160 217 7958 #

Panel 2 May 30 Registration Link (Audio/Visual): https://tinyurl.com/423baeu4; password, if needed: USCCR–PR

Panel 2 Phone (Audio Only): 1–833 435 1820 USA Toll Free; Meeting ID: 160 461 9474 #

Panel 3 June 4 Registration Link (Audio/Visual): https://tinyurl.com/5ap7am93; password, if needed: USCCR–PR

Panel 3 Phone (Audio Only): 1–833 435 1820 USA Toll Free; Meeting ID: 160 962 4965 #

FOR FURTHER INFORMATION CONTACT: Email Victoria Moreno, Designated Federal Officer at *vmoreno@usccr.gov,* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: The virtual briefings will take place in Spanish with English interpretation. These committee meetings are available to the public through the registration links above. Any interested member of the public may listen to the meetings. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meetings will include a list of persons who are present at the meetings. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive

or learning impairments. To request additional accommodations, please email *ebohor@usccr.gov* at least 10 business days prior to each meeting date.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meetings. Written comments may be emailed to Victoria Moreno at *vmoreno@usccr.gov.* Persons who desire additional information may contact the Regional Programs Coordination Unit at 1–312–353–8311.

Records generated from these meetings may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meetings. Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Puerto Rico Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Coordination Unit at *ebohor@usccr.gov.*

Agenda

1. Welcome, Roll Call, & Chair Opening Remarks
2. Panel 1 | May 21: followed by Committee Q&A
3. Panel 2 | May 30: followed by Committee Q&A
4. Panel 3 | June 4: followed by Committee Q&A
5. Public Comment
6. Adjourn

Dated: April 30, 2024.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Boundary and Annexation Survey

AGENCY: Census Bureau, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act (PRA) of 1995, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment on the proposed revision of the Boundary and Annexation Survey, prior to the submission of the information collection request (ICR) to OMB for approval.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before July 5, 2024.

ADDRESSES: Interested persons are invited to submit written comments by email to *dcmd.pra@census.gov.* Please reference ''Boundary and Annexation Survey'' in the subject line of your comments. You may also submit comments, identified by Docket Number USBC–2024–0012, to the Federal e-Rulemaking Portal: *https://www.regulations.gov.* All comments received are part of the public record. No comments will be posted to *https://www.regulations.gov* for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. You may submit

attachments to electronic comments in Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Michael S. Snow, Program Manager, Decennial Census Management Division, by phone at 301–763–9912 or by email to *dcmd.pra@census.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The U.S. Census Bureau conducts many voluntary geographic partnership programs designed to collect addresses, boundaries, and linear features for incorporation into the Master Address File/Topologically Integrated Geographic Encoding and Referencing (MAF/TIGER) System. The Boundary and Annexation Survey (BAS) is one of these programs. It provides eligible governments, which include tribal, state, and general-purpose local governments, an opportunity to review the Census Bureau's legal boundary data to ensure the Census Bureau has the correct boundary, name, and status information and make necessary updates. BAS also allows for the review and update of census designated place (CDP) boundaries and linear features. It fulfills the agency's responsibility as part of the National Spatial Data Infrastructure, for which the Office of Management and Budget (OMB) Circular A–16 designates the Census Bureau as the lead federal agency for maintaining national data about legal government boundaries, as well as statistical and administrative boundaries. It also supports the geospatial data steward responsibilities of the Geospatial Data Act, the Evidence Act, OMB E-Gov, the Federal Geographic Data Committee, Data.gov, GeoPlatform.gov, the National Map, the Geographic Names Information System, and the Geospatial One-Stop.

The Census Bureau uses the boundaries collected during BAS to tabulate data for various censuses and surveys including the decennial census, American Community Survey (ACS), and Population Estimates Program (PEP). It also uses the boundaries collected through BAS to support other programs such as the Redistricting Data Program, the Economic Census, the Geographic Update Population Certification Program, and the Special Census program.

Other federal programs also rely on accurate boundaries collected through BAS. The Department of Housing and Urban Development uses boundaries to determine jurisdictional eligibility for various grant programs, such as the Community Development Block Grant program. In addition, the Department of Agriculture uses boundaries to determine eligibility for various rural housing and economic development programs.

The BAS participation process, outlined below, is like the Census Bureau's other geographic partnership programs though there are some differences in the universe of eligible governments, requirements, and timeframe of the program.

- The Census Bureau notifies eligible governments about BAS through email. Eligible governments are instructed to review the legal boundary, name, and status information, along with CDP boundaries, linear features, and the highest elected official and program contact information the Census Bureau has on file. They can review their boundaries and linear features using the Census Bureau's TIGERweb application, partnership shapefiles, or PDF maps.
- Eligible governments respond through an online response form or email to indicate if they have legal boundary, CDP, linear feature, or contact updates. Those with updates can choose to create their submission using the BAS Partnership Toolbox, Geographic Update Partnership Software (GUPS), GUPS Web, or paper maps.
- Eligible governments return updates to the Census Bureau. Updates created using the BAS Partnership Toolbox, GUPS, or GUPS Web are returned through the Census Bureau's secure online data sharing portal while paper map updates are returned through the mail.
- The Census Bureau processes and verifies all updates for accuracy and completeness. The updates are inserted into the MAF/TIGER System and quality control is performed.

Legal Information

The Census Bureau reviews and maintains an inventory of each state's legal boundary laws and statutes. This information is made available to eligible governments on the BAS website. The Census Bureau also uses this information to verify that updates provided during BAS are made in accordance with state law.

If it comes to the Census Bureau's attention that an area of non-tribal land is in dispute between two or more governments, the Census Bureau will not make boundary updates until all affected parties come to a written agreement, or there is a documented final court decision regarding the matter and/or dispute. If there is a dispute over an area of tribal land, the Census Bureau will not make boundary updates until the governments provide supporting documents or the U.S. Department of the Interior issues a comment. If necessary, the Census Bureau will request clarification regarding current boundaries or supporting documentation, from the U.S. Department of the Interior, Office of the Solicitor.

BAS Universe

The BAS universe includes approximately 40,000 eligible governments. These include:

- Federally recognized tribes with a reservation or off-reservation trust land (including tribal subdivisions).
- States.
- Counties and county equivalent governments.
- Incorporated places (including consolidated cities).
- Minor civil divisions.
- Hawaiian Home Lands.
- Municipios, barrios, barrio-pueblos, and subbarrios in the Commonwealth of Puerto Rico.
- The U.S. territories of American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands.

II. Method of Collection

The following collection methods allow the Census Bureau to coordinate among various levels of governments to obtain the most accurate boundary, CDP, linear feature, and contact information:

- BAS.
- State Certification.
- Boundary Quality Project.

BAS

BAS provides eligible governments, which include tribal, state, and general-purpose local governments, an opportunity to review the Census Bureau's legal boundary data to ensure the Census Bureau has the correct boundary, name, and status information and make necessary updates. BAS also allows for the review and update of CDPs and linear features.

The Census Bureau notifies eligible governments about BAS through email. The email includes program information and directs eligible governments to respond through an online form if they have legal boundary, CDP, linear feature, or contact updates to report. Any eligible government without an email on file with the Census Bureau will be contacted by phone and asked to provide their response.

Those indicating they have updates to provide must create their submission using one of the options listed below.

- *BAS Partnership Toolbox.* The BAS Partnership Toolbox allows eligible governments to create the submission in ArcGIS Pro. The toolbox automates data download, boundary update creation, and exports standardized files for submission.
- *GUPS.* GUPS is a free, customized geographic information system software application provided by the Census Bureau. It is offered as standalone (GUPS Download) and online (GUPS Web) applications.
  - GUPS Download allows eligible governments to manually create boundary updates and export standardized files for submission.
  - GUPS Web allows eligible governments to manually create boundary updates or import local boundary data to automate the creation of boundary updates and export standardized files for submission.
- *Paper maps.* The Census Bureau will ship large format paper maps and instructions for eligible governments to annotate and return their updates to the Census Bureau. The paper map package includes a letter, materials list insert, large format paper maps covering the extent of the government, supplies to update the paper maps, how-to guide, and postage-paid return envelope.

Eligible governments that do have boundary updates can submit both legal boundary changes and boundary corrections. Legal boundary changes include updates that are a result of any legal action taken by the eligible government(s) to add or remove land to their official boundary. Boundary corrections are updates that are the result of spatial inaccuracies and do not substantially alter the Census Bureau's representation of the boundaries.

Updates created using the BAS Partnership Toolbox, GUPS, or GUPS Web are returned through the Census Bureau's secure online data sharing portal, while paper map are returned through the mail.

Eligible governments that do not respond, or those that indicate they have updates to provide, but have not submitted their updates are contacted during *nonresponse* follow-up by email. The email reminds eligible governments to respond through an online response form or email if they have updates to report. Those that indicated they have updates to report are requested to submit those updates by the March 1 or May 31 deadlines.

Refer to the schedule below for a high-level BAS program timeline.

- *January 1*—Legal boundary changes must be legally in effect on or before this date to be reported in the current survey year.
- *January to May*—The Census Bureau conducts BAS. Eligible governments respond to BAS indicating if they have legal boundary, CDP, linear feature, or contact updates to report. Those with updates can choose to create their submission using the Census Bureau's BAS Partnership Toolbox, GUPS, GUPS Web, or paper maps.
- *Early January*—The Census Bureau notifies eligible governments about BAS through email. Eligible governments are contacted through email to determine if they have legal boundary, CDP, linear feature, or contact updates to report. Any eligible government without an email on file with the Census Bureau will be contacted by phone and asked to provide their response.
- *Mid-February, Mid-March, and Mid-April*—The Census Bureau conducts nonresponse follow-up for BAS through email. Eligible governments that have not responded to annual response, along with those that indicated they have updates to report but have not yet submitted those updates, are contacted through email on up to three occasions.
- *March 1*—Legal boundary changes returned by this date will be reflected in the ACS and PEP data and in next year's BAS materials.
- *May 31*—Legal boundary changes returned by this date will be reflected in next year's BAS materials. If time permits, boundary corrections returned by this date may also be reflected in next year's BAS materials.

The Census Bureau maintains state and county (CBAS) agreements that coordinate the sharing of information and resources between the federal government and state or county governments in collecting boundary information for general-purpose local governments. These agreements aim to reduce the duplication of effort across various levels of governments as well as the cost and time burden associated with BAS participation.

To facilitate a state agreement, the Census Bureau enters a Memorandum of Understanding with the state. States interested in establishing an agreement can do so when there is state legislation requiring general-purpose local governments to report all boundary updates to a state agency. The Census Bureau currently maintains two types of state agreements. In the first type of agreement, the state reports boundary updates for all eligible governments within its jurisdiction. Eligible governments in this type of agreement are notified about BAS; however, they do not receive the request to provide updates and are instructed to report all boundary updates to the state. Under the second type of agreement, the state provides the Census Bureau with a list of eligible governments that reported boundary changes. The Census Bureau uses the list to target those general-purpose local governments during BAS.

CBAS agreements allow county or county-equivalent governments to submit updates for the eligible general-purpose local governments within their jurisdiction. Once under an agreement, eligible governments are notified about BAS; however, they do not receive the request to provide updates and are instructed to report all boundary updates to the county or county-equivalent government.

State Certification

The state certification program allows state agencies to verify that the legal boundary, name, and status information received through BAS were reported in accordance with state law. The Census Bureau annually requests that each state governor designate a state certifying official (SCO) to participate in the program. The SCO reviews listings of legal boundary changes, as well as government names and statuses that were submitted through the previous year's BAS. These listings include the attribute information for new incorporations, dissolutions, mergers, consolidations, and legal boundary changes. The listings also include the names and functional statuses of all general-purpose local governments within the state's jurisdiction. The SCO can request that the Census Bureau edit the attribute data, add missing records, or remove invalid records. Invalid records are only removed if the state government maintains an official record of all changes to legal boundaries and governments as mandated by state law. The state certification schedule is as follows:

- *October*—The Census Bureau emails governor's letters requesting the state appoint an SCO to participate in the program.
- *December*—The Census Bureau emails the information required to participate to the SCO.
- *December to February*—The SCO returns submission to the Census Bureau.
- *March*—The Census Bureau distributes discrepancy emails to general-purpose local governments based on feedback from the SCO.

The state certification materials include a governor's letter, an email to the SCO, how-to guide, legal boundary change and government name and status

listings, and discrepancy email to local governments. The listings and how-to guide are available on the BAS website. The SCO returns all updates electronically through the Census Bureau's secure online data sharing portal.

Boundary Quality Project

The boundary quality project is designed to assess, analyze, and improve the spatial quality of legal, statistical, and administrative boundaries within the MAF/TIGER System. Ensuring quality boundaries is a critical component of the geographic preparations for each decennial census and the Census Bureau's ongoing geographic partnership programs. In addition, the improvement of boundary quality is an essential element of the Census Bureau's commitment as the responsible agency for legal boundaries under OMB Circular A–16.

The project represents an effort to systematically target and assess boundary quality within the MAF/TIGER System. Historically, the Census Bureau relied exclusively on geographic partnership programs such as BAS and the Participant Statistical Areas Program (PSAP) to obtain updates to tribal, state, general-purpose local government, and CDP boundaries. While programs like BAS play an essential role in improving boundary quality, the goal of the boundary quality project is to establish a new, more accurate, baseline for legal boundaries and CDPs within an entire state or county. BAS builds on this baseline by collecting individual legal boundary changes and optionally associated addresses, and CDP updates on a transaction basis as they occur over the years.

Feedback

The Census Bureau is adding a feedback component to its geographic partnership programs to allow for the solicitation of feedback to improve the administration of the respective program and potentially reduce the future burden. Eligible governments may be asked to provide their feedback on materials, method(s) of data collection, manner of communications, and the usability of the program applications and tools.

III. Data

OMB Control Number: 0607–0151.

Form Number(s): BAS–6. This is the CBAS agreement form.

Type of Review: Regular submission, request for a revision of a currently approved collection.

Affected Public: Tribal, state, and general-purpose local governments in all fifty states, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands.

Estimated Number of Respondents:

- *BAS/State Certification/Boundary Quality Project:* 40,000 governments.
- *Feedback:* 1,000 governments.

Estimated Time per Response:

- *BAS/State Certification/Boundary Quality Project:* 7.5 hours. This estimate is based on an average of 5 hours for an eligible government with no change and 10 hours for an eligible government with changes.
- *Feedback:* 30 minutes.

Estimated Total Annual Burden Hours: 300,500 hours.

- *BAS/State Certification/Boundary Quality Project:* 300,000 hours.
- *Feedback:* 500 hours.

Estimated Total Annual Cost to Public: $0. (This is not the cost of respondents' time, but the indirect costs respondents may incur for such things as purchases of specialized software or hardware needed to report, or expenditures for accounting or records maintenance services required specifically by the collection.)

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C., section 6.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include, or summarize, each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Redistricting Data Program

AGENCY: Census Bureau, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act (PRA) of 1995, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment on the proposed revision of the Redistricting Data Program (RDP), prior to the submission of the information collection request (ICR) to OMB for approval.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before July 5, 2024.

ADDRESSES: Interested persons are invited to submit written comments by email to *dcmd.pra@census.gov.* Please reference ''Redistricting Data Program'' in the subject line of your comments. You may also submit comments, identified by Docket Number USBC–2024–0011, to the Federal e-Rulemaking Portal: *https://www.regulations.gov.* All comments received are part of the public record. No comments will be posted to *https://www.regulations.gov* for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. You may submit attachments to electronic comments in

Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Michael S. Snow, Program Manager, Decennial Census Management Division, by phone at 301–763–9912 or by email to *dcmd.pra@census.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The Redistricting Data Program (RDP) is one of many voluntary geographic partnership programs that collects boundaries and attributes to update the U.S. Census Bureau's geographic database of addresses, streets, and boundaries. The Census Bureau uses its geographic database, *i.e.,* the Master Address File/Topologically Integrated Geographic and Encoding and Referencing (MAF/TIGER) System, to link demographic data from surveys and the decennial census to locations and areas, such as cities, congressional and legislative districts, and counties. To tabulate statistics by localities, the Census Bureau must have accurate addresses, streets, boundaries, and attributes.

The RDP is executed under the provisions of title 13, section 141(c) of the United States Code (U.S.C.). Under the provisions of Public Law 94–171, as amended (title 13, United States Code (U.S.C.), section 141(c)), ''[t]he officers or public bodies having initial responsibility for the legislative apportionment or districting of each State may, not later than 3 years before the decennial census date, submit to the Secretary a plan identifying the geographic areas for which specific tabulations of population are desired.''

The Census Bureau is requesting a clearance to continue activities included in the RDP. As the current OMB Control Number 0607–0988 clearance will expire in November 2024, the new clearance will allow the Census Bureau to provide RDP-specific materials and procedures to participants during the fiscal years (FY) 2025, 2026, and 2027. These activities include:

- Solicitation of Non-Partisan Liaisons (2025)
- Collection of Post-2020 Census Congressional and State Legislative District Plans (2025–2026)
- Block Boundary Suggestion Project (2026–2027)

II. Method of Collection

Solicitation of Non-Partisan Liaisons (2025)

Legislative leadership of all fifty states, the District of Columbia, and the Commonwealth of Puerto Rico will be asked to provide a non-partisan liaison who will serve for the entirety of the 2030 Census RDP and who will create and submit geographic updates and perform verification as a part of the RDP.

Solicitation of Non-Partisan Liaisons Schedule

Legislative leadership will be contacted by mail beginning in January 2025 asking for a non-partisan liaison from each state to be designated to work on the RDP. Contacts will continue through mail, email, and phone until at least one liaison has been assigned from every state, the District of Columbia, and the Commonwealth of Puerto Rico.

Collection of Post-2020 Census Congressional and State Legislative District Plans (2025–2026)

The Census Bureau collaborates with the designated non-partisan liaisons to collect any newly enacted congressional or state legislative districts plans since the collection of the 119th Congressional and 2024 State Legislative Districts plans in 2024. The Census Bureau provides guidelines for submitting their plans. Those that have changes provide a block equivalency file, split block shapefiles (if any), district population, and legislation to the Census Bureau. The Census Bureau processes the new plans into the MAF/TIGER System and provides a new block equivalency file and split block shapefiles (if any) to verify that the districts were inserted correctly.

Collection of Post-2020 Census Congressional and State Legislative District Plans Schedule

- The Census Bureau collects plans from November 2025 through April 2026.
- The verification phase occurs from February 2026 through April 2026.

Block Boundary Suggestion Project (2026–2027)

The Census Bureau collaborates with the designated non-partisan liaisons to collect and verify suggestions for the 2030 Census tabulation blocks as part of the Block Boundary Suggestion Project (BBSP). Liaisons are also able to submit suggested legal boundary updates as well as updates to other geographic areas and features. These actions allow for the construction of the small area geography needed for legislative redistricting. Digital copies of the features and boundaries the Census Bureau has in the MAF/TIGER System are provided to the liaisons. The liaisons can choose to use a free customized geographic information system (GIS) application provided by the Census Bureau, *i.e.,* the Geographic Update Partnership Software (GUPS), or their own GIS mapping software to submit updates and block boundary suggestions.

The BBSP is conducted in two parts, an initial delineation of updates, *i.e.,* delineation phase, and a verification phase to ensure the suggested updates are accurately applied. The verification phase also has the option for liaisons to make additional block suggestions. Those that choose to participate in BBSP receive guidelines and training for providing their suggestions.

BBSP Schedule

- The delineation phase begins in January 2026 and ends in May 2026.
- The verification phase begins in January 2027 and ends in May 2027.

Feedback

The Census Bureau is adding a feedback component to its geographic partnership programs to allow for the solicitation of feedback to improve the administration of the respective program and potentially reduce the future burden. Liaisons may be asked to provide their feedback on materials, method(s) of data collection, manner of communications, and the usability of the program applications and tools.

III. Data

OMB Control Number: 0607–0988.

Form Number(s): Certification Forms (4) and Verification Forms (2).

- 2026 State Legislative Boundary Certification Form for states with a Single Congressional District (Alaska, Delaware, North Dakota, South Dakota, Vermont, and Wyoming).
- District of Columbia 2026 Wards Certification Form.
- 120th Congressional District Boundary and 2026 State Legislative District Boundary Certification Form.
- Commonwealth of Puerto Rico 2026 Legislative District Boundaries Certification Form.
- 2026 State Legislative District Boundaries Verification Form.
- 120th Congressional District Boundaries Verification Form.

Type of Review: Regular submission, request for a revision of a currently approved collection.

Affected Public: All fifty states, the District of Columbia, and the Commonwealth of Puerto Rico.

Estimated Number of Respondents:

- Solicitation of Non-Partisan Liaisons: 52.
- Collection of Post-2020 Census Congressional and State Legislative District Plans: 52.
- BBSP Delineation Phase: 52.
- BBSP Verification Phase: 52.
- Feedback: 52.

Estimated Time per Response:

- Solicitation of Non-Partisan Liaisons: 6 hours.
- Collection of Post-2020 Census Congressional and State Legislative District Plans: 8 hours.
- BBSP Delineation Phase: 124 hours.
- BBSP Verification Phase: 62 hours.
- Feedback: 1 hour.

Estimated Total Annual Burden Hours: 10,452.

- Solicitation of Non-Partisan Liaisons: 312 hours.
- Collection of Post-2020 Census Congressional and State Legislative District Plans: 416 hours.
- BBSP Delineation Phase: 6,448 hours.
- BBSP Verification Phase: 3,224 hours.
- Feedback: 52 hours.

Estimated Total Annual Cost to Public: $0. (This is not the cost of respondents' time, but the indirect costs respondents may incur for such things as purchases of specialized software or hardware needed to report, or expenditures for accounting or records maintenance services required specifically by the collection.)

Respondent's Obligation: Voluntary.

Legal Authority: Public Law 94–171, as amended (title 13, United States Code (U.S.C.), section 141(c)).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include, or summarize, each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

Foreign-Trade Zones Board

[B–18–2024]

Foreign-Trade Zone (FTZ) 90, Notification of Proposed Production Activity; PPC Broadband, Inc.; (Fiber Optic Conduit); East Syracuse, New York

PPC Broadband, Inc. submitted a notification of proposed production activity to the FTZ Board (the Board) for its facilities in East Syracuse, New York, within Subzone 90C. The notification conforming to the requirements of the Board's regulations (15 CFR 400.22) was received on April 26, 2024.

Pursuant to 15 CFR 400.14(b), FTZ production activity would be limited to the specific foreign-status material(s)/component(s) and specific finished product(s) described in the submitted notification (summarized below) and subsequently authorized by the Board. The benefits that may stem from conducting production activity under FTZ procedures are explained in the background section of the Board's website—accessible via *www.trade.gov/ftz.* The proposed finished product(s) and material(s)/component(s) would be added to the production authority that the Board previously approved for the operation, as reflected on the Board's website.

The proposed finished product is fiber optic conduit (duty rate, 3.1%).

The proposed foreign-status materials and components include polyester pull cord, copper clad steel wire, polyethylene pellets, and polypropylene pellets (duty rate ranges from duty-free to 7.5%). The request indicates that polyester pull cord will be admitted to the zone in privileged foreign (PF) status (19 CFR 146.41), thereby precluding inverted tariff benefits on such items. The request also indicates that certain materials/components are subject to duties under section 301 of the Trade Act of 1974 (section 301), depending on the country of origin. The applicable section 301 decisions require subject merchandise to be admitted to FTZs in PF status.

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary and sent to: *ftz@trade.gov*. The closing period for their receipt is June 17, 2024.

A copy of the notification will be available for public inspection in the ''Online FTZ Information System'' section of the Board's website.

For further information, contact Diane Finver at *Diane.Finver@trade.gov*.

Dated: May 1, 2024.

Elizabeth Whiteman,

Executive Secretary.

International Trade Administration

[A–533–887]

Carbon and Alloy Steel Threaded Rod From India: Preliminary Results and Preliminary Rescission of Antidumping Duty Administrative Review, In Part, 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that carbon and alloy steel threaded rod (steel threaded rod) from India was sold in the United States at prices below normal value (NV) during the period of review (POR) April 1, 2022, through March 31, 2023. We are also preliminarily rescinding the review with respect to certain companies that had no entries of the subject merchandise during the POR. We invite interested parties to comment on these preliminary results.

DATES: Applicable May 6, 2024.

FOR FURTHER INFORMATION CONTACT: Samuel Frost, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–8180.

SUPPLEMENTARY INFORMATION:

Background

On June 12, 2023, Commerce initiated an administrative review of the

antidumping duty (AD) order on steel threaded rod from India, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).[1] Commerce initiated this review for 112 companies.[2] Commerce selected Mangal Steel Enterprises Limited (Mangal) and Shree Luxmi Fasteners (SLF) for individual examination as mandatory respondents.[3]

Commerce extended the time limit for completing the preliminary results of this review until April 29, 2024.[4] For details regarding the events that occurred subsequent to the initiation of the review, *see* the Preliminary Decision Memorandum.[5]

Scope of the Order

The product covered by the scope of this *Order* is carbon and alloy steel threaded rod from India. A complete description of the scope of the *Order* is contained in the Preliminary Decision Memorandum.[6]

Preliminary Rescission of Administrative Review, in Part

Pursuant to 19 CFR 351.213(d)(3), when there are no reviewable entries of subject merchandise during the POR subject to the AD order for which liquidation is suspended, Commerce may rescind an administrative review, in whole or only with respect to a particular exporter or producer.[7]

At the end of the administrative review, any suspended entries are liquidated at the assessment rate computed for the review period.[8] Therefore, for an administrative review to be conducted, there must be a reviewable, suspended entry to be liquidated at the newly calculated assessment rate. Accordingly, pursuant to 19 CFR 351.213(d)(3), we have preliminarily determined to rescind this administrative review with respect to the 83 companies listed in Appendix III to this notice that have no reviewable, suspended entries of subject merchandise during the POR.[9]

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Act. We calculated export price and constructed export price in accordance with sections 772(a) and 772(b) of the Act, respectively. We calculated NV in accordance with section 773 of the Act. For a full description of the methodology underlying these preliminary results, *see* the Preliminary Decision Memorandum. *See* Appendix I for a complete list of topics discussed in the Preliminary Decision Memorandum. The Preliminary Decision Memorandum is a public document and is made available to the public via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*. In addition, a complete version of the Preliminary Decision Memorandum is available at *https://access.trade.gov/public/FRNoticesListLayout.aspx*.

Rate for Non-Examined Companies

The Act and Commerce's regulations do not address the establishment of a rate to be applied to companies not selected for examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in a market economy investigation, for guidance when calculating the rate for companies which were not selected for individual examination in an administrative review. Under section 735(c)(5)(A) of the Act, the all-others rate is normally ''an amount equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated, excluding any zero and *de minimis* margins, and any margins determined entirely {on the basis of facts available}.''

In this review, we have preliminarily calculated a weighted-average dumping margin of 10.97 percent for SLF/TEI and zero percent for Mangal. Therefore, in accordance with section 735(c)(5)(A) of the Act, we are preliminarily applying SLF/TEI's weighted-average dumping margin of 10.97 percent to the non-examined companies (*see* Appendix II for a full list of these companies), because this is the only rate that is not zero, *de minimis,* or based entirely on facts available.

Preliminary Results of the Review

We preliminarily determine that the following estimated weighted-average dumping margins exist during the period April 1, 2022, through March 31, 2023:

Exporter/producer	Estimated weighted-average dumping margin (percent)
Mangal Steel Enterprises Limited	0.00
Shree Luxmi Fasteners/The Emerging Impex[10]	10.97
Non-Examined Companies[11]	10.97

Disclosure and Public Comment

We intend to disclose the calculations performed to parties within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs no later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.[12] Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[13]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their briefs that should be limited to five pages total,

[1] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 88 FR 38021 (June 12, 2023) (*Initiation Notice*); *see also Carbon and Alloy Steel Threaded Rod from India: Amended Final Determination of Sales at Less Than Fair Value and Antidumping Duty Order,* 85 FR 19925 (April 9, 2020) (*Order*).

[2] *See Initiation Notice,* 88 FR at 38023–24.

[3] *See* Memorandum, ''Respondent Selection,'' dated June 28, 2023. We are preliminarily treating SLF and its affiliate The Emerging Impex (TEI) as a single entity for purposes of this review. For further details, *see* Memorandum, ''Decision Memorandum for the Preliminary Results of the Antidumping Duty Administrative Review of Carbon and Alloy Steel Threaded Rod from India; 2022–2023,'' dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[14] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[15]

Interested parties who wish to request a hearing must do so within 30 days of publication of these preliminary results by submitting a written request to the Assistant Secretary, filed electronically via ACCESS.[16] Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case and rebuttal briefs.[17] If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined. Parties should confirm the date and time of the hearing two days before the scheduled date. Parties are reminded that all briefs and hearing requests must be filed electronically using ACCESS and received successfully in their entirety by 5:00 p.m. Eastern Time on the due date.

Assessment Rates

The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by this review and for future deposits of estimated duties, where applicable.[18]

Upon completion of the final results of this administrative review, pursuant to section 751(a)(2)(A) of the Act, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review. If a respondent's weighted-average dumping margin is not zero or *de minimis* (*i.e.,* less than 0.5 percent) in the final results of this review, we will calculate importer-specific assessment rates based on the ratio of the total amount of dumping calculated for the importer's examined sales to the total entered value of those same sales in accordance with 19 CFR 351.212(b)(1). We intend to instruct CBP to assess antidumping duties on all such entries covered by this review. Where an importer-specific assessment rate is zero or *de minimis* in the final results of this review, we intend to instruct CBP to liquidate the appropriate entries without regard to antidumping duties in accordance with 19 CFR 351.106(c)(2).

If, in the final results, we continue to find that the administrative review for companies in Appendix III should be rescinded, we will instruct CBP to assess antidumping duties on any suspended entries that entered under their CBP case numbers (*i.e.,* at that exporter's rate) at a rate equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, during the POR.

In accordance with Commerce's ''automatic assessment'' practice, for entries of subject merchandise during the POR produced by Mangal or SLF/TEI for which these companies did not know that the merchandise was destined for the United States, we will instruct CBP to liquidate those entries at the all-others rate established in the original less-than-fair-value (LTFV) investigation [19] (*i.e.,* 0.00 percent) if there is no rate for the intermediate company(ies) involved in the transaction.[20] For the companies which were not selected for individual review, we will assign an assessment rate based on the review-specific average rate, calculated as noted in the ''Preliminary Results of Review'' section above.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the publication date of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the companies listed in the final results of this review will be equal to the weighted-average dumping margin established in the final results of this administrative review except if the rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for merchandise exported by producers or exporters not covered in this review but covered in a prior segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recently-completed segment of this proceeding in which they were reviewed; (3) if the exporter is not a firm covered in this review, or the original LTFV investigation, but the producer is, then the cash deposit rate will be the rate established for the most recently-completed segment of this proceeding for the producer of the merchandise; (4) the cash deposit rate for all other producers or exporters will continue to be 0.00 percent, the all-others rate established in the LTFV investigation as adjusted for the export-subsidy rate in the companion countervailing duty investigation.[21] The cash deposit requirements, when imposed, shall remain in effect until further notice.

Final Results of Review

Unless extended, Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised in any written briefs, not later than 120 days after the date of publication of this notice, pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(1).

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the

[14] We use the term ''issue'' here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

subsequent assessment of double antidumping duties.

Notification to Interested Parties

Commerce is issuing and publishing these preliminary results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(4).

Dated: April 29, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Environmental Technologies Trade Advisory Committee

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of an open meeting of a Federal advisory committee.

SUMMARY: The Environmental Technologies Trade Advisory Committee (ETTAC) will hold a hybrid meeting, accessible in-person and online, on Tuesday May 21, 2024 at the U.S. Department of Commerce in Washington, DC. The meeting is open to the public with registration instructions provided below. This notice sets forth the schedule and proposed topics for the meeting.

DATES: The meeting is scheduled for Tuesday, May 21, 2024 from 10:00 a.m. to 12:00 p.m. and 1:00 to 3:00 p.m. Eastern Standard Time (EST). The deadline for members of the public to register to participate, including requests to make comments during the meeting and for auxiliary aids, or to submit written comments for dissemination prior to the meeting, is 5:00 p.m. EST on Wednesday, May 15, 2024. Members of the public must register by that date to participate.

ADDRESSES: The meeting will be held virtually as well as in-person in the Commerce Research Library at the U.S. Department of Commerce Herbert Clark Hoover Building, 1401 Constitution Avenue NW, Washington, DC 20230. Requests to register to participate in-person or virtually (including to speak or for auxiliary aids) and any written comments should be submitted via email to Ms. Megan Hyndman, Office of Energy & Environmental Industries, International Trade Administration, at *Megan.Hyndman@trade.gov.* This meeting has a limited number of spaces for members of the public to attend in-person. Requests to participate in-person will be considered on a first-come, first-served basis.

FOR FURTHER INFORMATION CONTACT: Ms. Megan Hyndman, Office of Energy & Environmental Industries, International Trade Administration (Phone: 202–823–1839; email: *Megan.Hyndman@trade.gov*).

SUPPLEMENTARY INFORMATION: The ETTAC is mandated by section 2313(c) of the Export Enhancement Act of 1988, as amended, 15 U.S.C. 4728(c), to advise the Environmental Trade Working Group of the Trade Promotion

Coordinating Committee, through the Secretary of Commerce, on the development and administration of programs to expand U.S. exports of environmental technologies, goods, services, and products. The ETTAC was most recently re-chartered through August 16, 2024.

On Tuesday, May 21, 2024 from 10:00 a.m. to 12:00 p.m. and 1:00 to 3:00 p.m. EST, the ETTAC will hold the eighth meeting of its current charter term. During the meeting, committee members will discuss issues of interest to specific environmental technology sectors, deliberate on potential recommendation topics, and hear briefings from the U.S. government related to tax incentives for carbon management projects, among other topics. An agenda will be made available one week prior to the meeting upon request to Megan Hyndman.

The meeting will be open to the public and time will be permitted for public comment before the close of the meeting. Members of the public seeking to attend the meeting are required to register by Wednesday, May 15, at 5:00 p.m. EST, via the contact information provided above. This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to OEEI at *Megan.Hyndman@trade.gov* or (202) 823–1839 no less than one week prior to the meeting. Requests received after this date will be accepted, but it may not be possible to accommodate them.

Written comments concerning ETTAC affairs are welcome any time before or after the meeting. To be considered during the meeting, written comments must be received by Wednesday, May 15, 2024, at 5:00 p.m. EST to ensure transmission to the members before the meeting. Draft minutes will be available within 30 days of this meeting.

Dated: April 30, 2024.

Man K. Cho,

Deputy Director, Office of Energy and Environmental Industries.

[FR Doc. 2024–09733 Filed 5–3–24; 8:45 am]

BILLING CODE 3510–DR–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Northeast Region Observer Providers Requirements

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on January 31, 2024, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic & Atmospheric Administration (NOAA), Commerce.

Title: Northeast Region Observer Providers Requirements.

OMB Control Number: 0648–0546.

Form Number(s): None.

Type of Request: Regular submission (extension and revision of a currently approved information collection).

Number of Respondents: 626.

Average Hours per Response: Response time varies between 10 minutes to 10 hours depending on the information collection.

Total Annual Burden Hours: 6,475.

Needs and Uses: Under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Steven Act), the Secretary of Commerce (Secretary) has the responsibility for the conservation and management of marine fishery resources. Much of this responsibility has been delegated to the NOAA/National Marine Fisheries Service (NMFS). Under this stewardship role, the Secretary was given certain regulatory authorities to ensure the most beneficial uses of these resources. One of the regulatory steps taken to carry out the conservation and management objectives is to collect data from users of the resource.

Regulations at 50 CFR 648.11(g) require observer service providers to comply with specific requirements in order to operate as an approved provider in the Atlantic sea scallop (scallop) fishery. Observer service providers must comply with the following requirements: submit applications for approval as an observer service provider; formally request observer training by the Northeast Fisheries Observer Program (NEFOP); submit observer deployment reports and biological samples; give notification of whether a vessel must carry an observer within 24 hours of the vessel owner's notification of a prospective trip; maintain an updated contact list of all observers that includes the observer identification number; observer's name mailing address, email address, phone numbers, homeports or fisheries/trip types assigned, and whether or not the observer is ''in service.'' The regulations also require observer service providers submit any outreach materials, such as informational pamphlets, payment notification, and descriptions of observer duties as well as all contracts between the service provider and entities requiring observer services for review to NMFS/NEFOP. Observer service providers also have the option to respond to application denials, and submit a rebuttal in response to a pending removal from the list of approved observer providers. During the 60-day comment period for this renewal NMFS approved an additional observer service provider, increasing the number of providers from three to four. The additional burden hours necessary to accommodate the additional provider are reflected in the updated total burden hours.

Regulations at § 648.11(k)(2) require that limited access, limited access general category individual fishing quota, and Northern Gulf of Maine scallop vessels notify NMFS prior to the beginning of a scallop trip to facilitate the deployment of at-sea observers. Previously, vessels either called or emailed to notify NMFS of an upcoming scallop trip. NMFS has added a new method for notification called the Pre-Trip Notification System (PTNS). The integration of the scallop notification requirement into the PTNS helps standardize observer operations between fisheries and modernize reporting systems. The PTNS is a mobile-friendly website that is more sophisticated and flexible than the aging interactive voice response technology. The change to the PTNS does not affect determination of scallop coverage rates or the compensation analysis. There are no changes to the requirements vessels must abide by if selected to carry an observer, such as equal accommodations, a harassment-free

environment, and other safety requirements. This change is not expected to impact the burden response time, but NOAA will continue to monitor use of this new tool, and will update the collection if it results in any burden changes at our next renewal. There will still be an email and a phone option for vessels to notify. These requirements allow NMFS/NEFOP to effectively administer the scallop observer program.

Affected Public: Business or other for-profit organization.

Frequency: Weekly

Respondent's Obligation: Required to Obtain Benefits.

Legal Authority: Magnuson-Steven Act

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0546.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD924]

Mid-Atlantic Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: A sub-panel of the Mid-Atlantic and New England Fishery Management Councils' Scientific and Statistical Committees (SSC) and the Atlantic States Marine Fisheries Commission (ASMFC) Assessment Science Committee will hold a meeting.

DATES: The meeting will be held on Wednesday, May 22, 2024, starting at 9:30 a.m. and continue through 12:30 p.m. on Friday, May 24, 2024. See **SUPPLEMENTARY INFORMATION** for agenda details.

ADDRESSES: This will be an in-person meeting with a virtual option. Participants and members of the public will have the option to participate in person at the Northeast Fisheries Science Center Narragansett Lab, 28 Tarzwell Drive, Narragansett, RI, or virtually via webinar. Webinar connection instructions and briefing materials will be available at: *www.mafmc.org.*

Council address: Mid-Atlantic Fishery Management Council, 800 N State Street, Suite 201, Dover, DE 19901; telephone: (302) 674–2331; website: *www.mafmc.org.*

FOR FURTHER INFORMATION CONTACT: Christopher M. Moore, Ph.D., Executive Director, Mid-Atlantic Fishery Management Council, telephone: (302) 526–5255.

SUPPLEMENTARY INFORMATION: The joint sub-panel, consisting of Mid-Atlantic and New England SSC members and ASMFC Assessment Science Committee members, will meet to review and provide input on the Northeast Fisheries Science Center (NEFSC) draft survey mitigation plans relative to offshore wind development. NOAA Fisheries and the Bureau of Ocean Energy Management (BOEM) developed the Federal Survey Mitigation Strategy (Strategy) which describes the impacts of wind energy development on fisheries-independent surveys and outlines the goals, objectives, and actions to guide the development and implementation of a program to mitigate the impacts on fisheries-independent surveys. To address the actions outlined in the Strategy, the NEFSC developed the Northeast Survey Mitigation Program and survey-specific mitigation plans to ensure NEFSC can continue to provide equal or higher quality science for each of the long-term, recurring surveys conducted by NEFSC that will be impacted by offshore wind development. The survey mitigation plans include descriptions of the impacted survey, specific stakeholders for the data collected, impacts of offshore wind development, and planned mitigation measures to address the impacts of wind energy development on scientific surveys.

To ensure the survey mitigation plans represent the best science available, the joint sub-panel will peer review the draft survey mitigation plans prepared by the NEFSC for eight existing fishery-independent surveys and three new supplemental surveys. The sub-panel will evaluate the detail and scientific soundness of the mitigation approaches described in each plan, following a set of Terms of Reference. The NEFSC will consider the feedback received from the sub-panel and will address and/or incorporate into revised survey mitigation plans as appropriate.

A detailed agenda and background documents will be made available on the Council's website (*www.mafmc.org*) prior to the meeting.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aid should be directed to Shelley Spedden, (302) 526–5251, at least 5 days prior to the meeting date.

Authority: 16 U.S.C 1801 *et seq.*

Fisheries of the South Atlantic; Southeast Data, Assessment, and Review (SEDAR); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 92 Atlantic Blueline Tilefish Landings Stream Topical Working Group (LS–TWG) Webinar I.

SUMMARY: The SEDAR 92 assessment of the Atlantic stock of blueline tilefish will consist of a series of assessment webinars. SEDAR 92 Webinar I is scheduled for May 22, 2024. See **SUPPLEMENTARY INFORMATION**.

DATES: The SEDAR 92 Atlantic Blueline Tilefish LS–TWG Webinar I is scheduled for May 22, 2024, from 1 p.m. to 3 p.m., eastern. The established times may be adjusted as necessary to accommodate the timely completion of discussion relevant to the assessment process. Such adjustments may result in the meeting being extended from or completed prior to the time established by this notice.

ADDRESSES: The meeting will be held via webinar. The webinar is open to

members of the public. Registration for the webinar is available by contacting the SEDAR coordinator via email at *Julie.Neer@safmc.net.*

SEDAR address: South Atlantic Fishery Management Council, 4055 Faber Place Drive, Suite 201, N Charleston, SC 29405; *www.sedarweb.org.*

FOR FURTHER INFORMATION CONTACT: Julie Neer, SEDAR Coordinator, 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405; phone: (843) 571–4366; email: *Julie.Neer@safmc.net.*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions, have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a three-step process including: (1) Data Workshop; (2) Assessment Process utilizing webinars; and (3) Review Workshop. The product of the Data Workshop is a data report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The product of the Assessment Process is a stock assessment report which describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The assessment is independently peer reviewed at the Review Workshop. The product of the Review Workshop is a Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, Highly Migratory Species Management Division, and Southeast Fisheries Science Center. Participants include: data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and non-governmental organizations (NGOs); international experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion at the SEDAR 92 Atlantic Blueline Tilefish LS–TWG Webinar I are as follows:

Discuss available data sources, review preliminary analysis, and provide guidance for next steps.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

This meeting is accessible to people with disabilities. Requests for auxiliary aids should be directed to the South Atlantic Fishery Management Council office (see **ADDRESSES**) at least 5 business days prior to the meeting.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

SUMMARY: The SEDAR 84 assessment process of U.S. Caribbean yellowtail snapper and stoplight parrotfish will consist of a Data Workshop, and a series of assessment webinars, and a Review Workshop. See **SUPPLEMENTARY INFORMATION**.

DATES: The SEDAR 84 Assessment Webinar II will be held May 23, 2024, from 2 p.m. to 4 p.m., eastern time.

ADDRESSES: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Julie A. Neer at SEDAR (see **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information. Please request webinar invitations at least 24 hours in advance of each webinar.

SEDAR address: 4055 Faber Place Drive, Suite 201, North Charleston, SC 29405.

FOR FURTHER INFORMATION CONTACT: Julie A. Neer, SEDAR Coordinator; (843) 571–4366; email: *Julie.neer@safmc.net.*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a multi-step process including: (1) Data Workshop, (2) a series of assessment webinars, and (3) A Review Workshop. The product of the Data Workshop is a report that compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The assessment webinars produce a report that describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The product of the Review Workshop is an Assessment Summary documenting panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, HMS Management Division, and Southeast Fisheries Science Center. Participants include data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and NGO's; International experts; and staff of Councils, Commissions, and state and federal agencies.

The items of discussion during the Assessment Webinar II are as follows:

Panelists will review and discuss initial assessment modeling to date.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically identified in this notice and any issues

arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to the Council office (see **ADDRESSES**) at least 5 business days prior to each workshop.

Note: The times and sequence specified in this agenda are subject to change.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 1, 2024.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Tornado Watch/Warning Post-Event Evaluation

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on February 9th, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration, Commerce.

Title: Tornado Watch/Warning Post-Event Evaluation.

OMB Control Number: 0648–0797.

Form Number(s): None.

Type of Request: Regular submission: revision.

Number of Respondents: Surveys: 1,200, Interviews: 50.

Average Hours per Response: Surveys: 5–10 minutes, Interviews: 15–30 minutes.

Total Annual Burden Hours: Survey: 200 hours, Interviews: 25 hours.

Needs and Uses: Each year over 1000 tornadoes affect communities across the United States, yet little is known about how individuals receive, interpret, and respond to information from NOAA relating to this hazard. In fact, only a small sample of tornadoes ever receive study, and most often those are only the most violent tornadoes. No generalizable, or even relatively large-scale information on tornado forecast and warning response after real-world events exists. The NOAA National Weather Service (NWS) and National Severe Storms Laboratory (NSSL) designed the data collection instrument to allow for more routine collection of this information. Respondents include members of the United States public who have been in or near a tornado, received a tornado warning, or were in or near a strong storm that made them concerned about tornadoes. They answer questions about the ways they received, understood, and responded to information about the event, including NWS watch and warning information. This survey is delivered through a web application hosted by NSSL called Tornado Tales, available online at *https://inside.nssl.noaa.gov/tornado-tales/.*

After approval of our initial data collection instrument (that shown on the website), the OU Cooperative Institute for Severe and High-Impact Weather Research and Operations (CIWRO) and NOAA NSSL Behavioral Insights Unit carried out post-event data collections for multiple tornado events, validating the questions and identifying issues for improvement. This fieldwork led to several needed improvements, including the addition of questions about the event more broadly, changing some response types, rephrasing some questions that were interpreted too broadly, and including questions about efficacy and the availability of forecast information to individuals. While the revisions have added questions to the survey, their improved clarity should allow for faster response times per question. We estimate the time to complete the survey is five to ten minutes on average. Subject recruitment will primarily be done by NOAA NSSL and its partners advertising the survey via websites and social media outlets. In addition to these efforts, there is also the possibility that during post-storm damage assessment activities NWS forecasters may direct impacted individuals to the Tornado Tales website.

In addition to the changes to the survey instrument, researchers at NOAA NSSL and at the OU CIWRO Behavioral Insights Unit would like to conduct interviews with emergency managers, broadcast meteorologists, and members of the public after certain tornado events. These more in-depth interviews will collect similar information to the survey instrument from members of the public, broadcast meteorologists, and Emergency Management personnel who recently experienced a tornado event. The interviews will walk respondents through a timeline of events leading up to the tornado event. Researchers will use a skip-logic approach, meaning participants will only answer questions about the time periods relevant to their personal experience. The purpose of these interviews will be to more thoroughly explore how residents, broadcast meteorologists, and Emergency Managers received, understood, and responded to tornado forecasts and warnings. Given the in-person nature of these interviews, we expect them to take between 15 and 30 minutes on average.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

Legal Authority: N/A.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0797.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–KE–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0048]

Privacy Act of 1974; System of Records

AGENCY: Office of the Secretary of Defense, Department of Defense (DoD).

ACTION: Notice of a new system of records.

SUMMARY: In accordance with the Privacy Act of 1974, the DoD is establishing a new system of records titled, ''All-domain Anomaly Resolution and Anomalous Phenomena (AARO) Program Records,'' AARO–0001. This system of records describes the AARO's collection, use, and maintenance of correspondence and reports submitted from current or former U.S. government employees, service members, or contractors with direct knowledge of U.S. Government programs or activities related to Unidentified Anomalous Phenomenon (UAP) dating back to 1945. This system also includes correspondence and reports submitted from members of the general public and government-affiliated personnel on reported events related to UAP. The submitted information will be used to carry out AARO's mission, including to inform AARO's congressionally directed Historical Record Report. Additionally, DoD is issuing a direct final rulemaking, which will exempt this system of records from certain provisions of the Privacy Act, elsewhere in this issue of the **Federal Register**.

DATES: This system of records is effective May 6, 2024; however, comments on the Routine Uses will be accepted on or before June 5, 2024. The Routine Uses take effect at the close of the comment period.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.

* *Mail:* Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Attn: Mailbox 24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *https://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Paul Plescow, Chief of Staff, All-domain Anomaly Resolution Office, Office of the Deputy Secretary of Defense, 5000 Defense Pentagon, 3C949, Washington, DC 20301–5000, ATTN: AARO; *osd.pentagon.ousd-intel-sec.mesg.contact-aaro-mbx@mail.mil;* phone 703–693–6081.

SUPPLEMENTARY INFORMATION:

I. Background

The All-domain Anomalous Resolution Office is an office within the Office of the Secretary of Defense charged with the mission to synchronize efforts across the DoD, and with other U.S. Federal departments and agencies, to detect, identify and attribute objects of interest in, on or near military installations, operating areas, training areas, special use airspace and other areas of interest, and, as necessary, to mitigate any associated threats to safety of operations and national security. This includes anomalous, unidentified space, airborne, submerged and transmedium objects. In furtherance of this mission, the AARO Report System covers the AARO's maintenance of correspondence and reports received from current or former U.S. government employees, service members, or contractor personnel with direct knowledge of U.S. Government programs or activities related to UAP dating back to 1945. This system also includes correspondence and reports received from members of the general public and government-affiliated personnel on events related to UAP. The records include contact information and any other reported information voluntarily provided by submitters.

Additionally, DoD is issuing a direct final rule to exempt this system of records from certain provisions of the Privacy Act elsewhere in today's issue of the **Federal Register**. DoD SORNs have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at the Defense Privacy, Civil Liberties, and Transparency Division website at *https://dpcld.defense.gov.*

II. Privacy Act

Under the Privacy Act, a ''system of records'' is a group of records under the control of an agency from which information is retrieved by the name of an individual or by some identifying number, symbol, or other identifying particular assigned to the individual. In the Privacy Act, an individual is defined as a U.S. citizen or lawful permanent resident.

In accordance with 5 U.S.C. 552a(r) and Office of Management and Budget (OMB) Circular No. A–108, DoD has provided a report of this system of records to the OMB and to Congress.

Dated: April 29, 2024.

Aaron T. Siegel,

Alternate OSD Federal RegisterLiaison Officer, Department of Defense.

SYSTEM NAME AND NUMBER:

All-domain Anomaly Resolution and Anomalous Phenomena Program Records,'' AARO–0001.

SECURITY CLASSIFICATION:

Unclassified; Classified.

SYSTEM LOCATION:

All-domain Anomaly Resolution Office, Office of the Deputy Secretary of Defense, 5000 Defense Pentagon, 3C949, Washington, DC 20301–5000. Information may also be stored within a government-certified cloud, implemented and overseen by the Department's Chief Information Officer (CIO), 6000 Defense Pentagon, Washington, DC 20301–6000.

SYSTEM MANAGER(S):

The system manager for this system of records is the Chief of Staff, All-domain Anomaly Resolution Office, Office of the Deputy Secretary of Defense, 5000 Defense Pentagon, 3C949, Washington, DC 20301–5000, ATTN: AARO; *osd.pentagon.ousd-intel-sec.mesg.contact-aaro-mbx@mail.mil;* phone 703–693–6081.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

10 U.S.C. 113, Secretary of Defense; 44 U.S.C. 2107, Acceptance of Records for Historical Preservation; Section 1673 of the National Defense Authorization Act for Fiscal Year 2023 (Pub. Law 117–263).

PURPOSE(S) OF THE SYSTEM:

A. To manage records maintained in furtherance of AARO's mission, including to synchronize efforts across the DoD and with other U.S. Federal departments and agencies to detect, identify, and attribute objects of interest in, on or near military installations, operating areas, training areas, special use airspace and other areas of interest, and, as necessary, to mitigate any associated threats to safety of operations and national security. This includes anomalous, unidentified space, airborne, submerged and transmedium objects.

B. To document, manage, track, and oversee correspondence and reports from current or former U.S. government employees, service members, or contractor personnel with direct knowledge of U.S. Government programs or activities related to UAP dating back to 1945.

C. To document, manage, track, and oversee correspondence and reports from the general public and Government-affiliated personnel concerning events related to UAP.

D. To track and report data, conduct research and statistical analysis, and evaluate program effectiveness.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

A. Current or former U.S. Government employees, uniformed service members, and contractor personnel with direct knowledge of U.S. Government programs or activities related to UAP dating back to 1945 or who report any event related to UAP;

B. Members of the general public and Government-affiliated personnel who provide correspondence or reports concerning events related to UAP.

CATEGORIES OF RECORDS IN THE SYSTEM:

A. Personal information including: Name, DoD ID number, home and email addresses, phone numbers, U.S. Government or contractor employment status, driver's license ID information, security clearance information.

B. Information related to UAPs including: correspondence and reports of events related to UAP, event description or narrative, location relative to the observer, any reported health implications related to UAP, metadata, night vision camera footage, characteristics, including physical state (*e.g.,* size shape, color), observer's assessment of the UAP, including the nature of the phenomenon and whether it was benign, hazard, or a threat, imagery and metadata from photography or recording devices, including mobile phones, and analytical products related to submitted correspondence and reports. The specific types of data in these records may vary widely depending on the nature of the individual's report or correspondence.

RECORD SOURCE CATEGORIES:

Records and information maintained in this system of records are obtained from the individuals; some records may also be obtained from other systems or databases maintained by other DoD or OSD components or other agencies.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, all or a portion of the records or information contained herein may specifically be disclosed outside the DoD as a Routine Use pursuant to 5 U.S.C. 552a(b)(3) as follows:

A. To contractors, grantees, experts, consultants, students, and others performing or working on a contract, service, grant, cooperative agreement, or other assignment for the Federal Government when necessary to accomplish an agency function related to this system of records.

B. To the appropriate Federal, State, local, territorial, tribal, foreign, or international law enforcement authority or other appropriate entity where a record, either alone or in conjunction with other information, indicates a violation or potential violation of law, whether criminal, civil, or regulatory in nature.

C. To any component of the Department of Justice for the purpose of representing the DoD, or its components, officers, employees, or members in pending or potential litigation to which the record is pertinent.

D. In an appropriate proceeding before a court, grand jury, or administrative or adjudicative body or official, when the DoD or other Agency representing the DoD determines that the records are relevant and necessary to the proceeding; or in an appropriate proceeding before an administrative or adjudicative body when the adjudicator determines the records to be relevant to the proceeding.

E. To the National Archives and Records Administration for the purpose of records management inspections conducted under the authority of 44 U.S.C. 2904 and 2906.

F. To a Member of Congress or staff acting upon the Member's behalf when the Member or staff requests the information on behalf of, and at the request of, the individual who is the subject of the record.

G. To appropriate agencies, entities, and persons when (1) the DoD suspects or confirms a breach of the system of records; (2) the DoD determines as a result of the suspected or confirmed breach there is a risk of harm to individuals, the DoD (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the DoD's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

H. To another Federal agency or Federal entity, when the DoD determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

I. To another Federal, State or local agency for the purpose of comparing to the agency's system of records or to non-Federal records, in coordination with an Office of Inspector General in conducting an audit, investigation, inspection, evaluation, or other review as authorized by the Inspector General Act of 1978, as amended.

J. To such recipients and under such circumstances and procedures as are mandated by Federal statute, treaty, or other international agreement.

K. To an authorized appeal or grievance examiner, formal complaints examiner, equal employment opportunity investigator, arbitrator, or other duly authorized official engaged in investigation or settlement of a grievance, complaint, or appeal filed by an employee.

L. To appropriate Federal, State, local, territorial, tribal, foreign, or international agencies for the purpose of scientific study or counterintelligence activities authorized by U.S. law or Executive Order, or for the purpose of executing or enforcing laws designed to protect the national security or homeland security of the United States, including those relating to the sharing of records or information concerning terrorism, homeland security, or law enforcement.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records may be stored electronically or on paper in secure facilities in a locked drawer behind a locked door. Electronic records may be stored locally on digital media; in agency-owned cloud environments; or in vendor Cloud Service Offerings certified under the Federal Risk and Authorization Management Program (FedRAMP).

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records may be retrieved by name and case number, or combination of both.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Disposition pending; until the National Archives and Records Administration has approved the retention and disposition schedule, treat as permanent.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

DoD safeguards records in this system of records according to applicable rules, policies, and procedures, including all applicable DoD automated systems security and access policies. DoD policies require the use of controls to minimize the risk of compromise of personally identifiable information (PII) in paper and electronic form and to enforce access by those with a need to know and with appropriate clearances. Additionally, DoD has established security audit and accountability policies and procedures which support the safeguarding of PII and detection of potential PII incidents. DoD routinely employs safeguards such as the following to information systems and paper recordkeeping systems: Multifactor log-in authentication including Common Access Card (CAC) authentication and password; physical token as required; physical and technological access controls governing access to data; network encryption to protect data transmitted over the network; disk encryption securing disks storing data; key management services to safeguard encryption keys; masking of sensitive data as practicable; mandatory information assurance and privacy training for individuals who will have access; identification, marking, and safeguarding of PII; physical access safeguards including multifactor identification physical access controls, detection and electronic alert systems for access to servers and other network infrastructure; and electronic intrusion detection systems in DoD facilities.

RECORD ACCESS PROCEDURES:

Individuals seeking access to their records should follow the procedures in 32 CFR part 310. Individuals should address written inquiries to the Office of the Secretary of Defense/Joint Staff Freedom of Information Act Requester Service Center, 1155 Defense Pentagon, Washington, DC 20301–1155. Signed written requests should contain the name and number of this system of records notice along with the full name, current address, and email address of the individual. In addition, the requester must provide either a notarized statement or an unsworn declaration made in accordance with 28 U.S.C. 1746, in the appropriate format:

If executed outside the United States: ''I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature).''

If executed within the United States, its territories, possessions, or commonwealths: ''I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date). (Signature).''

CONTESTING RECORD PROCEDURES:

Individuals seeking to amend or correct the content of records about them should follow the procedures in 32 CFR part 310.

NOTIFICATION PROCEDURES:

Individuals seeking to determine whether information about themselves is contained in this system of records should follow the instructions for Record Access Procedures above.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

The DoD has exempted records maintained in this system from 5 U.S.C. 552a(c)(3); (d)(1), (2), (3), and (4); (e)(1); (e)(4)(G), (H), and (I); and (f) pursuant to 5 U.S.C. 552a(k)(1). In addition, when exempt records received from other systems of records become part of this system, the DoD also claims the same exemptions for those records that are claimed for the prior system(s) of records of which they were a part, and claims any additional exemptions set forth here. An exemption rule for this system has been promulgated in accordance with requirements of 5 U.S.C. 553(b)(1), (2), and (3), (c), and published in 32 CFR part 310.

HISTORY:

None.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Notice of Availability of Draft Environmental Assessment for DARPA's Reefense Program, Baker Point, Florida

AGENCY: Defense Advanced Research Projects Agency (DARPA), Department of Defense (DoD).

ACTION: Notice; availability of a draft environmental assessment; request for comments.

SUMMARY: DARPA announces the availability of a Draft Environmental Assessment (EA) for the Reefense Program at Baker Point, Florida. DARPA is requesting comment on this draft EA.

DATES: The 30-day public comment period begins on May 6, 2024, and extends to June 5, 2024. Comments must be submitted electronically via the website no later than 11:59 p.m. Eastern Standard Time on June 5, 2024.

ADDRESSES: DARPA invites all interested parties to submit comments on the Draft EA through the project website *https://hsrl.rutgers.edu/research/darpa-reefense.*

FOR FURTHER INFORMATION CONTACT: Dr. Catherine Campbell, 703–526–2044 (Voice), *Catherine.Campbell@darpa.mil* (Email).

SUPPLEMENTARY INFORMATION: Publication of this notice begins the official public comment period for this draft EA. Per the National Environmental Policy Act (NEPA), the purpose of the draft EA is to evaluate the potential direct, indirect, and cumulative impacts caused by the Reefense program at Baker Point, FL. All comments received will become part of the public record and will be available for review.

Background

DARPA proposes to fund the development of bio-hybrid reef structures to help attenuate wave energy and protect United States (U.S.) DoD and coastal infrastructure through the Reefense Program (the Proposed Action). The strategy of DARPA's Reefense program includes employing recent innovations in materials science, hydrodynamic modeling, and adaptive biology to develop growing structures that are optimized to rapidly implement coastal defenses suited to a changing environment. DARPA's Reefense program involves the construction of custom wave-attenuating base structures to promote growth of reef-building organisms (*e.g.,* coral or oysters). The reef-building organisms would enable the Reefense structures to naturally self-heal and keep pace with sea level rise over time. Reefense structures would also include components to attract non-reef building organisms necessary to help maintain a healthy, growing reef. Finally, adaptive biology would enable improved resilience against disease and temperature stress for organisms present, to ensure compatibility with a changing environment. As soon as the Reefense structures are deployed, they would immediately attenuate coastal wave energy. As the structures facilitate the growth of the reef-building organisms, they would provide a biological benefit (*e.g.,* habitat for

mobile reef species) in just a few months or years that would be equivalent to decades of growth for a similarly-sized naturally-occurring reef.

National Environmental Policy Act

This notice is provided pursuant to NEPA regulations at 40 CFR 1506.6 and the draft EA was prepared in accordance with NEPA regulations at 40 CFR parts 1500–1508.

Alternatives Considered

Preferred Alternative: DARPA's proposed action is the deployment of Reefense structures at Baker Point, Florida. Deployment would occur over two phases with multiple components being proposed for each deployment. Components would consist of reef module breakwaters, mosaic oyster habitat structures (varying in height with low, medium, and high relief structures), and intertidal vegetation planting.

No Action Alternative: Under the No Action Alternative, the Proposed Action would not occur. No deployment of Reefense structures would occur within the proposed action area, and the Baker Point area would be left undeveloped unless/until other in-water construction is proposed as part of a future project. The No Action Alternative would not meet the purpose of and need for the Proposed Action because there would be no furthering of research on climate change-related shoreline protection; however, as required by CEQ Regulations (40 CFR 1502.14), the No Action Alternative is carried forward for analysis in this draft EA. The No Action Alternative will be used to analyze the consequences of not undertaking the Proposed Action, not simply conclude no impact, and will serve to establish a comparative baseline for analysis.

DARPA will publish a record of its final action in the **Federal Register**.

Dated: April 30, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Education Innovation and Research (EIR) Program Early-phase Grants

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for fiscal year (FY) 2024 for the EIR program Early-phase Grants, Assistance Listing Number 84.411C (Early-phase Grants). This notice relates to the approved information collection under OMB control number 1894–0006.

DATES:

Applications Available: May 6, 2024.

Deadline for Notice of Intent to Apply: June 6, 2024.

Deadline for Transmittal of Applications: July 22, 2024.

Deadline for Intergovernmental Review: September 20, 2024.

Pre-Application Information: The Department will post additional competition information for prospective applicants on the EIR program website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/*.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs*.

FOR FURTHER INFORMATION CONTACT: Jamila Smith, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202–5900. Telephone: (202) 987–1753. Email: *eir@ed.gov*.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION: Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The EIR program, established under section 4611 of the Elementary and Secondary Education Act, as amended (ESEA), provides funding to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based (as defined in this notice), field-initiated innovations to improve student achievement and attainment for high-need students and to rigorously evaluate such innovations. The EIR program is designed to generate and validate solutions to persistent education challenges and to support the expansion of those solutions to serve substantially more students.

The central design element of the EIR program is its multitier structure that links the amount of funding an applicant may receive to the quality of the evidence supporting the efficacy of the proposed project, with the expectation that projects that build this evidence will advance through EIR's grant tiers: ''Early-phase,'' ''Mid-phase,'' and ''Expansion.''

''Early-phase,'' ''Mid-phase,'' and ''Expansion'' grants differ in terms of the level of prior evidence of effectiveness required for consideration for funding, the expectations regarding the kind of evidence and information funded projects should produce, the scale of funded projects, and, consequently, the amount of funding available to support each type of project.

Early-phase grants must demonstrate a rationale (as defined in this notice). Early-phase grants provide funding for the development, implementation, and feasibility testing of a program that prior research suggests has promise, for the purpose of determining whether the program can successfully improve student achievement and attainment for high-need students. Early-phase grants are not intended to simply expand established practices or address needs unique to one particular context. Rather, the goal is to determine whether and in what ways relatively new practices can improve student achievement and attainment for high-need students.

This notice invites applications for Early-phase grants only. The notices inviting applications for Mid-phase grants and Expansion grants are published elsewhere in this issue of the **Federal Register**.

Background:

While this notice is for the Early-phase grants tier only, the premise of the EIR program is that new, innovative, and promising educational programs and practices can help to overcome the persistent and significant challenges to student educational opportunity and success, particularly for underserved and high-need students. Raise the Bar: Lead the World is the Department's call to action to transform pre-kindergarten (Pre-K) through grade 12 education and unite around what works in promoting academic excellence, boldly improving learning conditions, and preparing our Nation's students for global competitiveness.[1] Consistent with that

[1] U.S. Secretary of Education Miguel Cardona laid out his vision for the direction the Department will follow in 2024 to promote academic excellence, improve learning conditions, and prepare our students for a world where global engagement is

Continued

call to action, the priorities used in this competition advance Raise the Bar's goals to promote academic excellence and boldly improve learning conditions.

In FY 2024, the Department is particularly interested in projects that propose services and activities that help students recover from the COVID–19 pandemic, accelerate learning and academic achievement, reimagine schools, and transform our education system. Specifically, the Department is focused on improving student achievement and attainment, as highlighted across Administration and Department efforts for the past several years. Building on the Administration's previous efforts, in January 2024, the Administration announced its Improving Student Achievement Agenda,[2] which aims to drive proven strategies that will support academic success for every child in school. The strategies and evidence discussed in the Improving Student Achievement Agenda focus on (1) increasing student attendance; (2) providing high-dosage tutoring; and (3) increasing summer learning and extended or afterschool learning time. These strategies and the broader Improving Student Achievement Agenda, including a focus on core academic instruction, are well aligned with the EIR program purpose, and the new funding to be released through the FY 2024 EIR competition will help accelerate and scale up sustainable adoption of evidence-based strategies that we expect will improve student achievement and attainment in the school years ahead. The priorities in this competition are designed to create conditions under which students have equitable access to high-quality learning opportunities and experiences. For example, projects may include new approaches to instructional design such as through project-based or experiential learning opportunities for students, schoolwide frameworks, such as small schools or learning communities, that support student connection and engagement and increased interagency coordination to improve academic supports for highly mobile students such as students in foster care and students experiencing homelessness.

Note: The EIR program statute refers to ''high-need students'' but does not define the term, which allows applicants to define it for purposes of their proposed project, population, and setting. Addressing the needs of underserved students (as defined in this notice) is one way to address EIR's statutory requirement to serve ''high-need students.'' In particular, the Department welcomes innovative and promising projects that serve disconnected youth, students who are in foster care, and students performing significantly below grade level.

The EIR program is rooted in innovation; the program is not intended to provide support for practices that are already commonly implemented by educators, unless significant adaptations of such practices warrant testing to determine if they can accelerate achievement or increase the likelihood that the practices can be widely, efficiently, and effectively implemented in new populations and settings. If the evaluation demonstrates that innovations are supported by sufficient evidence of effectiveness, they can be replicated and tested in new populations and settings.

As an EIR project is implemented, grantees are encouraged to learn more about how the practices improve student achievement and attainment, as well as to develop increasingly rigorous evidence of effectiveness and new strategies to efficiently and cost-effectively scale to new school districts, regions, and States. To meet the required evidence level, applicants must develop a logic model (as defined in this notice), theory of action, or another conceptual framework that includes the goals, objectives, outcomes, and key project components (as defined in this notice) of the project.

All EIR applicants and grantees should also consider how they will develop their organizational capacity, project financing, and business plans to sustain their projects and continue implementation and adaptation after Federal funding ends. The Department intends to provide grantees with technical assistance to support dissemination, scaling, and sustainability efforts.

Early-phase grant projects are encouraged to make continuous and iterative improvements in project design and implementation before conducting a full-scale evaluation of effectiveness. Applicants should consider how easily others could implement the proposed practice, and how its implementation could potentially be improved. Additionally, applicants should consider using data from early indicators to gauge initial impact and to consider possible changes in implementation that could increase student achievement and attainment.

Early-phase grant projects should develop, implement, and test the feasibility of their projects. The evaluation of an Early-phase grant project should be an experimental or quasi-experimental design study (both as defined in this notice) that can determine whether the program can successfully improve student achievement and attainment for high-need students. Early-phase grant evaluation designs should demonstrate a statistically significant effect on improving student outcomes or other relevant outcomes (as defined in this notice) based on moderate evidence (as defined in this notice) from at least one well-designed and well-implemented experimental or quasi-experimental design study. The Department intends to provide EIR grantees (including the independent evaluators they contract with as part of their project) with evaluation technical assistance. This could include grantees and their independent evaluators providing to the Department or its contractor updated comprehensive evaluation plans in a format as requested by the technical assistance provider and using such tools as the Department may request. Grantees will be encouraged to update this evaluation plan at least annually to reflect any changes to the evaluation with updates consistent with the scope and objectives of the approved application.

The FY 2024 Early-phase grants competition includes five absolute priorities and two competitive preference priorities. All Early-phase grant applicants must address Absolute Priority 1. Early-phase grant applicants are also required to address one of the other four absolute priorities (applicants may not submit under more than one of the other four absolute priorities). All applicants have the option of addressing the competitive preference priorities and may opt to do so regardless of the absolute priority they select.

Absolute Priority 1—Demonstrates a Rationale establishes the evidence required for this tier of grants. All Early-phase grants applicants must submit prior evidence of effectiveness that demonstrates a rationale.

Absolute Priority 2—Field-Initiated Innovations—General gives applicants the option to propose projects that are field-initiated innovations to improve student achievement and attainment.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Science, Technology, Engineering, and

---

critical to our Nation's standing. In his address Secretary Cardona remarked that ''Raise the Bar: Lead the World'' is not a list of new priorities, but a call to strengthen our will to transform education for the better, building on approaches that we know work in education. More information is available at *https://www.ed.gov/raisethebar.*

[2] *https://www.whitehouse.gov/briefing-room/statements-releases/2024/01/17/fact-sheet-biden-harris-administration-announces-improving-student-achievement-agenda-in-2024/.*

Mathematics (STEM) is intended to support innovations to improve student achievement and attainment in the STEM education field, consistent with efforts to ensure our Nation's economic competitiveness by improving and expanding STEM learning and engagement.

In Absolute Priority 3, the Department recognizes the importance of funding pre-K through grade 12 STEM education and anticipates that projects would expand opportunities for high-need students. Within this absolute priority, applicants may focus on expanding opportunities in STEM education, including computer science, for underrepresented students in STEM education, including students of color, girls, English learners, students with disabilities, youth from rural communities, and youth from families living at or below the poverty line, to help reduce the enrollment and achievement gaps in a manner consistent with nondiscrimination requirements contained in Federal civil rights laws.

Absolute Priority 4—Field-Initiated Innovations—Meeting Student Social, Emotional, and Academic Needs is intended to promote high-quality social and emotional learning projects. The disruption caused by the pandemic, along with the growth in youth mental health distress, continue to impact student well-being. It is critical to address students' social and emotional needs, not only to benefit student well-being, but also to support their academic success, as student social, emotional, and academic development are interconnected.

Absolute Priority 5—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Educator Recruitment and Retention is intended to elevate and strengthen the educator workforce in ways that prioritize innovation in recruiting and retaining educators to better support high-need students. Applicants are encouraged to address fundamental challenges that schools face in recruiting and retaining fully qualified educators, by addressing the responsibilities and challenges educators continue to face after the pandemic. For example, projects may be designed to improve supports for educators that enhance the ability of schools to recruit and retain staff (*e.g.,* strategies to support educator wellbeing or structuring staffing and schedules to ensure educators and students are appropriately supported, and have sufficient time for planning, collaboration, working with coaches, and observing instruction of other educators) and increase access to leadership opportunities that can lead to increased pay and improved retention for fully certified, experienced, and effective educators, while expanding the impact of great teachers within and beyond their classrooms. Projects may support the recruitment and retention of all school staff or specific staff with acute recruitment and retention challenges (*e.g.,* personnel serving children or students with disabilities).

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners is intended to encourage applicants to propose projects that promote partnerships with entities underrepresented under this program. The Department is eager to increase the volume of projects and partners from entities such as community colleges (as defined in this notice), Historically Black colleges and universities (as defined in this notice), Tribal Colleges and Universities (as defined in this notice), and minority-serving institutions (as defined in this notice). The Department expects applicants addressing this priority will raise the bar to reimagine schools through partnerships with underrepresented groups in ways that benefit underserved and high-need students.

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Supports reflects the Administration's ongoing commitment to addressing the impact of the COVID–19 pandemic on Pre-K through grade 12 education. The pandemic caused unprecedented disruption in schools across the country and drew renewed attention to the ongoing challenges for underserved students. In response to the pandemic, educators mobilized to address the needs of all students. Researchers, educators, parents, and policymakers are continuing to work to understand and address the impact of inconsistent access to instruction, enrichment, peers, services and supports, and the impact of other related challenges. We also know that for students in underserved communities, inequities in educational opportunity and outcomes existed previously, yet were exacerbated by the pandemic.[3] The impact of the COVID–19 pandemic changed the education landscape, especially as students continue to make up for lost classroom instruction. However, it also provides an opportunity to redesign how schools approach teaching and learning in ways that both address long-standing gaps in educational opportunity and better prepare students for college and careers. Over 14 million public school students (31 percent) missed at least 10 percent of school in school year 2021–2022.[4] According to analysis by the Council of Economic Advisors, absenteeism accounted for up to 27 percent of the test score declines in math and 45 percent of the test score declines in reading on the National Assessment of Educational Progress.[5] To that end, the Department seeks projects that develop and evaluate evidence-based, field-initiated innovations to address challenges and inequities caused by the COVID–19 pandemic. The proposed innovations should be designed to better enable students to access the educational opportunities they need to succeed in school and reach their full potential.

Through these priorities, the Department intends to advance innovation, build evidence, and address the learning and achievement of underserved and high-need students in Pre-K through grade 12.

Priorities: This notice includes five absolute priorities and two competitive preference priorities. In accordance with 34 CFR 75.105(b)(2)(ii), Absolute Priority 1 is from the Administrative Priorities for Discretionary Grant Programs published in the **Federal Register** on March 9, 2020 (85 FR 13640) (Administrative Priorities). In accordance with 34 CFR 75.105(b)(2)(iv), Absolute Priority 2 is from section 4611(a)(1)(A) of the ESEA. In accordance with 34 CFR 75.105(b)(2)(iv), Absolute Priorities 3, 4, and 5 are from section 4611(a)(1)(A) of the ESEA and the Supplemental Priorities and Definitions for Discretionary Grants Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities). competitive preference priorities are from the Supplemental Priorities.

In the Early-phase grant competition, Absolute Priorities 2, 3, 4, and 5 each constitute a separate funding category. The Secretary intends to award grants under each of these absolute priorities provided that applications submitted are of sufficient quality. To ensure that applicants are reviewed under the absolute priority most relevant to their proposed project, applicants must clearly identify the specific absolute priority that the proposed project addresses. If an applicant is interested in proposing separate projects (*e.g.,* one that addresses Absolute Priority 2 and another that addresses Absolute Priority 3), it must submit separate applications.

Absolute Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are absolute priorities. Under 34 CFR 75.105(c)(3), we consider only applications that meet Absolute Priority 1 and one additional absolute priority (Absolute Priority 2, Absolute Priority 3, Absolute Priority 4, or Absolute Priority 5).

These priorities are:

Absolute Priority 1—Applications that Demonstrate a Rationale.

Projects that demonstrate a rationale (as defined in this notice).

Absolute Priority 2—Field-Initiated Innovations—General.

Projects that are designed to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: STEM.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Promote educational equity and adequacy in resources and opportunity for underserved students—

(1) In one or more of the following educational settings:

(i) Early learning programs.

(ii) Elementary school.

(iii) Middle school.

(iv) High school.

(v) Career and technical education programs.

(vi) Out-of-school-time settings.

(vii) Alternative schools and programs.

(viii) Juvenile justice system or correctional facilities; and

(2) That examine the sources of inequity and inadequacy and implement responses, including rigorous, engaging, and well-rounded (*e.g.,* that include music and the arts) approaches to learning that are inclusive with regard to race, ethnicity, culture, language, and disability status and prepare students for college, career, and civic life, including science, technology, engineering, and mathematics (STEM), including computer science coursework.

Absolute Priority 4—Field-Initiated Innovations—Meeting Student Social, Emotional, and Academic Needs.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Improve students' social, emotional, academic, and career development, with a focus on underserved students, through one or more of the following priority areas:

(1) Developing and supporting educator and school capacity to support social and emotional learning and development that—

(i) Fosters skills and behaviors that enable academic progress;

(ii) Identifies and addresses conditions in the learning environment, that may negatively impact social and emotional well-being for underserved students, including conditions that affect physical safety; and

(iii) Is trauma-informed, such as addressing exposure to community-based violence and trauma specific to military- or veteran-connected students (as defined in this notice).

(2) Creating education or work-based settings that are supportive, positive, identity-safe and inclusive with regard to race, ethnicity, culture, language, and disability status, through one or more of the following activities:

(i) Developing trusting relationships between students (including underserved students), educators, families, and community partners.

(ii) Providing high-quality professional development opportunities designed to increase engagement and belonging and build asset-based mindsets for educators working in and throughout schools.

(iii) Engaging students (including underserved students), educators, families, and community partners from diverse backgrounds and representative of the community as partners in school climate review and improvement efforts.

(iv) Developing and implementing inclusive and culturally informed discipline policies and addressing disparities in school discipline policy by identifying and addressing the root causes of those disparities, including by involving educators, students, and families in decision-making about discipline procedures and providing training and resources to educators.

(3) Providing multi-tiered systems of supports that address learning barriers both in and out of the classroom, that enable healthy development and respond to students' needs and which may include evidence-based trauma-informed practices and professional development for educators on avoiding deficit-based approaches.

(4) Developing or implementing policies and practices, consistent with applicable Federal law, that prevent or reduce significant disproportionality on the basis of race or ethnicity with respect to the identification, placement, and disciplining of children or students with disabilities (as defined in this notice).

(5) Providing students equitable access that is inclusive, with regard to race, LGBTQI+, ethnicity, culture, language, and disability status, to social workers, psychologists, counselors, nurses, or mental health professionals and other integrated services and supports, which may include in early learning environments.

(6) Preparing educators to implement project-based or experiential learning opportunities for students to strengthen their metacognitive skills, self-direction, self-efficacy, competency, or motivation, including through instruction that connects to students' prior knowledge and experience; provides rich, engaging, complex, and motivating tasks; and offers opportunities for collaborative learning.

(7) Creating and implementing comprehensive schoolwide frameworks (such as small schools or learning communities, advisory systems, or looping educators) that support strong and consistent student and educator relationships.

(8) Fostering partnerships, including across government agencies (*e.g.,* housing, human services, employment agencies), local educational agencies, community-based organizations, adult learning providers, and postsecondary education institutions, to provide comprehensive services to students and families that support students' social, emotional, mental health, and academic needs, and that are inclusive with regard to race, ethnicity, culture, language, and disability status.

Absolute Priority 5—Field-Initiated Innovations—Promoting Equity in Student Access to Educational

Resources and Opportunities: Educator Recruitment and Retention.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Promote educational equity and adequacy in resources and opportunity for underserved students—

(1) In one or more of the following educational settings:

(i) Early learning programs.

(ii) Elementary school.

(iii) Middle school.

(iv) High school.

(v) Career and technical education programs.

(vi) Out-of-school-time settings.

(vii) Alternative schools and programs.

(viii) Juvenile justice system or correctional facilities; and

(2) That examine the sources of inequity and inadequacy and implement responses, and that may include one or more of the following:

(i) Increasing the number and proportion of experienced, fully certified, in-field, and effective educators, and educators from traditionally underrepresented backgrounds or the communities they serve, to ensure that underserved students have educators from those backgrounds and communities and are not taught at disproportionately higher rates by uncertified, out-of-field, and novice teachers compared to their peers.

Note: All strategies to increase racial diversity of educators must comply with the nondiscrimination requirements contained in Federal civil rights laws.

(ii) Improving the preparation, recruitment, and early career support and development of educators in shortage areas or hard to staff schools.

(iii) Improving the retention of fully certified, experienced, and effective educators in high-need schools or shortage areas.

Competitive Preference Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i), we award up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 1, and up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 2.

These priorities are:

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners (up to 3 points).

Under this priority, an applicant must demonstrate how the project will be implemented by or in partnership with one or more of the following entities:

(a) Community colleges (as defined in this notice).

(b) Historically Black Colleges and Universities (as defined in this notice).

(c) Tribal Colleges and Universities (as defined in this notice).

(d) Minority-serving institutions (as defined in this notice).

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Supports (up to 3 points).

Projects that are designed to address the impacts of the COVID–19 pandemic, including impacts that extend beyond the duration of the pandemic itself, on the students most impacted by the pandemic, with a focus on underserved students and the educators who serve them through the following priority areas:

(a) Conducting community asset-mapping and needs assessments that may include an assessment of the extent to which students, including subgroups of students, have become disengaged from learning, including students not participating in in-person or remote instruction, and specific strategies for reengaging and supporting students and their families; and

(b) Using evidence-based instructional approaches and supports, such as professional development, coaching, ongoing support for educators, high-quality tutoring, expanded access to rigorous coursework and content across K–12, and expanded learning time to accelerate learning for students in ways that ensure all students have the opportunity to successfully meet challenging academic content standards without contributing to tracking or remedial courses.

Definitions: The following definitions apply to this program. The definitions of ''baseline,'' ''demonstrates a rationale,'' ''experimental study,'' ''logic model,'' ''moderate evidence,'' ''nonprofit,'' ''performance measure,'' ''performance target,'' ''project component,'' ''quasi-experimental design study,'' ''relevant outcome,'' and ''What Works Clearinghouse Handbooks (WWC Handbooks)'' are from 34 CFR 77.1. The definitions of ''community college,'' ''children or students with disabilities,'' ''disconnected youth,'' ''early learning,'' ''educator,'' ''English learner,'' ''historically Black colleges and universities,'' ''military- or veteran-connected student,'' ''minority-serving institutions,'' ''Tribal College or University,'' and ''underserved students'' are from the Supplemental Priorities. The definitions of ''evidence-based,'' ''local educational agency,'' and ''State educational agency'' are from section 8101 of the ESEA.

Baseline means the starting point from which performance is measured and targets are set.

Children or students with disabilities means children with disabilities as defined in section 602(3) of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1401(3)) and 34 CFR 300.8, or students with disabilities, as defined in the Rehabilitation Act of 1973 (29 U.S.C. 705(37), 705(202)(B)).

Community college means ''junior or community college'' as defined in section 312(f) of the Higher Education Act of 1965, as amended (HEA).

Demonstrates a rationale means a key project component included in the project's logic model is informed by research or evaluation findings that suggest the project component is likely to improve relevant outcomes.

Disconnected youth means an individual, between the ages 14 and 24, who may be from a low-income background, experiences homelessness, is in foster care, is involved in the justice system, or is not working or not enrolled in (or at risk of dropping out of) an educational institution.

Early learning means any (a) State-licensed or State-regulated program or provider, regardless of setting or funding source, that provides early care and education for children from birth to kindergarten entry, including, but not limited to, any program operated by a child care center or in a family child care home; (b) program funded by the Federal Government or State or local educational agencies (including any IDEA-funded program); (c) Early Head Start and Head Start program; (d) nonrelative child care provider who is not otherwise regulated by the State and who regularly cares for two or more unrelated children for a fee in a provider setting; and (e) other program that may deliver early learning and development services in a child's home, such as the Maternal, Infant, and Early Childhood Home Visiting Program; Early Head Start; and Part C of IDEA.

Educator means an individual who is an early learning educator, teacher, principal or other school leader, specialized instructional support personnel (*e.g.,* school psychologist, counselor, school social worker, early

intervention service personnel), paraprofessional, or faculty.

English learner means an individual who is an English learner as defined in section 8101(20) of the ESEA, or an individual who is an English language learner as defined in section 203(7) of the Workforce Innovation and Opportunity Act.

Evidence-based means an activity, strategy, or intervention that—

(i) Demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(I) Strong evidence from at least 1 well-designed and well-implemented experimental study;

(II) Moderate evidence from at least 1 well-designed and well-implemented quasi-experimental study; or

(III) Promising evidence from at least 1 well-designed and well-implemented correlational study with statistical controls for selection bias; or

(ii)(I) Demonstrates a rationale based on high-quality research findings or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes or other relevant outcomes; and

(II) Includes ongoing efforts to examine the effects of such activity, strategy, or intervention.

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of experimental studies that, depending on their design and implementation (*e.g.,* sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the WWC Handbooks (as defined in this notice):

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the project component being evaluated (the treatment group) or not to receive the project component (the control group).

(ii) A regression discontinuity design study assigns the project component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Historically Black colleges and universities means colleges and universities that meet the criteria set out in 34 CFR 608.2.

Local educational agency (LEA) means:

(a) In General. A public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or of or for a combination of school districts or counties that is recognized in a State as an administrative agency for its public elementary schools or secondary schools.

(b) Administrative Control and Direction. The term includes any other public institution or agency having administrative control and direction of a public elementary school or secondary school.

(c) Bureau of Indian Education Schools. The term includes an elementary school or secondary school funded by the Bureau of Indian Education but only to the extent that including the school makes the school eligible for programs for which specific eligibility is not provided to the school in another provision of law and the school does not have a student population that is smaller than the student population of the LEA receiving assistance under the ESEA with the smallest student population, except that the school shall not be subject to the jurisdiction of any State educational agency (SEA) (as defined in this notice) other than the Bureau of Indian Education.

(d) Educational Service Agencies. The term includes educational service agencies and consortia of those agencies.

(e) State Educational Agency. The term includes the SEA in a State in which the SEA is the sole educational agency for all public schools.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

Military- or veteran-connected student means one or more of the following:

(a) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a member of the uniformed services (as defined by 37 U.S.C. 101), in the Army, Navy, Air Force, Marine Corps, Coast Guard, Space Force, National Guard, Reserves, National Oceanic and Atmospheric Administration, or Public Health Service or is a veteran of the uniformed services with an honorable discharge (as defined by 38 U.S.C. 3311).

(b) A student who is a member of the uniformed services, a veteran of the uniformed services, or the spouse of a service member or veteran.

(c) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a veteran of the uniformed services (as defined by 37 U.S.C. 101).

Minority-serving institution means an institution that is eligible to receive assistance under sections 316 through 320 of part A of title III, under part B of title III, or under title V of the HEA.

Moderate evidence means that there is evidence of effectiveness of a key project component in improving a relevant outcome for a sample that overlaps with the populations or settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''strong evidence base'' or ''moderate evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''positive effect'' or ''potentially positive effect'' on a relevant outcome based on a ''medium to large'' extent of evidence, with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single experimental study (as defined in this notice) or quasi-experimental design study (as defined in this notice) reviewed and reported by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks, or otherwise assessed by the Department

using version 4.1 of the WWC Handbook, as appropriate, and that—

(A) Meets WWC standards with or without reservations;

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome;

(C) Includes no overriding statistically significant and negative effects on relevant outcomes reported in the study or in a corresponding WWC intervention report prepared under version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks; and

(D) Is based on a sample from more than one site (*e.g.,* State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same project component that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy this requirement.

Nonprofit, as applied to an agency, organization, or institution, means that it is owned and operated by one or more corporations or associations whose net earnings do not benefit, and cannot lawfully benefit, any private shareholder or entity.

Performance measure means any quantitative indicator, statistic, or metric used to gauge program or project performance.

Performance target means a level of performance that an applicant would seek to meet during the course of a project or as a result of a project.

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Quasi-experimental design study means a study using a design that attempts to approximate an experimental study by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation (*e.g.,* establishment of baseline equivalence of the groups being compared), can meet WWC standards with reservations, but cannot meet WWC standards without reservations, as described in the WWC Handbooks.

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program.

State educational agency (SEA) means the agency primarily responsible for the State supervision of public elementary schools and secondary schools.

Tribal College or University has the meaning ascribed it in section 316(b)(3) of the HEA.

Underserved student means a student (which may include children in early learning environments, students in K–12 programs, and students in postsecondary education or career and technical education, as appropriate) in one or more of the following subgroups:

(a) A student who is living in poverty or is served by schools with high concentrations of students living in poverty.

(b) A student of color.

(c) A student who is a member of a federally recognized Indian Tribe.

(d) An English learner.

(e) A child or student with a disability.

(f) A disconnected youth.

(g) A migrant student.

(h) A student experiencing homelessness or housing insecurity.

(i) A lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+) student.

(j) A student who is in foster care.

(k) A student without documentation of immigration status.

(l) A pregnant, parenting, or caregiving student.

(m) A student impacted by the justice system, including a formerly incarcerated student.

(n) A student who is the first in their family to attend postsecondary education.

(o) A student performing significantly below grade level.

(p) A military- or veteran-connected student.

What Works Clearinghouse Handbooks (WWC Handbooks) means the standards and procedures set forth in the WWC Standards Handbook, Versions 4.0 or 4.1, and WWC Procedures Handbook, Versions 4.0 or 4.1, or in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (all incorporated by reference, see § 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the WWC Handbooks documentation.

Note: The What Works Clearinghouse Procedures and Standards Handbook (Version 4.1), as well as the more recent What Works Clearinghouse Handbooks released in August 2022 (Version 5.0), are available at *https://ies.ed.gov/ncee/wwc/Handbooks.*

Program Authority: 20 U.S.C. 7261.

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The Administrative Priorities. (e) The Supplemental Priorities.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: $251,000,000.

These estimated available funds are the total available for new awards for all three types of grants under the EIR program (Early-phase, Mid-phase, and Expansion grants).

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications from this competition.

Estimated Average Size of Awards: Up to $6,000,000.

Maximum Award: We will not make an award exceeding $6,000,000 for a project period of 60 months. Under 34 CFR 75.104(b) the Secretary may reject, without consideration or evaluation, any application that proposes a project funding level that exceeds the stated maximum award amount. The Department intends to fund one or more projects under each of the EIR competitions, including Expansion grants (84.411A), Mid-phase grants (84.411B), and Early-phase grants (84.411C). Entities may submit applications for different projects for more than one competition (Early-phase grants, Mid-phase grants, and Expansion grants). The combined maximum new award amount a grantee may receive under these three competitions is $16,000,000. If an entity is within the funding range for multiple applications,

the Department will award the highest scoring applications up to $16,000,000.

Estimated Number of Awards: 13–23.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

Note: Under section 4611(c) of the ESEA, the Department must use at least 25 percent of EIR funds for a fiscal year to make awards to applicants serving rural areas, contingent on receipt of a sufficient number of applications of sufficient quality. For purposes of this competition, we will consider an applicant as rural if the applicant meets the qualifications for rural applicants as described in the *Eligible Applicants* section and the applicant certifies that it meets those qualifications through the application. In implementing this statutory provision and program requirement, the Department may fund high-quality applications from rural applicants out of rank order in the Early-phase grants competition. In addition, from the estimated funds for this competition, the Department intends to award an estimated $87 million in funds for STEM projects and $87 million in funds for social and emotional learning projects, contingent on receipt of a sufficient number of applications of sufficient quality.

III. Eligibility Information

1. *Eligible Applicants:*

(a) An LEA;

(b) An SEA;

(c) The Bureau of Indian Education (BIE);

(d) A consortium of SEAs or LEAs;

(e) A nonprofit (as defined in this notice) organization; and

(f) An LEA, an SEA, the BIE, or a consortium described in clause (d), in partnership with—

(1) A nonprofit organization;

(2) A business;

(3) An educational service agency; or

(4) An IHE.

To qualify as a rural applicant under the EIR program, an applicant must meet both of the following requirements:

(a) The applicant is—

(1) An LEA with an urban-centric district locale code of 32, 33, 41, 42, or 43, as determined by the Secretary;

(2) A consortium of such LEAs;

(3) An educational service agency or a nonprofit organization in partnership with such an LEA; or

(4) A grantee described in clause (1) or (2) in partnership with an SEA; and

(b) A majority of the schools to be served by the program are designated with a locale code of 32, 33, 41, 42, or 43, or a combination of such codes, as determined by the Secretary.

Applicants are encouraged to retrieve locale codes from the National Center for Education Statistics School District search tool (*https://nces.ed.gov/ccd/districtsearch/*), where districts can be looked up individually to retrieve locale codes, and the Public School search tool (*https://nces.ed.gov/ccd/schoolsearch/*), where individual schools can be looked up to retrieve locale codes. More information on rural applicant eligibility will be in the application package for this competition.

Note: An applicant that is a nonprofit organization may, under 34 CFR 75.51, demonstrate its nonprofit status by providing: (1) proof that the Internal Revenue Service currently recognizes the applicant as an organization to which contributions are tax deductible under section 501(c)(3) of the Internal Revenue Code; (2) a statement from a State taxing body or the State attorney general certifying that the organization is a nonprofit organization operating within the State and that no part of its net earnings may lawfully benefit any private shareholder or individual; (3) a certified copy of the applicant's certificate of incorporation or similar document if it clearly establishes the nonprofit status of the applicant; or (4) any item described above if that item applies to a State or national parent organization, together with a statement by the State or parent organization that the applicant is a local nonprofit affiliate.

In addition, with respect to IHEs and their affiliates, the following entities may apply for a grant in this competition: (1) As noted above, any IHE that is a partner in an application submitted by an LEA, SEA, BIE, consortium of SEAs or LEAs, or a nonprofit organization; (2) A private IHE that is a nonprofit organization may apply for an EIR grant; (3) A nonprofit organization, such as a development foundation, that is affiliated with a public IHE; and (4) A public IHE with 501(c)(3) status. A public IHE without 501(c)(3) status (even if that entity is tax exempt under Section 115 of the Internal Revenue Code or any other State or Federal provision), or that could not provide any other documentation of nonprofit status described above, however, would not qualify as a nonprofit organization, and therefore would not be eligible to apply for and receive an EIR grant.

2. a. *Cost Sharing or Matching:* Under section 4611(d) of the ESEA, each grant recipient must provide, from Federal, State, local, or private sources, an amount equal to 10 percent of funds provided under the grant, which may be provided in cash or through in-kind contributions, to carry out activities supported by the grant. Applicants must include a budget showing their matching contributions to the budget amount of EIR grant funds and must provide evidence of their matching contributions for the first year of the grant in their grant applications.

Section 4611(d) of the ESEA authorizes the Secretary to waive the matching requirement on a case-by-case basis, upon a showing of exceptional circumstances, such as:

(i) The difficulty of raising matching funds for a program to serve a rural area;

(ii) The difficulty of raising matching funds in areas with a concentration of LEAs or schools with a high percentage of students aged 5 through 17—

(A) Who are in poverty, as counted in the most recent census data approved by the Secretary;

(B) Who are eligible for a free or reduced-price lunch under the Richard B. Russell National School Lunch Act (42 U.S.C. 1751 *et seq.*);

(C) Whose families receive assistance under the State program funded under part A of title IV of the Social Security Act (42 U.S.C. 601 *et seq.*); or

(D) Who are eligible to receive medical assistance under the Medicaid program; and

(iii) The difficulty of raising funds on Tribal land.

An applicant that wishes to apply for a waiver must include a request in its application, describing the exceptional circumstances that make it difficult for the applicant to meet the matching requirement. Further information about applying for waivers can be found in the application package for this competition.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

4. *Other:* a. *Funding Categories:* An applicant will be considered for an award only for the type of EIR grant for which it applies (*i.e.,* Early-phase: Absolute Priority 2, Early-phase:

Absolute Priority 3, or Early-phase: Absolute Priority 4). An applicant may not submit an application for the same proposed project under more than one type of grant (*e.g.,* both an Early-phase grant and Mid-phase grant).

Note: Each application will be reviewed under the competition in which it was submitted in the *Grants.gov* system, and only applications that are successfully submitted by the established deadline will be peer reviewed. Applicants should be careful that they download the intended EIR application package and that they submit their applications under the intended EIR competition.

b. *Evaluation:* The grantee must conduct an independent evaluation of the effectiveness of its project.

c. *High-need students:* The grantee must serve high-need students.

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs,* which contain requirements and information on how to submit an application.

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for Early-phase grants, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit:* The application narrative is where you, the applicant, will address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative for an Early-phase grant to no more than 25 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; one-page abstract; evidence form; or appendices (*e.g.,* nonprofit documentation, resumes, letters of support, demonstration of match, matching waiver request, list of proprietary information, eligibility checklist, logic model, indirect cost rate agreement). However, the recommended page limit does apply to the entire application narrative.

6. *Notice of Intent to Apply:* The Department will be able to review grant applications more efficiently if we know the approximate number of applicants that intend to apply. Therefore, we strongly encourage each potential applicant to notify us of their intent to submit an application. Applicants may access this form using the link available on the Notice of Intent to Apply section of the competition website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/.* Applicants that do not submit a notice of intent to apply may still apply for funding; applicants that do submit a notice of intent to apply are not bound to apply or bound by the information provided.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for the Early-phase grant competition are from 34 CFR 75.210. The points assigned to each criterion are indicated in the parentheses next to the criterion. Together with the competitive preference priorities, an applicant may earn up to a total of 106 points based on the selection criteria for the application.

A. *Significance (up to 20 points).*

The Secretary considers the significance of the proposed project. In determining the significance of the proposed project, the Secretary considers the extent to which the proposed project involves the development or demonstration of promising new strategies that build on, or are alternatives to, existing strategies.

B. *Quality of the Project Design (up to 30 points).*

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which there is a conceptual framework underlying the proposed research or demonstration activities and the quality of that framework. (10 points)

(2) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable. (5 points)

(3) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs. (15 points)

C. *Quality of Project Personnel (up to 10 points).*

The Secretary considers the quality of the personnel who will carry out the proposed project. In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. In addition, the Secretary considers the qualifications, including relevant training and experience, of key project personnel.

D. *Quality of the Management Plan (up to 10 points).*

The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan, the Secretary considers the adequacy of the

management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

E. *Quality of the Project Evaluation (up to 30 points).*

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) The extent to which the methods of evaluation will, if well implemented, produce evidence about the project's effectiveness that would meet the What Works Clearinghouse standards with or without reservations as described in the What Works Clearinghouse Handbook (as defined in this notice). (20 points)

(2) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes. (5 points)

(3) The extent to which the evaluation plan clearly articulates the key project components, mediators, and outcomes, as well as a measurable threshold for acceptable implementation. (5 points)

Note: Applicants may wish to review the following technical assistance resources on evaluation: (1) WWC Procedures and Standards Handbooks: *https://ies.ed.gov/ncee/wwc/Handbooks;* (2) ''Technical Assistance Materials for Conducting Rigorous Impact Evaluations'': *http://ies.ed.gov/ncee/projects/evaluationTA.asp;* and (3) IES/NCEE Technical Methods papers: *http://ies.ed.gov/ncee/tech_methods/.* In addition, applicants may view an optional webinar recording that was hosted by the Institute of Education Sciences. The webinar focused on more rigorous evaluation designs, discussing strategies for designing and executing experimental studies that meet WWC evidence standards without reservations. This webinar is available at: *https://ies.ed.gov/ncee/wwc/Multimedia/18.*

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

Before making awards, we will screen applications submitted in accordance with the requirements in this notice to determine whether applications have met eligibility and other requirements. This screening process may occur at various stages of the process; applicants that are determined to be ineligible will not receive a grant, regardless of peer reviewer scores or comments.

Peer reviewers will read, prepare a written evaluation of, and score the assigned applications, using the selection criteria provided in this notice.

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions and, under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2), we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with:

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department

grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded Early-phase grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

Note: The evaluation report is a specific deliverable under an Early-phase grant that grantees must make available to the public. Additionally, EIR grantees are encouraged to submit final studies from research supported in whole or in part by EIR to the Educational Resources Information Center (*http://eric.ed.gov*).

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case, the Secretary establishes a data collection period.

5. *Performance Measures:* For the purpose of Department reporting under 34 CFR 75.110, the Department has established a set of performance measures (as defined in this notice) for the Early-phase grants.

Annual performance measures: (1) The percentage of grantees that reach their annual target number of students as specified in the application; (2) the percentage of grantees that reach their annual target number of high-need students as specified in the application; (3) the percentage of grantees with ongoing well-designed and independent evaluations designed to provide performance feedback to inform project design; (4) the percentage of grantees with ongoing well-designed and independent evaluations that will provide evidence of their effectiveness at improving student outcomes; (5) the percentage of grantees that implement an evaluation that provides information about the key elements and the approach of the project to facilitate testing, development, or replication in other settings; and (6) the cost per student served by the grant.

Cumulative performance measures: (1) The percentage of grantees that reach the targeted number of students specified in the application; (2) the percentage of grantees that reach the targeted number of high-need students specified in the application; (3) the percentage of grantees that use evaluation data to make changes to their practice(s); (4) the percentage of grantees that complete a well-designed, well-implemented, and independent evaluation that provides evidence of their effectiveness at improving student outcomes; (5) the percentage of grantees with a completed evaluation that provides information about the key elements and the approach of the project so as to facilitate testing, development, or replication in other settings; and (6) the cost per student served by the grant.

Project-Specific Performance Measures: Applicants must propose project-specific performance measures and performance targets (both as defined in this notice) consistent with the objectives of the proposed project. Applications must provide the following information as directed under 34 CFR 75.110(b) and (c):

(1) Performance measures. How each proposed performance measure would accurately measure the performance of the project and how the proposed performance measure would be consistent with the performance measures established for the program funding the competition.

(2) Baseline (as defined in this notice) data. (i) Why each proposed baseline is valid; or (ii) if the applicant has determined that there are no established baseline data for a particular performance measure, an explanation of why there is no established baseline and of how and when, during the project period, the applicant would establish a valid baseline for the performance measure.

(3) Performance targets. Why each proposed performance target is ambitious yet achievable compared to the baseline for the performance measure and when, during the project period, the applicant would meet the performance target(s).

(4) Data collection and reporting. (i) The data collection and reporting methods the applicant would use and why those methods are likely to yield reliable, valid, and meaningful performance data; and (ii) the applicant's capacity to collect and report reliable, valid, and meaningful performance data, as evidenced by high-quality data collection, analysis, and reporting in other projects or research.

All grantees must submit an annual performance report with information that is responsive to these performance measures.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things, whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other

documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Adam Schott,

Principal Deputy Assistant Secretary, Delegated the Authority to Perform the Functions and Duties of the Assistant Secretary, Office of Elementary and Secondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Education Innovation and Research (EIR) Program Mid-Phase Grants

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for fiscal year (FY) 2024 for the EIR program Mid-phase Grants, Assistance Listing Number 84.411B (Mid-phase Grants). This notice relates to the approved information collection under OMB control number 1894–0006.

DATES:

Applications Available: May 6, 2024.

Deadline for Notice of Intent to Apply: June 06, 2024.

Deadline for Transmittal of Applications: July 05, 2024.

Deadline for Intergovernmental Review: September 03, 2024.

Pre-Application Information: The Department will post additional competition information for prospective applicants on the EIR program website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/.*

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs.*

FOR FURTHER INFORMATION CONTACT: Jamila Smith, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202–5900. Telephone: 202–987–1753. Email: *eir@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The EIR program, established under section 4611 of the Elementary and Secondary Education Act, as amended (ESEA), provides funding to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based (as defined in this notice), field-initiated innovations to improve student achievement and attainment for high-need students; and to rigorously evaluate such innovations. The EIR program is designed to generate and validate solutions to persistent education challenges and to support the expansion of those solutions to serve substantially more students.

The central design element of the EIR program is its multi-tier structure that links the amount of funding an applicant may receive to the quality of the evidence supporting the efficacy of the proposed project. One of the program's goals is for projects to build evidence that will allow them to advance through EIR's grant tiers: ''Early-phase,'' ''Mid-phase,'' and ''Expansion.''

''Early-phase,'' ''Mid-phase,'' and ''Expansion'' grants differ in terms of the evidence of effectiveness required to be considered for funding, the expectations regarding the kind of evidence and information funded projects should produce, the scale of funded projects, and, consequently, the amount of funding available to support each type of project.

Mid-phase grants are supported by moderate evidence (as defined in this notice). Mid-phase grants provide funding for the implementation and rigorous evaluation of a program that has been successfully implemented under an Early-phase grant or other similar effort, such as developing and testing an innovative education practice at a local level, for the purpose of measuring the program's impact and cost-effectiveness.

This notice invites applications for Mid-phase grants only. The notices inviting applications for Early-phase grants and Expansion grants are published elsewhere in this issue of the **Federal Register**.

Background:

While this notice is for the Mid-phase grants tier only, the premise of the EIR program is that new, effective, and innovative educational programs and practices can help to overcome the persistent and significant challenges to student educational opportunity and success, particularly for underserved and high-need students. Raise the Bar: Lead the World is the Department's call to action to transform pre-kindergarten (Pre-K) through grade 12 education and unite around what truly works by promoting academic excellence, boldly improving learning conditions, and preparing our Nation's students for global competitiveness.[1] Consistent with that call to action, the priorities used in this competition advance Raise the Bar's goals to promote academic excellence and boldly improve learning conditions.

In FY 2024, the Department is particularly interested in projects that propose services and activities that help students recover from the COVID–19 pandemic, accelerate learning and academic achievement, reimagine schools, and transform our education system. Specifically, the Department is focused on improving student achievement and attainment, as highlighted across Administration and Department efforts for the past several years. Building on the Administration's previous efforts, in January 2024, the Administration announced its Improving Student Achievement Agenda,[2] which aims to drive proven strategies that will support academic success for every child in school. The strategies and evidence discussed in the Improving Student Achievement Agenda focus on (1) increasing student attendance; (2) providing high-dosage tutoring; and (3) increasing summer learning and extended or afterschool learning time. These strategies and the

[1] U.S. Secretary of Education Miguel Cardona laid out his vision for the direction the Department will follow in 2024 to promote academic excellence, improve learning conditions, and prepare students for a world where global engagement is critical to our Nation's standing. In his address, Secretary Cardona remarked that ''Raise the Bar: Lead the World'' is not a list of new priorities, but a call to strengthen our will to transform education for the better, building on approaches that we know work in education. More information is available at *https://www.ed.gov/raisethebar.*

[2] *https://www.whitehouse.gov/briefing-room/statements-releases/2024/01/17/fact-sheet-biden-harris-administration-announces-improving-student-achievement-agenda-in-2024/.*

broader Improving Student Achievement Agenda, including a focus on core academic instruction, are well aligned with the EIR program purpose, and the new funding to be released through the FY 2024 EIR competition will help accelerate and scale up sustainable adoption of evidence-based strategies that we expect will improve student achievement and attainment in the school years ahead. The priorities in this competition are designed to create conditions under which students have equitable access to high-quality learning opportunities and experiences. For example, projects may include new approaches to instructional design such as through project-based or experiential learning opportunities for students, schoolwide frameworks, such as small schools or learning communities, that support student connection and engagement and increased interagency coordination to improve academic supports for highly mobile students such as students in foster care and students experiencing homelessness.

Note: The EIR program statute refers to ''high-need students'' but does not define the term, which allows applicants to define it for purposes of their proposed project, population, and setting. Addressing the needs of underserved students (as defined in this notice) is one way to address EIR's statutory requirement to serve ''high-need students.'' In particular, the Department welcomes innovative and effective projects that serve disconnected youth, students who are in foster care, and students performing significantly below grade level.

The EIR program is rooted in innovation; the program is not intended to provide support for practices that are already commonly implemented by educators, unless significant adaptations and evaluation of such practices might determine if they can accelerate achievement or increase the likelihood that the practices can be widely, efficiently, and effectively implemented in new populations and settings. If the evaluation demonstrates that innovations are supported by moderate or strong evidence (as defined in this notice), then EIR seeks applicants who can replicate and test these innovations in new populations and settings.

As an EIR project is implemented, grantees are encouraged to learn more about how the practices improve student achievement and attainment as well as to develop increasingly rigorous evidence of effectiveness and new strategies to efficiently and cost-effectively scale to new school districts, regions, and States. We encourage applicants to develop a logic model (as defined in this notice), theory of action, or another conceptual framework that includes the goals, objectives, outcomes, and key project components (as defined in this notice) of the project that can support systems of continuous improvement.

All EIR applicants and grantees should also consider how they will develop their organizational capacity, project financing, and business plans to sustain their projects and continue implementation and adaptation after Federal funding ends. The Department intends to provide grantees with technical assistance to support dissemination, scaling, and sustainability efforts.

Mid-phase grant projects are expected to refine and expand the use of practices with prior evidence of effectiveness to improve outcomes for underserved and high-need students. They are also expected to generate information about an intervention's effectiveness, such as for whom and in which contexts a practice is most effective, including cost considerations such as economies of scale. Mid-phase grant projects are uniquely positioned to help answer questions about the process of scaling a practice to the regional or national levels (both as defined in this notice) across geographies as well as locale types. Mid-phase grant projects are encouraged to consider how the cost structure of a practice can change as the intervention scales. Additionally, grantees may want to consider how their project will balance implementation fidelity and flexibility for scaling.

As Mid-phase grant applicants are developing their required program evaluation, they are encouraged to design it with the potential to meet strong evidence. Mid-phase grants should measure the cost-effectiveness of their practices using administrative or other readily available data. These types of efforts are critical to sustaining and scaling EIR-funded effective practices after the EIR grant period ends, assuming that the practice has positive effects on important student outcomes. To support adoption or replication by other entities, the evaluation of a Mid-phase grant project should identify and codify the core elements of the EIR-supported practice that the project implements and examine the effectiveness of the project for any new populations or settings included in the project. The Department intends to provide grantees (including the independent evaluators they contract with as part of their project) with evaluation technical assistance. This could include grantees and their independent evaluators providing to the Department or its contractor updated comprehensive evaluation plans in a format as requested by the technical assistance provider and using such tools as the Department may request. Grantees will be encouraged to update this evaluation plan at least annually to reflect any changes to the evaluation, with updates consistent with the scope and objectives of the approved application.

The FY 2024 Mid-phase grant competition includes five absolute priorities and two competitive preference priorities. All Mid-phase grant applicants must address Absolute Priority 1. Mid-phase grant applicants are also required to address one of the other four absolute priorities (applicants may not submit under more than one of the other four absolute priorities). All applicants have the option of addressing the competitive preference priorities and may opt to do so regardless of the absolute priority they select.

Absolute Priority 1—Moderate Evidence establishes the evidence requirement for this tier of grants. All Mid-phase grants applicants must submit prior evidence of effectiveness that meets the moderate evidence standard.

Absolute Priority 2—Field-Initiated Innovations—General gives applicants the option to propose projects that are field-initiated innovations to improve student achievement and attainment.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Science, Technology, Engineering, and Mathematics (STEM) is intended to support innovations to improve student achievement and attainment in the STEM education field, consistent with efforts to ensure our Nation's economic competitiveness by improving and expanding STEM learning and engagement.

In Absolute Priority 3, the Department recognizes the importance of funding pre-K through grade 12 STEM education and anticipates that projects will expand opportunities for high-need students. Within this absolute priority, applicants may focus on expanding opportunities in STEM education, including computer science, for underrepresented students in STEM education, including students of color, girls, English learners, students with disabilities, youth from rural communities, and youth from families living at or below the poverty line, to help reduce the enrollment and achievement gaps in a manner consistent with nondiscrimination

requirements contained in Federal civil rights laws.

Absolute Priority 4—Field-Initiated Innovations—Meeting Student Social, Emotional, and Academic Needs is intended to promote high-quality projects that support student well-being. The disruption caused by the pandemic, along with the growth in youth mental health distress, continue to impact student well-being. It is critical to address students' social and emotional needs, not only to benefit student well-being, but also to support their academic success, as student social, emotional, and academic development are interconnected.

Absolute Priority 5—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Educator Recruitment and Retention is intended to identify and scale up models to elevate and strengthen the educator workforce in ways that prioritize innovation in recruiting and retaining educators to better support high-need students. Applicants are encouraged to address fundamental challenges schools face in recruiting and retaining qualified educators by addressing the responsibilities and challenges educators continue to face after the pandemic. For example, projects may be designed to improve supports for educators that enhance the ability of schools to recruit and retain staff (*e.g.,* strategies to support educator wellbeing; or structuring staffing and schedules to ensure educators and students are appropriately supported, and have sufficient time for planning, collaboration, and observing instruction of other educators) and increase access to leadership opportunities that can lead to increased pay and improved retention for fully certified, experienced, and effective educators, while expanding the impact of great teachers within and beyond their classrooms. Projects may support the recruitment and retention of all school staff or specific staff with acute recruitment and retention challenges (*e.g.,* personnel serving children or students with disabilities).

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners is intended to encourage applicants to propose projects that involve (as applicants or partners) entities underrepresented in the program's portfolio of grants. The Department is eager to increase the volume of projects and partners from entities such as community colleges (as defined in this notice), Historically Black colleges and universities (as defined in this notice), Tribal Colleges and Universities (as defined in this notice), and minority-serving institutions (as defined in this notice). The Department expects applicants addressing this priority will raise the bar to reimagine schools through partnerships with underrepresented groups in ways that benefit underserved and high-need students.

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Support reflects the Administration's ongoing commitment to addressing the impact of the COVID–19 pandemic on Pre-K through grade 12 education. The pandemic caused unprecedented disruption in schools across the country and drew renewed attention to the ongoing challenges for underserved students. In response to the pandemic, educators mobilized to address the needs of all students. Researchers, educators, parents, and policymakers are working to understand and address the impact of inconsistent access to instruction, enrichment, peers, and services and supports, and the impact of other related challenges. We also know that for students in underserved communities, inequities in educational opportunity and outcomes existed previously, yet they were exacerbated by the pandemic.[3] The impact of the COVID–19 pandemic changed the education landscape, especially as students continue to make up for lost classroom instruction. However, it also provides an opportunity to redesign how schools approach teaching and learning in ways that both address long-standing gaps in educational opportunity and better prepare students for college and careers. Over 14 million public school students (31 percent) missed at least 10 percent of school in school year 2021–2022.[4] According to analysis by the Council of Economic Advisors, absenteeism accounted for up to 27 percent of the test score declines in math and 45 percent of the test score declines in reading on the National Assessment of Educational Progress.[5] To that end, the Department seeks projects that develop and evaluate evidence-based, field-initiated innovations to addresses these challenges and inequities. The proposed innovations should be designed to better enable students to access the educational opportunities they need to succeed in school and reach their full potential.

Through these priorities, the Department intends to advance innovation, build evidence, and address the learning and achievement of underserved and high-need students in Pre-K through grade 12.

Priorities: This notice includes five absolute priorities and two competitive preference priorities. In accordance with 34 CFR 75.105(b)(2)(ii), Absolute Priority 1 is from regulations (34 CFR 75.226(d)(2)). In accordance with 34 CFR 75.105(b)(2)(iv), Absolute Priority 2 is from section 4611(a)(1)(A) of the ESEA. In accordance with 34 CFR 75.105(b)(2)(iv), Absolute Priorities 3, 4, and 5 are from section 4611(a)(1)(A) of the ESEA and the Supplemental Priorities and Definitions for Discretionary Grants Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities). The competitive preference priorities are from the Supplemental Priorities.

In the Mid-phase grants competition, Absolute Priorities 2, 3, 4, and 5 each constitutes a separate funding category. The Secretary intends to award grants under each of these absolute priorities provided that applications submitted are of sufficient quality. To ensure that applicants are reviewed under the absolute priority most relevant to their proposed project, applicants must clearly identify the specific absolute priority that the proposed project addresses. If an applicant is interested in proposing separate projects (*e.g.,* one that addresses Absolute Priority 2 and another that addresses Absolute Priority 3), it must submit separate applications.

Absolute Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are absolute priorities. Under 34 CFR 75.105(c)(3), we consider only applications that meet Absolute Priority 1—Moderate Evidence, and one additional absolute priority (Absolute

[3] Dorn, E., Hancock, B., Sarakatsannis, J., & Viruleg, E. (2021, July 27). COVID–19 and education: The lingering effects of unfinished learning. McKinsey & Company. *https://www.mckinsey.com/industries/education/our-insights/covid-19-and-education-the-lingering-effects-of-unfinished-learning.*

[4] U.S. Department of Education. (2023, September 15). Raising the Bar for Consistent School Attendance. *ED.gov* Blog. *https://blog.ed.gov/2023/09/raising-the-bar-for-consistent-school-attendance/.*

[5] The White House. (2023, September 13). Chronic Absenteeism and Disrupted Learning Require an All-Hands-on-Deck Approach | CEA. The White House. *https://www.whitehouse.gov/cea/written-materials/2023/09/13/chronic-absenteeism-and-disrupted-learning-require-an-all-hands-on-deck-approach/.*

Priority 2, Absolute Priority 3, Absolute Priority 4, or Absolute Priority 5).

These priorities are:

Absolute Priority 1—Moderate Evidence.

Projects supported by evidence that meets the conditions in the definition of ''moderate evidence.''

Note: An applicant must identify up to two studies to be reviewed against the What Works Clearinghouse (WWC) Handbooks (as defined in this notice) for the purposes of meeting the definition of ''moderate evidence.'' The studies may have been conducted by the applicant or by a third party. An applicant must clearly identify the citations for each study in the Evidence form. An applicant must ensure that all cited studies are available to the Department from publicly available sources and provide links or other guidance indicating where each is available. The Department may not review a study that an applicant fails to clearly identify for review.

In addition to including up to two study citations, an applicant must provide in the Evidence form the following information: (1) the positive student outcomes the applicant intends to replicate under its Mid-phase grant and how these outcomes correspond to the positive student outcomes in the cited studies; (2) the characteristics of the population or setting to be served under its Mid-phase grant and how these characteristics correspond to the characteristics of the population or setting in the cited studies; and (3) the practice(s) the applicant plans to implement under its Mid-phase grant and how the practice(s) correspond with the practice(s) in the cited studies.

If the Department determines that an applicant has provided insufficient information, the applicant will not have an opportunity to provide additional information. However, if the WWC team reviewing evidence determines that a study does not provide enough information on key aspects of the study design, such as sample attrition or equivalence of intervention and comparison groups, the WWC may submit a query to the study author(s) to gather information for use in determining a study rating. Authors would be asked to respond to queries within 10 business days. If the author query remains incomplete within 14 days of the initial contact to the study author(s), the study may be deemed ineligible under the grant competition. After the grant competition closes, the WWC will, for purposes of its own curation of studies, continue to include responses to author queries and make updates to study reviews as necessary. However, no additional information will be considered after the competition closes and the initial timeline established for response to an author query passes.

Absolute Priority 2—Field-Initiated Innovations—General.

Projects that are designed to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: STEM.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Promote educational equity and adequacy in resources and opportunity for underserved students—

(1) In one or more of the following educational settings:

(i) Early learning programs.

(ii) Elementary school.

(iii) Middle school.

(iv) High school.

(v) Career and technical education programs.

(vi) Out-of-school-time settings.

(vii) Alternative schools and programs.

(viii) Juvenile justice system or correctional facilities; and

(2) That examine the sources of inequity and inadequacy and implement responses, including rigorous, engaging, and well-rounded (*e.g.,* that include music and the arts) approaches to learning that are inclusive with regard to race, ethnicity, culture, language, and disability status and prepare students for college, career, and civic life, including science, technology, engineering, and mathematics (STEM), including computer science coursework.

Absolute Priority 4—Field-Initiated Innovations—Meeting Student Social, Emotional, and Academic Needs.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Improve students' social, emotional, academic, and career development, with a focus on underserved students, through one or more of the following priority areas:

(1) Developing and supporting educator and school capacity to support social and emotional learning and development that—

(i) Fosters skills and behaviors that enable academic progress;

(ii) Identifies and addresses conditions in the learning environment, that may negatively impact social and emotional well-being for underserved students, including conditions that affect physical safety; and

(iii) Is trauma-informed, such as addressing exposure to community-based violence and trauma specific to military- or veteran-connected students (as defined in this notice).

(2) Creating education or work-based settings that are supportive, positive, identity-safe and inclusive with regard to race, ethnicity, culture, language, and disability status, through one or more of the following activities:

(i) Developing trusting relationships between students (including underserved students), educators, families, and community partners.

(ii) Providing high-quality professional development opportunities designed to increase engagement and belonging and build asset-based mindsets for educators working in and throughout schools.

(iii) Engaging students (including underserved students), educators, families, and community partners from diverse backgrounds and representative of the community as partners in school climate review and improvement efforts.

(iv) Developing and implementing inclusive and culturally informed discipline policies and addressing disparities in school discipline policy by identifying and addressing the root causes of those disparities, including by involving educators, students, and families in decision-making about discipline procedures and providing training and resources to educators.

(3) Providing multi-tiered systems of supports that address learning barriers both in and out of the classroom, that enable healthy development and respond to students' needs and which may include evidence-based trauma-informed practices and professional development for educators on avoiding deficit-based approaches.

(4) Developing or implementing policies and practices, consistent with applicable Federal law, that prevent or reduce significant disproportionality on the basis of race or ethnicity with respect to the identification, placement, and disciplining of children or students with disabilities (as defined in this notice).

(5) Providing students equitable access that is inclusive with regard to race, LGBTQI+, ethnicity, culture, language, and disability status, to social

workers, psychologists, counselors, nurses, or mental health professionals and other integrated services and supports, which may include in early learning environments.

(6) Preparing educators to implement project-based or experiential learning opportunities for students to strengthen their metacognitive skills, self-direction, self-efficacy, competency, or motivation, including through instruction that connects to students' prior knowledge and experience; provides rich, engaging, complex, and motivating tasks; and offers opportunities for collaborative learning.

(7) Creating and implementing comprehensive schoolwide frameworks (such as small schools or learning communities, advisory systems, or looping educators) that support strong and consistent student and educator relationships.

(8) Fostering partnerships, including across government agencies (*e.g.,* housing, human services, employment agencies), local educational agencies, community-based organizations, adult learning providers, and postsecondary education institutions, to provide comprehensive services to students and families that support students' social, emotional, mental health, and academic needs, and that are inclusive with regard to race, ethnicity, culture, language, and disability status.

Absolute Priority 5—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Educator Recruitment and Retention.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students; and

(b) Promote educational equity and adequacy in resources and opportunity for underserved students—

(1) In one or more of the following educational settings:

(i) Early learning programs.

(ii) Elementary school.

(iii) Middle school.

(iv) High school.

(v) Career and technical education programs.

(vi) Out-of-school-time settings.

(vii) Alternative schools and programs.

(viii) Juvenile justice system or correctional facilities; and

(2) That examine the sources of inequity and inadequacy and implement responses, and that may include one or more of the following:

(i) Increasing the number and proportion of experienced, fully certified, in-field, and effective educators, and educators from traditionally underrepresented backgrounds or the communities they serve, to ensure that underserved students have educators from those backgrounds and communities and are not taught at disproportionately higher rates by uncertified, out-of-field, and novice teachers compared to their peers.

Note: All strategies to increase the diversity of educators must comply with the nondiscrimination requirements contained in Federal civil rights laws.

(ii) Improving the preparation, recruitment, and early career support and development of educators in shortage areas or hard to staff schools.

(iii) Improving the retention of fully certified, experienced, and effective educators in high-need schools or shortage areas.

Competitive Preference Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i), we award up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 1, and up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 2.

These priorities are:

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners (up to 3 points).

Under this priority, an applicant must demonstrate how the project will be implemented by or in partnership with one or more of the following entities:

(a) Community colleges (as defined in this notice).

(b) Historically Black colleges and universities (as defined in this notice).

(c) Tribal Colleges and Universities (as defined in this notice).

(d) Minority-serving institutions (as defined in this notice).

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Supports (up to 3 points).

Projects that are designed to address the impacts of the COVID–19 pandemic, including impacts that extend beyond the duration of the pandemic itself, on the students most impacted by the pandemic, with a focus on underserved students and the educators who serve them, through the following priority areas:

(a) Conducting community asset-mapping and needs assessments that may include an assessment of the extent to which students, including subgroups of students, have become disengaged from learning, including students not participating in in-person or remote instruction, and specific strategies for reengaging and supporting students and their families; and

(b) Using evidence-based instructional approaches and supports, such as professional development, coaching, ongoing support for educators, high-quality tutoring, expanded access to rigorous coursework and content across K–12, and expanded learning time to accelerate learning for students in ways that ensure all students have the opportunity to successfully meet challenging academic content standards without contributing to tracking or remedial courses.

Definitions: The following definitions apply to this program. The definitions of ''baseline,'' ''experimental study,'' ''logic model,'' ''moderate evidence,'' ''national level,'' ''nonprofit,'' ''performance measure,'' ''performance target,'' ''project component,'' ''quasi-experimental design study,'' ''regional level,'' ''relevant outcome,'' ''strong evidence,'' and ''What Works Clearinghouse Handbooks (WWC Handbooks)'' are from 34 CFR 77.1. The definitions of ''community college,'' ''children or students with disabilities,'' ''disconnected youth,'' ''early learning,'' ''educator,'' ''English learner,'' ''Historically Black colleges and universities,'' ''military- or veteran-connected student,'' ''minority-serving institutions,'' ''Tribal College or University,'' and ''underserved students'' are from the Supplemental Priorities. The definitions of ''evidence-based,'' ''local educational agency,'' and ''State educational agency'' are from section 8101 of the ESEA.

Baseline means the starting point from which performance is measured and targets are set.

Children or students with disabilities means children with disabilities as defined in section 602(3) of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1401(3)) and 34 CFR 300.8, or students with disabilities, as defined in the Rehabilitation Act of 1973 (29 U.S.C. 705(37), 705(202)(B)).

Community college means ''junior or community college'' as defined in section 312(f) of the Higher Education Act of 1965, as amended (HEA).

Disconnected youth means an individual, between the ages 14 and 24, who may be from a low-income

background, experiences homelessness, is in foster care, is involved in the justice system, or is not working or not enrolled in (or at risk of dropping out of) an educational institution.

Early learning means any (a) State-licensed or State-regulated program or provider, regardless of setting or funding source, that provides early care and education for children from birth to kindergarten entry, including, but not limited to, any program operated by a child care center or in a family child care home; (b) program funded by the Federal Government or State or local educational agencies (including any IDEA-funded program); (c) Early Head Start and Head Start program; (d) nonrelative child care provider who is not otherwise regulated by the State and who regularly cares for two or more unrelated children for a fee in a provider setting; and (e) other program that may deliver early learning and development services in a child's home, such as the Maternal, Infant, and Early Childhood Home Visiting Program; Early Head Start; and Part C of IDEA.

Educator means an individual who is an early learning educator, teacher, principal or other school leader, specialized instructional support personnel (*e.g.,* school psychologist, counselor, school social worker, early intervention service personnel), paraprofessional, or faculty.

English learner means an individual who is an English learner as defined in section 8101(20) of the ESEA, or an individual who is an English language learner as defined in section 203(7) of the Workforce Innovation and Opportunity Act.

Evidence-based means an activity, strategy, or intervention that—

(i) Demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(I) Strong evidence from at least 1 well-designed and well-implemented experimental study;

(II) Moderate evidence from at least 1 well-designed and well-implemented quasi-experimental study; or

(III) Promising evidence from at least 1 well-designed and well-implemented correlational study with statistical controls for selection bias; or

(ii)(I) Demonstrates a rationale based on high-quality research findings or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes or other relevant outcomes; and

(II) Includes ongoing efforts to examine the effects of such activity, strategy, or intervention.

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of experimental studies that, depending on their design and implementation (*e.g.,* sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the WWC Handbooks (as defined in this notice):

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the project component being evaluated (the treatment group) or not to receive the project component (the control group).

(ii) A regression discontinuity design study assigns the project component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Historically Black colleges and universities means colleges and universities that meet the criteria set out in 34 CFR 608.2.

Local educational agency (LEA) means:

(a) *In General.* A public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or of or for a combination of school districts or counties that is recognized in a State as an administrative agency for its public elementary schools or secondary schools.

(b) *Administrative Control and Direction.* The term includes any other public institution or agency having administrative control and direction of a public elementary school or secondary school.

(c) *Bureau of Indian Education Schools.* The term includes an elementary school or secondary school funded by the Bureau of Indian Education but only to the extent that including the school makes the school eligible for programs for which specific eligibility is not provided to the school in another provision of law and the school does not have a student population that is smaller than the student population of the LEA receiving assistance under the ESEA with the smallest student population, except that the school shall not be subject to the jurisdiction of any State educational agency (SEA) (as defined in this notice) other than the Bureau of Indian Education.

(d) *Educational Service Agencies.* The term includes educational service agencies and consortia of those agencies.

(e) *State Educational Agency.* The term includes the SEA in a State in which the SEA is the sole educational agency for all public schools.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

Military- or veteran-connected student means one or more of the following:

(a) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a member of the uniformed services (as defined by 37 U.S.C. 101), in the Army, Navy, Air Force, Marine Corps, Coast Guard, Space Force, National Guard, Reserves, National Oceanic and Atmospheric Administration, or Public Health Service or is a veteran of the uniformed services with an honorable discharge (as defined by 38 U.S.C. 3311).

(b) A student who is a member of the uniformed services, a veteran of the uniformed services, or the spouse of a service member or veteran.

(c) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a veteran of the uniformed services (as defined by 37 U.S.C. 101).

Minority-serving institution means an institution that is eligible to receive

assistance under sections 316 through 320 of part A of title III, under part B of title III, or under title V of the HEA.

Moderate evidence means that there is evidence of effectiveness of a key project component in improving a relevant outcome for a sample that overlaps with the populations or settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''strong evidence base'' or ''moderate evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''positive effect'' or ''potentially positive effect'' on a relevant outcome based on a ''medium to large'' extent of evidence, with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single experimental study (as defined in this notice) or quasi-experimental design study (as defined in this notice) reviewed and reported by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks, or otherwise assessed by the Department using version 4.1 of the WWC Handbook, as appropriate, and that—

(A) Meets WWC standards with or without reservations;

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome;

(C) Includes no overriding statistically significant and negative effects on relevant outcomes reported in the study or in a corresponding WWC intervention report prepared under version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks; and

(D) Is based on a sample from more than one site (*e.g.,* State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same project component that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy this requirement.

National level describes the level of scope or effectiveness of a process, product, strategy, or practice that is able to be effective in a wide variety of communities, including rural and urban areas, as well as with different groups (*e.g.,* economically disadvantaged, racial and ethnic groups, migrant populations, individuals with disabilities, English learners, and individuals of each gender).

Nonprofit, as applied to an agency, organization, or institution, means that it is owned and operated by one or more corporations or associations whose net earnings do not benefit, and cannot lawfully benefit, any private shareholder or entity.

Performance measure means any quantitative indicator, statistic, or metric used to gauge program or project performance.

Performance target means a level of performance that an applicant would seek to meet during the course of a project or as a result of a project.

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Quasi-experimental design study means a study using a design that attempts to approximate an experimental study by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation (*e.g.,* establishment of baseline equivalence of the groups being compared), can meet WWC standards with reservations, but cannot meet WWC standards without reservations, as described in the WWC Handbooks.

Regional level describes the level of scope or effectiveness of a process, product, strategy, or practice that is able to serve a variety of communities within a State or multiple States, including rural and urban areas, as well as with different groups (*e.g.,* economically disadvantaged, racial and ethnic groups, migrant populations, individuals with disabilities, English learners, and individuals of each gender). For an LEA-based project, to be considered a regional-level project, a process, product, strategy, or practice must serve students in more than one LEA, unless the process, product, strategy, or practice is implemented in a State in which the SEA is the sole educational agency for all schools.

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program.

State educational agency (SEA) means the agency primarily responsible for the State supervision of public elementary schools and secondary schools.

Strong evidence means that there is evidence of the effectiveness of a key project component in improving a relevant outcome for a sample that overlaps with the populations and settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''strong evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''positive effect'' on a relevant outcome based on a ''medium to large'' extent of evidence, with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single experimental study reviewed and reported by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks, or otherwise assessed by the Department using version 4.1 of the WWC Handbooks, as appropriate, and that—

(A) Meets WWC standards without reservations;

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome;

(C) Includes no overriding statistically significant and negative effects on relevant outcomes reported in the study or in a corresponding WWC intervention report prepared under version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks; and

(D) Is based on a sample from more than one site (*e.g.,* State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same project component that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy the requirement in this paragraph (iii)(D).

Tribal College or University has the meaning ascribed it in section 316(b)(3) of the HEA.

Underserved student means a student (which may include children in early learning environments, students in K–12 programs, and students in postsecondary education or career and technical education, as appropriate) in one or more of the following subgroups:

(a) A student who is living in poverty or is served by schools with high concentrations of students living in poverty.

(b) A student of color.

(c) A student who is a member of a federally recognized Indian Tribe.

(d) An English learner.

(e) A child or student with a disability.
(f) A disconnected youth.
(g) A migrant student.
(h) A student experiencing homelessness or housing insecurity.
(i) A lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+) student.
(j) A student who is in foster care.
(k) A student without documentation of immigration status.
(l) A pregnant, parenting, or caregiving student.
(m) A student impacted by the justice system, including a formerly incarcerated student.
(n) A student who is the first in their family to attend postsecondary education.
(o) A student performing significantly below grade level.
(p) A military- or veteran-connected student.

What Works Clearinghouse Handbooks (WWC Handbooks) means the standards and procedures set forth in the WWC Standards Handbook, Versions 4.0 or 4.1, and WWC Procedures Handbook, Versions 4.0 or 4.1, or in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (all incorporated by reference, see § 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the WWC Handbooks documentation.

Note: The What Works Clearinghouse Procedures and Standards Handbook (Version 4.1), as well as the more recent What Works Clearinghouse Handbooks released in August 2022 (Version 5.0), are available at *https://ies.ed.gov/ncee/wwc/Handbooks.*

Program Authority: 20 U.S.C. 7261.

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The Supplemental Priorities.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: $251,000,000.

These estimated available funds are the total available for new awards for all three types of grants under the EIR program (Early-phase, Mid-phase, and Expansion grants).

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications.

Estimated Average Size of Awards: Up to $10,000,000.

Maximum Award: We will not make an award exceeding $10,000,000 for a project period of 60 months. Under 34 CFR 75.104(b) the Secretary may reject, without consideration or evaluation, any application that proposes a project funding level that exceeds the stated maximum award amount. The Department intends to fund one or more projects under each of the EIR competitions, including Expansion grants (84.411A), Mid-phase grants (84.411B), and Early-phase grants (84.411C). Entities may submit applications for different projects for more than one competition (Early-phase grants, Mid-phase grants, and Expansion grants). The combined maximum new award amount a grantee may receive under these three competitions, is $16,000,000. If an entity is within funding range for multiple applications, the Department will award the highest scoring applications up to $16,000,000.

Estimated Number of Awards: 8–15.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

Note: Under section 4611(c) of the ESEA, the Department must use at least 25 percent of EIR funds for a fiscal year to make awards to applicants serving rural areas, contingent on receipt of a sufficient number of applications of sufficient quality. For purposes of this competition, we will consider an applicant as rural if the applicant meets the qualifications for rural applicants as described in the *Eligible Applicants* section and the applicant certifies that it meets those qualifications through the application.

In implementing this statutory provision and program requirement, the Department may fund high-quality applications from rural applicants out of rank order in the Mid-phase grants competition.

In addition, from the estimated available funds for this competition, the Department intends to award an estimated $87 million in funds for STEM projects and $87 million in funds for social and emotional learning projects, contingent on receipt of a sufficient number of applications of sufficient quality.

III. Eligibility Information

1. *Eligible Applicants:*
(a) An LEA;
(b) An SEA;
(c) The Bureau of Indian Education (BIE);
(d) A consortium of SEAs or LEAs;
(e) A nonprofit organization; and
(f) An LEA, an SEA, the BIE, or a consortium described in clause (d), in partnership with—
(1) A nonprofit (as defined in this notice) organization;
(2) A business;
(3) An educational service agency; or
(4) An IHE.

To qualify as a rural applicant under the EIR program, an applicant must meet both of the following requirements:
(a) The applicant is—
(1) An LEA with an urban-centric district locale code of 32, 33, 41, 42, or 43, as determined by the Secretary;
(2) A consortium of such LEAs;
(3) An educational service agency or a nonprofit organization in partnership with such an LEA; or
(4) A grantee described in clause (1) or (2) in partnership with an SEA; and
(b) A majority of the schools to be served by the program are designated with a locale code of 32, 33, 41, 42, or 43, or a combination of such codes, as determined by the Secretary.

Applicants are encouraged to retrieve locale codes from the National Center for Education Statistics School District search tool (*https://nces.ed.gov/ccd/districtsearch/*), where districts can be looked up individually to retrieve locale codes, and the Public School search tool (*https://nces.ed.gov/ccd/schoolsearch/*), where individual schools can be looked up to retrieve locale codes. More information on rural applicant eligibility will be in the application package for this competition.

Note: An applicant that is a nonprofit organization may, under 34 CFR 75.51, demonstrate its nonprofit status by providing: (1) proof that the Internal Revenue Service currently recognizes the applicant as an organization to which contributions are tax deductible under section 501(c)(3) of the Internal

Revenue Code; (2) a statement from a State taxing body or the State attorney general certifying that the organization is a nonprofit organization operating within the State and that no part of its net earnings may lawfully benefit any private shareholder or individual; (3) a certified copy of the applicant's certificate of incorporation or similar document if it clearly establishes the nonprofit status of the applicant; or (4) any item described above if that item applies to a State or national parent organization, together with a statement by the State or parent organization that the applicant is a local nonprofit affiliate.

In addition, with respect to IHEs and their affiliates, the following entities may apply for a grant under this competition: (1) As noted above, any IHE that is a partner in an application submitted by an LEA, SEA, BIE, consortium of SEAs or LEAs, or a nonprofit organization; (2) A private IHE that is a nonprofit organization; (3) A nonprofit organization, such as a development foundation, that is affiliated with a public IHE; and (4) A public IHE with 501(c)(3) status. A public IHE without 501(c)(3) status (even if that entity is tax exempt under Section 115 of the Internal Revenue Code or any other State or Federal provision), or that could not provide any other documentation of nonprofit status described above, however, would not qualify as a nonprofit organization, and therefore would not be eligible to apply for and receive an EIR grant.

2. a. *Cost Sharing or Matching:* Under section 4611(d) of the ESEA, each grant recipient must provide, from Federal, State, local, or private sources, an amount equal to 10 percent of funds provided under the grant, which may be provided in cash or through in-kind contributions, to carry out activities supported by the grant. Applicants must include a budget showing their matching contributions to the budget amount of EIR grant funds and must provide evidence of their matching contributions for the first year of the grant in their grant applications.

Section 4611(d) of the ESEA authorizes the Secretary to waive the matching requirement on a case-by-case basis, upon a showing of exceptional circumstances, such as:

(i) The difficulty of raising matching funds for a program to serve a rural area;

(ii) The difficulty of raising matching funds in areas with a concentration of LEAs or schools with a high percentage of students aged 5 through 17—

(A) Who are in poverty, as counted in the most recent census data approved by the Secretary;

(B) Who are eligible for a free or reduced-price lunch under the Richard B. Russell National School Lunch Act (42 U.S.C. 1751 *et seq.*);

(C) Whose families receive assistance under the State program funded under part A of title IV of the Social Security Act (42 U.S.C. 601 *et seq.*); or

(D) Who are eligible to receive medical assistance under the Medicaid program; and

(iii) The difficulty of raising funds on Tribal land.

An applicant that wishes to apply for a waiver must include a request in its application, describing the exceptional circumstances that make it difficult for the applicant to meet the matching requirement. Further information about applying for waivers can be found in the application package for this competition.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

4. *Other:* a. *Funding Categories:* An applicant will be considered for an award only for the type of EIR grant for which it applies (*i.e.,* Mid-phase: Absolute Priority 2, Mid-phase: Absolute Priority 3, or Mid-phase: Absolute Priority 4). An applicant may not submit an application for the same proposed project under more than one type of grant (*e.g.,* both an Early-phase grant and Mid-phase grant).

Note: Each application will be reviewed under the competition in which it was submitted in the *Grants.gov* system, and only applications that are successfully submitted by the established deadline will be peer reviewed. Applicants should be careful that they download the intended EIR application package and that they submit their applications under the intended EIR competition.

b. *Evaluation:* The grantee must conduct an independent evaluation of the effectiveness of its project.

c. *High-need students:* The grantee must serve high-need students.

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs*, which contain requirements and information on how to submit an application.

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for Mid-phase grants, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit:* The application narrative is where you, the applicant, will address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative for a Mid-phase grant to no more than 30 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.

• Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.

• Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).

• Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; one-page abstract; evidence form; or appendices (*e.g.,* nonprofit documentation, resumes, letters of support, demonstration of match, matching waiver request, list of proprietary information, eligibility checklist, logic model, indirect cost rate agreement). However, the recommended page limit does apply to the entire application narrative.

6. *Notice of Intent to Apply:* The Department will be able to review grant applications more efficiently if we know the approximate number of applicants that intend to apply. Therefore, we strongly encourage each potential applicant to notify us of their intent to submit an application. Applicants may access this form using the link available on the Notice of Intent to Apply section of the competition website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/.* Applicants that do not submit a notice of intent to apply may still apply for funding; applicants that do submit a notice of intent to apply are not bound to apply or bound by the information provided.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for the Mid-phase grants competition are from 34 CFR 75.210. The points assigned to each criterion are indicated in the parentheses next to the criterion. Together with the competitive preference priorities, an applicant may earn up to a total of 106 points based on the selection criteria for the application.

A. *Significance (up to 15 points).*

The Secretary considers the significance of the proposed project. In determining the significance of the proposed project, the Secretary considers the extent to which the proposed project involves the development or demonstration of promising new strategies that build on, or are alternatives to, existing strategies.

B. *Strategy to Scale (up to 40 points).*

The Secretary considers the applicant's strategy to scale the proposed project. In determining the applicant's capacity to scale the proposed project, the Secretary considers the following factors:

(1) The extent to which the applicant identifies a specific strategy or strategies that address a particular barrier or barriers that prevented the applicant, in the past, from reaching the level of scale that is proposed in the application. (10 points)

(2) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks. (5 points)

(3) The applicant's capacity (*e.g.,* in terms of qualified personnel, financial resources, or management capacity) to bring the proposed project to scale on a national or regional level (as defined in this notice) working directly, or through partners, during the grant period. (10 points)

(4) The mechanisms the applicant will use to broadly disseminate information on its project so as to support further development or replication. (10 points)

(5) The likely utility of the products (such as information, materials, processes, or techniques) that will result from the proposed project, including the potential for their being used effectively in a variety of other settings. (5 points)

C. *Quality of the Project Design (up to 20 points).*

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which there is a conceptual framework underlying the proposed research or demonstration activities and the quality of that framework. (5 points)

(2) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable. (5 points)

(3) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs. (10 points)

D. *Quality of the Project Evaluation (up to 25 points).*

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) The extent to which the methods of evaluation will, if well implemented, produce evidence about the project's effectiveness that would meet the What Works Clearinghouse standards without reservations as described in the What Works Clearinghouse Handbook (as defined in this notice). (15 points)

(2) The extent to which the evaluation will provide guidance about effective strategies suitable for replication or testing in other settings. (5 points)

(3) The extent to which the evaluation plan clearly articulates the key project components, mediators, and outcomes, as well as a measurable threshold for acceptable implementation. (5 points)

Note: Applicants may wish to review the following technical assistance resources on evaluation: (1) WWC Procedures and Standards Handbooks: *https://ies.ed.gov/ncee/wwc/Handbooks;* (2) ''Technical Assistance Materials for Conducting Rigorous Impact Evaluations'': *http://ies.ed.gov/ncee/projects/evaluationTA.asp;* and (3) IES/NCEE Technical Methods papers: *http://ies.ed.gov/ncee/tech_methods/.* In addition, applicants may view an optional webinar recording that was hosted by the Institute of Education Sciences. The webinar focused on more rigorous evaluation designs, discussing strategies for designing and executing experimental studies that meet WWC evidence standards without reservations. This webinar is available at: *https://ies.ed.gov/ncee/wwc/Multimedia/18.*

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

Before making awards, we will screen applications submitted in accordance with the requirements in this notice to determine whether applications have met eligibility and other requirements. This screening process may occur at various stages of the process; applicants

that are determined to be ineligible will not receive a grant, regardless of peer reviewer scores or comments.

Peer reviewers will read, prepare a written evaluation of, and score the assigned applications, using the selection criteria provided in this notice.

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions and, under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2), we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with:

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

Note: The evaluation report is a specific deliverable under a Mid-phase grant that grantees must make available to the public. Additionally, EIR grantees are encouraged to submit final studies resulting from research supported in whole or in part by EIR to the Educational Resources Information Center (*http://eric.ed.gov*).

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html*.

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case, the Secretary establishes a data collection period.

5. *Performance Measures:* For the purpose of Department reporting under 34 CFR 75.110, the Department has established a set of performance measures (as defined in this notice) for the Mid-phase grants.

Annual performance measures: (1) The percentage of grantees that reach their annual target number of students as specified in the application; (2) the percentage of grantees that reach their annual target number of high-need students as specified in the application; (3) the percentage of grantees with ongoing well-designed and independent evaluations that will provide evidence of their effectiveness at improving student outcomes in multiple contexts; (4) the percentage of grantees that implement an evaluation that provides information about the key practices and the approach of the project so as to facilitate replication; (5) the percentage of grantees that implement an evaluation that provides information on

the cost-effectiveness of the key practices to identify potential obstacles and success factors to scaling; and (6) the cost per student served by the grant.

Cumulative performance measures: (1) The percentage of grantees that reach the targeted number of students specified in the application; (2) the percentage of grantees that reach the targeted number of high-need students specified in the application; (3) the percentage of grantees that complete a well-designed, well-implemented, and independent evaluation that provides evidence of their effectiveness at improving student outcomes at scale; (4) the percentage of grantees that complete a well-designed, well-implemented, and independent evaluation that provides information about the key elements and the approach of the project so as to facilitate replication or testing in other settings; (5) the percentage of grantees with a completed evaluation that provides information on the cost-effectiveness of the key practices to identify potential obstacles and success factors to scaling; and (6) the cost per student served by the grant.

Project-Specific Performance Measures: Applicants must propose project-specific performance measures and performance targets (both as defined in this notice) consistent with the objectives of the proposed project. Applications must provide the following information as directed under 34 CFR 75.110(b) and (c):

(1) Performance measures. How each proposed performance measure would accurately measure the performance of the project and how the proposed performance measure would be consistent with the performance measures established for the program funding the competition.

(2) Baseline (as defined in this notice) data. (i) Why each proposed baseline is valid; or (ii) if the applicant has determined that there are no established baseline data for a particular performance measure, an explanation of why there is no established baseline and of how and when, during the project period, the applicant would establish a valid baseline for the performance measure.

(3) Performance targets. Why each proposed performance target is ambitious yet achievable compared to the baseline for the performance measure and when, during the project period, the applicant would meet the performance target(s).

(4) Data collection and reporting. (i) The data collection and reporting methods the applicant would use and why those methods are likely to yield reliable, valid, and meaningful performance data; and (ii) the applicant's capacity to collect and report reliable, valid, and meaningful performance data, as evidenced by high-quality data collection, analysis, and reporting in other projects or research.

All grantees must submit an annual performance report with information that is responsive to these performance measures.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things, whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Adam Schott,

Principal Deputy Assistant Secretary, Delegated the Authority to Perform the Functions and Duties of the Assistant Secretary, Office of Elementary and Secondary. Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2024–SCC–0016]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; High School Equivalency Program (HEP) Annual Performance Report

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a revision of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before June 5, 2024.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link *www.reginfo.gov/public/do/PRAMain* to access the site. Find this information collection request (ICR) by selecting ''Department of Education'' under ''Currently Under Review,'' then check the ''Only Show ICR for Public Comment'' checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the ''View Information Collection (IC) List'' link. Supporting statements and other supporting documentation may be found by clicking on the ''View Supporting Statement and Other Documents'' link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Katrina Ballard, (202) 987–0702.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner;

(3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: High School Equivalency Program (HEP) Annual Performance Report.

OMB Control Number: 1810–0684.

Type of Review: Revision of a currently approved ICR.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 54.

Total Estimated Number of Annual Burden Hours: 1,242.

Abstract: This is a request for a revision of the 1810–0684 High School Equivalency Program (HEP) Annual Performance Report collection. These revisions include language replacements, removals, and additions that are intended to ensure compliance with EDGAR 34 CFR 75.110 and OMB Circular A–110, improve the clarity of instructions and data collection, and remove duplicative language. Substantive changes include the addition of a data element related to mode of instruction. For a complete list of revisions, please see the attached summary, which will be shared with the public and OMB as a supplemental document. The Office of Migrant Education (OME) is collecting information for the High School Equivalency Program (HEP) which is authorized under title IV, section 418A of the Higher Education Act of 1965, as amended by section 408 of the Higher Education Opportunity Act (HEOA) (20 U.S.C. 1070d–2) (special programs for students whose families are engaged in migrant and seasonal farm work) and 2 CFR 200.328 which requires that recipients of discretionary grants submit an Annual Performance Report (APR) to best inform improvements in program outcomes and productivity.

Although the Education Department continues to use the generic 524B, OME is requesting to continue the use of a customized APR that goes beyond the generic 524B APR to facilitate the collection of more standardized and comprehensive data to inform performance indicators, to improve the overall quality of data collected, and to increase the quality of data that can be used to inform policy decisions.

Although the Education Department continues to use the generic 524B, OME is requesting to continue the use of a customized APR that goes beyond the generic 524B APR to facilitate the collection of more standardized and comprehensive data to inform Government Performance Results Act (GPRA) indicators, to improve the overall quality of data collected, and to increase the quality of data that can be used to inform policy decisions.

Dated: April 30, 2024.

Kun Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

[FR Doc. 2024–09741 Filed 5–3–24; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Education Innovation and Research (EIR) Program Expansion Grants

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for fiscal year (FY) 2024 for the EIR program Expansion Grants, Assistance Listing Number 84.411A (Expansion Grants). This notice relates to the approved information collection under OMB control number 1894–0006.

DATES:

Applications Available: May 6, 2024.

Deadline for Notice of Intent to Apply: June 06, 2024.

Deadline for Transmittal of Applications: July 05, 2024.

Deadline for Intergovernmental Review: September 03, 2024.

Pre-Application Information: The Department will post additional competition information for prospective applicants on the EIR program website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/.*

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs.*

FOR FURTHER INFORMATION CONTACT: Jamila Smith, U.S. Department of Education, 400 Maryland Avenue SW, Washington, DC 20202–5900. Telephone: 202–987–1753. Email: *eir@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The EIR program, established under section 4611 of the Elementary and Secondary Education Act, as amended (ESEA), provides funding to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based (as defined in this notice), field-initiated innovations to improve student achievement and attainment for high-need students and to rigorously evaluate such innovations. The EIR program is designed to generate and validate solutions to persistent education challenges and to support the expansion of those solutions to serve substantially higher numbers of students.

The central design element of the EIR program is its multitier structure that links the amount of funding an applicant may receive to the quality of the evidence supporting the efficacy of the proposed project. A goal of the program is for projects that build this evidence to advance through EIR's grant tiers: ''Early-phase,'' ''Mid-phase,'' and ''Expansion.''

''Early-phase,'' ''Mid-phase,'' and ''Expansion'' grants differ in terms of the evidence of effectiveness required to be considered for funding, the expectations regarding the kind of evidence and information funded projects should produce, the scale of funded projects, and, consequently, the amount of funding available to support each type of project.

Expansion grants are supported by strong evidence (as defined in this notice) for at least one population and setting, and grantees are encouraged to implement at the national level (as defined in this notice). Expansion grants provide funding for the implementation and rigorous evaluation of a program that has been found to produce sizable, significant impacts under a Mid-phase grant or other effort meeting similar criteria, for the purposes of (a) determining whether such impacts can be successfully reproduced and sustained over time, and (b) identifying

the conditions in which the program is most effective.

This notice invites applications for Expansion grants only. The notices inviting applications for Early-phase grants and Mid-phase grants are published elsewhere in this issue of the **Federal Register**.

Background:

While this notice is for the Expansion grants tier only, the premise of the EIR program is that new, effective, and innovative educational programs and practices can help to overcome the persistent and significant challenges to student educational opportunity and success, particularly for underserved and high-need students. Raise the Bar: Lead the World is the Department's call to action to transform pre-kindergarten (Pre-K) through grade 12 education and unite around what evidence demonstrates works by in promoting academic excellence, boldly improving learning conditions, and preparing our Nation's students for global competitiveness.[1] Consistent with that call to action, the priorities used in this competition advance Raise the Bar's goals to promote academic excellence and boldly improve learning conditions.

In FY 2024, the Department is particularly interested in projects that propose services and activities that help students recover from the COVID–19 pandemic, accelerate learning and academic achievement, reimagine schools, and transform our education system. Specifically, the Department is focused on improving student achievement and attainment, as highlighted across Administration and Department efforts for the past several years. Building on the Administration's previous efforts, in January 2024, the Administration announced its Improving Student Achievement Agenda,[2] which aims to drive proven strategies that will support academic success for every child in school. The strategies and evidence discussed in the Improving Student Achievement Agenda focus on (1) increasing student attendance; (2) providing high-dosage tutoring; and (3) increasing summer learning and extended or afterschool learning time. These strategies and the broader Improving Student Achievement Agenda, including a focus on core academic instruction, are well aligned with the EIR program purpose, and the new funding to be released through the FY 2024 EIR competition will help accelerate and scale up sustainable adoption of evidence-based strategies that we expect will improve student achievement and attainment in the school years ahead. The priorities in this competition are designed to create conditions under which students have equitable access to high-quality learning opportunities and experiences. For example, projects may include new approaches to instructional design such as through project-based or experiential learning opportunities for students, schoolwide frameworks, such as small schools or learning communities, that support student connection and engagement, and increased interagency coordination to improve academic supports for highly mobile students such as students in foster care and students experiencing homelessness.

Note: The EIR program statute refers to ''high-need students'' but does not define the term, which allows applicants to define it for purposes of the applicant's proposed project, population, and setting. Addressing the needs of underserved students (as defined in this notice) is one way to address EIR's statutory requirement to serve ''high-need students.'' In particular, the Department welcomes innovative projects that serve disconnected youth, students who are in foster care, and students performing significantly below grade level.

The EIR program is rooted in innovation; the program is not intended to provide support for practices that are already commonly implemented by educators, unless significant adaptations of such practices warrant testing to determine if they can accelerate achievement or increase the likelihood that the practices can be widely, efficiently, and effectively implemented in new populations and settings. If the evaluation demonstrates that innovations are supported by strong evidence, then EIR seeks applicants who can replicate and test these innovations in new populations and settings.

As an EIR project is implemented, grantees are encouraged to learn more about how the practices improve student achievement and attainment as well as to develop increasingly rigorous evidence of effectiveness and new strategies to efficiently and cost-effectively scale to new school districts, regions, and States. We encourage applicants to develop a logic model (as defined in this notice), theory of action, or another conceptual framework that includes the goals, objectives, outcomes, and key project components (as defined in this notice) of the project that can support systems of continuous improvement.

All EIR applicants and grantees should also consider how they will develop their organizational capacity, project financing, and business plans to sustain their projects and continue implementation and adaptation after Federal funding ends. The Department intends to provide grantees with technical assistance to support dissemination, scaling, and sustainability efforts.

Expansion grant projects are expected to scale practices that have prior evidence of effectiveness to improve outcomes for high-need and underserved students. They are also expected to generate important information about an intervention's effectiveness, such as for whom and in which contexts a practice is most effective, including cost considerations such as economies of scale. Expansion grant projects are uniquely positioned to help answer critical questions about the process of scaling a practice to the national level across geographies as well as locale types. Expansion grant applicants are encouraged to consider how the cost structure of a practice can change as the intervention scales. Additionally, grantees may want to consider how their project will balance implementation fidelity and flexibility for scaling.

Expansion grant applicants are encouraged to design an evaluation that has the potential to meet strong evidence. Expansion grants should measure the cost—effectiveness of their practices using administrative or other readily available data. These types of efforts are critical to sustaining and scaling EIR-funded effective practices after the EIR grant period ends (assuming that the practice has positive effects on important student outcomes). To support adoption or replication by other entities, the evaluation of an Expansion grant project should identify and codify the core elements of the EIR-supported practice that the project implements, as well as examine the effectiveness of the project for any new populations or settings included in the project. The Department intends to provide grantees (including the independent evaluators they contract with as part of their project) with evaluation technical assistance. This could include grantees and their independent evaluators providing to the

[1] U.S. Secretary of Education Miguel Cardona laid out his vision for the direction the agency will follow in 2024 to promote academic excellence, improve learning conditions, and prepare our students for a world where global engagement is critical to our Nation's standing. In his address, Secretary Cardona remarked that ''Raise the Bar: Lead the World'' is not a list of new priorities, but a call to strengthen our will to transform education for the better, building on approaches that we know work in education. More information is available at *https://www.ed.gov/raisethebar.*

[2] *https://www.whitehouse.gov/briefing-room/statements-releases/2024/01/17/fact-sheet-biden-harris-administration-announces-improving-student-achievement-agenda-in-2024/.*

Department or its contractor updated comprehensive evaluation plans in a format as requested by the technical assistance provider and using such tools as the Department may request. Grantees will be encouraged to update this evaluation plan at least annually to reflect any changes to the evaluation. Updates must be consistent with the scope and objectives of the approved application.

The FY 2024 Expansion grant competition includes three absolute priorities and two competitive preference priorities. All Expansion grant applicants must address Absolute Priority 1. Expansion grant applicants are also required to address one of the other two absolute priorities (applicants may not submit under more than one of the other 2 absolute priorities). All applicants have the option of addressing the competitive preference priorities and may opt to do so regardless of the absolute priority they select.

Absolute Priority 1—Strong Evidence establishes the evidence requirement for this tier of grants. All Expansion grants applicants must submit prior evidence of effectiveness that meets the strong evidence standard.

Absolute Priority 2—Field-Initiated Innovations—General gives applicants the option to propose projects that are field-initiated innovations to improve student achievement and attainment.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Educator Recruitment and Retention is intended to elevate and strengthen the educator workforce in ways that prioritize innovation in recruiting and retaining educators to better support high-need students. Applicants are encouraged to address fundamental challenges schools face in recruiting and retaining qualified educators by addressing the responsibilities and challenges educators continue to face after the pandemic. For example, projects may be designed to improve supports for educators that enhance the ability of schools to recruit and retain staff (*e.g.,* strategies to support educator wellbeing or structuring staffing and schedules to ensure educators and students are appropriately supported, and have sufficient time for planning, collaboration, working with coaches, and observing instruction of other educators) and increase access to leadership opportunities that can lead to increased pay and improved retention for fully certified, experienced, and effective educators, while expanding the impact of great teachers within and beyond their classrooms. Projects may support the recruitment and retention of all school staff or specific staff with acute recruitment and retention challenges (*e.g.,* personnel serving children or students with disabilities) and increasing access to leadership opportunities that can lead to increased pay and improved retention for fully certified, experienced, and effective educators, while expanding the impact of great teachers within and beyond their classrooms. Projects may support the recruitment and retention of all school staff or specific staff with acute recruitment and retention challenges (*e.g.,* personnel serving children or students with disabilities).

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners is intended to encourage applicants to propose projects that involve (as applicants or partners) entities underrepresented in the program's portfolio of grants. The Department is eager to increase the volume of applicants and partners from entities such as community colleges (as defined in this notice), Historically Black Colleges and Universities (as defined in this notice), Tribal Colleges and Universities (as defined in this notice), and minority-serving institutions (as defined in this notice).

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Supports reflects the Administration's ongoing commitment to addressing the impact of the COVID–19 pandemic on Pre-K through grade 12 education. The pandemic caused unprecedented disruption in schools across the country and drew renewed attention to the ongoing challenges for underserved students. In response to the pandemic, educators mobilized to address the needs of all students. Researchers, educators, parents, and policymakers are working to understand and address the impact of inconsistent access to instruction, enrichment, peers, and services and supports, and the impact of other related challenges. We also know that for students in underserved communities, inequities in educational opportunity and outcomes existed previously, and have been exacerbated by the pandemic.[3] The COVID–19 pandemic has changed the education landscape, as students continue to make up for lost classroom instruction. However, it also provides an opportunity to redesign how schools approach teaching and learning in ways that both address long-standing gaps in educational opportunity and better prepare students for college and careers. Over 14 million public school students (31 percent) missed at least 10 percent of school in school year 2021–2022.[4] According to analysis by the Council of Economic Advisors, absenteeism accounted for up to 27 percent of the test score declines in math and 45 percent of the test score declines in reading on the National Assessment of Educational Progress.[5] To that end, the Department seeks projects that build the evidence base on effective educational practices to improve achievement for high-need students by expanding existing innovative education practices to address these challenges and inequities. The proposed innovations should be designed to better enable students to access the educational opportunities they need to succeed in school and reach their full potential.

Through these priorities, the Department intends to advance innovation, build evidence, and address the learning and achievement of underserved and high-need students in Pre-K through grade 12.

Priorities: This notice includes three absolute priorities and two competitive preference priorities. In accordance with 34 CFR 75.105(b)(2)(ii), Absolute Priority 1 is from regulations (34 CFR 75.226(d)(2)). In accordance with 34 CFR 75.105(b)(2)(iv), Absolute Priority 2 is from section 4611(a)(1)(A) of the ESEA. Absolute Priority 3 is from section 4611(a)(1)(A) of the ESEA and the Supplemental Priorities and Definitions for Discretionary Grants Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities). The competitive preference priorities are from the Supplemental Priorities.

Absolute Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded

[4] U.S. Department of Education. (2023, September 15). Raising the Bar for Consistent School Attendance. *ED.gov* Blog. *https://blog.ed.gov/2023/09/raising-the-bar-for-consistent-school-attendance/*.

[5] The White House. (2023, September 13). Chronic Absenteeism and Disrupted Learning Require an All-Hands-on-Deck Approach | CEA. The White House. *https://www.whitehouse.gov/cea/written-materials/2023/09/13/chronic-absenteeism-and-disrupted-learning-require-an-all-hands-on-deck-approach/.*

applications from this competition, these priorities are absolute priorities. Under 34 CFR 75.105(c)(3), we consider only applications that meet Absolute Priority 1 and one additional absolute priority.

These priorities are:

Absolute Priority 1—Strong Evidence.

Projects supported by evidence that meets the conditions in the definition of ''strong evidence.''

Note: An applicant must identify up to four studies to be reviewed against the What Works Clearinghouse (WWC) Handbooks (as defined in this notice) for the purposes of meeting the definition of ''strong evidence.'' The studies may have been conducted by the applicant or by a third party. An applicant must clearly identify the citation for each study in the Evidence form. An applicant must ensure that all cited studies are available to the Department from publicly available sources and provide links or other guidance indicating where each is available. The Department may not review a study that an applicant fails to clearly identify for review.

In addition to including up to four study citations, an applicant must provide in the Evidence form the following information: (1) the positive student outcomes the applicant intends to replicate under its Expansion grant and how these outcomes correspond to the positive student outcomes in the cited studies; (2) the characteristics of the population to be served under its Expansion grant and how these characteristics correspond to the characteristics of the students in the cited studies; (3) the characteristics of the setting to be served under its Expansion grant and how these characteristics correspond to the settings in the cited studies; and (4) the practice(s) the applicant plans to implement under its Expansion grant and how the practice(s) correspond with the practice(s) in the cited studies.

If the Department determines that an applicant has provided insufficient information, the applicant will not have an opportunity to provide additional information. However, if the WWC team reviewing evidence determines that a study does not provide enough information on key aspects of the study design, such as sample attrition or equivalence of intervention and comparison groups, the WWC may submit a query to the study author(s) to gather information for use in determining a study rating. Authors would be asked to respond to queries within 10 business days. If the author query remains incomplete within 14 days of the initial contact with the study author(s), the study may be deemed ineligible under the grant competition. After the grant competition closes, the WWC will, for purposes of its own curation of studies, continue to include responses to author queries and make updates to study reviews as necessary. However, no additional information will be considered after the competition closes and the initial timeline established for response to an author query passes.

Absolute Priority 2—Field-Initiated Innovations—General.

Projects designed to create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated innovations to improve student achievement and attainment for high-need students.

Absolute Priority 3—Field-Initiated Innovations—Promoting Equity in Student Access to Educational Resources and Opportunities: Educator Recruitment and Retention.

Projects that are designed to—

(a) Create, develop, implement, replicate, or take to scale entrepreneurial, evidence-based, field-initiated

innovations to improve student achievement and attainment for high-need students; and

(b) Promote educational equity and adequacy in resources and opportunity for underserved students—

(1) In one or more of the following educational settings:

(i) Early learning programs.

(ii) Elementary school.

(iii) Middle school.

(iv) High school.

(v) Career and technical education programs.

(vi) Out-of-school-time settings.

(vii) Alternative schools and programs.

(viii) Juvenile justice system or correctional facilities; and

(2) That examine the sources of inequity and inadequacy and implement responses, and that may include one or more of the following:

(i) Increasing the number and proportion of experienced, fully certified, in-field, and effective educators, and educators from traditionally underrepresented backgrounds or the communities they serve, to ensure that underserved students have educators from those backgrounds and communities and are not taught at disproportionately higher rates by uncertified, out-of-field, and novice teachers compared to their peers.

Note: All strategies to increase racial diversity of educators must comply with the nondiscrimination requirements contained in Federal civil rights laws.

(ii) Improving the preparation, recruitment, and early career support and development of educators in shortage areas or hard to staff schools.

(iii) Improving the retention of fully certified, experienced, and effective educators in high-need schools or shortage areas.

Competitive Preference Priorities: For FY 2024 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i), we award up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 1, and up to an additional 3 points to an application, depending on how well the application addresses Competitive Preference Priority 2.

These priorities are:

Competitive Preference Priority 1—Promoting Equity in Student Access to Educational Resources and Opportunities: Implementers and Partners (up to 3 points).

Under this priority, an applicant must demonstrate how the project will be implemented by or in partnership with one or more of the following entities:

(a) Community colleges (as defined in this notice).

(b) Historically Black colleges and universities (as defined in this notice).

(c) Tribal Colleges and Universities (as defined in this notice).

(d) Minority-serving institutions (as defined in this notice).

Competitive Preference Priority 2—Addressing the Impact of COVID–19 on Students, Educators, and Faculty: Community Asset-Mapping and Needs Assessment and Evidence-Based Instructional Approaches and Supports (up to 3 points).

Projects that are designed to address the impacts of the COVID–19 pandemic, including impacts that extend beyond the duration of the pandemic itself, on the students most impacted by the pandemic, with a focus on underserved students and the educators who serve them, through the following priority areas:

(a) Conducting community asset-mapping and needs assessments that may include an assessment of the extent to which students, including subgroups of students, have become disengaged from learning, including students not participating in in-person or remote instruction, and specific strategies for reengaging and supporting students and their families; and

(b) Using evidence-based instructional approaches and supports, such as professional development, coaching,

ongoing support for educators, high quality tutoring, expanded access to rigorous coursework and content across K–12, and expanded learning time to accelerate learning for students in ways that ensure all students have the opportunity to successfully meet challenging academic content standards without contributing to tracking or remedial courses.

Definitions: The following definitions apply to this program. The definitions of ''baseline,'' ''experimental study,'' ''logic model,'' ''strong evidence,'' ''national level,'' ''nonprofit,'' ''performance measure,'' ''performance target,'' ''project component,'' ''relevant outcome,'' and ''What Works Clearinghouse Handbooks (WWC Handbooks)'' are from 34 CFR 77.1. The definitions of ''evidence-based,'' ''local educational agency,'' and ''State educational agency'' are from section 8101 of the ESEA. The definitions of ''community college,'' ''children or students with disabilities,'' ''disconnected youth,'' ''early learning,'' ''educator,'' ''English learner,'' ''Historically Black colleges and universities,'' ''military- or veteran-connected student,'' ''minority-serving institutions,'' ''Tribal College or University,'' and ''underserved student'' are from the Supplemental Priorities.

Baseline means the starting point from which performance is measured and targets are set.

Children or students with disabilities means children with disabilities as defined in section 602(3) of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1401(3)) and 34 CFR 300.8, or students with disabilities, as defined in the Rehabilitation Act of 1973 (29 U.S.C. 705(37), 705(202)(B)).

Community college means ''junior or community college'' as defined in section 312(f) of the Higher Education Act of 1965, as amended (HEA).

Disconnected youth means an individual, between the ages 14 and 24, who may be from a low-income background, experiences homelessness, is in foster care, is involved in the justice system, or is not working or not enrolled in (or at risk of dropping out of) an educational institution.

Early learning means any (a) State-licensed or State-regulated program or provider, regardless of setting or funding source, that provides early care and education for children from birth to kindergarten entry, including, but not limited to, any program operated by a child care center or in a family child care home; (b) program funded by the Federal Government or State or local educational agencies (including any IDEA-funded program); (c) Early Head Start and Head Start program; (d) non-relative child care provider who is not otherwise regulated by the State and who regularly cares for two or more unrelated children for a fee in a provider setting; and (e) other program that may deliver early learning and development services in a child's home, such as the Maternal, Infant, and Early Childhood Home Visiting Program; Early Head Start; and Part C of IDEA.

Educator means an individual who is an early learning educator, teacher, principal or other school leader, specialized instructional support personnel (*e.g.,* school psychologist, counselor, school social worker, early intervention service personnel), paraprofessional, or faculty.

English learner means an individual who is an English learner as defined in section 8101(20) of the ESEA, or an individual who is an English language learner as defined in section 203(7) of the Workforce Innovation and Opportunity Act.

Evidence-based means an activity, strategy, or intervention that—

(i) Demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(I) Strong evidence from at least 1 well-designed and well-implemented experimental study;

(II) Moderate evidence from at least 1 well-designed

and well-implemented quasi-experimental study; or

(III) Promising evidence from at least 1 well-designed and well-implemented correlational study with statistical controls for selection bias; or

(ii)(I) Demonstrates a rationale based on high-quality research findings or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes or other relevant outcomes; and

(II) Includes ongoing efforts to examine the effects of such activity, strategy, or intervention.

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of experimental studies that, depending on their design and implementation (*e.g.,* sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the WWC Handbooks (as defined in this notice):

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the project component being evaluated (the treatment group) or not to receive the project component (the control group).

(ii) A regression discontinuity design study assigns the project component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Historically Black colleges and universities means colleges and universities that meet the criteria set out in 34 CFR 608.2.

Local educational agency (LEA) means:

(a) In General. A public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or of or for a combination of school districts or counties that is recognized in a State as an administrative agency for its public elementary schools or secondary schools.

(b) Administrative Control and Direction. The term includes any other public institution or agency having administrative control and direction of a public elementary school or secondary school.

(c) Bureau of Indian Education Schools. The term includes an elementary school or secondary school funded by the Bureau of Indian Education but only to the extent that including the school makes the school eligible for programs for which specific eligibility is not provided to the school in another provision of law and the school does not have a student population that is smaller than the student population of the LEA receiving assistance under the ESEA with the smallest student population, except that the school shall not be subject to the jurisdiction of any State educational agency (SEA) (as defined in this notice)

other than the Bureau of Indian Education.

(d) Educational Service Agencies. The term includes educational service agencies and consortia of those agencies.

(e) State Educational Agency. The term includes the SEA in a State in which the SEA is the sole educational agency for all public schools.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

Military- or veteran-connected student means one or more of the following:

(a) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a member of the uniformed services (as defined by 37 U.S.C. 101), in the Army, Navy, Air Force, Marine Corps, Coast Guard, Space Force, National Guard, Reserves, National Oceanic and Atmospheric Administration, or Public Health Service or is a veteran of the uniformed services with an honorable discharge (as defined by 38 U.S.C. 3311).

(b) A student who is a member of the uniformed services, a veteran of the uniformed services, or the spouse of a service member or veteran.

(c) A child participating in an early learning program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a veteran of the uniformed services (as defined by 37 U.S.C. 101).

Minority-serving institution means an institution that is eligible to receive assistance under sections 316 through 320 of part A of title III, under part B of title III, or under title V of the HEA.

National level describes the level of scope or effectiveness of a process, product, strategy, or practice that can be effective in a wide variety of communities, including rural and urban areas, as well as with different groups (*e.g.,* economically disadvantaged, racial and ethnic groups, migrant populations, individuals with disabilities, English learners, and individuals of each gender).

Nonprofit, as applied to an agency, organization, or institution, means that it is owned and operated by one or more corporations or associations whose net earnings do not benefit, and cannot lawfully benefit, any private shareholder or entity.

Performance measure means any quantitative indicator, statistic, or metric used to gauge program or project performance.

Performance target means a level of performance that an applicant would seek to meet during the course of a project or as a result of a project.

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program. *State educational agency* (SEA) means the agency primarily responsible for the State supervision of public elementary schools and secondary schools.

Strong evidence means that there is evidence of the effectiveness of a key project component in improving a relevant outcome for a sample that overlaps with the populations and settings proposed to receive that component, based on a relevant finding from one of the following:

(i) A practice guide prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''strong evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks reporting a ''positive effect'' on a relevant outcome based on a ''medium to large'' extent of evidence, with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single experimental study reviewed and reported by the WWC using version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks, or otherwise assessed by the Department using version 4.1 of the WWC Handbook, as appropriate, and that—

(A) Meets WWC standards without reservations;

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome;

(C) Includes no overriding statistically significant and negative effects on relevant outcomes reported in the study or in a corresponding WWC intervention report prepared under version 2.1, 3.0, 4.0, or 4.1 of the WWC Handbooks; and

(D) Is based on a sample from more than one site (*e.g.,* State, county, city, school district, or postsecondary campus) and includes at least 350 students or other individuals across sites. Multiple studies of the same project component that each meet requirements in paragraphs (iii)(A), (B), and (C) of this definition may together satisfy this requirement in this paragraph (iii)(D).

Tribal College or University has the meaning ascribed it in section 316(b)(3) of the HEA.

Underserved student means a student (which may include children in early learning environments, students in K–12 programs, and students in postsecondary education or career and technical education, as appropriate) in one or more of the following subgroups:

(a) A student who is living in poverty or is served by schools with high concentrations of students living in poverty.

(b) A student of color.

(c) A student who is a member of a federally recognized Indian Tribe.

(d) An English learner.

(e) A child or student with a disability.

(f) A disconnected youth.

(g) A migrant student.

(h) A student experiencing homelessness or housing insecurity.

(i) A lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+) student.

(j) A student who is in foster care.

(k) A student without documentation of immigration status.

(l) A pregnant, parenting, or caregiving student.

(m) A student impacted by the justice system, including a formerly incarcerated student.

(n) A student who is the first in their family to attend postsecondary education.

(o) A student performing significantly below grade level.

(p) A military- or veteran-connected student.

What Works Clearinghouse Handbooks (WWC Handbooks) means the standards and procedures set forth in the WWC Standards Handbook, Versions 4.0 or 4.1, and WWC Procedures Handbook, Versions 4.0 or 4.1, or in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (all incorporated by reference, see § 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC

standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the WWC Handbooks documentation.

Note: The What Works Clearinghouse Procedures and Standards Handbook (Version 4.1), as well as the more recent What Works Clearinghouse Handbooks released in August 2022 (Version 5.0), are available at *https://ies.ed.gov/ncee/wwc/Handbooks.*

Program Authority: 20 U.S.C. 7261.

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The Supplemental Priorities.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: $251,000,000.

These estimated available funds are the total available for new awards for all three types of grants under the EIR program (Early-phase, Mid-phase, and Expansion grants).

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of unfunded applications.

Estimated Average Size of Awards: Up to $15,000,000.

Maximum Award: We will not make an award exceeding $15,000,000 for a project period of 60 months. Under 34 CFR 75.104(b) the Secretary may reject, without consideration or evaluation, any application that proposes a project funding level that exceeds the stated maximum award amount. The Department intends to fund one or more projects under each of the EIR competitions, including Expansion grants (84.411A), Mid-phase grants (84.411B), and Early-phase grants (84.411C). Entities may submit applications for different projects for more than one competition (Early-phase grants, Mid-phase grants, and Expansion grants). The combined maximum new award amount a grantee may receive under these three competitions, is $16,000,000. If an entity is within funding range for multiple applications, the Department will award the highest scoring applications up to $16,000,000.

Estimated Number of Awards: 4–8.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

Note: Under section 4611(c) of the ESEA, the Department must use at least 25 percent of EIR funds for a fiscal year to make awards to applicants serving rural areas, contingent on receipt of a sufficient number of applications of sufficient quality. For purposes of this competition, we will consider an applicant as rural if the applicant meets the qualifications for rural applicants as described in the *Eligible Applicants* section and the applicant certifies that it meets those qualifications through the application. In implementing this statutory provision and program requirement, the Department may fund high-quality applications from rural applicants out of rank order in the Expansion grants competition.

In addition, from the estimated funds for this competition, the Department intends to award an estimated $87 million in funds for Science, Technology, Engineering and Math (STEM) projects and $87 million in funds for social and emotional learning projects, contingent on receipt of a sufficient number of applications of sufficient quality.

III. Eligibility Information

1. *Eligible Applicants:*

(a) An LEA;

(b) An SEA;

(c) The Bureau of Indian Education (BIE);

(d) A consortium of SEAs or LEAs;

(e) A nonprofit (as defined in this notice) organization; and

(f) An LEA, an SEA, the BIE, or a consortium described in clause (d), in partnership with—

(1) A nonprofit organization;

(2) A business;

(3) An educational service agency; or

(4) An IHE.

To qualify as a rural applicant under the EIR program, an applicant must meet both of the following requirements:

(a) The applicant is—

(1) An LEA with an urban-centric district locale code of 32, 33, 41, 42, or 43, as determined by the Secretary;

(2) A consortium of such LEAs;

(3) An educational service agency or a nonprofit organization in partnership with such an LEA; or

(4) A grantee described in clause (1) or (2) in partnership with an SEA; and

(b) A majority of the schools to be served by the program are designated with a locale code of 32, 33, 41, 42, or 43, or a combination of such codes, as determined by the Secretary.

Applicants are encouraged to retrieve locale codes from the National Center for Education Statistics School District search tool (*https://nces.ed.gov/ccd/districtsearch/*), where districts can be looked up individually to retrieve locale codes, and the Public School search tool (*https://nces.ed.gov/ccd/schoolsearch/*), where individual schools can be looked up to retrieve locale codes. More information on rural applicant eligibility will be in the application package for this competition.

Note: An applicant that is a nonprofit organization may, under 34 CFR 75.51, demonstrate its nonprofit status by providing: (1) proof that the Internal Revenue Service currently recognizes the applicant as an organization to which contributions are tax deductible under section 501(c)(3) of the Internal Revenue Code; (2) a statement from a State taxing body or the State attorney general certifying that the organization is a nonprofit organization operating within the State and that no part of its net earnings may lawfully benefit any private shareholder or individual; (3) a certified copy of the applicant's certificate of incorporation or similar document if it clearly establishes the nonprofit status of the applicant; or (4) any item described above if that item applies to a State or national parent organization, together with a statement by the State or parent organization that the applicant is a local nonprofit affiliate.

In addition, with respect to IHEs and their affiliates, the following entities may apply for a grant under this competition: (1) As noted above, any IHE that is a partner in an application submitted by an LEA, SEA, BIE, consortium of SEAs or LEAs, or a nonprofit organization; (2) A private IHE that is a nonprofit organization; (3) A nonprofit organization, such as a development foundation, that is affiliated with a public IHE; and (4) A public IHE with 501(c)(3) status. A public IHE without 501(c)(3) status (even if that entity is tax exempt under Section 115 of the Internal Revenue Code or any other State or Federal provision), or that could not provide any other documentation of nonprofit status described above, however, would

not qualify as a nonprofit organization, and therefore would not be eligible to apply for and receive an EIR grant.

2. a. *Cost Sharing or Matching:* Under section 4611(d) of the ESEA, each grant recipient must provide, from Federal, State, local, or private sources, an amount equal to 10 percent of funds provided under the grant, which may be provided in cash or through in-kind contributions, to carry out activities supported by the grant. Applicants must include a budget showing their matching contributions to the budget amount of EIR grant funds and must provide evidence of their matching contributions for the first year of the grant in their grant applications.

Section 4611(d) of the ESEA authorizes the Secretary to waive the matching requirement on a case-by-case basis, upon a showing of exceptional circumstances, such as:

(i) The difficulty of raising matching funds for a program to serve a rural area;

(ii) The difficulty of raising matching funds in areas with a concentration of LEAs or schools with a high percentage of students aged 5 through 17—

(A) Who are in poverty, as counted in the most recent census data approved by the Secretary;

(B) Who are eligible for a free or reduced-price lunch under the Richard B. Russell National School Lunch Act (42 U.S.C. 1751 *et seq.*);

(C) Whose families receive assistance under the State program funded under part A of title IV of the Social Security Act (42 U.S.C. 601 *et seq.*); or

(D) Who are eligible to receive medical assistance under the Medicaid program; and

(iii) The difficulty of raising funds on Tribal land.

An applicant that wishes to apply for a waiver must include a request in its application, describing the exceptional circumstances that make it difficult for the applicant to meet the matching requirement. Further information about applying for waivers can be found in the application package for this competition.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

4. *Other:* a. *Funding Categories:* An applicant will be considered for an award only for the type of EIR grant for which it applies. An applicant may not submit an application for the same proposed project under more than one type of grant (*e.g.,* both an Expansion grant and Mid-phase grant).

Note: Each application will be reviewed under the competition in which it was submitted in the *Grants.gov* system, and only applications that are successfully submitted by the established deadline will be peer reviewed. Applicants should be careful that they download the intended EIR application package and that they submit their applications under the intended EIR competition.

b. *Evaluation:* The grantee must conduct an independent evaluation of the effectiveness of its project.

c. *High-need students:* The grantee must serve high-need students.

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 7, 2022 (87 FR 75045), and available at *https://www.federalregister.gov/documents/2022/12/07/2022-26554/common-instructions-for-applicants-to-department-of-education-discretionary-grant-programs,* which contain requirements and information on how to submit an application.

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for Expansion grants, your application may include business information that you consider proprietary. In 34 CFR 5.11 we define ''business information'' and describe the process we use in determining whether any of that information is proprietary and, thus, protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit:* The application narrative is where you, the applicant, will address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative for an Expansion grant to no more than 35 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; one-page abstract; evidence form; or appendices (*e.g.,* nonprofit documentation, resumes, letters of support, demonstration of match, matching waiver request, list of proprietary information, eligibility checklist, logic model, indirect cost rate agreement). However, the recommended page limit does apply to the entire application narrative.

6. *Notice of Intent to Apply:* The Department will be able to review grant applications more efficiently if we know the approximate number of applicants that intend to apply. Therefore, we strongly encourage each potential applicant to notify us of their intent to submit an application. Applicants may access this form using the link available on the Notice of Intent to Apply section of the competition website: *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/innovation-early-learning/education-innovation-and-research-eir/fy-2024-competition/.* Applicants that do not submit a notice of intent to apply may still apply for funding; applicants that do submit a notice of intent to apply are not bound to apply or bound by the information provided.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for the Expansion grant competition are from 34 CFR 75.210. The points assigned to each criterion are indicated in the parentheses next to the criterion. Together with the competitive preference priorities, an applicant may earn up to a total of 106 points based on the selection criteria for the application.

A. *Significance (up to 15 points).*

The Secretary considers the significance of the proposed project. In determining the significance of the proposed project, the Secretary considers the extent to which the proposed project involves the development or demonstration of promising new strategies that build on, or are alternatives to, existing strategies.

B. *Strategy to Scale (up to 40 points).*

The Secretary considers the applicant's strategy to scale the proposed project. In determining the applicant's capacity to scale the proposed project, the Secretary considers the following factors:

(1) The extent to which the applicant identifies a specific strategy or strategies that address a particular barrier or barriers that prevented the applicant, in the past, from reaching the level of scale that is proposed in the application. (10 points)

(2) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks. (5 points)

(3) The applicant's capacity (*e.g.,* in terms of qualified personnel, financial resources, or management capacity) to bring the proposed project to scale on a national or regional level (as defined in this notice) working directly, or through partners, during the grant period. (10 points)

(4) The mechanisms the applicant will use to broadly disseminate information on its project so as to support further development or replication. (10 points)

(5) The likely utility of the products (such as information, materials, processes, or techniques) that will result from the proposed project, including the potential for their being used effectively in a variety of other settings. (5 points)

C. *Quality of the Project Design (up to 20 points).*

The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which there is a conceptual framework underlying the proposed research or demonstration activities and the quality of that framework. (5 points)

(2) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable. (5 points)

(3) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs. (10 points)

D. *Quality of the Project Evaluation (up to 25 points).*

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) The extent to which the methods of evaluation will, if well implemented, produce evidence about the project's effectiveness that would meet the What Works Clearinghouse standards without reservations as described in the What Works Clearinghouse Handbook (as defined in this notice). (15 points)

(2) The extent to which the evaluation will provide guidance about effective strategies suitable for replication or testing in other settings. (5 points)

(3) The extent to which the evaluation plan clearly articulates the key project components, mediators, and outcomes, as well as a measurable threshold for acceptable implementation. (5 points)

Note: Applicants may wish to review the following technical assistance resources on evaluation: (1) WWC Procedures and Standards Handbooks: *https://ies.ed.gov/ncee/wwc/Handbooks;* (2) ''Technical Assistance Materials for Conducting Rigorous Impact Evaluations'': *http://ies.ed.gov/ncee/projects/evaluationTA.asp;* and (3) IES/NCEE Technical Methods papers: *http://ies.ed.gov/ncee/tech_methods/.* In addition, applicants may view an optional webinar recording that was hosted by the Institute of Education Sciences. The webinar focused on more rigorous evaluation designs, discussing strategies for designing and executing experimental studies that meet WWC evidence standards without reservations. This webinar is available at: *https://ies.ed.gov/ncee/wwc/Multimedia/18.*

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

Before making awards, we will screen applications submitted in accordance with the requirements in this notice to determine whether applications have met eligibility and other requirements. This screening process may occur at various stages of the process; applicants that are determined to be ineligible will not receive a grant, regardless of peer reviewer scores or comments.

Peer reviewers will read, prepare a written evaluation of, and score the assigned applications, using the selection criteria provided in this notice.

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions and, under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that

over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2), we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with:

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

Note: The evaluation report is a specific deliverable under an Expansion grant that grantees must make available to the public. Additionally, EIR grantees are encouraged to submit final studies resulting from research supported in whole or in part by EIR to the Educational Resources Information Center (*http://eric.ed.gov*).

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case, the Secretary establishes a data collection period.

5. *Performance Measures:* For the purpose of Department reporting under 34 CFR 75.110, the Department has established a set of performance measures (as defined in this notice) for the Expansion grants.

Annual performance measures: (1) The percentage of grantees that reach their annual target number of students as specified in the application; (2) the percentage of grantees that reach their annual target number of high-need students as specified in the application; (3) the percentage of grantees with ongoing well-designed and independent evaluations that will provide evidence of their effectiveness at improving student outcomes in multiple contexts; (4) the percentage of grantees that implement an evaluation that provides information about the key practices and the approach of the project so as to facilitate replication; (5) the percentage of grantees that implement an evaluation that provides information on the cost-effectiveness of the key practices to identify potential obstacles and success factors to scaling; and (6) the cost per student served by the grant.

Cumulative performance measures: (1) The percentage of grantees that reach the targeted number of students specified in the application; (2) the percentage of grantees that reach the targeted number of high-need students specified in the application; (3) the percentage of grantees that complete a well-designed, well-implemented, and independent evaluation that provides evidence of effectiveness at improving student outcomes at scale; (4) the percentage of grantees that complete a well-designed, well-implemented, and independent evaluation that provides information about the key elements and the approach of the project so as to facilitate replication or testing in other settings; (5) the percentage of grantees with a completed evaluation that provides information on the cost-effectiveness of the key practices to identify potential obstacles and success

factors to scaling; and (6) the cost per student served by the grant.

Project-Specific Performance Measures: Applicants must propose project-specific performance measures and performance targets (both as defined in this notice) consistent with the objectives of the proposed project. Applications must provide the following information as directed under 34 CFR 75.110(b) and (c):

(1) Performance measures. How each proposed performance measure would accurately measure the performance of the project and how the proposed performance measure would be consistent with the performance measures established for the program funding the competition.

(2) Baseline (as defined in this notice) data. (i) Why each proposed baseline is valid; or (ii) if the applicant has determined that there are no established baseline data for a particular performance measure, an explanation of why there is no established baseline and of how and when, during the project period, the applicant would establish a valid baseline for the performance measure.

(3) Performance targets. Why each proposed performance target is ambitious yet achievable compared to the baseline for the performance measure and when, during the project period, the applicant would meet the performance target(s).

(4) Data collection and reporting. (i) The data collection and reporting methods the applicant would use and why those methods are likely to yield reliable, valid, and meaningful performance data; and (ii) the applicant's capacity to collect and report reliable, valid, and meaningful performance data, as evidenced by high-quality data collection, analysis, and reporting in other projects or research.

All grantees must submit an annual performance report with information that is responsive to these performance measures.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things, whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Adam Schott,

Principal Deputy Assistant Secretary, Delegated the Authority to Perform the Functions and Duties of the Assistant Secretary, Office of Elementary and Secondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Privacy Act of 1974; System of Records

AGENCY: Department of Energy.

ACTION: Notice of a modified system of records.

SUMMARY: As required by the Privacy Act of 1974 and the Office of Management and Budget (OMB) Circulars A–108 and A–130, the Department of Energy (DOE or the Department) is publishing notice of a modification to an existing Privacy Act system of records. DOE proposes to amend System of Records DOE–1, *Grievance Records.* This System of Records Notice (SORN) is being modified to align with new formatting requirements, published by OMB, and to ensure appropriate Privacy Act coverage of business processes and Privacy Act information. While there are no substantive changes to the ''Categories of Individuals'' or ''Categories of Records'' sections covered by this SORN, substantive changes have been made to the ''System Locations,'' ''Routine Uses,'' and ''Administrative, Technical and Physical Safeguards'' sections to provide greater transparency. Changes to ''Routine Uses'' include new provisions related to responding to breaches of information held under a Privacy Act SORN as required by OMB's Memorandum M–17–12, ''Preparing for and Responding to a Breach of Personally Identifiable Information'' (January 3, 2017). Language throughout the SORN has been updated to align with applicable Federal privacy laws, policies, procedures, and best practices.

DATES: This modified SORN will become applicable following the end of the public comment period on June 5, 2024 unless comments are received that result in a contrary determination.

ADDRESSES: Written comments should be sent to the DOE Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW, Washington, DC 20503 and to Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H–085, Washington, DC 20585 or by facsimile at (202) 586–8151 or by email at *privacy@hq.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H–085, Washington, DC 20585 or by facsimile at (202) 586–8151, by email at *privacy@hq.doe.gov,* or by telephone at (240) 686–9485.

SUPPLEMENTARY INFORMATION: On January 9, 2009, DOE published a Compilation of its Privacy Act systems of records, which included System of Records DOE–1, *Grievance Records.* This notice proposes amendments to the System Locations section of that system of records by removing System Locations where DOE–1 is no longer applicable. These locations are as follows: Alaska Power Administration, Environmental Consolidated Business Center, Southeastern Power

Administration, and the Office of Repository Development. Addresses for the National Energy Technology Laboratory's (NETL) sites in Pittsburgh, Morgantown, and Albany have been updated. Addresses for NETL's offices in Oklahoma and Alaska have been removed as they no longer require coverage. Finally, the Office of River Protection, Richland Operations Office, and Southwestern Power Administration addresses have been updated. The system manager's office title has been changed to ''Office of Policy, Labor and Employee Relations.'' The data element ''Social Security numbers'' has been removed from the ''Categories of Records in the System'' and ''employee identification numbers'' has been added. In the ''Routine Uses'' section, this modified notice deletes a previous routine use concerning efforts responding to a suspected or confirmed loss of confidentiality of information as it appears in DOE's compilation of its Privacy Act systems of records (January 9, 2009) and replaces it with one to assist DOE with responding to a suspected or confirmed breach of its records of Personally Identifiable Information (PII), modeled with language from OMB's Memorandum M–17–12, ''Preparing for and Responding to a Breach of Personally Identifiable Information'' (January 3, 2017). Further, this notice adds one new routine use to ensure that DOE may assist another agency or entity in responding to the other agency's or entity's confirmed or suspected breach of PII, as appropriate, as aligned with OMB's Memorandum M–17–12. An administrative change required by the FOIA Improvement Act of 2016 extends the length of time a requestor is permitted to file an appeal under the Privacy Act from 30 to 90 days. Both the ''System Locations'' and ''Administrative, Technical and Physical Safeguards'' sections have been modified to reflect the Department's usage of cloud-based services for records storage. Language throughout the SORN has been updated to align with applicable Federal privacy laws, policies, procedures, and best practices.

SYSTEM NAME AND NUMBER:

DOE–1, *Grievance Records.*

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATIONS:

Systems leveraging this SORN may exist in multiple locations. All systems storing records in a cloud-based server are required to use government-approved cloud services and follow National Institute of Standards and Technology (NIST) security and privacy standards for access and data retention. Records maintained in a government-approved cloud server are accessed through secure data centers in the continental United States.

U.S. Department of Energy, Headquarters, 1000 Independence Avenue SW, Washington, DC 20585.

U.S. Department of Energy, National Nuclear Security Administration (NNSA) Headquarters, 1000 Independence Avenue SW, Washington, DC 20585.

U.S. Department of Energy, NNSA John A. Gordon, Albuquerque Complex, 24600 20th Street SE, Albuquerque, NM 87116.

U.S. Department of Energy, NNSA Naval Reactors Field Office, Pittsburgh Naval Reactors, P.O. Box 109, West Mifflin, PA 15122–0109.

U.S. Department of Energy, NNSA Naval Reactors Field Office, Schenectady Naval Reactors, P.O. Box 1069, Schenectady, NY 12301.

Nevada Field Office, 232 Energy Way North, Las Vegas, NV 89030.

U.S. Department of Energy, Bonneville Power Administration, P.O. Box 3621, Portland, OR 97208.

U.S. Department of Energy, Office of Science, Chicago Office, Consolidated Service Center, 9800 South Cass Avenue, Lemont, IL 60439.

U.S. Department of Energy, Office of Science, Consolidated Service Center, P.O. Box 2001, Oak Ridge, TN 37831.

U.S. Department of Energy, Idaho Operations Office, 1955 Fremont Avenue, Idaho Falls, ID 83415.

U.S. Department of Energy, National Energy Technology Laboratory (Pittsburgh), 626 Cochran Mill Road, Pittsburgh, PA 15236.

U.S. Department of Energy, National Energy Technology Laboratory (Morgantown), 3610 Collins Ferry Road, Morgantown, WV 26505.

SYSTEM MANAGER(S):

Office of Policy, Labor and Employee Relations, Office of the Chief Human Capital Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 5 U.S.C. 7121, and 5 CFR part 771.

PURPOSE(S) OF THE SYSTEM:

The records in this system are used by management officials in the resolution of employee concerns about conditions of employment, working conditions, administration of the agency's grievance process, labor-management relations, work processes, or other similar issues.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Current and former DOE employees including NNSA employees, consultants, board members, and applicants, related to grievances filed in accordance with the Department's grievance process or pursuant to a negotiated grievance procedure.

CATEGORIES OF RECORDS IN THE SYSTEM:

Grievances; names; unique identifiers for Department employees and applicants for employment with the Department (*e.g.,* DOE OneID, employee number, and any other government identifier excluding Social Security number), work and home address; work and home telephone numbers; applicable demographic information; job titles, series, and grade levels; organization; supervisors' names and telephone numbers; copies of employee records, such as personnel actions, electronic official personnel files, performance appraisals, pay and leave records, and security clearance documents; management reports; witness statements; affidavits; checklists; notes; and relevant correspondence.

RECORD SOURCE CATEGORIES:

The grievant or complainant, applicable management officials, program office records, congressional offices, witnesses, and fact finders' notes and reports.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

1. A record from this system may be disclosed as a routine use to union officials acting in their official capacity

as a representative of the grievant or affected employees under 5 U.S.C. 7101 *et seq.*

2. A record from this system may be disclosed as a routine use to a member of Congress submitting a request involving a constituent when the constituent has requested assistance from the member concerning the subject matter of the record. The member of Congress must provide a copy of the constituent's signed request for assistance.

3. A record from this system may be disclosed as a routine use to an appropriate Federal, State, or local agency that is authorized to review and resolve the issue(s) raised in the grievance.

4. A record from this system may be disclosed as a routine use for the purpose of an investigation, settlement of claims, or the preparation and conduct of litigation to (1) persons representing the Department in the investigation, settlement or litigation, and to individuals assisting in such representation; (2) others involved in the investigation, settlement, and litigation, and their representatives and individuals assisting those representatives; (3) witnesses, potential witnesses, or their representatives and assistants; and any other person who possess information pertaining to the matter when it is necessary to obtain information or testimony relevant to the matters who possess information pertaining to the matter when it is relevant and necessary to obtain information or testimony relevant to the matter.

5. A record from this system may be disclosed as a routine use to DOE contractors in performance of their contracts, and their officers and employees who have a need for the record in the performance of their duties. Those provided information under this routine use are subject to the same limitations applicable to Department officers and employees under the Privacy Act.

6. A record from this system may be disclosed as a routine use to appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that there has been a breach of the system of records; (2) the Department has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, DOE (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

7. A record from this system may be disclosed as a routine use to another Federal agency or Federal entity, when the Department determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach; or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records in this system are on paper or in digital or other electronic form. Digital and other electronic images are stored on a storage area network in a secured environment. Records, whether paper or electronic, may be stored in a separate, secure location at the Department of Energy Headquarters or at the Department field sites.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records may be retrieved by the name of the grievant or the employing organizational element, type of grievance/matter being grieved, or other unique identifier, such as employee identification number.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Retention and disposition of these records is in accordance with the National Archives and Records Administration-approved records disposition schedule with a retention of 4 years.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Electronic records may be secured and maintained on a cloud-based software server and operating system that resides in Federal Risk and Authorization Management Program (FedRAMP) and Federal Information Security Modernization Act (FISMA) hosting environment. Data located in the cloud-based server is firewalled and encrypted at rest and in transit. The security mechanisms for handling data at rest and in transit are in accordance with DOE encryption standards. Records are protected from unauthorized access through the following appropriate safeguards:

- *Administrative:* Access to all records is limited to lawful government purposes only, with access to electronic records based on role and either two-factor authentication or password protection. The system requires passwords to be complex and to be changed frequently. Users accessing system records undergo frequent training in Privacy Act and information security requirements. Security and privacy controls are reviewed on an ongoing basis.
- *Technical:* Computerized records systems are safeguarded on Departmental networks configured for role-based access based on job responsibilities and organizational affiliation. Privacy and security controls are in place for this system and are updated in accordance with applicable requirements as determined by NIST and DOE directives and guidance.
- *Physical:* Computer servers on which electronic records are stored are located in secured Department facilities, which are protected by security guards, identification badges, and cameras. Paper copies of all records are locked in file cabinets, file rooms, or offices and are under the control of authorized personnel. Access to these facilities is granted only to authorized personnel and each person granted access to the system must be an individual authorized to use or administer the system.

RECORD ACCESS PROCEDURES:

The Department follows the procedures outlined in 10 CFR 1008.4. Valid identification of the individual making the request is required before information will be processed, given, access granted, or a correction considered, to ensure that information is processed, given, corrected, or records disclosed or corrected only at the request of the proper person.

CONTESTING RECORD PROCEDURES:

Any individual may submit a request to the System Manager and request a copy of any records relating to them. In accordance with 10 CFR 1008.11, any individual may appeal the denial of a request made by him or her for information about or for access to or correction or amendment of records. An appeal shall be filed within 90 calendar days after receipt of the denial. When an appeal is filed by mail, the postmark is conclusive as to timeliness. The appeal shall be in writing and must be signed by the individual. The words ''PRIVACY ACT APPEAL'' should appear in capital letters on the envelope and the letter. Appeals of denials relating to records maintained in government-wide system of records reported by Office of Personnel

Management (OPM), shall be filed, as appropriate, with the Assistant Director for Agency Compliance and Evaluation, OPM, 1900 E Street NW, Washington, DC 20415. All other appeals relating to DOE records shall be directed to the Director, Office of Hearings and Appeals (OHA), 1000 Independence Avenue SW, Washington, DC 20585.

NOTIFICATION PROCEDURES:

In accordance with the DOE regulation implementing the Privacy Act, 10 CFR part 1008, a request by an individual to determine if a system of records contains information about themselves should be directed to the U.S. Department of Energy, Headquarters, Privacy Act Officer. The request should include the requester's complete name and the time period for which records are sought.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

This SORN was last published in the **Federal Register**, 88 FR 87760–87762, on December 19, 2023.

Signing Authority

This document of the Department of Energy was signed on May 1, 2024, by Ann Dunkin, Senior Agency Official for Privacy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on May 1, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Privacy Act of 1974; System of Records

AGENCY: Department of Energy.

ACTION: Notice of a modified system of records.

SUMMARY: As required by the Privacy Act of 1974 and the Office of Management and Budget (OMB) Circulars A–108 and A–130, the Department of Energy (DOE or the Department) is publishing notice of a modification to an existing Privacy Act System of Records. DOE proposes to amend System of Records DOE–8 Intergovernmental Personnel Act (IPA).

This System of Records Notice (SORN) is being modified to align with new formatting requirements, published by OMB, and to ensure appropriate Privacy Act coverage of business processes and Privacy Act information. While there are no substantive changes to the ''Categories of Individuals'' or ''Categories of Records'' sections covered by this SORN, substantive changes have been made to the ''System Locations,'' ''Routine Uses,'' and ''Administrative, Technical and Physical Safeguards'' sections to provide greater transparency. Changes to ''Routine Uses'' include new provisions related to responding to breaches of information held under a Privacy Act SORN as required by OMB's Memorandum M–17–12, ''Preparing for and Responding to a Breach of Personally Identifiable Information'' (January 3, 2017). Language throughout the SORN has been updated to align with applicable Federal privacy laws, policies, procedures, and best practices.

DATES: This modified SORN will become applicable following the end of the public comment period on June 5, 2024 unless comments are received that result in a contrary determination.

ADDRESSES: Written comments should be sent to the DOE Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW, Washington, DC 20503 and to Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H–085, Washington, DC 20585, or by facsimile at (202) 586–8151, or by email at *privacy@hq.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H–085, Washington, DC 20585, or by facsimile at (202) 586–8151, by email at *privacy@hq.doe.gov,* or telephone at (240) 686–9485.

SUPPLEMENTARY INFORMATION: On January 9, 2009, DOE published a Compilation of its Privacy Act Systems of Records, which included System of Records DOE–8 Intergovernmental Personnel Act (IPA). This notice proposes the following amendments. The following system locations have been removed as they are no longer applicable: Naval Reactors Field Office, Alaska Power Administration, Office of Science's Chicago and Oak Ridge Offices, Environmental Management Consolidated Business Center, both National Energy Technology Laboratory locations, Richland Operations Office, Savannah River Operations Office, and Southwestern Power Administration. The following addresses have been updated: John A. Gordon Albuquerque Complex, and Golden Field Office. The National Nuclear Security Administration in Washington, DC has been added. In the ''Routine Uses'' section, this modified notice deletes a previous routine use concerning efforts responding to a suspected or confirmed loss of confidentiality of information as it appears in DOE's compilation of its Privacy Act Systems of Records (January 9, 2009) and replaces it with one to assist DOE with responding to a suspected or confirmed breach of its records of Personally Identifiable Information (PII), modeled with language from OMB's Memorandum M–17–12, ''Preparing for and Responding to a Breach of Personally Identifiable Information'' (January 3, 2017). Further, this notice adds one new routine use to ensure that DOE may assist another agency or entity in responding to the other agency's or entity's confirmed or suspected breach of PII, as appropriate, as aligned with OMB's Memorandum M–17–12. An administrative change required by the FOIA Improvement Act of 2016 extends the length of time a requestor is permitted to file an appeal under the Privacy Act from 30 to 90 days. Both the ''System Locations'' and ''Administrative, Technical and Physical Safeguards'' sections have been modified to reflect the Department's usage of cloud-based services for records storage. Language throughout the SORN has been updated to align with applicable Federal privacy laws, policies, procedures, and best practices.

SYSTEM MANAGER(S):

Headquarters: Director of Human Capital Management, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585.

Field Offices: The Human Capital Directors at the field locations listed above under ''Systems Locations'' are the system managers for their respective portions of this system.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 5 U.S.C. chapter 33, subchapter VI, 36 CFR subpart E 1236, General Records Schedule 4.2 item 150, and title 5 CFR part 334.

PURPOSE(S) OF THE SYSTEM:

Records in this system are maintained and used by DOE to provide a basis for payments under the terms of the IPA agreements, provide employment histories, and provide information for reports and program evaluations.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who are now, or have been, under an IPA agreement to or from DOE, including NNSA.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, home and work addresses, Social Security number, unique identifiers for Department employees and applicants for employment with the Department (*e.g.,* DOE OneID, employee number, and any other government identifier), home and work telephone numbers, salary, and related correspondence.

RECORD SOURCE CATEGORIES:

The subject individual and current or prospective employer.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

1. A record from this system may be disclosed to any organization eligible to receive an assigned individual under the Intergovernmental Personnel Act, including tribal, state, and local governments, institutions of higher education, Federally Funded Research and Development Centers, and other organizations certified under IPA rules.

2. A record from this system may be disclosed as a routine use to DOE contractors in performance of their contracts, and their officers and employees who have a need for the record in the performance of their duties. Those provided information under this routine use are subject to the same limitations applicable to Department officers and employees under the Privacy Act.

3. A record from this system may be disclosed as a routine use to a member of Congress submitting a request involving a constituent when the constituent has requested assistance from the member concerning the subject matter of the record. The member of Congress must provide a copy of the constituent's signed request for assistance.

4. A record from this system may be disclosed as a routine use to appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that there has been a breach of the System of Records; (2) the Department has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, DOE (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

5. A record from this system may be disclosed as a routine use to another Federal agency or Federal entity, when the Department determines that information from this System of Records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records may be stored as electronic media or paper records.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records are retrieved by name or Social Security number.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Retention and disposition of these records is in accordance with the National Archives and Records Administration approved schedule with a 250-year retention.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Electronic records may be secured and maintained on a cloud-based software server and operating system that resides in Federal Risk and Authorization Management Program (FedRAMP) and Federal Information Security Modernization Act (FISMA) hosting environment. Data located in the cloud-based server is firewalled and encrypted at rest and in transit. The security mechanisms for handling data at rest and in transit are in accordance with DOE encryption standards. Records are protected from unauthorized access through the following appropriate safeguards:

- Administrative: Access to all records is limited to lawful government purposes only, with access to electronic records based on role and either two-factor authentication or password protection. The system requires passwords to be complex and to be changed frequently. Users accessing system records undergo frequent training in Privacy Act and information security requirements. Security and privacy controls are reviewed on an ongoing basis.
- Technical: Computerized records systems are safeguarded on Departmental networks configured for role-based access based on job responsibilities and organizational affiliation. Privacy and security controls

are in place for this system and are updated in accordance with applicable requirements as determined by NIST and DOE directives and guidance.

• Physical: Computer servers on which electronic records are stored are located in secured Department facilities, which are protected by security guards, identification badges, and cameras. Paper copies of all records are locked in file cabinets, file rooms, or offices and are under the control of authorized personnel. Access to these facilities is granted only to authorized personnel and each person granted access to the system must be an individual authorized to use or administer the system.

RECORD ACCESS PROCEDURES:

The Department follows the procedures outlined in 10 CFR 1008.4. Valid identification of the individual making the request is required before information will be processed, given, access granted, or a correction considered, to ensure that information is processed, given, corrected, or records disclosed or corrected only at the request of the proper person.

CONTESTING RECORD PROCEDURES:

Any individual may submit a request to the System Manager and request a copy of any records relating to them. In accordance with 10 CFR 1008.11, any individual may appeal the denial of a request made by him or her for information about or for access to or correction or amendment of records. An appeal shall be filed within 90 calendar days after receipt of the denial. When an appeal is filed by mail, the postmark is conclusive as to timeliness. The appeal shall be in writing and must be signed by the individual. The words ''PRIVACY ACT APPEAL'' should appear in capital letters on the envelope and the letter. Appeals relating to DOE records shall be directed to the Director, Office of Hearings and Appeals (OHA), 1000 Independence Ave. SW, Washington, DC 20585.

NOTIFICATION PROCEDURES:

In accordance with the DOE regulation implementing the Privacy Act, 10 CFR part 1008, a request by an individual to determine if a System of Records contains information about themselves should be directed to the U.S. Department of Energy, Headquarters, Privacy Act Officer. The request should include the requester's complete name and the time period for which records are sought.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

This SORN was last published in the **Federal Register**, 74 FR 1006–1007, on January 9, 2009.

Signing Authority

This document of the Department of Energy was signed on May 1, 2024, by Ann Dunkin, Senior Agency Official for Privacy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on May 1, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[EPA–HQ–OPPT–2003–0004; FRL–11939–01–OCSPP]

Access to Confidential Business Information by General Dynamics Information Technology (GDIT)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has authorized its contractor General Dynamics Information Technology (GDIT) of Falls Church, VA, to access information which has been submitted to EPA under all sections of the Toxic Substances Control Act (TSCA). Some of the information may be claimed or determined to be Confidential Business Information (CBI).

DATES: Access to the confidential data will occur no sooner than May 13, 2024.

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Colby Lintner or Adam Schwoerer, Program Management and Operations Division (7407M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–8182; email address: *lintner.colby@epa.gov* or (202) 564–4767; *schwoerer.adam@epa.gov* or (202) 564–4767.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. This action may, however, be of interest to all who manufacture, process, or distribute industrial chemicals. Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2003–0004, is available at *https://www.regulations.gov* or at the Office of Pollution Prevention and Toxics Docket (OPPT Docket), Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave., NW, Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPPT Docket is (202) 566–0280. Please review the visitor instructions and additional information about the docket available at *https://www.epa.gov/dockets.*

II. What action is the Agency taking?

Under contract number 47QTCK18D0003, task order number 47QFCA22F0018, contractor GDIT of 3150 Fairview Park Drive, Falls Church, VA 22042 will assist the Office of Pollution Prevention and Toxics (OPPT) by hosting the servers and managing the infrastructure where TSCA CBI resides.

In accordance with 40 CFR 2.306(j), EPA has determined that under EPA contract number 47QTCK18D0003, task order number 47QFCA22F0018, GDIT will require access to CBI submitted under all sections of TSCA. EPA has determined that GDIT will need access to TSCA CBI submitted to EPA under all Sections of TSCA to perform successfully the duties specified under the contract. GDIT's personnel will be given access to information claimed or determined to be CBI information

submitted to EPA under all sections of TSCA.

EPA is issuing this notice to inform all submitters of information under all sections of TSCA that EPA will provide GDIT access to these CBI materials on a need-to-know basis only. All access to TSCA CBI under this contract will take place at the National Computer Center in RTP, NC and telework locations of EPA and GDIT staff in accordance with EPA's *TSCA CBI Protection Manual* and the Rules of Behavior for Virtual Desktop Access to OPPT Materials, including TSCA CBI.

Access to TSCA data, including CBI, will continue until April 24, 2029. If the contract is extended, this access will also continue for the duration of the extended contract without further notice.

GDIT personnel will be required to sign nondisclosure agreements and will be briefed on specific security procedures for TSCA CBI.

Authority: 15 U.S.C. 2601 *et seq.*

Dated: April 30, 2024.

Pamela Myrick,

Director, Project Management and Operations Division, Office of Pollution Prevention and Toxics.

Pesticide Registration Review; Decisions for Several Pesticides; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the availability of EPA's interim registration review decision for bromine. The notice also announces the availability of EPA's final registration review decisions for the following chemicals: *Agrobacterium radiobacter,* polybutene resins, and porcine zona pellucida (PZP).

FOR FURTHER INFORMATION CONTACT:

For pesticide specific information, contact: The Chemical Review Manager for the pesticide of interest identified in table 1 of unit I.

For general information on the registration review program, contact: Melanie Biscoe, Pesticide Re-Evaluation Division (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–0701; email address: *biscoe.melanie@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Purpose of This Notice

Pursuant to 40 CFR 155.58(c), this notice announces the availability of EPA's interim or final registration review decisions for the pesticides shown in table 1. The interim and final registration review decisions are supported by rationales included in the docket established for each chemical.

TABLE 1—INTERIM AND FINAL REGISTRATION REVIEW DECISIONS BEING ISSUED

Registration review case name and No.	Docket ID No.	Chemical review manager and contact information
Agrobacterium radiobacter, Case Number 4101	EPA–HQ–OPP–2022–0860	Joseph Mabon, *mabon.joseph@epa.gov,* (202) 566–1535.
Bromine, Case Number 4015	EPA–HQ–OPP–2021–0034	Megan Snyderman, *snyderman.megan@epa.gov,* (202) 566–0639.
Polybutene Resins, Case Number 4076	EPA–HQ–OPP–2022–0799	Michelle Nolan, *nolan.michelle@epa.gov,* (202) 566–2237.
Porcine Zona Pellucida (PZP), Case Number 7801	EPA–HQ–OPP–2022–0153	Christian Bongard, *bongard.christian@epa.gov,* (202) 566–2248.

II. Background

EPA is conducting its registration review of the chemicals listed in table 1 of unit I pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) section 3(g) (7 U.S.C. 136a(g)) and the Procedural Regulations for Registration Review at 40 CFR part 155, subpart C. FIFRA section 3(g) provides, among other things, that pesticide registrations are to be reviewed every 15 years. Consistent with 40 CFR 155.57, in its final registration review decision, EPA will ultimately determine whether a pesticide continues to meet the registration standard in FIFRA section 3(c)(5) (7 U.S.C. 136a(c)(5)). As part of the registration review process, the Agency has completed interim or final registration review decisions for the pesticides in table 1 of unit I.

Prior to completing the interim or final registration review decisions in table 1 of unit I, EPA posted proposed interim decisions or proposed registration review decisions for these chemicals and invited the public to submit any comments or new information, consistent with 40 CFR 155.58(a). EPA considered and responded to any comments or information received during these public comment periods in the respective interim decision or final registration review decisions.

For additional background on the registration review program, see: *https://www.epa.gov/pesticide-reevaluation.*

Authority: 7 U.S.C. 136 *et seq.*

Dated: April 30, 2024.

Timothy Kiely,

Acting Director, Pesticide Re-Evaluation Division, Office of Pesticide Programs.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2017–0720; FRL–11905–01–OCSPP]

Pesticide Registration Review; Pesticide Dockets Opened for Review and Comment; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the availability of the EPA's work plans and registration review case dockets for the following chemicals: Cornmint Oil, Humates (as derived from Leonardite), and Refined oil of *Nepeta cataria.* EPA is opening a 60-day public comment period for these work plans and case dockets.

DATES: Comments must be received on or before July 5, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2017–0720,

through the *Federal eRulemaking Portal* at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT:

For pesticide specific information, contact: The Chemical Review Manager for the pesticide of interest identified in Table 1 of Unit I.

For general questions on the registration review program, contact: Melanie Biscoe, Pesticide Re-Evaluation Division (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–0701; email address: *biscoe.melanie@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Purpose of This Notice

Pursuant to 40 CFR 155.50(b), this notice announces the availability of the EPA's work plans and registration review case dockets for the pesticides shown in Table 1 and opens a 60-day public comment period on the work plans and case dockets.

TABLE 1—WORK PLANS BEING MADE AVAILABLE FOR PUBLIC COMMENT

Registration review case name and No.	Docket ID No.	Chemical review manager and contact information
Cornmint Oi, Case Number 6345	EPA–HQ–OPP–2023–0528	Hector Andres Maldonado, *maldonado.hector@epa.gov,* (202) 566–1373.
Humates (as derived from Leonardite), Case Number 6323.	EPA–HQ–OPP–2024–0017	Andrew Queen, *queen.andrew@epa.gov,* (202) 566–1539.
Refined oil of *Nepeta cataria,* Case Number 6361	EPA–HQ–OPP–2024–0019	Bibiana Oe, *oe.bibiana@epa.gov*, (202) 566–1538.

II. Background

EPA is conducting its registration review of the chemicals listed in Table 1 of Unit I pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) section 3(g) (7 U.S.C. 136a(g)) and the Procedural Regulations for Registration Review at 40 CFR part 155, subpart C. FIFRA section 3(g) provides, among other things, that pesticide registrations are to be reviewed every 15 years. Consistent with 40 CFR 155.57, in its final registration review decision, EPA will ultimately determine whether a pesticide continues to meet the registration standard in FIFRA section 3(c)(5) (7 U.S.C. 136a(c)(5)).

Pursuant to 40 CFR 155.50, EPA initiates a registration review by establishing a public docket for a pesticide registration review case. Registration review dockets contain information that will assist the public in understanding the types of information and issues that the Agency has consider during registration review. Consistent with 40 CFR 155.50(a), these dockets may include information from the Agency's files including, but not limited to, an overview of the registration review case status, a list of current product registrations and registrants, any **Federal Register** notices regarding any pending registration actions, any **Federal Register** notices regarding current or pending tolerances, risk assessments, bibliographies concerning current registrations, summaries of incident data, and any other pertinent data or information. EPA includes in these dockets a Preliminary Work Plan (PWP), and in some cases a continuing work plan (CWP), summarizing information EPA has on the pesticide and the anticipated path forward.

Consistent with 40 CFR 155.50(b), EPA provides for at least a 60-day public comment period on work plans and registration review dockets. This comment period is intended to provide an opportunity for public input and a mechanism for initiating any necessary changes to a pesticide's workplan. During this public comment period, the Agency is asking that interested persons identify any additional information they believe the agency should consider during the registration reviews of these pesticides. The Agency identifies in each docket the areas where public comment is specifically requested, though comment in any area is welcome.

For additional background on the registration review program, see: *https://www.epa.gov/pesticide-reevaluation.*

III. What should I consider as I prepare a comment for EPA?

This notice is directed to the public in general and may be of interest to a wide range of stakeholders including environmental, human health, farm worker, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the Chemical Review Manager identified in Table 1 of Unit I. In submitting a comment to EPA, please consider the following:

1. *Submitting CBI.* Do not submit this information to the EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to the EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets.*

3. *Environmental justice.* EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, the Agency seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

All comments should be submitted using the methods in **ADDRESSES** and must be received by the EPA on or before the closing date. These comments will become part of the docket for the pesticides included in Table 1 of Unit I. The Agency will consider all comments received by the closing date and may respond to comments in a ''Response to Comments Memorandum'' in the docket or the Final Work Plan (FWP), as appropriate.

Authority: 7 U.S.C. 136 *et seq.*

Dated: April 30, 2024.

Timothy Kiely,

Acting Director, Pesticide Re-Evaluation Division, Office of Pesticide Programs.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0188; Docket No. 2024–0053; Sequence No. 4]

Submission for OMB Review; Combating Trafficking in Persons

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division has submitted to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement regarding combating trafficking in persons.

DATES: Submit comments on or before June 5, 2024.

ADDRESSES: Written comments and recommendations for this information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Zenaida Delgado, Procurement Analyst, at telephone 202–969–7207, or *zenaida.delgado@gsa.gov.*

SUPPLEMENTARY INFORMATION:

A. OMB control number, Title, and any Associated Form(s)

OMB Control # 9000–0188, Combating Trafficking in Persons.

B. Need and Uses

This clearance covers the information that offerors and contractors must submit to comply with the following Federal Acquisition Regulation (FAR) requirements:

52.222–50, Combating Trafficking in Persons

Notification. Paragraph (d) of this clause requires contractors to notify the contracting officer and the agency Inspector General of—

- Any credible information they receive from any source that alleges a contractor employee, subcontractor, or subcontractor employee, or their agent has engaged in conduct that violates the policy in paragraph (b) of the clause 52.222–50; and
- Any actions taken against a contractor employee, subcontractor, subcontractor employee, or their agent pursuant to this clause.

Compliance Plan and Annual Certification. Paragraph (h) of the clause contains an additional requirement for contracts for supplies (other than commercially available off-the-shelf (COTS) items) to be acquired outside the United States and contracts for services to be performed outside the United States, with an estimated value exceeding $550,000, where the contractor is to maintain a compliance plan during the performance of the contract. This compliance plan must include an awareness program, a process for employees to report activity inconsistent with the zero-tolerance policy, a recruitment and wage plan, a housing plan, and procedures to prevent subcontractors from engaging in trafficking in persons.

- Contractors are required to provide the compliance plan to the contracting officer upon request.
- Contractors are required to submit a certification to the contracting officer annually after receiving an award, asserting that they have the required compliance plan in place and that there have been no abuses, or that appropriate actions have been taken if abuses have been found.
- For those subcontractors required to submit a certification (see next bullet on flow down), contractors shall require that submission prior to award of the subcontract and annually thereafter.

Portions of this clause flows down to all subcontractors. The requirements related to the compliance plan only flow down to subcontracts exceeding $550,000 for supplies (other than COTS items) acquired and services performed outside the United States.

This clause applies to commercial acquisitions, except the portions related to the compliance plan do not apply to acquisitions of COTS items.

52.222–56, Certification Regarding Trafficking in Persons Compliance Plan

This provision requires apparently successful offerors to submit a certification, prior to award, that they have implemented a compliance plan and that there have been no abuses, or that appropriate actions have been taken if abuses have been found.

The provision requires this certification for the portion of contracts exceeding $550,000 for supplies (other than COTS items) acquired and services performed outside the United States.

This provision applies to commercial acquisitions, except acquisitions of COTS items.

FAR 52.222–50, paragraph (d)—Notification. The Government uses this notification of potential violations of trafficking in persons requirements to investigate and take appropriate action if a violation has occurred.

FAR 52.222–50, paragraph (h)—Compliance Plan. The Government uses the compliance plan to ascertain compliance with the Trafficking Victims Protection Act (22 U.S.C. 7104), Executive Order 13627, Strengthening Protections Against Trafficking in Persons in Federal Contracts dated September 25, 2012 (77 FR 60029, October 2, 2012) and Title XVII of the National Defense Authorization Act for Fiscal Year 2013 (Pub. L. 112–239, enacted January 2, 2013) or any other applicable law or regulation.

FAR 52.222–50, paragraph (h) and FAR 52.222–56—Certification. The Government uses the certification to obtain reasonable assurance that the contractor and its subcontractors are aware of and complying with the requirements of the Executive Order and statute.

C. Annual Burden

Respondents/Recordkeepers: 5,944.
Total Annual Responses: 11,778.
Total Burden Hours: 165,818. (27,194 reporting hours + 138,624 recordkeeping hours).

D. Public Comment

A 60-day notice was published in the **Federal Register** at 89 FR 14497, on February 27, 2024. A comment was received in *Regulations.gov* but not posted to be publicly viewable because it was not relevant or responsive to the

request for comments. The comment seems to be unsolicited bulk email.

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division, by calling 202–501–4755 or emailing *GSARegSec@gsa.gov.* Please cite OMB Control No. 9000–0188, Combating Trafficking in Persons.

BILLING CODE 6820–EP–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Public Webinar: National Public Health Strategy for the Prevention and Control of Vector-Borne Diseases in People

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of public webinar.

SUMMARY: The Centers for Disease Control and Prevention (CDC), within the Department of Health and Human Services (HHS), is announcing a closed meeting and public webinar to share information on the National Public Health Strategy for the Prevention and Control of Vector-Borne Diseases in People (VBD National Strategy). The full meeting will be by invitation only to ensure representation and inclusion of researchers, clinicians, public health officials, vector control officials, and patient advocates. However, the public is invited to listen virtually to the opening and closing sessions (attendance via livestream is unlimited).

DATES: The public webinar will be held on May 23, 2024, from 10:00 a.m. to 11:00 a.m. and 3:00 p.m. to 4:00 p.m., Eastern time.

ADDRESSES: The public webinar will be available by livestream. To access the meeting visit this page on the day of the event: *https://www.hhs.gov/live/index.html.*

FOR FURTHER INFORMATION CONTACT: Sue Visser, DrPH, MS, Deputy Director for Policy and Extramural Program; Fort Collins, CO (Offices and Laboratories), 3156 Rampart Road, Fort Collins, CO 80521; Telephone: 404–498–3008; Email: *vbdstrategy@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Background: Leaders from CDC's Division of Vector-Borne Disease (DVBD) will host an in-person and online meeting about the National Public Health Strategy for the Prevention and Control of Vector-Borne Diseases in People (VBD National Strategy). The VBD National Strategy was developed by the Department of Health and Human Services in response to congressional direction in the Kay Hagan Tick Act, passed as part of the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94). The primary purpose of the meeting is to increase awareness of the VBD National Strategy and inform future implementation efforts.

The public is invited to attend the opening and closing sessions of the meeting. In the opening session, speakers will describe the VBD National Strategy and federal agency representatives will present 2023 success stories. After the opening session, invited participants will participate in a set of interactive activities to collect individual opinions from a range of invited meeting participants with vector-borne disease experience. The public will be invited to a closing session at which time a summary of the interactive sessions will be shared.

This meeting follows previous public engagement activities, including the two Requests for Information previously published in the **Federal Register** on April 27, 2021, (86 FR 23391) and November 21, 2022, (87 FR 70836). Additional information and public comments can be found on *www.regulations.gov* in dockets HHS–OASH–2021–0012 and HHS–OASH–2022–0019.

Public Webinar: The opening and closing sessions will be open to the public to an unlimited number of viewers via livestream.

Noah Aleshire,

Chief Regulatory Officer, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers: CMS–10636, CMS–10874, and CMS–319]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by July 5, 2024.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number: ____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing*

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS—10636 Triennial Network Adequacy Review for Medicare Advantage Organizations and 1876 Cost Plans

CMS—10874 Part D Drug Management Program

CMS—319 State Medicaid Eligibility Quality Control Sample Selection Lists and Supporting Regulations

Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Triennial Network Adequacy Review for Medicare Advantage Organizations and 1876 Cost Plans; *Use:* CMS regulations at 42 CFR 417.414, 417.416, 422.112(a)(1)(i), and 422.114(a)(3)(ii) require that all Medicare Advantage organizations (MAOs) offering coordinated care plans, network-based private fee-for-service (PFFS) plans, and as well as section 1876 cost organizations, maintain a network of appropriate providers that is sufficient to provide adequate access to covered services to meet the needs of the population served. To enforce this requirement, CMS regulations at § 422.116 outline network adequacy criteria which set forth the minimum number of providers and maximum travel time and distance from enrollees to providers, for required provider specialty types in each county in the United States and its territories. Organizations must be in compliance with the current CMS network adequacy criteria guidance, which is updated and published annually on CMS's website. This collection of information is essential to appropriate and timely compliance monitoring by CMS, in order to ensure that all active contracts offering network-based plans maintain an adequate network; *Form Number:* CMS–10636 (OMB control number: 0938–1346); *Frequency:* Yearly; *Affected Public:* Private sector; *Number of Respondents:* 502; *Number of Responses:* 2,753; *Total Annual Hours:* 27,470. (For policy questions regarding this collection contact Jackie Ford at 410–786–7767.)

2. *Type of Information Collection Request:* New collection (Request for a new OMB control number); *Title of Information Collection:* Part D Drug Management Program (DMP); *Use:* Section 1860D–4(c)(5)(A) of the Social Security Act requires that Part D sponsors have a DMP for beneficiaries at risk of abuse or misuse of frequently abused drugs (FADs). The information in this collection of information request is necessary for sponsor conformance with DMP requirements at § 423.153(f), including communicating with prescribers and pharmacies, informing beneficiaries that they have been identified as a PARB or ARB, and informing beneficiaries and CMS whether a beneficiary's access to FADs will be restricted to a selected prescriber and/or network pharmacy(ies) and/or through a beneficiary-specific point-of-sale claim edit. Part D sponsors will use the standardized and model documents to communicate with providers, enrollees, and other sponsors. Specifically, Part D sponsors may use the Model Part D Drug Management Program Prescriber Inquiry Letter to inform providers that their patient's pattern of use or history of use of FADs is potentially unsafe and has prompted a case management review under the plan's DMP. Part D sponsors must use the standardized Initial Notice and Second Notice, or Alternate Second Notice, to inform enrollees, following identification by CMS's OMS and subsequent case management, whether the beneficiaries have been identified as being potentially at risk or at risk for abuse or misuse of FADs. Part D sponsors may use the Model Part D Drug Management Program Sponsor Information Transfer Memorandum to communicate to a gaining sponsor the enrollee's history of misuse or abuse of FADs; *Form Number:* CMS–10874 (OMB control number: 0938–1465); *Frequency:* Yearly and once; *Affected Public:* Private sector; *Number of Respondents:* 319; *Number of Responses:* 62,248; *Total Annual Hours:* 152,585. (For policy questions regarding this collection contact Valerie Yingling at 667–290–8657.)

3. *Type of Information Collection Request:* Reinstatement with change to the previously approved information collection: *Title of Information Collection:* State Medicaid Eligibility Quality Control Sample Selection Lists and Supporting Regulations; *Use:* Title XIX and Title XXI State agencies are required to submit the MEQC pilot planning document in accordance with § 431.814(b), and the MEQC case level and CAP reports based on pilot findings in accordance with §§ 431.816 and 431.820, respectively. The primary users of this information are State Medicaid (and where applicable CHIP) agencies and CMS. State agencies are expected to use the information collected for continuous quality improvement purposes. They will identify patterns of error in their eligibility processing operations and systems and take corrective actions to address issues and improve the eligibility determination process. CMS will use the data collected to identify and help those States that are most in need of technical assistance. CMS will also use the data set to identify potential weaknesses in Federal regulations. It will propose regulatory modifications designed to ensure that there are more effective quality controls in the eligibility determination process.; *Form Number:* CMS–319 (OMB control number: 0938–0147); *Frequency:* Occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 35; *Number of Responses:* 647; *Total Annual Hours:* 9,840. (For policy questions regarding this collection contact Camiel Rowe at 410–786–0069.)

Inflation Reduction Act (IRA) Medicare Drug Price Negotiation Program Draft Guidance; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' draft guidance for the second cycle of the Medicare Drug Price Negotiation Program and manufacturer effectuation of the maximum fair price for 2026 and 2027 for the implementation of the Inflation Reduction Act. This and other Inflation Reduction Act-related guidance can be viewed on the dedicated Inflation Reduction Act section of the CMS website at *https://www.cms.gov/inflation-reduction-act-and-medicare/*.

DATES: Comments must be received by July 2, 2024.

ADDRESSES: Written comments should be sent to *IRARebateandNegotiation@cms.hhs.gov* with the relevant subject line, ''Medicare Drug Price Negotiation Program Draft Guidance.''

FOR FURTHER INFORMATION CONTACT: Elizabeth Daniel, *Elizabeth.daniel@cms.hhs.gov* or (667) 290–8793.

SUPPLEMENTARY INFORMATION: The Inflation Reduction Act (IRA) (*Pub. L. 117–169*) was signed into law on August 16, 2022. Sections 11001 and 11002 of the IRA established the Medicare Drug Price Negotiation Program (hereafter the ''Negotiation Program'') to negotiate maximum fair prices (MFPs) for certain high expenditure, single source drugs and biological products. The requirements for this program are described in sections 1191 through 1198 of the Social Security Act as added by sections 11001 and 11002 of the IRA. The draft guidance describes how CMS intends to implement the Negotiation Program for Initial Price Applicability Year (IPAY) 2027 (January 1, 2027 to December 31, 2027), and specifies the requirements for manufacturer effectuation of the MFPs for 2026 and 2027.

To obtain copies of the Negotiation Program draft guidance and other Inflation Reduction Act-related documents, please access the CMS Inflation Reduction Act website by copying and pasting the following web address into your web browser: *https://www.cms.gov/inflation-reduction-act-and-medicare*. If interested in receiving CMS Inflation Reduction Act updates by email, individuals may sign up for CMS Inflation Reduction Act's email updates at *https://www.cms.gov/About-CMS/Agency-Information/Aboutwebsite/EmailUpdates*.

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Evell J. Barco Holland, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Dated: April 30, 2024.

Evell J. Barco Holland,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10054 New Technology Services for Ambulatory Payment Classifications under the Outpatient Prospective Payment System

Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal agencies to publish a 60-day notice in the **Federal Register**

concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* New Technology Services for Ambulatory Payment Classifications Under Outpatient Prospective Payment System; *Use:* In the April 7, 2000 final rule with comment period first implementing the hospital outpatient prospective payment system (OPPS), we created a set of New Technology ambulatory payment classifications (APCs) to pay for certain new technology services under the OPPS. These APCs are intended to pay for new technology services that were not covered by the transitional pass-through payments provisions authorized by the Balanced Budget Refinement Act (BBRA) of 1999.

Since implementation of the hospital outpatient prospective payment system (OPPS) on August 1, 2000, transitional pass-through payments have been made to hospitals for certain drugs, biologicals, and medical devices. These are temporary additional payments required by section 1833(t)(6) of the Social Security Act (the Act), which was added by section 201(b) of the Balanced Budget Act of 1999 (BBRA). The law required the Secretary to make these additional payments to hospitals for at least 2 but no more than 3 years.

In the April 7, 2000 final rule with comment period, we specified an application process and the information that must be supplied for us to consider a request for payment under the New Technology APCs (65 FR 18478). We posted the application process on our website at *www.cms.hhs.gov.* Services were only considered eligible for assignment to a New Technology APC if we listed them in one of a number of lists published in Medicare Program Memoranda, which are posted to our website (*https://www.cms.gov/medicare/regulations-guidance/transmittals/cms-program-memoranda*). We established a quarterly application process by which interested parties could submit applications to us for particular services. We assign new services to the New Technology APCs that we determine cannot be placed appropriately in clinical APCs. Under our current policy, we retain services in a New Technology APC until we gain sufficient information about actual hospital costs incurred to furnish a new technology service. *Form Number:* CMS–10054 (OMB control number: 0938–0860); *Frequency:* Once; *Affected Public:* Private sector, Business or other for-profit; *Number of Respondents:* 25; *Number of Responses:* 25; *Total Annual Hours:* 400. (For policy questions regarding this collection contact Josh Mcfeeters at 410–786–9732.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–D–1133]

International Cooperation on Harmonisation of Technical Requirements for Registration of Veterinary Medicinal Products; Pharmaceutical Development; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry (GFI) #290 (VICH GL61) entitled ''Pharmaceutical Development.'' This draft guidance has been developed for veterinary use by the International Cooperation on Harmonisation of Technical Requirements for Registration of Veterinary Medicinal Products (VICH). This draft guidance describes the suggested contents for the Pharmaceutical Development section, which provides an opportunity to present the knowledge gained through the application of scientific approaches and quality risk management to the development of a product and its manufacturing process.

DATES: Submit either electronic or written comments on the draft guidance by July 5, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov*. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov*.
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–D–1133 for ''Pharmaceutical Development.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The

second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov*. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf*.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV–6), Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Mai Huynh, Center for Veterinary Medicine (HFV–140), Food and Drug Administration, 7500 Standish Place, Rockville, MD 20855, 240–402–0669, *Mai.Huynh@fda.hhs.gov*

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft GFI #290 (VICH GL61) entitled ''Pharmaceutical Development.'' This draft guidance describes the suggested contents for the Pharmaceutical Development section, which provides an opportunity to present the knowledge gained through the application of scientific approaches and quality risk management to the development of a product and its manufacturing process. The Pharmaceutical Development section is intended to provide a comprehensive understanding of the product and manufacturing process for reviewers and investigators.

FDA has participated in efforts to enhance international harmonization and is committed to seeking scientifically based harmonized technical procedures for pharmaceutical development. One of the goals of harmonization is to identify, and then reduce, differences in technical requirements for drug development among regulatory agencies in different countries. FDA has actively participated in the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use to develop harmonized technical requirements for the approval of human pharmaceutical and biological products among the European Union, Japan, and the United States. The VICH is a parallel initiative for veterinary medicinal products. The goal of the VICH is to develop harmonized technical requirements for the approval of veterinary medicinal products in the European Union, Japan, and the United States, and receives input from both regulatory and industry representatives.

The VICH Steering Committee is composed of member representatives from the European Commission and European Medicines Agency; AnimalhealthEurope; FDA—Center for Veterinary Medicine and U.S. Department of Agriculture—Center for Veterinary Biologics; the U.S. Animal Health Institute; the Japanese Ministry of Agriculture, Forestry and Fisheries; and the Japanese Veterinary Products Association. There are 10 observers to the VICH Steering Committee: one representative from government and one representative from industry of Australia, New Zealand, Canada, South Africa, and the United Kingdom. The World Organisation for Animal Health is an associate member of the VICH. The VICH Secretariat, which coordinates the preparation of documentation, is provided by HealthforAnimals.

This level 1 draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Pharmaceutical Development.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 514 have been approved under OMB control numbers 0910–0032; the collections of information in 21 CFR part 511 have been approved under OMB control number 0910–0117; and the collections of information in 512(n)(1) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360b(n)(1)) have been approved under OMB control number 0910–0669.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/default.htm, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov*.

Dated: May 1, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–0008]

The Tobacco Products Scientific Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming public advisory committee meeting of the Tobacco Products Scientific Advisory Committee (TPSAC). The general function of the committee is to provide advice and recommendations to the Agency on FDA's regulatory issues. The meeting will be open to the public.

DATES: The meeting will be held on June 26, 2024, from 9 a.m. to 4:30 p.m. EST.

ADDRESSES: FDA White Oak Campus, 10903 New Hampshire Ave., Bldg. 31 Conference Center, the Great Room (Rm. 1503), Silver Spring, MD 20993. The

public will have the option to participate, and the advisory committee meeting will be heard, viewed, captioned, and recorded through an online teleconferencing and/or video conferencing platform. Answers to commonly asked questions about FDA advisory committee meetings, including information regarding special accommodations due to a disability, visitor parking, and transportation, may be accessed at: *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm408555.htm.*

For those unable to attend in person, the meeting will also be webcast and will be available at the following link: *https://fda.zoomgov.com/j/1604157441?pwd=YkVzZ28vNHQrVXh3ZlhrTmlHaFVzZz09.*

FOR FURTHER INFORMATION CONTACT: Serina Hunter-Thomas, Office of Science, Center for Tobacco Products, Food and Drug Administration, Document Control Center, Bldg. 71, Rm. G335, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 1–877–287–1373, email: *TPSAC@fda.hhs.gov*, or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area). A notice in the **Federal Register** about last minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check the Agency's website at *https://www.fda.gov/AdvisoryCommittees/default.htm* and scroll down to the appropriate advisory committee meeting link, or call the advisory committee information line to learn about possible modifications before coming to the meeting.

SUPPLEMENTARY INFORMATION:

Agenda: On June 26, 2024, the Center for Tobacco Product's TPSAC will convene for one open session, during which the committee will discuss the renewal of a risk modification order, submitted by Swedish Match USA, Inc. for the following loose snus and portioned snus products:

- MR0000020: General Loose
- MR0000021: General Dry Mint Portion Original Mini
- MR0000022: General Portion Original Large
- MR0000024: General Classic Blend Portion White Large—12 ct
- MR0000025: General Mint Portion White Large
- MR0000027: General Nordic Mint Portion White Large—12 ct
- MR0000028: General Portion White Large
- MR0000029: General Wintergreen Portion White Large

Additional discussion about broader Modified Risk Tobacco Products program developments related to the conceptualization and measurement of consumer understanding will also occur.

The meeting presentations will be heard, viewed, captioned, and recorded through an online teleconferencing and/or video conferencing platform.

FDA intends to make background material available to the public no later than 2 business days before the meeting. If FDA is unable to post the background material on its website prior to the meeting, the background material will be made publicly available at the location of the advisory committee meeting, and the background material will be posted on FDA's website after the meeting. Background material is available at *https://www.fda.gov/AdvisoryCommittees/Calendar/default.htm.* Scroll down to the appropriate advisory committee meeting link. The meeting will include slide presentations with audio and video components to allow the presentation of materials in a manner that most closely resembles an in-person advisory committee meeting.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person on or before June 20, 2024. Oral presentations from the public will be scheduled between approximately 1:30 p.m. and 2:30 p.m. EST on June 26, 2024. Those individuals interested in making formal oral presentations should notify the contact person (see **FOR FURTHER INFORMATION CONTACT**) and submit a brief statement describing the general nature of the evidence or arguments they wish to present and the names and email addresses of proposed participants, whether they would like to present online or in person, on or before June 11, 2024, by 5 p.m. Eastern Time. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. Similarly, room for interested persons to participate in-person may be limited. If the number of registrants requesting to speak in-person during the open public hearing is greater than can be reasonably accommodated in the venue for the in-person portion of the advisory committee meeting, FDA may conduct a lottery to determine the speakers who will be invited to participate in person. The contact person will notify interested persons regarding their request to speak by June 12, 2024.

Persons attending FDA's advisory committee meetings are advised that the Agency is not responsible for providing access to electrical outlets.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with disabilities. If you require accommodations due to a disability, please contact Serina Hunter-Thomas at least 7 days in advance of the meeting (see **FOR FURTHER INFORMATION CONTACT**).

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our website at *https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm* for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. 1001 *et seq.*). This meeting notice also serves as notice that, pursuant to 21 CFR 10.19, the requirements in 21 CFR 14.22(b), (f), and (g) relating to the location of advisory committee meetings are hereby waived to allow for this meeting to take place using an online meeting platform in conjunction with the physical meeting room (see location). This waiver is in the interest of allowing greater transparency and opportunities for public participation, in addition to convenience for advisory committee members, speakers, and guest speakers. The conditions for issuance of a waiver under 21 CFR 10.19 are met.

Dated: May 1, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–D–5365]

Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency; Draft Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of the draft guidance entitled ''Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency.'' This draft guidance, when finalized, will describe the factors FDA intends to assess when deciding to issue an enforcement policy regarding test manufacturers' offering of certain unapproved tests and unapproved uses of approved tests during a declared emergency. This draft guidance is not final nor is it for implementation at this time.

DATES: Submit either electronic or written comments on the draft guidance by July 5, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–D–5365 for ''Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the draft guidance document entitled ''Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency'' to the Office of Policy, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Toby Lowe, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 3416, Silver Spring, MD 20993–0002, 301–796–6512.

SUPPLEMENTARY INFORMATION:

I. Background

During an emergency, appropriately safe and effective diagnostic tests are critical to the diagnosis, treatment, tracking, and interruption of transmission of infectious diseases during outbreaks, as well as for diagnosing and treating diseases or conditions caused by chemical, biological, radiological, and nuclear threat agents. FDA is issuing this draft guidance that, when finalized, will describe the factors FDA plans to assess in deciding whether to issue an enforcement policy regarding test manufacturers' offering of certain unapproved tests and unapproved uses of approved tests for the diagnosis of a disease or other condition to help quickly increase test availability when appropriate during a declared emergency under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act).

This draft guidance describes the factors FDA intends to assess when issuing an enforcement policy including: (1) the need for accelerated availability of tests; (2) the known or potential risks of such tests; (3) the availability of appropriate alternative tests that are authorized or approved; and (4) the availability of sufficient mitigations to address risks of false results. When issuing an enforcement policy, FDA generally intends to describe the circumstances in which the Agency intends to exercise enforcement discretion, including, for example, when the test has been validated. FDA may also identify the initial duration in which an enforcement policy is intended to be in effect.

This draft guidance is being issued consistent with FDA's good guidance

practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at *https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/guidance-documents-medical-devices-and-radiation-emitting-products.* This guidance document is also available at *https://www.regulations.gov and https://www.fda.gov/regulatory-information/search-fda-guidance-documents.* Persons unable to download an electronic copy of ''Consideration of Enforcement Policies for Tests During a Section 564 Declared Emergency'' may send an email request to *CDRH-Guidance@fda.hhs.gov* to receive an electronic copy of the document. Please use the document number GUI00007009 and complete title to identify the guidance you are requesting.

III. Paperwork Reduction Act of 1995

While this guidance contains no new collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by OMB under the PRA (44 U.S.C. 3501–3521). The collections of information in the following table have been approved by OMB:

21 CFR part or guidance	Topic	OMB control No.
807, subpart E	Premarket notification	0910–0120
814, subparts A through E	Premarket approval	0910–0231
814, subpart H	Humanitarian Use Devices; Humanitarian Device Exemption	0910–0332
812	Investigational Device Exemption	0910–0078
860, subpart D	De Novo classification process	0910–0844
800, 801, 809, and 830	Medical Device Labeling Regulations; Unique Device Identification.	0910–0485
''Emergency Use Authorization of Medical Products and Related Authorities''.	Emergency Use Authorization	0910–0595
803	Medical Device Reporting	0910–0437
''Administrative Procedures for CLIA Categorization'' and ''Recommendations: Clinical Laboratory Improvement Amendments of 1988'' (CLIA) Waiver Applications for Manufacturers of In Vitro Diagnostic Devices''.	CLIA Administrative Procedures; CLIA Waivers	0910–0607

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA–NS–24–021: HEAL Initiative: Individual Differences in Human Pain Conditions.

Date: June 3–4, 2024.

Time: 8:30 a.m. to 8:00 p.m.

Agenda: To review and evaluate grant applications.

Place: North Bethesda Marriott Hotel & Conference Center, Montgomery County Conference Center Facility, 5701 Marinelli Road, North Bethesda, MD 20852.

Contact Person: Mark Allen Vosvick, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3110, Bethesda, MD 20892, 301–402–4128, *mark.vosvick@nih.gov.*

Name of Committee: Biobehavioral and Behavioral Processes Integrated Review Group; Motor Function, Speech and Rehabilitation Study Section.

Date: June 3–4, 2024.

Time: 9:00 a.m. to 7:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Salamander Hotel, Washington, DC, 1330 Maryland Ave. SW, Washington, DC 2024.

Contact Person: Stephanie Nagle Emmens, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 594–6604, *nagleemmenssc@csr.nih.gov*.

Name of Committee: Biological Chemistry and Macromolecular Biophysics Integrated Review Group; Biochemistry and Biophysics of Membranes Study Section.

Date: June 4–5, 2024.

Time: 8:00 a.m. to 8:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Embassy Suites at the Chevy Chase Pavilion, 4300 Military Road NW, Washington, DC 20015.

Contact Person: Nuria E. Assa-Munt, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4164, MSC 7806, Bethesda, MD 20892, (301) 451–1323, *assamunu@csr.nih.gov*.

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group; Neurotoxicology and Alcohol Study Section.

Date: June 4–5, 2024.

Time: 8:00 a.m. to 8:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton Garden Inn, Bethesda, 7301 Waverly Street, Bethesda, MD 20814.

Contact Person: John N. Stabley, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (301) 594–0566, *stableyjn@csr.nih.gov*.

Name of Committee: Musculoskeletal, Oral and Skin Sciences Integrated Review Group; Skeletal Muscle and Exercise Physiology Study Section.

Date: June 4–5, 2024.

Time: 9:00 a.m. to 10:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Rockledge II, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

National Institutes of Health

National Heart, Lung, and Blood Institute; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Heart, Lung, and Blood Advisory Council.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. The open session will be videocast and can be access from the NIH Videocasting website *http://videocast.nih.gov/or https://www.nhlbi.nih.gov/about/advisory-and-peer-review-committees/advisory-council.*

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Heart, Lung, and Blood Advisory Council.

Date: June 4, 2024

Closed: 8:00 a.m. to 10:00 a.m.

Agenda: To review and evaluate grant applications.

Place: Porter Neuroscience Research Center, Building 35A, 35 Convent Drive, Bethesda, MD 20892.

Open: 10:00 a.m. to 4:00 p.m.

Agenda: To discuss program policies and issues.

Place: Porter Neuroscience Research Center, Building 35A, 35 Convent Drive, Bethesda, MD 20892.

Meeting Format: In Person.

Virtual Access: The meeting will be videocast and can be accessed from the NIH Videocast. *http://videocast.nih.gov/* or *https://www.nhlbi.nih.gov/about/advisory-and-peer-review-committees/advisory-council.* Please note, the link to the videocast meeting will be posted within a week of the meeting date.

Contact Person: Valerie L. Prenger, Ph.D., Acting Division Director, Office of Scientific Review/DERA, National Heart, Lung, and Blood Institute, 6701 Rockledge Drive Room 7214, Bethesda, MD 20892–7924, 301–435–0270, *Valerie.Prenger@nih.gov.*

Any member of the public interested in presenting oral comments to the committee may notify the Contact Person listed on this notice at least 10 days in advance of the meeting. Interested individuals and representatives of organizations may submit a letter of intent, a brief description of the organization represented, and a short description of the oral presentation. Only one representative of an organization may be allowed to present oral comments and if accepted by the committee, presentations may be limited to five minutes. Both printed and electronic copies are requested for the record. In addition, any interested person may file written comments with the committee by forwarding their statement to the Contact Person listed on the notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has procedures at *https://www.nih.gov/about-nih/visitor-information/campus-access-security* for entrance into on-campus and off-campus facilities. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors attending a meeting on campus or at an off-campus federal facility will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *https://www.nhlbi.nih.gov/about/advisory-and-peer-review-committees/advisory-council* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[245A2100DD/AAKC001030/A0A501010.999900]

Rate Adjustments for Indian Irrigation Projects

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Indian Affairs (BIA) owns or has an interest in irrigation projects located on or associated with various Indian reservations throughout the United States. We are required to establish irrigation assessment rates to recover the costs to administer, operate, maintain, and rehabilitate these projects. The BIA proposes to adjust the irrigation operation and maintenance (O&M) assessment rate at Duck Valley Irrigation Project (DVIP). We request your comments on the proposed rate adjustment.

DATES: Interested parties may submit comments on the proposed rate adjustments on or before July 5, 2024.

ADDRESSES: All comments on the proposed rate adjustments must be in writing. You may send comments via email to *comments@bia.gov.* Please reference ''Rate Adjustment for Duck Valley Irrigation Project'' in the subject line. Or you may submit comments to the Program Specialist, Division of Water and Power, Office of Trust Services, 2021 4th Avenue North, Billings, Montana 59101.

FOR FURTHER INFORMATION CONTACT: Jonathan Cody, Irrigation Engineer, BIA Western Regional Office, (480) 235–3848.

SUPPLEMENTARY INFORMATION: A Notice of Proposed Rate Adjustment was published in the **Federal Register** on February 8, 2024 (89 FR 8707) to propose adjustments to the irrigation assessment rates at several BIA irrigation projects. After further review and coordination with the Shoshone-Paiute Tribes, we decided to adjust the proposed rate assessment for DVIP from $5.30 to $11.00 per acre. The first table in this notice provides contact information for individuals who can give further information about DVIP. The second table provides the proposed rate for calendar year (CY) 2025.

What is the meaning of the key terms used in this notice?

In this notice:

Administrative costs mean all costs we incur to administer our irrigation projects at the local project level and are a cost factor included in calculating your operation and maintenance assessment. Costs incurred at the local project level do not normally include agency, region, or central office costs unless we state otherwise in writing.

Assessable acre means lands designated by us to be served by one of our irrigation projects, for which we collect assessments in order to recover costs for the provision of irrigation service. (*See also* ''total assessable acres.'')

BIA means the Bureau of Indian Affairs.

Bill means our statement to you of the assessment charges and/or fees you owe the United States for administration, operation, maintenance, and/or rehabilitation. The date we mail or hand-deliver your bill will be stated on it.

Costs means the costs we incur for administration, operation, maintenance, and rehabilitation to provide direct support or benefit to an irrigation facility. (*See* administrative costs, operation costs, maintenance costs, and rehabilitation costs).

Customer means any person or entity to whom or to which we provide irrigation service.

Due date is the date on which your bill is due and payable. This date will be stated on your bill.

I, me, my, you and *your* mean all persons or entities that are affected by this notice.

Irrigation project means a facility or portion thereof for the delivery, diversion, and storage of irrigation water that we own or have an interest in, including all appurtenant works. The term ''irrigation project'' is used interchangeably with irrigation facility, irrigation system, and irrigation area.

Irrigation service means the full range of services we provide customers of our irrigation projects. This includes our activities to administer, operate, maintain, and rehabilitate our projects in order to deliver water.

Maintenance costs means costs we incur to maintain and repair our irrigation projects and associated equipment and is a cost factor included in calculating your operation and maintenance assessment.

Operation and maintenance (O&M) assessment means the periodic charge you must pay us to reimburse costs of administering, operating, maintaining, and rehabilitating irrigation projects consistent with this notice and our supporting policies, manuals, and handbooks.

Operation or operating costs means costs we incur to operate our irrigation projects and equipment and is a cost factor included in calculating your O&M assessment.

Past due bill means a bill that has not been paid by the close of business on the 30th day after the due date as stated on the bill. Beginning on the 31st day after the due date, we begin assessing additional charges accruing from the due date.

Rehabilitation costs means costs we incur to restore our irrigation projects or features to original operating condition or to the nearest state which can be achieved using current technology and is a cost factor included in calculating your O&M assessment.

Responsible party means an individual or entity that owns, leases, or uses land as authorized by the Tribe within the assessable acreage of one of our irrigation projects and is responsible for providing accurate information to our billing office and paying a bill for an annual irrigation rate assessment.

Total assessable acres mean the total acres served by one of our irrigation projects.

Water delivery is an activity that is part of the irrigation service we provide our customers when water is available.

We, us, and *our* mean the United States Government, the Secretary of the Interior, the BIA, and all who are authorized to represent us in matters covered under this notice.

Does this notice affect me?

This notice affects you if you irrigate land by permit or lease, as authorized by the Tribe, within the assessable acreage of DVIP.

Where can I get information on the regulatory and legal citations in this notice?

You can contact the DVIP. Please use the table in the **SUPPLEMENTARY INFORMATION** section to contact the

regional or local office where the project is located.

Why are you publishing this notice?

We are publishing this notice to inform you that we propose to adjust our irrigation assessment rate for DVIP. DVIP is a federally-owned irrigation project, which is operated and maintained by the Shoshone-Paiute Tribes of the Duck Valley Reservation under a self-governance compact. The irrigation project is located in Elko County, Nevada and Owyhee County, Idaho. This notice is published in accordance with the BIA's regulations governing its operation and maintenance of irrigation projects, found at 25 CFR part 171. This regulation provides for the establishment and publication of the proposed rates for annual irrigation assessments as well as related information about our irrigation projects.

What authorizes you to issue this notice?

Our authority to issue this notice is vested in the Secretary of the Interior by 5 U.S.C. 301 and the Act of August 14, 1914 (38 Stat. 583; 25 U.S.C. 385). The Secretary has in turn delegated this authority to the Assistant Secretary—Indian Affairs under Part 209, Chapter 8.1A, of the Department of the Interior's Departmental Manual.

When will you put the rate adjustments into effect?

We will put the rate adjustments into effect for CY 2025.

How do you calculate irrigation rates?

Pursuant to the self-governance compact, we calculate annual irrigation assessment rates in accordance with 25 CFR part 171.500 by estimating the annual costs of DVIP operation and maintenance and then dividing by the total assessable acres for DVIP. The result of this calculation is stated in the rate table in this notice.

What kinds of expenses do you consider in determining the estimated annual costs of operation and maintenance?

Consistent with 25 CFR part 171.500, these expenses include the following:

(a) Personnel salary and benefits for the project engineer/manager and project employees under the project engineer/manager's management or control;

(b) Materials and supplies;

(c) Vehicle and equipment repairs;

(d) Equipment costs, including lease fees;

(e) Depreciation;

(f) Acquisition costs;

(g) Maintenance of a reserve fund available for contingencies or emergency costs needed for the reliable operation of the irrigation facility infrastructure;

(h) Maintenance of a vehicle and heavy equipment replacement fund;

(i) Systematic rehabilitation and replacement of project facilities;

(j) Contingencies for unknown costs and omitted budget items; and

(k) Other expenses we determine necessary to properly perform the activities and functions characteristic of an irrigation project.

When should I pay my irrigation assessment?

Under the self-governance compact and applicable Federal law, BIA bills and collects DVIP's annual O&M assessment directly from the Shoshone-Paiute Tribes. The Shoshone-Paiute Tribes are responsible for billing and collecting the annual O&M assessment from persons who irrigate land by permit or lease within the assessable acreage of the DVIP. You should pay your bill by the due date stated on your bill.

What information must I provide for billing purposes?

The BIA billing and collection process for DVIP is established by the self-governance compact and related authorities. BIA is not involved in the billing and collection process between the Shoshone-Paiute Tribes and the persons who irrigate land by permit or lease within the assessable acreage of the DVIP. The Shoshone-Paiute Tribes are required to provide us with the following information for billing purposes:

(1) Full legal name;

(2) Correct mailing address; and

(3) Taxpayer identification number.

Why is BIA collecting the Shoshone-Paiute Tribes' taxpayer identification number?

Public Law 104–134, the Debt Collection Improvement Act of 1996, requires that we collect the taxpayer identification number before billing a responsible party and as a condition to servicing the account.

If the Shoshone-Paiute Tribes allow the annual bill owed to BIA to become past due, could this affect my water delivery?

Yes. 25 CFR 171.545(a) states: ''We will not provide you irrigation service until: (1) Your bill is paid; or (2) You make arrangement for payment pursuant to § 171.550 of this part.'' If we do not receive payment before the close of business on the 30th day after the due date stated on the bill, we will send a past due notice to the Shoshone-Paiute Tribes. This past due notice will have additional information concerning the Shoshone-Paiute Tribes' rights. We will consider the past due notice as delivered no later than five business days after the day we mail it. We follow the procedures provided in 31 CFR 901.2, ''Demand for Payment,'' when demanding payment of the Shoshone-Paiute Tribes past due bill.

Are there any additional charges to the Shoshone-Paiute Tribes if it is late paying the bill?

Yes. We are required to assess interest, penalties, and administrative costs on past due bills in accordance with 31 U.S.C. 3717 and 31 CFR 901.9. The rate of interest is established annually by the Secretary of the United States Treasury (Treasury) and accrues from the date the bill is past due. If the bill becomes more than 90 days past due, the Shoshone-Paiute Tribes will be assessed a penalty charge of no more than six percent per year, which accrues from the date the bill became past due. Each time we try to collect the past due bill, the Shoshone-Paiute Tribes will be charged an administrative fee of $12.50 for processing and handling.

What else will happen to the Shoshone-Paiute Tribes' past due bill?

If the Shoshone-Paiute Tribes do not pay its bill or make payment arrangements to which we agree, we are required to transfer the past due bill to Treasury for further action. Pursuant to 31 CFR 285.12, bills that are 120 days past due will be transferred to Treasury.

Who can I contact for further information?

The contact table below contains the regional and project/agency contacts for DVIP.

Western Region Contacts	
Jessie Durham, Regional Director, Bureau of Indian Affairs, Western Regional Office, 2600 North Central Avenue, 4th Floor Mailroom, Phoenix, AZ 85004. Telephone: (602) 379–6600.	
Duck Valley Irrigation Project	Phaline Conklin, Superintendent, (Project O&M compacted to Shoshone-Paiute Tribes under PL 93–638), 2719 Argent Avenue, Suite 4, Gateway Plaza, Elko, NV 89801. Telephones: Superintendent (775) 738–5165; Pawan Upadhyay, Tribal Water Resources Director (208) 759–3100 Ext. 1228.

What irrigation assessments or charges are proposed for adjustment by this notice?

The rate table below contains the final CY 2024 rate for DVIP, where we recover costs of administering, operating, maintaining, and rehabilitating the project. The table also contains the proposed CY 2025 rate.

Project Name	Rate category	Final 2024 rate	Proposed 2025 rate
Western Region Rate Table			
Duck Valley Irrigation Project	Basic per acre	$5.30	$11.00

Consultation and Coordination With Tribal Governments (Executive Order 13175)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and Tribal sovereignty. We have evaluated this notice under the Department's consultation policy and under the criteria of Executive Order 13175 and have determined there to be substantial direct effects on federally recognized Tribes because the irrigation projects are located on or associated with Indian reservations. To fulfill its consultation responsibility to Tribes and Tribal organizations, BIA communicates, coordinates, and consults on a continuing basis with these entities on issues of water delivery, water availability, and costs of administration, operation, maintenance, and rehabilitation of projects that concern them. This is accomplished at the individual irrigation project by project, agency, and regional representatives, as appropriate, in accordance with local protocol and procedures. This notice is one component of our overall coordination and consultation process to provide notice to, and request comments from, these entities when we adjust irrigation assessment rates.

Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use (Executive Order 13211)

The proposed rate adjustments are not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

Regulatory Planning and Review (Executive Order 12866)

These proposed rate adjustments are not a significant regulatory action and do not need to be reviewed by the Office of Management and Budget under Executive Order 12866.

Regulatory Flexibility Act

These proposed rate adjustments are not a rule for the purposes of the Regulatory Flexibility Act because they establish ''a rule of particular applicability relating to rates.'' 5 U.S.C. 601(2).

Unfunded Mandates Reform Act of 1995

These proposed rate adjustments do not impose an unfunded mandate on state, local, or Tribal governments in the aggregate, or on the private sector, of more than $130 million per year. They do not have a significant or unique effect on State, local, or Tribal governments or the private sector. Therefore, the Department is not required to prepare a statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*).

Takings (Executive Order 12630)

These proposed rate adjustments do not effect a taking of private property or otherwise have ''takings'' implications under Executive Order 12630. The proposed rate adjustments do not deprive the public, State, or local governments of rights or property.

Federalism (Executive Order 13132)

Under the criteria in section 1 of Executive Order 13132, these proposed rate adjustments do not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement because they will not affect the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government. A federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

This notice complies with the requirements of Executive Order 12988. Specifically, in issuing this notice, the Department has taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct as required by section 3 of Executive Order 12988.

Paperwork Reduction Act of 1995

These proposed rate adjustments do not affect the collections of information which have been approved by the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995. The OMB Control Number is 1076–0141 and expires March 31, 2026.

National Environmental Policy Act

The Department has determined that these proposed rate adjustments do not constitute a major Federal action significantly affecting the quality of the human environment and that no detailed statement is required under the

National Environmental Policy Act of 1969, 42 U.S.C. 4321–4370(d)), pursuant to 43 CFR 46.210(i). In addition, the proposed rate adjustments do not present any of the 12 extraordinary circumstances listed at 43 CFR 46.215.

Bryan Newland,

Assistant Secretary—Indian Affairs.

BILLING CODE 4337–15–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

[S1D1S SS08011000 SX064A000 245S180110; S2D2S SS08011000 SX064A000 24XS501520; OMB Control Number 1029–0040]

Agency Information Collection Activities; Requirements for Permits for Special Categories of Mining

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before June 5, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to Mark Gehlhar, Office of Surface Mining Reclamation and Enforcement, 1849 C Street NW, Room 1544–MIB, Washington, DC 20240, or by email to *mgehlhar@osmre.gov.* Please reference OMB Control Number 1029–0040 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Mark Gehlhar by email at *mgehlhar@osmre.gov,* or by telephone at (202) 208–2716. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA; 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on January 17, 2024 (89 FR 2979). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The information is being collected to meet the requirements of sections 507, 508, 510, 515, 701 and 711 of the Surface Mining Control and Reclamation Act of 1977, which require applicants for special types of mining activities to provide descriptions, maps, plans and data of the proposed activity. This information will be used by the regulatory authority in determining if the applicant can meet the applicable performance standards for the special type of mining activity.

Title of Collection: Requirements for Permits for Special Categories of Mining.

OMB Control Number: 1029–0040.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Businesses and State governments.

Total Estimated Number of Annual Respondents: 50.

Total Estimated Number of Annual Responses: 70.

Estimated Completion Time per Response: Varies from 10 hours to 1,000 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 4,448.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: One time.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Mark J. Gehlhar,

Information Collection Clearance Officer, Office of Surface Mining Reclamation and Enforcement.

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before June 5, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to Mark Gehlhar, Office of Surface Mining Reclamation and Enforcement, 1849 C Street NW, Room 1544–MIB, Washington, DC 20240, or by email to *mgehlhar@osmre.gov.* Please reference OMB Control Number 1029–0112 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Mark Gehlhar by email at *mgehlhar@osmre.gov,* or by telephone at (202) 208–2716. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA; 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on January 17, 2024 (89 FR 2978). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: OSMRE and State regulatory authorities use the information collected under 30 CFR part 772 to keep track of coal exploration activities, evaluate the need for an exploration permit, and ensure that exploration activities comply with the environmental protection and reclamation requirements of 30 CFR parts 772 and 815, and section 512 of SMCRA (30 U.S.C. 1262).

Title of Collection: Requirements for Coal Exploration.

OMB Control Number: 1029–0112.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Businesses and State governments.

Total Estimated Number of Annual Respondents: 110.

Total Estimated Number of Annual Responses: 195.

Estimated Completion Time per Response: Varies from 30 minutes to 70 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 757.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: One time.

Total Estimated Annual Nonhour Burden Cost: $310.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Mark J. Gehlhar,

Information Collection Clearance Officer, Office of Surface Mining Reclamation and Enforcement.

BILLING CODE 4310–05–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1400]

Certain Cameras, Camera Systems, and Accessories Used Therewith; Notice of Institution of Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on March 29, 2024, under section 337 of the Tariff Act of 1930, as amended, on behalf of GoPro, Inc. of San Mateo, California. The complaint alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain cameras, camera systems, and accessories used therewith by reason of the infringement of certain claims of U.S. Patent No. 10,015,413 (''the '413 patent''); U.S. Patent No. 10,529,052 (''the '052 patent''); U.S. Patent No. 10,574,894 (''the '894 patent''); U.S. Patent No. 10,958,840 (''the '840 patent''); U.S. Patent No. 11,336,832 (''the '832 patent''); and U.S. Design Patent No. D789,435 (''the D'435 patent''). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainant requests that the Commission institute an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* Hearing impaired individuals are advisedthat information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.*

FOR FURTHER INFORMATION CONTACT: Katherine Hiner, The Office of Docket Services, U.S. International Trade Commission, telephone (202) 205–1802.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2024).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on April 30, 2024, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1–12 of the '413 patent; claims 1–10 of the '052 patent; claims 1–20 of the '894 patent; claims 1–21 of the '840 patent; claims 1–10 of the '832 patent; and the claim of the D'435 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is ''action and 360-degree cameras and systems, as well as camera-mounting systems, frames, and camera-wearable systems used therewith'';

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainant is: GoPro, Inc., 3025 Clearview Way, San Mateo, CA 94402.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Arashi Vision Inc. d/b/a Insta360, 12F, Building T2, Hengyu Qianhai Financial Center, Nanshan District, Shenzhen, China

Arashi Vision (U.S.) LLC d/b/a Insta360, 2323 Main St., Unit 16, Irvine, CA 92614

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission's Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: May 1, 2024.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2024–09809 Filed 5–3–24; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint *Certain Sensors with Pixels and Products Containing the Same,* DN 3744; the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.*

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of SiOnyx, LLC on April 30, 2024. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain sensors with pixels and products containing the same. The complaint names as respondents: Samsung Electronics, Co., Ltd. of Korea; Samsung Electronics America, Inc. of Ridgefield Park, NJ; and Samsung Semiconductor, Inc. of San Jose, CA. The complainant requests that the Commission issue a limited exclusion order, cease and desist orders, and impose a bond upon respondent

alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the **Federal Register**. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due, notwithstanding § 201.14(a) of the Commission's Rules of Practice and Procedure. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number (''Docket No. 3744'') in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, Electronic Filing Procedures.[1])

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov.*) No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the Secretary at *EDIS3Help@usitc.gov.*

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. appendix 3; or (ii) by U.S. Government employees and contract personnel,[2] solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[3]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: April 30, 2024.

Lisa Barton,

Secretary to the Commission.

INTERNATIONAL TRADE COMMISSION

[USITC SE–24–017]

Sunshine Act Meetings

Agency Holding the Meeting: United States International Trade Commission.

TIME AND DATE: May 10, 2024 at 9:30 a.m.

PLACE: Room 101, 500 E Street SW, Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agendas for future meetings: none.

2. Minutes.

3. Ratification List.

4. Commission vote on Inv. Nos. 701–TA–712–715 and 731–TA–1679–1682 (Preliminary) (Ferrosilicon from Brazil, Kazakhstan, Malaysia, and Russia). The Commission currently is scheduled to complete and file its determinations on May 13, 2024; views of the Commission currently are scheduled to be completed and filed on May 20, 2024.

5. Commission vote on Inv. No. 731–TA–860 (Fourth Review) (Tin- and Chromium-Coated Steel Sheet from Japan). The Commission currently is scheduled to complete and file its determination and views of the Commission on May 28, 2024.

6. Outstanding action jackets: none.

CONTACT PERSON FOR MORE INFORMATION: Sharon Bellamy, Supervisory Hearings and Information Officer, 202–205–2000.

The Commission is holding the meeting under the Government in the Sunshine Act, 5 U.S.C. 552(b). In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.

Issued: May 1, 2024.

Sharon Bellamy,

Supervisory Hearings and Information Officer.

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Amended Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received an amended complaint entitled *Certain Dynamic Random Access Memory Device and Product Containing Same, DN 3729;* the Commission is soliciting comments on any public interest issues raised by the amended complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.*

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at *https://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at *https://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received an amended complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Wen T. Lin on April 29, 2024. The original complaint was filed on March 4, 2024 and a notice of receipt of complaint; solicitation of comments relating to the public interest published in the **Federal Register** on March 11, 2024. The amended complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain dynamic random access memory device and product containing same. The amended complaint names as respondents: Etron Technology, Inc. of Taiwan; Etron Technology America, Inc. of Santa Clara, CA; and DigiKey Corporation of Thief River Falls, MN. The complainant requests that the Commission issue an exclusion order and cease and desist orders.

Proposed respondents, other interested parties, and members of the public are invited to file comments on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the **Federal Register**. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due, notwithstanding § 201.14(a) of the Commission's Rules of Practice and Procedure. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number (''Docket No. 3729'') in a prominent place on the cover page and/or the first page. (*See* Handbook for Electronic Filing Procedures, Electronic Filing Procedures [1]).

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov.*) No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the Secretary at *EDIS3Help@usitc.gov.*

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. Government employees and contract personnel,[2] solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.[3]

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1360]

Bulk Manufacturer of Controlled Substances Application: Pisgah Laboratories Inc.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Pisgah Laboratories Inc., has applied to be registered as a bulk manufacturer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before July 5, 2024. Such persons may also file a written request for a hearing on the application on or before July 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.33(a), this is notice that on March 15, 2024, Pisgah Laboratories Inc., 3222 Old Hendersonville Highway, Pisgah Forest, North Carolina 28768, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
4-Bromo-2,5-dimethoxyphenethylamine	7392	I
Methylone (3,4-Methylenedioxy-N-methylcathinone)	7540	I
Amphetamine	1100	II
Lisdexamfetamine	1205	II
Methylphenidate	1724	II
Diphenoxylate	9170	II
Meperidine	9230	II
Methadone	9250	II
Tapentadol	9780	II

The company plans to bulk manufacture the above-listed controlled substances in bulk for internal research purposes and distribution to its customers. No other activities for these drug codes are authorized for this registration.

Marsha Ikner,

Acting Deputy Assistant Administrator.

[FR Doc. 2024–09810 Filed 5–3–24; 8:45 am]

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 1354]

Bulk Manufacturer of Controlled Substances Application: Bulk Manufacturer of Marihuana: Entheogen Pharmaceuticals Inc

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: The Drug Enforcement Administration (DEA) is providing notice of an application it has received from an entity applying to be registered to manufacture in bulk basic class(es) of controlled substances listed in schedule I. DEA intends to evaluate this and other pending applications according to its regulations governing the program of growing marihuana for scientific and medical research under DEA registration.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before July 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.''

SUPPLEMENTARY INFORMATION: The Controlled Substances Act (CSA) prohibits the cultivation and distribution of marihuana except by persons who are registered under the CSA to do so for lawful purposes. In accordance with the purposes specified in 21 CFR 1301.33(a), DEA is providing notice that the entity identified below has applied for registration as a bulk manufacturer of schedule I controlled substances. In response, registered bulk manufacturers of the affected basic class(es), and applicants therefor, may submit electronic comments on or objections of the requested registration, as provided in this notice. This notice does not constitute any evaluation or determination of the merits of the application submitted.

The applicant plans to manufacture bulk active pharmaceutical ingredients (APIs) for product development and distribution to DEA registered researchers. If the application for registration is granted, the registrant would not be authorized to conduct other activity under this registration aside from those coincident activities specifically authorized by DEA regulations. DEA will evaluate the application for registration as a bulk manufacturer for compliance with all

applicable laws, treaties, and regulations and to ensure adequate safeguards against diversion are in place.

As this applicant has applied to become registered as a bulk manufacturer of marihuana, the application will be evaluated under the criteria of 21 U.S.C. 823(a). DEA will conduct this evaluation in the manner described in the rule published at 85 FR 82333 on December 18, 2020, and reflected in DEA regulations at 21 CFR part 1318.

In accordance with 21 CFR 1301.33(a), DEA is providing notice that on December 11, 2023, Entheogen Pharmaceuticals Inc, 17349 Muskrat Avenue, Adelanto, California, 92301 applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substances:

Controlled substance	Drug code	Schedule
Ibogaine	7260	I
Lysergic Acid Diethylamide	7315	I
Marihuana Extract	7350	I
Marihuana	7360	I
Mescaline	7381	I
Dimethyltryptamine	7435	I
Psilocybin	7437	I
Psilocyn	7438	I

In reference to drug codes 7260 (Ibogaine), 7315 (Lysergic Acid Diethylamide), 7381 (Mescaline), 7435 (Dimethyltryptamine), 7437 (Psilocybin), and 7438 (Psilocyn), the company plans to bulk manufacture the listed controlled substances for internal research and analytical development purposes. No other activities for these drug codes are authorized for this registration.

Marsha Ikner,

Acting Deputy Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1358]

Importer of Controlled Substances Application: Lipomed

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Lipomed has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before June 5, 2024. Such persons may also file a written request for a hearing on the application on or before June 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on February 7, 2024, Lipomed, 150 Cambridgepark Drive, Suite 705, Cambridge, Massachusetts 02140–2300, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
3-Fluoro-N-methylcathinone (3–FMC)	1233	I
Cathinone	1235	I
Methcathinone	1237	I
4-Fluoro-N-methylcathinone (4–FMC)	1238	I
Pentedrone (α-methylaminovalerophenone)	1246	I
Mephedrone (4-Methyl-N-methylcathinone)	1248	I
4-Methyl-N-ethylcathinone (4–MEC)	1249	I
Naphyrone	1258	I
N-Ethylamphetamine	1475	I
N,N-Dimethylamphetamine	1480	I
Fenethylline	1503	I
Aminorex	1585	I
4-Methylaminorex (cis isomer)	1590	I
Gamma Hydroxybutyric Acid	2010	I
Methaqualone	2565	I
Mecloqualone	2572	I
Etizolam (4-(2-chlorophenyl)-2-ethyl-9-methyl-6H-thieno[3,2-f][1,2,4]triazolo[4,3-a][1,4]diazepine	2780	I

Controlled substance	Drug code	Schedule
Flualprazolam (8-chloro-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine)	2785	I
Clonazolam (6-(2-chlorophenyl)-1-methyl-8-nitro-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2786	I
Flubromazolam (8-bromo-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2788	I
Diclazepam (7-chloro-5-(2-chloro-5-(2-chlorophenyl)-1- methyl-1,3-dihydro-2H-benzo[e][1,4]diazepin-2-one	2789	I
JWH–250 (1-Pentyl-3-(2-methoxyphenylacetyl) indole)	6250	I
SR–18 (Also known as RCS–8) (1-Cyclohexylethyl-3-(2-methoxyphenylacetyl) indole)	7008	I
ADB–FUBINACA (N-(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide)	7010	I
5-Fluoro-UR–144 and XLR11 ([1-(5-Fluoro-pentyl)1H-indol-3-yl] (2,2,3,3-tetramethylcyclopropyl)methanone)	7011	I
AB–FUBINACA (N-(1-amino-3-methyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide)	7012	I
JWH–019 (1-Hexyl-3-(1-naphthoyl) indole)	7019	I
MDMB–FUBINACA (Methyl 2-(1-(4-fluorobenzyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate)	7020	I
FUB–AMB, MMB–FUBINACA, AMB–FUBINACA (2-(1-(4-fluorobenzyl)-1Hindazole-3-carboxamido)-3-methylbutanoate)	7021	I
AB–PINACA (N-(1-amino-3-methyl-	7023	I
1-oxobutan-2-yl)-1-pentyl-1H-indazole-)3-carboxamide		
THJ–2201 ([1-(5-fluoropentyl)-1H-indazol-3-	7024	I
yl](naphthalen-1-yl)methanone)		
5F–AB–PINACA (N-(1-amino-3methyl-1-oxobutan-2-yl)-1-(5-fluoropentyl)-1H-indazole-3-carboxamide)	7025	I

The company plans to import analytical reference standards for distribution to its customers for research and analytics purposes. Placement of these drug codes onto the company's registration does not translate into automatic approval of subsequent permit applications to import controlled substances. No other activities for these drug codes are authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Marsha Ikner,

Acting Deputy Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1349]

Bulk Manufacturer of Controlled Substances Application: Research Triangle Institute

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Research Triangle Institute has applied to be registered as a bulk manufacturer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before July 5, 2024. Such persons may also file a written request for a hearing on the application on or before July 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.33(a), this is notice that on March 11, 2024, Research Triangle Institute, 3040 East Cornwallis Road, Hermann Building, Room 106, Research Triangle Park, North Carolina 27709–2194, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Tetrahydrocannabinols ...	7370	I

The company plans to bulk manufacture the listed controlled substance synthetically for distribution to its customers for research and as analytical reference standards. No other activities for this drug code are authorized for this registration.

Marsha Ikner,

Acting Deputy Assistant Administrator.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Restek Corporation has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before June 5, 2024. Such persons may also file a written request for a hearing on the application on or before June 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on March 5, 2024, Restek Corporation, 110 Benner Circle, Bellefonte, Pennsylvania 16823–8433, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Amineptine	1219	I
Mesocarb	1227	I
3-Fluoro-N-methylcathinone (3–FMC)	1233	I
Cathinone	1235	I
Methcathinone	1237	I
4-Fluoro-N-methylcathinone (4–FMC)	1238	I
Para-Methoxymethamphetamine (PMMA), 1-(4–1245 I N methoxyphenyl)-N-methylpropan-2-amine	1245	I
Pentedrone (a-methylaminovalerophenone)	1246	I
Mephedrone (4-Methyl-N-methylcathinone	1248	I
4-Methyl-N-ethylcathinone (4–MEC)	1249	I
Naphyrone	1258	I
N-Ethylamphetamine	1475	I
Methiopropamine (N-methyl-1-(thiophen-2-yl)propan-2- 1478 I N amine)	1478	I
N,N-Dimethylamphetamine	1480	I
Fenethylline	1503	I
Aminorex	1585	I
4-Methylaminorex (cis isomer)	1590	I
4,4′-Dimethylaminorex	1595	I
Gamma Hydroxybutyric Acid	2010	I
Methaqualone	2565	I
Mecloqualone	2572	I
JWH–250 (1-Pentyl-3-(2-methoxyphenylacetyl) indole)	6250	I
SR–18 (Also known as RCS–8) (1-Cyclohexylethyl-3-(2-methoxyphenylacetyl) indole)	7008	I
ADB–FUBINACA (N-(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide)	7010	I
5-Fluoro-UR–144 and XLR11 [1-(5-Fluoro-pentyl)1H-indol-3-yl](2,2,3,3-tetramethylcyclopropyl)methanone	7011	I

Controlled substance	Drug code	Schedule
AB–FUBINACA (N-(1-amino-3-methyl-1-oxobutan-2-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboxamide)	7012	I
FUB–144 (1-(4-fluorobenzyl)-1H-indol-3-yl)(2,2,3,3-tetramethylcyclopropyl)methanone)	7014	I
JWH–019 (1-Hexyl-3-(1-naphthoyl)indole)	7019	I
MDMB–FUBINACA (Methyl 2-(1-(4-fluorobenzyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate)	7020	I
FUB–AMB, MMB- FUBINACA, AMB–FUBINACA (2-(1-(4-fluorobenzyl)-1Hindazole-3-carboxamido)-3-methylbutanoate).	7021	I
AB–PINACA (N-(1-amino-3-methyl-1-oxobutan-2-yl)-1-pentyl-1H-indazole-3-carboxamide)	7023	I
THJ–2201 ([1-(5-fluoropentyl)-1H-indazol-3-yl](naphthalen-1-yl)methanone)	7024	I
5F–AB–PINACA (N-(1-amino-3-methyl-1-oxobutan-2-yl)-1-(5-fluropentyl)-1H-indazole-3-carboximide)	7025	I
AB–CHMINACA (N-(1-amino-3-methyl-1-oxobutan-2-yl)-1-(cyclohexylmethyl)-1H-indazole-3-carboxamide)	7031	I
MAB–CHMINACA (N-(1-amino-3,3dimethyl-1-oxobutan-2-yl)-1-(cyclohexylmethyl)-1H-indazole-3-carboxamide)	7032	I
5F–AMB (Methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3-methylbutanoate)	7033	I
5F–ADB, 5F–MDMB–PINACA (Methyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate)	7034	I
ADB–PINACA (N-(1-amino-3,3-dimethyl-1-oxobutan-2-yl)-1-pentyl-1H-indazole-3-carboxamide)	7035	I
5F–EDMB–PINACA (ethyl 2-(1-(5-fluoropentyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate)	7036	I
5F–MDMB–PICA (methyl 2-(1-(5-fluoropentyl)-1H-indole-3-carboxamido)-3,3-dimethylbutanoate)	7041	I
MDMB–CHMICA, MMB–CHMINACA (Methyl 2-(1-(cyclohexylmethyl)-1H-indole-3-carboxamido)-3,3-dimethylbutanoate).	7042	I
4F–MDMB–BINACA (4F–MDMB–BUTINACA or methyl 2- (1-(4-fluorobutyl)-1H-indazole-3-carboxamido)-3,3-dimethylbutanoate) 7043 I N.	7043	I
MMB–CHMICA, AMB–CHMICA (methyl 2-(1-(cyclohexylmethyl)-1H-indole-3-carboxamido)-3-methylbutanoate)	7044	I
FUB–AKB48, FUB–APINACA, AKB48 N-(4–FLUOROBENZYL) (N-(adamantan-1-yl)-1-(4-fluorobenzyl)-1H-indazole-3-carboximide).	7047	I
APINACA and AKB48 (N-(1-Adamantyl)-1-pentyl-1H-indazole-3-carboxamide)	7048	I
5F–APINACA, 5F–AKB48 (N-(adamantan-1-yl)-1-(5-fluoropentyl)-1H-indazole-3-carboxamide)	7049	I
JWH–081 (1-Pentyl-3-(1-(4-methoxynaphthoyl) indole)	7081	I
5F–CUMYL–PINACA, 5GT–25 (1-(5-fluoropentyl)-N-(2-phenylpropan-2-yl)-1H-indazole-3-carboxamide)	7083	I
5F–CUMYL–P7AICA (1-(5-fluoropentyl)-N-(2-phenylpropan-2-yl)-1H-pyrrolo[2,3-b]pyridine-3-carboxamide)	7085	I
4–CN–CUML–BUTINACA, 4-cyano-CUMYL–BUTINACA, 4–CN–CUMYL BINACA, CUMYL–4CN–BINACA, SGT–78 (1-(4-cyanobutyl)-N-(2-phenylpropan-2-yl)-1H-indazole-3-carboxamide).	7089	I
SR–19 (Also known as RCS–4) (1-Pentyl-3-[(4-methoxy)-benzoyl] indole)	7104	I
JWH–018 (also known as AM678) (1-Pentyl-3-(1-naphthoyl)indole)	7118	I
JWH–122 (1-Pentyl-3-(4-methyl-1-naphthoyl) indole)	7122	I
UR–144 (1-Pentyl-1H-indol-3-yl)(2,2,3,3-tetramethylcyclopropyl)methanone	7144	I
JWH–073 (1-Butyl-3-(1-naphthoyl)indole)	7173	I
JWH–200 (1-[2-(4-Morpholinyl)ethyl]-3-(1-naphthoyl)indole)	7200	I
AM2201 (1-(5-Fluoropentyl)-3-(1-naphthoyl) indole)	7201	I
JWH–203 (1-Pentyl-3-(2-chlorophenylacetyl) indole)	7203	I
NM2201, CBL2201 (Naphthalen-1-yl 1-(5-fluoropentyl)-1H-indole-3-carboxylate	7221	I
PB–22 (Quinolin-8-yl 1-pentyl-1H-indole-3-carboxylate)	7222	I
5F–PB–22 (Quinolin-8-yl 1-(5-fluoropentyl)-1H-indole-3-carboxylate)	7225	I
4-methyl-alpha-ethylaminopentiophenone (4–MEAP) 7245 I N 4–MEAP	7245	I
N-ethylhexedrone 7246 I N	7246	I
Alpha-ethyltryptamine	7249	I
Ibogaine	7260	I
2-(ethylamino)-2-(3-methoxyphenyl)cyclohexan-1-one (methoxetamine)	7286	I
CP–47,497 (5-(1,1-Dimethylheptyl)-2-[(1R,3S)-3-hydroxycyclohexyl-phenol)	7297	I
CP–47,497 C8 Homologue (5-(1,1-Dimethyloctyl)-2-[(1R,3S)3-hydroxycyclohexyl-phenol)	7298	I
Lysergic acid diethylamide	7315	I
2C–T–7 (2,5-Dimethoxy-4-(n)-propylthiophenethylamine	7348	I
Marihuana Extract	7350	I
Marihuana	7360	I
Tetrahydrocannabinols	7370	I
Parahexyl	7374	I
Mescaline	7381	I
2C–T–2 (2-(4-Ethylthio-2,5-dimethoxyphenyl) ethanamine)	7385	I
3,4,5-Trimethoxyamphetamine	7390	I
4-Bromo-2,5-dimethoxyamphetamine	7391	I
4-Bromo-2,5-dimethoxyphenethylamine	7392	I
4-Methyl-2,5-dimethoxyamphetamine	7395	I
2,5-Dimethoxyamphetamine	7396	I
JWH–398 (1-Pentyl-3-(4-chloro-1-naphthoyl) indole)	7398	I
2,5-Dimethoxy-4-ethylamphetamine	7399	I
3,4-Methylenedioxyamphetamine	7400	I
5-Methoxy-3,4-methylenedioxyamphetamine	7401	I
N-Hydroxy-3,4-methylenedioxyamphetamine	7402	I
3,4-Methylenedioxy-N-ethylamphetamine	7404	I
3,4-Methylenedioxymethamphetamine	7405	I
4-Methoxyamphetamine	7411	I
Peyote	7415	I
5-Methoxy-N–N-dimethyltryptamine	7431	I
Alpha-methyltryptamine	7432	I
Bufotenine	7433	I
Diethyltryptamine	7434	I

Controlled substance	Drug code	Schedule
Dimethyltryptamine	7435	I
Psilocybin	7437	I
Psilocyn	7438	I
5-Methoxy-N,N-diisopropyltryptamine	7439	I
4-chloro-alpha-pyrrolidinovalerophenone (4-chloro-a-PVP)	7443	I
4′-methyl-alpha-pyrrolidinohexiophenone (MPHP)	7446	I
N-Ethyl-1-phenylcyclohexylamine	7455	I
1-(1-Phenylcyclohexyl)pyrrolidine	7458	I
1-[1-(2-Thienyl)cyclohexyl]piperidine	7470	I
1-[1-(2-Thienyl)cyclohexyl]pyrrolidine	7473	I
N-Ethyl-3-piperidyl benzilate	7482	I
N-Methyl-3-piperidyl benzilate	7484	I
N-Benzylpiperazine	7493	I
4-MePPP (4-Methyl-alphapyrrolidinopropiophenone)	7498	I
2C–D (2-(2,5-Dimethoxy-4-methylphenyl) ethanamine)	7508	I
2C–E (2-(2,5-Dimethoxy-4-ethylphenyl) ethanamine)	7509	I
2C–H 2-(2,5-Dimethoxyphenyl) ethanamine)	7517	I
2C–I 2-(4-iodo-2,5-dimethoxyphenyl) ethanamine)	7518	I
2C–C 2-(4-Chloro-2,5-dimethoxyphenyl) ethanamine)	7519	I
2C–N (2-(2,5-Dimethoxy-4-nitro-phenyl) ethanamine)	7521	I
2C–P (2-(2,5-Dimethoxy-4-(n)-propylphenyl) ethanamine)	7524	I
2C–T–4 (2-(4-Isopropylthio)-2,5-dimethoxyphenyl) ethanamine)	7532	I
MDPV (3,4-Methylenedioxypyrovalerone)	7535	I
25B–NBOMe (2-(4-bromo-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl) ethanamine)	7536	I
25C–NBOMe (2-(4-chloro-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl) ethanamine)	7537	I
25I–NBOMe (2-(4-iodo-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl) ethanamine)	7538	I
Methylone (3,4-Methylenedioxy-N-methylcathinone)	7540	I
Butylone	7541	I
Pentylone	7542	I
N-Ethypentylone, ephylone (1-(1,3-benzodioxol-5-yl)-2-(ethylamino)-pentan-1-one)	7543	I
alpha-pyrrolidinohexanophenone (a-PHP)	7544	I
alpha-pyrrolidinopentiophenone (α-PVP)	7545	I
alpha-pyrrolidinobutiophenone (α-PBP)	7546	I
Ethylone	7547	I
alpha-pyrrolidinoheptaphenone (PV8)	7548	I
AM–694 (1-(5-Fluoropentyl)-3-(2-iodobenzoyl) indole)	7694	I
Acetyldihydrocodeine	9051	I
Benzylmorphine	9052	I
Codeine-N-oxide	9053	I
Cyprenorphine	9054	I
Desomorphine	9055	I
Etorphine (except HCl)	9056	I
Codeine methylbromide	9070	I
Brorphine (1-(1-(1-(4-bromophenyl)ethyl)piperidin-4–4l)1,3-dihydro-2H-benzo[d]imidazol-2-one)	9098	I
Dihydromorphine	9145	I
Difenoxin	9168	I

Phenoperidine	9641	I
Piritramide	9642	I
Proheptazine	9643	I
Properidine	9644	I
Racemoramide	9645	I
Trimeperidine	9646	I
Phenomorphan	9647	I
Propiram	9649	I
1-Methyl-4-phenyl-4-propionoxypiperidine	9661	I
1-(2-Phenylethyl)-4-phenyl-4-acetoxypiperidine	9663	I
Tilidine	9750	I
Butonitazene	9751	I
Lunitazene (N,N-diethyl-2-(2-(4-fluorobenzyl)-5- nitro1H-benzimidazol-1-yl)ethan-1- amine)	9756	I
Metonitazene (N,N-diethyl-2-(2-(4- methoxybenzyl)-5- nitro-1Hbenzimidazol-1-yl)ethan-1-amine	9757	I
N-pyrrolidino etonitazene; etonitazepyne (2-(4-ethoxybenzyl)-5-nitro-1-(2- (pyrrolidin-1-yl)ethyl)- 1Hbenzimidazole)	9758	I
Protonitazene (N,N-diethyl-2-(5-nitro-2-(4- propoxybenzyl)-1H-benzimidazol-1- yl)ethan-1-amine)	9759	I
Metodesnitazene (N,N-diethyl-2-(2-(4- methoxybenzyl)- 1H-benzimidazol-1- yl)ethan-1-amine)	9764	I
Etodesnitazene; etazene (2-(2-(4-ethoxybenzyl)- 1Hbenzimidazol-1-yl)-N,N-diethylethan-1- amine)	9765	I
Acryl fentanyl (N-(1-phenethylpiperidin-4-yl)-N-phenylacrylamide)	9811	I
Para-Fluorofentanyl	9812	I
3-Methylfentanyl	9813	I
Alpha-methylfentanyl	9814	I
Acetyl-alpha-methylfentanyl	9815	I
N-(2-fluorophenyl)-N-(1-phenethylpiperidin-4-yl)propionamide	9816	I
Para-Methylfentanyl (N-(4-methylphenyl)-N-(1- phenethylpiperidin-4-yl)propionamide; also known as 4- methylfentanyl)	9817	I
4'-Methyl acetyl fentanyl (N-(1-(4- methylphenethyl)piperidin-4-yl)-N-phenylacetamide)	9819	I
Ortho-Methyl methoxyacetyl fentanyl (2-methoxy-N-(2- methylphenyl)-N-(1-phenethylpiperidin-4-yl)acetamide)	9820	I
Acetyl Fentanyl (N-(1-phenethylpiperidin-4-yl)-N-phenylacetamide)	9821	I
Butyryl Fentanyl	9822	I
Para-fluorobutyryl fentanyl	9823	I
4-Fluoroisobutyryl fentanyl (N-(4-fluorophenyl)-N-(1-phenethylpiperidin-4-yl)isobutyramide)	9824	I
2-methoxy-N-(1-phenethylpiperidin-4-yl)-N-phenylacetamide	9825	I
Para-chloroisobutyryl fentanyl	9826	I
Isobutyryl fentanyl	9827	I
Beta-hydroxyfentanyl	9830	I
Beta-hydroxy-3-methylfentanyl	9831	I
Alpha-methylthiofentanyl	9832	I
3-Methylthiofentanyl	9833	I
Furanyl fentanyl (N-(1-phenethylpiperidin-4-yl)-N-phenylfuran-2-carboxamide)	9834	I
Thiofentanyl	9835	I
Beta-hydroxythiofentanyl	9836	I
Para-methoxybutyryl fentanyl	9837	I
Ocfentanil	9838	I
Thiofuranyl fentanyl (N-(1-phenethylpiperidin-4-yl)-Nphenylthiophene-2-carboxamide; also known as 2- thiofuranyl fentanyl; thiophene fentanyl).	9839	I
Valeryl fentanyl	9840	I
Phenyl fentanyl (N-(1-phenethylpiperidin-4-yl)-Nphenylbenzamide; also known as benzoyl fentanyl)	9841	I
Beta'-Phenyl fentanyl (N-(1-phenethylpiperidin-4-yl)-N,3- diphenylpropanamide; also known as β'-phenyl fentanyl; 3-phenylpropanoyl fentanyl).	9842	I

Controlled substance	Drug code	Schedule
N-(1-phenethylpiperidin-4-yl)-N-phenyltetrahydrofuran-2-carboxamide	9843	I
Crotonyl fentanyl ((E–N-(1-phenethylpiperidin-4-yl)-N-phenylbut-2-enamide)	9844	I
Cyclopropyl Fentanyl	9845	I
Cyclopentyl fentanyl	9847	I
Ortho-Methyl acetylfentanyl (N-(2-methylphenyl)-N-(1- phenethylpiperidin-4-yl)acetamide; also known as 2- methyl acetylfentanyl).	9848	I
Fentanyl related-compounds as defined in 21 CFR 1308.11(h)	9850	I
Fentanyl carbamate (ethyl (1-phenethylpiperidin-4- yl)(phenyl)carbamate)	9851	I
Ortho-Fluoroacryl fentanyl (N-(2-fluorophenyl)-N-(1- phenethylpiperidin-4-yl)acrylamide)	9852	I
Ortho-Fluoroisobutyryl fentanyl (N-(2-fluorophenyl)-N-(1- phenethylpiperidin-4-yl)isobutyramide)	9853	I
Para-Fluoro furanyl fentanyl (N-(4-fluorophenyl)-N-(1- phenethylpiperidin-4-yl)furan-2-carboxamide)	9854	I
2'-Fluoro ortho-fluorofentanyl (N-(1-(2- fluorophenethyl)piperidin-4-yl)-N-(2- fluorophenyl)propionamide; also known as 2'-fluoro 2- fluorofentanyl).	9855	I
Beta-Methyl fentanyl (N-phenyl-N-(1-(2- phenylpropyl)piperidin-4-yl)propionamide; also known as β-methyl fentanyl)	9856	I

The company plans to import analytical reference standards for distribution to its customers for research and analytics purposes. Placement of these drug codes onto the company's registration does not translate into automatic approval of subsequent permit applications to import controlled substances.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized in 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Marsha Ikner,

Acting Deputy Assistant Administrator.

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1361]

Importer of Controlled Substances Application: NSI Lab Solutions, Inc.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: NSI Lab Solutions, Inc. has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before June 5, 2024. Such persons may also file a written request for a hearing on the application on or before June 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrissette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrissette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrissette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on March 22, 2024, NSI Lab Solutions, Inc., 7212 ACC Boulevard, Raleigh, North Carolina 27617, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
3-Fluoro-N-methylcathinone (3–FMC)	1233	I
Cathinone	1235	I
Methcathinone	1237	I
4-Fluoro-N-methylcathinone (4–FMC)	1238	I
Pentedrone (α-methylaminovalerophenone)	1246	I
Mephedrone (4-Methyl-N-methylcathinone)	1248	I
4-Methyl-N-ethylcathinone (4–MEC)	1249	I
Naphyrone	1258	I
3-methylmethcathinone (2-(methylamino)-1-(3- methylphenyl)propan-1-one)	1259	I
N-Ethylamphetamine	1475	I
Methiopropamine (N-methyl-1-(thiophen-2-yl)propan-2- amine)	1478	I
N,N-Dimethylamphetamine	1480	I
Fenethylline	1503	I
Aminorex	1585	I
4-Methylaminorex (cis isomer)	1590	I
4,4′-Dimethylaminorex (4,4′-DMAR; 4,5-dihydro-4- methyl-5-(4-methylphenyl)-2-oxazolamine; 4-methyl-5- (4-methylphenyl)-4,5-dihydro-1,3-oxazol-2-amine).	1595	I

Controlled substance	Drug code	Schedule
Gamma Hydroxybutyric Acid	2010	I
Methaqualone	2565	I
Etizolam (4-(2-chlorophenyl)-2-ethyl-9-methyl-6H-thieno[3,2-f][1,2,4]triazolo[4,3-a][1,4]diazepine	2780	I
Flualprazolam (8-chloro-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine)	2785	I
Clonazolam (6-(2-chlorophenyl)-1-methyl-8-nitro-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2786	I
Flubromazolam (8-bromo-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2788	I
Diclazepam (7-chloro-5-(2-chloro-5-(2-chlorophenyl)-1- methyl-1,3-dihydro-2H-benzo[e][1,4]diazepin-2-one	2789	I
JWH–250 (1-Pentyl-3-(2-methoxyphenylacetyl) indole)	6250	I

The company plans to import the listed controlled substances for sale to research facilities for drug testing and analysis. In reference to drug codes 7360 (Marihuana) and 7370 (Tetrahydrocannabinols) the company plans to import a synthetic cannabidiol and a synthetic tetrahydrocannabinol. No other activities for these drug codes are authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Marsha Ikner,

Acting Deputy Assistant Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 1324]

Importer of Controlled Substances Application: AndersonBrecon dba PCI Pharma Services; Correction

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of correction.

SUMMARY: The Drug Enforcement Administration (DEA) published a document in the **Federal Register** on March 6, 2024, concerning an application for an Importer of Controlled Substances. The document request removal of Dimethyltrytamine.

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** on March 6, 2024, in FR Doc No: 89 FR 16029, FR No. 2024–04753, on pages 16029–16030 (2 pages), in the first column, remove the controlled substance Dimethltrytamine from the list to read as follows:

Controlled substance	Drug code	Schedule
Cocaine	9041	II
Methadone	9250	II

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1357]

Bulk Manufacturer of Controlled Substances Application: Pharmaron Manufacturing Services (US) LLC

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Pharmaron Manufacturing Services (US) LLC has applied to be registered as a bulk manufacturer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before July 5, 2024. Such persons may also file a written request for a hearing on the application on or before July 5, 2024.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to *https://www.regulations.gov* and follow the online instructions at that site for

submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on *https://www.regulations.gov.* If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.33(a), this is notice that on March 25, 2024, Pharmaron Manufacturing Services (US) LLC, 498 Washington Street, Coventry, Rhode Island 02816, applied to be registered as a bulk manufacturer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Oxymorphone	9652	II
Noroxymorphone	9668	II

The company plans to bulk manufacture the listed controlled substances for the purpose of producing material for clinical trials. No other activities for these drug codes are authorized for this registration.

BILLING CODE P

DEPARTMENT OF JUSTICE

[OMB 1140–0008]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Application and Permit for Permanent Exportation of Firearms—ATF Form 9 (5320.9)

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until June 5, 2024.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Melisa Mason, by phone at 304–616–4500, or email at *nfaombcomments@atf.gov.*

SUPPLEMENTARY INFORMATION: The proposed information collection was previously published in the **Federal Register**, volume 89 page 15614, on Monday, March 4, 2024, allowing a 60-day comment period. Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should

address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and/or
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/*PRAMain. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the information collection or the OMB Control Number 1140–0008. This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Revision of a previously approved collection.

2. *Title of the Form/Collection:* Application and Permit for Permanent Exportation of Firearms.

3. *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* ATF Form 9 (5320.9).

Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Affected Public: Private Sector-for or not for profit institutions.

Abstract: ATF Form 9 (5320.9) is typically used by a Federal firearms licensee who has paid the special (occupational) tax to deal, manufacture or import NFA firearms. The form must be filed (in quadruplicate) for approval to permanently export NFA firearms registered in the National Firearms Registration and Transfer Record. Once authorization has been granted, one copy is retained by ATF and the remaining copies returned to the exporter to establish that the exportation took place. The information collection (IC) OMB 1140–0008 (Application and Permit for Permanent Exportation of Firearms—ATF Form 9 (5320.9) is being revised to change the last sentence in 'Instructions 1a'. This change includes deleting ''to that effect'' and adding ''certifying compliance with 26 U.S. Code § 5854 and 27 CFR 479.33''.

5. *Obligation to Respond:* Required to obtain or retain benefits.

6. *Total Estimated Number of Respondents:* 1,831.

7. *Estimated Time per Respondent:* 18 minutes.

8. *Frequency:* Once annually.

9. *Total Estimated Annual Time Burden:* 549 hours.

10. *Total Estimated Annual Other Costs Burden:* $320.

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W–218 Washington, DC 20530.

Dated: May 1, 2024.

Darwin Arceo,

Department Clearance Officer for PRA,U.S. Department of Justice.

BILLING CODE 4410–FY–P

DEPARTMENT OF JUSTICE

[OMB Number 1121–0292]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension, With Change, of a Currently Approved Collection; Survey of Sexual Victimization

AGENCY: Bureau of Justice Statistics, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Justice Statistics, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until June 5, 2024.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Emily Buehler, Bureau of Justice Statistics, 810 Seventh Street NW, Washington, DC 20531 (email: *Emily.Buehler@usdoj.gov;* telephone: 202–598–1036).

SUPPLEMENTARY INFORMATION: The proposed information collection was previously published in the **Federal Register** on February 12, 2024, allowing a 60-day comment period.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and/or
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the information collection or the OMB Control Number [1121–0292]. This

information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Extension, with changes, of a currently approved collection.

2. *Title of the Form/Collection:* Survey of Sexual Victimization (SSV).

3. *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Summary Forms: SSV–1, SSV–2, SSV–3, SSV–4, SSV–5, SSV–6. Incident Forms: SSV–IA, SSV–IJ. Bureau of Justice Statistics, Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Respondents will include the Federal Bureau of Prisons; state prison and juvenile justice systems; private prisons; correctional facilities operated by the U.S. Military and U.S. Immigration and Customs Enforcement; local, private and tribal jails; local and private juvenile justice facilities; and juvenile facilities in Indian country.

5. *Obligation to Respond:* The obligation to respond is required under the Prison Rape Elimination Act of 2003 (Pub. L. 108–79).

6. *Total Estimated Number of Respondents:* 4,492 total responses received (1,492 summary forms and 3,000 incident forms).

7. *Estimated Time per Respondent:* Varies from 30 minutes to 1 hour per summary form; 40 minutes per incident form.

8. *Frequency:* Once a year.

9. *Total Estimated Annual Time Burden:* 3,047 hours.

10. *Total Estimated Annual Other Costs Burden:* PREA requires facilities to track the data collected in SSV. No costs other than the cost of the hour burden exist for this data collection.

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC 20530.

Dated: April 30, 2024.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–18–P

DEPARTMENT OF LABOR

Employment and Training Administration

Agency Information Collection Activities; Comment Request; Extension Package for Labor Condition Application for H–1B, H–1B1, and E–3 Nonimmigrant Workers and Nonimmigrant Worker Information Form

AGENCY: Employment and Training Administration, Department of Labor.

ACTION: Notice; request for comments.

SUMMARY: The Department of Labor's (DOL) Employment and Training Administration (ETA) is soliciting comments concerning the proposed extension of the information collection request (ICR) for the ''Labor Condition Application for Nonimmigrant Workers'' and ''Nonimmigrant Worker Information Form''; and related information collection and retention requirements (OMB Control Number 1205–0310), which covers Form ETA–9035, Form ETA–9035E (electronic), Form ETA–9035 & 9035E, Appendix A, Form ETA–9035CP, General Instructions for the 9035 & 9035E, and Form WH–4. This action seeks an extension of the forms without changes. This comment request is part of continuing Departmental efforts to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995 (PRA).

DATES: Consideration will be given to all written comments received by July 5, 2024.

ADDRESSES: A copy of this ICR with applicable supporting documentation, including a description of the likely respondents, proposed frequency of response, and estimated total burden, may be obtained for free by contacting Brian Pasternak, Administrator, Office of Foreign Labor Certification, by telephone at 202–693–8200 (this is not a toll-free number), TTY 1–877–889–5627 (this is not a toll-free number), or by email at *ETA.OFLC.Forms@dol.gov.*

Instructions: Submit written comments about, or requests for a copy of, this ICR by email at *ETA.OFLC.Forms@dol.gov.* To ensure proper consideration, include the OMB control number 1205–0310.

FOR FURTHER INFORMATION CONTACT: Brian Pasternak, Administrator, Office of Foreign Labor Certification, by telephone at 202–693–8200 (this is not a toll-free number) or by email at *ETA.OFLC.Forms@dol.gov.*

SUPPLEMENTARY INFORMATION: DOL, in its continuing efforts to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies an opportunity to comment on proposed and/or continuing collections of information before submitting them to the Office of Management and Budget (OMB) for final approval. This program ensures the public provides all necessary data in the desired format, the reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements can be properly assessed.

This information collection is required under sections 212(n) and (t) and 214(c) of the Immigration and Nationality Act (INA). *See* 8 U.S.C. 1182(n) and (t), and 1184(c). DOL and the Department of Homeland Security have promulgated regulations to implement the INA's requirements at 20 CFR part 655, subparts H and I, and 8 CFR 214.2(h)(4), respectively. The INA mandates that no H–1B, H–1B1 or E–3 temporary nonimmigrant worker may enter the United States (U.S.) to perform work in a specialty occupation or as a fashion model of distinguished merit and ability unless the U.S. employer makes certain attestations to the Secretary of Labor (Secretary). The employer must attest that the working conditions for the nonimmigrant worker will not adversely affect the working conditions of workers similarly employed; that it will offer a wage that is at least the higher of the prevailing wage for the occupational classification in the area of employment or the actual wage paid to all other individuals with similar experience and qualifications for the specific employment in question; that there is no strike or lockout in the course of a labor dispute in the occupational classification at the place of employment; and that it has provided notice of the filing of the LCA. *See* 20 CFR 655.731, 655.732, 655.733, and 655.734. In addition, further attestations are generally required for H–1B dependent employers and willful violators. *See* 20 CFR 655.736, 655.738, and 655.739. The current ICR expires December 31, 2024. DOL seeks to extend, without changes, the validity of

Forms ETA–9035, ETA–9035E, ETA–9035 & 9035E, Appendix A, ETA–9035CP, General Instructions, and WH–4.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection unless OMB, under the PRA, approves it and the collection tool displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

Interested parties are encouraged to provide comments regarding this ICR to the contact shown in the **ADDRESSES** section. Comments must be written to receive consideration, and they will be summarized and included in the request for OMB approval of the final ICR. To help ensure appropriate consideration, comments should mention OMB control number 1205–0310.

Submitted comments will also be a matter of public record for this ICR and posted on the internet, without redaction. DOL encourages commenters not to include personally identifiable information, confidential business data, or other sensitive statements/information in any comments.

DOL is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronic submission of responses).

Agency: DOL–ETA.

Type of Review: Extension Without Changes.

Title of Collection: Labor Condition Application for H–1B, H–1B1, and E–3 Non-immigrants; and Nonimmigrant Worker Information Form.

Forms: ETA–9035, ETA–9035E, ETA–9035 & 9035E, Appendix A, ETA–9035CP, and WH–4.

OMB Control Number: 1205–0310.

Affected Public: Private Sector: Business or other for-profits and not-for-profit institutions; State, Local, and Tribal Governments; Individuals or Households.

Total Estimated Number of Annual Respondents: 138,314.

Annual Frequency: On Occasion.

Total Estimated Number of Annual Responses: 645,353.

Estimated Time per Response: Varies by form.

Total Estimated Annual Burden Hours: 843,989 hours.

Total Estimated Annual Other Costs: $41,140.

Authority: 44 U.S.C. 3506(c)(2)(A).

José Javier Rodríguez,

Assistant Secretary for Employment and Training, Labor.

BILLING CODE 4510–FP–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2010–0030]

Ionizing Radiation Standard; Extension of the Office of Management and Budget's (OMB) Approval of Information Collection (Paperwork) Requirements

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Request for public comments.

SUMMARY: OSHA solicits public comments concerning the proposal to extend the Office of Management and Budget's (OMB) approval of the information collection requirements specified in the Ionizing Radiation Standard.

DATES: Comments must be submitted (postmarked, sent, or received) by July 5, 2024.

ADDRESSES:

Electronically: You may submit comments and attachments electronically at *https://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the instructions online for submitting comments.

Docket: To read or download comments or other material in the docket, go to *https://www.regulations.gov.* Documents in the docket are listed in the *https://www.regulations.gov* index; however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through the websites. All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

Instructions: All submissions must include the agency name and OSHA docket number (OSHA–2010–0030) for the Information Collection Request (ICR). OSHA will place all comments, including any personal information, in the public docket, which may be made available online. Therefore, OSHA cautions interested parties about submitting personal information such as social security numbers and birthdates.

For further information on submitting comments, see the ''Public Participation'' heading in the section of this notice titled **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Seleda Perryman, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone (202) 693–2222.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Labor, as part of the continuing effort to reduce paperwork and respondent (*i.e.,* employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, the collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of effort in obtaining information (29 U.S.C. 657).

The Ionizing Radiation Standard specifies a number of collection of information requirements. The basic purpose of the collections of information in the Ionizing Radiation Standard is to document that employers are providing their workers with protection from ionizing radiation exposure. The collections of information contained in the Standard include: monitoring worker exposure to ionizing radiation, posting caution signs at radiation areas, reporting worker overexposure to OSHA, maintaining exposure records, and providing exposure records to current and former workers.

II. Special Issues for Comment

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirements are necessary for the proper performance of the agency's functions to protect workers, including whether the information is useful;
- The accuracy of OSHA's estimate of the burden (time and costs) of the information collection requirements, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply; for example, by using automated or other technological information, and transmission techniques.

III. Proposed Actions

OSHA is requesting that OMB extend the approval of the information collection requirements contained in the Ionizing Radiation Standard. The agency is requesting an adjustment increase of 11,479 burden hours from 59,077 to 70,556 hours. This increase is primarily due to increasing the percentage of affected establishments that may be using ionizing radiation in each industry identified as using ionizing radiation. Also, the agency is requesting an adjustment increase in capital cost from $8,892,917 to $11,461,149, a total increase of $2,568,232. The increase is due to increases in both the estimated number employees being monitored and the costs for exposure monitoring badges.

OSHA will summarize the comments submitted in response to this notice and will include this summary in the request to OMB to extend the approval of the collection of information requirements.

Type of Review: Extension of a currently approved collection.

Title: Ionizing Radiation Standard.

OMB Control Number: 1218–0103.

Affected Public: Business or other for-profits.

Number of Respondents: 25,631.

Number of Responses: 395,705.

Frequency of Responses: On occasion.

Average Time per Response: Varies.

Estimated Total Burden Hours: 70,556.

Estimated Cost (Operation and Maintenance): $11,461,149.

IV. Public Participation—Submission of Comments on This Notice and Internet Access to Comments and Submissions

You may submit comments in response to this document as follows: (1) electronically at *http://www.regulations.gov,* which is the Federal eRulemaking Portal; or (2) by facsimile (fax), if your comments, including attachments, are not longer than 10 pages you may fax them to the OSHA Docket Office at (202) 693–1648. All comments, attachments, and other material must identify the agency name and the OSHA docket number for the ICR (OSHA–2010–0030). You may supplement electronic submission by uploading document files electronically.

Comments and submissions are posted without change at *https://www.regulations.gov.* Therefore, OSHA cautions commenters about submitting personal information such as social security numbers and dates of birth. Although all submissions are listed in the *https://www.regulations.gov* index, some information (*e.g.,* copyrighted material) is not publicly available to read or download from this website. All submissions, including copyrighted material, are available for inspection and copying at the OSHA Docket Office. Information on using the *https://www.regulations.gov* website to submit comments and access the docket is available at the website's ''User Tips'' link.

Contact the OSHA Docket Office at (202) 693–2350, (TTY (877) 889–5627) for information about materials not available from the website, and for assistance in using the internet to locate docket submissions.

V. Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is the Paperwork Reduction Act of 1995 (44 U.S.C. 3506 *et seq.*) and Secretary of Labor's Order No. 8–2020 (85 FR 58393).

Signed at Washington, DC, on April 29, 2024.

James S. Frederick,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510–26–P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Institute of Museum and Library Services

Submission for OMB Review, Comment Request, Proposed Collection: National Medal for Museum and Library Service Nomination Form

AGENCY: Institute of Museum and Library Services, National Foundation on the Arts and the Humanities.

ACTION: Submission for OMB review, comment request.

SUMMARY: The Institute of Museum and Library Services announces the following information collection has been submitted to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. This Notice proposes the clearance of the web-based National Medal for Museum and Library Service Nomination Form.

A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section below on or before June 06, 2024.

OMB is particularly interested in comments that help the agency to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronic submission of responses).

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this Notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Institute of Museum and Library Services'' under ''Currently Under Review;'' then check ''Only Show ICR for Public Comment'' checkbox. Once you have found this information collection request, select ''Comment,'' and enter or upload your comment and information. Alternatively, please mail your written comments to Office of Information and Regulatory Affairs, Attn.: OMB Desk Officer for Education, Office of Management and Budget, Room 10235, Washington, DC 20503, or call (202) 395–7316.

FOR FURTHER INFORMATION CONTACT: Katherine Maas, Chief of Staff, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024–2135. Ms. Maas can be reached by telephone at 202–653–4798, or by email at *nationalmedals@imls.gov.* Office hours are from 8:30 a.m. to 5 p.m., E.T., Monday through Friday, except Federal holidays. Persons who are deaf or hard of hearing (TTY users) can contact IMLS at 202–207–7858 via 711 for TTY-Based Telecommunications Relay Service.

SUPPLEMENTARY INFORMATION: The Institute of Museum and Library Services (IMLS) is the primary source of federal support for the nation's libraries and museums. We advance, support, and empower America's museums, libraries, and related organizations through grant making, research, and policy development. To learn more, visit *www.imls.gov.*

Current Actions: The purpose of this collection is to administer the IMLS process by which organizations nominated for the National Medal for Museum and Library Service submit administrative information about their organizations, communities, and programs. IMLS uses a standardized electronic form to collect this information from museums and libraries when they submit their nominations. The National Medal for Museum and Library Service is the nation's highest honor for institutions that make significant and exceptional contributions to their communities. Since 1994, IMLS has presented the award to institutions that demonstrate extraordinary and innovative approaches to community service. In addition to the Medal, IMLS may provide a monetary award. This action is to renew the content, form, and instructions for the next three years. The 60-Day Notice was published in the **Federal Register** on March 4, 2024 (89 FR 15617, Document Number 2024–04451). The agency received and responded to one comment in response to this Notice.

Agency: Institute of Museum and Library Services.

Title of Collection: National Medal for Museum and Library Service Nomination Form.

OMB Control Number: 3137–0097.

Agency Number: 3137.

Affected Public: Library and Museum applicants.

Total Estimated Number of Annual Responses: 175.

Frequency of Response: Once per year.

Average Hours per Response: 9.

Total Estimated Number of Annual Burden Hours: 1,575.

Total Annual Cost Burden: $50,225.

Total Annual Federal Costs: $8,024.

Dated: May 1, 2024.

Suzanne Mbollo,

Grants Management Specialist, Institute of Museum and Library Services.

BILLING CODE 7036–01–P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Institute of Museum and Library Services

Submission for OMB Review, Comment Request, Proposed Collection: IMLS Library and Museum Reviewer Forms

AGENCY: Institute of Museum and Library Services, National Foundation on the Arts and the Humanities.

ACTION: Submission for OMB review, request for comments, collection of information.

SUMMARY: The Institute of Museum and Library Services announces that the following information collection has been submitted to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. This Notice proposes the clearance of the IMLS Museum and Library Reviewer Forms which are used by library and museum professionals to submit their interest and expertise to be considered for selection as an IMLS peer reviewer. A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **FOR FURTHER INFORMATION CONTACT** section of this Notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section below on or before June 6, 2024.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this Notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Institute of Museum and Library Services'' under ''Currently Under Review;'' then check ''Only Show ICR for Public Comment'' checkbox. Once you have found this information collection request, select ''Comment,'' and enter or upload your comment and information. Alternatively, please mail your written comments to Office of Information and Regulatory Affairs, Attn.: OMB Desk Officer for Education, Office of Management and Budget, Room 10235, Washington, DC 20503, or call (202) 395–7316.

OMB is particularly interested in comments that help the agency to:

• Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology (*e.g.,* permitting electronic submission of responses).

FOR FURTHER INFORMATION CONTACT: Julie Balutis, Director, Office of Grants Policy and Management, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024–2135. Ms. Balutis may be reached by telephone at 202–653–4645, or by email at *jbalutis@imls.gov.* Persons who are deaf or hard of hearing (TTY users) may contact IMLS at 202–207–7858 via 711 for TTY-Based Telecommunications Relay Service.

SUPPLEMENTARY INFORMATION: The Institute of Museum and Library Services is the primary source of federal support for the nation's libraries and museums. We advance, support, and empower America's museums, libraries, and related organizations through grant making, research, and policy development. To learn more, visit *www.imls.gov.*

Current Actions: This Notice proposes the clearance of the content, forms, and instructions for IMLS Library and Museum Reviewer Forms for the next three years.

All proposals submitted for IMLS competitive awards are reviewed by library and museum professionals who know the needs of communities, can share promising practices, and are well versed in the issues and concerns of libraries and museums today. Peer reviewers dedicate their time and expertise to advance the highest professional practices in the field. The IMLS review process is well respected, and the success of our grant programs is largely due to the expertise of our reviewers. These peer reviewer forms, accessed through the IMLS website, allow library and museum professionals to indicate their interest and provide information on their professional expertise to be considered for selection as an IMLS peer reviewer.

The 60-day Notice was published in the **Federal Register** on March 04, 2024 (89 FR 15618) (Document Number: 2024–04411). The agency received no comments in response to this Notice.

Agency: Institute of Museum and Library Services.

Title: IMLS Library and Museum Reviewer Forms.

OMB Control Number: 3137–0099.

Agency Number: 3137.

Respondents/Affected Public: Library and Museum professionals.

Total Number of Respondents: 1,450.

Frequency of Response: Once per year.

Average Minutes per Response: 15.

Total Estimated Annual Burden Hours: 363.

Total Annual Cost Burden: $11,649.

Total Annual Federal Costs: $3,989.

Dated: May 01, 2024.

Suzanne Mbollo,

Grants Management Specialist, Institute of Museum and Library Services.

BILLING CODE 7036–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2023–0189]

Information Collection: Public Records and NRC Forms 507 and 509

AGENCY: Nuclear Regulatory Commission.

ACTION: Renewal of existing information collection; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) invites public comment on the renewal of Office of Management and Budget (OMB) approval for an existing collection of information. The information collection is entitled, ''Public Records and NRC Forms 507 and 509.''

DATES: Submit comments by July 5, 2024. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0189. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* David Cullison, Office of the Chief Information Officer, Mail Stop: T–6 A10M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2023–0189 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0189. A copy of the collection of information and related instructions may be obtained without charge by accessing Docket ID NRC–2023–0189 on this website.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* A copy of the collection of information and related instructions may be obtained without charge by accessing ADAMS Accession Nos. ML24022A113, ML24022A114, and ML24022A116. The supporting statement and burden spreadsheet are available in ADAMS under Accession Nos. ML24022A111 and ML24022A112.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.
- *NRC's Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–2084; email: *Infocollects.Resource@nrc.gov.*

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2023–0189, in your comment submission.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not

want to be publicly disclosed in your comment submission. All comment submissions are posted at *https://www.regulations.gov* and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized as follows.

1. *The title of the information collection:* Public Records and NRC Forms 507 and 509.
2. *OMB approval number:* 3150–0043.
3. *Type of submission:* Extension.
4. *The form number, if applicable:* NRC Forms 507 and 509.
5. *How often the collection is required or requested:* On occasion.
6. *Who will be required or asked to respond:* Freedom of Information Act (FOIA) requesters, outside vendors, and licensees who submit an objection to disclosure.
7. *The estimated number of annual responses:* 628.
8. *The estimated number of annual respondents:* 273.
9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 180.5.
10. *Abstract:* The FOIA, 5 U.S.C. 552, and the implementing regulations, part 9 of title 10 of the *Code of Federal Regulations* (10 CFR), ''Public Records,'' require individuals seeking access to records under the FOIA and Privacy Act of 1974, as amended, 5 U.S.C. 552a, to submit a request in writing and to describe the records sought sufficiently for the NRC to conduct a reasonable search. The Privacy Act of 1974, as amended, 5 U.S.C. 552a, establishes a code of fair information practices that governs the collection, maintenance, use, and dissemination of information about individuals that is maintained in systems of records by Federal agencies. Specifically, Subpart B (Privacy Act regulations) implements the provisions of the Privacy Act of 1974, as amended, (5 U.S.C. 552a), with respect to the procedures by which individuals may determine the existence of, seek access to, and request correction of NRC records concerning themselves. Requesters can currently submit FOIA and/or Privacy Act requests in writing, fax, email, *https://www.foia.gov* or by using the Public Access Link (*https://foia.nrc-gateway.gov/app/Home.aspx*). NRC Form 509, ''Statement of Estimated Fees for Freedom of Information Act (FOIA) Request'' is used by: (1) the NRC to notify requesters that fees will be assessed for processing their FOIA requests, (2) the requester to notify NRC in writing of their agreement to pay fees, (3) the NRC to notify the requester to submit a written request for a waiver pursuant to 10 CFR 9.41 within 10 working days from the receipt of the notice, and (4) the NRC to notify the requester to provide advanced payment of estimated fees. NRC Form 507, ''Identity Verification and/or Third-Party Authorization for Freedom of Information Act/Privacy Act Requests,'' is used by requesters to provide the identity verification or third-party authorization that is needed by the NRC in order to process their requests. The NRC uses the information provided by requesters to process requests from the public. In addition, outside vendors and licensees can submit an objection to disclosure. The NRC needs this information to properly process FOIA requests that involve confidential information or trade secrets.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility? Please explain your answer.
2. Is the estimate of the burden of the information collection accurate? Please explain your answer.
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

Dated: April 30, 2024.

For the Nuclear Regulatory Commission.

David Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

[FR Doc. 2024–09747 Filed 5–3–24; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2024–0079]

NUREG: Report to Congress on Abnormal Occurrences: Fiscal Year 2023; Dissemination of Information

AGENCY: Nuclear Regulatory Commission.

ACTION: Final report; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing NUREG–0090, Volume 46, ''Report to Congress on Abnormal Occurrences: Fiscal Year 2023.'' The report describes those events that the NRC or an Agreement State identified as abnormal occurrences (AOs) during fiscal year (FY) 2023, based on the criteria defined by the Commission. The report describes nine events at Agreement State-licensed facilities and two events at NRC-licensed facilities.

DATES: NUREG–0090, Volume 46, is available May 6, 2024.

ADDRESSES: Please refer to Docket ID NRC–2024–0079 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0079. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The FY 2023 AO report, NUREG–0090, Volume 46, ''Report to Congress on Abnormal Occurrences: Fiscal Year 2023 is available in ADAMS under Accession No. ML24121A231).

FOR FURTHER INFORMATION CONTACT: Rigel Flora, Office of Nuclear Regulatory Research, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3890; email: *Rigel.Flora@nrc.gov.*

SUPPLEMENTARY INFORMATION: Section 208 of the Energy Reorganization Act of 1974, as amended (Pub. L. 93–438), defines an ''abnormal occurrence'' as an unscheduled incident or event that the NRC determines to be significant from the standpoint of public health or safety. The FY 2023 AO report, NUREG–0090, Volume 46, ''Report to Congress on Abnormal Occurrences: Fiscal Year 2023'' describes those events that the NRC identified as AOs during FY 2023.

This report describes nine events involving Agreement State licensees and two events involving NRC licensees. Seven of the AOs occurred at medical facilities, three AOs involved the theft or diversion and recovery of Category 2 radioactive material sources, and the other event involved an overexposure.

The NRC identified no events at NRC-licensed facilities during FY 2023 that met the guidelines for inclusion in Appendix B, ''Other Events of Interest.''

One event met the guidelines for inclusion in Appendix C, ''Updates of Previously Reported Abnormal Occurrences.''

Agreement States are the 39 U.S. States that currently have entered into formal agreements with the NRC pursuant to section 274 of the Atomic Energy Act of 1954, as amended (AEA), to regulate certain quantities of AEA-licensed material at facilities located within their borders.

The Federal Reports Elimination and Sunset Act of 1995 (Pub. L. 104–68) requires that AOs be reported to Congress annually. The full report, NUREG–0090, Volume 46, ''Report to Congress on Abnormal Occurrences: Fiscal Year 2023,'' is also available electronically at the NRC's public website at *https://www.nrc.gov/reading-rm/doc-collections/nuregs/staff.*

Dated: May 1, 2024.

For the Nuclear Regulatory Commission.

Carrie Safford,

Secretary of the Commission.

BILLING CODE 7590–01–P

OFFICE OF PERSONNEL MANAGEMENT

[Docket ID: OPM–2024–0011]

Submission for Review: Revision and Consolidation of Two Existing Information Collections Related to Health Benefits Election Forms

AGENCY: Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Office of Personnel Management (OPM) offers the general public and other Federal agencies the opportunity to comment on a revised information collection request (ICR) for two forms: SF 2809 Health Benefits Election Form and OPM 2809 Health Benefits Election Form.

DATES: Comments are encouraged and will be accepted until July 5, 2024.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection by one of the following means:

- *Federal Rulemaking Portal: http://www.regulations.gov.*

All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: A copy of this information collection request, with applicable supporting documentation, may be obtained by contacting Retirement Services, Office of Personnel Management, 1900 E Street NW, Washington, DC 20415, Attention: Cyrus Benson. You may also contact (202) 936–0401 or email *RSPublicationsTeam@opm.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act (PRA) (44 U.S.C. chapter 35), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. This notice complies with that requirement, and OPM is soliciting comments for the ICR described below.

The Federal Employees Health Benefits (FEHB) Program, as governed by 5 U.S.C. chapter 89, provides health insurance to employees and annuitants of the Federal Government. Standard Form 2809 Health Benefits Election Form, OMB Control No. 3206–0160, has long been used by OPM and other Federal agencies to collect the information needed for employees to enroll in and to update enrollment information for the FEHB. OPM is proposing that the SF–2809 be categorized as a ''common form.''

The form OPM–2809 Health Benefits Election Form, OMB Control No 3206–0141, is in many respects similar to the SF–2809. The OPM–2809 provides OPM with the information needed for annuitants, survivor annuitants, and former spouses of annuitants in the Civil Service Retirement System (CSRS) and the Federal Employees Retirement System (FERS) to enroll in and to update enrollment information for the FEHB.

The SF–2809 and the OPM–2809 forms are generally very similar in terms of the information collected, with only a few different data points to reflect differences between an employee and an annuitant. Nonetheless, the forms were historically managed under two different information collections. OPM is not currently planning to consolidate the forms into a single form because the instructions for annuitants are different than the instructions for an employee. OPM expects that retaining separate forms helps annuitants better understand what information is required.

OPM anticipates that both forms will generally require revisions at the same time and that comments relevant to one form will generally apply equally to the other form. Therefore, because the forms serve the same purpose (for two different populations) and collect virtually identical information, OPM is proposing to combine the two information collections and to manage the two forms under a single information collection, OMB Control No. 3206–0160, going forward.

The Postal Service Reform Act of 2022 (PSRA; Pub. L. 117–108) created a new Postal Service Health Benefits (PSHB) Program within the Federal Employees Health Benefits (FEHB) Program. As part of the regulatory implementation of the PSHB, OPM requested comment on whether OPM should introduce a separate enrollment form for PSHB. One commenter recommended that OPM update the existing 2809 form rather than introducing a new form for PSHB. OPM is publishing a final rule to implement the PSHB Program elsewhere in this issue of the **Federal Register**. OPM agrees with the commenter in that rulemaking and is proposing to add one data element to the existing SF–2809 and OPM–2809 forms. Specifically, the forms will request, only for PSHB retirees and family members, information on eligibility for health

services from the Indian Health Service and enrollment in health care benefits provided by the Veterans Affairs. OPM is requesting this information because it is necessary to determine Program eligibility for these individuals.

In addition, the Forms have been updated to improve clarity and ease of use. OPM consulted with Agency Benefit Officers, Federal benefit electronic enrollment systems, FEHB insurance carriers and conducted several employee focus groups to determine proposed changes. Some changes to instructions for the SF–2809 form have not been made to the OPM–2809 form to accommodate a larger use of paper forms by the annuitant population.

Finally, as part of the release of the new PSHB Program, OPM will be offering the use of a new online enrollment system. The information collected using the system will be identical to the paper and electronic PDF versions of the SF–2809 and OPM–2809 forms; however, users will be able to enter the information using a series of prompts that provide additional instructions and guidance.

The information collection for form SF–2809 (OMB Control Number 3206–0160) is currently approved with an estimated public burden of 9,000 hours for 18,000 responses. The information collection (OMB Control number 3206–0141) associated with that form is currently approved with an estimated public burden of 11,667 hours for 30,000 responses. As OPM is proposing to combine these information collections, the estimated public burden for the revised information collection is 20,667 hours for 48,000 responses.

The Standard Form 2809 and OPM Form 2809 reflect the minimal critical elements collected across the Federal government to begin an application for enrollment under the FEHB Program (including the PSHB Program) under the authority of 5 U.S.C. chapter 89.

We invite comments that:

1. Evaluate the utility of the changes made to the forms;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Suggest ways to enhance the quality, utility, and clarity of the information to be collected; and

4. Suggest ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

In particular, OPM requests comment on (a) the proposed changes to form SF–2809, (b) the proposed changes to form OPM–2809, (c) OPM's proposal to collect the SF–2809 and OPM–2809 information for PSHB via the new electronic system, and (d) OPM's proposal to combine the two information collections into a single collection.

Analysis

Agency: Office of Personnel Management.

Title: Health Benefits Election Forms.

OMB Number: 3206–0160.

Frequency: Annually.

Affected Public: Eligible individuals who wish to enroll in FEHB (including Postal Service Health Benefits under FEHB) for the first time or to change an existing enrollment.

Number of Respondents: 48,000.

Estimated Time per Respondent: 30 Minutes.

Total Burden Hours: 20,667.

Office of Personnel Management.

Kayyonne Marston,

Federal Register Liaison.

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* May 8, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2024–261 and CP2024–267; *Filing Title:* USPS Request to Add Priority Mail Express Contract 101 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 30, 2024;

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

Filing Authority: 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* May 8, 2024.

2. *Docket No(s).:* MC2024–262 and CP2024–268; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 235 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 30, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jana Slovinska; *Comments Due:* May 8, 2024.

3. *Docket No(s).:* MC2024–263 and CP2024–269; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 236 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* April 30, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jana Slovinska; *Comments Due:* May 8, 2024.

This Notice will be published in the **Federal Register**.

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: 2:00 p.m. on Thursday, May 9, 2024.

PLACE: The meeting will be held via remote means and/or at the

Commission's headquarters, 100 F Street, NE, Washington, DC 20549.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters also may be present.

In the event that the time, date, or location of this meeting changes, an announcement of the change, along with the new time, date, and/or place of the meeting will be posted on the Commission's website at *https://www.sec.gov*.

The General Counsel of the Commission, or her designee, has certified that, in her opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (8), 9(B) and (10) and 17 CFR 200.402(a)(3), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9)(ii) and (a)(10), permit consideration of the scheduled matters at the closed meeting.

The subject matter of the closed meeting will consist of the following topics:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

Resolution of litigation claims; and

Other matters relating to examinations and enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting agenda items that may consist of adjudicatory, examination, litigation, or regulatory matters.

CONTACT PERSON FOR MORE INFORMATION: For further information, please contact Vanessa A. Countryman from the Office of the Secretary at (202) 551–5400.

Authority: 5 U.S.C. 552b.

Dated: May 2, 2024.

Vanessa A. Countryman,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–428, OMB Control No. 3235–0478]

Submission for OMB Review; Comment Request; Extension: Rule 11a1–1(T)

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') has submitted to the Office of Management and Budget (''OMB'') a request for approval of extension of the previously approved collection of information provided for in Rule 11a1–1(T) (17 CFR 240.11a1–1(T)), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) (''Exchange Act'').

On January 27, 1976, the Commission adopted Rule 11a1–1(T) to exempt certain exempt transactions of exchange members for their own accounts that would otherwise be prohibited under Section 11(a) of the Exchange Act. The Rule provides that a member's proprietary order may be executed on the exchange of which the trader is a member, if, among other things: (1) the member discloses that a bid or offer for its account is for its account to any member with whom such bid or offer is placed or to whom it is communicated; (2) any such member through whom that bid or offer is communicated discloses to others participating in effecting the order that it is for the account of a member; and (3) immediately before executing the order, a member (other than a specialist in such security) presenting any order for the account of a member on the exchange clearly announces or otherwise indicates to the specialist and to other members then present that he is presenting an order for the account of a member.

Without these requirements, it would not be possible for the Commission to monitor its mandate under the Exchange Act to promote fair and orderly markets and ensure that exchange members have, as the principal purpose of their exchange memberships, the conduct of a public securities business.

There are approximately 531 respondents that require an aggregate total of approximately 15 hours per year to comply with this Rule. Each of these approximately 531 respondents makes an estimated 20 annual responses, for an aggregate of 10,620 responses per year. Each response takes approximately 5 seconds to complete. Thus, the total time burden per year is approximately 15 hours (10,620 × 5 seconds/60 seconds per minute/60 minutes per hour = 14.7618 hours rounded up to 15 hours). The approximate internal cost of compliance per hour is approximately $405, resulting in a total internal cost of compliance of approximately $6,075 per year (15 hours @$405).

Compliance with Rule 11a1–1(T) is necessary for exchange members to make transactions for their own accounts under a specific exemption from the general prohibition of such transactions under Section 11(a) of the Exchange Act. Compliance with Rule 11a1–1(T) does not involve the collection of confidential information. Rule 11a1–1(T) does not have a record retention requirement per se. However, responses made pursuant to Rule 11a1–1(T) may be subject to the recordkeeping requirements of Rules 17a–3 and 17a–4.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

The public may view background documentation for this information collection at the following website: *www.reginfo.gov*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Written comments and recommendations for the proposed information collection should be sent by June 5, 2024 to (i) *www.reginfo.gov/public/do/PRAMain* and (ii) David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549, or by sending an email to: *PRA_Mailbox@sec.gov*.

Dated: May 1, 2024.

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #20292 and #20293; TEXAS Disaster Number TX–20007]

Administrative Declaration of a Disaster for the State of Texas

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a notice of an Administrative declaration of a disaster for the State of TEXAS dated 04/30/2024.

Incident: Severe Storms, Flooding, Hail and Straight-line Winds.

Incident Period: 04/08/2024 through 04/26/2024.

DATES: Issued on 04/30/2024.

Physical Loan Application Deadline Date: 07/01/2024.

Economic Injury (EIDL) Loan Application Deadline Date: 01/30/2025.

ADDRESSES: *Visit the MySBA Loan Portal at https://lending.sba.gov* to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Alan Escobar, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205–6734.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the Administrator's disaster declaration, applications for disaster loans may be submitted online using the MySBA Loan Portal *https://lending.sba.gov* or other locally announced locations. Please contact the SBA disaster assistance customer service center by email at *disastercustomerservice@sba.gov* or by phone at 1–800–659–2955 for further assistance.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties: Jasper

Contiguous Counties: Texas: Angelina, Hardin, Newton, Orange, Sabine, San Augustine, Tyler

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners with Credit Available Elsewhere	5.375
Homeowners without Credit Available Elsewhere	2.688
Businesses with Credit Available Elsewhere	8.000
Businesses without Credit Available Elsewhere	4.000
Non-Profit Organizations with Credit Available Elsewhere	3.250
Non-Profit Organizations without Credit Available Elsewhere	3.250
For Economic Injury:	
Business and Small Agricultural Cooperatives without Credit Available Elsewhere	4.000
Non-Profit Organizations without Credit Available Elsewhere	3.250

The number assigned to this disaster for physical damage is 202926 and for economic injury is 202930.

The State which received an EIDL Declaration is Texas.

(Catalog of Federal Domestic Assistance Number 59008)

Isabella Guzman,

Administrator.

BILLING CODE 4710–05–P

DEPARTMENT OF STATE

[Public Notice 12395]

60-Day Notice of Proposed Information Collection: Four DDTC Information Collections

ACTION: Notice of request for public comments.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collections described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on these collections from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collections to OMB.

DATES: The Department will accept comments from the public up to July 5, 2024.

ADDRESSES: You may submit comments by any of the following methods:

- *Web:* Persons with access to the internet may comment on this notice by going to *www.Regulations.gov.* You can search for the document by entering ''Docket Number: DOS–2024–0016'' in the Search field. Then click the ''Comment Now'' button and complete the comment form.
- *Email: DDTCPublicComments@state.gov.*

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Andrea Battista, SA–1, 12th Floor, Directorate of Defense Trade Controls, Bureau of Political Military Affairs, U.S. Department of State, Washington, DC 20522–0112, via phone at 202–992–0973, or via email at *battistaal@state.gov.*

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Application/License for Permanent Export of Unclassified Defense Articles and Related Unclassified Technical Data.
- *OMB Control Number:* 1405–0003.
- *Type of Request:* Extension of a Currently Approved Collection.
- *Originating Office:* Bureau of Political-Military Affairs, Directorate of Defense Trade Controls, PM/DDTC.
- *Form Number:* DSP–5.
- *Respondents:* Business, Nonprofit Organizations, and Individuals.

- *Estimated Number of Respondents:* 1,668.
- *Estimated Number of Responses:* 16,845.
- *Average Time per Response:* 1 hour.
- *Total Estimated Burden Time:* 16,845 hours.
- *Frequency:* On Occasion.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.
- *Title of Information Collection:* Application/License for Temporary Import of Unclassified Defense Articles.
- *OMB Control Number:* 1405–0013.
- *Type of Request:* Extension of Currently Approved Collection.
- *Originating Office:* Bureau of Political-Military Affairs, Directorate of Defense Trade Controls, PM/DDTC.
- *Form Number:* DSP–61.
- *Respondents:* Business, Nonprofit Organizations, and Individuals.
- *Estimated Number of Respondents:* 141.
- *Estimated Number of Responses:* 572.
- *Average Time per Response:* 30 minutes.
- *Total Estimated Burden Time:* 286 hours.
- *Frequency:* On Occasion.
- *Obligation to Respond:* Required in Order to Obtain or Retain Benefits.
- *Title of Information Collection:* Application/License for Temporary Export of Unclassified Defense Articles.
- *OMB Control Number:* 1405–0023.

- *Form Number:* DSP–6; DSP–62; DSP–74.
- *Respondents:* Business, Nonprofit Organizations, and Individuals.
- *Estimated Number of Respondents:* 440.
- *Estimated Number of Responses:* 1,742.
- *Average Time per Response:* 30 minutes.
- *Total Estimated Burden Time:* 871 hours.
- *Frequency:* On Occasion.
- *Obligation to Respond:* Required in Order to Obtain or Retain Benefits.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The export, temporary import, and brokering of defense articles, including technical data, and defense services are authorized by the Department of State, Bureau of Political-Military Affairs, Directorate of Defense Trade Controls (DDTC) in accordance with the International Traffic in Arms Regulations (''ITAR,'' 22 CFR parts 120–130) and section 38 of the Arms Export Control Act (AECA). Any person who engages in the United States in the business of manufacturing, brokering, exporting, or temporarily importing defense articles, including technical data, or furnishing defense services must register with the Department of State. Manufacturers who do not engage in exporting must nevertheless register. Additionally, any person who intends to export or to import temporarily a defense article must obtain the approval from DDTC prior to the export or temporary import, unless the export or temporary import qualifies for an exemption. The applicant must be registered with DDTC prior to submitting an application or using an exemption. Also, registered brokers must submit annual reports regarding all brokering activities that were transacted, and registered manufacturers and exporters must maintain records of defense trade activities for five years.

1405–0003, Application/License for Permanent Export of Unclassified Defense Articles and Related Unclassified Technical Data: In accordance with part 123 of the ITAR, any person who intends to permanently export unclassified defense articles or unclassified technical data must obtain DDTC approval prior to export. The ''Application/License for Permanent Export of Unclassified Defense Articles and Related Unclassified Technical Data'' (Form DSP–5) is the licensing vehicle typically used to obtain permission for the permanent export of unclassified defense articles, including unclassified technical data covered by the U.S. Munitions List (USML). This form is an application that, when approved, signed and dated by an official of DDTC, serves as the applicant's authorization for the permanent export of unclassified USML articles.

1405–0013, Application/License for Temporary Import of Unclassified Defense Articles: In accordance with part 123 of the ITAR, any person who intends to temporarily import unclassified defense articles must obtain DDTC authorization prior to import. The ''Application/License for Temporary Import of Unclassified Defense Articles'' (Form DSP–61) is the licensing vehicle typically used to obtain permission for the temporary import of unclassified defense articles covered by the USML. This form is an application that, when completed and approved by DDTC, it constitutes the official record and authorization for the temporary commercial import of unclassified USML articles, pursuant to the AECA and the ITAR.

1405–0023, Application/License for Temporary Export of Unclassified Defense Articles: In accordance with part 123 of the ITAR, any person who intends to temporarily export unclassified defense articles must obtain authorization from DDTC prior to export. The ''Application/License for Temporary Export of Unclassified Defense Articles'' (Form DSP–73) is the licensing vehicle typically used to obtain permission for the temporary export of unclassified defense articles covered by the USML. This form is an application that, when completed and approved by DDTC, it constitutes the official record and authorization for the temporary commercial export of unclassified USML articles, pursuant to the AECA and the ITAR.

1405–0092, Application for Amendment to License for Export or Import of Unclassified Defense Articles and Related Unclassified Technical Data: In accordance with part 123 of the ITAR, any person who intends to permanently export, temporarily import, or temporarily export unclassified or classified defense articles or related technical data must obtain DDTC authorization. This information collection is used by private industry to make changes in an approved Form DSP–5, Form DSP–61, or Form DSP–73. Upon approval, the amendment form along with the original license constitutes the authority to export or temporarily import.

Methodology

This information collection may be sent to DDTC via the following methods: electronically or by mail.

Michael J. Vaccaro,

Deputy Assistant Secretary for Defense Trade Controls, U.S. Department of State.

[FR Doc. 2024–09784 Filed 5–3–24; 8:45 am]

BILLING CODE 4710–25–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 33 (Sub-No. 350X); Docket No. AB 1338X]

Union Pacific Railroad Company—Abandonment Exemption—in St. Louis County, Mo.; Missouri Eastern Railroad, LLC—Discontinuance of Service Exemption—in St. Louis County, Mo.

Union Pacific Railroad Company (UP) and Missouri Eastern Railroad, LLC (MER) (collectively, Applicants) have jointly filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments and Discontinuances of Service* for UP to abandon, and for MER to discontinue service over, a 0.55-mile portion of the Rock Island Old Passenger Main extending from milepost 11.58 to milepost 11.03, near Olivette, in St. Louis County, Mo. (the Line). The Line traverses U.S. Postal Service Zip Code 63132.

Applicants have certified that: (1) no local traffic has moved over the Line for at least two years; (2) no overhead traffic has moved over the Line for at least two years, and there is therefore no need to reroute any traffic; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government entity acting on behalf of such user) regarding cessation of service over the Line either is pending with the Surface Transportation Board (Board) or with any U.S. District Court or has been decided in favor of complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7 and 1105.8 (notice of environmental and historic reports), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment or discontinuance of service shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received,[1] these exemptions will be effective on June 5, 2024, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2), and interim trail use/railbanking requests under 49 CFR 1152.29 must be filed by May 16, 2024.[3] Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by May 28, 2024.

All pleadings, referring to Docket Nos. AB 33 (Sub-No. 350X) and AB 1338X, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on UP's representative, Christine A. Neuharth, 1400 Douglas Street, MS 1580, Omaha, NE 68179, and MER's representative, Robert A. Wimbish, Fletcher & Sippel LLC, 29 North Wacker Drive, Suite 800, Chicago, IL 60606.

[1] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer, indicating the type of financial assistance they wish to provide (*i.e.,* subsidy or purchase) and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(2)(i).

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before effective date of the exemptions. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request to stay should be filed as soon as possible so that the Board may take appropriate action before the effective date of the exemptions.

[3] Filing fees for OFAs and trail use requests can be found at 49 CFR 1002.2(f)(25) and (27), respectively.

If the verified notice contains false or misleading information, the exemptions are void ab initio.

UP has filed a combined environmental and historic report that addresses the potential effects, if any, of the abandonment on the environment and historic resources. OEA will issue a Draft Environmental Assessment (Draft EA) by May 10, 2024. The Draft EA will be available to interested persons on the Board's website, by writing to OEA, or by calling OEA at (202) 245–0294. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245–0245. Comments on environmental and historic preservation matters must be filed within 15 days after the Draft EA becomes available to the public.

Environmental, historic preservation, public use, or interim trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), UP shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by UP's filing of a notice of consummation by May 6, 2025, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available at *www.stb.gov*.

Decided: May 1, 2024.

By the Board, Mai T. Dinh, Director, Office of Proceedings.

Kenyatta Clay,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Initiate a Deactivation Request for Tallahassee Commercial (68J), a Privately Owned Airport for Public Use Located in Tallahassee, FL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: This notice announces that the FAA intends to file a Deactivation request for Tallahassee Commercial Airport (68J), a privately owned for public use airport.

DATES: Comments are due on or before May 10, 2024. Permanent airport closure is applicable after this date.

ADDRESSES: Documents are available for review at the FAA Orlando Airports District Office, 8427 SouthPark Circle, Suite 524, Orlando, FL 32819. Written comments on the Sponsor's request must be delivered or mailed to: Jenny Iglesias-Hamann, Community Planner, Orlando Airports District Office, 8427 SouthPark Circle, Suite 524, Orlando, FL 32819.

FOR FURTHER INFORMATION CONTACT: Jenny Iglesias-Hamann, Community Planner, Orlando Airports District Office, 8427 SouthPark Circle, Suite 524, Orlando, FL 32819, or by telephone at (407) 487–7234.

SUPPLEMENTARY INFORMATION: The Eastern Service Area (ESA) Air Traffic Safety Action Program (ATSAP) Event Review Committee (ERC) has received reports from Tallahassee Air Traffic Control Tower (TLH) indicating the Tallahassee Commercial Airport (68J) is reported as closed via Notice to Air Missions (NOTAM), however, is still depicted on Visual Flight Rules (VFR) sectional charts. TLH controllers have had several instances where pilots have mistakenly tried to land at 68J airport due to it still being depicted on VFR sectional charts.

The 68J airport has been closed via NOTAM since 2011 when the owner of 68J was forced to close the runway (RWY) due to a large pavement failure. Airport Master Record states RWY 16/34 has surface cracking and shows Airport Status as closed indefinitely. The airport has continued to receive licensing under the presumption that progress was being made to repair the runway. It has been reported that no progress has been made to repair the runway pavement. A certified letter was sent to airport owner requesting corrective actions, with no response or comments received after 30 days.

DEPARTMENT OF TRANSPORTATION

Maritime Administration

Decommissioning and Disposition of the National Historic Landmark Nuclear Ship Savannah; Notice of Public Meeting

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Notice.

SUMMARY: The Maritime Administration (MARAD) announces a public meeting of the Peer Review Group (PRG). The PRG was established pursuant to the requirements of the National Historic Preservation Act (NHPA) and its implementing regulations to plan for the decommissioning and disposition of the Nuclear Ship Savannah (NSS). PRG membership is comprised of officials from the U.S. Department of Transportation, MARAD, the U.S. Nuclear Regulatory Commission (NRC), the Advisory Council on Historic Preservation (ACHP), and the Maryland State Historic Preservation Officer (SHPO) and other consulting parties. The public meeting affords the public an opportunity to participate in PRG activities, including reviewing and providing comments on draft deliverables. MARAD encourages public participation and provides the PRG meeting information below.

DATES: The meeting will be held on Tuesday, May 21, 2024, from 2:30 p.m. to 4:00 p.m. Eastern Daylight Time (EDT). Requests to attend the meeting must be received by 5:00 p.m. EDT one week before the meeting, Tuesday, May 14, 2024, to facilitate entry or to receive instructions to participate online. Requests for accommodations for a disability must also be received one week before the meeting, Tuesday, May 14, 2024.

ADDRESSES: The meeting will be held onboard the NSS, online, or by phone. The NSS is located at Pier 13 Canton Marine Terminal, 4601 Newgate Avenue, Baltimore, MD 21124.

FOR FURTHER INFORMATION CONTACT: Erhard W. Koehler, (202) 680–2066 or via email at *marad.history@dot.gov.* You may send mail to N.S. Savannah/Savannah Technical Staff, Pier 13 Canton Marine Terminal, 4601 Newgate Avenue, Baltimore, MD 21224, ATTN: Erhard Koehler.

SUPPLEMENTARY INFORMATION:

I. Background

The decommissioning and disposition of the NSS is an Undertaking under Section 106 of the NHPA. Section 106 requires that federal agencies consider views of the public regarding their Undertakings; therefore, in 2020, MARAD established a Federal docket at *https://www.regulations.gov/docket/MARAD-2020-0133* to provide public notice about the NSS Undertaking. The federal docket was also used in 2021 to solicit public comments on the future uses of the NSS. MARAD is continuing to use this same docket to take in public comment, share information, and post agency actions.

The NHPA Programmatic Agreement (PA) for the Decommissioning and Disposition of the NSS is available on the MARAD docket located at *www.regulations.gov* under docket id ''MARAD–2020–0133.'' The PA stipulates a deliberative process by which MARAD will consider the disposition of the NSS. This process requires MARAD to make an affirmative, good-faith effort to preserve the NSS. The PA also establishes the PRG in Stipulation II. The PRG is the mechanism for continuing consultation during the effective period of the PA and its members consist of the signatories and concurring parties to the PA, as well as other consulting parties. The PRG members will provide individual input and guidance to MARAD regarding the implementation of stipulations in the PA. PRG members and members of the public are invited to provide input by attending bi-monthly meetings and reviewing and commenting on deliverables developed as part of the PA.

II. Agenda

The agenda will include (1) welcome and introductions; (2) program update; (3) status of PA stipulations; (4) other business; and (5) date of next meeting. The agenda topic, titled *PA stipulations,* involves deliverables identified in the PA. MARAD will provide status updates for the following items: the Disposition Alternatives Study; the Notice of Availability/Request for Information; and the License Termination Plan. The agenda will also be posted on MARAD's website at *https://www.maritime.dot.gov/outreach/history/maritime-administration-history-program* and on the MARAD docket located at *www.regulations.gov* under docket id ''MARAD–2020–0133.''

III. Public Participation

The meeting will be open to the public. Members of the public who wish to attend in person or online must RSVP to the person listed in the **FOR FURTHER INFORMATION CONTACT** section with your name and affiliation. Members of the public may also call-in using the following number: 312–600–3163 and conference ID: 930 866 814#.

Special services. The NSS is not compliant with the Americans with Disabilities Act (ADA). The ship has some capability to accommodate persons with impaired mobility. If you require accommodations to attend PRG meetings in-person, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The U.S. Department of Transportation is committed to providing all participants

equal access to this meeting. If you need alternative formats or services such as sign language, interpretation, or other ancillary aids, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

(Authority: 49 CFR 1.81 and 1.93; 36 CFR part 800; 5 U.S.C. 552b.)

By Order of the Maritime Administrator.

T. Mitchell Hudson, Jr.,

Secretary, Maritime Administration.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2023–0026]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Examining Distraction and Driver Monitoring Systems To Improve Driver Safety

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice and request for comments on a request for approval of a new information collection.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) summarized below will be submitted to the Office of Management and Budget (OMB) for review and approval. The ICR describes the nature of the information collection and its expected burden. This document describes a new collection of information for which NHTSA intends to seek OMB approval titled Examining Distraction and Driver Monitoring Systems to Improve Driver Safety. A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on July 14, 2023. Four comments were received during the comment period. This 30-day notice includes a summary of those comments, responses to the comments (no changes to the study are expected as a result of the comments), and an update to the estimated burden hours from the 60-day notice.

DATES: Comments must be submitted on or before June 5, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection, including suggestions for reducing burden, should be submitted to the Office of Management and Budget at *www.reginfo.gov/public/do/PRAMain.* To find this particular information collection, select ''Currently under Review—Open for Public Comment'' or use the search function.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact: Thomas Fincannon, Office of Vehicle Safety Research, Human Factors/Engineering Integration Division NSR–310, West Building, W46–447, 1200 New Jersey Ave. SE, Washington, DC 20590; *thomas.fincannon@dot.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), a Federal agency must receive approval from the Office of Management and Budget (OMB) before it collects certain information from the public and a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. In compliance with these requirements, this notice announces that the following information collection request will be submitted OMB.

Title: Examining Distraction and Driver Monitoring Systems to Improve Driver Safety.

OMB Control Number: New.

Form Numbers: NHTSA Form 1718 Online Eligibility Questionnaire, NHTSA Form 1719 Karolinska Sleepiness Scale, NHTSA Form 1799 Appointment Reminder Confirmation Process, NHTSA Form 1720 Sleep and Food Intake, NHTSA Form 1721 End of Visit Release Agreement, NHTSA Form 1730 Track A Consent Form, and NHTSA Form 1731 Track B Consent Form Track B.

Type of Request: New information collection.

Type of Review Requested: Regular.

Length of Approval Requested: Three years from date of approval.

Summary of the Collection of Information

NHTSA proposes to collect information from the public as part of a study to improve NHTSA's understanding of the differences in approaches to driver state detection and the potential safety impacts of driver monitoring systems (DMS). DMS refers to in-vehicle technology that can detect driver state and interact with the driver through the human-machine interface (the user interface that connects the driver to the vehicle). For example, a DMS that detects drowsiness may display an icon on the dashboard, such as a coffee cup, accompanied by a sound to alert the driver that drowsiness is present.

This study contains two tracks to assess DMS, and subjects may participate in Track A, Track B, or both. This allows for a balance between understanding how driver state detection changes within a diverse testing sample and within an individual across driver states. The overall sample will contain 80 data sets. Each track will have 40 completed data sets. Thus, the total sample size is anticipated to be 68 subjects and will include subjects that completed Track A only (n = 28), Track B only (n = 28), and those that completed both tracks (n = 12). Track A will evaluate the ability of the DMS to assess distraction and Track B will evaluate the ability of the DMS to assess both drowsiness alone and distraction while drowsy.

NHTSA proposes to collect information from licensed drivers about their age, sex, driver license status, sleep and driving habits, and general health history to determine eligibility for the study. Those interested in participating will be asked about their ability to adhere to various requirements of the protocol (*e.g.,* abstain from caffeine) and availability for a study appointment. Those who participate in the study will come to the University of Iowa Driving Safety Research Institute (DSRI), home of the National Advanced Driving Simulator (NADS). Both tracks involve a consent process, breath alcohol measurement, facial shape measurement, standing and seated height measurement, training presentation, a familiarization drive in the driving simulator, and sleepiness ratings before and after each study drive as well as approximately every 30 minutes during a waiting period. Both tracks also involve taking a digital image of the face so that researchers can obtain RGB values to assess skin tone variability. Track A only involves one study drive that occurs while the subject is alert and distracted. In Track B, subjects will be asked about their sleep and food intake (to confirm they have not consumed caffeine since 1:00 p.m., that they were awake by 7:00 a.m., and that they have consumed no other substances that could influence driving) prior to an overnight driving session that involves three study drives. The first drive occurs while alert. The next two drives are counterbalanced and will occur while drowsy (at least 14 hours awake and having sleepiness ratings indicating drowsiness) and while drowsy and distracted. Simulator data will be used to evaluate the ability of the DMS to assess driver state.

Respondents will volunteer for the study by responding to an internet ad or via solicitation for volunteers from the

DSRI subject registry. Only potential subjects in the registry meeting inclusion criteria will be contacted. Respondents will be asked a series of questions to determine eligibility to participate in the study. The questionnaire covers both Track A and Track B so respondents don't have to complete the questionnaire more than once and so researchers can ensure a subset of respondents meet criteria for both tracks. Criteria for both studies are largely the same; differences are related to ability to attend visits of a specified length, willingness to adhere to different protocol elements, and sleep habits (needed only for Track B). A research team member will answer all questions the respondent may have and schedule eligible respondents who wish to participate for a session at the DSRI.

Description of the Need for the Information and Proposed Use of the Information

NHTSA was established by the Highway Safety Act of 1970 (Pub. L. 91–605, 202(a), 84 Stat. 1713, 1739–40). Its mission is to reduce the number of deaths, injuries, and economic losses resulting from motor vehicle crashes on our nation's highways. To further this mission, NHTSA conducts research as a foundation for the development of traffic safety programs.

In 2013, NHTSA published the final version of the Visual-Manual NHTSA Driver Distraction Guidelines for In-Vehicle Electronic Devices. In the decade since, vehicle technologies and interfaces have evolved and a substantial amount of new research on the topic of driver distraction has been conducted. As a result, NHTSA requires a rigorous and thorough review to update the current state of knowledge on driver distraction, attention management, and distraction/risk assessment. Driver monitoring systems (DMS) are currently deployed in many production vehicles. Current production systems use different data sources, including driver-facing cameras, vehicle inputs (*e.g.,* steering wheel torque), driving performance (*e.g.,* lane departures), and other measures (*e.g.,* time on task). Future production systems are also likely to use physiological sensors (*e.g.,* heart rate) as tools to identify driver state more accurately. DMS could play a variety of roles in vehicles, including detecting and alerting drivers to distraction, drowsiness, or impairment, and then adjusting the vehicle technology to meet the needs of the driver or providing support in particular situations. It is important for NHTSA to be able to discern the differences in approaches to state detection to understand the potential safety impacts of DMS. This requires a comparison of various sensor approaches to driver state monitoring and the development of a test protocol for different DMS methodologies. The overall objective is to develop and deliver a methodology that will assess the ability of DMS to accurately determine driver state by collecting data to support a full assessment of the factors associated with DMS and modeling driver state based on sensor data in a driving simulator.

60-Day Notice

A **Federal Register** notice with a 60-day comment period soliciting public comments on the following information collection was published on July 14, 2023 (88 FR 45269). Four comments and one email were received in response to that notice. During the public comment period for the 60-day notice, NHTSA received four comments and one email. The first comment requested collection of data regarding circadian effects as related to school start times. This would involve subjects under the age of 18 and are not related to driver monitoring systems and is out of scope of the planned research project. The second comment expressed a dislike for driver monitoring systems as expressed the opinion that DMS are a disciplinary tool rather than a safety tool. NHTSA respectfully disagrees with this opinion and believes DMS may be able to improve motor vehicle safety.

One email from Alliance for Automotive Innovation asked if the research was in response to Sec. 24209 of the Infrastructure Investment and Jobs Act, 2021 (H.R. 3684; Pub. L. 117–58, enacted on November 15, 202 and commonly referred to as the Bipartisan Infrastructure Law or BIL). NHTSA responded by email to the Alliance for Automotive Innovation and noted that this project does include elements that were funded by the IIJA/BIL legislation. The email response also encouraged submission of comments to *regulations.gov* and noted that NHTSA would provide responses to comments in a 30-day notice published in the **Federal Register** (this document).

Two of the comments received were relevant to the burden and design of the study. The following summarizes the points brought up in those comments and NHTSA's response.

The American Academy of Sleep Medicine (AASM) commended NHTSA for planning the current information collection. They found the assessment of both drowsiness and distraction while drowsy to be a progressive and necessary step in determining the utility of DMS as a tool for road safety.

The AASM commented that self-reported sleepiness may not always reflect an individual's true level of sleepiness and recommended the inclusion of other objective measures of alertness, such as electroencephalography (EEG) or the psychomotor vigilance task (PVT) to strengthen the accuracy of collected drowsiness data. *Response:* The research team has used both EEG [1] and PVT [2] as part of prior drowsy driving research. We included the review of this data as part of preliminary steps in this research study. Specifically, we found a strong relationship between the Observer Rating of Drowsiness (ORD) and the Karolinska Sleepiness Scale (KSS) ($r = 0.682$, $p < 0.001$) and weak relationships between ORD and Psychomotor Vigilance Task (PVT) prior to the drive ($r = 0.150$, $p < 0.001$) and after the drive ($r = 0.244$, $p < 0.001$). Based on our prior published research, the inherent value of adding EEG is limited, but there are substantial increases to the burden (*e.g.,* application/cleanup & driver distraction) that do not outweigh this benefit. Depending on the EEG system, applying the EEG to the participant's scalp can range from 45 minutes to 120 minutes. The EEG may also interfere with the driver and cause additional distraction, discomfort, or prevent them from becoming immersed in the driving scenario, further reducing ecological validity. Recently, other researchers have investigated the associations between KSS, ORD, vehicle-based measures, and metrics from electrooculogram (EOG) and EEG.[3] KSS

[3] Uchiyama, Y., Sawai, S., Omi, T., Yamauchi, K., Tamura, K., Sakata, T., Nakajima, K., & Sakai, H. (2023). Convergent validity of video-based observer rating of drowsiness, against subjective, behavioral, and physiological measures. PLoS one, 18(5), e0285557.

was associated with ORD, standard deviation of lateral position (SDLP), percentage of eyelid closure over the pupil over time (PERCLOS), EEG alpha power, EEG theta power, and percentage of time with slow eye movement. Interestingly, measures from the physiological sensors (*i.e.,* EEG and EOG) displayed only weak and moderate associations. Given these considerations, we maintain that the KSS will produce sufficiently accurate data to support the goals of the data collection while minimizing participant burden. The KSS will be used to determine when drivers have achieved a certain level of drowsiness and thus, they will begin the drowsy drive. We anticipated participants will complete the KSS nine times prior to the drive. Drowsiness will be defined based on a combination of the participant being awake for a minimum of 14 hours and the KSS. The KSS will not be administered during the drive as this may influence driver's levels of drowsiness. Drowsiness during the drive will be captured by measures derived from eye closures over the course of the drive (*e.g.,* PERCLOS). Given that each approach to measuring drowsiness comes with inherent flaws, we are using a combination of measures to infer drowsiness based on a sleepiness scale to bookend drowsiness during the drive and use of eye measures (*i.e.,* PERCLOS) to elucidate changes in drowsiness levels during the drive.

The AASM recommended that the information collection include an assessment of possible sleep disorders during the online eligibility questionnaire and advised excluding individuals with untreated sleep disorders from the study. Additionally, AASM recommended that the data collection include a measure of participant sleep quality in order to quantify contributing factors to drowsiness and driving performance; they suggested use of a participant sleep log and/or a three-day reporting of bedtimes, waketimes, estimate of the amount of time to fall asleep, number of awakenings, estimate of the amount of time awake during the awakenings, and daytime sleeping times and duration. *Response:* The proposed study procedures will capture wake and sleep time for the day preceding the study visit. We are not aware of any validated sleep log, and as additional measures would increase burden to participants, we have proposed to only ask targeted items that are known to influence drowsiness (*i.e.,* wake time and sleep time) and can be used to provide measures for the analysis (*i.e.,* hours of sleep and continuous time awake). The items that we ask participants are extracted from sleep logs and are variables that we could include in our statistical models. Since the sleep logs are not validated, we selected specific items, rather than using the entire log, as this reduces participant burden. Given that the focus of this research is on the manifestation of drowsiness (*i.e.,* for the purpose of determining validity of DMS assessment) while driving in the general driving population, we did not propose collecting subjective evaluation of sleep quality in subjects which might be better addressed by NIH funded research, nor do we plan to exclude participation based on sleep disorders given that an estimated 9 to 15% of individuals have ongoing sleep disorders. A DMS will need to detect distraction and drowsiness, regardless of individual health conditions, and exclusion of these drivers could hinder the external validity of findings from this research. The presence of daytime drowsiness regardless of source will be collected using self-reported sleepiness via the KSS.

The AASM also requested clarification on how the data obtained from the study would be protected, particularly as it related to prevention of consequences for participants who are distracted while driving. The AASM also asked whether a certificate of confidentiality would be provided. *Response:* The study has received approval from the University of Iowa Institutional Review Board, which requires us to protect the participants' anonymity. Respondents' performance in the driving simulator will be deidentified and separated from any personally identifiable information. Certificates of confidentiality are generally not sought unless we are collecting data that would put the participants at legal risk, which is not the case in this study.

The National Association of Mutual Insurance Companies (NAMIC) commented that the use of the Fitzpatrick Skin Type Scale in the online eligibility questionnaire, which requires participants to self-rate, negates the uniformity of the scale. Further, NAMIC questions why the study intends to oversample participants who are rated higher on the scale (*e.g.,* darker skin types). *Response:* The proposed self-rating of an applicant on the Fitzpatrick Skin Type Scale will be used to inform our study stratification and data collection logistics. The scale will be used to objectively quantify their skin pigmentation upon consenting and enrolling our study by a single rater. Additionally, the RGB values for skin tone will be captured during the visit via visual processing to provide an objective metric with greater gradation.

NAMIC also requested additional clarification on which driver monitoring system(s) will be used in the study. Response: The team will implement a sensor suite to provide the same types of signals available to a variety of types of DMS including vehicle and driver data. DSRI has existing relationships with technology suppliers that will be leveraged to provide necessary data. We do not propose to evaluate the algorithms from any technology suppliers, but instead focus on the utility of the underlying signals in detection.

Both AASM and NAMIC commented on the importance of recruiting participants from a large audience to ensure a sample that is representative and generalizable to a larger driving population. NAMIC noted their concerns related to the limited location (noting a 30-mile radius around Iowa City, IA), number of participants, and participant selection process. Response: A power analysis was conducted to estimate the sample size needed for the study. We agree that generalizability is important and must be balanced with the experimental aims of the research. Given that the research method utilizes a one-of-a-kind driving simulator, recruitment must be focused in the geographic area where it is housed. The plan is to maximize diversity of the sample within the limits of the proposed sample size through robust recruitment utilizing the existing registry which includes thousands of potential participants that includes the Cedar Rapids-Iowa City, IA CSA; Davenport-Moline, IA-IL CSA; Waterloo-Cedar Falls, IA MSA; Dubuque, IA MSA; Ottumwa, IA USA; Fort Madison-Keokuk, IA-IL-MO USA; Burlington, IA-IL USA; and Marshalltown, IA USA in addition to the surrounding rural areas. To expand the diversity of the overall sample, areas outside of Iowa City are being included in the recruitment approach. Additionally, participants who are not in the registry are not excluded from participating. No participants are excluded due to location so long as they are able to arrange safe transportation to/from the facility for the overnight visit. Prior research has shown that this can be done effectively, particularly when the study includes within-subject comparisons, which is one reason why we are including a subset of the sample in both tracks. As Iowa is less ethnically diverse than the US population overall, targeted recruitment will be performed

to promote a more balanced sample based on the Fitzpatrick Skin Type Scale, which is also a crucial variable to include when assessing the capabilities of DMSs. The proposed self-rating of an applicant on the Fitzpatrick Skin Type Scale will be used to inform our study stratification and data collection logistics.

Affected Public

Individuals aged 18+ from Eastern Iowa and the surrounding areas who have volunteered to take part in driving studies will be contacted for participation. They will be randomized evenly by sex, though some imbalance will be permitted to be inclusive of individuals who do not identify on the binary. Efforts will be made to enroll a diverse age sample that broadly represents the age of the driving population and includes those at greater risk of crashing (*e.g.,* less than 25 years of age and greater than 65 years of age). Additional efforts will be made to enroll individuals with diverse skin tones, oversampling those who rate themselves higher on the Fitzpatrick Skin Type Scale.

Estimated Number of Respondents: Varies by individual information collection. See Table 1 below.

Frequency: Varies by individual information collection. See Table 1 below.

Annual Number of Responses: 626.

Estimated Annual Burden Hours: 175 hours.

The estimated annual burden for the study is 175 hours. Table 1 provides estimates for the burden calculation across the study.

TABLE 1—ANNUAL BURDEN ESTIMATES

Study component	Annual number of respondents	Frequency of response	Annual responses	Time per response	Cost per response ($32.36/hour)	Annual estimated burden (rounded) (hrs)	Annual opportunity costs (rounded)
Online Eligibility Questionnaire (Form 1718)	200	1	200	10 min	$5.39	33	$1,078
Appointment Reminder Confirmation Process (Form 1799)	35	1.15	40	5	2.70	3	108
Breathalyzer Measurement	28	1.16	32	3	1.62	2	52
Facial Shape and Height Measurement	27	1.15	31	7	3.78	4	117
Karolinska Sleepiness Scale (Form 1719)	27	8.43	228	1	0.54	4	123
Track A Informed Consent (Form 1730)	16	1	16	15	8.09	4	129
Track A Study Drive (includes Training Presentation, Familiarization Drive and Study Drive)	16	1	16	81.25	43.82	22	22
Track B Informed Consent (Form 1731)	16	1	16	15	8.09	4	129
Sleep & Food Intake (Form 1720)	16	1	16	5	2.70	1	43
Track B Study Drive (includes Training Presentation, Familiarization Drive, Wait Time, Study Drives)	45	1	45	388.38	209.47	97	3,142
End of Visit Release Agreement (Form 1721)	16	1	16	2	1.08	1	17
Total Burden			626			175	5,159

Estimated Total Annual Burden Cost: $0.

The respondents are not expected to incur any reporting or recordkeeping cost from the information collection. The only costs associated with any of the information collections is the cost for travel to and from DSRI, which is associated with each of the study drives. We estimate that 83 respondents will travel to DSRI for each of the two tracks, though 13 respondents will travel for both tracks resulting in 96 round trips. We expect most subjects to be traveling locally, within 30 miles from the test facility. Maximally, we estimate a round trip distance from subjects' starting destination to DSRI to be 60 miles. The standard mileage rate for business-related driving in 2023 is 65.5 cents per mile driven, or $39.30 for 60 miles driven. Therefore, we estimate the maximum travel costs associated with Track A Study Drive to be $1,886 (48 respondents × $39.30 = $1,886.40). We estimate that the total transportation costs will be higher for subjects in Track B, who will not be permitted to walk, bike, or drive when leaving the test facility. Previous overnight studies conducted at DSRI have shown that $70 compensation for transportation expenses was sufficient to limit subject attrition and offset costs of third-party transportation. Accordingly, we estimate the travel costs associated with Track B Study Drive to be $3,360 (48 respondents × $70 = $3,360). The total costs for this ICR are estimated to be $5,246 ($1,886 + $3,360). These transportation costs are offset by subject compensation. For subjects in Track B, who will not be permitted to walk, bike, or drive when leaving the test facility, an additional $70 will be provided to offset the costs of finding alternative transportation. Table 1 provides an estimate for the opportunity cost of the collection; however, there is no direct cost to the respondents for this collection.

Public Comments Invited: You are asked to comment on any aspects of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; 49 CFR 1.49; and DOT Order 1351.29A.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No: PHMSA–2022–0085]

Pipeline Safety: Information Collection Activities: Mitigation of Ruptures on Onshore Gas Transmission and Gathering, Hazardous Liquid, and Carbon Dioxide Pipeline Segments Using Rupture-Mitigation Valves or Alternative Equivalent Technologies and Blending of Hydrogen Gas and Natural Gas within Gas Pipelines

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).

ACTION: Notice and extension of comment period.

SUMMARY: On March 25, 2024, PHMSA published a notice in the **Federal Register** inviting public comments on its intent to request the Office of Management and Budget's (OMB) approval of changes to PHMSA forms to collect data on the use of rupture mitigation valves, or alternative equivalent technologies, and the blending of hydrogen gas with other natural gases within gas pipelines. In response to a petition, PHMSA is extending the deadline to submit comments.

DATES: The comment submission deadline for the notice published March 25, 2024 at 89 FR 20751 is extended from May 24, 2024, to June 24, 2024.

FOR FURTHER INFORMATION CONTACT: Angela Hill by phone at 202–366–1246 or by email at *Angela.Hill@dot.gov.*

SUPPLEMENTARY INFORMATION: On March 25, 2024, PHMSA published a notice in the **Federal Register** (89 FR 20751) inviting public comments on its intent to request the Office of Management and Budget's (OMB) approval of changes to existing information collections under OMB control numbers 2137–0627 (National Registry of Pipeline and LNG Operators), 2137–0635 (Pipeline Operators), 2137–0635 (Incident Reports for Natural Gas Pipeline Operators), 2137–0629 (Annual Report for Gas Distribution Operators), 2137–0522 (Annual Reports for Gas Pipeline Operators), 2137–0614 (Hazardous Liquid Pipeline Operator Annual Reports), and 2137–0596 (National Pipeline Mapping Program). The proposed information collection changes would provide data necessary to demonstrate an alternative approach to the implementation of Recommendation P–11–11 made by the National Transportation Safety Board and allow PHMSA to identify trends related to the blending of hydrogen gas and natural gas within gas pipelines from operator-submitted data. Comments on the proposed data collection are due on May 24, 2024.

On April 1, 2024, the Interstate Natural Gas Association of America, the American Fuel and Petrochemical Manufacturers, the American Gas Association, the American Petroleum Institute, the American Public Gas Association, and the GPA Midstream Association (the Associations) requested PHMSA extend the May 24, 2024, deadline to submit comments. Specifically, the Associations requested an additional 119 days to provide comments on the information collection proposal.

PHMSA believes the allotted time is sufficient to provide comments on the proposed changes, however, PHMSA acknowledges the Associations request for additional time due to them also providing comments on pending rulemaking actions. PHMSA will extend the comment submission deadline from May 24, 2024, to June 24, 2024. Consistent with 49 CFR 190.323, PHMSA will consider late-filed comments to the extent practicable.

Issued in Washington, DC, on April 30, 2024, under authority delegated in 49 CFR 1.97.

Alan K. Mayberry,

Associate Administrator for Pipeline Safety.

BILLING CODE 4910–60–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Notice of OFAC Sanctions Action

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing the names of persons and vessels that have been placed on OFAC's Specially Designated Nationals and Blocked Persons List (SDN List) based on OFAC's determination that one or more applicable legal criteria were satisfied. All property and interests in property subject to U.S. jurisdiction of these persons, including the identified vessels, are blocked, and U.S. persons are generally prohibited from engaging in transactions with them.

DATES: See **SUPPLEMENTARY INFORMATION** section for applicable date(s).

FOR FURTHER INFORMATION CONTACT: OFAC: Bradley T. Smith, Director, tel.: 202–622–2490; Associate Director for Global Targeting, tel.: 202–622–2420; Assistant Director for Licensing, tel.: 202–622–2480; Assistant Director for Regulatory Affairs, tel.: 202–622–4855; or the Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The Specially Designated Nationals and Blocked Persons List and additional information concerning OFAC sanctions programs are available on OFAC's website (*https://www.treasury.gov/ofac*).

Notice of OFAC Action(s)

A. On November 16, 2023, OFAC determined that the property and interests in property subject to U.S. jurisdiction of the following persons are blocked under the relevant sanctions authority listed below:

Entities

1. GALLION NAVIGATION INCORPORATED, 80 Broad Street, Monrovia, Liberia; Unit 27610–001, Building A1, IFZA Business Park, Dubai Silicon Oasis, Dubai, United Arab Emirates; Identification Number IMO 4112088 [RUSSIA–EO14024].

Designated pursuant to section 1(a)(i) of Executive Order 14024 of April 15, 2021, ''Blocking Property With Respect To Specified Harmful Foreign Activities of the Government of the Russian Federation,'' 86 FR 20249, 3 CFR, 2021 Comp., p. 542 (Apr. 15, 2021) (E.O. 14024) for operating or having operated in the marine sector of the Russian Federation economy.

2. KAZAN SHIPPING INCORPORATED, Office OT 17–32, 17th Floor, Office Tower, Central Park Towers, Dubai, United Arab Emirates; Unit 27610–001, Building A1, IFZA Business Park, DDP, Dubai Silicon Oasis, Dubai, United Arab Emirates; Identification Number IMO 1142781 [RUSSIA–EO14024].

Designated pursuant to section 1(a)(i) of E.O. 14024 for operating or having operated in the marine sector of the Russian Federation economy.

3. PROGRESS SHIPPING COMPANY LIMITED, 80 Broad Street, Monrovia, Liberia; Unit 27610–001, Building A1, IFZA Business Park, Dubai Silicon Oasis, Dubai, United Arab Emirates; Identification Number IMO 4075276 [RUSSIA–EO14024].

Designated pursuant to section 1(a)(i) of E.O. 14024 for operating or having operated in the marine sector of the Russian Federation economy.

On November 16, 2023, OFAC also identified the following vessels as property in which a blocked person has an interest, under the relevant sanctions authority listed below:

Vessels

1. NS CENTURY (A8IJ8) Crude Oil Tanker Liberia flag; Vessel Registration Identification

IMO 9306782; MMSI 636012853 (vessel) [RUSSIA–EO14024] (Linked To: GALLION NAVIGATION INCORPORATED).

Identified as property in which Gallion Navigation Incorporated, a person whose property and interests in property are blocked pursuant to E.O. 14024, has an interest.

2. KAZAN (A8CE6) Crude Oil Tanker Liberia flag; Vessel Registration Identification IMO 9258002; MMSI 636011916 (vessel) [RUSSIA–EO14024] (Linked To: KAZAN SHIPPING INCORPORATED).

Identified as property in which Kazan Shipping Incorporated, a person whose property and interests in property are blocked pursuant to E.O. 14024, has an interest.

3. LIGOVSKY PROSPECT (A8AP5) Crude Oil Tanker Liberia flag; Vessel Registration Identification IMO 9256066; MMSI 636011641 (vessel) [RUSSIA–EO14024] (Linked To: PROGRESS SHIPPING COMPANY LIMITED).

Identified as property in which Progress Shipping Company Limited, a person whose property and interests in property are blocked pursuant to E.O. 14024, has an interest.

Dated: May 1, 2024.

Bradley T. Smith,

Director, Office of Foreign Assets Control, U.S. Department of the Treasury.

[FR Doc. 2024–09788 Filed 5–3–24; 8:45 am]

BILLING CODE 4810–AL–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0188]

Agency Information Collection Activity Under OMB Review: Applications for Motor Vehicle Adaptive Equipment and HISA Services

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Health Administration, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0188.''

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Avenue NW, Washington, DC 20420, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0188'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 44 U.S.C. 3501–3521.

Title: Applications for Motor Vehicle Adaptive Equipment and HISA Services.

OMB Control Number: 2900–0188.

Type of Review: Reinstatement, with revisions, of a previously approved collection.

Abstract: The Department of Veterans Affairs (VA), through its Veterans Health Administration (VHA), administers medical services established by law. Title 38 U.S.C. 1701(6) includes prosthetic items within the scope of medical services. Title 38 U.S.C. 3901, 3902, 3903, 3904, and 1162 authorize the Secretary to provide each person eligible for a motor vehicle grant the adaptive equipment deemed necessary to ensure that the person will be able to operate the vehicle safely, in a manner consistent with the safety of others and to satisfy the applicable standards of licensure established by the state of residency. VA also provides assistance to Veterans applying for Home Improvements and Structural Alterations (HISA) grants. The Prosthetic Service determines eligibility, entitlement, and payment of individual claims for home improvements and structural alterations to accommodate a Veteran's needs.

VA Form 10–1394 will be used to collect necessary information from eligible Veterans applying for motor vehicle adaptive equipment. VA Form 10–0103 will be used to collect necessary information from eligible Veterans applying for HISA grants.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 40 on February 28, 2024, pages 14740 and 14741.

Total Annual Burden: 2,750 hours.

Total Annual Responses: 21,000.

Affected Public: Individuals or households.

Estimated Annual Burden:

10–1394–1,500 hours.

10–0103–1,250 hours.

Estimated Average Burden per Respondent:

10–1394–15 minutes.

10–0103–5 minutes.

Frequency of Response: Once annually.

Estimated Number of Respondents:

10–1394–6,000.

10–0103–15,000.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

[FR Doc. 2024–09771 Filed 5–3–24; 8:45 am]

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0067]

Agency Information Collection Activity: Application for Automobile or Other Conveyance and Adaptive Equipment (Under 38 U.S.C. 3901–3904)

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Benefits Administration, Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed revision of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before July 5, 2024.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to *nancy.kessinger@va.gov.* Please refer to ''OMB Control No. 2900–0067'' in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise

and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0067'' in any correspondence.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Authority: 38 U.S.C. 3901–3904, 38 CFR 3.808.

Title: Application for Automobile or Other Conveyance and Adaptive Equipment (Under 38 U.S.C. 3901–3904) (VA Form 21–4502).

OMB Control Number: 2900–0067.

Type of Review: Revision of a currently approved collection.

Abstract: VA Form 21–4502 is used by veterans and servicepersons to apply for automobile or other conveyance and adaptive equipment benefits. Without the information solicited by this form, VA would be unable to determine eligibility, and benefits would not be properly paid.

No changes have been made to this form. The respondent burden has increased due to the estimated number of receivables averaged over the past year.

Affected Public: Individuals or households.

Estimated Annual Burden: 3,197 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 12,786 per year.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration/Data Governance Analytics, Department of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0545]

Agency Information Collection Activity Under OMB Review: Report of Medical, Legal, and Other Expenses Incident to Recovery for Injury or Death

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0545''.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 810 Vermont Ave. NW, Washington, DC 20420, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0545'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 U.S.C. 1503, 28 CFR 3.262, § 3.271, and § 3.272.

Title: Report of Medical, Legal, and Other Expenses Incident to Recovery for Injury or Death.

OMB Control Number: 2900–0545.

Type of Review: Revision of a currently approved collection.

Abstract: VA Form 21P–8416b is used to gather information about certain expenses related to securing compensation based on personal injury or death. The form is used by claimants for VA income-based benefits to determine the amount of countable income. Without this information, the VA would be unable to properly determine entitlement to income-based benefits and the rate payable.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 14154 on Friday, February 26, 2024, page 14154.

Affected Public: Individuals or Households.

Estimated Annual Burden: 75 hours.

Estimated Average Burden per Respondent: 45 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 100.

By direction of the Secretary:

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

FEDERAL REGISTER

Vol. 89 Monday,
No. 88 May 6, 2024

Part II

Department of Health and Human Services

Food and Drug Administration

21 CFR Part 809

Medical Devices; Laboratory Developed Tests; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 809

[Docket No. FDA–2023–N–2177]

RIN 0910–AI85

Medical Devices; Laboratory Developed Tests

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration is issuing a final rule to amend its regulations to make explicit that in vitro diagnostic products (IVDs) are devices under the Federal Food, Drug, and Cosmetic Act (FD&C Act) including when the manufacturer of the IVD is a laboratory. In conjunction with this amendment, the Food and Drug Administration is phasing out its general enforcement discretion approach for laboratory developed tests (LDTs) so that IVDs manufactured by a laboratory will generally fall under the same enforcement approach as other IVDs. This phaseout policy includes enforcement discretion policies for specific categories of IVDs manufactured by a laboratory, including currently marketed IVDs offered as LDTs and LDTs for unmet needs. This phaseout policy is intended to better protect the public health by helping to assure the safety and effectiveness of IVDs offered as LDTs, while also accounting for other important public health considerations such as patient access and reliance.

DATES: This rule is effective July 5, 2024.

ADDRESSES: For access to the docket to read background documents or comments received, go to *https://www.regulations.gov* and insert the docket number found in brackets in the heading of this final rule into the ''Search'' box and follow the prompts, and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Toby Lowe, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 301–796–6512, *LDTFinalRule@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Executive Summary

A. Purpose of the Final Rule

The Food and Drug Administration (FDA, the Agency, or we) is amending its regulations to make explicit that IVDs are devices under the FD&C Act including when the manufacturer of the IVD is a laboratory. This amendment reflects that the device definition in the FD&C Act does not differentiate between entities manufacturing the device. In connection with amending the regulation, FDA is phasing out its general enforcement discretion approach for LDTs so that IVDs manufactured by a laboratory will generally fall under the same enforcement approach as other IVDs (*i.e.,* FDA's expectations for compliance will generally be the same). This phaseout policy includes enforcement discretion policies for specific categories of IVDs manufactured by a laboratory, including currently marketed IVDs offered as LDTs [1] and LDTs for unmet needs. For purposes of this document, we use ''manufacture'' and related terms as a shorthand for the various activities that constitute manufacturing as described in FDA regulations (*e.g.,* design, preparation, propagation, assembly, and processing).

In 1976, the Medical Device Amendments of 1976 (the MDA) amended the FD&C Act to create a comprehensive system for the regulation of devices intended for human use. In implementing the MDA, FDA has exercised enforcement discretion such that it generally has not enforced applicable requirements with respect to most LDTs. Enforcement discretion for LDTs developed as a matter of practice. However, the risks associated with LDTs are much greater today than they were at the time of enactment of the MDA. As discussed more fully in the notice of proposed rulemaking (NPRM) (88 FR 68006, October 3, 2023) and this preamble, today's LDTs are, among other things, used more widely, by a more diverse population, with an increasing reliance on high-tech instrumentation and software, and more frequently for the purpose of guiding critical healthcare decisions. In this regard, today's LDTs are similar to other IVDs that have not come within FDA's general enforcement discretion approach.

Given these changes, and for the additional reasons discussed in the NPRM and this preamble, FDA is phasing out the general enforcement discretion approach for LDTs. By phasing out this approach, FDA intends to better protect the public health by helping to assure the safety and effectiveness of IVDs offered as LDTs, while also accounting for other important public health considerations such as patient access and reliance.

B. Summary of Select Provisions of the Final Rule

FDA is amending the definition of ''in vitro diagnostic products'' in its regulations to state that IVDs are devices

[1] As discussed in section V.A.1, FDA uses the phrase ''IVDs offered as LDTs'' throughout this preamble to refer to IVDs that are manufactured and offered as LDTs by laboratories that are certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and that meet the regulatory requirements under CLIA to perform high complexity testing, and used within such laboratories, even if those IVDs do not fall within FDA's traditional understanding of an LDT because they are not designed, manufactured, and used within a single laboratory.

under the FD&C Act ''including when the manufacturer of these products is a laboratory.''

In conjunction with this amendment, FDA is phasing out the general enforcement discretion approach for LDTs. As discussed further in this preamble, however, FDA is adopting targeted enforcement discretion policies for several categories of IVDs manufactured by a laboratory in certain circumstances. As with any enforcement discretion policy, FDA may update any of these enforcement discretion policies as circumstances warrant or if the circumstances that inform these policies change, consistent with FDA's good guidance practices (21 U.S.C. 371(h), § 10.115 (21 CFR 10.115)).

Additional details regarding the phaseout policy are discussed further in section V of this preamble.

C. Legal Authority

FDA is issuing this rule under the Agency's general rulemaking authorities and statutory authorities relating to devices. These authorities include sections 201(h)(1), 301, 501, 502, 510, 513, 514, 515, 518, 519, 520, 701, 702, 704, and 801 of the FD&C Act (21 U.S.C. 321(h)(1), 331, 351, 352, 360, 360c, 360d, 360e, 360h, 360i, 360j, 371, 372, 374, and 381) and section 351 of the Public Health Service Act (PHS Act) (42 U.S.C. 262).

D. Costs and Benefits

We quantify benefits to patients from averted health losses due to problematic IVDs offered as LDTs. We focus mainly on certain broad disease categories associated with the majority of misdiagnosis-related harms in the United States. Additional benefits include averted non-health losses from reduced spending on problematic IVDs offered as LDTs and unquantified reduction in costs from lawsuits. We quantify costs to affected laboratories for complying with statutory and regulatory requirements. Additional costs include costs to FDA, which we include in our estimates. We estimate that the annualized benefits over 20 years range from $0.99 billion to $11.1 billion at a 7 percent discount rate, with a primary estimate of $3.51 billion, and from $1.24 billion to $13.62 billion at a 3 percent discount rate, with a primary estimate of $4.34 billion. The annualized costs range from $566 million to $3.56 billion at a 7 percent discount rate, with a primary estimate of $1.29 billion, and from $603 million to $3.79 billion at a 3 percent discount rate, with a primary estimate of $1.37 billion.

II. Table of Abbreviations/Commonly Used Acronyms in This Document

Abbreviation/acronym	What it means
3P510k Review Organization	Third Party Review Organization Accredited Under FDA's Third Party Review Program
510(k)	Premarket Notification.
AABB	Association for the Advancement of Blood and Biotherapies.
ACGME	Accreditation Council for Graduate Medical Education.
ACLA	American Clinical Laboratory Association.
ADLT	Advanced Diagnostic Laboratory Test.
ACHC	Accreditation Commission for Health Care.
AMC	Academic Medical Center.
AML	Acute Myeloid Leukemia.
AMP	Association for Molecular Pathology.
ANI	Average Nucleotide Identity.
APA	Administrative Procedure Act.
ASHI	American Society for Histocompatibility and Immunogenetics.
ASR	Analyte Specific Reagent.
AST	Antimicrobial Susceptibility Test.
BLA	Biologics License Application.
CAP	College of American Pathologists.
CAPA	Corrective and Preventive Action.
CBRN	Chemical, Biological, Radiological, or Nuclear.
CDER	Center for Drug Evaluation and Research.
CDRH	Center for Devices and Radiological Health.
CDC	Centers for Disease Control and Prevention.
CDx	Companion Diagnostic.

TMB	Tumor Mutational Burden.
UDI	Unique Device Identification.
UMRA	Unfunded Mandates Reform Act of 1995.
USG	United States Government.
VALID Act	Verifying Accurate, Leading-Edge IVCT Development Act of 2023.
VHA	Veterans Health Administration.

III. Background

FDA's regulations define IVDs as reagents, instruments, and systems intended for use in the diagnosis of disease or other conditions, including a determination of the state of health, in order to cure, mitigate, treat, or prevent disease or its sequelae, and intended for use in the collection, preparation, and examination of specimens taken from the human body. IVDs include test systems (also referred to in this preamble as ''tests'') that are intended for use in the collection, preparation, and examination of samples taken from the human body, such as blood or tissue, for the purpose of detecting diseases or other conditions, monitoring

a person's overall health, identifying patients who are likely to benefit from specific therapies, or otherwise helping to diagnose, cure, mitigate, treat, or prevent disease or its sequelae. Some IVDs are manufactured by conventional medical device manufacturers for use by other entities such as laboratories, healthcare providers, or, in some cases, patients. Such IVDs may include ''test kits,'' containing packaged sets of components that are part of or comprise a test system. Other IVDs are manufactured by laboratories for use by the same or other laboratories. Such IVDs include LDTs. FDA has generally considered an LDT to be an IVD that is intended for clinical use and that is designed, manufactured, and used within a single laboratory that is certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA) and meets the regulatory requirements under CLIA to perform high complexity testing.[2]

However, in implementing the MDA since 1976, FDA has exercised enforcement discretion such that it generally has not enforced applicable legal requirements with respect to most LDTs. This means that, for most LDTs, FDA generally has not enforced requirements related to registration and listing, reporting adverse events to FDA, current good manufacturing practices (CGMPs), or premarket review of an IVD by FDA prior to use of the LDT in patient care, among other requirements. The rationale for this approach was that, at the time of passage of the MDA, LDTs were mostly manufactured in small volumes by laboratories that served their local communities. They were typically intended for use in diagnosing rare diseases or for other uses to meet the needs of a local patient population, or were generally similar to well-characterized, standard IVDs (Refs. 2 and 3). They also tended to employ manual techniques (and did not use automation) and were performed by laboratory personnel with specialized expertise; to be used and interpreted by physicians or pathologists in a single institution responsible for the patient (and who were actively involved in patient care); and to be manufactured using components legally marketed for clinical use, such as general purpose reagents or immunohistochemical stains marketed in compliance with FDA requirements. Due to these and other factors, FDA exercised enforcement discretion such that it generally has not enforced applicable requirements for most LDTs.[3]

However, the LDT landscape has evolved significantly since 1976. Today, many LDTs increasingly rely on high-tech or complex instrumentation and software to generate results and clinical interpretations (Refs. 2 and 3). They are often used in laboratories outside of the patient's healthcare setting and are often run in high volume for large and diverse populations. Many LDTs are manufactured by laboratory corporations that market the IVDs nationwide, as they accept specimens from patients across the country and run their LDTs in very large volumes in a single laboratory. Today's LDTs are also more commonly manufactured with instruments or other components not legally marketed for clinical use and are more often used to inform or direct critical treatment decisions, to widely screen for common diseases, to predict personal risk of developing certain diseases, and to diagnose serious medical conditions such as cancer and heart disease.[4] The risks associated with most LDTs today are therefore much greater than they were at the time FDA began implementing the MDA, and most LDTs today are similar to other IVDs that have not been under FDA's general enforcement discretion approach. In addition, FDA is concerned that firms are offering IVDs as ''LDTs'' even when they are not LDTs as defined on FDA's website, because they are not actually designed, manufactured, and used within a single laboratory (see, *e.g.,* Refs. 5 and 6).

As LDTs increasingly rely on high-tech instrumentation and software, the potential for cybersecurity vulnerabilities is growing. Many LDTs are connected to Laboratory Information Management Systems and other IT infrastructure, making them a potential conduit for those looking to access information in such systems. This may include patient genetic information, among other things, which could have national security implications. Further, it has been demonstrated that hackers can modify medical test results (Ref. 7). Through premarket review, FDA works with manufacturers to ensure cybersecurity is appropriately considered, mitigating the potential for future problems. Through medical device reporting (MDR) and correction and removal reporting requirements, FDA helps to ensure that any problems are appropriately addressed. In fact, FDA has seen cybersecurity problems with certain instruments and issued two safety communications where laboratories may not have otherwise been aware that the research use only (RUO) versions of the instruments used as part of their LDTs had the same vulnerabilities (Refs. 8 and 9).

As a result of these evolutions in the testing landscape, FDA has long recognized the need for a change in the Agency's general enforcement discretion approach for LDTs. The history of FDA's efforts with respect to LDTs is described more fully in the NPRM. Over the past few years, FDA has accumulated even more information supporting the need for a change, as noted in the NPRM and discussed below. In light of these developments, FDA is amending FDA's regulations to make explicit that IVDs are devices under the FD&C Act including when the manufacturer is a laboratory.[5] FDA is also issuing a policy (see section V) under which FDA is: (1) phasing out its general enforcement discretion approach for LDTs so that IVDs manufactured by a laboratory will generally fall under the same enforcement approach as other IVDs and (2) adopting targeted enforcement discretion policies for specific categories of IVDs manufactured by a laboratory. As reflected in FDA's Final Regulatory Impact Analysis (FRIA), FDA estimates that the benefits of the phaseout policy outweigh the costs (see Ref. 10).

A. FDA's Current Regulatory Framework

A comprehensive system for the regulation of devices is included in the FD&C Act, as amended by the MDA. Section 513 of the FD&C Act (21 U.S.C. 360c) establishes three categories (classes) of devices depending on the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories of devices are class I (general controls), class II (special controls), and class III (premarket approval).

Class I devices are those devices for which the general controls of the FD&C Act (controls authorized by or under section 501, 502, 510, 516, 518, 519, or 520 (21 U.S.C. 351, 352, 360, 360f, 360h, 360i, or 360j) or any combination of

[2] Such laboratories may include those operating under State licensure programs deemed exempt from CLIA. *See* CMS, ''Exempt States Under the Clinical Laboratory Improvement Amendments'' (Ref. 1).

[3] FDA's general enforcement discretion approach has not applied to LDTs in all contexts; for example, it has not applied to, among other LDTs, those used for declared emergencies/potential emergencies/material threats under section 564 of the FD&C Act (21 U.S.C. 360bbb–3).

[4] *See, e.g.,* Refs. 2–4. These observations are also informed by FDA's own experience, including the review of submissions and site visits, and staff with prior experience in the laboratory industry manufacturing and performing LDTs.

[5] FDA is also amending the statutory citation for the device definition included in § 809.3 (21 CFR 809.3) to reflect that it is now codified at section 201(h)(1) of the FD&C Act.

such sections) are sufficient to provide reasonable assurance of safety and effectiveness of the device; or those devices for which insufficient information exists to determine that general controls are sufficient to provide reasonable assurance of safety and effectiveness or to establish special controls to provide such assurance, but because the devices are not purported or represented to be for a use in supporting or sustaining human life or for a use which is of substantial importance in preventing impairment of human health, and do not present a potential unreasonable risk of illness or injury, are to be regulated by general controls (section 513(a)(1)(A) of the FD&C Act).

General controls include, but are not limited to, provisions that relate to establishment registration and device listing; premarket notification; prohibitions against adulteration and misbranding (*e.g.,* labeling that fails to bear adequate directions for use); recordkeeping and reporting, including adverse event reporting and reporting of corrections and removals initiated to reduce a risk to health posed by the device or to remedy a violation of the FD&C Act caused by the device which may present a risk to health; investigational device exemption (IDE) requirements; [6] and CGMP requirements. These controls apply to all devices unless an exemption applies.

Class II devices are those devices for which general controls by themselves are insufficient to provide reasonable assurance of safety and effectiveness, but for which there is sufficient information to establish special controls to provide such assurance, including the promulgation of performance standards, post-market surveillance, patient registries, development and dissemination of guidelines, recommendations, and other appropriate actions the Agency deems necessary to provide such assurance (section 513(a)(1)(B) of the FD&C Act).

Class III devices are those devices for which insufficient information exists to determine that general controls and special controls would provide a reasonable assurance of safety and effectiveness, and are purported or represented for a use in supporting or sustaining human life or for a use which is of substantial importance in preventing impairment of human health, or present a potential unreasonable risk of illness or injury (section 513(a)(1)(C) of the FD&C Act).

Under section 513(d)(1) of the FD&C Act, devices that were introduced or delivered for introduction into interstate commerce for commercial distribution before the enactment of the MDA on May 28, 1976 (generally referred to as ''preamendments devices'') are classified after FDA: (1) receives a recommendation from a device classification panel (an FDA advisory committee); (2) publishes the panel's recommendation, along with a proposed regulation classifying the device, and provides an opportunity for interested persons to submit comments; and (3) publishes a final regulation classifying the device. A preamendments device for which a classification regulation has not been promulgated is known as an ''unclassified device.'' Until an unclassified device type has been formally classified by regulation, the marketing of new devices within the device type requires FDA premarket review through a premarket notification (510(k)) under section 510(k) of the FD&C Act.

Devices that were not introduced or delivered for introduction into interstate commerce for commercial distribution before May 28, 1976 (generally referred to as ''postamendments devices'') are classified automatically by section 513(f) of the FD&C Act into class III without any FDA rulemaking process. Those devices remain in class III and require approval of a premarket approval application (PMA), unless and until: (1) FDA classifies or reclassifies the device into class I or II under section 513(f)(2) or (3) of the FD&C Act, or (2) FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(i) of the FD&C Act, to a predicate device that does not require premarket approval. The Agency determines whether new devices are substantially equivalent to predicate devices by means of premarket notification procedures in section 510(k) of the FD&C Act and part 807 of the regulations (21 CFR part 807).

Failure to comply with applicable requirements of the FD&C Act and FDA regulations may render the device adulterated and misbranded under sections 501 and 502 of the FD&C Act and may constitute a prohibited act under section 301 of the FD&C Act (21 U.S.C. 331). For a further discussion of these regulatory measures, and specifically how they help to ensure device safety and effectiveness, see section III.B.1 of this preamble.

IVDs, as defined in § 809.3 (21 CFR 809.3), are devices intended for human use and are subject to the FD&C Act. They include class I, class II, and class III devices, as well as both preamendments and postamendments devices. Like other devices, IVDs are subject to general controls, and other applicable requirements under the FD&C Act and FDA's regulations. IVDs are also subject to specific labeling requirements in part 809 of the regulations (21 CFR part 809).

For additional discussion of how FDA's legal authorities apply to LDTs, see the ''Legal Basis for the Amendment'' section (section V.B) of the NPRM (88 FR 68006 at 68017) and sections VI.D and VI.E of this preamble.

B. Need for the Rule

This final rule is the culmination of years of study and deliberation by FDA and represents a significant step forward for public health. By phasing out the general enforcement discretion approach for LDTs, FDA is correcting the imbalance in its oversight between non-laboratory and laboratory IVD manufacturers—an imbalance that harms American patients. As a result of the final phaseout policy, the public will benefit from laboratory manufacturer compliance with basic FDA requirements that protect and promote public health, such as adverse event reporting, establishment registration and device listing, labeling standards, investigational use requirements and, as new IVDs enter the market or are significantly modified, CGMPs and premarket review. Compliance with these time-tested regulatory measures will put patients in a better position to understand and have confidence in IVDs regardless of where they are manufactured. FDA believes that the benefits of this rulemaking will become more and more pronounced over time, as new IVDs come on the market and as the circumstances in which we exercise enforcement discretion narrow correspondingly (as discussed in section V.B of this preamble).

FDA has considered a wide array of input on this topic. In light of that input, we have adapted our thinking and adjusted the phaseout policy in a manner that we believe best serves the public health. The final phaseout policy, as set forth in section V of this preamble, fulfills the core goal of greater oversight of laboratory-manufactured IVDs while also accounting for other key public health interests, such as helping to maintain access to those beneficial IVDs on which patients currently rely and access to certain IVDs for which

[6] Under section 520(g) of the FD&C Act and part 812 of FDA's regulations (21 CFR part 812), a clinical investigation to determine the safety and effectiveness of certain devices must be the subject of an approved IDE before such investigation may commence. If an IDE has been granted, a failure to comply with a requirement under which the device was exempted for investigational use renders the device adulterated (see section 501(i) of the FD&C Act).

there is little financial incentive for development. This final phaseout policy reflects a careful balancing of relevant factors and, overall, will substantially promote and protect public health, both now and in the future.

1. The Device Regulatory Scheme Advances Public Health, Including as Applied to Laboratory Manufacturers

Since Congress first enacted the FD&C Act, over time and across a wide range of product areas, Congress has empowered FDA with a standard set of tools to manage the risks (and, as applicable, help assure the effectiveness) of regulated products. *See* 21 U.S.C. 393(b). These tools—such as adverse-event reporting, establishment registration and product listing, labeling standards, investigational controls, CGMPs, and premarket review—routinely appear in FDA statutory schemes because they effectively serve the public. See section IV for a more complete description of these authorities. As applied to devices, these regulatory measures help ensure product safety and effectiveness and facilitate greater information production and sharing, among other things.[7] FDA anticipates that compliance with these regulatory measures will have equal benefit in the context of laboratory-manufactured IVDs.[8]

For example, FDA expects that laboratory compliance with MDR requirements will yield significant public health benefits. Today, clinical laboratories comply with CLIA, which means that complaints are investigated and monitored generally only on a laboratory-by-laboratory basis. That approach makes sense in light of CLIA's focus on individual laboratory operations. However, FDA is focused on identifying problems with an IVD itself—such as design or other manufacturing problems—so FDA looks for different types of errors and applies a different analysis to the MDRs it receives. Among other things, FDA aggregates MDR information across IVD types for tracking and trending, enabling the detection of issues that a single laboratory may never see. FDA has identified and helped resolve a wide range of IVD issues using this type of information (see the response to comment 165 for additional information). For example, using MDRs submitted by multiple manufacturers, FDA discovered that high dose biotin supplements were interfering with certain immunoassays (biotin is commonly used in the design of these assays), which caused inaccurate results among those tests. FDA's investigation of the issue—an issue that could apply equally to laboratory-manufactured tests—led to the redesign of multiple tests on the market (see also comment response 122). In order to maximize the value of medical device reporting, FDA's Office of Health Technology 7 (OHT7): Office of In Vitro Diagnostics, within the Office of Product Evaluation and Quality in FDA's Center for Devices and Radiological Health (CDRH), employs trained staff dedicated to the review of MDRs for each IVD product code. These efforts help ensure that FDA catches and addresses potentially problematic IVDs to better protect the public.

Compliance with registration and listing requirements will also have substantial public health value. The collection of this information provides FDA with the location of device establishments and all devices manufactured at those establishments. Knowledge of the location where devices are manufactured allows for effective planning, coordinating, and scheduling of inspections, ensuring that FDA has visibility into the operations and practices at different manufacturing facilities. Through inspections, FDA has been able to determine when manufacturers have deficient processes, such as failure to investigate complaints and adverse events (which can signal larger problems, as just described). Although CLIA inspections occur for laboratories, such inspections do not have the same focus on design issues, for example, such as design changes that fundamentally alter the IVD's safety or effectiveness and present novel risks to patients. In addition, compliance with listing requirements will give FDA better information about the universe of IVDs on the market. With respect to the biotin interference issue discussed earlier, for example, FDA's investigation led to the redesign of affected tests in FDA's listing database, but FDA did not have insight into laboratory developed tests on the market that might have the same issue because they were not in the database. It is possible that laboratories today are *still* manufacturing and offering tests with inaccurate results due to biotin interference. With greater listing information, FDA can better protect the public through more comprehensive remediation efforts, among other things. FDA's publicly accessible registration and listing database also gives the public greater knowledge of IVD manufacturers and the range of IVDs on the market, which will benefit patients and providers who seek to better understand the different testing options that are available and the source and location of those testing options. Right now, as noted in the FRIA, there is no reliable inventory of IVDs on the market. More comprehensive information will do a great service to the public and improve patient care.

Laboratory compliance with FDA labeling requirements will also materially advance public health, because it will provide for the availability of a consistent set of information critical to understanding the IVD, whether the IVD is manufactured by a laboratory or another manufacturer. The labeling requirements in § 809.10 (21 CFR 809.10) require IVD manufacturers to disclose basic facts about an IVD that can inform a doctor or patient's selection decisions, such as the intended use, limitations, and performance characteristics of the test. Today, ordering physicians do not necessarily have access to this standardized set of information for IVDs offered as LDTs, and therefore may lack the information needed to understand the use and performance of tests for their intended uses, make decisions in the context of an individual patient's needs, and pass on relevant information to their patients. Laboratory compliance with labeling requirements will mean that laboratories both compile and provide access to this type of information, which will facilitate knowledge transfer and, consequently, more informed healthcare decisions. Labeling also provides a frame of

[7] *See, e.g.,* Ref. 11 (finding, for stents, that the testing required under U.S. device premarket review standards improves consumer welfare and reflects ''optimal policy in terms of trading off testing versus access to innovation''—while also noting that post-market surveillance or learning could theoretically yield the same benefits as pre-market review at lower cost); Ref. 12 (noting that one benefit of ''approval regulation'' is the collection of ''information useful to 'downstream' product users,'' such as physicians, who then ''exhibit higher consumption and will more readily switch to superior products''); Ref. 13 (''The FDA is a critical component to the industries' success because it (1) provides appropriate reviews for safety and effectiveness, and (2) helps provide consumers with confidence that these technologies are safe and effective.'').

[8] *See, e.g.,* Ref. 14 (''Negative consequences of poorly understood or weakly applied regulatory oversight processes for laboratory developed tests have been vividly demonstrated . . . . Failure to insist on good clinical and laboratory practices, apply rigorous standards for the design, conduct, and analysis of biomedical research, and implement safeguards to address conflicts of interest poses threats to the integrity of biomedical research and exposes patients to potential harms.''); Ref. 15 (''Increasing regulatory responsibilities and requirements could encourage laboratories seeking to introduce LDTs . . . to prioritize tests with the greatest potential to positively affect patient care, which could reduce the clutter of available assays with limited utility.'').

reference for evaluating a manufacturer's promotional claims, helping FDA determine, for example, whether manufacturers may be misleading the public about the safety or effectiveness of their IVDs. Based on the various lawsuits cited in the NPRM (88 FR 68006 at 68012), FDA is aware that such promotion may be taking place and should be addressed.

FDA is also aware that, today, laboratories are conducting IVD clinical investigations without complying with FDA requirements, including the requirement to submit an IDE application for FDA review before beginning studies involving ''significant risk'' IVDs. When this occurs, subjects may be enrolled in studies that lack key human subject protections. Among other things, such investigations may lack an appropriate evaluation of whether, for example, the informed consent documents that are provided to potential subjects contain adequate information about the reasonably foreseeable risks or potential benefits of participation in the study. Such investigations of significant risk IVDs may also lack review by FDA to evaluate whether there are sufficient data to justify use of a significant risk IVD in the proposed study population. As explained in an FDA memorandum to file that was part of the record for this rulemaking, FDA is aware of circumstances in which laboratories have failed to conduct appropriate analytical validation studies to support the use of tests in clinical investigations (Ref. 16). In these instances, in the absence of FDA review of these investigations, subjects may have been enrolled in studies that exposed them to safety risks with little potential for benefit or for generating useful information.

Laboratory compliance with CGMP requirements will benefit the public as well. The Quality System Regulation (QSR) requires manufacturers to establish procedures for the consistent, quality manufacturing of devices. FDA recently issued comprehensive amendments to harmonize the QSR with international quality management system requirements (89 FR 7496, February 2, 2024). Under FDA's quality system (QS) requirements, design controls are a key area of focus, and an area that is distinct from CLIA (see the response to comment 188 for further information). Design controls require manufacturers to have procedures for generating IVD specifications, making sure their IVDs actually meet those specifications, and confirming that those specifications conform with user needs and intended use(s). By establishing and following a set system of documentation, manufacturers approach device design and modifications systemically, ensuring that the original design and any changes have been properly evaluated and do not have unintended consequences. In 1990, Congress specifically granted FDA authority to issue design control requirements after the Agency found that 44 percent of the quality problems that had led to voluntary recall actions between 1983 and 1989 were due to design errors or deficiencies, and the Agency promulgated corresponding QS regulations in 1996 (61 FR 52602, October 7, 1996). Design controls play such a key role because, as FDA explained when it issued those regulations, ''[t]he intrinsic quality of devices, including their safety and effectiveness, is established during the design phase'' (61 FR 52602 at 52615). Other QS requirements help ensure effective and appropriate design, such as acceptance activities, corrective and preventive actions, and records requirements. Although FDA recognizes that compliance with the QS requirements is associated with relatively higher costs for laboratories, and has taken that fact into account in crafting the phaseout policy, FDA believes laboratory compliance with the requirements generally will advance public health.

Finally, premarket review is one of FDA's most important tools for protecting and promoting public health. Through premarket review, the Agency evaluates the scientific information supporting the analytical validity, clinical validity, and safety of high- and moderate-risk IVDs, which helps ensure the IVD's safety and effectiveness before it reaches a patient. In FDA's experience, premarket review serves an important gatekeeping function regardless of whether an IVD is manufactured by a laboratory or another manufacturer. For example, FDA has received submissions for IVDs offered as LDTs showing that laboratories do not always properly validate tests or have sound clinical data to support a test's intended use (Ref. 16). If marketed as originally presented to FDA, many of these tests could have led to missed diagnoses or misdiagnoses, improper patient management decisions, or missed opportunities for beneficial treatment. Through premarket review, FDA works with applicants to obtain adequate data, determine whether a device works as intended, and refine labeling to reflect the intended use and limitations of an IVD. This process motivates the development of robust scientific data on safety and effectiveness [9] and gives patients confidence that an independent, expert third party has determined that patients can rely on these IVDs. FDA has recognized circumstances in the final phaseout policy in which the benefits of laboratory compliance with premarket review requirements are outweighed by other public-health considerations. The Agency will exercise enforcement discretion in those circumstances, as described below. Apart from these circumstances, FDA expects that laboratory compliance with premarket review requirements will have a significant positive impact on public health.

2. The Oversight Approach Set Forth in This Preamble Will Advance Public Health

Those who object to this rulemaking appear to argue that the IVDs manufactured by laboratories are so fundamentally different from, or better than, other IVDs that these IVDs should not fall under the oversight scheme outlined above. But these commenters are not able to point to differences that logically sustain that position. Many laboratory-manufactured tests use the same materials and technology, are based on the same scientific principles, are intended for the same or similar purposes, are developed by those with similar expertise, require the same level of training to perform, and are marketed for the same patients as tests from other manufacturers. Although some activities of these laboratories are also subject to CLIA, CLIA is not a substitute for FDA oversight, as detailed throughout this preamble and as the Centers for Medicare & Medicaid Services (CMS) has explained.

Furthermore, a review of the evidence does not bear out the suggestion that laboratory-manufactured IVDs have higher quality or perform better than other IVDs. FDA's memorandum to file describing submissions for IVDs offered as LDTs detailed the many defects FDA has seen with laboratory validation, among other things, and described the submissions as raising ''significant concerns'' in some cases (Ref. 16). During the COVID–19 emergency, FDA's conversations with laboratory manufacturers revealed that many were unfamiliar with what constitutes appropriate analytical and clinical validation for an IVD generally (see comment response 37 and Ref. 18). FDA's experience is corroborated by new information in the record from New York State. New York State submitted

[9] See Ref. 17.

data indicating that more than half of original applications from laboratories could not be approved by the New York State Department of Health Clinical Laboratory Evaluation Program (NYS CLEP) based on deficiencies such as ''design flaws, inadequate validation data, and process problems that call into question the reliability of the results'' (Ref. 19). And in one of the only true head-to-head comparisons between IVDs offered as LDTs and the parallel FDA-authorized IVD,[10] the IVDs offered as LDTs were less accurate than the FDA-authorized IVD (Ref. 20). Although some commenters suggested that a reanalysis of that data supports a different conclusion, even under the reanalysis, the laboratory tests had worse performance, with only 8 of 19 laboratories correctly reporting all variants (compared to 7 in the original analysis). For additional information about the analysis and reanalysis, see comment responses 34 and 38.[11]

In short, based on the information before us, we do not believe that the general enforcement discretion approach for LDTs should continue. Today, IVDs offered as LDTs do not have appropriate assurances of safety and effectiveness. At least one survey suggests that the public agrees.[12] Therefore, FDA is phasing out the general enforcement discretion approach for LDTs, as explained in more detail in section V.

However, FDA also recognizes the effect that its longstanding enforcement discretion approach has had on the market, the role that laboratory-manufactured tests play in modern healthcare, and the presence of other expert regulatory bodies. Many comments emphasized these considerations. FDA agrees with certain comments' concern, for example, that expecting compliance with full QS and premarket review requirements for all currently marketed IVDs offered as LDTs could lead to the loss of access to safe and effective IVDs on which patients currently rely, and we are issuing an enforcement discretion policy to address that issue (see section V.B.3). FDA also agrees with the concern that, for certain LDTs for unmet needs, expecting full compliance with FDA requirements could lead to loss of access to tests for unmet needs for which laboratories cannot recoup the costs of compliance; we are issuing an enforcement discretion policy to address that issue in circumstances in which certain risk mitigations apply (see section V.B.3). FDA has also incorporated enforcement discretion policies recognizing the regulatory role that other Federal and State entities play (see sections V.B.1 and 2). In these and other ways, FDA has crafted a tailored phaseout policy that balances the important public health considerations at issue in this rule.

We anticipate that the final phaseout policy will provide significant benefits to the public. As indicated in the FRIA, the anticipated benefits significantly outweigh the anticipated costs. Through this Agency action, patients will have greater assurance that the IVDs used in their care are safe and effective, a significant step forward for public health. In addition, by applying the same general oversight approach to laboratories and non-laboratories that manufacture IVDs, FDA will reduce regulatory uncertainty, which will give stakeholders more stability, clarity, and confidence, and facilitate investment in the development of innovative IVDs (Ref. 22). FDA oversight will help to support coverage and reimbursement determinations for IVDs offered as LDTs, which we anticipate will make certain IVDs offered as LDTs for which there is a reasonable assurance of safety and effectiveness more affordable for patients. And with increased oversight, FDA will be able to help promote adequate representation in validation studies, and transparency regarding potential differential performance and unknown performance in certain patient populations, which will ultimately help advance health equity (see comment response 221 for additional information).

FDA expects the benefits of the phaseout policy to become more and more pronounced over time, as new tests come on the market and as the circumstances in which we exercise enforcement discretion narrow correspondingly. Diagnostic testing is increasingly important; for example, as time goes on, more novel treatments will require use of a specialized test to identify patients likely to benefit from those treatments.[13] Furthermore, IVDs offered as LDTs are a growing sector of the diagnostic testing market (Ref. 4). FDA anticipates that IVDs will continue to become more complex and play a greater role in modern healthcare (Ref. 3). The U.S. LDT market size is anticipated to grow 6 percent from 2023 to 2030 due to varying factors including increased use in personalized medicine and rising prevalence of chronic diseases. (*Id.*) FDA is therefore taking steps to help ensure that IVDs are safe and effective regardless of where they are manufactured, so that both now and in the future, patients can have confidence about the tests used in their care.

C. Summary of Comments on the Notice of Proposed Rulemaking

In the **Federal Register** of October 3, 2023, FDA published a rule proposing an amendment to its regulations to make explicit that IVDs are devices under the FD&C Act including when the manufacturer is a laboratory, and proposing a policy under which FDA would phase out its general enforcement discretion approach for LDTs. The comment period for the NPRM closed on December 4, 2023. FDA received more than 6,500 comments on the NPRM from a variety of entities including medical device associations, members of the medical device and pharmaceutical industries, medical and healthcare professional associations, hospitals and academic medical centers (AMCs), accreditation organizations, other advocacy organizations, government agencies, and individuals.

Comments supporting FDA's proposal pointed to problems with LDTs, concerns about the significant impact of problematic LDTs on patients and the treatment decisions of healthcare providers, and the need for increased oversight of LDTs by FDA. Some comments also emphasized the importance of creating a ''level playing field'' between laboratory and non-laboratory manufacturers of IVDs, and described how phasing out the general enforcement discretion approach for LDTs would incentivize innovation by non-laboratory IVD manufacturers.

Some comments raised concerns or requested clarification regarding the following:

- the evidence related to the safety or effectiveness of IVDs offered as LDTs,
- the sufficiency of regulation by CMS and other non-FDA entities,
- FDA's legal authority to regulate LDTs,
- the impact of the phaseout policy on access to and the pricing of IVDs offered as LDTs,

[10] For purposes of this preamble, ''FDA-authorized'' refers to FDA permitting the marketing of a device via the premarket approval, 510(k), De Novo classification, Biologics License Application (BLA), or Humanitarian Device Exemption (HDE) pathway and to devices that are exempt from premarket notification. This term does not include devices authorized for emergency use under section 564 of the FD&C Act.

[11] For additional discussion of evidence relevant to IVDs offered as LDTs, see section III.B.2 of the NPRM (88 FR 68006 at 68010–12).

[12] Ref. 21 (''When presented with information on the differences between FDA regulation and CMS oversight, most participants supported FDA having oversight over all diagnostic tests.'').

[13] *See, e.g.,* Ref. 23 (''Demand is increasing in the CDx market, due to the paradigm shift to precision medicine.'').

- the impact of the phaseout policy on test innovation,
- the impact of the phaseout policy on small laboratories,
- the impact of the phaseout policy on specific patient populations, including underrepresented and underserved populations,
- the details of the phaseout policy,
- the types of IVDs offered as LDTs for which FDA intends to continue the general enforcement discretion approach and generally not enforce some or all applicable requirements, and
- FDA's implementation of the phaseout policy and the resources needed for such implementation.

D. General Overview of the Final Amendment to the Definition of In Vitro Diagnostic Products

FDA is amending its regulations to make explicit that IVDs are devices under the FD&C Act including when the manufacturer of the IVD is a laboratory. This amendment reflects that the device definition in the FD&C Act does not differentiate between entities manufacturing the device, and provides further clarity, including for stakeholders affected by the accompanying changes to FDA's general enforcement discretion approach for LDTs.

FDA is also amending the statutory citation for the device definition included in § 809.3 to reflect amendments to section 201(h) of the FD&C Act as a result of the enactment of the Safeguarding Therapeutics Act (Pub. L. 116–304). For many years, the definition of ''device'' had been codified at section 201(h) of the FD&C Act. Upon enactment of the Safeguarding Therapeutics Act, the definition of ''device'' was redesignated as paragraph (h)(1) and a new definition of ''counterfeit device'' was codified at paragraph (h)(2).

FDA considered comments received on the NPRM, as discussed in more detail throughout this preamble, and has made no changes to the amendment.

E. General Overview of the Final Phaseout Policy

FDA has had a general enforcement discretion approach for most LDTs.[14] FDA is phasing out this general enforcement discretion approach so that IVDs manufactured by a laboratory will generally fall under the same enforcement approach as other IVDs. The phaseout is intended to help assure the safety and effectiveness of IVDs offered as LDTs, while also accounting for other important public health considerations such as patient access and reliance.

Following a 4-year phaseout period, FDA will no longer have a general enforcement discretion approach for LDTs. The phaseout policy includes the following five stages for IVDs offered as LDTs (a term discussed further in section V.A.1):

- *Stage 1:* beginning 1 year after the publication date of this final rule, FDA will expect compliance with MDR requirements, correction and removal reporting requirements, and QS requirements under § 820.198 (21 CFR 820.198) (complaint files);
- *Stage 2:* beginning 2 years after the publication date of this final rule, FDA will expect compliance with requirements not covered during other stages of the phaseout policy, including registration and listing requirements, labeling requirements, and investigational use requirements;
- *Stage 3:* beginning 3 years after the publication date of this final rule, FDA will expect compliance with QS requirements under part 820 (21 CFR part 820) (other than requirements under § 820.198 (complaint files), which are already addressed in stage 1);
- *Stage 4:* beginning 3½ years after the publication date of this final rule, FDA will expect compliance with premarket review requirements for high-risk IVDs offered as LDTs (IVDs that may be classified into class III or that are subject to licensure under section 351 of the Public Health Service Act), unless a premarket submission has been received by the beginning of this stage in which case FDA intends to continue to exercise enforcement discretion for the pendency of its review; and
- *Stage 5:* beginning 4 years after the publication date of this final rule, FDA will expect compliance with premarket review requirements for moderate-risk and low-risk IVDs offered as LDTs (that require premarket submissions), unless a premarket submission has been received by the beginning of this stage in which case FDA intends to continue to exercise enforcement discretion for the pendency of its review.

The phaseout policy includes targeted enforcement discretion policies for certain categories of IVDs manufactured by a laboratory, as explained in more detail in sections V.B. and V.C. For example, as proposed in the NPRM, FDA generally does not intend to enforce requirements under the FD&C Act and FDA's regulations for ''1976-Type LDTs'' (as described in section V.B.1); Human Leukocyte Antigen (HLA) tests that are designed, manufactured, and used within a single laboratory certified under CLIA that meets the requirements to perform high-complexity histocompatibility testing when used in connection with organ, stem cell, and tissue transplantation to perform HLA allele typing, for HLA antibody screening and monitoring, or for conducting real and ''virtual'' HLA crossmatch tests; and tests intended solely for forensic (law enforcement) purposes (88 FR 68006 at 68022).

In addition, FDA considered comments received on the proposed phaseout policy and, based in part on those comments, made various changes to the phaseout policy, which include the addition of the following enforcement discretion policies:

- FDA intends to exercise enforcement discretion and generally not enforce requirements for LDTs manufactured and performed within the Veterans Health Administration (VHA) or the Department of Defense (DoD);
- FDA intends to exercise enforcement discretion and generally not enforce premarket review requirements for LDTs approved by NYS CLEP; [15]
- FDA intends to exercise enforcement discretion and generally not enforce premarket review requirements and QS requirements (except for requirements under part 820, subpart M (Records))[16] [17] for LDTs manufactured and performed by a

[14] As discussed further in section V.A.2, FDA's general enforcement discretion approach has not applied to certain categories of LDTs. For these categories of LDTs, FDA has generally expected applicable requirements to be met, and in the NPRM we proposed that this approach be maintained (88 FR 68006 at 68021). After considering comments received on this topic we are not changing that approach for these categories with the phaseout policy described in this preamble.

[15] For purposes of this preamble, FDA uses the phrase ''LDTs approved by NYS CLEP'' to refer to LDTs that are approved, conditionally approved, or within an approved exemption from full technical documentation, under NYS CLEP. These three categories of LDTs are discussed further below in section V.B.2. Other LDTs, including ''LDTs used in Clinical Trials'' and ''Tests Not Subject to Evaluation'' which are described on NYS CLEP's website (Ref. 24), are not considered ''LDTs approved by NYS CLEP'' and are not within the enforcement discretion policy with respect to premarket review requirements described in section V.B.2. For additional discussion of the NYS CLEP premarket review program, see section V.B.2.

[16] When the final rule to amend part 820 takes effect in February 2026, the comparable requirements can be found in International Organization for Standardization (ISO) 13485 subclause 4.2 as modified by part 820.

[17] FDA recognizes that part 820, subpart M (Records) includes cross-references to §§ 820.20, 820.22, 820.40, and 820.50 (21 CFR 820.20, 820.22, 820.40, and 820.50). For the categories of IVDs discussed in section V.B.3 of this preamble, FDA generally expects compliance with requirements under subpart M but not §§ 820.20, 820.22, 820.40, and 820.50, or comparable provisions of ISO 13485 in accordance with the amendments to part 820 once that rule takes effect in February 2026.

laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system;

- FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records)) for currently marketed IVDs offered as LDTs that were first marketed prior to the date of issuance of this rule and that are not modified, or that are modified in certain limited ways as described in section V.B.3; and
- FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records)) for non-molecular antisera LDTs for rare red blood cell (RBC) antigens where such tests are manufactured and performed in blood establishments, including transfusion services and immunohematology laboratories and where there is no alternative available to meet the patient's need for a compatible blood transfusion.

These enforcement policies do not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

IV. Legal Authority

FDA is issuing this final rule under the Agency's general rulemaking authorities and statutory authorities relating to devices. These authorities include sections 201(h)(1), 301, 501, 502, 510, 513, 514, 515, 518, 519, 520, 701, 702, 704, and 801 of the FD&C Act and section 351 of the PHS Act. In particular:

- Under section 201(h)(1) of the FD&C Act, a device is defined as ''an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part, or accessory, which is (A) recognized in the official National Formulary, or the United States Pharmacopeia, or any supplement to them, (B) intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in man or other animals, or (C) intended to affect the structure or any function of the body of man or other animals, and which does not achieve its primary intended purposes through chemical action within or on the body of man or other animals and which is not dependent upon being metabolized for the achievement of its primary intended purposes.''
- Section 701(a) of the FD&C Act authorizes FDA to issue regulations for the efficient enforcement of the FD&C Act.

For additional descriptions of some of the authorities referenced above, see section III.A of this preamble. For additional discussion of how these legal authorities apply to LDTs, see the ''Legal Basis for the Amendment'' section (section V.B) of the NPRM (88 FR 68006 at 68017) and sections VI.D and VI.E of this preamble.

V. Phaseout Policy

Based on the considerations set forth in the NPRM and this preamble, including the public comments discussed in section VI.F below, FDA is phasing out the general enforcement discretion approach for LDTs in stages, as described in more detail below. FDA's intent is that following a 4-year phaseout period, IVDs offered as LDTs generally will be expected to meet applicable requirements, with several enforcement discretion policies for certain categories of IVDs manufactured by a laboratory as discussed further below.

We note that these policies may not be the only enforcement discretion policies applicable to these IVDs, and other enforcement discretion policies not addressed in this phaseout policy may apply to certain IVDs. As discussed in the NPRM, FDA has adopted and intends to continue adopting enforcement discretion policies for certain types of IVDs in certain circumstances, as appropriate (88 FR 68006 at 68021). For example, FDA issued final guidance documents with enforcement discretion policies for certain COVID–19 and mpox tests at the beginning of each declared emergency and, concurrent with this final rule, is issuing a draft guidance document with an enforcement policy for certain IVDs for immediate response to a chemical, biological, radiological, or nuclear (CBRN) agent in the absence of a declaration under section 564 of the FD&C Act (21 U.S.C. 360bbb–3).

Although FDA is phasing out its current general enforcement discretion approach over a period of years, the phaseout policy does not in any way alter the fact that it is illegal to offer IVDs without complying with applicable requirements. Regardless of the phaseout timeline and enforcement discretion policies for certain IVDs discussed below, FDA retains discretion to pursue enforcement action for violations of the FD&C Act at any time, and intends to do so when appropriate.

The details of FDA's final phaseout policy, including the scope, subsidiary enforcement discretion policies, and stages, are set forth below.

A. Scope

1. IVDs Within the Scope of the Phaseout Policy

While FDA's general enforcement discretion approach has been focused on LDTs,[18] FDA has determined to apply a broader scope for the phaseout policy, consistent with FDA's proposal in the NPRM (88 FR 68006 at 68021).[19] Specifically, the phaseout policy applies to IVDs that are *manufactured and offered* as LDTs by laboratories that are certified under CLIA and that meet the regulatory requirements under CLIA to perform high complexity testing, and used within such laboratories,[20] even if those IVDs do not fall within FDA's traditional understanding of an LDT because they are not designed, manufactured, and used within a single laboratory. Throughout this preamble, these IVDs are referred to as ''IVDs offered as LDTs.'' [21] FDA is adopting this scope because it recognizes that not all laboratories have understood the limited nature of FDA's general enforcement discretion approach and have been offering IVDs based on the approach even when those IVDs do not fit what FDA generally considers to be an LDT. FDA has determined that this

[18] As discussed elsewhere in this preamble, FDA has generally considered the term ''laboratory developed test (LDT)'' to mean an IVD that is intended for clinical use and that is designed, manufactured, and used within a single CLIA-certified laboratory that meets the regulatory requirements under CLIA to perform high complexity testing.

[19] However, certain enforcement discretion policies described in sections V.B and V.C apply only to LDTs.

[20] Other laboratories would be out of compliance with CLIA regulations if they were developing and performing tests that are not FDA authorized. Such tests have never fallen within FDA's general enforcement discretion approach (see, *e.g.,* Refs. 25–27).

[21] We note that ''IVDs offered as LDTs'' does not include IVDs manufactured or used *outside* of a laboratory, including collection devices. FDA's statements and actions have shown that the Agency has expected compliance where, for example, CLIA is inapplicable (*e.g.,* manufacturing outside of a laboratory and collection devices). *See, e.g.,* 61 FR 10484 (''*in-house* developed tests have not been actively regulated by the Agency'') (emphasis added); Ref. 23 (describing an LDT as an IVD that is ''designed, manufactured, and *used* within a single laboratory'') (emphasis added); *United States* v. *Undetermined No. of Unlabeled Cases,* 21 F.3d 1026 (10th Cir. 1994) (FDA enforcement action against a laboratory that ''purchased specimen containers, repackaged them into kits which included instruction sheets, and forwarded them along with consent forms to insurers to collect specimens''); Ref. 28 (compliance action regarding a blood lead testing system manufactured outside of a laboratory but for use by a laboratory); Ref. 29 (compliance action involving a laboratory and a sample collection kit).

approach will help facilitate uniform compliance going forward.

2. IVDs Outside the Scope of the Phaseout Policy

Although FDA is adopting a broader scope for the phaseout policy, it does not intend to sweep in certain IVDs that were excluded from the general enforcement discretion approach, as reflected in compliance patterns, multiple public FDA actions and communications, or both. In particular, the general enforcement discretion approach has never applied to the following tests:

a. Tests that are intended as blood donor screening or human cells, tissues, and cellular and tissue-based products (HCT/P) donor screening tests required for infectious disease testing under § 610.40 (21 CFR 610.40) and § 1271.80(c) (21 CFR 1271.80(c)), respectively, or required for determination of blood group and Rh factors under § 640.5 (21 CFR 640.5). Under the cited regulations, a blood or HCT/P establishment must not use a test for the purposes listed here unless the test is authorized by FDA for such use. Blood and HCT/P establishments must register with FDA and are subject to FDA inspection (see parts 207, 607, 807, and 1271 (21 CFR parts 207, 607, 807, and 1271)). FDA's general enforcement discretion approach for LDTs has never applied to these tests because these tests are a critical part of the overall process of ensuring the safety of blood and blood components and HCT/Ps by preventing infectious disease transmission and incompatible blood transfusions which can have life-threatening consequences (see, *e.g.,* Refs. 30 and 31). Based on FDA experience, establishments have been generally complying with the requirements to use authorized tests under §§ 1271.80(c), 610.40, and 640.5. FDA addresses comments related, in part, to this category of tests in sections VI.L.14 and VI.L.15.

b. Tests intended for emergencies, potential emergencies, or material threats declared under section 564 of the FD&C Act. After all previous declarations under section 564(b), FDA has generally expected LDTs to comply with applicable requirements in the FD&C Act and FDA regulations. FDA's general enforcement discretion approach has not applied to these tests because of the significant risk posed by the disease (as signified by the unusual step of issuing a declaration) and because false results can have serious implications for disease progression and public health decision-making, in addition to the individual patient's care. As it has done in other areas, FDA has adopted (and may continue to adopt) specific enforcement discretion policies for such tests (see, *e.g.,* Refs. 32 and 33). In addition, consistent with the Government Accountability Office (GAO)'s 2022 recommendation that ''FDA should develop a policy for the use of enforcement discretion regarding unauthorized tests in future public health emergencies'' (Ref. 34), FDA is issuing a draft guidance document, concurrent with this final rule, on factors to consider in adopting such enforcement discretion policies. FDA has communicated its expectations regarding tests for emergency use in final guidance and elsewhere, including ''It has come to our attention'' letters posted on FDA's website and other public communications (see, *e.g.,* Refs. 27, 32 to 37). FDA addresses comments related, in part, to this category of tests in section VI.L.10.

c. Direct-to-consumer tests. FDA's general enforcement discretion approach has not applied to tests intended for consumer use (without meaningful involvement by a licensed healthcare professional), given the greater risks to patients presented by these tests (see, *e.g.,* Refs. 28 and 39 to 44). FDA's enforcement discretion approach for LDTs was originally premised, in part, on the participation of medical professionals to help determine whether a particular test was appropriate, counsel patients on the significance and limitations of a test, assist in interpreting results, assess how the results fit in the overall clinical picture, and consider next steps. When patients order tests, receive results, or make decisions (such as a decision to stop medication) without this expert intermediary, there is a heightened need for FDA oversight. FDA addresses comments related, in part, to this category of tests in section VI.L.1.

For these categories of tests, FDA has generally expected applicable requirements to be met, and we are not changing that approach with the phaseout policy. FDA intends to continue to enforce all applicable requirements for these categories of tests. Neither the phaseout policy nor any subsidiary enforcement discretion policies described in sections V.B and V.C apply to these tests.

Finally, as further discussed in the NPRM, tests manufactured and offered for use exclusively for public health surveillance are distinct from other tests where: (1) they are intended solely for use on systematically collected samples for analysis and interpretation of health data in connection with disease prevention and control and (2) test results are not reported to patients or their healthcare providers (88 FR 68006 at 68023). The results of these tests are generally used for trending on a population basis or public health outbreaks, where the test results are not intended for clinical decision making. FDA received several comments on these tests (see section VI.L.6), and for the reasons discussed in the NPRM (88 FR 68006 at 68023) and in our responses to those comments, we continue to believe that these tests should not be affected by the phaseout policy.[22]

B. Enforcement Discretion Policies

FDA is phasing out the general enforcement discretion approach for LDTs so that IVDs manufactured by laboratories will generally fall under the same enforcement approach as other IVDs. For certain IVDs, however, FDA intends to exercise enforcement discretion and generally not enforce all or some applicable requirements, for the reasons discussed further below. Specifically, and as described further in section V.B.1, FDA intends to exercise enforcement discretion and generally not enforce all applicable requirements for 1976-Type LDTs, certain HLA tests, tests intended solely for forensic (law enforcement) purposes, and LDTs manufactured and performed within DoD or VHA. As described further in section V.B.2, FDA also intends to exercise enforcement discretion and generally not enforce premarket review requirements for LDTs that are approved by NYS CLEP. In addition, and as described further in section V.B.3, FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records)) for LDTs manufactured and performed by a laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system, currently marketed IVDs offered as LDTs, and certain non-molecular antisera LDTs for rare RBC antigens.

As noted above, these policies do not apply to the tests described in section V.A.2. Moreover, in an emergent situation (see additional discussion of this time period below), these policies do not apply to tests that are: (1) intended to detect or diagnose a serious or life-threatening disease or condition that may be attributed to a newly identified, previously unknown, or

[22] Surveillance tests are not used for individual decision-making. Screening tests are distinct from public health surveillance tests and do fall within the phaseout policy.

unusual CBRN agent or agents; or a known agent or agents that results in a newly identified or unusual clinical presentation of such a disease or condition; and (2) needed for immediate response to a potential case or cases of such disease or condition for which there is no adequate, authorized, and available alternative. FDA is proposing a separate enforcement policy for some such tests in a concurrently issued draft guidance entitled ''Enforcement Policy for Certain In Vitro Diagnostic Devices for Immediate Public Health Response in the Absence of a Declaration under Section 564.'' As discussed in that draft guidance, that proposed enforcement policy would be for tests that are intended to help ensure the government's coordinated and effective public health response and so is limited to certain tests and certain laboratories, such as those that are U.S. Government (USG) laboratories, State or local public health laboratories, or other laboratories that have agreements with the USG.[23] FDA believes that the proposed policy in that draft guidance (and not the enforcement discretion policies described in section V.B of this preamble) would be appropriate for such tests during the limited time period described in the draft guidance—specifically, during an emergent situation.[24] We note that prior to an emergent situation and after an emergent situation has been resolved, when there is not a critical need for a coordinated and immediate public health response and where the implications of false results may not have as serious implications for public health decision-making, such tests may fall within the enforcement discretion policies described in section V.B of this preamble.

As with any enforcement discretion policy, FDA may update any of these policies as circumstances warrant or if the circumstances that inform these policies change, consistent with FDA's good guidance practices (21 U.S.C. 371(h), § 10.115). Notably, these enforcement discretion policies do not confer lawful marketing status on any IVD being marketed as described in the policies. These policies do not in any way alter the fact that it is illegal to market an IVD that lacks required premarket authorization or is otherwise in violation of the FD&C Act, the PHS Act, or FDA regulations. These policies set forth FDA's general priorities and, consistent with FDA's public health mission, FDA intends to take action to enforce applicable requirements for IVDs (including IVDs described in these policies) as appropriate, taking into account any public health concerns as evaluated on a case-by-case basis.[25] For example, if FDA receives reports, or otherwise learns of information, that raise safety or effectiveness concerns with an IVD that falls within an enforcement discretion policy, FDA generally intends to take action with respect to requirements applicable to that specific IVD.

1. Enforcement Discretion Policies With Respect to All FDA Requirements

For several categories of tests, FDA intends to continue the general enforcement discretion approach and generally not enforce any applicable requirement because tests in these categories are, in our experience, unlikely to pose significant risks or are conducted in circumstances that themselves will mitigate the risks. One such category of tests is referred to in this preamble as ''1976-Type LDTs.'' Such tests have the following characteristics common among LDTs offered in 1976: (1) use of manual techniques (without automation) performed by laboratory personnel with specialized expertise; (2) use of components legally marketed for clinical use; and (3) design, manufacture, and use within a single CLIA-certified laboratory that meets the requirements under CLIA for high complexity testing. The characteristics associated with LDTs offered in 1976 resulted in the emergence of FDA's general enforcement discretion approach for LDTs, and the specific characteristics listed above provide the greatest risk mitigation among the characteristics that were commonly associated with LDTs offered in 1976 (discussed in section III). Based on changes to the LDT landscape since 1976, the risks associated with most modern LDTs are generally much greater today than they were in 1976; however, for tests that share the characteristics listed above, FDA has determined that the risks are sufficiently low such that FDA's general enforcement discretion approach for LDTs should continue to apply (see section VI.L.3 for a discussion of the comments on this topic and FDA's responses to those comments). These tests might include, for example, immunohistochemistry tests that involve no automated preparation or interpretation, but would not include, for example, lateral flow tests, as they do not generally rely on laboratory personnel expertise. This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B. FDA intends to consider whether guidance containing additional discussion and examples of tests that may fall within this category would be helpful, and would issue any such guidance in accordance with good guidance practices (see § 10.115).

Another category of such tests is HLA tests that are designed, manufactured, and used within a single laboratory certified under CLIA that meets the requirements to perform high-complexity histocompatibility testing when used in connection with organ, stem cell, and tissue transplantation to perform HLA allele typing, for HLA antibody screening and monitoring, or for conducting real and ''virtual'' HLA crossmatch tests (hereinafter ''HLA tests for transplantation''). Physicians must often make prompt decisions about transplantation based on medical judgment regarding their patient's condition and degree of mismatch between the donor and patient should an organ, stem cells, or tissue become available. Because new alleles are continuously identified, and the need for assessing degree of crossmatch is generally urgent, modifications to HLA tests for transplantation are often made rapidly in response to urgent situations. Further, these tests are often individualized within each medical facility; for example, they include reagents that reflect local HLA polymorphisms and patient demographics.

In addition, oversight under certain Federal programs helps to mitigate the risks of harm from inaccurate and unreliable HLA tests for transplantation. For example, the National Organ Transplant Act (NOTA) of 1984 created the Organ Procurement and Transplant Network (OPTN). NOTA, as amended (42 U.S.C. 273 *et seq.*), and the OPTN

[23] For tests that meet the description included at the beginning of this paragraph but that would not otherwise fall within the proposed policy described in the draft guidance because, for example, they are manufactured by entities that fall outside the scope of the draft guidance, FDA is not proposing an enforcement discretion policy in the draft guidance. For such tests, FDA generally will expect compliance with applicable FDA requirements in line with the phaseout policy during an emergent situation, and outside of an emergent situation, these tests could potentially fall within an enforcement discretion policy described in section V.B. of this preamble.

[24] Prior to finalization of that draft guidance, FDA intends to act consistent with the relevant policies for LDTs included in this final rule and will consider whether to update any policies herein as a result of any changes to the proposed enforcement policy described in the draft guidance, when finalized.

[25] *See Heckler* v. *Chaney,* 470 U.S. 821, 835 (1985) (providing that the FD&C Act's enforcement provisions commit broad discretion to the Secretary to decide how and when they should be exercised).

Final Rule, 42 CFR part 121, establish a comprehensive system for the safe and equitable allocation, distribution, and transplantation of donated organs. The OPTN Final Rule and OPTN bylaws and policies govern operation of all member transplant hospitals, organ procurement organizations, and histocompatibility laboratories in the United States. The Stem Cell Therapeutic and Research Act of 2005 (Pub. L. 109–129), as amended, authorizes a national registry (''Be the Match Registry'') to support patients in need of bone marrow or umbilical cord blood transplants, which is operated under Federal contracts by the National Marrow Donor Program® (NMDP) (Ref. 45). NMDP sets forth minimum requirements for organizations working through the NMDP to facilitate stem cell transplants (Refs. 46 and 47).

OPTN has requirements for performance of HLA typing, antibody screening, and crossmatching tests, and NMDP requires HLA typing for donors and potential recipients for stem cell transplants facilitated by the Be the Match Registry, as well as reporting of test results to NMDP (Refs. 47 and 48). Both OPTN and NMDP have procedures in place for identifying, investigating, and reporting discrepant tests results (Refs. 48 and 49).

In addition to these safeguards designed to identify and resolve potentially inaccurate results, each OPTN member histocompatibility laboratory must, among other things, meet specified American Society for Histocompatibility and Immunogenetics (ASHI) and/or College of American Pathologists (CAP) standards as a condition of OPTN membership (Ref. 50). NMDP similarly requires histocompatibility laboratories used by U.S. transplant centers and donor centers to be accredited by CAP and/or ASHI (Refs. 46, 51 and 52). Both ASHI and CAP standards have provisions that specifically address OPTN and/or NMDP requirements for histocompatibility laboratories that perform tests for those programs. Importantly, as discussed below, FDA does not believe that a CAP or ASHI accreditation of a laboratory, on its own, is sufficient to mitigate risk and provide assurance of the safety and effectiveness for all IVDs offered as LDTs by the accredited laboratory. However, we consider the fact that OPTN and NMDP require adherence to CAP and/or ASHI standards, including provisions specific to OPTN and NMDP requirements, to be one factor that helps mitigate risk of inaccurate results or unreliable HLA tests for transplantation. After considering this factor in combination with the protections provided through the programs described above and the urgent circumstances in which HLA tests for transplantation may be modified and performed, as well as the comments received on our proposed approach to HLA tests for transplantation, FDA intends to continue the general enforcement discretion approach for these tests. We note that this enforcement discretion policy does not apply to HLA tests used for blood transfusion, which are highly standardized across institutions, nor does it apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

An additional category of such tests is tests intended solely for forensic (law enforcement) purposes. FDA has had an enforcement discretion approach for such tests for over 20 years and that approach applies to such tests regardless of whether they are offered as an LDT. *See, e.g.,* 65 FR 18230, April 7, 2000. Tests used in the law enforcement setting are subject to protections and requirements associated with the judicial process that mitigate risk related to test accuracy and sample collection and that generally are not available in the home, workplace, insurance, and sports settings. These protections include the use of rules of evidence in judicial proceedings and legal representation of the accused (*i.e.,* the person being tested) through the judicial process during which the accuracy of the test may be raised during the adjudication. This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

A final category of such tests is LDTs [26] manufactured and performed within DoD or VHA. This policy applies only to LDTs used for patients that are being tested and treated within the DoD or VHA. In the NPRM, FDA sought comment on whether it would be appropriate to continue the general enforcement discretion approach, such that FDA generally would not enforce any applicable device requirements, ''where outside programs can be leveraged'' (88 FR 68006 at 68024). FDA mentioned programs within VHA as an example, and we received several comments stating that FDA should continue the general enforcement discretion approach for LDTs manufactured and performed by VHA, generally on the grounds that it would avoid ''duplicating regulatory oversight regimes'' and promote the efficient use of resources. Two comments suggested that FDA should not continue the general enforcement discretion approach for LDTs manufactured and performed by VHA because VHA's program is not in alignment with FDA regulation (though one of these comments supported ''leveraging'' outside programs ''in principle''). FDA received one comment, submitted by DoD, which stated that FDA should maintain an enforcement discretion approach for LDTs ''utilized by DoD for our service members.'' Among other things, DoD emphasized ''the importance of LDTs to DoD's operational readiness and mission success,'' and referenced DoD's internal programs, including ''the authority, oversight, and responsibilities vested in the Assistant Secretary of Defense (Health Affairs).''

FDA recognizes that DoD and VHA have statutory mandates under 10 U.S.C. chapter 55 and 38 U.S.C. chapter 73 to provide for the care of specific populations in their systems and have existing oversight and enforcement groups within their respective systems. Based on consultation with DoD and VHA, FDA understands that both departments use and will continue to use FDA-authorized IVDs wherever available. However, to meet the needs of their patient populations (*i.e.,* military personnel, veterans, and their families) and fulfill their mandates, DoD and VHA often manufacture unique LDTs, such as tests for diseases or chemicals to which their patients may be exposed while serving abroad but which do not exist at home. DoD and VHA have developed expertise for evaluating these unique tests, and are taking steps in consultation with FDA to track all LDTs in their systems and to ensure the analytical and clinical validity of their LDTs, the quality manufacturing of their LDTs, and the central reporting of adverse events.[27] Additional oversight by FDA would not be an efficient use of government resources in these circumstances.

This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

[26] Consistent with what FDA has generally considered to be an LDT (as discussed elsewhere in this preamble), this enforcement discretion policy applies only to tests that are designed, manufactured, and used within a single CLIA-certified laboratory that meets the requirements under CLIA for high complexity testing.

[27] To the extent that VHA and DoD anticipate the need for additional resources, FDA understands that such matters will be addressed through the management of those departments.

2. Enforcement Discretion Policies With Respect to Premarket Review Requirements

FDA also generally intends to exercise enforcement discretion with respect to premarket review requirements for LDTs [28] that are approved by NYS CLEP.[29] For these LDTs, FDA intends to exercise enforcement discretion and generally not enforce premarket review requirements given certain risk mitigations under NYS CLEP as discussed further below. This policy applies only to the approved version of the test (FDA is aware that some laboratories may offer different versions of an LDT depending on whether a patient specimen comes from NYS or from elsewhere). This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

FDA intends to phase out the general enforcement discretion approach with respect to other applicable requirements for these tests consistent with the stages described in section V.C below. In brief, for these tests, FDA intends at stage 1 to phase out the general enforcement discretion approach with respect to MDR requirements, correction and removal reporting requirements, and QS requirements under § 820.198 (complaint files) 1 year after publication of this final rule; at stage 2 to phase out the general enforcement discretion approach with respect to requirements not addressed in the other stages (these requirements include, *e.g.,* registration and listing requirements and labeling requirements) 2 years after publication of this final rule; and at stage 3 to phase out the general enforcement discretion approach with respect to certain QS requirements (see below for further discussion) 3 years after publication of this final rule. See section V.C for further information.

As noted above, in the NPRM, FDA sought comment on whether it would be appropriate to continue the general enforcement discretion approach with respect to LDTs that are under NYS CLEP or certain other programs (88 FR 68006 at 68024), and we received several comments in response (see discussion in section VI.F.5 of this preamble). This policy reflects consideration of those comments. Should experience with this policy indicate that changes are warranted, FDA would consider appropriate policy changes through guidance in accordance with good guidance practices (see § 10.115).

FDA believes that NYS CLEP has a program that provides for certain mitigations that help reduce the risk of harm from inaccurate and unreliable LDTs. Specifically, as discussed further below, NYS CLEP has a program under which high risk and moderate risk LDTs generally are evaluated for analytical and clinical validity. Based on the available information, FDA believes that generally NYS CLEP's review of analytical and clinical validity of LDTs helps to mitigate the risk of harm from inaccurate and unreliable LDTs and that, rather than enforcing premarket review requirements by FDA, it would be more efficient and effective to use our resources for other oversight activities regarding IVDs offered as LDTs.

Under NYS CLEP's program, high risk LDTs require full technical review and approval prior to testing on specimens from NYS (Ref. 53). Moderate risk LDTs require full technical review but may receive conditional approval if the laboratory holds a permit in the appropriate category (Ref. 53). For classification as a moderate risk LDT under NYS CLEP, certain criteria must be met, *e.g.,* the LDT uses well-established methodology (as defined by NYS CLEP, this includes, among other things, the laboratory having demonstrated competence for development of LDTs of the same or similar technology through multiple prior high-quality submissions) (Ref. 53). Upon notification of a moderate risk classification and conditional approval, the laboratory may offer the test (Ref. 53). Once the full technical review has been completed, the moderate risk LDT may receive approval (Ref. 53). For additional information, see NYS CLEP's Tiered Evaluation of Laboratory Developed Tests Policy (Ref. 53).

In its enforcement discretion policy with respect to premarket review requirements, FDA is including not just those moderate risk LDTs that receive full approval by NYS CLEP but also those that receive conditional approval by that agency. For LDTs receiving conditional approval, full technical review is pending and these tests may receive approval by NYS CLEP once their review has been completed. FDA does not intend to use its resources to enforce premarket review requirements for these LDTs that are under review by NYS CLEP and may eventually receive approval. However, if an LDT has its conditional approval withdrawn by NYS (*e.g.,* because approval is denied after NYS CLEP completes the full technical review), the LDT would no longer be under this enforcement discretion policy as it would neither have conditional approval nor full approval.[30]

For purposes of full technical review (as mentioned above, this applies to high risk and moderate risk LDTs), NYS CLEP requires the submission of detailed information as specified in the applicable checklist (either the general checklist or test-specific checklist) (Ref. 24). For example, under the general checklist, laboratories must submit, among other things, a description of the test target, data supporting analytical validity, data supporting clinical validity, sample test reports, standard operating procedures, and other information regarding the subject test (Ref. 54). Additionally, laboratories must submit a ''Risk Attestation Form for Laboratory Developed Tests'' containing additional information about the test, including a summary of intended use (including target population, methodology and technology, specimen types, and whether the intend use makes claims or direct reference to recognized diseases/conditions), whether the laboratory has full approval of other LDTs using the same test method that is used for the proposed new test, whether the methodology is well-established in the laboratory and generally accepted by the field, evidence of clinical validity, and information regarding the potential impact of an inaccurate test result (Ref. 55).

NYS CLEP also has a process for laboratories to request an exemption from full technical documentation. As described on NYS CLEP's website, ''[o]nce acceptable method validation performance has been demonstrated by the NYS approval of a representative sampling of tests that utilize a

[28] Consistent with what FDA has generally considered to be an LDT (as discussed elsewhere in this preamble), this enforcement discretion policy applies only to tests that are designed, manufactured, and used within a single laboratory that is certified under CLIA and meets the regulatory requirements under CLIA to perform high complexity testing.

[29] As noted elsewhere in this preamble, for purposes of this preamble FDA uses the phrase ''LDTs approved by NYS CLEP'' to refer to LDTs that are approved, conditionally approved, or within an approved exemption from full technical documentation, under NYS CLEP. These three categories of LDTs are discussed further below in this section (section V.B.2). Other LDTs, including ''LDTs used in Clinical Trials'' and ''Tests Not Subject to Evaluation'' which are described on NYS CLEP's website (Ref. 24), are not considered ''LDTs approved by NYS CLEP'' and are not within the enforcement discretion policy with respect to premarket review requirements described in this section.

[30] Although not relevant to our decision-making with respect to our policy regarding LDTs approved by NYS CLEP, it is our understanding, based on consultation with NYS CLEP, that withdrawal of conditional approval due to approval being denied after NYS CLEP completes the full technical review is a rare occurrence.

methodology that is common across many analytes/targets, the laboratory may request an exemption from the requirement to submit full method validation documentation for future test/assays that utilize the same methodology'' (Ref. 24). An application for an exemption from full technical documentation must include: a written request for an exemption that identifies ''the previously submitted tests to be used as the predicate submissions for the exemption''; ''a standardized protocol for method validation to include a description of the laboratory's principles and practices for assay development and initial validation''; and ''laboratory-specific protocols for on-going validation, including quality control procedures and quality assurance indicators'' (Ref. 24). If an exemption is approved, then a streamlined process applies to new LDTs with the same methodology under the exemption. For such new LDTs, certain information must be provided, including data on analytical and clinical validity, but this can be provided in summary form (see the Add Under Exemption Form available on NYS CLEP's website, Ref. 24). The summary of the validation studies performed must address how analytical and clinical performance characteristics were established (see the Add Under Exemption Form available on NYS CLEP's website, Ref. 24). Additionally, for such new LDTs, laboratories must submit sample reports for all applicable findings (see the Add Under Exemption Form available on NYS CLEP's website, Ref. 24), a ''Risk Attestation Form for Laboratory Developed Tests'' containing additional information about the test, including information regarding the potential impact of an inaccurate test result (Ref. 55), and certain other information if applicable (Ref. 24). Although specific approval of new LDTs added under an approved exemption is not required, it is our understanding that NYS CLEP reviews the information submitted for these LDTs. Further, NYS CLEP reserves the right to rescind an exemption at any time (Ref. 24). Because NYS CLEP reviews the analytical and clinical validity of LDTs that are added under an approved exemption and may rescind an exemption at any time, FDA is including such LDTs within the enforcement discretion policy with respect to LDTs approved by NYS CLEP.

Based on the available information as discussed above, FDA believes that generally NYS CLEP's review of analytical and clinical validity of LDTs helps to mitigate the risk of harm from inaccurate and unreliable LDTs. First, NYS CLEP reviews much of the same information that FDA reviews in assessing analytical and clinical validity (*e.g.,* data supporting analytical validity, data supporting clinical validity, sample test reports, and standard operating procedures). For example, in comments submitted to the docket for this rulemaking, NYS CLEP explained, ''Applications must include validation data throughout the reportable range, particularly at or near the limit of detection, and for intended specimen types, specimen stability range, clinical indications, and target populations (pediatric vs adult, symptomatic vs asymptomatic, varied ethnicities, etc.).'' Second, NYS CLEP is identifying many of the same types of issues that FDA has identified with LDTs. In their comments, NYS CLEP provided a detailed description of the issues they have identified when reviewing LDT applications. For example, NYS CLEP noted that more than half of the LDTs submitted for their review cannot be approved based on the original application. For such applications, NYS CLEP requests additional information, sometimes multiple times, to address a range of issues, including ''design flaws, inadequate validation data, and process problems that call into the question the reliability of the results.'' These are the same types of issues FDA has observed in the review of emergency use authorization (EUA) requests from laboratories for molecular tests for COVID–19 (see Ref. 18) and in other premarket submissions for LDTs (see Ref. 16). Additionally, FDA collaborated with NYS CLEP in the review of the first authorized tumor profiling test and found substantial alignment in FDA's and NYS CLEP's assessments of the analytical and clinical validity of this LDT for tumor profiling. FDA has also accredited NYS CLEP as a Third Party Review Organization accredited under FDA's Third Party review program (3P510K Review Organization) qualified to conduct reviews of 510(k)s for certain IVDs. Accreditation of 3P510K Review Organizations is based on many factors, including qualification of staff in the scientific disciplines relevant to the review of the specific device types that the 3P510K Review Organization intends to review (Ref. 56). In the case of IVDs, the 3P510K Review Organization must be qualified to assess the analytical and clinical validity of tests which NYS CLEP was able to demonstrate.

Exercising enforcement discretion with respect to the premarket review requirements for LDTs approved by NYS CLEP will facilitate more efficient use of FDA resources. The resources that FDA would otherwise spend on premarket review of such LDTs can instead be focused on premarket review of other IVDs offered as LDTs and enforcement of other applicable requirements. FDA estimates that 12.1 percent of IVDs offered as LDTs would not experience new costs associated with submission preparation and review as a result of the enforcement discretion policy with respect to LDTs approved by NYS CLEP, as discussed in appendix A of the FRIA (Ref. 10).

As mentioned above, FDA intends to phase out the general enforcement discretion approach with respect to other applicable requirements for LDTs approved by NYS CLEP, consistent with the stages described below in section V.C. Enforcement of other requirements will help to protect and promote the public health, *e.g.,* by providing FDA and the public with important information about these tests. For example, compliance with registration and listing requirements will provide FDA and the public with basic information on these LDTs, and compliance with MDR requirements will provide FDA and the public with adverse event information about these LDTs. Further, under § 807.26(e) (21 CFR 807.26(e)) (additional device listing information), FDA intends to request the labeling for these LDTs, which will provide information on test performance and a summary of the supporting validation, among other things.[31] Additionally, compliance with labeling requirements, including those in § 809.10(b)(12), will help to ensure that healthcare providers and patients have information on test performance, among other things, and thus enable more informed decision making. The labeling information and adverse event reports will help FDA identify LDTs that raise concerns, *e.g.,* concerns regarding insufficient validation or inaccurate

[31] Devices licensed under section 351 of the PHS Act register and list pursuant to part 607 (21 CFR 607.1 and 807.20(e)), which does not contain a provision identical to 21 CFR 807.26(e). Most licensed IVDs are tests intended for use as blood donor screening tests or HCT/P donor screening tests subject to § 610.40 and 1271.80(c), respectively, or tests for determination of blood group and Rh factors subject to § 640.5. As explained in the NPRM (88 FR 68006 at 68021), FDA's general enforcement discretion approach for LDTs has never applied to such tests. Therefore, we anticipate that there would be a limited number of IVDs subject to the registration and listing requirements in part 607 that would fall within this policy or other policies for which FDA intends to request laboratories to provide labeling information in connection with listing the device. Should FDA receive listing information under part 607 for an IVD that is not licensed, we will consider if any additional action is appropriate, including with respect to information regarding IVD performance.

results. Compliance with the QS requirements that FDA intends to enforce for these LDTs will help provide for quality manufacturing of these tests. As discussed in section V.C, for LDTs, FDA generally will expect compliance at the 3-year mark with some, but not all, of the QS requirements (specifically, design controls, purchasing controls, acceptance activities, corrective and preventive actions (CAPA), and records requirements). This includes for LDTs approved by NYS CLEP. However, it is our understanding, based on consultation with NYS CLEP, that compliance with NYS CLEP's clinical laboratory standards (which exceed CLIA requirements in certain respects) and its premarket review requirements collectively could generally satisfy these subparts of the QSR except as to certain aspects of design control documentation. Therefore, although not relevant to our decision-making with respect to our policy regarding LDTs approved by NYS CLEP, FDA does not anticipate significant additional burden with respect to compliance with these QS requirements for laboratories offering LDTs approved by NYS CLEP.

Finally, as noted elsewhere in this preamble, regardless of this or any other enforcement discretion policy, FDA retains discretion to pursue enforcement action at any time against violative IVDs when appropriate. We intend to carefully monitor tests falling within this policy and to take action when appropriate to protect the public health.

3. Enforcement Discretion Policies With Respect to Premarket Review and Certain QS Requirements

FDA also intends to exercise enforcement discretion and generally not enforce premarket review and most QS requirements for three categories of IVDs. These enforcement discretion policies have been added to the final phaseout policy after consideration of comments received on the NPRM.

First, for the reasons discussed further below, FDA intends to exercise enforcement discretion and generally not enforce premarket review requirements and QS requirements (except for requirements under part 820, subpart M (Records)) [32] for LDTs manufactured and performed by a laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system. This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

In the NPRM, FDA discussed LDTs for unmet needs, stating that a specific enforcement discretion policy for such LDTs was not included in the proposed phaseout policy because we anticipated that programs currently in place (*e.g.,* the Humanitarian Use Devices (HUD)/HDE program and the Breakthrough Devices program) may facilitate the development and premarket authorization of IVDs for unmet needs.[33] *See* 88 FR 68006 at 68026. We received over 100 comments addressing whether FDA should adopt a specific enforcement discretion policy for LDTs for unmet needs (see section VI.L.5). In particular, we received numerous comments that asserted that the perceived burden of premarket review and QS requirements would lead laboratories to stop developing such LDTs, leaving patients without access to the LDTs they need. For this reason, many comments recommended that FDA adopt an enforcement discretion policy for LDTs for unmet needs. Two public interest groups recommended against adopting a separate policy for LDTs for unmet needs for various reasons, including so that LDTs for patients with unmet needs would have the same assurances of safety and effectiveness as LDTs for other patients. Stakeholders further commented that the existing HUD/HDE and Breakthrough Devices programs are insufficient to mitigate the perceived burden that laboratories face with respect to development of LDTs for unmet needs. Specifically, commenters noted the numerical limit of 8,000 tests nationwide per year is too restrictive, the requirements for use of tests under HDE (*e.g.,* institutional review board approval) dissuade physicians from using them, and the program has only been used for 6 IVDs despite existing for over 30 years. We also received information in comments indicating that laboratories integrated within healthcare systems, including AMCs, often make tests to meet the unique needs of their patients, and that patients may be referred to those systems because of their ability to meet patient needs that cannot be met elsewhere. The comments stated that this is often the case for patients with rare diseases for which the market is so small that there is no financial incentive for non-laboratory manufacturers to meet their needs and for which collecting data to validate a test is particularly challenging due to small patient populations (for example, rare immunohematology problems, Huntington disease, Prader-Willi/Angelman syndrome, and genetic tests for certain cancers).

With respect to AMCs in particular, the Agency sought comment in the NPRM on whether FDA should have a different enforcement policy for tests manufactured by AMC laboratories. *See* 88 FR 68006 at 68023–24. We asked about various aspects of such a policy, including whether any continued enforcement discretion policy should take into account ''whether an FDA cleared or approved test is available for the same intended use as the test manufactured by an AMC laboratory,'' and the public health rationale for how integration of a laboratory into patient care might support a different approach for tests manufactured by AMC laboratories. *Id.* at 68024. We received over 100 comments addressing whether FDA should adopt a specific enforcement discretion policy for tests offered by AMC laboratories and/or other laboratories integrated within healthcare systems (see section VI.F.4 of this preamble). Many of the comments we received addressing whether FDA should adopt a specific enforcement discretion policy for LDTs for unmet needs addressed LDTs for unmet needs manufactured by AMC laboratories/other laboratories integrated within healthcare systems. These comments were from patients, healthcare providers, AMCs, other healthcare systems, and various entities representing such groups.

The majority of comments recommended that FDA adopt an enforcement discretion policy specific to tests manufactured by AMC laboratories given risk mitigations provided by the integration of the laboratory within the AMC that is providing care to the patient. Many comments stated that because other laboratories are similarly integrated within healthcare systems, any such enforcement discretion policy should not be limited to AMC laboratories. Many of these comments emphasized the built-in communication mechanisms between the laboratory and AMC/other healthcare system within which the laboratory is integrated. For example:

- ''[T]he close connection between the clinical pathologists developing the tests and the care providers at AMCs

[32] As noted in footnote 17, for the categories of IVDs discussed in section V.B.3, FDA generally expects compliance with requirements under part 820, subpart M (Records) but not §§ 820.20, 820.22, 820.40, and 820.50 (which are cross-referenced in subpart M), or comparable provisions of ISO 13485 in accordance with the amendments to part 820 once that rule takes effect in February 2026.

[33] As described in the NPRM, FDA considered a possible premarket-review approach specific to LDTs for unmet needs in the ''Discussion Paper on Laboratory Developed Tests (LDTs)'' issued by the Agency on January 13, 2017 (2017 Discussion Paper) (Ref. 57) (88 FR 68006 at 68026).

further validates the alignment between diagnostic results and clinical presentation and helps to provide real-time feedback to the LDT developers on test performance and outcomes.''

- ''As hospital-based labs, we are integrated into patient care within the healthcare system. Treating clinicians will contact us directly when tests don't make sense and we adjust our testing strategies if needed. I personally get around 3–10 questions per week from clinicians as a laboratory medical director. At AMCs, while we implement LDTs we seek information and feedback from our clinical colleagues . . . . This direct connection and information flow allows for quality control and real-time communication if a test is not performing as expected.''
- ''As a CLIA director of a hospital-based lab, I occasionally see patients with specimens that were sent to our laboratory as well as an off-site, disconnected reference lab for the same test at nearly the same time. The results are often not consistent. I am able to investigate further by getting a new specimen and communicating with the clinician about the patients' signs, symptoms, and radiology results. I review our other test results, including some of our other LDTs. The reference labs are often not aware of the issues because they do not have the same line of communication and access to the electronic health record. They continue to offer the same test with no knowledge of the problem.''
- ''There is a direct connection or ability to directly connect between the laboratory provider/director and the treating clinician, and laboratory professionals have access to patient electronic medical records, details of which often inform the nuance of laboratory testing that is managed locally. This direct connection and information flow allows for quality control that cannot be engendered by an off-site, disconnected reference lab model for testing and allows for issues associated with any particular testing modality to be identified; thus it provides quality control at both the patient and assay level.''

Several comments recommended against a separate enforcement discretion policy for tests manufactured by AMC laboratories, including because they argued that AMC laboratory tests have the same problems as other IVDs (which FDA acknowledged in the context of the COVID–19 pandemic) and having the same enforcement policies for these tests as for other tests will level the playing field and promote the development of new and improved tests.

As an initial matter, we understand that laboratories that develop LDTs for unmet needs, often laboratories integrated within a healthcare system, may be more likely to stop developing many of these LDTs for unmet needs if the proposed phaseout policy were finalized. The cost of compliance with premarket review and QS requirements may be deemed too high given the limited market for many of these LDTs for unmet needs, and so laboratories may not have financial incentives to develop these types of LDTs in particular (for example, FDA's primary estimates anticipate the cost per premarket submission to range from approximately $250,000 to $4.5 million depending on the type of submission required, in addition to costs associated with QS requirements, annual reporting requirements (for PMAs) and applicable user fees, as described in sections II.F.3, II.F.4 and II.H of the FRIA (Ref. 10)). In their comments, various laboratories noted challenges and limitations associated with the HDE pathway that would dissuade them from seeking HDE approval for their LDTs. Specifically, commenters noted the numerical limit of 8,000 tests nationwide per year is too restrictive in that it applies to the cumulative testing volume of all patients who would be tested with a diagnostic device annually, and the requirements for use of tests under HDE (*e.g.,* administration of the test in a facility having oversight by an institutional review board, monitoring whether the national testing volume exceeds 8,000 patients per year, and limitations on profit, etc.) dissuade laboratories from developing such tests and submitting them for HDE approval. Although we think that the HDE pathway could help to facilitate the manufacture and premarket authorization of certain LDTs for unmet needs, based on these comments, we are concerned that many laboratories would stop manufacturing LDTs for unmet needs altogether, instead of seeking HDE approval for the LDTs, in light of the perceived financial costs of premarket review and QS requirements. Moreover, although we think that the Breakthrough Devices program would help to facilitate the premarket review process for LDTs for unmet needs, again based on the comments, we are concerned many laboratories would stop manufacturing LDTs for unmet needs altogether if they are expected to comply with premarket review and QS requirements.

As such, and upon further consideration, FDA has determined that a targeted enforcement discretion policy is appropriate to help avoid patients being deprived of critically needed LDTs where certain risk mitigations exist. Specifically, FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records)) for LDTs manufactured and performed by a laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system. FDA intends to phase out the general enforcement discretion approach for these LDTs with respect to all other applicable requirements consistent with the stages described in section V.C. Should experience with this policy indicate that changes are warranted, FDA would consider appropriate policy changes through guidance in accordance with good guidance practices (see § 10.115).

This policy is limited to LDTs for patients who are receiving care within the healthcare system within which the laboratory offering the LDT is integrated. FDA does not consider this to include patients that are being treated at an affiliated hospital with different corporate ownership than the laboratory. Where the laboratory and the treating physicians are in the same corporate entity, there is shared responsibility and potential liability for patient outcomes, which helps mitigate risk. Moreover, the policy is limited to LDTs that are ordered by a healthcare practitioner on the staff or with credentials and privileges at a facility owned and operated by the same healthcare system employing the laboratory director and performing the LDT. In these circumstances, FDA believes that the risk mitigations present help to address some of the concerns raised regarding problematic IVDs offered as LDTs discussed in the NPRM and this preamble.

For LDTs manufactured and performed by laboratories integrated within healthcare systems, FDA generally has greater confidence that ordering physicians will communicate any questions about LDTs or concerns regarding the safety and effectiveness of the LDT (*e.g.,* when the patient's symptoms point to another diagnosis; when subsequent test results contradict the original test result) to a laboratory given the built-in communication mechanisms present. Moreover, FDA generally has greater confidence that laboratories will communicate any limitations of the LDT or other relevant information to the ordering physician given these mechanisms. We think this is particularly likely to happen in the context of LDTs for unmet needs, which

are likely to be a focus of attention and communication between laboratorians and providers given the uncommon nature of the issues presented.

Communication from ordering physicians to laboratories may help laboratories to identify any problems with their LDT and make necessary adjustments, improvements, and other changes to the LDT. Although we acknowledge that any identification and subsequent modification of the LDT would happen postmarket, and thus would not prevent potentially problematic LDTs from ever being used, subsequent modification would benefit future patients and providers who are relying on the LDT. In addition, communication from laboratories to ordering physicians may help to underscore to the ordering physicians any limitations with the LDT and provide other relevant information to ordering physicians, for example that is specific to the unique needs of their patient, which in turn should help inform appropriate use and interpretation of the LDT.[34]

We believe that generally these features associated with integration of a laboratory within the healthcare system, along with enforcement of other applicable regulatory requirements as described in the phaseout policy (see section V.C), help to mitigate the risk of harm from inaccurate and unreliable LDTs. While we recognize that these features do not mitigate all risk and there may still be some uncertainty about the performance of LDTs that fall within this policy, we believe that these features support an enforcement discretion policy for premarket review and most QS requirements in the specific context of LDTs for unmet needs.

This policy is limited to LDTs for unmet needs. FDA considers an LDT to be for an unmet need where there is no available FDA-authorized IVD that meets the patient's needs. This may be because: (1) there is no FDA-authorized IVD for the disease or condition (for example, because it is for a rare disease or condition); (2) there is an FDA-authorized IVD for the disease or condition but it is not indicated for use on the patient, or a unique attribute needs to be added to the LDT to meet the patient's needs; or (3) there is an FDA-authorized IVD but it is not available to the patient. Examples of LDTs for unmet needs are:

- An LDT that is intended for cytogenetic analysis of certain genes and chromosomes associated with rare diseases or conditions, certain metals testing, viral load monitoring for some transplant-associated viruses, or diagnosis of certain mosquito- and tick-borne-diseases, where there is no FDA-authorized IVD for the disease/condition (*rare disease or condition*);
- An LDT to accommodate an alternative specimen type that is infrequently tested when the specimen type required for the FDA-authorized IVD is not and cannot be made available (*variation from the indications for use of an FDA-authorized IVD*);
- An LDT for use on pediatric patients when FDA-authorized IVDs are indicated for use on adults only (*variation from the indications for use of an FDA-authorized IVD*);
- An LDT that generates results in a significantly shorter period (*e.g.,* hours versus days) than an FDA-authorized IVD with the same indication where, due to the circumstances of the patient, the shorter time period to get results is critical for the clinical decision being made (*unique attribute needed to be added to an FDA-authorized IVD*);
- An LDT for the same indication as an FDA-authorized IVD that is offered only in another healthcare system that is not accessible to the patient and the developing laboratory will not make the IVD available outside its system (*FDA-authorized IVD is not available*); and
- An LDT for an emerging pathogen for which there is no FDA-authorized IVD and for which FDA has not identified an emergent situation (*no FDA-authorized IVD*).

In contrast, FDA does not consider an LDT to be for an unmet need when there is an available FDA-authorized IVD that would sufficiently meet the needs of the patient. For example, potential improvements in performance or lower cost in comparison to an FDA-authorized IVD that meets the patient's needs does not fall within this policy.

FDA intends this policy to be targeted. It is not intended to serve as an alternative ''pathway'' to market for LDTs for unmet needs. FDA intends to provide additional guidance on this enforcement discretion policy, which would be issued in accordance with good guidance practices (see § 10.115).

We note that if there is no longer an unmet need for an LDT because, for example, FDA authorizes an IVD that meets the needs of the patient, then the LDT would no longer fall within this enforcement discretion policy. This will encourage manufacturers, including the manufacturers of LDTs falling within this policy, to seek premarket authorization, without delaying patient access to the LDT. It also will provide patients and providers with greater confidence that once an IVD has been authorized by FDA, all similar devices, regardless of who makes them, should have appropriate assurance of safety and effectiveness because all such devices should comply with premarket review and QS requirements. Moreover, such a limitation helps to ensure that the enforcement discretion policy will ultimately target only those LDTs where there is insufficient financial incentive to seek authorization for the LDTs (in such cases, there is unlikely to ever be an available FDA-authorized IVD).

Notably, this unmet needs LDT policy applies only to LDTs that are validated. We acknowledge that validation may vary depending on many factors, including the accessibility of specimens and the number of affected patients. FDA intends to consider whether issuing additional guidance regarding validation of tests, including those for rare diseases that takes into consideration the challenges in obtaining a robust number of samples for validation, would be helpful.

In developing this policy, FDA took into consideration various factors that mitigate the risk that LDTs offered as described in this policy may not have appropriate assurance of safety and effectiveness. As an initial matter, the phaseout of the general enforcement discretion approach for all other applicable requirements will provide greater assurances regarding these LDTs than the Agency, healthcare providers, and patients currently have. Compliance with registration and listing requirements, for example, will provide FDA and the public with insight into what LDTs for unmet needs are being offered by laboratories integrated within healthcare systems. Moreover, compliance with labeling requirements, including those in § 809.10(b)(12), will help to ensure that healthcare providers and patients have information on the performance of the LDT and thus will help to enable more informed decision making. In addition, FDA generally intends to request that laboratories that offer LDTs as described in this policy submit labeling information to FDA in

[34] *See* Ref. 58 (''more aggressive laboratory involvement in [the interpretation and reporting] step may be necessary to ensure a more nearly perfect hit rate on proper interpretation and action after reporting of laboratory results''); *see also* Ref. 59. Shaw and Miller compared hospital laboratories and hospital-independent reference laboratories, and highlighted the following advantages, among others, of the former over the latter: (1) tracking problems (hospital laboratories ''[c]an easily work with medical and nursing services to coordinate patient care efforts'' whereas hospital-independent reference laboratories ''[c]an only track internal problems effectively'') and (2) physician consultation (this is ''[r]eadily available'' for hospital laboratories whereas it is ''[n]ot as readily available'' for hospital-independent reference laboratories).

connection with the listing of the device as provided in § 807.26(e) (this regulation is discussed above). This labeling will facilitate FDA surveillance for potentially poor performing LDTs that should otherwise be addressed.

Finally, as noted elsewhere in this preamble, regardless of this or any other enforcement discretion policy, FDA retains discretion to pursue enforcement action at any time against violative IVDs when appropriate. We intend to carefully monitor LDTs falling within this policy and intend to take action regarding such LDTs as appropriate taking into account any public health concerns as evaluated on a case-by-case basis.

We considered various alternative policies proposed in comments regarding LDTs for unmet needs and LDTs manufactured by AMC laboratories or laboratories integrated within other healthcare systems, but we believe this policy best serves FDA's public health mission by helping to assure the safety and effectiveness of LDTs while also accounting for patient access. For example, an enforcement discretion policy whereby FDA generally does not enforce premarket review and most QS requirements for *any* LDT manufactured by AMC laboratories and laboratories integrated within other healthcare systems would appear to be overly broad, including because it would encompass LDTs for which there are FDA-authorized alternatives that we know have appropriate assurances of safety and effectiveness. Similarly, an enforcement discretion policy whereby FDA generally does not enforce premarket review and most QS requirements for *all* LDTs for unmet needs would also appear to be overly broad, as there are not the same risk mitigations present for all such LDTs that would help address and avoid the use of problematic LDTs. We also considered several narrower enforcement discretion policies, such as an enforcement discretion policy where a premarket submission would be expected *after* an LDT is offered for use and where the LDT is offered until FDA makes a final decision on the LDT (see, *e.g.,* the 2017 Discussion Paper (Ref. 57)) or a longer phaseout policy for QS requirements. We do not think such policies would make sense here because many laboratories would likely be dissuaded from developing LDTs in this space if compliance with premarket review and QS requirements is routinely expected at any point in time due to the lack of financial incentives and perceived costs associated with premarket review and QS requirements.

Second, FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records)) [35] for currently marketed IVDs offered as LDTs that were first marketed prior to the date of issuance of this rule (hereinafter, ''currently marketed IVDs offered as LDTs''). FDA intends for this policy to apply to currently marketed IVDs offered as LDTs as long as they are not modified following the issuance of this final rule, or are modified but only in certain limited ways that are described below. This enforcement discretion policy does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

As part of this policy, FDA intends to request submission of the labeling for currently marketed IVDs offered as LDTs under § 807.26(e) and to use this information, along with information obtained through laboratory compliance with other relevant requirements (such as adverse event reporting), to identify and address those currently marketed IVDs offered as LDTs that specifically raise concerns. We recognize that patients, the healthcare community, and the laboratory industry have likely made decisions in reliance on access to, or the continued manufacturing of, many currently marketed IVDs offered as LDTs, and that loss of beneficial currently marketed IVDs offered as LDTs could cause harm and undermine those reliance interests. We believe this policy appropriately balances the various competing interests at issue to best serve public health because it helps facilitate continued access to those IVDs offered as LDTs that are beneficial while incorporating targeted use of available tools to identify and act against currently marketed IVDs offered as LDTs that are problematic. As IVDs evolve, compliance with premarket review and QS requirements will be phased in according to the natural lifecycle of test development and use.

FDA is adopting this policy after a review of the comments, which leads us to conclude that an expectation of compliance with premarket review and QS requirements for currently marketed IVDs offered as LDTs may be more harmful than helpful to the public because, for example, it will prompt many laboratories to stop offering tests even if they are safe and effective. One commenter stated that ''[i]f the rule is implemented, it is likely that we would consider no longer offer [*sic*] [IVDs offered as LDTs] due to the administrative and financial burdens of the regulations.'' Another commenter stated that ''the most prominent reason [the proposed rule should not move forward] is that patient care will suffer as most small laboratories will be forced to close because of increased cost and need to reduce their test menu.'' These comments corresponded to data in FDA's Preliminary Regulatory Impact Analysis (PRIA) suggesting a potentially high burden on laboratories associated with compliance for currently marketed IVDs offered as LDTs—a burden that could potentially cause some laboratories (particularly small laboratories) to close (Ref. 60). As reflected in section II.F of the FRIA (Ref. 10), a significant fraction of the estimated overall costs of compliance with applicable requirements under the FD&C Act and FDA's regulations is attributable to premarket review (where applicable) and QS requirements. Specifically, out of the total estimated discounted costs to industry of $1.17 billion, the average estimated costs of compliance with stages 1 and 2 of the phaseout policy (as described in section V.C below) are approximately $9,522 per test ($74,783 per laboratory) and the average estimated costs of compliance with premarket review and QS requirements are approximately $3.02 million per test ($1.26 million per laboratory).

In the NPRM and this preamble, FDA explained that relevant evidence points to a high degree of variability in the performance of IVDs offered as LDTs today, but FDA does not take the view that all laboratory-manufactured IVDs are problematic (see, *e.g.,* 88 FR 68006 at 68010–68012 and responses to comments 28, 32–33). We believe that an appreciable proportion of IVDs currently offered as LDTs likely help patients and are important to patient care (see section II.E.1 of the FRIA (Ref. 10)), and as noted above, we understand that patients, the healthcare community, and the laboratory industry have likely made decisions in reliance on access to, or the continued manufacturing of, such IVDs. The loss of such IVDs could cause harm and undermine those reliance interests.

FDA is aware, for instance, that certain patients may have embarked on a course of treatment in reliance on regular testing to help monitor their treatment or condition, and the loss of that testing could pose serious risks and

[35] As noted in footnote 17, for the categories of IVDs discussed in section V.B.3, FDA generally expects compliance with requirements under part 820, subpart M (Records) but not §§ 820.20, 820.22, 820.40, and 820.50 (which are cross-referenced in subpart M), or comparable provisions of ISO 13485 in accordance with the amendments to part 820 once that rule takes effect in February 2026.

complications for that patient. For example, consistent access to tests that are already being used to measure plazomicin to aid in the management of patients with complicated urinary tract infection receiving plazomicin therapy and tests to measure levels of immunosuppressants—such as cyclosporine, tacrolimus, everolimus, and sirolimus—in transplant patients are important for treating physicians to make well-informed treatment decisions for those patients. In the context of patients receiving tests that are not well-standardized to monitor their diseases or conditions, consistent access to the same test at the same laboratory over time is also important for treating physicians to make accurate diagnostic and treatment decisions. Examples of such tests include thyroid hormone tests that are used to monitor thyroid disease, adrenal function tests that are used to monitor adrenal disorders, and flow-cytometry-based minimal residual disease tests that are used to monitor patients with cancer that have undergone treatment to determine if they are at risk for relapse.

FDA also recognizes that healthcare professionals may have made significant financial investments in reliance on access to certain tests (*e.g.,* contracts for certain tests that they need for long-term patient monitoring, where such monitoring must continue with the same test because test results are compared over time and results from a different test are not interchangeable), and that the loss of access could harm their practice and, ultimately, the patients they serve. In addition, laboratories may have made financial investments and other decisions based on a past assumption about the presence of the general enforcement discretion approach.

In light of these reliance considerations and, in particular, the risk that laboratories may stop offering safe and effective tests on which patients and the healthcare community currently rely, we do not think it is appropriate to expect compliance with premarket review and most QS requirements for all currently marketed IVDs offered as LDTs. Instead, we have determined it is in the best interest of the public health to expect compliance with premarket review and QS requirements in a more targeted fashion—*i.e.,* for those currently marketed IVDs offered as LDTs that specifically raise concerns. As new IVDs come on the market following issuance of this rule, they will be expected to comply with premarket review and QS requirements—in accordance with the phaseout policy—gradually phasing in those requirements for the overall market. In the meantime, compliance with other applicable requirements will help enable FDA to identify and address safety and effectiveness problems that may arise.

In deciding on this policy, FDA considered alternatives to address the concerns identified above, including the risk of market exit, such as: (1) extending the phaseout timeline to give more time for currently marketed IVDs offered as LDTs to come into compliance with premarket review and QS requirements and (2) expecting compliance with premarket review and QS requirements only for high-risk currently marketed IVDs offered as LDTs. However, based on FDA's economic projections, neither of these alternatives resolves the concern about market exit resulting in loss of access to beneficial IVDs on which patients and others currently rely because neither substantially changes the economic burden on laboratories. For example, under Alternative 3 in section II.J of the PRIA, FDA evaluated the reduction in burden of an extended phaseout policy, and based on the calculations there, we doubt that the reduction would be sufficient to prevent the outcomes described above (see Ref. 60). In addition, the PRIA shows that the greatest costs in the phaseout policy are those associated with high-risk IVDs, so a policy that involves compliance for currently marketed high-risk IVDs offered as LDTs also would not resolve the concern about market exit. Given this information, and given the information we received in comments, FDA has concluded that the best course is to adopt the policy for currently marketed IVDs offered as LDTs outlined above. (This policy is keyed to the date of this final rule, rather than the proposed rule, because patients and the healthcare community may have begun relying on IVDs during the period between publication of the proposed and final rule.)

Based on FDA's understanding of the current IVD industry, we expect IVDs offered as LDTs to continue to advance to meet new patient needs, accommodate new technologies, and incorporate the latest scientific findings. Under this policy for currently marketed IVDs offered as LDTs, when such IVDs are modified in certain significant ways that would, under FDA requirements, generally prompt the need for premarket review relative to the original currently marketed IVD, FDA expects laboratories to comply with premarket review and QS requirements for that modified IVD. This policy is intended to preserve access to beneficial IVDs on which patients and the healthcare community currently rely, including versions of that IVD with minor changes. However, we expect compliance with premarket review and QS requirements once the IVD is changed in certain, more significant ways that could affect its basic safety and effectiveness profile. In particular, under this policy, FDA generally expects compliance with premarket review and QS requirements for currently marketed IVDs offered as LDTs when a laboratory's modifications (individually or in aggregate):

- change the indications for use of the IVD;
- alter the operating principle of the IVD (*e.g.,* changes in critical reaction components);
- include significantly different technology in the IVD (*e.g.,* addition of artificial intelligence or machine learning to the test algorithm, a change from targeted sequencing to whole genome sequencing, a change from immunoassay to mass spectrometry, or a change from manual to automated procedures); or
- adversely change the performance or safety specifications of the IVD.[36]

FDA believes this approach appropriately limits the scope of this policy and reduces the risk for patients.

As noted above, FDA also intends to take targeted steps to address currently marketed IVDs offered as LDTs that are problematic. In particular, we intend to use available tools to identify and act against currently marketed IVDs offered as LDTs that specifically raise concerns, such as IVDs that are potentially inaccurate or poorly validated. In this way, FDA can work to assure the safety and effectiveness of currently marketed IVDs offered as LDTs without creating the risk of widespread market exit. FDA has a range of tools to assist in this effort.

First, FDA intends to request that laboratories offering currently marketed IVDs offered as LDTs submit labeling to FDA as provided in § 807.26(e). Labeling includes IVD performance information and a summary of supporting validation, as applicable. This information will help FDA more closely monitor currently marketed IVDs offered as LDTs and identify those that may lack analytical validity, clinical validity, or safety. As part of its review of labeling, FDA also intends to

[36] Under FDA regulations, the listed modifications to an IVD would generally require a new submission, such as a new 510(k), PMA, BLA, or De Novo, or certain types of PMA or BLA supplements. *See, e.g.,* 21 CFR 601.2, 601.12, 807.81(a)(3), 814.39, and 860.200; see also ''Deciding When to Submit a 510(k) for a Change to an Existing Device'' (Ref. 61).

look closely at claims of superior performance and whether those claims are adequately substantiated.[37] Such claims are of particular public health concern because, in FDA's experience, they have led to escalating claims from competitors that can ultimately mislead the public. FDA generally intends to take action where the labeling of a currently marketed IVD offered as an LDT is false or misleading, and/or the IVD offered as an LDT lacks the appropriate assurance of safety and effectiveness for its intended uses as a result of any such claims that are not adequately substantiated.

Second, FDA intends to enforce records requirements in part 820, subpart M, for manufacturing activities related to a currently marketed IVD offered as an LDT that occur after the date of issuance of this final rule. Compliance with these requirements will facilitate FDA's review of these IVDs during inspections, enabling FDA to understand the validation bases and processes underlying these IVDs, and will support appropriate adverse event reporting (MDRs).

Third, under the policy, FDA expects laboratories to comply with applicable requirements other than premarket review and most QS requirements, including MDR requirements, corrections and removals reporting requirements, registration and listing requirements, and labeling requirements. Compliance with these requirements will provide FDA with additional important information regarding currently marketed IVDs offered as LDTs, such as information enabling FDA to track adverse-event trends.

Finally, based on our experience with other devices, we anticipate that laboratory manufacturers will alert us to potential problems with their competitors' IVDs once IVD performance information is transparent, which will help direct FDA's attention to problematic tests.

FDA emphasizes that these tools are not a substitute for premarket review or full QS compliance. FDA continues to believe that premarket review and full QS compliance are important tools to help assure the safety and effectiveness of IVDs going forward. However, there are sufficient countervailing reasons to take a more targeted approach for currently marketed IVDs offered as LDTs, including the risk of market exit and the potentially significant reliance on currently marketed IVDs offered as LDTs. Thus, FDA has determined that the enforcement discretion policy outlined above best serves public health.

The third category of tests for which FDA intends to exercise enforcement discretion and generally not enforce premarket review and QS requirements (except for requirements under part 820, subpart M (Records))[38] is non-molecular antisera LDTs[39] for rare RBC antigens when such tests are manufactured and performed by blood establishments, including transfusion services and immunohematology laboratories[40] and when there is no alternative IVD available to meet the patient's need for a compatible blood transfusion. This policy does not apply to molecular tests used for genotyping RBC antigens. This policy also does not apply to any IVDs identified in section V.A.2 as falling outside the scope of the phaseout policy or as discussed in section V.B.

Some individuals develop antibodies to certain antigens that they lack on their own RBCs following exposure to foreign RBC antigens through blood transfusion or pregnancy. These may be clinically significant, causing a hemolytic transfusion reaction if the patient receives a transfusion of RBCs that have the corresponding antigen(s). As of July 2023, there are currently 45 recognized blood group systems containing 360 RBC antigens (Ref. 63). FDA understands that there are occasions where licensed antisera IVDs are not available for rare RBC antigens but testing for such rare antigens is necessary to help ensure that patients receive a compatible blood transfusion[41] and avoid potentially life-threatening reactions. Although FDA has also approved molecular tests for use in genotyping RBC antigens, there may not be an available, approved molecular test to use as an alternative for all rare antigens.

FDA is adopting this policy after consideration of comments that requested that FDA continue to exercise enforcement discretion with respect to antisera LDTs for rare RBC antigens and/or molecular tests for genotyping rare RBC antigens. This included comments pointing to FDA's existing 2018 final guidance (Ref. 64), which, among other things, recognized that blood establishments sometimes use unlicensed antisera tests or unapproved molecular tests for RBC antigen typing in circumstances where a licensed reagent for a rare antigen is not available.

The non-molecular antisera LDTs within the scope of this policy share certain characteristics with ''1976-Type LDTs,'' as they use manual techniques performed by laboratory personnel with specialized expertise. For such LDTs, in instances where there is no available alternative to ensure that a patient receives a compatible transfusion, FDA has determined it is in the best interest of public health to adopt this enforcement discretion policy. However, this policy does not apply to molecular tests for genotyping RBC antigens. Compared to serologic tests, molecular RBC typing is a relatively new and complex technique for detection of RBC antigens. Some limitations of molecular RBC typing tests include that the genotype does not always correlate with the phenotype due to samples with rare null phenotypes, and the assay may not be designed to detect all rare or new variants of an antigen. As such, FDA has greater concern regarding risk of error with molecular tests for genotyping RBC antigens that do not comply with applicable FDA requirements.

For LDTs offered as described in this policy, FDA expects the LDT to be validated. As discussed previously, we acknowledge that such expectations may vary depending on many factors, including the accessibility of specimens and the number of affected patients.

In addition, this enforcement policy applies only to premarket review and QS requirements (except for

[37] *See, e.g.,* FDA, Final Guidance for Industry: Medical Product Communications That Are Consistent With the FDA-Required Labeling—Questions and Answers at 18 (June 2018) (''[P]romotional material is misleading'' when ''it makes a claim of superior effectiveness for Drug A versus Drug B based on a study that was not designed to establish superiority of Drug A to Drug B.''). *See* Ref. 62.

[38] As noted in footnote 17, for the categories of IVDs discussed in section V.B.3, FDA generally expects compliance with requirements under part 820, subpart M (Records) but not §§ 820.20, 820.22, 820.40, and 820.50 (which are cross-referenced in subpart M), or comparable provisions of ISO 13485 in accordance with the amendments to part 820 once that rule takes effect in February 2026.

[39] Consistent with what FDA has generally considered to be an LDT (as discussed elsewhere in this preamble), this enforcement discretion policy applies only to tests that are designed, manufactured, and used within a single CLIA-certified laboratory that meets the requirements under CLIA for high complexity testing.

[40] In our experience, establishments that perform compatibility tests for blood transfusion include establishments, such as reference laboratories, that are not integrated within a healthcare system. Therefore, the non-molecular antisera LDTs at issue may not fall within the policy described above for LDTs manufactured and performed by a laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system.

[41] Such tests are not subject to the requirements in § 640.5. As noted elsewhere in this document, FDA's general enforcement discretion approach for LDTs has not applied to tests for determination of blood group and Rh factors that are subject to § 640.5.

requirements under part 820, subpart M (Records)). FDA expects compliance with records requirements in part 820, subpart M, for non-molecular antisera LDTs that fall within this policy. Compliance with these requirements will facilitate FDA's review of these LDTs during inspections and will support appropriate adverse event reporting. The phaseout of the general enforcement discretion approach for other applicable requirements will provide greater assurances regarding tests that fall within this policy than the Agency, healthcare providers, and patients currently have.

Finally, as noted elsewhere in this preamble, regardless of this or any other enforcement discretion policy, FDA retains discretion to pursue enforcement action at any time against violative IVDs. We intend to carefully monitor LDTs falling within this policy and intend to take action regarding such LDTs as appropriate, taking into account any public health concerns as evaluated on a case-by-case basis.

C. Stages

As previously discussed, FDA has determined to gradually phase out its current general enforcement discretion approach for LDTs so that IVDs manufactured by a laboratory will generally fall under the same enforcement approach as other IVDs. In particular, FDA has structured the phaseout policy to contain five key stages:

- *Stage 1:* beginning 1 year after the publication date of this final rule, FDA will expect compliance with MDR requirements, correction and removal reporting requirements, and QS requirements under § 820.198 (complaint files).
- *Stage 2:* beginning 2 years after the publication date of this final rule, FDA will expect compliance with requirements not covered during other stages of the phaseout policy, including registration and listing requirements, labeling requirements, and investigational use requirements.
- *Stage 3:* beginning 3 years after the publication date of this final rule, FDA will expect compliance with QS requirements under part 820 (other than requirements under § 820.198 (complaint files), which are already addressed in stage 1).
- *Stage 4:* beginning 3½ years after the publication date of this final rule, FDA will expect compliance with premarket review requirements for high-risk IVDs offered as LDTs, unless a premarket submission has been received by the beginning of this stage in which case FDA intends to continue to exercise enforcement discretion for the pendency of its review.
- *Stage 5:* beginning 4 years after the publication date of this final rule, FDA will expect compliance with premarket review requirements for moderate-risk and low-risk IVDs offered as LDTs (that require premarket submissions), unless a premarket submission has been received by the beginning of this stage in which case FDA intends to continue to exercise enforcement discretion for the pendency of its review.

These stages, along with certain narrower enforcement discretion policies specific to certain stages, are discussed in further detail below.

We note that FDA generally does not intend to enforce requirements to include certain information (*e.g.,* registration numbers, premarket submission numbers) in reports or other submissions to the Agency until the information is addressed in a later stage of the phaseout policy.

We received several comments on the structure, sequencing, and timing of the proposed phaseout policy described in the NPRM (see section VI.F.6 of this preamble). Some indicated that the proposed timing for all phases was appropriate while others recommended it be shortened or lengthened. Some also proposed different approaches for organizing or implementing the phaseout.

FDA carefully considered these comments, and also considered the impact of other policies included in the final phaseout policy on the considerations noted in these comments. For the reasons discussed below and in section VI.F.6, FDA has determined that it should retain the general structure, sequencing, and timelines proposed in the NPRM (88 FR 68006 at 68021) for the phaseout policy in this final rule.

FDA encourages laboratory manufacturers to begin early and work toward compliance with requirements sooner than the end of the timeframes specified for each stage of the phaseout policy, as described below. FDA also intends to consider providing more targeted guidance and/or making additional resources available on specific topics, such as compliance with applicable labeling requirements, over the course of the phaseout period, as discussed in section VI.P.

1. Stage 1: Beginning 1 Year After the Publication Date of This Final Rule, FDA Will Expect Compliance With MDR Requirements, Correction and Removal Reporting Requirements, and QS Requirements Under § 820.198 (Complaint Files)

As detailed elsewhere in this preamble, FDA is concerned that some IVDs offered as LDTs may be posing risks to patients; therefore, FDA seeks to obtain information about potentially harmful IVDs offered as LDTs as soon as feasible. In light of that objective, and after reviewing the comments, FDA continues to believe that 1 year is an appropriate time for laboratory manufacturers to come into compliance with MDR and correction and removal reporting requirements. Among other things, this timeline is reasonable in light of the estimates in the FRIA, and under CLIA, laboratories should already have some processes in place for detecting problems with their IVDs. In addition, the new enforcement discretion policies set forth in section V.B (particularly the policy for currently marketed IVDs offered as LDTs) may help laboratories with limited resources focus on compliance with requirements at stage 1. Therefore, FDA is retaining the 1-year period for the phaseout of the general enforcement discretion approach with respect to MDR and correction and removal reporting requirements, in order to prioritize the phaseout of the general enforcement discretion approach for requirements that would help FDA identify and monitor significant issues with IVDs offered as LDTs.

Enforcement of the MDR requirements under 21 U.S.C. 360i(a) through (c) and part 803 (21 CFR part 803), in particular, will enable FDA to systematically monitor significant adverse events to identify problematic IVDs offered as LDTs, such as those with poor performance or other safety issues. FDA has made a determination that gathering this information early in the phaseout period is important for IVDs that do not have the safeguards associated with compliance with other FDA requirements, such as manufacturing under QS requirements or confirmation of appropriate safety and effectiveness through premarket review.

For similar reasons, FDA is prioritizing the collection of information about when a manufacturer has initiated a correction or removal of its IVD to reduce a risk to health or to remedy a violation of the FD&C Act that may present a risk to health. Under 21 U.S.C. 360i(g) and part 806 (21 CFR part 806), manufacturers are required to report

such corrections or removals to FDA, and FDA intends to phase out the general enforcement discretion approach for these requirements at the same time it does so for MDR requirements.

In addition, FDA has determined that it should include compliance with one additional regulatory provision at stage 1 of the phaseout policy. In particular, while FDA generally expects compliance with most QS requirements beginning in stage 3 of the phaseout policy (as described below), FDA intends to phase out the general enforcement discretion approach with respect to the QS requirements under § 820.198 (complaint files)[42] in stage 1 of the phaseout policy, given the connection between the complaint investigation and complaint file requirements under § 820.198 and the MDR reporting regulations. Under § 820.198, manufacturers are required to document complaints, investigate them, and determine if they require reporting under MDR requirements. Absent compliance with these requirements under § 820.198, manufacturers would not be able to comply with applicable MDR requirements (see § 803.18(e)), and FDA believes that developing procedures for compliance with § 820.198 can be accomplished on the same timeline as compliance with MDR requirements.

2. Stage 2: Beginning 2 Years After the Publication Date of This Final Rule, FDA Will Expect Compliance With Requirements Not Covered During Other Stages of the Phaseout Policy, Including Registration and Listing Requirements, Labeling Requirements, and Investigational Use Requirements

After considering the comments, FDA has determined to phase out the general enforcement discretion approach for requirements not covered during other stages of the phaseout policy (*i.e.,* requirements other than MDR, correction and removal reporting, QS, and premarket review requirements) 2 years after publication of this final rule. These other requirements include registration and listing requirements under 21 U.S.C. 360 and parts 607 and 807 (excluding subpart E); labeling requirements under 21 U.S.C. 352 and parts 801 and 809, subpart B (21 CFR parts 801 and 809, subpart B); and investigational use requirements under 21 U.S.C. 360j(g) and part 812 (21 CFR part 812).[43] We have included compliance with investigational use requirements at this stage, in recognition that there has been some confusion about our enforcement approach in this area. Our understanding is that laboratories often are not complying with investigational use requirements currently, even though FDA has generally expected compliance with these requirements.[44] We are therefore including these requirements in the phaseout policy.

As described in the NPRM (88 FR 68006 at 68025), FDA anticipates that it will best serve the public health to phase out the general enforcement discretion approach for these requirements at the 2-year mark, and FDA did not receive information changing its view with respect to that timeline. Under this timeline, FDA will obtain registration and listing information before the enforcement discretion phaseout for premarket review requirements, which may give the Agency a better understanding of the universe of IVDs offered as LDTs to facilitate premarket review of those IVDs. Relatively few commenters raised concerns about this timeline, and FDA's estimates of the resources required for compliance with the requirements covered by stage 2 suggest 2 years is adequate time (see FRIA section II.F.2). Furthermore, the new enforcement discretion policies set forth in section V.B may free up time and resources for laboratories to focus on compliance with requirements at stage 2. FDA has determined that this timeline appropriately balances the importance of compliance with registration and listing, labeling, and investigational use requirements, among others, relatively quickly—in order to address IVDs offered as LDTs that are problematic, among other things—with the recognition that laboratories generally have not complied with FDA requirements and may need time to order their affairs and build out FDA-compliant systems.

FDA notes that the labeling requirements under part 801 include unique device identification (UDI) requirements, as applicable (see part 801, subpart B).

3. Stage 3: Beginning 3 Years After the Publication Date of This Final Rule, FDA Will Expect Compliance With QS Requirements

At the 3-year mark, FDA generally will expect compliance with the CGMP requirements of the QS requirements under 21 U.S.C. 360j(f) and part 820. (FDA notes that we expect compliance with requirements under § 820.198 (complaint files) during stage 1 of the phaseout policy.) We recognize that the costs of compliance with QS requirements are comparatively high among the range of costs quantified in the FRIA (and as suggested in certain comments), but FDA continues to believe that the 3-year timeline is appropriate given, in particular, the new enforcement discretion policies in section V.B.3, which we anticipate will significantly reduce laboratories' work at this stage (see section II.F.3 of the FRIA). FDA has determined that this timeline is consistent with our goal of improving the quality of IVDs manufactured by laboratories as soon as feasible while also taking into account the resources and time required to set up quality systems.

FDA also notes that we expect laboratories to retain manufacturing records they may already have or may create for certain IVDs prior to stage 3 of the phaseout policy. In particular, for any IVDs for which FDA generally intends to exercise enforcement discretion for all QS requirements other

[42] 21 CFR 820.198 generally requires that a manufacturer maintain complaint files and establish and maintain procedures for receiving, reviewing, and evaluating complaints, including requiring that certain complaints which are required to be reported to FDA under part 803 be promptly reviewed, evaluated, and investigated. When the final rule to amend part 820 takes effect in February 2026, the comparable requirements can be found in International Organization for Standardization (ISO) 13485 subclause 8.2.2 as modified by part 820. Under these provisions, manufacturers will generally be required to document procedures for timely complaint handling, including minimum requirements and responsibilities for receiving and recording information, evaluating whether the information constitutes a complaint, investigating complaints, determining the need to report information to appropriate regulatory authorities, handling of complaint-related product, and determining the need to initiate corrective action. Additionally, new § 820.35 will require, among other things, that manufacturers maintain records of such review and report to FDA complaints that are required under part 803.

[43] An IVD that is also a biological product and subject to licensure under section 351 of the PHS Act may be studied under an IND and subject to the investigational use requirements in section 351(a)(3) of the PHS Act and 21 CFR part 312, instead of the IDE requirements in part 812 (see, *e.g.,* 21 CFR 312.2(a) and Ref. 65). IVDs studied under an IND are generally those intended for use as blood donor screening or HCT/P donor screening tests to which FDA's general enforcement discretion approach for LDTs has not applied (see section V.A.2). Therefore, we anticipate that there would be a limited number of IVDs offered as LDTs, if any, subject to investigational use requirements under 21 CFR part 312 for which the phase out of enforcement discretion would be relevant. However, to the extent such IVDs offered as LDTs exist, we intend to phase out enforcement discretion with respect to those investigational use requirements at stage 2, consistent with our policy regarding other investigational use requirements.

[44] For example, FDA stated in the ''Framework for Regulatory Oversight of Laboratory Developed Tests (LDTs)'' draft guidance that ''FDA intends to *continue to enforce* investigational device requirements under 21 CFR part 812 for all clinical investigations of LDTs that are conducted under clinical protocols that require institutional review board approval'' (Ref. 38).

than requirements under part 820, subpart M (Records), FDA expects laboratories to retain existing records and records created prior to the start of stage 3 that are relevant to validation and the other topics covered under part 820, subpart M (Records)). This documentation will help FDA understand the manufacturing for IVDs offered as LDTs that are marketed prior to stage 3, including helping FDA identify IVDs that are potentially problematic.

FDA issued its final rule amending the QSR on February 2, 2024, which will take effect on February 2, 2026, meaning that the amended QS requirements will be in effect before the beginning of stage 3. When a laboratory undertakes to comply with QS requirements, FDA will expect compliance with the QS requirements that are in effect at that time whether that be at the start of stage 3 or earlier (if the laboratory complies with QS requirements prior to the start of stage 3).[45] For further information on the QS requirements established pursuant to the amendments to the QSR, please refer to 89 FR 7496.

In addition, specifically for LDTs,[46] FDA is adopting the enforcement discretion policy proposed in the NPRM under which FDA generally will expect compliance at the 3-year mark with some, but not all, of the QS requirements (88 FR 68006 at 68025). FDA continues to believe this policy is helpful and appropriate. Although FDA and CMS regulation are different and complementary, compliance with CLIA requirements provides some quality assurances that may be relevant to laboratories' manufacturing practices. In particular, laboratories may in practice be able to apply concepts set forth under CLIA requirements for laboratory operations to certain manufacturing activities regulated by FDA. For FDA to effectively take into account the CLIA requirements, this policy will apply only for LDTs (*i.e.,* when all manufacturing activities occur within a single laboratory and the IVD is not transferred outside that laboratory). However, this policy is limited in scope because CLIA regulations do not provide relevant assurances for certain QS requirements. These requirements include design controls under § 820.30; purchasing controls (including supplier controls) under § 820.50; acceptance activities (receiving, in-process, and finished device acceptance) under §§ 820.80 and 820.86; CAPA under § 820.100; and records requirements under part 820, subpart M.[47] [48] Because CLIA does not provide assurances relevant to these requirements, FDA has determined to phase out the general enforcement discretion approach for these specific requirements 3 years after publication of this final rule (except for requirements under § 820.198 (complaint files), for which FDA intends to phase out the general enforcement discretion approach during stage 1 of the phaseout policy).

Finally, FDA notes that under section 515(d)(2) of the FD&C Act, the Agency may not approve a PMA if the applicant fails to demonstrate conformity with the QS requirements. Therefore, compliance with the QS requirements is needed to support approval of a PMA. As provided in section 520(f)(2) of the FD&C Act, any person subject to the QS requirements may petition for an exemption or variance from any QS requirement (see also § 820.1).

4. Stage 4: Beginning 3½ Years After the Publication Date of This Final Rule, FDA Will Expect Compliance With Premarket Review Requirements for High-Risk IVDs Offered as LDTs, Unless a Premarket Submission Has Been Received by the Beginning of This Stage in Which Case FDA Intends To Continue To Exercise Enforcement Discretion for the Pendency of Its Review

FDA has determined that the phaseout for the general enforcement discretion approach with respect to premarket review requirements for high-risk IVDs offered as LDTs should occur 3½ years from publication of this final rule, consistent with the timeline proposed in the NPRM (88 FR 68006 at 68026). The premarket review requirements for PMAs are set forth in 21 U.S.C. 360e and part 814 (21 CFR part 814). The information in the record has not changed our view that 3½ years will provide sufficient notice and opportunity for laboratories manufacturing IVDs to plan for and prepare PMAs.[49] Although we received comments indicating that it would be difficult for laboratories to comply within this 3.5-year timeline, the new enforcement discretion policies included in this final phaseout policy should help address those concerns. For example, the policy for currently marketed IVDs offered as LDTs and the policy for certain unmet needs LDTs mean FDA generally does not expect compliance with premarket review requirements for a substantial subset of IVDs. Overall, in light of these policies, FDA has determined that a 3.5-year period is a reasonable amount of time to expect laboratories to come up to speed on PMA requirements, gather the information required for PMAs, and complete their PMA submissions (see section II.F.4 of the FRIA).

This timeline is also intended to align the phaseout for the general enforcement discretion approach for premarket review requirements for high-risk IVDs offered as LDTs with the start of fiscal year 2028, which coincides with the beginning of a new user fee cycle. This alignment will provide an opportunity for industry participation in

[45] As noted elsewhere in this phaseout policy, FDA intends to phase out the general enforcement discretion approach with respect to requirements under § 820.198 (complaint files) during stage 1 of the phaseout policy. However, upon the start of stage 1, and prior to the effective date of the amended QSR, FDA intends to exercise enforcement discretion and generally not enforce requirements under § 820.198 for laboratories that are in compliance with Subclause 8.2.2 of ISO 13485. Following the effective date of the amended QSR (February 2, 2026), laboratories must comply with the QS requirements that are in effect at that time.

[46] As explained elsewhere in this preamble, FDA has generally considered the term ''laboratory developed test (LDT)'' to mean an IVD that is intended for clinical use and that is designed, manufactured, and used within a single CLIA-certified laboratory that meets the regulatory requirements under CLIA to perform high complexity testing.

[47] For LDTs, FDA generally expects compliance with requirements under part 820, subpart M (Records) but not §§ 820.20, 820.22, and 820.40 (which are cross-referenced in subpart M), or comparable provisions of ISO 13485 in accordance with the amendments to part 820 once that rule takes effect in February 2026.

[48] Upon the effective date of the amendments to the QSR, the requirements relating to design controls, purchasing controls, acceptance activities, CAPA, and records requirements will be set forth in the following ISO 13485 clauses as modified by the codified for part 820: Clause 4. Quality Management System, Subclause 4.2.5; Clause 6. Resource Management; Clause 7. Product Realization, Subclause 7.1, Subclause 7.3, Subclause 7.4, and Subclause 7.4.3; and Clause 8. Measurement, Analysis, & Improvement, Subclause 8.2.2., Subclause 8.2.5, Subclause 8.2.6, and Subclause 8.3.

[49] Under the phaseout policy, laboratories that intend to submit an HDE application or a BLA should do so within the same 3½-year timeframe for submission of PMAs. As in the case of PMAs, under the phaseout policy, FDA generally does not intend to enforce against IVDs after a complete HDE application or BLA has been submitted (within the 3½-year timeframe) until FDA completes its review of the application. Premarket review requirements specific to HDE applications are set forth in 21 U.S.C. 360j(m) and part 814, subpart H. Licensure requirements are set forth in 42 U.S.C. 262 and 21 CFR part 601.

negotiations regarding the next user fee cycle with the knowledge that laboratory manufacturers will be expected to comply with premarket review requirements. (Although a trade association representing laboratories previously has participated in Medical Device User Fee Amendments (MDUFA) negotiations, the prior negotiations have not incorporated similar expectations regarding laboratory compliance with premarket requirements.) Thus, we have determined that this amount of time is appropriate to foster stability and consistency in the marketplace for the current MDUFA cycle, and FDA will take into account the need for adequate FDA resources to implement the phaseout policy in a manner that does not compromise the capacity to achieve MDUFA V performance expectations. FDA anticipates that during this 3½-year period, laboratories will work with FDA to determine whether PMAs should be submitted for their IVDs.

Under this phaseout policy, FDA generally does not intend to enforce against IVDs offered as LDTs for lacking premarket approval after a complete PMA has been submitted until FDA completes its review of the application, provided that the PMA has been submitted within the 3½-year timeframe. Given that such IVDs may already be on the market and available to patients, FDA generally does not intend to interrupt access at the point when a submission is made. IVDs for which a PMA is submitted after the 3½-year timeframe would not fall within this enforcement discretion policy; FDA approval is expected prior to such IVDs being offered.

Based on a review of the comments, FDA is also adopting a policy under which it generally does not intend to enforce premarket review requirements for certain laboratory changes to another manufacturer's lawfully marketed test. In particular, this policy applies when a laboratory certified under CLIA and meeting the regulatory requirements under CLIA to perform high complexity testing modifies another manufacturer's 510(k) cleared or De Novo authorized test, following design controls and other quality system requirements for which FDA expects compliance as described in section V.C.3, in a manner that could not significantly affect the safety or effectiveness of the test and does not constitute a major change or modification in intended use, and where the modified test is performed only in the laboratory making the modification. FDA is adopting this policy to promote more efficient and effective use of Agency resources and because it understands laboratories may make such changes to, for example, integrate a test into its operations, accommodate local conditions (*e.g.,* storage conditions), or address supply shortages. Under the policy, FDA would expect premarket submissions from laboratories modifying a third party's 510(k) cleared or De Novo authorized test for the same types of changes for which FDA would expect a premarket submission from the *original* manufacturer making changes to its own IVD. Taking into account the risks associated with relatively minor changes to 510(k) cleared or De Novo authorized tests when they occur in a single laboratory (*i.e.,* without broad distribution), at this time, we believe the resources needed to review these types of changes generally can be better spent on other Agency priorities and activities. For a description of changes that could significantly affect the safety or effectiveness of the test or constitute a major change or modification in intended use under this policy, see FDA's regulations at § 807.81(a)(3) and further discussion in the final guidance ''Deciding When to Submit a 510(k) for a Change to an Existing Device'' (Ref. 61). If the modification (individually or in the aggregate) could significantly affect the safety or effectiveness of the test or does constitute a major change or modification in intended use and the modified test does not fall within an enforcement discretion policy discussed in section V.B above, FDA expects laboratories to submit the applicable premarket submission. If the laboratory modification is so significant that the IVD is no longer substantially equivalent to the original IVD and requires a PMA, FDA expects the PMA to be submitted either by stage 4 or before the modified test is marketed, whichever comes later.

We are not applying this enforcement discretion policy to modifications to another manufacturer's PMA-approved or BLA-licensed test because such tests are high-risk, and changes to such tests pose corresponding increased risks. We note that relatively few IVDs are considered high risk today, and, further, FDA has announced its intent to initiate the reclassification process for most IVDs that are currently class III into class II (Ref. 66). FDA aims to complete this reclassification process before stage 4 of the phaseout policy. We therefore anticipate that there will be even fewer class III (high-risk) IVDs going forward. As such, these tests present resource considerations that are different from those discussed above.

5. Stage 5: Beginning 4 Years After the Publication Date of This Final Rule, FDA Will Expect Compliance With Premarket Review Requirements for Moderate-Risk and Low-Risk IVDs Offered as LDTs (That Require Premarket Submissions), Unless a Premarket Submission Has Been Received by the Beginning of This Stage in Which Case FDA Intends To Continue To Exercise Enforcement Discretion for the Pendency of Its Review

FDA has determined to phase out the general enforcement discretion approach with respect to premarket review requirements for moderate-risk IVDs offered as LDTs (IVDs that may be eligible for classification into class II) and low-risk IVDs offered as LDTs (IVDs that may be eligible for classification into class I) that require a premarket submission 4 years from publication of this final rule. These premarket submissions include 510(k) submissions, the requirements for which are set forth at 21 U.S.C. 360(k), 360c(i), and part 807, subpart E. These submissions also include De Novo requests, which laboratories may submit for IVDs offered as LDTs for which there is no legally marketed device upon which to base a determination of substantial equivalence, and for which the laboratory seeks classification into class I or class II. These requirements are set forth at 21 U.S.C. 360c(f)(2) and 21 CFR part 860, subpart D.

FDA is retaining the same 4-year timeline that was proposed in the NPRM for stage 5 for reasons similar to those for stage 4 (see 88 FR 68006 at 68027). Specifically, when taking into account the enforcement discretion policies in section V.B, we believe the original timeline for compliance with 510(k) and De Novo requirements is feasible, particularly given that these submissions are generally less resource-intensive than PMAs (for additional information see section II.F.4 of the FRIA (Ref. 10)). As noted in the NPRM, the 6-month interval between stages 4 and 5 will enable FDA to prioritize the review of applications for high-risk IVDs offered as LDTs (subject to premarket approval requirements), so that we can focus first on IVDs for which the consequences of a false result are generally most significant (88 FR 68006 at 68027). In addition, this timeline aligns with the user fee cycle, as previously discussed.

FDA generally does not intend to enforce against IVDs offered as LDTs for lacking premarket authorization after a complete 510(k) or De Novo request has been submitted until FDA completes its

review of the submission, provided that the 510(k) or De Novo request has been submitted within the 4-year timeframe. Given that such IVDs may already be on the market and available to patients, FDA generally does not intend to interrupt access at the point when a submission is made. IVDs for which a 510(k) or De Novo request is submitted after the 4-year timeframe would not fall within this enforcement discretion policy; FDA clearance or authorization is expected prior to such IVDs being offered.

FDA is also adopting the policy regarding laboratory modifications to another manufacturer's lawfully marketed test that is discussed under stage 4. As explained in that discussion, under this policy, FDA generally does not intend to enforce premarket review requirements when a laboratory certified under CLIA and meeting the regulatory requirements under CLIA to perform high complexity testing modifies another manufacturer's 510(k) cleared or De Novo authorized test, following design controls and other quality system requirements for which FDA expects compliance as described in section V.C.3, in a manner that could not significantly affect the safety or effectiveness of the test and does not constitute a major change or modification in intended use, and where the modified test is performed only in the laboratory making the modification. If the modification (individually or in the aggregate) could significantly affect the safety or effectiveness of the test or does constitute a major change or modification in intended use and the modified test does not fall within an enforcement discretion policy discussed in section V.B above, FDA expects laboratories to submit the applicable premarket submission. If the applicable premarket submission is a 510(k) or De Novo request, FDA expects the 510(k) or De Novo request to be submitted either by stage 5 or before the modified test is marketed, whichever comes later.

FDA also anticipates that laboratories may seek to utilize FDA's Third Party review program. FDA currently operates a Third Party review program for medical devices, and multiple organizations are accredited to conduct reviews of 510(k) submissions for certain IVDs (see Ref. 67). We anticipate interest in the Third Party review program among IVD manufacturers, as well as potential new 3P510k Review Organizations. In particular, FDA is aware of certain CLIA accreditation organizations that have expressed interest in potentially becoming Third Party reviewers under FDA's program, and to the extent laboratories are already familiar with these organizations, laboratories may be more inclined to use the Third Party review program. In addition, under the MDUFA V agreement, FDA is currently working to enhance the Third Party review program, which may make it more attractive to manufacturers including laboratories.

VI. Comments on the Notice of Proposed Rulemaking and FDA Responses

We received more than 6,500 comment letters on the NPRM by the close of the comment period, each containing one or more comments on one or more issues. We received comments from medical device associations, members of the medical device and pharmaceutical industries, medical and healthcare professional associations, hospitals and AMCs, accreditation organizations, other advocacy organizations, government agencies, and individuals. We describe and respond to the comments in this section of the document. We have numbered each comment to help distinguish between different comments. We have grouped similar comments together under the same number so that FDA's responses can be addressed by topic, and, in some cases, we have separated different issues discussed in the same comment and designated them as distinct comments for purposes of our responses. The number assigned to each comment or comment topic is purely for organizational purposes and does not signify the comment's value or importance or the order in which comments were received or considered.

A. General Comments on the Notice of Proposed Rulemaking

(Comment 1) FDA received comments in support of and in opposition to the NPRM. Comments supporting the proposal generally discussed the importance of FDA oversight of IVDs offered as LDTs to protect the public health and ensure that patients and healthcare providers are able to trust and rely on test results which impact important healthcare decisions. Some comments expressed concern regarding the use of IVDs offered as LDTs that are not clinically validated, and regarding scientifically dubious claims made about such IVDs, especially in areas like cancer prognosis and genetic screening. Several comments noted that without independent oversight the work to ensure LDT effectiveness and consistency is left to those with a financial interest in the continued use of those LDTs. Comments expressing general opposition cited various reasons for their opposition, including that the proposal is too broad in scope, is too difficult for laboratories to follow, would require laboratories to ''follow processes that are unfit for the purpose of assessing the quality of laboratory tests,'' is not necessary, and reflects regulatory overreach.

(Response 1) FDA agrees that phasing out the general enforcement discretion approach for LDTs is important to protect the public health, as discussed further in section III.B. Current evidence points to problems associated with IVDs offered as LDTs such that there is a fundamental uncertainty about whether IVDs offered as LDTs provide accurate and reliable results. These issues highlight the need for increased oversight to help ensure the safety and effectiveness of IVDs offered as LDTs.

FDA disagrees with the comments stating that FDA's proposal is overly broad. As described throughout this preamble and in the NPRM, the evidence supports increased oversight of IVDs offered as LDTs. The final phaseout policy fulfills the goal of greater oversight of such IVDs while also accounting for other key public health interests. For example, upon further consideration, including of the comments received regarding particular aspects of the phaseout policy, FDA is adopting several new targeted enforcement discretion policies, as detailed in section V.B.

FDA also disagrees with comments stating that FDA's proposal is difficult to follow. We believe the scope and five stages of the proposed and final phaseout policy, discussed further in section V, are clear and, as noted throughout this preamble, we intend to issue additional guidance as appropriate and offer other resources to the public, which will assist stakeholders during implementation of the phaseout.

In addition, we disagree with the statement that the proposal would require laboratories to follow processes that are ''unfit for the purpose of assessing the quality'' of IVDs offered as LDTs. As further discussed in sections VI.C.2 and VI.C.3 of this preamble, FDA has the experience and the scientific and regulatory expertise to oversee IVDs, including LDTs. Moreover, the requirements and processes for devices in the FD&C Act and FDA regulations apply to all IVDs, including LDTs, and the requirements/processes set forth in part 809 are specifically tailored to IVDs, including LDTs. We also disagree that the proposal (or final rule) reflects ''regulatory overreach'' for the reasons discussed in section VI.D.

B. Definitions

(Comment 2) Several comments stated that the rule should explicitly define in § 809.3 terms such as ''LDTs,'' ''IVDs,'' and ''enforcement discretion'' for clarity. Other comments suggested that FDA identify the differences between IVDs and LDTs, with one comment suggesting that FDA refer to LDTs as CLIA–LDTs because laboratories must be CLIA-certified. Another comment requested that FDA define the terms ''diagnostic'' and ''impact clinical outcomes'' as used in the proposed rule. One comment requested clarity on whether digital scanning of pathology slides is within the scope of the LDT definition included in the NPRM.

(Response 2) The term ''in vitro diagnostic products'' (IVDs) is defined in § 809.3(a). Through this rulemaking, FDA is amending the definition of ''in vitro diagnostic products'' in its regulations to state that IVDs are devices under the FD&C Act ''including when the manufacturer of these products is a laboratory.'' Therefore, as amended by this rule, IVDs are defined in § 809.3(a) as those reagents, instruments, and systems intended for use in the diagnosis of disease or other conditions, including a determination of the state of health, in order to cure, mitigate, treat, or prevent disease or its sequelae. Such products are intended for use in the collection, preparation, and examination of specimens taken from the human body. These products are devices as defined in section 201(h)(1) of the FD&C Act, and may also be biological products subject to section 351 of the PHS Act, including when the manufacturer of these products is a laboratory.

FDA disagrees that the terms ''LDTs'' and ''enforcement discretion'' should be defined in § 809.3. Neither term is used in part 809, so adding definitions to part 809 would have no effect, and would likely be confusing. To the extent the commenter believed the use of those terms in the NPRM was not sufficiently clear, FDA also disagrees, as it has clearly explained those terms in both the proposed and final rules (see, *e.g.,* 88 FR 68006 at 68008 (stating that ''FDA has generally exercised enforcement discretion such that it generally has not enforced applicable requirements with respect to most LDTs''); 88 FR 68006 at 68009 (stating that ''FDA has generally considered an LDT to be an IVD that is intended for clinical use and that is designed, manufactured, and used within a single laboratory that is certified under [CLIA] and meets the regulatory requirements under CLIA to perform high complexity testing'')).

With regards to the definition of ''diagnostic,'' FDA interprets this comment as a request to further define the term in the definition of an IVD. We see no reason, and the comment does not include any rationale, why this term should be defined. Moreover, we note that the term applies across many devices and so defining it in part 809, which is limited in scope to IVDs, would likely cause confusion. With regard to the comment requesting clarification of the phrase ''impact clinical outcomes,'' FDA did not use the phrase ''impact clinical outcomes'' in the NPRM and, as a result, does not understand this request.

Finally, regarding the comment requesting clarity on whether digital scanning of pathology slides is within the scope of the LDT definition, FDA would need to know more about the product to assess whether it falls within what FDA has generally considered to be an LDT—*i.e.,* an IVD that is intended for clinical use and that is designed, manufactured, and used within a single laboratory that is certified under CLIA and meets the regulatory requirements under CLIA to perform high complexity testing. FDA notes that whole slide imaging systems are class II devices with special controls and are subject to 510(k) notification requirements (21 CFR 864.3700). For additional information about specific classifications for devices, we recommend consulting 21 CFR parts 862 through 892.

(Comment 3) A comment requested FDA clarify how it regulates common laboratory equipment (such as general-purpose computer monitors or printers, microscopes, centrifuges, and incubators), and expressed concern that increased FDA oversight of LDTs would impact FDA's regulation of such equipment.

(Response 3) FDA regulates common laboratory equipment that meets the FD&C Act's definition of a device. Section 201(h)(1) of the FD&C Act defines a device, in relevant part, as ''An instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including a component part, or accessory which is: . . . . (B) intended for use [50] in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease, in man or other animals, ... The term 'device' does not include software functions excluded pursuant to section 520(o) [of the FD&C Act].'' Whether a product falls within the device definition involves a fact-specific inquiry, including an inquiry into the product's intended use. In general, general-purpose computer monitors or printers that are not intended for a medical use would not fall within the device definition, whereas general purpose laboratory equipment labeled or promoted for specific medical uses intended to prepare or examine specimens from the human body would fall within the device definition.

FDA has classified such general purpose laboratory equipment into class I and has exempted these devices from premarket notification under section 510(k) of the FD&C Act (21 CFR 862.2050). FDA has also classified certain microscopes and accessories and microbiological incubators into class I and has exempted them from premarket notification under section 510(k) of the FD&C Act (21 CFR 864.3600 and 866.2540). For additional information about specific classifications for devices, we recommend consulting 21 CFR parts 862 through 892. This rule does not change FDA's authority to regulate such equipment and FDA does not anticipate a significant impact from the phaseout policy on such equipment, which is generally not designed, manufactured, and used within a single CLIA-certified laboratory.

C. Need for the Rule

1. FDA's Description of the Current State of the LDT Market

(Comment 4) FDA received several comments on the current state of the LDT market. Some asserted that the potential risk to patients of false results from LDTs remains unchanged from 1976.

(Response 4) FDA disagrees with comments which claim that the risk to patients is unchanged from 1976. As discussed in the NPRM and this preamble, today LDTs are commonly used to diagnose infectious diseases, screen for various diseases and conditions, and identify the best treatment for patients with cancer, among other uses. The consequences of false results in these contexts can include spread of disease, missed diagnoses, misdiagnoses, use of ineffective treatments with toxic side effects, and lack of use of life-saving treatments. LDTs are relied upon for high stakes medical decisions. Further, genetic sequencing technology has advanced such that a person's

[50] ''Intended use'' as used in this provision is determined by the objective intent of the persons legally responsible for the labeling of an article (or their representatives) (see § 801.4). The intent may be shown by such persons' expressions, the design or composition of the article, or by the circumstances surrounding the distribution of the article (*Id.*).

deoxyribonucleic acid (DNA) can be quickly sequenced and different variations identified in a single analysis; the clinical significance of many of these variations is unknown. FDA is aware of IVDs offered as LDTs, particularly genetic IVDs offered as LDTs, that are offered for uses that lack sufficient scientific support. The availability of new technologies and increasing reliance on them for clinical decision-making has increased the risk of IVDs offered as LDTs.

(Comment 5) Some comments claimed FDA overestimated the number of IVDs offered as LDTs on the market while others claimed FDA underestimated the number of IVDs offered as LDTs on the market. Some comments said the breadth of reach of LDTs is small whereas another comment pointed out that LDTs are used for routine clinical tests in addition to ''advanced diagnostics.'' One comment claimed that FDA's estimate of the number of IVDs offered as LDTs was more than ''10 times what researchers found in a peer-reviewed study published in the American Journal of Clinical Pathology of actual clinical test orders at University of Utah Health: 3.9%'' (see Ref. 68).

(Response 5) FDA acknowledges that it does not know exactly how many IVDs are currently offered as LDTs, precisely what those IVDs are used for, or the exact breadth of the reach of those IVDs. FDA will receive information regarding IVDs offered as LDTs and their intended uses through registration and listing in stage 2 of the phaseout policy. FDA disagrees with the assertion that the cited publication suggests that FDA's estimates may be 10 times higher than what has been reported in scientific literature. According to the publication cited in the comment, the percentage of test orders fulfilled with IVDs offered as LDTs at a single health system was 3.9 percent (which seems to have been the basis of the commenter's ''10 times higher'' claim) but the percentage of distinct tests that were IVDs offered as LDTs within this health system was 45 percent (880/1,954). While it is helpful to understand that 3.9 percent of test orders were fulfilled with IVDs offered as LDTs, this does not support the assertion that FDA's estimate of the percentage of *distinct* IVDs offered as LDTs is ''10 times higher'' than that reported by the publication. In section II.D of the PRIA, FDA estimated that LDTs account for about 50 percent of total IVDs that are used in some laboratories (see Ref. 60), which is very similar to the 45 percent reported in the publication. Additional information regarding these estimates is provided in response to comment 3 in the FRIA (see Ref. 10).

(Comment 6) One comment questioned FDA's statement that test results are often used by treating clinicians to inform their professional judgments and that the incidence of false positive and false negative test results inherent in any form of testing can present treatment challenges. This comment asserted that treating clinicians are well aware of the inherent limitations of testing, regardless of whether the test is an LDT or not, and that such clinicians base their treatment on holistic considerations of treatment factors. Thus, an erroneous test result from an LDT does not necessarily mean an erroneous treatment decision. A similar comment from a physician stated that FDA oversight will not increase the safety of LDTs and any risks associated with inaccurate test results are better left to physicians to assess.

(Response 6) FDA disagrees with these comments. Despite the suggestion to the contrary, not all clinicians are ''well aware'' of limitations of tests, including tests that are not FDA-authorized. Rather, FDA routinely consults with experts and has encountered many who do not understand the limitations of tests and do not consider that a test result provided by a test may be incorrect. For example, a cardiologist at an FDA public workshop on troponin testing stated, ''[d]octors trust numbers and if they are wrong we don't care we trust them anyway'' (Ref. 69). Similarly, an article authored by a physician and published in the Washington Post explained that his ''research has found that many physicians misunderstand test results'' and noted that ''your doctor may have a blind spot, an unconscious tendency to have too much trust in a test'' (Ref. 70). While we agree that erroneous test results do not *always* lead to direct harm/erroneous treatment decisions, they often do, and FDA is addressing these risks in the phaseout policy.

2. CLIA Oversight

(Comment 7) FDA received comments stating that CLIA and CLIA regulations do not provide sufficient regulation of manufacturer laboratories and their tests. One comment noted that this is because laboratories are not equipped with appropriate ''QMS systems,'' development teams, manufacturing, and production processes. Some comments stated that CLIA lacks requirements related to design controls and other important QS requirements. Comments also asserted that CMS does not review a laboratory's methodology for assessing analytical validity, does not assess clinical validity, and inspects only every 2 years under CLIA. A comment stated that CLIA and the related laboratory accreditation by CMS do not necessarily preclude additional oversight by FDA, especially for direct-to-consumer and ''commercialized'' products.

(Response 7) FDA agrees that CLIA and CLIA regulations are not a substitute for FDA's oversight of IVDs offered as LDTs under the FD&C Act. As discussed in the NPRM, laboratories that offer IVDs as LDTs are subject to both the FD&C Act and CLIA (88 FR 68006 at 68013–14). CMS determines whether a laboratory meets CLIA requirements, which is a specific role distinct from FDA's statutory responsibilities. FDA's device authorities under the FD&C Act are intended to help ensure that devices, including IVDs offered as LDTs, have appropriate assurance of safety and effectiveness.

FDA acknowledges that CLIA establishes requirements for laboratory operations and personnel and the issuance of clinical laboratory certifications. However, those requirements do not provide sufficient assurance of safety and effectiveness for the tests themselves. For example, in administering CLIA, CMS does not regulate critical aspects of laboratory test development; does not evaluate the performance of a test before it is offered to patients and healthcare providers; does not assess clinical validity (*i.e.,* the accuracy with which a test identifies, measures, or predicts the presence or absence of a clinical condition or predisposition in a patient); does not regulate certain manufacturing activities, such as design controls and acceptance activities; does not provide human subject protections for individuals who participate in clinical trials; and does not require adverse event reporting. FDA also agrees that inspections under CLIA do not provide sufficient assurances of safety and effectiveness for IVDs offered as LDTs, as discussed further in response to comment 8.

CMS has consistently agreed that its role in administering the CLIA Program, which regulates the operations of clinical laboratories performing testing, is distinct from FDA's role in enforcing the FD&C Act to ensure that tests have appropriate assurance of safety and effectiveness. In order to ensure the accuracy and reliability of patient test results, the CLIA regulations provide oversight covering the operation and administration of the laboratory, to

include the appropriate qualification of its personnel. For example, the CLIA regulations include requirements pertaining to proficiency testing, laboratory personnel qualifications, test ordering and reporting, quality control, and the development and use of laboratory processes and procedures. FDA and CMS have long stood together in mutual support of FDA oversight of the analytical and clinical validity of LDTs, and CMS agrees with FDA that the CLIA program is separate in scope and purpose from FDA oversight (Ref. 71). Each regulatory scheme serves a different function, and as CMS notes, ''CMS and FDA's regulatory schemes are different in focus, scope, and purpose, but they are intended to be complementary'' (Ref. 26). In 2015, Dr. Patrick Conway, then the Deputy Administrator for Innovation and Quality & Chief Medical Officer of CMS, stated that ''CMS does not have scientific staff capable of reviewing complex medical and scientific literature in determining clinical validity. This expertise resides within the FDA, which assess the clinical validity in the context of premarket reviews and other activities aligned with their regulatory efforts under the Food, Drug and Cosmetic Act.'' Statement of Dr. Patrick Conway, Deputy Administrator for Innovation and Quality & Chief Medical Officer, CMS, Committee Hearing (October 29, 2015), at 25. This was not a new position for CMS; nearly 30 years earlier, the then-Administrator of the Health Care Financing Administration (HCFA, CMS's predecessor agency) stated that FDA, under the FD&C Act, had a role to play in the regulation of laboratory testing: ''On the quality issue, first, the Health Care Financing Administration has oversight authority and will use that to do a better job under our new regulations. The role of the Centers for Disease Control is to provide expert advice to us on how we regulate laboratories. The role of the FDA is in oversight of the devices and other technical aspects of lab testing.'' Statement of Dr. William L. Roper, Administrator, HCFA, Committee Hearing on H.R. 4325 (July 6, 1988), at 77.

(Comment 8) FDA received several comments stating that CLIA provides sufficient regulation of IVDs offered as LDTs. Some comments stated that regulation under CLIA is sufficient because obtaining a CLIA certificate requires a laboratory to demonstrate that the personnel in the laboratory have the training, experience, and level of proficiency required to perform the types of tests offered by the laboratory. Other comments stated that regulation under CLIA is sufficient because CLIA-certified laboratories are subject to inspections to confirm that the testing complies with CLIA regulations, including ensuring that there is adequate validation of the tests, supervision by the laboratory director, and quality procedures. Many comments contended that laboratories certified by CLIA follow a robust and rigorous set of requirements regarding validation, verification, and monitoring of IVDs offered as LDTs. In particular, some comments asserted that CLIA provides a regulatory mechanism designed to ensure accurate test results. Other comments stated that FDA has not demonstrated that FDA's premarket review process is more effective than CLIA in ensuring the accuracy of tests.

(Response 8) FDA acknowledges that CLIA and CLIA regulations establish requirements for laboratory operations and laboratory personnel, and specific requirements that must be met to obtain a clinical laboratory certification (see, *e.g.,* 42 CFR part 493 subparts C, K, and M). CLIA-certified laboratories also are subject to inspection under 42 CFR part 493 subpart Q to verify that laboratories are conducting testing in compliance with the CLIA regulation. Inspections do not, however, verify that the tests themselves comply with the requirements of the FD&C Act that are designed to ensure that tests have appropriate assurance of safety and effectiveness for their intended purpose. Likewise, while FDA agrees that CLIA-certified laboratories are required to meet certain verification, validation, and monitoring requirements, FDA disagrees that those requirements provide sufficient assurance of safety and effectiveness for the tests themselves. As more fully set forth in response to comment 7, CMS does not regulate critical aspects of laboratory test development; does not evaluate the performance of a test before it is offered to patients and healthcare providers; does not assess clinical validity; does not regulate certain manufacturing activities; does not provide human subject protections for individuals who participate in test clinical trials; and does not require adverse event reporting.

FDA disagrees with comments indicating that FDA's premarket review process ''is not more effective'' than CLIA regulation. FDA's premarket review process serves a role that CLIA regulation does not. During review of a marketing submission for an IVD, FDA reviewers closely examine data relevant to safety and effectiveness and draw on their expertise and experience to understand both the product and the science supporting the product. FDA reviewers evaluate whether a test accurately and reliably detects or quantifies its intended target and whether results from the test accurately and reliably identify, measure, or predict the presence or absence of the intended clinical condition or predisposition. For example, for a test that is intended to detect genetic variants to predict the risk of a person developing a particular disease, FDA reviewers would evaluate whether the test can accurately and reliably detect the intended genetic variants in the intended use specimen type (*e.g.,* blood, saliva), and they would also evaluate evidence demonstrating whether the genetic variant is associated with the risk of developing that particular disease. As another example, for a test intended to quantify the levels of a protein to aid in the diagnosis of a particular disease, FDA would evaluate whether the device can accurately and reliably quantify the levels of the protein in the intended specimen type and also whether the levels of protein quantified by the test can be used to diagnose the disease. FDA also reviews IVD labeling to ensure there are adequate instructions for use, which includes directions for performing the test and interpreting the results, warnings, limitations, a summary of test performance (for example, accuracy), and how the results are reported. See our response to comment 10 for additional discussion of FDA's expertise.

(Comment 9) FDA received comments stating that regulation under CLIA is sufficient because CLIA-certified laboratories perform proficiency testing to ensure that assays are performing properly. One comment suggested that FDA authorization is a one-time event with no ongoing monitoring of product performance, whereas proficiency testing is an ongoing requirement through which laboratories periodically confirm their capabilities to perform tests. In contrast, FDA received a comment which suggested that proficiency testing is not sufficient, as a laboratory may fail proficiency testing several times before receiving a notice to cease testing.

(Response 9) FDA disagrees that proficiency testing provides sufficient regulation of IVDs offered as LDTs. Under CLIA, enrollment in a Department of Health & Human Services (HHS)-approved proficiency testing program is a requirement for only a portion of tests that a laboratory offers, and proficiency testing programs do not

address all IVDs offered as LDTs (see 87 FR 41194). Under the CLIA regulations, proficiency testing is required for only the limited number of analytes found in 42 CFR part 493 subpart I (Proficiency Testing Programs for Nonwaived Testing), which are referred to as ''regulated'' analytes by CMS. From the list of LDTs approved by NYS CLEP, FDA has seen that many IVDs offered as LDTs are tests for analytes other than the regulated analytes listed in 42 CFR part 493 subpart I. Additionally, the list of regulated analytes does not include any genetic markers, and FDA is aware from the NYS CLEP approval database as well as discussions with stakeholder that many IVDs offered as LDTs are genetic tests. There are also many other analytes for which there are no programs that offer proficiency testing. When a laboratory performs tests, including IVDs offered as LDTs, for analytes that are not regulated under CLIA or where there is no proficiency testing program available, the laboratory is required only to verify the accuracy of the test at least twice annually, which may be done by splitting a patient sample with a laboratory that offers the same test and comparing results. The number of samples tested and the acceptability of the results is determined by the laboratory director. Comparing results from a small number of samples, possibly even a single sample, without prospective metrics for success is not equivalent to a prospective determination of safety and effectiveness prior to initiating testing on patient samples. FDA also appreciates the concern raised in the comment which stated that laboratories may potentially continue testing after failing proficiency testing. For these reasons, proficiency testing alone does not provide sufficient assurance of safety and effectiveness for an IVD offered as an LDT for its intended use.

FDA also disagrees with the suggestion that FDA regulation involves no ongoing monitoring of product performance. Under FDA regulations, test manufacturers are generally subject to a variety of ongoing requirements, including labeling requirements, registration and listing, quality system requirements, adverse event reporting, and periodic inspections that confirm compliance with design controls and other QS requirements.

(Comment 10) A number of comments suggested that FDA is not the appropriate entity to oversee LDTs, and that any changes to the manner in which tests are regulated should be implemented through amendments to CLIA, or through modifications to the CLIA regulation, which many comments described as ''modernizing'' that regulation. Comments asserted that FDA does not have the required expertise, and one comment stated that CMS/CLIA and certain CLIA accreditation organizations are best able to verify the accuracy of laboratory testing. This comment stated that requiring all ''laboratory testing'' to be certified under CLIA would be better than enforcing laboratory compliance with medical device regulations. Other comments stated that complaints about test quality should be evaluated by CMS rather than FDA, to avoid creating what the comments described as duplicative regulation. Some comments noted that laboratories are unfamiliar with the premarket requirements and other requirements of the FD&C Act. Some comments argued that FDA is slow to clear or approve tests, and asserted that for that reason, FDA should not oversee IVDs offered as LDTs. On the other hand, some comments asserted that FDA has a role to play in assuring that tests produce reliable results for patients and providers, and some comments pointed to FDA's demonstrated expertise in review of analytical and clinical validity of IVDs.

(Response 10) FDA does not agree that concerns regarding the safety and effectiveness of LDTs should be addressed by amending CLIA or modifying the CLIA regulation. CMS determines whether a laboratory and its personnel meet CLIA requirements, whereas FDA, among other things, reviews and evaluates the tests themselves, including IVDs offered as LDTs, to ensure that they have appropriate assurance of safety and effectiveness under the FD&C Act. CMS and FDA agree: CMS does not have the resources and expertise to assure that tests work for their intended clinical purpose; FDA does (Ref. 71). Congress specifically charged FDA with such oversight, as discussed further in response to comments in section VI.D.2. In particular, FDA has the scientific and regulatory expertise to review data and information on individual IVDs offered as LDTs and determine their safety and effectiveness. FDA employs hundreds of scientists with expertise in review of safety and effectiveness, including those who have worked in clinical laboratories and developed LDTs. FDA is comprised of physicians, statisticians, engineers, biologists, chemists, geneticists, and others, who evaluate the science behind medical products before they are marketed and utilized. Understanding the complex technical information in applications, such as clinical trial data, bench testing results, and product design characteristics—and putting that information in context to assess whether a product has appropriate assurance of safety and effectiveness for its intended use—is within FDA's unique expertise. This type of expertise is no less important for IVDs offered as LDTs, the safety and effectiveness of which may significantly impact not only individual health but also the public health, as described elsewhere in this preamble.

Moreover, establishing a duplicative system for the oversight of IVDs would create bureaucracy and inconsistencies (Ref. 71). As described in the NPRM, such an approach would cause a problematic split in oversight, with the same types of IVDs being reviewed by different Agencies depending on where the IVD was made (88 FR 68006 at 68014). For example, a cancer diagnostic test developed by a conventional manufacturer would be reviewed by FDA while a similar cancer diagnostic test (using the same sample type and testing for the same analytes) developed by a laboratory would be reviewed by another Agency. Further, with that divided oversight, an IVD developed by a conventional manufacturer could even be reviewed and cleared by FDA and subsequently reviewed by another Agency if a laboratory made certain modifications to it. However, if those same modifications were made by the original manufacturer, they would be reviewed by FDA. This could lead to confusion and inconsistency.

In response to the comment that stated that CLIA should require certification of all ''laboratory testing,'' FDA acknowledges that CLIA establishes requirements for laboratory operations and their personnel and issues clinical laboratory certifications. However, FDA disagrees that those requirements provide sufficient assurance of safety and effectiveness for the tests themselves. CLIA does not assess clinical validity or certain manufacturing activities.

We further note that to the extent laboratories may be unfamiliar with the premarket requirements of the FD&C Act, current familiarity with applicable requirements is not determinative of the need for such requirements to be enforced. FDA has made several resources available to stakeholders to increase familiarity with applicable requirements, including final guidance documents and information on FDA's website (see, *e.g.,* Ref. 72), and will provide additional materials and outreach to laboratories during the phaseout period. In addition, with respect to the speed of FDA's premarket

review, FDA notes that its premarket review timelines are negotiated with industry in connection with MDUFA reauthorization. For information regarding FDA's recent performance with respect to MDUFA decision goals, see Ref. 73. FDA generally meets the timeframes for MDUFA decisions negotiated with industry, including for IVD submissions. However, FDA's response to the unprecedented COVID–19 public health emergency significantly impacted the Agency's ability to meet its MDUFA IV performance goals, resulting in some missed decision goals.

(Comment 11) Comments stated that CLIA has its own mechanism for making improvements to its regulations, through the Clinical Laboratory Improvement Advisory Committee (CLIAC), which includes members from the Centers for Disease Control and Prevention (CDC) and FDA. Comments noted that CLIAC has provided advice and guidance to HHS on revisions and improvements to the CLIA standards. Comments suggested that modernizing CLIA is a pathway which is supported by a significant number of ''major organizations.'' A comment stated that effectuating changes through CLIA would be a streamlined and cost-effective approach, for both the government and laboratories, and the least disruptive and burdensome approach to addressing clinical and analytical validity, transparency, and other concerns.

(Response 11) FDA disagrees with these comments. CLIAC's advice is one of many sources available to the Secretary of HHS (Secretary) and is only a recommendation (Ref. 74). As set forth in response to comments 7 and 10, neither CMS nor FDA consider changing CLIA or the CLIA regulations to be appropriate to address the issues discussed in this preamble; to the contrary, it would lead to costly and inefficient bifurcation of the regulation of IVDs offered as LDTs. FDA appreciates that stakeholders seek a streamlined, cost-effective approach that is the least disruptive to their laboratories. FDA shares those goals, which are addressed throughout this preamble, and particularly in the phaseout policy described in section V.

(Comment 12) FDA has received comments stating that FDA oversight of IVDs offered as LDTs would be duplicative of, or conflict with, CLIA. In particular, comments stated that QS requirements and validation requirements would be duplicative or conflict. A comment stated that FDA oversight of LDTs is not in line with Executive Order (E.O.) 13563, which asks executive branch agencies to harmonize regulatory requirements. In addition, some comments stated that increased oversight would be cumbersome, and therefore would not follow FDA's least burdensome principles.

(Response 12) FDA disagrees with these comments. As set forth elsewhere in this preamble, CMS and FDA enforce two different regulatory schemes, separate in scope and purpose from each other. CMS agrees the two are complementary, not duplicative, as discussed in response to comment 7. The portion of CLIA that addresses quality systems relates to laboratory operations, laboratory personnel, and requirements for laboratory procedures relevant to testing. FDA's QS requirements are focused on design control and validation and other requirements intended to ensure that the IVD has appropriate assurance of safety and effectiveness for its intended use. FDA also notes that this rule comports with E.O. 13563 because this rule promotes coordination and harmonization by taking into account the assurances that CLIA provides (see section V.C).

As described in section V.C regarding FDA's intention to phase out the general enforcement discretion approach with respect to QS requirements during stage 3 of the phaseout policy (other than requirements under § 820.198 (complaint files), which are addressed in stage 1), FDA intends to take into account CLIA requirements as appropriate. As to validation, CLIA regulations do not address clinical validation of tests, and analytical validation under CLIA is different from that under the FD&C Act. FDA's review of analytical validity (*i.e.,* the ability of the test to accurately and reliably measure or detect the analyte(s) it is intended to measure or detect) is done prior to marketing, and FDA assesses the analytical validity of the IVD offered as an LDT in greater depth and scope. FDA also assesses clinical validity, which is the accuracy and reliability with which the test identifies, measures, or predicts the presence or absence of a clinical condition or predisposition in a patient, in reviewing the safety and effectiveness of the test. As noted, unlike the FDA regulatory scheme, CMS' CLIA program does not address the clinical validity of any test.

We also note that FDA collaborates closely with CMS. The two Agencies have entered into a memorandum of understanding that facilitates information sharing, and FDA, CMS, and CDC participate in monthly ''Tri-Agency'' meetings to discuss topics related to CLIA oversight. Tri-Agency meetings often include sharing of non-CLIA information that is pertinent to the CLIA program, such as issues related to specific tests, safety communications, recalls, or warning letters. FDA and CMS also share information between meetings as needed, particularly when there are signals that may warrant investigation by either Agency.

FDA also disagrees that increased FDA oversight of IVDs offered as LDTs would not follow FDA's least burdensome principles. As explained in a final guidance document issued by FDA on February 5, 2019, entitled ''The Least Burdensome Provisions: Concept and Principles,'' FDA ''defines least burdensome to be the minimum amount of information necessary to adequately address a relevant regulatory question or issue through the most efficient manner at the right time (*e.g.,* need to know versus nice to know). Our least burdensome definition and principles do not change the applicable statutory and regulatory standards, such as the device authorization standards, nor the applicable requirements, including premarket submission content requirements and the requirement for valid scientific evidence'' (Ref. 75). In developing the phaseout policy, FDA has considered least burdensome principles consistent with this definition. As described extensively in the NPRM and this preamble, oversight of LDTs is necessary to adequately address safety and effectiveness concerns regarding LDTs. The phaseout policy is designed to achieve this objective in the most efficient manner and at the right time, by phasing out the general enforcement discretion approach with respect to applicable statutory and regulatory requirements in a gradual manner and including various targeted enforcement discretion policies, as further described in section V. With respect to the comment that invoked E.O. 13563, we note that section 7(d) of the E.O. states that it ''is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity. . . .''

(Comment 13) FDA received comments which stated that FDA oversight is not necessary, as CLIA has its own enforcement mechanism. Some comments stated that CMS can, and has, used its enforcement capability from CLIA to sanction both laboratories and individual laboratory directors. Some comments stated that FDA oversight is unnecessary, because laboratory medical directors have medical, legal, and ethical responsibility for their laboratories, which includes personally

approving all new technical procedures and approving all test validations. One comment stated, however, that when an LDT does not meet specifications or ''quality standards,'' a laboratory director can continue to release results after making ''a deviation/exception report.''

(Response 13) FDA agrees that CLIA has certain enforcement capabilities, and that CMS has exercised those enforcement tools to take certain actions against laboratories that do not comply with CLIA regulations. FDA also agrees that medical and laboratory directors have responsibilities for their laboratories, and that some of those responsibilities include approving certain procedures and activities. However, FDA disagrees that relying on CMS enforcement tools, personal responsibilities, or the activities of the laboratory director alone are sufficient to protect the public health if a test does not have appropriate assurance of safety and effectiveness. As one comment noted, under CLIA, laboratory directors may continue to release test results that do not meet their own specifications. The CLIA regulations focus on laboratory operations whereas the FD&C Act focuses on the design and manufacturing of the test. While this rule does not change the responsibilities of a laboratory director, FDA oversight ensures compliance with quality requirements set forth in the FD&C Act.

In contrast to CMS, FDA generally is authorized to review the safety and effectiveness of individual IVDs, including an IVD offered as an LDT, prior to marketing, to impose special controls or post-approval conditions for certain tests as risk mitigations, to receive reports of device malfunctions and adverse events, and to require reports of corrections and removals of a device, as well as to take specific steps when a device presents a risk to the public health such as advisory, administrative, or enforcement actions, including issuance of warning letters, injunction, seizure, mandatory recall, and assessment of civil monetary penalties.

(Comment 14) A comment suggested that instead of implementing FDA's proposal, FDA should work with CMS to establish a national registry of LDTs to register all existing and new LDTs. The comment suggested that FDA include in that registry test type classification, clinical utility claims, and validated performance with confidence intervals or other relevant statistics. The comment further suggested that FDA coordinate with CMS, CAP, clinical laboratory professional organizations, AMCs, and ''commercial'' laboratories to establish a system for LDT review and regulation.

(Response 14) FDA enforcement of existing registration and listing requirements is appropriate for IVDs offered as LDTs. FDA already has a process and database for establishment registration and device listing, and there is no need to establish a new ''registry'' for LDTs. FDA also has labeling requirements for IVDs in part 809 that include, among other things, required information on performance characteristics. Given the existing statutory and regulatory framework, there is no need to establish a new system for LDT review and regulation as suggested by the comment. As set forth in section V.C, FDA is phasing out the general enforcement discretion approach with respect to registration and listing requirements (21 U.S.C. 360, part 607 (for IVDs subject to licensure), and part 807 (excluding subpart E)) 2 years after the phaseout policy is published. Under this timeline, FDA will be able to utilize registration and listing information to obtain an initial understanding of the universe of IVDs offered as LDTs to facilitate premarket review of those IVDs. As set forth in section V.C, FDA also is phasing out the general enforcement discretion approach with respect to labeling requirements 2 years after the phaseout policy is published.

(Comment 15) Some comments claimed that the fact that FDA has identified some problematic tests demonstrates that CLIA is providing sufficient oversight. Comments requested that FDA explain why CLIA regulation is insufficient for the majority of laboratories that follow CLIA guidelines. See also comment 16.

(Response 15) FDA agrees that CLIA serves an important role: CMS regulates laboratories that perform testing on individuals in the United States by regulating laboratory testing and personnel under CLIA. As discussed elsewhere in this preamble, CLIA is separate in scope and purpose from the FD&C Act and FDA regulations. CLIA regulations help to determine whether laboratories are conducting testing in a manner consistent with CLIA, but CLIA does not ensure that the test itself has appropriate assurance of safety and effectiveness for its intended use.

As more fully set forth in section III.B and in response to comments in section VI.C.4, FDA is aware of numerous examples of potentially inaccurate, unsafe, ineffective, or poor quality IVDs offered as LDTs that caused or may have caused patient harm. FDA would not expect the types of problems observed among these IVDs offered as LDTs to be identified under CLIA, and as described elsewhere in this preamble, the evidence of these problems cuts across test types and laboratories and is from a variety of sources, including published studies in the scientific literature, allegations of problematic tests reported to FDA, FDA's own experience in reviewing IVDs offered as LDTs, news articles, and class-action lawsuits.

(Comment 16) Several comments asserted that FDA's experience with Theranos is evidence that FDA oversight will not address problematic tests, particularly those that are fraudulent. They pointed out that FDA cleared a 510(k) from Theranos and that the company's fraudulent behaviors were addressed by CMS through the CLIA program.

(Response 16) This comment does not reflect a complete accounting of events. First, FDA cleared one test from Theranos early in our experience with the company. Per standard practice, FDA reviewed the data provided and based our decision on it. We subsequently identified significant device performance concerns based on the data submitted in submissions for other tests of Theranos, including questions about inaccurate results that may put patients at risk. We did not clear those devices. Less than 2 months after the clearance of the one test, we sent investigators to all Theranos sites, where we identified concerns with IVDs offered as LDTs and an unapproved collection device (Ref. 76). Recognizing the immediate risk to patients, we took a strategic compliance approach. Specifically, FDA took quick action that directly led to the firm ceasing distribution of its unapproved collection device. We also alerted CMS to potential CLIA concerns, and CMS promptly confirmed CLIA violations in a follow-up inspection. Thus, FDA was integral to the government's handling of Theranos, and FDA disagrees with the comment's assertions that FDA did not address problematic IVDs offered as LDTs by Theranos.

(Comment 17) Some comments suggested that CLIA could be ''modernized'' to incorporate oversight of clinical validity and address concerns raised by FDA.

(Response 17) These comments are outside the scope of this rulemaking. This rulemaking is focused on FDA's oversight of devices under the current statutory authorities set forth in the FD&C Act, and in consideration of CMS's current authorities under CLIA.

In any event, FDA disagrees that concerns with IVDs offered as LDTs should be addressed through expansion

of CLIA. First, the authority and expertise to oversee the safety and effectiveness of tests already lies with FDA, and not with CMS; expanding CMS oversight would require legislation and would establish a duplicative regulatory program. Second, neither FDA nor CMS supports such an approach. It would establish a dual system for the oversight of tests and create more government bureaucracy, duplication of effort, and potential inconsistencies. For example, a test made by a non-laboratory manufacturer (and any modifications to that test made by the laboratory manufacturer) would be regulated by FDA, but if the test is modified by a laboratory, CMS would regulate it. The same/similar tests made by a laboratory and non-laboratory manufacturer would be reviewed by two different agencies under different frameworks. This approach does not make sense.

3. Other Controls

(Comment 18) FDA received comments claiming that FDA should not enforce the requirements of the FD&C Act for IVDs offered as LDTs, as it is more appropriate for accrediting entities, including the Commission on Office Laboratory Accreditation (COLA), CAP, the Accreditation Commission for Health Care (ACHC), the Association for the Advancement of Blood and Biotherapies (AABB), the Joint Commission, and ASHI to oversee IVDs offered as LDTs. Some comments suggested that FDA should exercise enforcement discretion with respect to IVDs offered as LDTs at certain facilities with relevant accreditations, such as accreditation by ASHI or the Foundation for the Accreditation of Cellular Therapy (FACT), because such accreditations provide the necessary assurances relevant to the type and volume of work performed by these accredited facilities.

(Response 18) FDA disagrees that CLIA accreditation organizations such as COLA, CAP, or ACHC provide sufficient oversight of IVDs offered as LDTs. As discussed in response to comment 7, CLIA accreditation entities, including COLA, CAP, and ACHC, determine whether a laboratory meets CLIA requirements. Moreover, various accreditation entities, including AABB, the Joint Commission, ASHI, and FACT, may also determine whether a laboratory meets these organizations' voluntary accreditation standards. Unlike these organizations, which assess laboratories/laboratory operations under CLIA and their own accreditation standards, FDA (and FDA's device authorities under the FD&C Act) focus on whether devices, including IVDs offered as LDTs, have appropriate assurances of safety and effectiveness.

In particular, COLA evaluates and, if appropriate, certifies that certain laboratories that conduct tests in certain specialties (chemistry, hematology, microbiology, immunology, and immunohematology/transfusion services) meet CLIA requirements and any applicable COLA accreditation standards (Ref. 77). CAP conducts inspections to determine compliance with CLIA and applicable CAP accreditation standards (Ref. 78). Although CAP and COLA have their own accreditation standards, these additional standards address the manner in which the laboratory performs tests, and do not assess the clinical validity of the test itself. COLA and CAP do not perform premarket review of individual IVDs offered as LDTs for overall safety and effectiveness for the devices' intended uses. More generally, third-party accreditation entities have their own standards for accreditation of facilities that may not assess the clinical validity of the tests that the facility performs. Thus, an accreditation of a facility by one of these third parties does not, on its own, provide sufficient assurance of safety and effectiveness for the IVDs offered as LDTs by the accredited facility for their intended uses.

We note that pursuing CAP, COLA, ACHC, AABB, Joint Commission, ASHI, or FACT (or other) accreditation is a voluntary process. CAP, COLA, and other accreditation organizations' standards are not regulatory or statutory requirements.

Finally, we note that for reasons more fully set forth in response to comment 7, FDA is the appropriate entity to provide the necessary oversight of IVDs offered as LDTs to better assure their safety and effectiveness.

(Comment 19) FDA received comments stating that many laboratories follow guidelines provided by the Association for Molecular Pathology (AMP), the International Clinical Cytometry Society (ICCS), and the Clinical and Laboratory Standards Institute (CLSI), and voluntary standards issued by ISO. Some comments suggested that laboratories that follow such standards are already highly regulated. Other comments stated that following such guidelines and/or standards provides a level of assurance that the laboratories' assays are ''safe and reliable.'' Comments recommended that FDA permit AMP, ICCS, CLSI, and other entities to continue to offer such guidelines. Another comment stated that the ''solution for . . . incompetent tests should be . . . standardization and not regulation.''

(Response 19) FDA acknowledges that many entities, including the entities that the comments listed, offer guidelines, standards, and other resources to laboratories. However, the guidelines and standards that the comments describe are, in most instances, voluntary and non-binding.[51] FDA disagrees that a laboratory that chooses to follow such guidelines or standards is ''highly regulated'' as a result of these voluntary actions. FDA further disagrees that following such voluntary guidelines or standards provides assurances of safety or reliability (or effectiveness), as the guidelines and standards do not address IVD safety and effectiveness (see, *e.g.,* Refs. 79 to 81). Notably, nothing in this rule will prevent AMP, ICCS, CLSI, or other entities from continuing to provide voluntary guidelines or standards to laboratories.

(Comment 20) Comments asserted that the Federal program entitled Molecular Diagnostic Services (MolDx) already provides significant regulatory oversight and overlaps with FDA's proposal. Comments also stated that MolDx addresses technical requirements for assays by assessing a test's analytical and clinical validity, and for this reason, the comments suggested that increased FDA oversight is not needed.

(Response 20) FDA regulation and the MolDx program differ in several key respects. MolDx is a limited program, which evaluates whether tests are reasonable and necessary with a focus on the Medicare population (Ref. 82). In contrast, FDA's authority extends to IVDs for all people and includes various compliance and enforcement authorities (that MolDx lacks), which enable FDA to take action when an IVD presents a risk to health (*e.g.,* through recalls). The MolDx program does not mitigate the need for increased FDA oversight of IVDs offered as LDTs.

(Comment 21) FDA received a comment stating that CDC's Newborn Screening Laboratory Quality Assurance Program (NSQAP) administers proficiency testing and validates new screening tests, ensuring the accuracy of results generated by laboratories. The comment suggested that because of this program, increased FDA oversight is not needed.

(Response 21) FDA disagrees that NSQAP is a substitute for FDA oversight

[51] FDA may incorporate a voluntary consensus standard by reference. *See* 5 U.S.C. 552(a) and 1 CFR part 51. Where FDA has incorporated a voluntary consensus standard by reference, that standard is treated as if it were published in the **Federal Register** and CFR, and this material has the full force and effect of law.

of IVDs offered as LDTs. The NSQAP program provides quality assurance services to newborn screening laboratories by providing reference materials, providing proficiency testing regarding laboratory operations, providing quality control reports, and offering training and consults (Ref. 83). NSQAP evaluates the proficiency of laboratory personnel and procedures, not the safety and effectiveness of IVDs offered as LDTs. See our response to comment 9 for additional discussion regarding proficiency testing.

(Comment 22) Comments stated that New Jersey and Washington certification programs ensure that laboratories conduct LDT validations and proficiencies at high quality standards. The comments stated that laboratories that adhere to New Jersey's certification requirements and other certification programs provide patients with a high level of care. The comments suggested that such certification programs obviate the need for increased FDA oversight.

(Response 22) FDA acknowledges that several States have certification programs. New Jersey and Washington State certification programs certify laboratories within those states if they meet the State certification requirements. FDA disagrees, however, that compliance with these State certification requirements provides sufficient risk mitigations for IVDs offered as LDTs. For example, there is no indication that these State programs evaluate both the analytical and clinical validity of LDTs (see Refs. 84 and 85). According to the website of the cited program in Washington State, the program covers licensure, biennial surveys, and proficiency testing (Ref. 84). In the comment submitted to the docket regarding New Jersey's program, no specific information or citation was provided regarding the program. Nor did FDA receive a comment to the docket from the New Jersey program. Based on information available to FDA regarding New Jersey's program, we believe this program is focused on laboratory operations, and not the evaluation of the IVDs themselves (see Ref. 85).

(Comment 23) Some comments stated that when electronic medical records (EMRs), inter-specialty cooperation, and educational and safety-reporting systems are integrated within a healthcare system, the risk to patients from IVDs manufactured by the laboratory within that system is minimized and there is no need for additional FDA oversight.

(Response 23) FDA disagrees that these elements alone are a substitute for FDA oversight of IVDs offered as LDTs. FDA acknowledges that these elements may play a role in patient care, but FDA oversight of IVDs offered as LDTs serves a vital role in assuring the appropriate safety and effectiveness of the IVDs. Critical aspects of FDA's oversight, including premarket review, QS, registration and listing, centralized adverse event reporting, labeling, and other requirements, are not addressed by the elements described in these comments.

We note that FDA does believe that integration of a laboratory within a healthcare system provides some risk mitigations, as discussed further in section V.B.3. FDA has taken those risk mitigations into consideration in adopting an enforcement discretion policy for premarket review and most QS requirements for LDTs manufactured and performed by a laboratory integrated within a healthcare system to meet an unmet need of patients receiving care within the same healthcare system.

(Comment 24) One comment stated that concerns about manufacturing controls and other device-specific concerns regarding IVDs offered as LDTs are managed by ''lot-to-lot'' validation and a laboratory's quality control.

(Response 24) FDA disagrees with this comment. While premarket and post-market validation activities are an essential element of quality management, there are other critical aspects of a quality management system, and a laboratory's quality control does not address other critical aspects of FDA oversight.

(Comment 25) FDA received comments which noted that laboratories consult with clinicians, diagnosticians, tumor boards, and case conferences, and which suggested that this consultation provides clinical validation and ensures that tests are interpreted appropriately.

(Response 25) FDA disagrees that consultation provides clinical validation, or that consultation alone is a substitute for FDA oversight of IVDs offered as LDTs. Although FDA agrees that consultation between laboratories and clinicians, diagnosticians, and others as described in this comment may help to mitigate risks from IVDs offered as LDTs in certain circumstances and particularly in the context of LDTs for unmet needs (see further discussion in section V.B.3), such consultation does not obviate the need for FDA oversight such as would justify continuing the general enforcement discretion approach for all FDA requirements for all LDTs, as suggested by the comments.

(Comment 26) FDA received a comment stating that ''financial restrictions to laboratory testing'' represent another layer of oversight beyond CMS and FDA regulation, and serve to maintain the quality of laboratory testing. The comment did not define ''financial restrictions,'' but referenced payment codes and payor coverage decisions. The comment suggested that because of this additional layer of oversight, increased FDA oversight is not needed.

(Response 26) FDA disagrees that ''financial restrictions'' related to coverage and reimbursement considerations provide sufficient assurances of safety and effectiveness for IVDs offered as LDTs. In the analysis that CMS conducts to determine Medicare coverage, it may consider various factors, including coverage indications, coverage limitations, and the clinical circumstances that demonstrate medical necessity, but those factors are not equivalent to, or a substitute for, the assurances of safety and effectiveness provided by FDA oversight. In general, CMS considers claims after marketing evaluations regarding whether expenses incurred are reasonable and necessary for the diagnosis and treatment of illness or injury or improve the functioning of a malformed body member, and whether the claim for payment contains the necessary information for CMS to process the claim (see section 1862(a)(1)(A) and section 1833(e) of Title XVIII of the Social Security Act).

(Comment 27) One comment indicated that ''review by peer organizations'' would be superior to FDA review due to subspecialty expertise and cost ''to the taxpayer.''

(Response 27) FDA disagrees that review by peer organizations would be superior to FDA review of IVDs offered as LDTs due to subspecialty expertise. First, FDA has the appropriate expertise to review the safety and effectiveness of IVDs, as discussed in response to comments 7 and 10. Where additional expertise may be beneficial, FDA can seek input from advisory committees in accordance with the Federal Advisory Committee Act. Second, peer review may introduce bias and variability of oversight, particularly if unblinded. For example, where two peers review each others' work, they may potentially be inclined to overlook issues and expect the same in return.

Use of peer reviewers is also not necessary to address costs to taxpayers or FDA. FDA receives funding from Congressional non-user fee appropriations (''budget authority'') and user fees to support operation of the

medical device program, including premarket review. FDA also intends to enhance the Third Party review program, which will reduce costs to the Agency while providing for assistance with 510(k) reviews by entities that are independent of the manufacturer.

4. Evidence of the Need for Greater FDA Oversight

(Comment 28) FDA received comments stating that there is no problem with LDTs. One comment from a laboratory director voiced confidence in LDT results and stated that any areas for improvement seldom have to do with ''faulty results or improper care related to testing.'' Other comments stated that the errors in laboratory testing often stem from operational issues and human error rather than the design or nature of LDTs, and opined that FDA oversight would not address these issues. Several asserted that laboratories are diligent in their validation of LDTs, that there is no evidence of problems with LDTs, and that LDTs are as safe as FDA-authorized tests. One comment cited a 2014 publication concluding that the quality of clinical DNA testing for rare diseases in the United States was excellent (Ref. 86). Another comment pointed to a 2022 opinion article in the Wall Street Journal claiming ''a review of all reported cases in state and federal courts reveals no reported suits filed against a laboratory for an LDT result'' (Ref. 87).

FDA also received comments indicating problems with LDTs. One comment described the commenter's experience witnessing ''unsafe practices similar to those described in FDA's proposed rule'' while working in a profitable laboratory. This commenter left that laboratory to work at ''labs that care for the health of individuals.'' Another comment described the commenter's experience with marketing of RUO products for clinical diagnostic testing. One company reported that laboratories offer inferior LDTs that compete with the company's FDA-approved test, and that proficiency testing programs allow inferior tests to pass. In these cases, patients receiving an inferior test may not get the most up to date treatment they should have. An AMC laboratory director indicated the laboratory often sees inconsistent results for the same patient tested in the AMC laboratory and at reference laboratories. Several other comments, including comments submitted by healthcare providers, laboratorians, patients, and public interest organizations, provided specific examples of problematic IVDs offered as LDTs, including IVDs offered as LDTs that, according to the comments, lacked clinical validity, provided false results, provided inconsistent results, or were promoted with false or misleading claims. A comment submitted by NYS CLEP described several examples of LDTs that NYS CLEP did not approve based on the original application due to issues such as design flaws and inadequate validation data, including an LDT with an ''error [that] would have endangered patient safety.'' Another comment submitted in support of FDA's proposal stated that ''[t]he current state of laboratory developed testing in the US is quite honestly, astonishingly bad. . . . as a CAP inspector, I have seen firsthand the absolutely shoddy laboratory developed tests in place at many laboratories.''

(Response 28) The information discussed in the NPRM, and additional information provided in various comments submitted to the Agency, demonstrates that performance problems exist with certain IVDs offered as LDTs (see 88 FR 68006 at 68010–12). FDA disagrees with comments claiming that there is no problem with LDTs or that deficiencies in laboratory testing are mostly caused by operational or human error. As described in the NPRM (88 FR 68006 at 68010–12), in memoranda included in the docket for this rulemaking (Refs. 16 and 18), and in other comments submitted to the docket such as those described above, we are aware of problems with IVDs offered as LDTs, many of which stem from issues with the IVD itself, such as design issues. We have become aware of these problems even though the general enforcement discretion approach has applied to requirements for postmarket reporting, such as MDR requirements.

We acknowledge that the 2014 publication cited in the comment refers to a ''high level of confidence that most U.S. laboratories offering rare disease testing are providing consistent and reliable clinical interpretations''; however, this is based on a survey conducted from 2010 through 2012 for a proficiency testing program to assess the performance of laboratories running Sanger sequencing IVDs for rare and ultra-rare disorders. Laboratory proficiency testing results for Sanger sequencing IVDs for rare and ultra-rare diseases from over a decade ago do not support the assertion that the quality of clinical DNA testing in the United States is excellent today, let alone that there are no concerns with IVDs offered as LDTs generally. First, proficiency testing data are not appropriate as standalone or comparative results to support test validation and performance. Please see our response to comment 34 for a more detailed assessment of the limitations of proficiency testing data. Second, laboratory performance for Sanger sequencing IVDs for rare and ultra-rare disorders, which are a limited subset of genetic IVDs, do not represent the landscape of clinical genetic tests used today where most tests use next generation sequencing (NGS) and other technologies. As noted in the NPRM, FDA's concerns with IVDs offered as LDTs have grown in recent years (88 FR 68006 at 68010). Moreover, we disagree with the statement that no suits have been filed against a laboratory for a false result associated with an IVD offered as an LDT; the NPRM cited evidence to the contrary (see 88 FR 68006 at 68012 (stating that ''consumers, shareholders, and investors are filing lawsuits against laboratory manufacturers for false and misleading statements about test efficacy,'' and citing to Complaint, *Davis* v. *Natera, Inc.,* No. 3:22–cv–00985 (N.D. Cal. 2022); *Biesterfeld* v. *Ariosa Diagnostics, Inc.,* No. 1:21–CV–03085, 2022 WL 972281 (N.D. Ill. 2022); and other lawsuits)). FDA shares the concern of comments that described problems observed with IVDs offered as LDTs.

(Comment 29) FDA received comments stating that the proposed rule is not necessary for FDA ''to take action against bad actors'' or ''ill-intended individuals and laboratories'' that abuse the system, because FDA could choose to enforce in ''egregious cases of patient harm or attempts to exploit regulatory loopholes.''

(Response 29) FDA agrees that the Agency may choose to enforce against violations of the FD&C Act or PHS Act at any time, including (but not limited to) in response to egregious cases of patient harm, attempts to exploit loopholes, or other conduct involving ''bad actors'' or ''ill-intended individuals and laboratories.'' The general enforcement discretion approach does not bind the Agency or prevent FDA from taking enforcement action. However, as described in section III.B of this preamble, FDA is choosing to adjust its approach to enforcement discretion moving forward to address the fundamental uncertainty about whether IVDs offered as LDTs provide accurate and reliable results. The phaseout policy clarifies FDA's expectations regarding laboratories' compliance with applicable requirements and will bring more stability to the overall testing market. By phasing out the general enforcement discretion approach for LDTs, FDA may gain a more comprehensive understanding of the universe of IVDs

offered as LDTs (through enforcement of registration and listing requirements), monitor safety signals and more readily identify problematic IVDs (through enforcement of MDR requirements and corrections and removals reporting requirements), better assure that patients and providers have access to the information they need and that IVDs are not promoted with false or misleading claims (through enforcement of labeling requirements), and better assure analytical validity, clinical validity, and safety (through enforcement of QS, premarket review, and other applicable requirements). Ultimately, as noted elsewhere in this preamble, by applying the same general oversight approach to both laboratory and non-laboratory manufacturers of IVDs, FDA may better assure the safety and effectiveness of IVDs offered as LDTs, incentivize innovation by nonlaboratory manufacturers, and help ensure that innovation from laboratory manufacturers yields IVDs for which there is a reasonable assurance of safety and effectiveness (Refs. 15, 22, 88 to 90).

(Comment 30) FDA received comments suggesting certain steps FDA should take prior to phasing out the overall general enforcement discretion approach. Different comments provided different suggestions, but several suggested that FDA first gather more information about IVDs offered as LDTs through, for example, a survey, use of CMS's ''data from every licensed laboratory on the test type and annual volume,'' use of data available from CAP, or a U.S. GAO study. One comment suggested FDA enforce registration and listing and adverse event reporting requirements in order to gather information prior to determining whether to phase out the general enforcement discretion approach for premarket review requirements. Another comment stated that FDA needed to develop a better understanding of how ''in-office'' tests in particular are operationalized in clinical practice and undertake a more ''inclusive and deliberative process'' that accounts for ''diverse stakeholders,'' but did not specify how.

(Response 30) FDA acknowledges that we do not know exactly how many laboratories manufacture IVDs offered as LDTs nor precisely how many such IVDs they make. Based on direct interactions with CMS and CAP, FDA understands that neither organization collects this information for all IVDs offered as LDTs. However, FDA's FRIA provides estimates of how many laboratories currently offer IVDs as LDTs and how many IVDs offered as LDTs are on the market (Ref. 10). The basis for these estimates is described in section II.D.1 and appendix A of the FRIA. FDA does not agree that it should wait until it has more precise information about how many laboratories offer IVDs as LDTs and how may IVDs offered as LDTs are on the market before finalizing this rule, because more precise numbers would not affect the fundamental public health concerns that have motivated this rulemaking. FDA also notes that the longer it waits, the higher the numbers will become and the greater the risk posed to patients. Nor does FDA believe it should gather more information about potential problems with IVDs offered as LDTs prior to phasing out the overall general enforcement discretion approach; as discussed further in response to comments 32 and 160, while FDA is uncertain of the impact to the existing market, FDA already possesses enough information to conclude that there is no longer a sound basis to generally treat LDTs differently from other IVDs, and that the general enforcement discretion approach for LDTs does not best serve the public health.

With respect to the suggestion that FDA initially focus solely on registration and listing and adverse event reporting requirements, please see the response to comment 160 in section VI.F.6 of this preamble.

With respect to the comment about a more inclusive and deliberative process, FDA notes that, through this rulemaking, it has solicited and received many comments from diverse stakeholders that provided information on how in-office and other tests are operationalized in clinical practice, and we have carefully considered those comments. Furthermore, FDA has engaged with the public on this topic on multiple occasions over the last 30 years, including through draft guidances and public meetings. This rulemaking reflects FDA's best judgment based on a significant amount of input over many years, and we intend to continue to engage with the public on this topic. See our response to comment 296 for additional discussion regarding stakeholder engagement.

We also note that FDA does not control the U.S. GAO, and cannot compel a U.S. GAO study.

(Comment 31) Comments called on CMS, the National Institutes of Health (NIH), and HHS to review FDA's proposal.

(Response 31) Per standard practice, all relevant components of HHS, including CMS, NIH, and HHS leadership, reviewed and cleared FDA's proposed rule and this final rule.

(Comment 32) FDA received comments calling on FDA to produce more evidence of a problem. Some noted that FDA's existing evidence is largely anecdotal and called for ''evidence of multiple, conclusive, high-quality studies that show . . . that errors in laboratory testing are a pervasive and particularly dangerous problem.'' Other comments asked FDA to provide evidence of a problem with LDTs in specific areas, such as clinical toxicology. Some stated that the examples provided are not reflective of the landscape of LDTs, particularly at AMCs.

(Response 32) FDA does not agree with these comments. FDA has considered a wide range of evidence, including evidence described in the NPRM (88 FR 68006 at 68010–12) and information submitted in comments, and has determined that this evidence is adequate to conclude that there is a concerning level of variability in the performance of IVDs offered as LDTs.

As discussed in the NPRM, information about IVDs offered as LDTs in the scientific literature, as well as news articles and anecdotal reports submitted to the Agency, among other sources, has exposed evidence of problems associated with some of these tests (88 FR 68006 at 68010–12; Refs. 20 and 91 to 97). Regarding the scientific literature, the NPRM described multiple publications that document high variability in performance among IVDs offered as LDTs, including the potential for inaccurate or incomplete results (see comment responses 38, 39, and 41 for additional information) (88 FR 68006 at 68010–12). In addition, in support of this rulemaking, FDA prepared and submitted a memorandum to the docket regarding ''Examples of In Vitro Diagnostic Products (IVDs) Offered as Laboratory Developed Tests (LDTs) that Raise Public Health Concerns,'' which contained additional details from non-public sources (and some public MDRs) regarding examples of IVDs offered as LDTs with reported or known issues that were referenced in the NPRM (Ref. 16). FDA also submitted a second memorandum to the docket entitled ''Summary of 2020 Assessment of the First 125 EUA Requests from Laboratories for Molecular Diagnostic Tests for SARS–CoV–2'' (Ref. 18). Comments submitted to the docket provided additional evidence that further exposed problems associated with IVDs offered as LDTs (see discussion in response to comment 28). FDA also notes that the evidence of problematic IVDs offered as LDTs has

been growing, a trend that increases FDA's concerns.[52]

To the extent that comments raised questions about the quality of the evidence cited in the NPRM, FDA has addressed those questions in our responses to other comments in this section, including comments 36, 37, 38, and 43.

FDA does not take the position that all IVDs offered as LDTs are problematic, but the collective evidence, including anecdotal evidence, regarding certain IVDs offered as LDTs is of significant concern, especially given there is no consistent reporting of adverse events. Because this evidence covers a wide variety of tests across a range of laboratories, including AMCs, FDA considers it fairly representative of the landscape of IVDs offered as LDTs, contrary to one comment's claim. FDA also disagrees that it must have evidence specific to every type of test, such as clinical toxicology tests, in order to justify this rulemaking, and we disagree that ''multiple, conclusive, high-quality studies'' are needed here. *See FCC [Federal Communications Commission]* v. *Prometheus Radio Project,* ____ U.S. ____, 141 S. Ct. 1150, 1160, 209 L.Ed.2d 287 (2021) (''[T]he [Administrative Procedure Act (APA)] imposes no general obligation on agencies to conduct or commission their own empirical or statistical studies.''). Instead, FDA has ''made a reasonable predictive judgment based on the evidence it ha[s].'' Id. Specifically, based on careful consideration of the information in the record, FDA has determined that the final phaseout policy appropriately balances the relevant considerations and will advance public health.

(Comment 33) FDA received comments regarding the risks and benefits of FDA's proposal, with some comments indicating that FDA has not adequately considered the benefits of IVDs offered LDTs. One comment stated that the data provided by FDA ''appears to overstate the risks associated with LDTs, while understating the benefits.''

(Response 33) FDA disagrees that the data provided in the NPRM overstates the risks associated with IVDs offered as LDTs. FDA has considered evidence from a variety of sources that, taken together, demonstrates fundamental uncertainty about whether such IVDs provide accurate and reliable results. FDA acknowledges the benefits that IVDs offered as LDTs offer when those IVDs do provide accurate and reliable results, and has taken these and other public health considerations into account in developing the phaseout policy. The fact that accurate and reliable IVDs offered as LDTs have benefits does not mean that the current status quo—in which problematic IVDs offered as LDTs are marketed with limited FDA oversight—should continue indefinitely.

(Comment 34) FDA received comments indicating FDA failed to include all available data relevant to the need for rulemaking. For example, one comment stated FDA is ''ignoring broad evidence of the high quality of genetic LDTs.'' Comments asserted that there was omission of multiple publications claiming comparable or better performance of IVDs offered as LDTs compared to ''FDA IVDs.'' Comments pointed to the following publications:

- Benayed, R., Offin, M., Mullaney, K., Sukhadia, P., et al. (2019). ''High Yield of RNA [Ribonucleic acid] Sequencing for Targetable Kinase Fusions in Lung Adenocarcinomas with no Mitogenic Driver Alteration Detected by DNA Sequencing and Low Tumor Mutation Burden.'' *Clinical Cancer Research,* 25(15), 4712–4722. (Ref. 98).
- Keegan, A., Bridge, J.A., Lindeman, N.I., Long, T.A., et al. (2020). ''Proficiency Testing of Standardized Samples Shows High Interlaboratory Agreement for Clinical Next-Generation Sequencing-Based Hematologic Malignancy Assays with Survey Material-Specific Differences in Variant Frequencies.'' *Archives of Pathology & Laboratory Medicine,* 144(8), 959–966. (Ref. 99).
- Kim, A.S., Bartley, A.N., Bridge, J.A., Kamel-Reid, S., et al. (2018). ''Comparison of Laboratory-Developed Tests and FDA-Approved Assays for BRAF, EGFR, and KRAS Testing.'' *JAMA Oncology,* 4(6), 838–841. (Ref. 100).
- Merker, J.D., Devereaux, K., Iafrate, A.J., Kamel-Reid, S., et al. (2019). ''Proficiency Testing of Standardized Samples Shows Very High Interlaboratory Agreement for Clinical Next-Generation Sequencing-Based Oncology Assays.'' *Archives of Pathology & Laboratory Medicine,* 143(4), 463–471. (Ref. 101).
- Moncur, J.T., Bartley, A.N., Bridge, J.A., Kamel-Reid, S., et al. (2019). Archives of Pathology & Laboratory Medicine, 143(10), 1203–1211. (Ref. 102).
- Zehir, A., Nardi, V., Konnick, E.Q., Lockwood, C.M., et al. ''SPOT/Dx Pilot Reanalysis and College of American Pathologists Proficiency Testing for KRAS and NRAS Demonstrate Excellent Laboratory Performance.'' *Archives of Pathology & Laboratory Medicine.* (Ref. 103).
- Zhang, B.M., Keegan, A., Li, P., Lindeman, N.I., et al. (2021). ''An Overview of Characteristics of Clinical Next-Generation Sequencing-Based Testing for Hematologic Malignancies.'' *Archives of Pathology & Laboratory Medicine,* 145(9), 1110–1116. (Ref. 104).

One comment further asserted that ''publications have demonstrated major deficiencies in FDA-approved tests that would result in patient mismanagement had LDTs not been available to address those deficiencies,'' citing to the above-listed publication from Benayed et al. There were two other publications referenced by a comment that were mis-cited or not identifiable from the information provided.

(Response 34) FDA does not agree that the publications cited by these comments vitiate the need for greater oversight of IVDs offered as LDTs. FDA does not take the position that all IVDs offered as LDTs are problematic. Instead, as described in section V.B.3, FDA believes that beneficial IVDs offered as LDTs are likely on the market. But the fact that some IVDs offered as LDTs that are on the market may be beneficial does not mean that the current status quo—in which problematic IVDs offered as LDTs are marketed with limited FDA oversight—should continue indefinitely. Thus, even if the seven articles cited above showed that certain IVDs offered as LDTs have performance comparable to or better than that of certain FDA-authorized tests—which FDA does not believe to be the case, as discussed below—that would only support the accuracy and reliability of the cited tests. It would not negate evidence of problematic IVDs offered as LDTs or uncertainty as to whether IVDs offered as LDTs provide accurate and reliable results, as discussed in the NPRM and elsewhere in this preamble.

Moreover, we disagree that the referenced publications demonstrate comparable or better performance of IVDs offered as LDTs compared to FDA-authorized IVDs, for the reasons described below.

a. Six of the 7 publications report results from proficiency testing, which are not appropriate as standalone or comparative results to support test validation and performance. Performing well during proficiency testing does not mean that a test is analytically and clinically valid. Kim et al., Moncur et al., Keegan et al., Merker et al., and Zehir et al. (Refs. 99 to 103) use data from the CAP proficiency testing programs for NGS, which are only a subset of IVDs overall, to contend that IVDs offered as LDTs are accurate and have comparable performance to FDA-

[52] For example, consider the years in which concerns with the IVDs offered as LDTs that raise public health concerns described in FDA's memorandum in the docket (Ref. 16) were first identified. Four concerns were identified between 2008 and 2011, 10 concerns between 2012 and 2015, 15 concerns between 2016 and 2019, and 23 concerns between 2020 and 2023.

authorized tests. However, proficiency testing data, as standalone or comparative results, do not support test validation and performance expectations. Proficiency testing programs evaluate the performance of laboratories running tests that should have already been validated. Proficiency testing is performed to ensure that certain characteristics, *e.g.,* detection of a specific analyte, can be achieved at a similar level in relation to results obtained by a group of referee laboratories or ''peers.'' Proficiency testing samples ensure results are detected within an acceptable range within a pre-determined limit, independent of an individual test's performance specifications. Proficiency testing program data is an aggregate assessment of laboratory performance rather than an evaluation of results on a test-by-test basis, the latter of which is more aligned with the clinical reality that patient care is generally determined by a single test performed in a single laboratory. One cannot assess the performance of an individual test from aggregate data across multiple tests. Looking at data in aggregate can mask poor performance of an individual test. Proficiency testing programs are not adequately representative of the routine conditions of clinical use, do not consider a test's intended use, and do not represent the challenges encountered in routine testing. For example, proficiency testing does not cover the entire test procedure. Specimens in proficiency testing are generally highly contrived and do not closely mimic patient specimens. Proficiency testing is generally insufficiently challenging (*e.g.,* less complex variant types and variant allele fractions for genetic tests). Although laboratories are expected to adhere to their typical testing protocols, proficiency testing exercises are highly controlled and come with specific instructions, so laboratories are aware that they are participating in a proficiency testing exercise, which may influence how the test is performed and results obtained. Proficiency testing does not ensure that a test has been analytically and clinically validated based on its intended use.

b. Even if the results of proficiency testing were appropriate to evaluate the performance of IVDs offered as LDTs compared to FDA-authorized tests, these studies only evaluated NGS-based IVDs, which are only a subset of IVDs. In addition, 2 publications purported to compare the performance of IVDs offered as LDTs to FDA-authorized tests but because of flawed methodology did not do so; 1 publication reported results that suggest performance issues with IVDs offered as LDTs; and 1 publication did not evaluate the performance of IVDs offered as LDTs compared to FDA-authorized tests. Two publications (Kim et al. and Moncur et al.) (Refs. 100 and 102) purporting to compare IVDs offered as LDTs with FDA-authorized tests were actually mainly comparing IVDs offered as LDTs with other IVDs offered as LDTs and not comparing IVDs offered as LDTs with FDA-authorized tests. These publications provided limited information about the relative performance of FDA-authorized tests and IVDs offered as LDTs because the majority of tests referred to as ''FDA-approved companion diagnostics'' had been modified in ways outside of their FDA authorizations, rendering them IVDs offered as LDTs. In addition, the authors considered any test from a manufacturer with any FDA-approved companion diagnostic (CDx) to be ''FDA-approved,'' even though some of these tests may not in fact have been FDA-authorized.

Zehir et al. (Ref. 103) used CAP proficiency testing methods and data to reanalyze a comparison of the performance of an FDA-approved CDx with IVDs offered as LDTs intended for the same use using the same set of samples that was reported in another publication (Pfeifer et al) (Ref. 20). Despite the authors' claims that the study demonstrated excellent laboratory performance, individual laboratories had a significant number of errors. Only eight laboratories correctly reported all variants in Zehir et al.'s reanalysis, and four laboratories had greater than five errors. The laboratory performing the FDA-approved CDx correctly reported all variants in both dry and wet samples. Therefore, while FDA does not consider it appropriate to use proficiency testing data to demonstrate or compare test performance (as earlier explained), this study does not in any way undermine FDA's position regarding the need for increased oversight. Please see our response to comment 38 for a more detailed assessment of this study.

Zhang et al. provided an overview of certain NGS-based test characteristics for hematologic malignancies with no discussion of test validation or performance and, therefore, does not conclude or even assert equivalence between IVDs offered as LDTs and FDA-authorized IVDs (Ref. 104). This may be an erroneous citation given the lack of relevant content to support the comment's assertion.

c. Of the 7 publications cited above, only one (Benayed et al.) did not report on proficiency testing results. This publication did not demonstrate comparable or better performance of IVDs offered as LDTs compared to FDA-authorized tests, nor did it identify ''major deficiencies'' in FDA-authorized tests as the comments assert. FDA disagrees that the publication from Benayed et al. supports the assertion that ''publications have demonstrated major deficiencies in FDA-approved tests that would result in patient mismanagement had LDTs not been available to address those deficiencies.'' (Ref. 98). After careful review, FDA has determined that the study did not identify a ''major deficiency'' with an FDA-approved test and does not demonstrate that the unauthorized IVD offered as an LDT in question was necessary in order to avoid patient mismanagement. Moreover, even if the study had demonstrated that the unauthorized IVD offered as an LDT was necessary to avoid patient mismanagement in certain instances, that fact would not mean that FDA oversight is unnecessary for IVDs offered as LDTs in general.

The Benayed study evaluated the use of the FDA-authorized MSK–IMPACT DNA sequencing test and use of the unauthorized MSK–FUSION RNA sequencing IVD offered as an LDT in patients with lung cancer. The MSK–FUSION was designed to detect fusions and rearrangements (complex variants) while the MSK–IMPACT is authorized for detection of single nucleotide variants, insertions and deletions (indels), MET exon 14 skipping, and microsatellite instability but not complex variants. The authors concluded that the IVD offered as an LDT identified complex variants that were not detected by the FDA-authorized test (and which the FDA-authorized test was not intended to detect). However, a test's inability to identify variants that it is not intended to detect is not inherently a ''major deficiency'' for that test. We note that FDA oversight of IVD labeling helps ensure that the instructions for use are clear, including clearly describing the intended use, which for genetic tests includes describing the variants detected by the test.

The authors of the Benayed study reported that 10 patients received targeted therapy based on identification of complex variants by the MSK–FUSION test and claimed that 80 percent of those patients had clinical benefit. FDA disagrees with the authors' conclusions that 80 percent of patients experienced clinical benefit. First, the authors considered the denominator to include only those patients who went

on to receive targeted therapy (n=10) rather than all patients identified by the MSK–FUSION test as having complex variants (n=33). Second, the authors considered clinical benefit to include stable disease, which FDA does not consider to be an appropriate endpoint for therapeutic efficacy when treating cancer. Adjusting for these considerations, only 6 percent of patients identified by the MSK–FUSION test as having complex variants (2 out of 33) experienced clinical benefit, and both of these patients could have been identified for therapy with FDA-authorized tests. Only 2 of the 10 patients who received therapy based on the MSK–FUSION test would not have otherwise been identified, and neither of those patients necessarily benefited from the therapy. Following treatment, one had progression of disease and the other had stable disease (*i.e.,* disease with no substantial change). Thus, it cannot be concluded that patients would have been mismanaged had the IVD offered as an LDT not been available.

(Comment 35) FDA received a comment that increased FDA oversight will not result in quantitative agreement between assays, and that any implication that it will result in such agreement ''is not supported by an empirical evaluation of approved, marketed tests.''

(Response 35) FDA has not implied that increased FDA oversight would ensure quantitative agreement for all tests. FDA's discussion regarding variability between tests in the NPRM referred primarily to variability in tests' clinical interpretation (*e.g.,* positive or negative for the clinical condition being diagnosed by the test) based on differing results (88 FR 68006 at 68011). For example, when two different tests are both intended to determine whether a patient with cancer is eligible for a specific treatment and one result is ''negative'' while the other is ''positive,'' there is variability between those tests that represents a clinically significant problem.

For tests that provide a numerical value, there is reasonable quantitative agreement for FDA-authorized tests that are standardized (for example tests that are traceable to a reference material) or harmonized. However, not all tests are standardized or harmonized, nor do all tests provide a numerical result (for example, qualitative genetic tests).

(Comment 36) FDA received comments regarding FDA's use of a New York Times article on non-invasive prenatal screening (NIPS) as evidence of a problem (Ref. 96). Specifically, comments stated that the article conflated screening with diagnostic testing. They asserted that the article mischaracterized false positive results as test failures and that the ''problem'' with this category of tests is with ''the lack of understanding of its purpose and limitations by the providers and patients who were interviewed by the reporters.''

(Response 36) FDA agrees that NIPS tests, which may tell people the risk of their fetus having certain genetic abnormalities, are different from diagnostic tests used to more definitively confirm or rule out a suspected genetic abnormality. FDA agrees with comments that NIPS tests should not be used to confirm or rule out a suspected abnormality. After publication of the New York Times article, FDA issued a safety communication to explain the limitations of NIPS tests and provide information to educate both patients and healthcare providers to help reduce the inappropriate use of NIPS tests (Ref. 97). Increased oversight of NIPS tests, including an expectation of compliance with labeling requirements, can help ensure such tests are appropriately labeled with transparent information regarding performance, clear instructions, and appropriate limitations.

(Comment 37) FDA received several comments regarding experience with IVDs offered as LDTs during the COVID–19 pandemic. Some suggested that FDA's policies slowed availability of tests early in the pandemic and slowed down development of over-the-counter (OTC) home tests. Some pointed to long review times for EUA requests as indicative that FDA does not have the bandwidth to handle review of IVDs offered as LDTs. Others suggested that it is unfair to point to problems with COVID–19 laboratory-made tests as evidence of a broader problem with IVDs offered as LDTs given that COVID–19 laboratory-made tests were developed under unusual circumstances, including ''overnight demands to dramatically expand testing capacity, continuous reagent shortages, [and] global supply chain disruptions.'' Another comment, from an AMC, reported on the AMC's own experience and that of colleagues at other AMCs, stating that ''in no case that I know of was anyone submitting data that was remotely representative of what we would generally consider sufficient for an assay.'' The comment explained that their strategy involved submitting ''minimal verification data so that we could get feedback on the initial submission . . . about how to proceed.''

(Response 37) As an initial matter, we disagree that FDA's policies unnecessarily slowed availability of COVID–19 laboratory-based or home tests that had appropriate assurances of safety and effectiveness. As discussed in section V.A.2, FDA has not applied the general enforcement discretion approach to LDTs used for declared emergencies because of the significant risk posed by the disease (as signified by the unusual step of issuing a declaration under section 564 of the FD&C Act) and because false results can have serious implications for disease progression and public health decision-making, as well as for the individual patient's care. For these reasons, FDA generally expected EUA authorization for COVID–19 LDTs.

Notably, FDA took steps to expedite submission and review of EUA requests for COVID–19 IVDs to help ensure that patients and providers had access to authorized IVDs. FDA made a template available in January of 2020 to help manufacturers prepare and submit EUA requests for COVID–19 IVDs, and engaged with 100 manufacturers by the end of February 2020 to discuss EUA requests and the EUA process. Early in the pandemic, FDA authorized IVDs, including several IVDs offered as LDTs, within a day of receiving complete datasets. Moreover, FDA issued enforcement discretion policies to help address access concerns as appropriate. FDA acknowledges that review times grew as a backlog of EUA requests grew, but we note that many test manufacturers offered their tests as described in these enforcement discretion policies while FDA review of their EUA requests was pending.

FDA also acknowledges that the entire healthcare community, including test manufacturers, operated under unusual circumstances that do not reflect the environment in which tests are typically developed. However, while the pandemic was an unusual circumstance, our conversations with laboratory manufacturers during that time revealed that many were unfamiliar with what constitutes appropriate analytical and clinical validation for an IVD generally. FDA's validation expectations for tests seeking EUAs were also lower than expectations for traditional marketing authorization, and many allegedly ''complete'' validation packages in EUA requests submitted to FDA were still insufficient. FDA appreciates that many laboratories were new to interactions with FDA and not familiar with FDA's expectations for validation, but we note that many of these laboratories were nonetheless offering their unvalidated IVDs as LDTs for COVID–19, and in

many cases for other diseases or conditions, to the public.

Moreover, the issues identified with COVID–19 IVDs offered as LDTs were similar to those that FDA has identified with IVDs manufactured by non-laboratory manufacturers. FDA's identification of these issues for IVDs offered as LDTs, by laboratories certified under CLIA, highlights the importance of FDA phasing out the general enforcement discretion approach for LDTs. Once the phaseout described in this preamble is complete, laboratory manufacturers will gain experience with FDA's general expectations for validation, providing greater assurances of safety and effectiveness for tests and making the country better prepared for future outbreaks. Further, FDA intends to publish guidance on validation of tests used after a determination and declaration under section 564 of the FD&C Act.

Finally, FDA disagrees that EUA review times for COVID–19 IVDs indicate that FDA does not have the capacity to handle review of IVDs offered as LDTs, as explained in response to comment 275.

(Comment 38) Several comments suggested that a study cited by FDA as evidence of variable performance among IVDs offered as LDTs was flawed (Pfeifer et al. (Ref. 20)). One comment suggested that FDA incorrectly described the findings of the study. Comments also referenced a recent publication that purported to be a reanalysis of the same data but was by different authors (Zehir et al. (Ref. 104)). Comments claimed that the reanalysis showed ''excellent'' LDT performance and that the original analysis was biased. Others questioned the use of the FDA-approved comparator in the original study. One comment suggested that FDA failed to disclose the reanalysis publication.

(Response 38) As an initial matter, FDA disagrees that the Zehir et al. study has any bearing on FDA's reliance on the Pfeifer et al. publication to support the need for this rulemaking. CAP proficiency testing programs' performance data are not appropriate comparative results to those reported in Pfeifer et al. due to various limitations with proficiency testing programs, including that the programs are not sufficiently challenging and adequately representative of the routine conditions of clinical test use. For example, proficiency testing does not cover the entire test procedure, proficiency testing specimens that are highly contrived do not closely mimic patient specimens, proficiency testing samples include less challenging variant types and variant allele fractions, and laboratories are aware of participation in highly controlled proficiency testing exercises, which may influence how the test is performed and results obtained. Furthermore, aggregate data reported by Zehir et al. (Ref. 103) and referenced by the comments may mask individual poor performing laboratories. Please see our response to comment 34 for additional details regarding FDA's concerns with the use of proficiency testing data to evaluate the performance of IVDs. The SPOT/Dx pilot study reported in Pfeifer et al. was intended to evaluate laboratories individually, using samples that mimic as closely as possible patient samples, and compares the accuracy of LDTs with an FDA-approved CDx in a specific clinical scenario, to model an actual patient encounter (Ref. 20). Thus, it is one of the only truly reliable head-to-head comparisons between IVDs offered as LDTs and a parallel FDA-authorized IVD.

We also disagree with the assertion that SPOT/Dx was confounded by comparing the performance of IVDs offered as LDTs with that of the FDA-approved CDx because the CDx was performed as intended, and the SPOT/Dx pilot was intended to assess the performance of IVDs offered as LDTs in detecting the same variants as the FDA-approved CDx. In both the SPOT/Dx pilot study and the Zehir et al. reanalysis, testing using the CDx led to accurate reporting of all variants for both wet and dry samples while testing involving IVDs offered as LDTs did not accurately report all variants. SPOT/Dx demonstrated that using the same set of samples, intended to mimic formalin-fixed paraffin embedded samples, certain IVDs offered as LDTs would not identify the same patient population as the approved CDx. FDA notes that the SPOT/Dx working group that developed the pilot comprised many stakeholders, including NGS laboratories, professional oncology organizations, payors, regulatory agencies, patient advocacy groups, and others. CAP specifically coordinated the Scientific and Technical Working Group and provided professional, logistical, and operational expertise in support of the pilot.

FDA disagrees with the comments' assertion that FDA incorrectly described the findings of the SPOT/Dx pilot study (Ref. 20). The description of this study in the NPRM stated that ''the same samples were sent to 19 laboratories for testing using their own manufactured test, and only 7 of those laboratories correctly reported all results. For almost half of the tests studied, analytical accuracy was significantly lower than that of the parallel test approved by FDA'' (88 FR 68006 at 68011). This aligns with the findings reported by the study authors that, of the 19 laboratories that analyzed both the wet and dry samples, ''7 (37 percent) of 19 laboratories correctly reported all variants, 3 (16 percent) of 19 had fewer than five errors, and 9 (47 percent) of 19 had five or more errors.'' The authors also reported that the Praxis Extended Ras Panel correctly reported all variants for both wet and dry samples. As discussed in the NPRM (88 FR 68006 at 68010 and 68011), this study documents high variability in performance among IVDs offered as LDTs, which is reflected in the study authors' key point that ''the accuracy of detection of genetic variants differed among the laboratory-developed tests (LDTs) performed by different laboratories,'' as well as the authors' conclusion that ''variable accuracy in detection of genetic variants among some LDTs may identify different patient populations for targeted therapy'' (Ref. 20).

FDA disagrees that the findings from the referenced reanalysis (Ref. 103) show ''excellent'' LDT performance. Despite Zehir et al.'s claims that the reanalysis demonstrated excellent laboratory performance, individual laboratories still had a significant number of errors, with only eight laboratories correctly reporting all variants in the reanalysis (compared to seven in SPOT/Dx) and four laboratories still had greater than five errors.

Finally, FDA did not fail to disclose the published reanalysis, as it was not published prior to the posting of FDA's NPRM for public inspection by the Office of the Federal Register on September 29, 2023. It has since been published and, in addition to the discussion in our comment responses, is included as a reference to the rule.

(Comment 39) One comment claimed that the Friends of Cancer Research Tumor Mutational Burden (TMB) study cited by FDA as evidence of variability among laboratories' tests actually showed similar variability as that seen in two FDA-approved tests.

(Response 39) FDA acknowledges there can be variability among FDA-approved tests and that the referenced TMB study included two FDA-authorized tests, one tumor mutation profiling test that includes detection of TMB, and one CDx test for detection of TMB for identifying patients for treatment with pembrolizumab. FDA further acknowledges that the results from the laboratories performing those tests were included among the authors' conclusions regarding variability across tests. The authors of the study did not

conduct an analysis to compare variability of IVDs offered as LDTs to those that are FDA-authorized nor comment on differences in variability between the two. While FDA accurately described the results of this study as finding ''substantial variability among tumor mutational burden (TMB) tests manufactured by laboratories and used to identify patients with cancer most likely to benefit from immunotherapy'' in the NPRM (88 FR 68006 at 68011), FDA does not mean for this to imply that the results of this study indicate greater variability in the studied IVDs offered as LDTs compared to the studied FDA-authorized tests. As such, FDA is clarifying here that the study does not support the proposition that TMB tests manufactured by laboratories have worse performance than FDA authorized TMB tests. However, other evidence in the NPRM supports this proposition as applied to tests more generally (see Refs. 20, 91 to 96, 105 to 110).

(Comment 40) One comment claimed that the publication on epidermal growth factor receptor (EGFR) testing for non-small cell lung cancer that was referenced in the PRIA is biased in multiple ways: the authors had a vested interest in the outcome, the work was funded by a company with a vested interest in the outcome, the IVD offered as an LDT was in Europe and therefore not required to comply with CLIA, and the trial did not assess the same material extracted from residual tissue specimens with the laboratory-made and FDA-approved test.

(Response 40) FDA acknowledges that, as is clear from the study publication, the work reported in this publication: (1) was authored and funded by a company who may be a competitor with the relevant laboratory manufacturers and (2) utilized IVDs offered as LDTs in Europe, which may not be representative of IVDs offered as LDTs in the United States. This study was not included in the NPRM but was included in the PRIA. FDA no longer cites this publication in the FRIA.

(Comment 41) One comment addressed FDA's citation of Manrai et al., 2016 (Ref. 95), arguing that this publication did not show that IVDs offered as LDTs exacerbate health disparities. The comment claimed that FDA did not properly describe the findings of the publication, stating that ''the message of the paper was the lack of testing in both control and diseased populations for underrepresented minorities is what led to poorer outcomes.'' The comment also asserted that an FDA-approved assay would have similar limitations to those described for IVDs offered as LDTs.

(Response 41) FDA cited this publication for the proposition that IVDs offered as LDTs *may* exacerbate health disparities. FDA did not contend that the publication showed that IVDs offered as LDTs do in fact exacerbate health disparities. FDA also separately cited this publication because it describes problems with IVDs offered as LDTs, regardless of any impact on health disparities (see 88 FR 68006 at 68011 (stating that the publication ''reported false positive results from genetic IVDs offered as LDTs for hypertrophic cardiomyopathy in multiple patients of African American descent.'')).

FDA believes it is appropriate to cite this publication to support that IVDs offered as LDTs may exacerbate health disparities for the following reasons. First, the study identified multiple persons of African or unspecified ancestry who had received false positive test results from IVDs offered as LDTs related to the historical dearth of data that include persons of diverse racial and ethnic backgrounds, which prevented accurate variant interpretation at the time of results reporting; higher rates of these types of false results in underrepresented populations may exacerbate health disparities. Second, the paper reports on disparities that may result from errors unrelated to access to care, particularly genetic variant misclassification (a type of inaccurate test result). The authors specifically state that their findings ''show how health disparities may arise from genomic misdiagnosis'' (*i.e.,* a type of inaccurate result) and describe the negative consequences of the ''provision of false genetic information'' not just to a patient but to their relatives as well. The authors also report that their ''findings suggest that false positive reports are an important and perhaps underappreciated component'' of certain tested persons. Despite the comment's assertion that the message of this paper was that the lack of testing in underrepresented minorities is what led to poorer health outcomes, that message was not explicitly stated in the publication. Rather, the authors call for diverse genomic data in their conclusion: ''the misclassification of benign variants as pathogenic that we found in our study shows the need for sequencing the genomes of diverse populations, both in asymptomatic controls and the tested patient population.''

FDA acknowledges that lack of data on the genomes of diverse populations makes demonstrating accurate genetic variant classification in diverse populations challenging. While FDA-authorized tests may face challenges due to the paucity of data from genetically diverse populations, FDA-authorized tests generally have greater transparency regarding the population(s) in which they were validated, information pertaining to device safety and effectiveness for specific demographic characteristics if performance differs within the target population, and population-specific limitations, if applicable. In addition, during FDA premarket review, FDA may ask that sponsors provide data for different intended use populations as well as diversity action plans to improve the generation of evidence regarding device performance in diverse populations. As such, in general, there is greater confidence in the accuracy and reliability of FDA authorized genetic tests, and FDA oversight of IVDs offered as LDTs may help to advance health equity, as discussed in the NPRM and in our responses to comments in section VI.K of this preamble.

(Comment 42) FDA received a comment from a sponsor that submitted a 510(k) for an IVD offered as an LDT that was discussed in FDA's memorandum to file regarding ''Examples of In Vitro Diagnostic Products (IVDs) Offered as Laboratory Developed Tests (LDTs) that Raise Public Health Concerns,'' which was included in the docket for this rulemaking (Ref. 16). The comment expressed concerns regarding the inclusion of this particular submission in the memorandum, contending that FDA's review of the submission was inappropriate and that the validation data submitted for this IVD offered as an LDT was sufficient. In particular, the comment stated that ''leading journals'' had published studies demonstrating the utility of the sponsor's techniques; that the sponsor withdrew its submission because FDA refused to use a certain ''fit-for-purpose'' assessment of the data; that the sponsor had demonstrated the detection limits and precision of the IVD; that quality controls embedded in the IVD provided for the identification of any interfering substances; that FDA inappropriately focused on certain details while dismissing other important information; that the review process was overly time-consuming and expensive; and that the IVD has become standard of care.

(Response 42) FDA disagrees with this comment. In relevant part, the memorandum to file stated that ''[i]n 2021, FDA received a 510(k) submission from [redacted] for their [redacted] test for monitoring changes in burden of

disease in pediatric and adult patients with [acute myeloid leukemia (AML)] during and after treatment. The submission did not contain adequate analytical and clinical validation studies to show the test worked as intended. For example, the sponsor did not provide any data from interference, detection limit, and reagent stability studies; did not submit data from precision studies to demonstrate the test is reliable in intended use specimens; only used one specimen to evaluate sample stability rather than the recommendation of at least ten; and included samples in the clinical study that were not the sample type intended for use with the test. The sponsor withdrew the submission after FDA raised concerns with the inadequate validation data. Without sufficient information to demonstrate adequate validation, a test's performance is unknown, which may put patients at risk of harm due to inaccurate results. In general, inaccurate results from tests to monitor disease burden during and after treatment for AML could lead to suboptimal clinical management of patients with AML. The risk of false negative results (*i.e.,* a patient assumed to have a more favorable prognosis based on the false negative result) could potentially result in a reduction in the level of care such as less medication use, subsequent confirmatory testing, and other possible treatment decisions. False positive results (*i.e.,* a patient who is disease free presumed to have a hematologic malignancy based on the positive test result) could result in additional unnecessary testing'' (Ref. 16).

With respect to the comment's statement that ''leading journals'' published studies demonstrating the utility of the sponsor's techniques, FDA notes that during review of the 510(k) submission, the sponsor referenced three publications that it claimed supported the clinical validation of the IVD. The first publication described a feasibility study and was not a validation study. The second publication described a clinical validation study that used a different version of the device than the subject device under review (*i.e.,* the device evaluated had a different operating principle than the device under review). The sponsor did not provide information adequate to support leveraging clinical performance data from a version of the device that differed in significant ways from the subject device. In addition, there was a difference in the limit of quantitation (LoQ) reported in the publication and the LoQ estimated by precision and linearity data submitted by the sponsor, which raised significant uncertainty in the clinical validation data. The third publication was a clinical study that utilized the device to aid in the diagnosis of a different disease and was thus for a different intended use. Therefore, the data could not be leveraged to support the device's safety and effectiveness for the AML claim being sought.

FDA also disagrees with the comment's statement that FDA refused to use a ''fit-for-purpose'' assessment of the data. FDA's review was risk-based and intended to be consistent with least burdensome principles. The expectations for safety and effectiveness for this test were based on the intended use of the device and in the context of special controls required for devices of this type, thereby ensuring the device performance was validated in a fashion encompassed by the fit-for-purpose concept. Throughout the review, FDA considered and proposed multiple alternatives as least-burdensome approaches.

The comment further contended that the sponsor had demonstrated the detection limit of the assay and had submitted precision studies to demonstrate test reliability. However, during FDA's review of the submission, the Agency did not agree that the detection limit of the assay could be demonstrated solely in the manner suggested by the sponsor as the output assessed by the sponsor in the studies conducted was different from the output of the device. In addition, although the sponsor had submitted multiple precision studies, the sponsor failed to provide information on how the studies were conducted and how the data were analyzed (*e.g.,* study protocols), such that FDA could not determine whether the reported precision would be adequate to support a determination that the test was as safe and effective as the predicate device. In addition, when the sponsor provided a reanalysis of the precision data, there were unexplained deviations in results calculations, raising concerns with the reliability of the data submitted.

With respect to the comment's assertion that quality controls embedded in the IVD provided for the identification of any interfering substances, the sponsor made this assertion during FDA's review of the submission as well, in an effort to justify why studies to assess the impact of potentially interfering substances on test performance were inapplicable. However, the sponsor did not provide critical explanatory information or documentation, or any validation data to demonstrate the capability of the laboratory's continuous process controls to identify failures in instrument, reagent, or specimen integrity. FDA also disagrees that the Agency focused too heavily on certain aspects of the submission, such as cell counting, and dismissed the importance of other aspects, such as fluorescence intensity. FDA discussed fluorescence intensity with the sponsor on several occasions. The comment's assertion that FDA never asked about the results from three clinical trials is likewise not accurate; during review of the submission, FDA made multiple requests to the sponsor for additional information on the studies submitted, and identified various concerns with the studies. Ultimately, throughout the review, FDA considered the available data and least burdensome approaches for providing the data necessary to demonstrate that the device was as safe and effective as the predicate device, considering the intended use and special controls for this device type, but the sponsor's assertions did not obviate the need for adequate clinical validation. During the review process, the sponsor acknowledged its ability to perform validation studies requested by FDA, but stated that it declined to do so.

The comment also suggested that FDA's review took too long and was too expensive, stating that the review process took 9 years and cost more than $1,000,000. FDA acknowledges that the Agency worked with the sponsor over 9 years, but notes that much of this interaction was in the context of 6 voluntary Pre-Submissions submitted by the sponsor, beginning approximately 9 years before the 510(k) was submitted.

With respect to the comment's statement that the subject assay has become the standard of care, FDA was not able to determine whether in fact this test is now used as part of the standard of care. Regardless, a test being used as part of the standard of care is not sufficient to provide appropriate assurances regarding safety and effectiveness. Use in clinical practice does not necessarily establish that a device is appropriately safe and effective.

(Comment 43) One comment stated that FDA's memorandum regarding examples of IVDs offered as LDTs that raise public health concerns did not provide enough details to determine whether the stated problems were related to assay design or procedural issues, and noted that procedural issues are under the regulatory authority of CLIA. The comment also asserted that FDA's statement in the memorandum

that FDA did not confirm the veracity of the reports suggests that FDA did not deem the public health risks severe enough to warrant investigation by the Agency at the time of submission.

(Response 43) FDA disagrees that the Agency did not deem the public health risks severe enough to warrant investigation by the Agency. The referenced statement regarding the Agency not confirming the veracity of information was specific to complaints, MDRs, and allegations, where FDA relies on information submitted by the entity filing the report. As described in that memorandum, any follow up by the Agency on the complaints, MDRs, and allegations is not included in the memorandum. As a general matter, FDA does not comment on such investigations.

FDA acknowledges that the details included in the memorandum regarding the MDRs and allegations cited therein do not indicate whether the problems were related to assay design or other aspects not covered by CLIA, due to the nature of MDRs where the information available to the Agency is the information submitted in the report and does not typically include detailed information on test design or validation of the test. The memorandum describes what was reported in the MDR or allegation. However, all of the examples from submissions FDA reviewed had issues related to analytical validation that would negatively impact the test's intended clinical use, or inadequate clinical validation that CLIA does not address. For these examples, FDA had sufficient data and information that pointed to issues CLIA would not address. Furthermore, FDA was able to confirm that the laboratories that developed 22 of the 26 IVDs offered as LDTs reviewed in these submissions were CLIA-certified laboratories. For the others that FDA was not able to confirm, those laboratories should have been CLIA certified since they were performing the tests on samples from United States subjects. Taken together, FDA identification of these issues demonstrates potential problems with the tests despite CLIA regulation.

D. FDA Authority To Regulate LDTs

1. General Comments Regarding FDA's Authority

(Comment 44) Various comments stated that FDA has statutory authority over LDTs. Other comments asserted (without specific analysis) that FDA lacks authority to finalize the proposed rule.

(Response 44) For the reasons set forth in the NPRM and this preamble, FDA agrees with the commenters who stated that FDA has this authority. FDA has long stated that LDTs, like other IVDs, are ''devices'' subject to applicable requirements in the FD&C Act (see 62 FR 62243 at 62249 (November 21, 1997), 65 FR 18230 at 18231 (April 7, 2000), Ref. 27, Ref. 32–33, Ref. 35, Ref. 39, Ref. 57, Ref. 97, Ref. 111–121). FDA responds to more specific jurisdictional arguments in the paragraphs that follow.

(Comment 45) Some comments suggested that FDA's failure to publicly announce its authority over LDTs closer to enactment of the FD&C Act or MDA raises questions about whether the Agency has authority over LDTs. Several comments noted that FDA did not communicate its authority over LDTs until 1992, 16 years after enactment of the MDA. Two comments suggested that FDA's position that it gained authority over IVDs, including LDTs, ''when key legislation was passed'' but exercised enforcement discretion constitutes ''revisionist history'' or an ''ex post facto'' narrative.

(Response 45) FDA disagrees with these comments. First, the Agency's jurisdiction depends on the scope of authority granted to it under the statute, and that jurisdiction existed (as explained in the NPRM and elsewhere in this preamble) regardless of when FDA publicly discussed it. *See Bostock* v. *Clayton Cty.,* 140 S. Ct. 1731, 1737 (2020) (''extratextual considerations'' do not trump ''the express terms of a statute'').

Second, the comments appear to take the position that FDA may not assert its statutory authority unless it issued a public statement announcing that authority within some timeframe after which Congress granted it. FDA is aware of no such obligation. On the contrary, the U.S. Supreme Court has held that agencies are not required to prospectively announce their interpretations to the public before applying that interpretation in an individual case. *SEC* v. *Chenery Corp.,* 332 U.S. 194 (1947). Moreover, because FDA generally did not enforce device requirements with respect to LDTs when the MDA was passed (as a matter of practice and based on relevant public-health considerations), it would not necessarily have made sense for FDA to expend resources to issue a public statement about its authority. FDA did not put itself to that task until public-health considerations justified it in 1992. (Ref. 111). Thus, as these comments appear to concede, FDA squarely announced its understanding that LDTs are devices over 30 years ago, nearly double the 16-year period cited in these comments.

Third, to the extent that comments are suggesting that laboratories would not have understood their potential status as manufacturers around the time the MDA was passed, FDA disagrees. FDA signaled this interpretation in various contemporaneous materials. In 1973, before enactment of the MDA, FDA issued a final rule announcing regulatory requirements for IVD products, including systems, which contained no carveout or exception for laboratories (38 FR 7096, March 15, 1973). Following the MDA, FDA amended the rule to clarify that IVDs are devices, consistent with Congress's intent. 45 FR 7474, 7484 (February 1, 1980) (revising the definition to state that IVD products are ''devices'' rather than ''drugs or devices'' under the FD&C Act). Again, FDA did not create any carveout or exception for LDTs. These facts put laboratories on notice that FDA interpreted the device requirements to apply to test systems regardless of who manufactured them. In addition, 3 years earlier, in 1977, FDA issued regulations regarding device registration and listing and exempted only those clinical laboratories ''whose primary responsibility to the ultimate consumer is to dispense or provide a service through the use of a previously manufactured device'' (see § 807.65(i) (21 CFR 807.65(i)); 42 FR 42520 at 42528, August 23, 1977)). This exemption conveyed that: (1) FDA considered clinical laboratories to manufacture devices (otherwise this exemption would not have been necessary) and (2) some laboratories are not exempt from registration and listing (*i.e.,* those who fall outside the ''use of a previously manufactured device'' limitation). In addition, in the context of a different exemption, the preamble to that rule emphasized that ''exemption from registration does not relieve such persons from their obligation to comply with other provisions of the act or regulations'' (42 FR 42520 at 42521). Thus, laboratories were on notice that FDA considered them device manufacturers subject to applicable provisions of the FD&C Act and regulations.

(Comment 46) Several comments suggested that FDA's enforcement discretion approach for LDTs raises questions about FDA's authority in this area. One comment stated that the commenter ''believes that any authority to regulate LDTs has been waived through the agency's actions since 1988 if they even existed when the Medical Device Amendments passed in 1976.'' Another comment noted, in arguing that

FDA lacks authority, that the Agency has a ''history of inconsistent positions on LDTs'' and ''has never exercised [its] claimed authority in a comprehensive manner in the 85 years it had authority over devices.'' Other comments stated that FDA's ''position on [its] authority has vacillated in significant ways, even recently.''

(Response 46) FDA disagrees that its enforcement discretion approach suggests that FDA lacks or ''waived'' authority over LDTs. As an initial matter, FDA is not aware of any legal support for the proposition that an agency can waive statutory authority granted to it by Congress through the exercise of enforcement discretion. Indeed, the Supreme Court has expressly distinguished an agency's exercise of enforcement discretion—what FDA has done in the case of LDTs—from the refusal to initiate enforcement proceedings based on the agency's conclusion ''that it lacks jurisdiction''—a conclusion FDA has never reached in this context. *Heckler* v. *Chaney,* 470 U.S. 821, 833 n.4 (1985).

In addition, although FDA recognizes that it has initiated a number of efforts to address LDTs, as explained in section III.D.2 of the NPRM, these policy efforts do not cast doubt on FDA's authority or its understanding of its authority (88 FR 68006 at 68016). On the contrary, FDA's initiation of different policy approaches over the course of many years confirms that it uniformly believed it had authority and certain discretion with respect to LDTs. Furthermore, as explained in response to comment 45, FDA interpreted laboratories to be manufacturers, and IVD products, including systems, to be devices, even before the initiation of these policy efforts. And since 1992, FDA has consistently and publicly announced that IVDs manufactured by laboratories are devices under the FD&C Act (see section III.D.1 of the NPRM, ''FDA's Longstanding Recognition That IVDs Manufactured by Laboratories Are Devices,'' 88 FR 68006 at 68015–16). Thus, contrary to commenters' suggestion, FDA has not had ''inconsistent positions'' but rather has consistently maintained a single position: it has authority over LDTs.

(Comment 47) One comment argued that ''it has long been the mainstream view of legal experts that the FDA lacks authority to regulate LDTs in the absence of legislation to grant them such authority,'' referencing a white paper coauthored by Paul Clement and Laurence Tribe as well as a June 2020 memorandum by the then-General Counsel of HHS. Another comment also quoted the HHS then-General Counsel's June 2020 memorandum for the proposition that ''the Agency's jurisdiction to regulate these devices is not uniform and not as plenary as it is for a traditional device.''

(Response 47) FDA disagrees with the assertion that legal experts generally think FDA lacks authority over LDTs. In FDA's experience, many legal scholars who have occasion to discuss LDTs describe them as tests treated differently as a matter of Agency discretion, rather than because FDA lacks authority.[53] Although the first comment relies on a document authored by Paul Clement and Lawrence Tribe as support for the proposition regarding the ''mainstream view of legal experts,'' these authors did not write that document in their capacity as independent legal experts, but as counsel to the American Clinical Laboratory Association (ACLA). Therefore, that document reflects the view of one interested party. To the extent that particular commenters incorporated arguments from that document, we address the substance of those arguments in our responses to the specific comments in question. In any event, FDA's analysis is based upon the substantive merits of the issues, not upon surveying how many ''legal experts'' have advocated for or against a given view.

In addition, the June 2020 memorandum identified in the comments did not (contrary to one comment's suggestion) take the position that FDA lacks authority to regulate LDTs in the absence of legislation. Instead, the memorandum indicated that FDA has discretion to treat LDTs as devices but that there is legal risk in taking that position absent notice-and-comment rulemaking (for further detail on the June 2020 memorandum's position, see, for example, Ref. 125 at 2, n. 5). As noted by the second comment, the memorandum did suggest that FDA's authority over LDTs was constrained by certain statutory limitations; the memorandum focused in particular on the following statutory language: ''introduction or delivery for introduction into interstate commerce,'' ''commercial distribution,'' ''held for sale,'' and ''person.'' HHS no longer agrees with that memorandum, which has since been superseded, for the reasons set forth in sections VI.D.3, VI.D.4, and VI.E (comment response 105) of this preamble. More generally, we note that even if FDA's authorities were limited in the ways proposed in the June 2020 memorandum, that would not implicate the question of whether LDTs are devices and thus FDA's authority to regulate LDTs under other relevant provisions of the statute and regulations. Not all provisions apply equally to all regulated products. For example, some statutory provisions apply depending on the specific activities of a manufacturer (see response to comment 54). Similarly, some statutory provisions impose requirements with respect to a device on certain actors but not others—for example, some provisions apply only to manufacturers and importers but not to distributors (*e.g.,* 21 U.S.C. 360i(a)(1)) and others apply to all three (*e.g.,* 21 U.S.C. 360h(a))—but the device is nonetheless within FDA's jurisdiction. FDA has jurisdiction to regulate devices including LDTs, even if some subset of substantive statutory provisions do not apply to LDTs.

(Comment 48) One comment stated that ''[f]alse advertising by some rogue companies overstating the benefits of their tests is the purview of the [Federal Trade Commission (FTC)], not the FDA.''

(Response 48) Although the comment appears to argue that IVDs manufactured by laboratories are not devices (and instead fall solely within an FTC-regulated category), laboratory-made IVDs are devices, as explained elsewhere in this preamble and the NPRM. Because these IVDs are devices, advertising for them does not fall within the sole purview of the FTC. Such IVDs are subject, for example, to the provisions in the FD&C Act that deem a device misbranded if its labeling (or advertising, in the case of a restricted device) is ''false or misleading in any particular.'' 21 U.S.C. 352(a)(1) and (q). FDA recognizes that the FTC also has authority regarding the advertising of devices. *E.g.,* 15 U.S.C. 52(a)(1) (prohibiting the dissemination of ''any false advertisement . . . for the purpose of inducing, or which is likely to induce, directly or indirectly, . . . the purchase . . . of . . . devices''). Because the two Agencies share authority, they have long worked together to effectively coordinate and use their authorities in complementary ways, particularly mindful of each Agency's substantive expertise, such as FDA's scientific expertise. Thus, the FTC is not the sole regulator of device advertisements.

(Comment 49) Two comments drew an analogy between the preparation of a laboratory test and the preparation of a restaurant meal. One comment stated that while FDA regulates the ingredients of a restaurant meal, such as pasta, it does not regulate the preparation of a restaurant meal, and the same should be true for laboratory tests. Another comment stated that restaurant recipes

[53] *See, e.g.,* Refs. 122–124.

are like laboratory testing procedures and should be regulated in the same manner.

(Response 49) Food and devices present different public health considerations and are subject to different requirements under the FD&C Act, including differing premarket review requirements, so FDA oversight of restaurants should not be understood to determine FDA's authority over, or approach to, laboratory tests. Furthermore, these comments appear to take as their premise that restaurants are exempt from the FD&C Act, but that is not the case. FDA has jurisdiction over ''food,'' a term defined broadly at 21 U.S.C. 321(f), and restaurants are subject, for example, to the prohibition on doing an act with respect to a food if such act is done while the food is held for sale after shipment in interstate commerce and results in it being adulterated or misbranded (21 U.S.C. 331(k)).

(Comment 50) One comment argued that if the Supreme Court overturns or narrows the *Chevron* doctrine through its decision in *Loper Bright Enterprises* v. *Raimondo,* that would ''further undermine FDA's authority to regulate LDTs and further place in question the validity of a final LDT rule.''

(Response 50) Because the FD&C Act confers clear authority on FDA to regulate IVD products, without any exception for products made by laboratories, the *Chevron* doctrine is not necessary to resolve any question of FDA's authority over LDTs. FDA's reasoning for this position, taking into account the traditional tools of statutory construction, is set forth in the following responses to comments 51–54.

2. Application of the Device Definition to LDTs

A number of comments argued that LDTs are not devices within the meaning of 21 U.S.C. 321(h)(1) because they are intangible services rather than tangible or material objects. Comments raised arguments related to the plain language, canons of construction, legislative history, and other provisions of the FD&C Act to support this position.

(Comment 51) Several comments took the position that because the device definition does not contain the terms ''in vitro diagnostic product'' (as defined in § 809.3), ''system,'' ''assay,'' ''test,'' or ''laboratory developed test,'' it does not encompass these articles. Some stated that these terms are broader than the terms that do appear in the definition, including ''in vitro reagent,'' ''instrument,'' and ''similar or related article,'' and concluded that they therefore fall outside the definition. One comment stated that because Congress presumably was aware that diagnostic tests are ''key elements of medical diagnoses'' when it enacted the MDA, if Congress had intended to cover such tests, it would have done so expressly. Several comments stated that Congress's decision not to include the term ''system'' in the device definition in 1976, following issuance of the IVD regulations in 1973, undermines the Agency's reliance on that concept. One commenter also noted that the concept of an LDT was not discussed in congressional hearings prior to the passage of the MDA, suggesting that Congress did not intend for LDTs to be included.

(Response 51) FDA disagrees with the position that the device definition does not include IVD systems because it does not contain the terms ''system,'' ''assay,'' ''test,'' or ''laboratory developed test.'' As explained in the NPRM, IVD systems fell within the device definition (which included the terms ''apparatus'' and ''contrivance'') even before passage of the MDA (88 FR 68006 at 68017). In FDA's 1973 rulemaking, which occurred 3 years before the MDA's enactment, the Agency publicly announced its view that IVD systems fell within the device and drug definitions and thus within its authority. If Congress had disagreed with FDA's interpretation, it had the opportunity to clarify that in the MDA, but it did not do so. Instead, it retained the same terms from the device definition in the 1938 Act, without any exemption for ''systems,'' ''assays,'' ''tests,'' or ''laboratory developed tests.'' This sequence of events indicates that despite numerous opportunities to do so, over decades' worth of subsequent legislation concerning devices, Congress did not disagree with FDA's interpretation that IVD systems fall within its authority.

In fact, Congress clarified in the MDA that IVD systems are devices and not drugs. To do so, it added the terms ''in vitro reagent'' and ''other similar or related articles'' to the device definition. *See* S. Rep. No. 93–670 at 16 (January 29, 1974) (explaining, with respect to nearly identical language, that ''[t]he Committee recognizes that there is confusion at the present time about whether certain articles are to be treated as devices or drugs under the Food, Drug and Cosmetic Act. Therefore, the Committee reported bill has carefully defined 'device' so as to specifically include implants, in vitro diagnostic products, and other similar or related articles.''). The purpose of adding the term ''in vitro reagent'' was not to narrow FDA's authority over IVD products (again, Congress had much clearer ways to accomplish that); instead, the goal was to clarify that all in vitro diagnostic products were devices rather than drugs. Id. (explaining that the term ''device'' includes ''in vitro diagnostic *products*'') (emphasis added). Other evidence in the legislative history confirms that Congress intended for FDA to regulate IVD systems as devices, as explained in response to comment 53. More recently, in the Protecting Access to Medicare Act of 2014 (PAMA) (passed in 2014), Congress enacted provisions that support an interpretation that LDTs are subject to FDA regulation. 42 U.S.C. 1395m–1(d)(5) & (d)(5)(B).

FDA also disagrees with the comment that suggested that Congress would have discussed LDTs in congressional hearings if it had intended for LDTs to be included in the definition. The topics covered in congressional hearings do not trump the plain text of the device definition, which encompasses LDTs. *See Bostock* v. *Clayton Cty.,* 140 S. Ct. 1731 at 1754 (''Judges are not free to overlook plain statutory commands on the strength of nothing more than suppositions about intentions or guesswork about expectations.''). Also, it would not be reasonable to expect that Congress would have discussed every conceivable device during congressional hearings.

(Comment 52) Many comments stated that tests made by laboratories, or some subset of such tests termed ''LDTs,'' are not devices under the FD&C Act because the device definition is limited by its plain language to physical objects or material things, and tests made by laboratories are intangible methods, services, procedures, or processes. One comment stated that a device within the definition has ''mass and volume'' and ''can be touched and held.'' Another comment relied on a canon of construction that words grouped together in a list should be given related meaning, and stated that because, according to the comment, the terms ''instrument,'' ''implement,'' ''machine,'' ''implant,'' and ''in vitro reagent'' refer to tangible objects, the terms ''apparatus'' and ''contrivance'' should also be understood to be tangible objects. The same comment noted that an ''article'' is defined as a ''particular material thing'' in the Oxford English Dictionary (OED). Several comments stated that courts have construed the term ''article'' to mean a material thing.

(Response 52) The FD&C Act defines a device, in relevant part, as ''an instrument, apparatus, implement, machine, contrivance, implant, in vitro

reagent, or other similar or related article, including any component, part, or accessory, which is . . . intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease.'' 21 U.S.C. 321(h)(1)). FDA does not agree that this definition is limited by its plain language to physical objects or material things, but even if it were, a test system is a physical object and a material thing.

As an initial matter, FDA does not read the definition of device to encompass only physical objects. The definition includes terms such as ''contrivance,'' whose plain meaning goes beyond objects that can be ''touched and held.'' Contrivance, Merriam-Webster.com (last accessed January 5, 2024) (defining ''contrivance'' as ''a thing contrived'' and ''an artificial arrangement or development,'' among other things). (Ref. 126). (*See also* Ref. 127 (defining ''contrivance'' as ''an arrangement or thing in which the foregoing action or faculty is embodied; something contrived for, or employed in contriving to effect a purpose.'') Although commenters advocate for a narrow interpretation of the device definition, the Supreme Court has specifically considered and rejected a narrow reading of the FD&C Act, instead embracing broad constructions of the FD&C Act based on the Court's understanding of its text, congressional intent, and remedial purpose. *See United States* v. *Bacto-Unidisk,* 394 U.S. 784, 798 (1969) (''Congress fully intended that the [FD&C] Act's coverage be as broad as its literal language indicates.'').[54] Software is an example of an article that cannot be ''touched and held'' but falls within the device definition. FDA has long interpreted software to be a device, see, *e.g.,* 52 FR 36104, September 25, 1987, and Congress reinforced that interpretation in the 21st Century Cures Act (Cures Act) (Pub. L. 114–255). The Cures Act, enacted in 2016, amended the FD&C Act to exclude certain software functions from the statutory ''device'' definition unless certain criteria are met. *See* 21 U.S.C. 360j(o). Congress would have had no need to make this amendment to the FD&C Act if the device definition did not already cover software, which is a thing that cannot be ''touched and held.'' This underscores that a plain reading of the device definition may include things that cannot be ''touched and held.''

Regardless, a test system manufactured by a laboratory is a physical product and a material thing. As explained in the NPRM, a test system is a set of components—such as reagents, instruments, and other articles—that function together to produce a test result (88 FR 68006 at 68017). No comment disputed that these individual components are physical or tangible, and there is no reason to think that uniting those physical objects in a system takes away from their physical or material nature. The instrument clause of the device definition clearly encompasses collections of this sort because it includes the term ''apparatus,'' which Merriam-Webster defines as ''a set of materials or equipment designed for a particular use'' (Ref. 128. See also Ref. 129–130). The fact that there is human involvement to fulfill the intended use of the system does not exclude it from the definition of a device. Such involvement is neither unique to LDTs nor unusual for devices more generally, as the examples offered in comment response 66 illustrate.

In short, the statute makes clear that test systems, including those manufactured by laboratories, are devices. To argue otherwise not only would be inconsistent with the FD&C Act's plain text, but also would be at odds with the way FDA has understood and regulated IVDs (and other devices) for at least half a century. *See* 38 FR 7096 at 7098, see 62 FR 62243 at 62249 (November 21, 1997), 65 FR 18230 at 18231 (April 7, 2000), Ref. 27, Ref. 32–33, Ref. 35, Ref. 39, Ref. 57, Ref. 97, Refs. 111 to 121. Indeed, under the commenters' construction of the FD&C Act, FDA would not be able to regulate any test systems at all, such as a COVID–19 test for at-home use: the Agency could oversee the safety and effectiveness of the individual test components in the context of their individual intended uses, but it could not evaluate the safety and efficacy of the COVID–19 test system as a whole, including the accuracy and reliability of the test results yielded when those individual components are used together. Such a construction defies the basic theory and premise of FDA's existing IVD program, which is to ensure that tests work. Nothing in the text or history of the FD&C Act justifies the commenters' proposed interpretation of the definition. On the contrary, the device definition specifically includes ''any component, part, or accessory,'' showing that the mere fact that an article, such as a COVID–19 test system, has individual components does not defeat the possibility that the article is a ''device.'' The legislative history also supports that Congress intended for FDA to regulate such systems, as discussed in response to comment 53. And Congress, which has been aware of FDA's interpretation for over 50 years (see 38 FR 7096), has never expressed disagreement with it. *See, e.g., United States* v. *Tuente Livestock,* 888 F. Supp. 1416, 1423 (S.D. Ohio 1995) (upholding FDA interpretation of statutory term ''food'' based, among other things, on the fact that ''Congress has been aware of the FDA's understanding and practice concerning live animals for almost twenty-five years, yet has in no way acted to limit the agency's jurisdiction'').

Furthermore, at least two Federal statutes contemplate that tests manufactured by laboratories can be subject to FDA regulation. First, CLIA refers to ''laboratory examinations and procedures'' that have been ''approved by the Food and Drug Administration for home use'' as among the types of tests a laboratory with a CLIA certificate of waiver can perform. 42 U.S.C. 263a(d)(3). Second, in PAMA, Congress expressly recognized that ''a clinical diagnostic laboratory test . . . offered and furnished only by a single laboratory and not sold for use by a laboratory other than the original developing laboratory (or a successor owner),'' a description that may include an LDT, can be ''cleared or approved by the Food and Drug Administration.'' 42 U.S.C. 1395m–1(d)(5) and (d)(5)(B). These provisions refute the comments' suggestion that tests developed by laboratories never fall within the definition of a device.

Various comments focused specifically on the term ''article'' in the device definition, citing narrow descriptions of the term ''article'' in a dictionary or in case law to support a narrow understanding of the term ''device.'' For example, one comment indicated that the term ''article'' is limited to a ''particular material thing'' based on a definition in the OED,

[54] *See also United States* v. *Dotterweich,* 320 U.S. 277, 280 (1943) (''The purposes of [the FD&C Act] thus touch phases of the lives and health of people which, in the circumstances of modern industrialism, are largely beyond self-protection. Regard for these purposes should infuse construction of the legislation if it is to be treated as a working instrument of government and not merely as a collection of English words.''); *United States* v. *25 Cases,* 942 F.2d 1179, 1182 (7th Cir. 1991) (quoting 79 Cong. Rec. at 4841 (1935)) (''the language [of the bill] is broad enough to cover any device of which the Food and Drug Bureau . . . . . chooses to take jurisdiction''); *United States* v. *Diapulse Corp. of America,* 457 F.2d 25, 27–28 (2d Cir. 1972) (''[t]he reach of the Act is broad''); *Clinical Reference Lab.* v. *Sullivan,* 791 F. Supp. 1499, 1508–09 (D. Kan. 1992), *rev'd in part on other grounds sub nom U.S.* v. *Undetermined No. of Unlabeled Cases,* 21 F.3d 1026 (10th Cir. 1994) (''congressional reports . . . . . indicate approval of the Supreme Court's method in *Bacto-Unidisk* of broadly defining terms within the [FD&C Act]'').

arguing that the definition of ''device'' cannot include intangible objects. FDA disagrees that this OED definition narrows the meaning of ''article'' in the FD&C Act's device definition. As an initial matter, other dictionary definitions of the term ''article'' are not so limited. See, *e.g.,* Merriam-Webster.com (Merriam Webster Collegiate Dictionary), article (''a member of a class of things'') (Ref. 131). More important, the text of the FD&C Act indicates that ''article'' is not so limited. As explained above, Congress has made clear that as used in the device definition, the term article includes software, an intangible thing. It has also made clear that the device definition encompasses clinical diagnostic laboratory tests, as just discussed.

With respect to comments' citations to cases interpreting the term ''article,'' FDA notes that none of these cases interpret language in the FD&C Act. Because these cases involve different legal schemes, contexts, and history, they are of limited relevance. Regardless, FDA has reviewed the cases and has concluded that they do not counsel in favor of a different understanding of the device definition as applied to LDTs.

Comments cited three cases: *ClearCorrect Operating, LLC* v. *ITC,* 810 F.3d 1283 (Fed. Cir. 2015), petition for rehearing en banc denied, 819 F.3d 1334 (Fed. Cir. 2016); *Wilton Meadows Ltd. P'ship* v. *Coratolo,* 14 A.3d 982 (Conn. 2011); and *Fortin* v. *Marshall,* 608 F.2d 525 (1st Cir. 1979). In *ClearCorrect,* the Federal Circuit determined that the term ''articles'' in the Tariff Act does not include digital data, relying on certain dictionary definitions contemporaneous with passage of the 1922 Tariff Act, among other things. This case is particularly inapposite because, as discussed previously, the FD&C Act specifically lists (to name one example) a ''contrivance,'' as within the device definition (unlike the Tariff Act, which does not further define the term ''articles''), and Congress has endorsed the view that the device definition in the FD&C Act (both as drafted in 1976 and currently) includes software functions. Regardless, an IVD system falls within the *ClearCorrect* court's understanding of an article because it is comprised of material things, as discussed earlier in this comment response. In *Fortin* and *Wilton Meadows,* courts interpreted the term ''article'' to exclude services (air transportation services in the former case and nursing home services in the latter). However, FDA's position is not that laboratory services are articles but that in vitro diagnostic products used in laboratories (such as test systems) are articles. Courts have agreed that medical services and articles used in medical services are distinguishable for purposes of FDA regulation. *See, e.g., United States* v. *Regenerative Sciences,* 741 F.3d 1314, 1319 (D.C. Cir. 2014). And the *Wilton Meadows* court itself acknowledged this distinction, 14 A.3d at 987 (holding that the term ''article'' does not include nursing home services but ''could reasonably be construed to include food, medicine or many other items that are associated with nursing home care,'' although upon review of relevant ''extratextual sources,'' it did not).

(Comment 53) Several comments asserted that the legislative history of the MDA bolsters the interpretation that the definition of ''device'' under 21 U.S.C. 321(h)(1) means physical objects. For example, these comments pointed to use of the terms ''products,'' ''machines'' and ''articles'' in congressional reports to argue that Congress only intended for physical objects to be devices.

(Response 53) At the outset, FDA notes that even if it were true that the legislative history suggested a narrow understanding of the device definition, that history would not trump the definition's plain text, which encompasses LDTs, as explained in comment response 52. *See Bostock* v. *Clayton Cty.,* 140 S. Ct. 1731 at 1737 (''When the express terms of a statute give us one answer and extratextual considerations suggest another, it's no contest. Only the written word is the law.''). Moreover, FDA does not agree that the legislative history suggests a narrow understanding of the device definition. Comments point to passing references to terms such as ''products,'' ''machines'' and ''articles'' in the legislative history, but these terms, such as the term ''article,'' do not necessarily refer solely to tangible objects, as discussed in the previous comment response. Likewise, ''product'' commonly refers to things that are either tangible or intangible, insurance and software being examples of the latter. Regarding software, the FD&C Act uses the term ''product'' to specifically refer to ''software'' in section 520(o)(2). This is consistent with dictionary definitions of ''product.'' *See, e.g.,* Merriam-Webster.com (Merriam Webster Collegiate Dictionary), product (''(1): something produced'' ''(2): something (such as a service) that is marketed or sold as a commodity'') (Ref. 132). The legislative history's passing references to ''machines'' also could not have been intended to limit the scope of the device definition to tangible objects. The instrument clause of that definition, section 201(h)(1) of the FD&C Act, is not limited to machines. Rather, it refers to ''an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part, or accessory.'' In accordance with this definition, FDA regulates as devices a wide variety of products—such as surgical instruments, surgical masks, and blood collection containers—that are not ''machines.'' In addition, the legislative history does not indicate that Congress intended for these references to limit the scope of FDA's authority; in fact, the legislative history also includes terms that cut in the opposite direction, such as a reference to a ''diagnostic service,'' as discussed later in this comment response.

Regardless, as explained in response to comment 52, LDTs are physical objects. Generally, they are systems consisting of a combination of physical objects. FDA has not identified evidence in the legislative history to suggest that when IVD components are combined as intended, the resulting in vitro diagnostic product falls outside FDA's jurisdiction; rather, the legislative history states the opposite. For example, a House report issued months before enactment of the MDA noted a district court's skepticism of FDA authority over a ''pregnancy detection kit'' and then emphasized the need for ''more comprehensive authority,'' suggesting that the Committee agreed that this type of kit (or combination of components) should fall within FDA's authority. H.R. Rep. 94–853 at 9 (February 29, 1976). A Senate report signaled Congress's intent that FDA regulate a test system (described as a ''diagnostic service'' in the report) under which an ''operator'' used various physical components—a ''Blood Specimen Carrier,'' a ''wand,'' ''metal plates,'' and a machine known as the ''Radioscope''—to determine the ''identity, kind, location, and significance of any disease present.'' S. Rep. 94–33 at 4–5 (March 11, 1975). The Committee described the system in detail, including how the individual components were used, and explained that practitioners ''received, for a fee, a diagnosis blank filled in with the diseases which the patient was supposed to have.'' Id. It noted with concern that the ''service was incapable of distinguishing the blood of animals or birds from that of man, or that of the living from the dead.'' Id. at 5. The Committee's emphasis on faulty results makes clear that it was focused on the harms from the test system, not from

any one individual component. (Although one commenter argued that the relevant ''device'' in this passage of the Senate Report was the Radioscope, that interpretation fails to account for the Committee's overall focus on the results, which were attributable to the combination of components.) The discussions in these reports reflect the degree of focus on IVDs at the time and show that, contrary to some commenters' suggestions, the MDA was enacted precisely with test systems in mind. The Committees' support for FDA authority over IVD systems is particularly notable given that FDA had, by regulation, announced that a ''system'' was a type of IVD only a few years before passage of the MDA. *See* 38 FR 7096. If Congress has disagreed with FDA's position, it presumably would have said so.

In sum, FDA does not agree that the legislative history casts doubt on its authority over LDTs; instead, it supports it. *See Clinical Reference Lab.* v. *Sullivan,* 791 F. Supp. 1499, 1508–09 (D. Kan. 1992) (''congressional reports [associated with the MDA] . . . indicate approval of the Supreme Court's method in Bacto-Unidisk of broadly defining terms within the [FD&C Act]'').

(Comment 54) Some comments stated that various provisions of the FD&C Act do not apply in the context of LDTs, which they contended supports their interpretation that LDTs do not fall within the device definition. These comments cited: (1) provisions referencing interstate commerce or movement in interstate commerce, commercial distribution, and ''held for sale,'' (2) requirements to repair, replace, or refund the purchase price of a device under 21 U.S.C. 360h(b); (3) provisions related to packaging; (4) packing, storage, and installation requirements at 21 U.S.C. 351(h), 360b, and 360j(f)(1); (5) import and export provisions at 21 U.S.C. 381; and (6) labeling requirements, such as those at 21 U.S.C. 352(a), (f). These comments concluded that FDA authority over LDTs is incompatible with the statute as a whole. Several comments also suggested that FDA regulations undermine the Agency's position, including the reference to ''in-process devices, finished devices and returned devices'' at § 820.3(r) and the UDI requirements at part 801.

(Response 54) As an initial matter, FDA disagrees with the premise of these comments that if some particular provisions in the FD&C Act do not apply to a system which meets the statutory definition of ''device,'' that means FDA lacks authority over that system. That premise is incompatible with the FD&C Act itself, which contains detailed provisions laying out the scope of the Agency's authority, the Agency's obligations, private party obligations, and private party exemptions. Congress included, for example, express statutory exclusions from certain requirements for certain healthcare personnel (such as ''practitioners licensed by law to prescribe or administer drugs or devices and who manufacture . . . drugs or devices solely for use in the course of their professional practice'' under 21 U.S.C. 360(g)(2)). It would be incongruous to conclude that it also intended, without saying so, to exclude a whole type of healthcare product or institution (namely, a laboratory). Instead, courts ''assume that Congress meant what it said, and said what it meant.'' *See Aqualliance* v. *U.S. Bureau of Reclamation,* 856 F.3d 101, 105 (D.C. Cir. 2017). The comments' interpretive approach also is inconsistent with how the Supreme Court has counseled interpretation of the FD&C Act. *See United States* v. *Bacto-Unidisk,* 394 U.S. 784, 798 (1969) (''[R]emedial legislation such as the Food, Drug, and Cosmetic Act is to be given a liberal construction consistent with the Act's overriding purpose to protect the public health.''). And it runs counter to Congress's understanding of the MDA as expressed in the legislative history. *See* H.R. Rep. 94–853 at 13 (''Because the Committee recognizes . . . that, in general, authority under the [FD&C Act] to regulate food, drugs, cosmetics, and devices is too often vague thus lending itself to interpretive regulation having the force of law, the Committee has attempted to design device authority such that the law and the intent of the Congress is clear.'').

Moreover, in the case of LDTs, the alleged ''inapplicability'' of many of the provisions identified by comments arises from a laboratory's own choice not to engage in certain activities that would be governed by such provisions, not from some fundamental incompatibility between the FD&C Act and LDTs. For example, even if a given laboratory chooses not to package or ship an IVD, that is not a reason to conclude that it, or the devices it makes, are excluded from the scope of the statute altogether. It simply means the laboratory is not engaged in conduct—such as packaging—that triggers a particular statutory requirement—such as the requirement that packaged devices bear certain information in their label under 21 U.S.C. 352(b).

Under commenters' logic, any manufacturer could narrow the scope of her or his operations, such that only some provisions of the FD&C Act applied, and then assert that none of its activities are ''what Congress had in mind when it drafted the statute'' (*i.e.,* that none of its activities are within FDA's jurisdiction). FDA disagrees with this logic. That would run counter to the statute's text and would cause negative public-health outcomes. If an entity is engaged in activities subject to the FD&C Act, even if those activities are limited in scope, the entity is subject to the FD&C Act—though obviously the nature of those activities will determine which provisions of the statute apply. A manufacturer's choice to engage in only a limited number of activities to which the FD&C Act is applicable should not mean that the FD&C Act does not apply at all.

FDA also has the following responses regarding specific provisions identified by commenters as inapplicable:

- For responses to comments regarding FD&C Act provisions that reference interstate commerce, commercial distribution, and ''held for sale,'' see sections VI.D.3 and VI.D.4 of this preamble.
- To the extent that commenters argued that the repair, replacement, and refund provisions in 21 U.S.C. 360h(b) do not apply to LDTs because they cannot be repaired, replaced, or refunded, FDA disagrees. A faulty IVD system could be repaired, for example, by repairing a faulty component, such as an instrument. The system could also be replaced with another IVD system, such as one from a conventional IVD manufacturer. Or the purchase price of the system could be refunded to the same extent and in the same manner as for most other devices that are used in medical practice.
- With respect to packaging, although it is true that laboratories making LDTs generally do not package those LDTs, the FD&C Act does not assume that regulated articles are packaged. On the contrary, the FD&C Act expressly contemplates that some drugs and devices will *not* be packaged, as it imposes certain label requirements only ''*[i]f* [the device is] in a package form.'' 21 U.S.C. 352(b)) (emphasis added).
- The provisions in 21 U.S.C. 351(h) and 360j(f)(1) do not contemplate that all devices will be packed, stored, and/or installed. Rather, these statutory provisions empower FDA to establish requirements governing these activities, to the extent they occur, and also require entities to comply with FDA requirements when applicable. *See* 21 U.S.C. 360j(f)(1) (authorizing the Secretary to ''prescribe regulations requiring that the methods used in, and the facilities and controls used for, the

manufacture, pre-production design validation . . ., packing, storage, and installation of a device conform to current good manufacturing practice''); 21 U.S.C. 351(h) (device adulterated if ''the methods used in, or the facilities or controls used for, its manufacture, packing, storage, or installation are not in conformity with applicable requirements''). It is not the case that all these activities must occur in order for an article to be a device. For example, a cotton swab or a tongue depressor intended for a use specified in the device definition is not ''installed'' but is indisputably a device. Neither the FD&C Act nor FDA regulations assume that all these activities will occur with respect to every device. *See, e.g.,* 21 U.S.C. 360e(c)(1)(C) (requiring premarket approval applications to contain ''a full description of the methods used in, and the facilities or controls used for, the manufacture, processing, and, *when relevant,* packing and installation of, such device'') (emphasis added); § 820.1(a)(1) (''If a manufacturer engages in only some operations subject to the requirements in this part, and not in others, that manufacturer need only comply with those requirements applicable to the operations in which it is engaged.''). Therefore, FDA disagrees that the potential inapplicability of these statutory provisions to some laboratories signals a broader mismatch between the FD&C Act and LDTs. Finally, although a comment referenced 21 U.S.C. 360b in connection with packing, storage, and installation, that provision relates to new animal drugs and not to devices.

- Import and export are not necessary for an article to be a device. FDA regards arguments concerning the import and export provisions at 21 U.S.C. 381 to be similar to arguments about physical shipment of an article in interstate commerce. Please see section VI.D.3 of this preamble for a detailed response to those arguments.
- Labeling requirements, such as those at 21 U.S.C. 352(a) and (f), do apply to LDTs. Although laboratories generally choose not to package LDTs or place them in a container, LDTs are accompanied by ''written, printed, or graphic matter'' that falls within the definition of labeling at 21 U.S.C. 321(m). Therefore, the labeling requirements at 21 U.S.C. 352(a) and (f) apply to LDTs.
- The comments citing FDA regulations appear to argue that despite FDA's publicly stated view that LDTs are devices, certain regulations governing device packages or returned devices may not apply to LDTs, which calls into question FDA's view of its authority. FDA disagrees with that reasoning. FDA has stated its interpretation that LDTs are devices on many occasions in clear terms and that interpretation is not undermined if some regulations do not apply to LDTs. See 62 FR 62243 at 62249 (November 21, 1997), 65 FR 18230 at 18231 (April 7, 2000), Refs. 27, 32 and 33, 35, 39, 57, 97, 111 to 121). In any event, the regulations the comments point to are not necessarily inapplicable to LDTs. First, the terms ''in-process devices'' and ''finished devices'' in the definition of ''product'' at § 820.3(r) apply to LDTs. An LDT can be ''in-process,'' for example, when system components are in process, such as when a laboratory manufacturer is sourcing and qualifying critical reagents such as primers and probes or antibodies for their test system. In addition, FDA recognizes that the UDI requirements at part 801 generally apply to ''labels'' and ''device packages,'' and that laboratories generally do not package their IVDs, such as test systems. However, this is not necessarily the case for all laboratories' IVDs and does not mean that laboratories are incapable of compliance with UDI requirements. For the reasons previously stated, FDA does not agree that these UDI requirements have any broader meaning with respect to FDA's authority over LDTs.

3. Interstate Commerce and ''Held for Sale''

(Comment 55) Several comments asserted that FDA lacks authority to regulate LDTs under the FD&C Act because many of FDA's authorities to regulate devices, such as the premarket notification provision in section 510(k) of the FD&C Act (21 U.S.C. 360(k)), require introduction or delivery for introduction into interstate commerce and, according to the comments, LDTs do not meet this element. One comment argued that in addition to section 510(k), the FD&C Act's premarket approval and De Novo classification provisions are limited to devices that are or will be introduced or delivered for introduction into interstate commerce, citing sections 513(c)(2)(C)(ii), 513(f)(1), 515(b)(1), and 515(i)(1) of the FD&C Act.

(Response 55) We disagree that introduction or delivery for introduction into interstate commerce is required for FDA jurisdiction of devices, including LDTs, under the FD&C Act. The FD&C Act's definition of a ''device'' subject to FDA's jurisdiction does not include an interstate commerce element. Whether a particular provision of the FD&C Act requires a connection to interstate commerce goes to the reach of *that specific provision,* not of the device definition or of the Act as a whole. If an FD&C Act provision does not contain an interstate commerce element, ''interstate commerce'' imposes no limit on FDA's powers beyond the constitutional minimum.

Section 510(k) of the FD&C Act illustrates this point. That provision states that a person who is required to register and ''proposes to begin the introduction or delivery for introduction into interstate commerce'' of a device ''shall'' submit a premarket notification. The inclusion of an interstate commerce element in section 510(k) of the FD&C Act means that the requirements of *that section* do not apply where that element is not satisfied. It does not mean that FDA lacks jurisdiction to enforce *other* device provisions of the FD&C Act that do not include such an element.[55]

Contrary to the assertion in comments that ''many'' of the FD&C Act's device requirements require introduction or delivery for introduction into interstate commerce, relatively few of the device provisions in the FD&C Act and FDA regulations include a specific interstate commerce element, and most of the device-related prohibited acts do not. See, *e.g.,* 21 U.S.C. 331(e) (prohibiting the failure to establish or maintain any record, or make any report, required under the device adverse-event reporting requirements without reference to interstate commerce); 21 U.S.C. 331(p) (prohibiting the failure to register a device establishment without reference to interstate commerce); 21 U.S.C. 331(q)(1) (prohibiting the failure to comply with device investigational use requirements without reference to interstate commerce); 21 U.S.C. 331(f)(3) (prohibiting the doing of any act which causes a device to be a counterfeit device, or the sale or dispensing, or holding for sale or dispensing, of a counterfeit device without reference to interstate commerce). For further discussion, see the NPRM (88 FR 68006 at 68019–20). Additionally, the FD&C Act gives FDA authority to take action, without satisfying any particular interstate commerce element, when there is a violation of device requirements. For example, FDA has the

[55] Additionally, as discussed in the NPRM, section 510(k) of the FD&C Act does not *preclude* regulated entities from submitting premarket notifications even if the device is not introduced into interstate commerce (88 FR 68006 at 68020). Therefore, laboratories may utilize the less burdensome 510(k) process to market their LDT even assuming the device is not introduced or delivered for introduction into interstate commerce. Regardless, the inclusion of an interstate commerce element in section 510(k) in no way affects FDA's overall authority to regulate IVDs manufactured by laboratories.

authority to seize any ''adulterated or misbranded device'' without reference to an interstate commerce element (21 U.S.C. 334(a)(2)). Thus, FDA does not somehow lose jurisdiction if a particular device has not been introduced or delivered for introduction into interstate commerce.

Further, Congress clearly intended that FDA have jurisdiction over devices that violate the FD&C Act even if they are not introduced or delivered for introduction into interstate commerce. For example, as discussed in the NPRM, Congress intentionally revised the aforementioned seizure provision of the FD&C Act, section 304, to ensure that FDA could take action against devices without satisfying any particular interstate commerce element. For further discussion, see the NPRM (88 FR 68006 at 68020). Additionally, one of the key prohibited acts on which FDA relies, section 301(k) of the FD&C Act (21 U.S.C. 331(k)), contains an interstate commerce element, but it does not require a *complete* violative device to have itself been introduced or delivered for introduction into interstate commerce. That provision prohibits ''the doing of any . . . act with respect to, a . . . device . . . if such act is done while such article is held for sale (whether or not the first sale) after shipment in interstate commerce and results in such article being adulterated or misbranded.'' Courts have held that even if a product is wholly manufactured and sold intrastate, the interstate commerce element in this provision is satisfied if a component used in manufacturing the product has traveled in interstate commerce. (See, *e.g., United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314, 1320–21 (D.C. Cir. 2014) (upholding FDA enforcement action under section 301(k) of the FD&C Act because a drug component had traveled in interstate commerce); *Baker* v. *United States,* 932 F.2d 813, 814–15 (9th Cir. 1991); *United States* v. *Dianovin Pharm., Inc.,* 475 F.2d 100, 102–103 (1st Cir. 1973)). At least some components of test systems, such as reagents and instruments, are usually shipped in interstate commerce even if the system itself is designed, manufactured, and used within the laboratory. And section 709 of the FD&C Act (21 U.S.C. 379a) establishes a presumption that any required connection with interstate commerce exists for enforcement actions, meaning that the burden is on regulated parties to demonstrate, for example, that no component of a system traveled across State lines. (''In any action to enforce the requirements of this Act respecting a device . . . the connection with interstate commerce . . . shall be presumed to exist.''). Thus, under the FD&C Act, FDA has authority over devices even assuming they are not introduced or delivered in completed form for introduction into interstate commerce.

FDA also disagrees with the comment's apparent presumption that, if a device is not subject to 510(k) requirements (because that provision's interstate commerce element is not satisfied), then it must not be subject to any of the FD&C Act's other requirements for marketing a device. As explained in the rest of this response, the relevant statutory text contains no such limitation.

Section 513(f)(1) of the FD&C Act applies to devices intended for human use that were ''*not* introduced or delivered for introduction into interstate commerce for commercial distribution before [May 28, 1976].'' (emphasis added). Under sections 513(f)(1) and 515(a), such devices fall into class III by operation of law, and must have an approved PMA, unless either: (1) they are exempt as investigational devices under section 520(g) of the FD&C Act (21 U.S.C. 360j(g)) or (2) they satisfy one of the criteria established in section 513(f)(1)(A)–(C) (21 U.S.C. 360c(f)(1)(A)–(C)).[56]

References in sections 513(c)(2)(C)(ii), 515(b)(1), and 515(i)(1) of the FD&C Act to devices that *were* ''introduced or delivered for introduction into interstate commerce for commercial distribution before [May 28, 1976]'' do not impose a general interstate commerce limitation on the FD&C Act's PMA requirements or the De Novo provisions. Rather, these sections use that language to identify the preamendments devices that are subject to specific processes under the FD&C Act.

The FD&C Act's De Novo and reclassification provisions (sections 513(f)(2) and (f)(3) of the FD&C Act, respectively) are also not limited to devices that are or will be introduced or delivered for introduction into interstate commerce. The De Novo provisions provide an alternative process for classifying new devices into class I or II where there is no legally marketed device upon which to base a substantial equivalence determination (section 513(f)(2) of the FD&C Act). Indeed, as mentioned above, De Novo is available as a non-PMA marketing pathway for certain devices that were ''*not* introduced or delivered for introduction into interstate commerce for commercial distribution before [May 28, 1976].'' (emphasis added). Manufacturers may also utilize the reclassification process in section 513(f)(3) of the FD&C Act, which likewise applies to devices ''*not* introduced or delivered for introduction into interstate commerce for commercial distribution before [May 28, 1976]'' (emphasis added) (see sections 513(f)(1) and (3)).

In sum, a device that is not subject to the premarket notification requirements under section 510(k) of the FD&C Act because it does not satisfy that provision's interstate commerce element is not thereby exempted from other requirements under the FD&C Act that do not include such an element.

(Comment 56) A comment asserted that FDA's interpretation of interstate commerce deviates from the plain language definition of the term and that FDA's concept of interstate commerce in section IV.B.3.a. of the NPRM (88 FR 68006 at 68019 and 68020) is so expansive as to negate the entirety of the meaning of the word interstate. Further, the comment asserted that if Congress did not intend to restrict FDA's authority to interstate commerce, it would not have used the term in legislation.

(Response 56) FDA did not provide a specific interpretation of the term ''interstate commerce'' in the NPRM but rather, we explained that interstate commerce is not a prerequisite to FDA device jurisdiction (beyond the constitutional minimum). To the extent the comment is asserting that interstate commerce is a prerequisite to FDA device jurisdiction, FDA disagrees. As explained in the NPRM and in response to comment 55, in the FD&C Act there are a limited number of provisions applicable to devices that include a specific interstate commerce element (88 FR 68006 at 68019–20). Where a provision applicable to devices includes an interstate commerce element, the particular interstate commerce element must be met in order for FDA to exercise authority under that provision. However, there are many provisions applicable to devices that do not include an interstate commerce element. Where a provision applicable to devices does not include an interstate commerce element, the provision applies without satisfying any particular interstate commerce element. ''[Where] Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.'' *See,*

[56] Those criteria are substantial equivalence under section 513(i), reclassification under section 513(f)(3), and De Novo authorization under section 513(f)(2) of the FD&C Act.

e.g., Russello v. *United States,* 464 U.S. 16, 23 (1983) (quoting *United States* v. *Wong Kim Bo,* 472 F.2d 720, 722 (CA5 1972)). Additionally, as discussed in the NPRM and in response to comment 55, Congress intentionally revised section 304 of the FD&C Act (seizure provisions) to ensure that FDA could take action against devices without satisfying any particular interstate commerce element (88 FR 68006 at 68020; H.R. Rep. No. 94–853 (1976), at 15). Thus, the statutory text of the FD&C Act, caselaw construing that text (such as *United States* v. *Walsh,* 331 U.S. 432, 434–36 (1947), discussed in the NPRM (88 FR 68006 at 68020)), and the legislative history of the MDA clearly support that interstate commerce is not a prerequisite to FDA jurisdiction over devices under the FD&C Act (beyond the constitutional minimum).

(Comment 57) One comment asserted that the NPRM was dismissive of concerns that Congress, by granting FDA the statutory authorities relied on here, may have exceeded its authority under the Interstate Commerce Clause of the U.S. Constitution, adding that some current justices of the U.S. Supreme Court might not agree that Congress may constitutionally authorize FDA to regulate purely intrastate operations.

(Response 57) The legal position FDA described in the NPRM and reflected in the final rule is fully consistent with current Interstate Commerce Clause jurisprudence, including numerous cases decided over decades by the U.S. Supreme Court. *See, e.g., Gonzales* v. *Raich,* 545 U.S. 1, 17–18 (2005).

As an initial matter, many laboratories that at first glance might appear to be operating exclusively within a single state are in fact operating interstate. Their online advertising may attract patients, the human samples they test may have been collected, the components they purchase to assemble their LDTs may have been shipped, and the test reports they generate may go to ordering physicians, from out-of-state. So not all laboratory manufacturers have operations that are purely intrastate.

But, even if a laboratory's operations are purely intrastate, Congress can still regulate the laboratory's activities under the Interstate Commerce Clause. The Supreme Court's ''case law firmly establishes Congress' power to regulate purely local activities that are part of an economic 'class of activities' that have a substantial effect on interstate commerce.'' *Gonzales* v. *Raich,* 545 U.S. at 17. Congress ''may regulate these intrastate activities based on their aggregate effect on interstate commerce.'' *Taylor* v. *United States,* 579 U.S. 301, 303 (2016). When a laboratory offers a test for purchase and use by healthcare providers and patients for diagnosis or treatment, it is engaged in economic activity. And that economic activity, in the aggregate, has a substantial effect on interstate commerce. As explained in the FRIA, FDA's primary estimated market revenue for IVDs offered as LDTs for 2023 is, in 2022 dollars, approximately $20 billion. IVDs offered as LDTs divert patients and providers from using IVDs not offered as LDTs, whose market FDA estimates at 65 percent of all IVDs (Ref. 10). And the test results obtained from IVDs offered as LDTs will lead patients and providers to choose to undergo or forgo a variety of health treatment decisions, with clear effects in both directions on the markets for the relevant treatments.

(Comment 58) A comment argued that LDTs are not ''held for sale'' under section 301(k) of the FD&C Act because there is no transfer of title or possession of an LDT to the ordering physician, and that this view comports with case law, which extends FDA's jurisdiction to regulate drugs and devices after release by the original manufacturer, but only insofar as such regulated products are being delivered or transferred to another ultimate consumer. The comment also argued that *United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314 (D.C. Cir. 2014), is inapplicable to LDTs because that case involved a drug-cell mixture administered to a patient for treatment, and LDTs are not transferred to anyone but performed by the manufacturer. The comment further argued that ''held for sale'' does not include use of a device to facilitate the work of a healthcare professional where that device is not transferred to the patient, citing *Shahinian* v. *Kimberly-Clark Corp.,* No. 14–CV–8390, 2017 WL 11595343 (C.D. Cal. March 7, 2017). Additionally, the comment argued that in cases cited by FDA in its response to a citizen petition from ACLA and in a memorandum by the then-General Counsel to HHS, the regulated drug or device product was delivered or transferred from one party (typically a doctor) to an ultimate consumer (typically a patient), and that this does not occur with LDTs.

(Response 58) FDA disagrees with the comment. Section 301 of the FD&C Act identifies prohibited acts that are intended to provide protection against adulterated and misbranded devices all the way to the consumer or patient. For example, section 301(a) addresses acts early in the distribution chain, by prohibiting ''[t]he introduction or delivery for introduction into interstate commerce'' of an adulterated or misbranded device (21 U.S.C. 331(a)). Separately, section 301(k) of the FD&C Act addresses circumstances later in the distribution process, in which the defendant does an act that results in the adulteration or misbranding of a device that is held for sale. Specifically, this section prohibits ''the doing of any . . . act with respect to, a . . . device . . . if such act is done while such article is held for sale (whether or not the first sale) after shipment in interstate commerce and results in such article being adulterated or misbranded'' (21 U.S.C. 331(k)). Courts have adopted a broad interpretation of the phrase ''held for sale'' in section 301(k) of the FD&C Act. This interpretation is based on the 1948 Supreme Court decision, *United States* v. *Sullivan,* 332 U.S. 689, in which the Court explained: sections 301(a)–(c) of the FD&C Act ''alone would not supply protection all the way to the consumer. The words of paragraph (k) 'while such article is held for sale after shipment in interstate commerce' apparently were designed to fill this gap and to extend the Act's coverage to every article that had gone through interstate commerce until it finally reached the ultimate consumer.'' Id. at 696–97.

LDTs are ''held for sale'' under section 301(k) of the FD&C Act. Among other things, laboratories generally sell their LDTs. Similar to other prescription products, a physician orders a test (which may or may not be an LDT) and the patient (or another party such as the patient's insurer) pays for it. With LDTs, patients and their healthcare providers are the ultimate consumers. LDTs are used on patients, specifically their specimens (as is the nature of in vitro diagnostic products), and the LDT output—the test results—are provided to healthcare professionals and/or patients for use in diagnosing or treating patients.

Consistent with section 301(k) of the FD&C Act's purpose, courts have held that devices used in the diagnosis or treatment of patients may properly be considered ''held for sale'' within the meaning of the FD&C Act, even where the device itself is not delivered or transferred to a patient. *See, e.g., United States* v. *Diapulse Corp. of Am.,* 514 F.2d 1097, 1098 (2d Cir. 1975) (the Diapulse machine, which was held by practitioners and ''used in the treatment of patients, may properly be considered 'held for sale' within the meaning of the [FD&C Act], 21 U.S.C. 331(k).'' (citations omitted)); *United States* v. *Articles of Device (Acuflex; Pro-Med),* 426 F. Supp. 366, 368 n.3 (W.D. Pa. 1977) (''Therefore, by their use in diagnosis [the electric acupuncture devices] were

held for sale after interstate shipment.''); *United States* v. *Device Labeled* ''*Cameron Spitler Amblyo-Syntonizer,*'' *etc.,* 261 F. Supp. 243, 246 (D. Neb. 1966) (''The court is also of the opinion that the devices were misbranded while being held for sale. Although the claimant never sold the devices in the commercial sense, the device was used in the claimant's treatment of patients.''). This interpretation of section 301(k) of the FD&C Act by the courts is consistent with the FD&C Act's intent to supply protection ''all the way to the consumer.'' The view asserted by the comment is not only inconsistent with the case law, but also would leave a serious gap in protecting patients under the FD&C Act. For example, under the comment's view, devices such as x-ray systems, MRI systems, excimer lasers, and proton therapy beams could never fall within section 301(k) of the FD&C Act because these devices are not delivered or transferred to a patient, even though they are used on patients. Whether a device is physically transferred/delivered to a patient or used on a patient without physical transfer/delivery, the public health interest in safe and effective devices is the same.

Although some of the cases discussing section 301(k) of the FD&C Act involved a product that was delivered or transferred to a patient, that does not mean that these cases stand for the proposition that delivery or transfer to a patient must occur in order for section 301(k) to apply. For example, in *United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314 (D.C. Cir. 2014), cited in one of the comments, the D.C. Circuit did not state that an article is held for sale only if there is physical delivery or transfer to a patient. Indeed, it did not address the ''held for sale'' requirement at all. On appeal the issue concerning section 301(k) of the FD&C Act was whether the defendant's entire Mixture product had to be shipped in interstate commerce in order to fall within section 301(k), which applies ''after shipment in interstate commerce.'' Id. at 1320. The court held ''that, by virtue of its use of doxycycline, [a component shipped in interstate commerce,] the Mixture is within the scope of drugs—and, by extension, biological products, see 42 U.S.C. 262(j)—regulated by [21 U.S.C.] § 331(k).'' Id. at 1321. Contrary to the comment's assertion, the D.C. Circuit's holding applies to LDTs because, among other things, LDTs are generally manufactured with components that are shipped in interstate commerce. Additionally, the district court's opinion in the same case *did* address the ''held for sale'' requirement, and endorsed FDA's interpretation. The district court stated: ''Defendants create the cell product, the 'drug' in this case, and use it to treat their patients. Such conduct satisfies the 'held for sale' requirement of the statute.'' *United States* v. *Regenerative Scis., LLC,* 878 F. Supp. 2d 248, 258. Both courts determined that the defendants who manufactured the Mixture fell within the scope of section 301(k) of the FD&C Act, because the Mixture was made with doxycycline that had been shipped in interstate commerce and the defendants used the Mixture to treat patients. Similarly, laboratories that manufacture LDTs with any component that has been shipped in interstate commerce and use their LDTs in the diagnosis or treatment of patients fall within the scope of section 301(k). 21 U.S.C. 331(k).

Additionally, the comment misconstrues *Shahinian* v. *Kimberly-Clark Corp.,* No. 14–CV–8390, 2017 WL 11595343 (C.D. Cal. March 7, 2017). Although not explicitly stated, it appears that the court considered the surgical gowns not to be ''held for sale'' by the surgery center because the surgery center purchased the surgical gowns for its own personal consumption.

In contrast, laboratories are not manufacturing LDTs solely for their own personal consumption. Rather, laboratories manufacture LDTs for healthcare providers and patients. Consistent with the case law discussed above, LDTs are generally held for sale under section 301(k) because LDTs are generally sold and used on patients, specifically their specimens (as is the nature of in vitro diagnostic products), and the LDT output—the test results—are provided to healthcare professionals and/or patients for use in diagnosing or treating patients.

(Comment 59) A comment argued that even if LDTs were ''held for sale,'' section 301(k) of the FD&C Act only applies while LDTs are held for sale ''after shipment'' in interstate commerce, and LDTs are never shipped in interstate commerce, but rather performed only within the laboratory in which they are developed.

(Response 59) FDA disagrees with the comment. The comment's assertion—that section 301(k) of the FD&C Act only applies while LDTs are held for sale after the LDT is shipped in interstate commerce—is contrary to the case law. For example, as discussed in response to comment 58, the appellants in *United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314, raised this issue, arguing that section 301(k) did not apply because the entire Mixture product was not shipped in interstate commerce. Id. at 1320. The court disagreed, holding ''that, by virtue of its use of doxycycline''—a component shipped in interstate commerce—''the Mixture is within the scope of drugs—and, by extension, biological products, see 42 U.S.C. 262(j)—regulated by [21 U.S.C.] § 331(k).'' Id. at 1321. The court noted that other circuits had come to the same conclusion, citing *Baker* v. *United States,* 932 F.2d 813, 814 (9th Cir. 1991) (holding that section 301(k) of the FD&C Act's '' 'shipment in interstate commerce' requirement is satisfied even when only an ingredient is transported interstate.''); and *United States* v. *Dianovin Pharmaceuticals, Inc.,* 475 F.2d 100, 103 (1st Cir. 1973) (holding that the company's ''use of components shipped in interstate commerce to make vitamin K for injection brought their activities within [21 U.S.C.] § 331(k).''). Thus, even if the LDT itself is not shipped in interstate commerce, LDTs generally are manufactured with components (*e.g.,* reagents and instruments) that are shipped in interstate commerce, and as discussed in response to comment 58, generally LDTs are held for sale under section 301(k) of the FD&C Act.

4. Commercial Distribution

(Comment 60) Some comments asserted that FDA lacks authority to regulate LDTs under the FD&C Act because certain device provisions under the FD&C Act, such as the premarket notification provision in section 510(k) of the FD&C Act, require ''commercial distribution'' and that LDTs do not meet this element. For example, several comments argued that LDTs are not in commercial distribution because there is no transfer of title with an LDT, and the test is not distributed to the clinician or the patient. A comment further argued that ''commerce'' refers to ''the exchange or buying and selling of commodities especially on a large scale and involving transportation from place to place'' and that ''distribution'' requires a ''delivery'' or ''conveyance'' of a good from a main source. Additionally, the comment alleged that the preamble to part 807 took pains to emphasize that commercial distribution is satisfied only where the product at issue is transferred to an unaffiliated third party, claiming that this is the reason why § 807.3(b)(1) specifically exempts the ''[i]nternal or interplant transfer of a device between establishments within the same parent, subsidiary, and/or affiliate company,'' and that this is also the reason why the preamble to the analyte specific reagent (ASR) rule expressly distinguished between ''ASR's that move in

commerce'' and ''tests developed in-house by clinical laboratories or ASR's created in-house and used exclusively by that laboratory for testing services.'' (62 FR 62243 at 62249, November 21, 1997). Additionally, a comment argued that in Compliance Policy Guide (CPG) § 300.600 (Commercial Distribution with Regard to Premarket Notification (Section 510(k))) (1978, reissued 1987) (Ref. 133), FDA interpreted commercial distribution to require actual or anticipated delivery of the device to purchasers or consignees and that in *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, 993–95 (W.D. Mich. 1985), a court upheld this interpretation.

(Response 60) FDA disagrees with these comments. As discussed in the NPRM, LDTs generally are in commercial distribution (88 FR 68006 at 68020–21). Under our longstanding interpretation, ''commercial distribution'' does not require the physical transfer of an object, nor does it require transfer of title. Instead, the legislative history of the MDA, FDA's near contemporaneous regulation, and at least one judicial decision reflect that the phrase ''commercial distribution'' means ''on the market.'' *See* H.R. Rep. No. 94–853 at 36 (Feb. 29, 1976) (''`Commercial distribution' is the functional equivalent of the popular phrase `on the market.' ''); 41 FR 37458 at 37459, September 3, 1976 (in the preamble to proposed part 807, FDA equated ''commercial distribution'' with the phrase ''on the market''); and *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, 994–95 (upholding as reasonable FDA's interpretation of ''commercial distribution'' to mean, ''in its popular sense, `on the market' ''). For further discussion, see the NPRM (88 FR 68006 at 68020). Because LDTs generally are ''on the market,'' they are for commercial distribution. For example, like manufacturers of other IVDs do, laboratories often promote their LDTs on their websites and hold or offer them for sale.

Additionally, the dictionary definitions of ''commercial,'' ''distribute'' and ''distribution'' are not limited to physical transfer of an object. The dictionary defines ''commercial'' to mean ''of or relating to commerce,'' providing examples of ''commercial regulations'' and ''commercial services,'' thus making it clear that the term ''commercial'' is not limited to ''the exchange or buying and selling of commodities especially on a large scale and involving transportation from place to place'' as suggested in the comment (Ref. 134). Regardless, the manufacture of LDTs generally involves components, such as reagents and instruments, that are purchased by and transported to the laboratory, and thus, involves commerce even under the more limited definition described in the comment. Moreover, the dictionary definitions of ''distribute'' and ''distribution'' include ''supply for sale'' and ''the marketing or merchandising of commodities'' (Refs. 135 and 136).[57] Thus, the plain meanings of ''commercial,'' ''distribute,'' and ''distribution'' are not limited to physical transfer of an object, and are consistent with FDA's longstanding interpretation of ''commercial distribution.''

FDA's interpretation of ''commercial distribution'' is also consistent with the FD&C Act's overriding purpose to ''protect the public health by ensuring that . . . there is reasonable assurance of the safety and effectiveness of devices intended for human use.'' Section 1003(b)(2)(C) of the FD&C Act (21 U.S.C. 393(b)(2)(C)). Moreover, FDA's interpretation of ''commercial distribution'' is consistent with section 301(k) of the FD&C Act which is intended to supply protection all the way to the consumer. As discussed in our responses to comments in section VI.D.3, the case law on section 301(k) of the FD&C Act supports FDA's jurisdiction over medical products that never leave a physician's office, and that are used in the diagnosis or treatment of patients even where the product itself is not delivered or transferred to a patient. *See, e.g., United States* v. *Diapulse Corp. of Am.,* 514 F.2d 1097, 1098 (the Diapulse machine, which was held by practitioners and ''used in the treatment of patients, may properly be considered `held for sale' within the meaning of the [FD&C Act], 21 U.S.C. 331(k).'' (citations omitted)); *United States* v. *Articles of Device (Acuflex; Pro-Med),* 426 F. Supp. 366, 368 n.3 (''Therefore, by their use in diagnosis [the electric acupuncture devices] were held for sale after interstate shipment.''); *United States* v. *Device Labeled ''Cameron Spitler Amblyo-Syntonizer,'' etc.,* 261 F. Supp. 243, 246 (''The court is also of the opinion that the devices were misbranded while being held for sale. Although the claimant never sold the devices in the commercial sense, the device was used in the claimant's treatment of patients.'').

However, even assuming LDTs were not in commercial distribution, this would not preclude FDA jurisdiction over these devices. As an initial matter, even assuming that certain provisions in the FD&C Act do not apply to a particular device, that does not mean FDA lacks authority to regulate the device under the FD&C Act. As discussed in the NPRM, ''commercial distribution'' appears in certain device provisions of the FD&C Act, including section 510(k), but as with ''interstate commerce,'' the presence of this term in certain device provisions does not bear on the Agency's overall jurisdiction (88 FR 68006 at 68019–21). For example, ''commercial distribution'' is not needed to trigger or enforce the PMA requirements. Specifically, section 515(a)(2) of the FD&C Act requires, without reference to commercial distribution, an approved PMA for any device that is class III under section 513(f) of the FD&C Act (which applies to all postamendments devices) unless it is exempt under section 520(g) of the FD&C Act, and section 501(f)(1)(B) of the FD&C Act deems adulterated, without reference to commercial distribution, any device that is classified into class III under section 513(f) of the FD&C Act and is required to have an approved PMA under section 515(a) of the FD&C Act, unless it is exempt under section 520(g) of the FD&C Act. Simply put, any requirement of commercial distribution is conspicuously absent from the statutory provisions that require an approved PMA for a postamendments class III device and that render the device adulterated in its absence. Further, FDA may initiate seizure of an adulterated device regardless of whether the device is in commercial distribution (21 U.S.C. 334(a)(2)(D) (stating that any adulterated device ''shall be liable to be proceeded against at any time on libel of information and condemned in any district court of the United States . . . within the jurisdiction of which they are found,'' without reference to ''commercial distribution'')).

The fact that Congress chose to include commercial distribution as an element only in certain device provisions but omitted it in others further supports that Congress did not intend for commercial distribution to be a prerequisite for device jurisdiction under the FD&C Act. ''[Where] Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.'' *See, e.g., Russello* v. *United States,* 464 U.S. 16, 23 (quoting *United States* v. *Wong Kim Bo,* 472 F.2d 720, 722). When

[57] The definition of ''commodity'' includes ''an economic good'' and ''something useful or valued'' (Ref. 137).

Congress enacted the MDA, it could have made commercial distribution an overarching element for device jurisdiction, but instead Congress chose to include this element only in a limited number of device provisions.

Regarding the regulatory exclusion from commercial distribution in § 807.3(b)(1) for ''[i]nternal or interplant transfer of a device between establishments within the same parent, subsidiary, and/or affiliate company,'' the preambles to the regulation support that this was intended to exclude such transfers as such devices were not on the market at that point. In the preamble to proposed part 807, FDA explicitly equated ''commercial distribution'' with ''on the market.'' 41 FR 37458 at 37459 (''The Amendments contain special provisions relating to the classification of devices not in commercial distribution (*i.e.,* not actually on the market) prior to May 28, 1976''). Further, commenters understood ''commercial distribution'' to mean ''on the market.'' *See* 42 FR 42520 (with regard to the internal/interplant transfer exclusion in the ''commercial distribution'' definition, commenters recommended that transfers between a foreign subsidiary and domestic parent also be excluded as ''premarket notification in such a situation would not serve any useful purpose since the device will not go 'on the market' at that point.''). Thus, the exclusion in § 807.3(b)(1) is consistent with FDA's longstanding interpretation of ''commercial distribution.''

Regarding the CPG on commercial distribution and *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, neither the CPG nor the court in this case limited ''commercial distribution'' to delivery. The CPG is clearly directed to devices that were not delivered. Specifically, the CPG identifies certain factors that FDA considers in determining whether a device is in commercial distribution before May 28, 1976, ''even though no units of the device had been delivered to purchasers or consignees.'' (Ref. 133). The factor in the CPG that the manufacturer had, before May 28, 1976, accepted or been prepared to accept at least one purchase order ''*generally* with delivery to occur immediately or at a promised future date'' indicates that delivery is typical but not necessary. Id. (emphasis added). Regardless, given that the CPG clearly covers devices that were not delivered, it reflects FDA's view that delivery is not required for commercial distribution. Additionally, in *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, 993–95, the court upheld FDA's interpretation of commercial distribution, stating ''This explanation, together with the agency's compliance policy guide . . . is a reasonable interpretation of the phrase 'commercial distribution'.'' The court was referring to the explanation in FDA's letter to the firm that, among other things, ''indicated that the agency views 'commercial distribution' to mean, in its popular sense, 'on the market', pursuant to H.R. 94–853, 94th Cong. 2d Sess. 36 (1976).'' Id. at 994.

Regarding the preamble to the ASR rule, FDA's limitation of the scope of the ASR rule to ''the classification and regulation of ASR's that move in commerce, not tests developed in-house by clinical laboratories,'' was a statement that those products were outside the scope of the rule and not a statement that there was no commercial distribution or that they were outside of FDA's jurisdiction or authority to regulate. 62 FR 62243 at 62249 (''The focus of this rule is the classification and regulation of ASR's that move in commerce, not tests developed in-house by clinical laboratories. . . .''). In fact, FDA made clear in the preamble to the ASR rule that ''FDA believes that clinical laboratories that develop [in-house] tests are acting as manufacturers of medical devices and are subject to FDA jurisdiction under the act.'' Id.

(Comment 61) A comment argued that neither the FD&C Act nor FDA's own interpretation of the statute supports an interpretation that a device not subject to section 510(k) may be independently subject to the PMA requirements in section 515 or the De Novo provisions in section 513(f)(2) of the FD&C Act. The comment argued that this is because submission of a PMA under section 515 or a De Novo request under section 513(f)(2) satisfies the requirement to submit a 510(k) premarket notification, which generally applies to all devices unless subject to a specific exemption. As support, the comment points to § 807.81, which states that a premarket notification is not required for a device for which a PMA, or for which a reclassification petition under section 513(f)(2) of the FD&C Act, is pending before FDA. The comment also refers to the preamble to proposed part 807 in which the Agency stated that ''[a] premarket notification under § 807.81 is not required for a device for which a premarket application under section 515 of the act, or for which a petition to reclassify from class III to class I or II under section 513(f)(2) of the act, is pending before FDA. For such devices, the other submissions will serve the purpose of a notification under section 510(k) of the act.'' 41 FR 37458 at 37460. Additionally, the comment refers to the preamble to the final rule setting out part 807 in which FDA explained ''[i]f a premarket approval application has been submitted, a premarket notification submission would not be required since FDA would already be advised of the intent to market.'' 42 FR 42520 at 42523. Another comment also argued that it ''defies logic that Congress would create a system to regulate LDTs where foundational provisions would not apply.'' The comment also alleged that the principal pathway to market for devices would be unavailable to LDTs, and claimed that the tens of thousands of LDTs that FDA estimated to be eligible for the 510(k) pathway in the PRIA would be subject to the lengthier, more expensive PMA and De Novo pathways.

(Response 61) The comment suggests that the fact that there are exemptions from the 510(k) requirements in the FD&C Act and in FDA regulations supports the conclusion that a device must be subject to the 510(k) requirements in order to be subject to the PMA requirements. FDA disagrees. Exemptions from the 510(k) requirements in the FD&C Act and FDA regulations are provided for various reasons, *e.g.,* because a 510(k) submission is not necessary to provide for reasonable assurance of safety and effectiveness as reflected in section 510(m) of the FD&C Act or because a 510(k) submission is not necessary where another submission informs the Agency of the intent to market the device as reflected in § 807.81(b)(1) and the accompanying preambles. The fact that these exemptions from 510(k) requirements exist do not signify that a device must be intended for ''introduction or delivery for introduction into interstate commerce for commercial distribution'' under section 510(k) of the FD&C Act in order for FDA to have jurisdiction over the device or for the PMA requirements to apply. This is supported by the device framework in the FD&C Act where all postamendments devices are class III by operation of law and subject to the PMA requirements, without satisfying any particular interstate commerce or commercial distribution element, unless one of the criteria under section 513(f)(1) of the FD&C Act is met or the device is exempt under section 520(g) of the FD&C Act (section 513(f)(1) of the FD&C Act). This is also supported by the numerous other provisions applicable to devices that do not require these elements, including the seizure

provision in section 304(a)(2) which was amended through the MDA. The legislative history of the MDA reinforces that under section 304(a)(2) of the FD&C Act, FDA has the authority to seize adulterated and misbranded devices without satisfying any particular interstate commerce element (see H.R. Rep. 94–853 at 15 (Congress made clear that it was amending this seizure provision to ''permit seizure of devices without reference to interstate commerce'' because ''whether or not a medical device actually crosses state lines has nothing to do with the principal intent of this proposal: to assure the safety and effectiveness of medical devices.'')).

Further, the 510(k) and PMA requirements are separate and distinct as reflected by the different charges under the FD&C Act. Specifically, the failure to provide a premarket notification as required under section 510(k) of the FD&C Act misbrands the device (section 502(o) of the FD&C Act), and the failure to obtain approval of a PMA as required under section 515 of the FD&C Act adulterates the device (section 501(f)(1) of the FD&C Act). Indeed, FDA routinely cites both charges in warning letters issued to manufacturers that appear to be marketing a device that FDA did not review (see *https://www.fda.gov/inspections-compliance-enforcement-and-criminal-investigations/compliance-actions-and-activities/warning-letters*). Thus, the FD&C Act supports that a device may be subject to the PMA requirements regardless of whether the device is subject to the 510(k) requirements and the fact that there are exemptions from 510(k) requirements do not lead to a contrary conclusion.

We note that the De Novo provisions in section 513(f)(2) of the FD&C Act exist simply to provide another pathway to classify a postamendments device (which is class III by operation of law under section 513(f)(1) of the FD&C Act) into class I or II. A manufacturer is not required to follow the De Novo pathway but may instead submit a reclassification petition under section 513(f)(3) of the FD&C Act.

Regarding the comment claiming that it ''defies logic that Congress would create a system to regulate LDTs where foundational provisions would not apply,'' we assume the comment is referring to the 510(k) requirements as this comment was made in the context of referring to other premarket pathways. We addressed this above and in other responses in this preamble.

Regarding the comment alleging that the principal pathway to market for devices would be unavailable to LDTs, we assume the comment is referring to the 510(k) pathway. As we explained in the NPRM (88 FR 68006 at 68020), section 510(k) of the FD&C Act does not preclude regulated entities from submitting premarket notifications even assuming their devices are not introduced or delivered for introduction into interstate commerce for commercial distribution. Thus, such regulated entities may still obtain a substantial equivalence determination through the submission of a 510(k) as a substantial equivalence determination is one way for a device that is otherwise class III by operation of law to be classified into class I or II (section 513(f)(1) of the FD&C Act).

Regarding the comment claiming that the tens of thousands of LDTs that FDA estimated to be eligible for the 510(k) pathway in the PRIA would be subject to the lengthier, more expensive PMA and De Novo pathways, as discussed in the paragraph above, LDTs may be eligible for the 510(k) pathway. Further, given that a substantial equivalence determination through a 510(k) submission is less burdensome than a PMA or De Novo submission, such regulated entities have an incentive to follow this less burdensome path to market (see 88 FR 68006 at 68020). Thus, the 510(k) pathway should play the same role in device reclassification regardless (88 FR 68006 at 68020).

(Comment 62) One comment argued that the presence of ''commercial distribution'' in the 510(k) and certain other specific device provisions of the FD&C Act bears on FDA's overall jurisdiction because statutes must be read as a whole, citing *Territory of Guam* v. *United States,* 141 S. Ct. 1608, 1613 (2021), and that a statute's language has meaning only in context, citing *Graham Cnty. Soil & Water Conservation Dist.* v. *United States ex rel. Wilson,* 545 U.S. 409, 415 (2005). The comment further stated that consequently, the words of a statute must be read in their context and with a view to their place in the overall statutory scheme, citing *Sturgeon* v. *Frost,* 577 U.S. 424, 438 (2016).

(Response 62) As explained in more detail in response to comment 60, FDA disagrees that the inclusion of commercial distribution as an element in certain device provisions in the FD&C Act bears on FDA's overall jurisdiction of devices or on the applicability of those provisions in the FD&C Act in which Congress did not include commercial distribution as an element. However, even assuming ''commercial distribution'' were necessary for a device to be within FDA's jurisdiction under the FD&C Act, this would not affect FDA's jurisdiction over LDTs because LDTs are generally in commercial distribution, and therefore, LDTs generally would meet such an element. *See* NPRM (88 FR 68006 at 68021) and response to comment 60.

(Comment 63) A comment asserted that there is not much support for ''commercial distribution'' meaning ''on the market.'' Specifically, the comment argued that the cited legislative history is a statement in one committee report, and that an isolated statement in a committee report does not represent an authoritative interpretation of a congressional enactment, citing *NLRB* v. *Health Care & Retirement Corp. of Am.,* 511 U.S. 571, 582 (1994). The comment also argued that the case cited in the NPRM, *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, deferred to an FDA letter citing the committee report in the course of improperly deciding a genuine issue of material fact on summary judgment. Another comment argued that the aforementioned case arose from a traditional device manufacturer's introduction without premarket notification of a prosthetic ligament device, and that the parties' only dispute turned on whether the defendant's product was the same or different from a pre-1976 version of the product. The comment further alleged that the government itself ''argue[d] that the FDA's definition of 'commercial distribution' has only minor relevance to this action . . . since the device in question did not exist prior to enactment of the [MDA],'' and the district court fully agreed. Another comment argued that the case cited in the NPRM, *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990, 994–95, fails to support that no transfer, movement, transportation, or exchange of title between unaffiliated parties is required to trigger statutory provisions requiring commercial distribution.

(Response 63) FDA disagrees with the comments. As discussed in response to comment 60, the plain meanings of ''commercial,'' ''distribute,'' and ''distribution'' support FDA's interpretation that ''commercial distribution'' in the relevant provisions of the FD&C Act means ''on the market.'' This interpretation has been endorsed by at least one judicial decision, as explained in more detail below, and is reinforced by a House Report issued 3 months before the MDA that contained an unusually clear statement on the intended meaning of commercial distribution. H.R. Rep. No. 94–853 at 36 ('''Commercial distribution' is the

functional equivalent of the popular phrase 'on the market.' '). *See also Garcia* v. *United States,* 469 U.S. 70, 76 (1984) (the Court has ''repeatedly stated that the authoritative source for finding the Legislature's intent lies in the Committee Reports on the bill, which '[represent] the considered and collective understanding of those Congressmen involved in drafting and studying proposed legislation.' '') (citation omitted).

FDA's interpretation of ''commercial distribution'' is also consistent with the FD&C Act's overriding purpose to ''protect the public health by ensuring that . . . there is reasonable assurance of the safety and effectiveness of devices intended for human use.'' Section 1003(b)(2)(C) of the FD&C Act. Moreover, as discussed in response to comment 60, FDA's interpretation is consistent with section 301(k) of the FD&C Act which is intended to supply protection all the way to the consumer, and under which courts have upheld FDA's jurisdiction over medical products that never leave a physician's office, and that are used in the diagnosis or treatment of patients even where the product itself is not delivered or transferred to a patient. *See, e.g., United States* v. *Diapulse Corp. of Am.,* 514 F.2d 1097, 1098 (the Diapulse machine, which was held by practitioners and ''used in the treatment of patients, may properly be considered 'held for sale' within the meaning of the [FD&C Act], 21 U.S.C. 331(k).'' (citations omitted)); *United States* v. *Articles of Device (Acuflex; Pro-Med),* 426 F. Supp. 366, 368 n.3 (''Therefore, by their use in diagnosis [the electric acupuncture devices] were held for sale after interstate shipment.''); *United States* v. *Device Labeled ''Cameron Spitler Amblyo-Syntonizer,'' etc.,* 261 F. Supp. 243, 246 (''The court is also of the opinion that the devices were misbranded while being held for sale. Although the claimant never sold the devices in the commercial sense, the device was used in the claimant's treatment of patients.'').

The case cited by the comment to support the assertion that a committee report does not represent an authoritative interpretation of a congressional enactment is inapposite. In that case, which involved the interpretation of a phrase in the definition of ''supervisor'' in the National Labor Relations Act, the Court found the legislative history to be unpersuasive where the interpretation asserted by the National Labor Relations Board (NLRB) was inconsistent with the plain meaning of the phrase and court precedent. *NLRB* v. *Health Care & Ret. Corp. of Am.,* 511 U.S. 571, 578–79 (1994). Additionally, the Court noted that the legislative history relied on by the Board was not contemporaneous as it related to the 1974 amendments to the National Labor Relations Act that amended other sections of the statute but not the provision at issue which was enacted in 1947. Id. at 581–82. Thus, the Court stated: ''the isolated statement in the 1974 Committee Report does not represent an authoritative interpretation of the phrase 'in the interest of the employer,' which was enacted by Congress in 1947.'' Id. at 582. In contrast, FDA's interpretation of commercial distribution is consistent with the plain meaning of the terms. Moreover, the legislative history that provides additional support for the Agency's interpretation is contemporaneous to the enactment of the relevant statutory language.

Additionally, FDA maintains that *United States* v. *An Article of Device Consisting of 1,217 Cardboard Boxes,* 607 F. Supp. 990 supports the Agency's reasonable interpretation of ''commercial distribution.'' In this case, which involved summary judgment motions filed by both the government and claimant, one of the charges was that the device was misbranded under section 502(o) of the FD&C Act because the claimant did not submit a 510(k) for the device. Id. at 992–97. The court stated that ''[w]hether the device was in commercial distribution before May 28, 1976, was a factual issue'' because it pertained to whether an exemption from the 510(k) requirements would apply. Id. at 993–94. This factual issue was ''hotly debated'' by the parties and given that ''commercial distribution'' was a key element of the exemption, the court considered the Agency's interpretation of the term and the relevant CPG in deciding the issue. Id. at 994–95. Ultimately, the court agreed with the government that the seized device was not in commercial distribution prior to May 28, 1976, because it was not the same as the device that was manufactured prior to May 28, 1976. Id. at 995 (''I find myself in agreement with the Government that the device which it has seized is not the same device manufactured by Meadox prior to enactment of the amendments.''). The court did not address the argument that the definition of ''commercial distribution'' has only minor relevance but regardless, the meaning of ''commercial distribution'' was still relevant given that ''commercial distribution'' was an element of the exemption; therefore, it was appropriate for the court to consider the meaning of the term and to uphold FDA's interpretation.

Although *An Article of Device Consisting of 1,217 Cardboard Boxes* was not specifically about transfer, movement, transportation, or exchange of title between unaffiliated parties, FDA referenced this case to support its longstanding interpretation of ''commercial distribution'' to mean ''on the market.'' It is clear in this case that the court upheld this interpretation.

(Comment 64) One comment argued that clinical laboratories cannot be considered manufacturers within the scope of the FD&C Act or key regulatory requirements because ''distribution'' of a device in interstate commerce is a threshold requirement for the applicability of many of the key regulatory requirements applicable to device manufacturers, including the requirements for medical device reporting, correction and removal reporting, and registration and listing, citing as an example, the definition of ''manufacturer'' in part 806 which includes ''distribution'' or ''commercial distribution.''

(Response 64) FDA disagrees with the comment. Although the definition of ''manufacturer'' in various regulations includes ''distribution,'' ''distribution'' is not a required element of the definition. For example, § 806.2(h) defines ''manufacturer'' to mean ''any person who manufactures, prepares, propagates, compounds, assembles, or processes a device by chemical, physical, biological, or other procedures. The term *includes* any person who: (1) [r]epackages or otherwise changes the container, wrapper, or labeling of a device in furtherance of the distribution of the device from the original place of manufacture to the person who makes final delivery or sale to the ultimate user or consumer; (2) [i]nitiates specifications for devices that are manufactured by a second party for subsequent distribution by the person initiating the specifications; or (3) [m]anufactures components or accessories which are devices that are ready to be used and are intended to be commercially distributed and are intended to be used as is, or are processed by a licensed practitioner or other qualified person to meet the needs of a particular patient'' (emphasis added). Although the definition lists three specific types of persons, the term ''includes'' indicates that the list is not intended to be exhaustive or limit the first part of the definition. The term ''includes'' means, among other things, ''to take in or comprise as a part of a whole or group.'' (Ref. 138). Thus, the

specific list is intended to be part of the whole or group described in the prior sentence of the ''manufacturer'' definition, *i.e.,* ''any person who manufactures, prepares, propagates, compounds, assembles, or processes a device by chemical, physical, biological, or other procedures.'' In other words, any person who engages in any of these activities is a manufacturer under part 806 and subject to the requirements therein.

(Comment 65) A comment claimed that the use of ''distributed'' in section VI.B.3 (''distributed outside that laboratory'') of the NPRM, which describes certain settings where limited QS requirements may be implemented, is inconsistent and illogical, and asserted that the Agency uses expansive definitions only when it supports its own claims for increased regulatory authority.

(Response 65) FDA disagrees with the comment. Words can have different meanings depending on their context. For example, the dictionary provides multiple definitions of ''distribute'' and ''distribution.'' (Refs. 135 and 136). As explained in response to comment 60, ''distribute'' and ''distribution'' in the context of the term ''commercial distribution'' include ''supply for sale'' and ''the marketing or merchandising of commodities,'' consistent with FDA's interpretation of ''commercial distribution'' to mean ''on the market.'' However, in other contexts, ''distribute'' and ''distribution'' can have different meanings. In section VI.B.3 of the NPRM (88 FR 68006 at 68025), FDA was using ''distributed'' consistent with the meaning ''to give out or deliver. . . .'' (Ref. 139). FDA believes it was obvious the Agency was not using the term consistent with commercial distribution as FDA was not saying that the IVD could not be on the market. However, to avoid potential confusion about this subset of IVDs for which FDA intends to enforce only certain QS requirements, FDA has decided to use ''transferred'' instead of ''distributed'' in section V.C of this preamble.

5. Asserted Distinctions From Devices

A number of comments argued that laboratory activities, tests, or both have unique characteristics that distinguish them from devices and device manufacturers. Many comments argued that these characteristics mean that LDTs are ''services'' or ''processes'' not subject to FDA jurisdiction.

(Comment 66) A number of comments argued that laboratory tests should not be understood to be devices because there is a strong human professional component to the performance of these tests. One comment stated, for example, that ''[t]he quality of [an LDT] procedure depends not only on the tangible components of a cancer genomics assay such as the reagents, and platforms and software but quite heavily on the qualifications, expertise, and experience of the operator both at the level of test performance and interpretation.'' Several comments stated that ''LDTs are comprised of not only medical products, but also analytic processes.'' Many comments emphasized the expertise and training of laboratory professionals who perform tests, including that they may be ''doctoral-level'' and ''board-certified,'' and may have ''specialty training to implement and run assays, interpret results, and ensure that clinicians understand them.'' One comment distinguished between laboratory tests that, in the commenter's view, are subject to FDA's jurisdiction—tests in which the device ''does all the work''—and those that are not, such as tests that involve a ''complex interplay between highly trained personnel, at multiple steps throughout the process.'' One comment suggested that LDT system components do not make up a system at all, stating that an LDT ''is a protocol or process by which a laboratory uses various tools—some of which are individually regulated as devices—to derive a test result for a patient,'' similar to ''a surgery'' that is ''performed by a physician using various tools (scalpels, sutures, etc.).'' The comment stated that LDTs ''do not become devices because they use devices.''

(Response 66) FDA does not agree that the involvement of qualified personnel in the administration of laboratory tests eliminates FDA's jurisdiction over IVDs, including LDTs.

The comments argue that test systems manufactured by laboratories are distinct from ''devices'' because professional users play a significant role in the achievement of the systems' intended uses, but that fact is not unusual or unexpected for devices. Devices are often complex and difficult to use; many contain a range of features, parts, and accessories, and functions that necessitate extensive user instructions to enable healthcare professionals to administer the device safely and effectively. Some devices are so difficult to use that FDA requires manufacturers to provide end-user training for them. *See, e.g.,* 21 CFR 870.5700(b)(5); 876.4340(b)(9); 884.4050(b)(5); 892.5725(b)(2). For this reason, human factors testing can be a core element of device design and important area of review during device premarket review. *See, e.g.,* Ref. 140.

The devices that require sophisticated user involvement regularly consist of disparate components that must be organized, manipulated, and evaluated by healthcare professionals, just like the complex laboratory test systems described in the comments. Sometimes, healthcare professionals must use the disparate components to build the device in accordance with the manufacturer's instructions for use. For example, FDA regulates a type of device known as a ''thoracolumbosacral pedicle screw system'' consisting of ''multiple components,'' such as screws, plates, rods, and connectors, that ''allow the surgeon to build an implant system to fit the patient's anatomical and physiological requirements.'' 21 CFR 888.3070(a); *see also* 21 CFR 870.1350(a) (identifying as a device a ''catheter balloon repair kit,'' which includes the materials, such as glue and balloons, necessary to repair or replace a catheter balloon). These systems are still ''devices'' even though significant healthcare practitioner involvement is required to effectuate their intended use.

FDA regulation of such devices is important—even in the context of use by highly trained and expert users—because, among other things, FDA regulation helps assure the safe and effective design of the device, which is separate from the safe and effective use of a device. For example, if a stent has a serious design defect, a cardiologist implanting the stent cannot necessarily assure the safety and effectiveness of the procedure no matter how great her stent implantation expertise. Similarly, if a laboratory test system lacks clinical validity (for example, it identifies a gene that has no clinical meaning), the test will not provide meaningful diagnostic information no matter how great the expertise or experience of the professionals performing the test.

Taken to its logical conclusion, commenters' argument would mean that few or no test systems intended for laboratory use (even those made by non-laboratories) would be devices, because most such systems consist of different components that must be organized and managed by expert personnel performing the test, in accordance with a manufacturer's instructions for use. No comments appeared to embrace the conclusion that even these sorts of systems are not devices, which would run counter to 50 years of established IVD regulation and enforcement. It would also mean that none of the device types described earlier in this comment response are actually ''devices,'' contrary to decades of FDA regulation of those articles.

FDA also emphasizes that the fact that these systems are devices does not mean that the use of the devices—*i.e.,* the performance of a test—in accordance with a manufacturer's instructions for use is a ''device.'' Those two things are distinct. *See, e.g., United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314, 1319 (distinguishing FDA regulation of a defendant's ''Mixture'' product from ''the procedures used to administer the Mixture'') (citation omitted).

FDA recognizes that extensive training and clinical knowledge can be required to perform laboratory tests, and does not seek in any way to diminish that expertise required for, or the important public-health contributions associated with, laboratorians performing testing. The fact that an entire statute was enacted to govern laboratory operations and laboratory personnel—CLIA—is evidence of the degree of complexity, technical skill, and experience required to perform many laboratory tests. But FDA believes that expertise in performing tests is not the same thing as expertise in designing and developing tests. For example, the set of skills required to develop a test that accurately detects COVID–19 is not the same as the set of skills required to correctly perform a test that accurately detects COVID–19. FDA's responsibility under the FD&C Act is to help ensure that such tests are designed in a way that, when they are performed as the manufacturer intends, they can produce accurate and reliable results, and that responsibility exists whether or not the test is designed by a laboratory.

(Comment 67) Various comments argued that design and development by laboratories should be viewed as distinct from design and development by other IVD manufacturers because laboratories provide medical care or employ medical experts. For example, one comment argued that LDTs are neither ''products'' nor ''manufactured'' because they may be developed in medical care settings. Another comment stated that LDTs ''do not fit into the category of medical devices'' because ''[t]he development and usage of LDTs are heavily reliant on the expertise of professional laboratory personnel.''

(Response 67) As an initial matter, FDA does not agree that IVDs offered as LDTs are necessarily designed and manufactured under circumstances that are distinct from other IVDs. As explained in the NPRM, FDA's understanding is that many test systems offered as LDTs are designed at Fortune 500 and other large companies by a ''development team,'' similar to how systems from conventional IVD manufacturers are designed (88 FR 68006 at 68018) (see also Ref. 141). And in FDA's experience, the individuals on these development teams (as well as individuals developing laboratory test systems at smaller laboratories) generally have the same training and expertise as those employed by a conventional manufacturer. Usually, this training is scientific or technical in nature rather than medical in nature. Therefore, FDA disagrees that the background and training of the individuals who develop LDTs is necessarily a distinguishing feature of these devices.

In any event, whether an article meets the definition of a ''device'' in the FD&C Act does not turn on who manufactures the article or where it is manufactured. Thus, even assuming that LDTs were always designed by healthcare professionals in medical care settings, those facts would not affect whether the LDT is a device under the plain language of the statutory definition. Other provisions in the FD&C Act confirm this fact because they exempt healthcare professionals who manufacture devices solely for use in the course of their professional practice from certain requirements. *See, e.g.,* 21 U.S.C. 360(g)(2). These exemptions would be superfluous if licensed healthcare professionals operating in medical care settings could not ''manufacture'' ''devices'' in the first place. For additional discussion of these exemptions, see our response to comment 77.

(Comment 68) Various comments took the position that LDTs are services and not devices because they are tailored to patients. For example, comments stated that LDTs ''are informed by the clinical needs of the individuals we treat,'' address patients' ''unique needs,'' and ''can be adjusted to the specific needs of the patient.''

(Response 68) FDA does not agree that the fact that LDTs can be customized to patients is a reason to conclude that they are not devices. The FD&C Act does not require mass production, marketing, or use in order for an article to be a ''device.'' On the contrary, the FD&C Act contains special provisions for ''custom devices,'' thus recognizing that an article can be tailored to patients and still be a device. *See* 21 U.S.C. 360j(b) (exempting devices that have been designed and manufactured to suit the unique needs of a physician or patient from certain requirements). The legislative history for these provisions reinforces that they were intended to cover the circumstances in which devices are ''ordered from manufacturers by members of the health professions to conform to their own special needs or to those of their patients'' as well as when ''health professionals themselves develop or alter devices to serve such needs.'' H.R. Rep. 94–853 at 44. Thus, the provisions were designed for exactly the types of circumstances asserted to exist with certain LDTs. Furthermore, Congress limited the applicability of the exemptions to premarket approval and performance standards, meaning that custom devices are not entirely exempt from the FD&C Act. Id. (explaining that ''[custom] devices are not exempt from otherwise applicable provisions . . . such as provisions with respect to investigational use, banning, restriction, adulteration or misbranding''). Reading the definition of ''device'' to exclude customized devices would render these provisions superfluous.

(Comment 69) One comment stated that LDTs are distinct from other IVDs because they ''are not produced or marketed for use outside of the originating laboratory.'' The comment stated that ''[t]he lack of marketing and sales to other laboratories further differentiates LDTs from IVDs—a distinction that is crucial to understanding why LDTs do not fit into the category of medical devices.''

(Response 69) FDA recognizes that LDTs are designed, manufactured, and used within a single laboratory (without being sold for use outside that laboratory), but that fact does not mean these IVDs are not devices. The statute defines a ''device,'' in relevant part, as ''an instrument, apparatus, implement, machine, contrivance, implant, in vitro reagent, or other similar or related article, including any component, part, or accessory, which is . . . intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of disease.'' 21 U.S.C. 321(h)(1). The definition does not exclude an article produced, sold, and used in a single location, and reading in such a limitation would undermine Congress's purpose in the MDA to assure the safety and effectiveness of devices (see response to comment 53).

(Comment 70) One comment suggested that LDTs are not devices because they have purposes that are distinct from other IVDs. The comment stated that the ''primary role of LDTs is to detect and/or quantify substances within the human body, aiding in disease detection, health condition assessment, monitoring of drug treatments and other testing processes'' and that ''over 83 percent of LDTs offered by NILA [National Independent Laboratory Association] and AAB [American Association of Bioanalysts]-

member laboratories serve these purposes.''

(Response 70) FDA disagrees that LDTs have purposes that are distinct from other IVDs. The detection and/or quantification of substances within the human body to aid in ''disease detection, health condition assessment, monitoring of drug treatments and other testing processes'' is consistent with the intended uses of non-LDT IVDs, and articles intended for such uses generally fall within the device definition because they are intended for use in ''the diagnosis of disease or other conditions'' and/or ''the cure, mitigation, treatment, or prevention of disease.'' Many FDA-authorized IVDs are indicated for use in conjunction with clinical assessments and not as the sole basis for clinical decisions, and IVDs offered as LDTs are not unique in that respect (see our response to comment 196 for examples of IVDs that fit this description). Therefore, even assuming the comment's factual assertions are correct that these are the primary intended uses of LDTs, these uses are not distinct from the intended uses of other IVDs, and they do not distinguish LDTs from devices.

(Comment 71) Several comments argued that test development activities occurring in a laboratory are distinct from conventional IVD manufacturing. One comment asserted, for example, that the laboratory validation is distinct because ''[v]alidation of each clinical test requires specific equipment and personnel that is unique to the lab and test being performed.'' Another comment stated that ''LDTs are developed specifically for use by the laboratory that created them, or laboratories under the same ownership/control,'' which promotes ''great consistency in performance'' and more limited ''potential for user error'' compared with manufacturing by non-laboratories. A separate comment argued that ''Quality Management applied to procedures have to be inherently different from those applied to products and need to consider the entire laboratory and not just individual procedures.'' The same comment stated that LDT development is unique because ''the primary output of a test development process is a standard operating procedure document, which is essentially a set of instructions to appropriately qualified individuals.''

(Response 71) With respect to comments' factual assertions about laboratory test development, FDA does not necessarily agree[58], but even assuming those assertions are correct, FDA disagrees that they would mean that laboratory test development is distinct from device manufacturing. As explained in the NPRM and elsewhere in this preamble, IVDs manufactured by laboratories are devices. Under FDA regulations, any ''person who designs, manufactures, fabricates, assembles, or processes a finished device'' is a manufacturer (§ 820.3(o)). Thus, laboratories that design, manufacture, fabricate, assemble, or process IVDs are manufacturers subject to FDA requirements.

Furthermore, laboratory IVD development is fully amenable to regulation under FDA's CGMP requirements for devices (the QSR) even if that development occurs in a single laboratory. These requirements are flexible and recognize that manufacturing circumstances may vary. For example, the QSR requires design validation that ''ensure[s] that devices conform to defined user needs and intended uses'' and ''include[s] testing of production units under actual or simulated use conditions'' for most devices (§ 820.30(g)). This requirement does not prescribe a single, rigid approach to validation; instead, under the QSR, a manufacturer's design validation obligations vary based on specific user needs and actual or simulated use conditions. In addition, the FD&C Act and FDA regulations provide for the issuance of ''exemption[s]'' and ''variance[s]'' from the QSR to account for unique circumstances in manufacturing. 21 U.S.C. 360j(f)(2)(A); § 820.1(e).

With respect to one comment's statement that laboratories primarily produce ''standard operating procedure document[s]''—and to the extent that the comment was suggesting that such documents are incongruous with FDA manufacturing requirements—FDA disagrees. First, we disagree that laboratories only produce standard operating procedure documents; laboratories produce test systems, which are the devices that generate results and implicate patient health and safety. For example, when a laboratory develops a test for measurement of hormone levels using mass spectrometry, they must source or manufacture calibrators and qualify a mass spectrometry instrument in order to perform that test. These calibrators and instrument, along with other components, comprise a test system. Second, the QSR specifically requires the development of documents, including procedures, laying out the design of a test (§ 820.30(d) (requiring device design output to be documented, reviewed, and approved before release)). Thus, this type of work is directly contemplated under the QSR. We note that even if laboratories were only engaged in design activity, they would still be manufacturers under the QSR (§ 820.3(o) (''manufacturer'' includes those ''perform[ing] the function[ ] of . . . specification development'')).

(Comment 72) One comment stated that an individual laboratory should not be considered a manufacturer because the instruments, software, and many reagents used in IVD testing are not manufactured by the laboratory. In addition, the comment stated that ''the term manufacture doesn't necessarily apply to the process individual laboratories use to assemble reagents for use in running an IVD test'' because they ''are not sold to other entities, do not leave the laboratory, take no part in interstate commerce, and may be individually labeled for their many uses within the laboratory environment.''

(Response 72) If a laboratory manufactures a test system, it is a manufacturer, even if it does not manufacture the components of that system (such as instruments, software, and reagents). In addition, FDA notes that entities who ''assemble[ ]'' devices constitute manufacturers (§ 820.3(o)). Laboratories do this by sourcing individual components and combining them to assemble a single test system with a specific intended use. For example, a laboratory that develops a PCR-based, targeted genetic test for Factor V Leiden thrombophilia must source or manufacture primers and probes and validate a PCR instrument to assemble their test. These primers, probes and instrument together, along with other components, comprise a test system with a specific intended use that is independent of each individual component's intended use. Under the FD&C Act and FDA regulations, manufacturing is not limited to devices that are sold to other entities, leave a laboratory, take part in interstate

[58] In particular, FDA disagrees that the need for specific equipment and personnel for validation is unique to laboratory manufacturers. Validation of each clinical test, regardless of whether that test is manufactured by a laboratory or a non-laboratory manufacturer, may require equipment and personnel to perform the validation that is specific or unique to the type of test being performed. FDA also disagrees that developing a test for use in a single laboratory or laboratories under common ownership/control necessarily promotes ''great consistency in performance'' or more limited ''potential for user error.'' Elsewhere in this preamble, FDA has described examples of problematic tests that were designed or used in a single laboratory. In addition, standard operating procedures for LDTs must include instructions that specify the components for use (this may include specifically naming components that are procured or specifications for components that may be otherwise procured). This is no different from IVD kit instructions that list components that are necessary but not provided.

commerce, or are labeled for different uses. *See generally* 21 U.S.C. 360j(f); part 820. FDA addresses interstate-commerce arguments in more detail in section VI.D.3 of this preamble.

(Comment 73) One comment argued that FDA regulations recognize that laboratories are performing services, and not manufacturing devices, based on the language in § 807.65(i) that exempts clinical laboratories from registration and listing under certain circumstances.

(Response 73) This comment misunderstands the legal framework behind the exemption at § 807.65(i). Contrary to the comment's suggestion, § 807.65(i) is premised on the position that laboratories are device manufacturers. If they were not device manufacturers, there would have been no need to exempt them from the registration and listing requirements because those requirements only apply to those who own or operate establishments engaged in the ''manufacture, preparation, propagation, compounding, or processing'' of a device. *See* 21 U.S.C. 360(b)(2), (c), (i), and (j). In other words, FDA issued § 807.65(i) because it understood laboratories to be engaged in the ''manufacture, preparation, propagation, compounding, or processing'' of a device and concluded laboratories engaged in limited activities falling within that description should be exempt from the registration and listing requirements. Specifically, FDA decided that laboratories ''whose primary responsibility to the ultimate consumer is to dispense or provide a service through the use of a previously manufactured device'' should not have to register and list.

As noted in response to comment 45, this exemption means not only that FDA considers clinical laboratories to manufacture devices, as just explained, but also that only certain laboratories should be exempt from registration (*i.e.,* those ''whose primary responsibility to the ultimate consumer is to dispense or provide a service through the use of a previously manufactured device''). Laboratories who go beyond that do not fall within the exemption. Furthermore, even for those laboratories who fall within § 807.65(i), the exemption does not confer broad immunity on laboratories or suggest they are not manufacturing devices. In the preamble to the registration and listing rule, for example, FDA emphasized (in the context of a different exemption) that ''exemption from registration does not relieve such persons from their obligation to comply with other provisions of the act or regulations'' (42 FR 42521, August 23, 1977). Although FDA acknowledges that the exemption implicates listing and the 510(k) premarket notification requirements because those requirements are tied to registration, it does not implicate the premarket approval or investigational use requirements, for example.

Thus, § 807.65(i) confirms, rather than undermines, the position that laboratories are manufacturers and that they are subject to a variety of requirements under the FD&C Act.

6. Practice of Medicine

(Comment 74) Several comments asserted that FDA cannot regulate the ''practice of medicine,'' which (in the commenters' view) includes all laboratory testing activities, but did not cite a specific source of authority for either the general assertion about FDA authority or the specific assertion about laboratory testing activities. To support the position that laboratory development falls within the ''practice of medicine,'' comments emphasized: (1) the training, board certifications, technological expertise, and medical judgment required for these activities, (2) that medical specialties associated with laboratory testing are sometimes defined to include the ''develop[ment of] new testing methods,'' (3) that the focus of laboratorians is on patient care, and (4) the involvement of a treating physician in ordering a test and receiving results. Some comments explained why, in the commenters' opinion, this type of ''practice of medicine'' limitation on FDA's authority is justified, including the fact that laboratories consider many factors in developing an LDT, such as clinical need, accuracy, and cost-effectiveness to the patient, and ensure ''quality'' in a more comprehensive sense than does FDA.

(Response 74) FDA does not agree that an atextual ''practice of medicine'' limitation precludes FDA regulation of all laboratory testing activities. The statute does not contain such a limitation, and FDA ''assume[s] that Congress meant what it said, and said what it meant.'' *See Aqualliance* v. *U.S. Bureau of Reclamation,* 856 F.3d 101 at 105. Instead, Congress enacted a narrower provision, entitled ''Practice of Medicine,'' that spells out in clear terms what conduct within the practice of medicine falls outside FDA's statutory authority. That provision states, in relevant part: ''Nothing in this [Act] shall be construed to limit or interfere with the authority of a health care practitioner to prescribe or administer any legally marketed device to a patient for any condition or disease within a legitimate health care practitioner-patient relationship,'' with several explicit limitations (21 U.S.C. 396).[59] In general, the provision codifies FDA's longstanding recognition of the fact that healthcare providers prescribe and use medical products for unapproved uses when they judge that the unapproved use is medically appropriate for their particular patients.[60] It thus limits FDA's oversight of certain practitioners' ''prescrib[ing] or administer[ing]'' of a ''legally marketed device,'' but it does not reach all the activities that fall within commenters' broad conception of the practice of medicine—including, notably, the manufacturing of a device. The fact that Congress assigned specific meaning to the ''practice of medicine'' and laid out, in statutory text, exactly how that concept should apply in the context of FDA regulation belies the notion that there is some additional ''practice of medicine'' limitation on the Agency.

Other statutory provisions confirm that understanding. In particular, if there were some generalized ''practice of medicine'' limitation that foreclosed FDA regulation of activities in a medical context, Congress would not have needed to issue exemptions specific to physician manufacturing. But the FD&C Act does contain exemptions for licensed practitioners who manufacture devices ''solely for use in the course of their professional practice.'' *See, e.g.,* 21 U.S.C. 360(g)(2). A generalized ''practice of medicine'' limitation would render these provisions superfluous. The exemptions are also limited in scope and do not, by their express terms, apply to all manufacturing by licensed practitioners. Id. (limiting exemption to ''use in the course of [the practitioner's] professional practice''); *see also* H.R. Rpt. 94–853 at 24 (stating, with respect to the adverse-event reporting exemption, that ''[o]bviously, physicians and other licensed practitioners are not exempt from these requirements if their use of a device extends beyond ordinary professional practice into commercial activity''). A generalized ''practice of medicine''

[59] The rest of 21 U.S.C. 396 provides: ''This section shall not limit any existing authority of the Secretary to establish and enforce restrictions on the sale or distribution, or in the labeling, of a device that are part of a determination of substantial equivalence, established as a condition of approval, or promulgated through regulations. Further, this section shall not change any existing prohibition on the promotion of unapproved uses of legally marketed devices.'' These limitations show that this provision does not operate as an across-the-board bar on FDA regulation of the prescribing or administration of legally marketed devices.

[60] See Ref. 17 at 17 (''January 2017 Memorandum'').

prohibition would read out those limitations.

As explained in response to comment 66, FDA recognizes that laboratories employ expert, trained personnel. We also recognize that laboratories prioritize the care of patients, may specialize in the development of testing methods, and may work closely with treating physicians. But these facts do not mean that, as a legal matter, FDA lacks authority over the IVDs manufactured by laboratories. The FD&C Act by its very nature affects medical practice. Cf. *United States* v. *9/1 Kg. Containers,* 854 F.2d 173, 176 (7th Cir. 1988) (''Congress gave the FDA comprehensive powers to license the manufacture of drugs and limit their sales. To regulate drugs is to be 'involved' in the 'practice of the healing arts.' ''). Thus, the fundamental question is the scope of authority Congress delegated, and the limitations it enacted, relevant to medical practice. As already explained, the FD&C Act contains no generalized limitation on FDA regulation of devices in a medical context. *Cf. United States* v. *Regenerative Scis.,* 741 F.3d 1314, 1320 (construing the FD&C Act not to apply to otherwise prohibited activities, because they were undertaken by doctors, would ''create an enormous gap in the FDCA's coverage'').

(Comment 75) One comment stated that Congress did not intend for FDA to regulate the ''practice of medicine,'' which (in the commenter's view) included all laboratory testing activities, as shown by: (1) legislative history for the FD&C Act, including legislative history associated with the 1938 Act and the 1962 Kefauver-Harris Amendments, (2) section 214 of the Food and Drug Administration Modernization Act (FDAMA), and (3) section 1111 of the Food and Drug Administration Amendments Act (FDAAA).

(Response 75) As explained in response to comment 74, FDA does not agree that there is a generalized, atextual ''practice of medicine'' limitation on FDA's authority in ways other than those enumerated in the statute. The statute contains specific provisions related to healthcare practitioners' ''prescrib[ing] or administer[ing]'' a legally marketed device and ''manufactur[ing]'' a device ''solely for use in the course of their professional practice,'' and those provisions represent Congress's considered judgment about the scope of conduct that falls outside FDA authority. *See West Virginia Univ. Hospitals, Inc.* v. *Casey,* 499 U.S. 83, 98 (1991) (''The best evidence of [Congress's] purpose is the statutory text adopted by both Houses of Congress and submitted to the President.'').

Comments cite statements in the legislative history related to the 1938 Act and the 1962 Kefauver-Harris Amendments, but (among other things) those sources predate the MDA and FDAMA, when Congress specifically considered the practice of medicine in the device context and translated those considerations into legislative text. *See* 21 U.S.C. 360(g)(2), 360i(c)(1), 374(a)(2)(B), 396.

FDA agrees that section 214 of FDAMA, codified at 21 U.S.C. 396, reflects Congress's intent to protect certain practitioner prescribing and administration activities, but the provision does not extend to laboratory manufacturing of IVDs, including LDTs. The purpose of the provision is to ''ensure[ ] that once the FDA permits a device to be marketed for one use, health care practitioners have the flexibility to draw on their expertise to prescribe or administer the device'' for other uses for a specific patient. *Judge Rotenberg Educ. Ctr., Inc.* v. *United States,* 3 F.4th 390, 395 (D.C. Cir. 2021); *see also* Conf. Rep. 105–399 at 97 (November 9, 1997) (provision intended to cover ''off-label use of a medical device by a physician using his or her best medical judgment in determining how and when to use the medical product for the care of a particular patient''). It applies only in the context of use of a ''legally marketed device''—that is, a device that is already manufactured and lawfully on the market—and only applies to ''prescrib[ing] or administer[ing] . . . within a legitimate health care practitioner-patient relationship.''

The comment also cites section 1111 of FDAAA, 42 U.S.C. 247d–5a (2007), but that provision was repealed in 2016 by the Cures Act (Pub. L. 114–255, 130 Stat 1033 at 1121 ''Section 1111 of the Food and Drug Administration Amendments Act of 2007 (42 U.S.C. 247d–5a), relating to identification of clinically susceptible concentrations of antimicrobials, is repealed.''). In any event, that provision directed FDA to identify and periodically update ''clinically susceptible concentrations'' of antimicrobial drugs and did not address FDA's regulation of IVDs.

(Comment 76) Various comments cited the role of state authorities, such as State laws and medical boards, in support of their conclusion that FDA cannot regulate the ''practice of medicine,'' which (in the commenters' view) included all laboratory testing activities. Several commenters asserted, for example, that the practice of medicine is regulated by state medical boards rather than FDA. Comments also argued that the proposed rule is inconsistent with existing state medical practice acts, such as a Utah law's definition of the practice of medicine. One commenter indicated that state law definitions of the practice of medicine should inform the applicability of 21 U.S.C. 396. Finally, one comment suggested that state tort law provides adequate oversight, noting that certain pathologists ''bear legal responsibility for the design and performance of LDTs'' and ''purchase medical malpractice insurance to cover these activities.''

(Response 76) The scope of FDA's authority is defined by Federal law. *See, e.g., City of Arlington* v. *Fed. Commc'ns Comm'n,* 569 U.S. 290, 297 (2013) (Agencies' ''power to act and how they are to act are authoritatively prescribed by Congress.''). Thus, the FD&C Act vests FDA with authority and dictates how that authority intersects with the ''practice of medicine'' (see our response to comment 52 for a discussion of FDA's authority and our response to comment 74 for a description of this intersection). To the extent that comments were suggesting that State law defines those authorities and limitations, FDA disagrees.

Comments appear to take the view that State law controls based on an assumption that state and Federal authorities cannot share jurisdiction, but that is not the case. Congress regularly enacts laws governing entities or activities that are also regulated under State law, and when it does so, the two regimes can coexist. *See Wyeth* v. *Levine,* 555 U.S. 555, 579 (2009) (''FDA [has] long maintained that state law offers an additional, and important, layer of consumer protection that complements FDA regulation.''). At least one comment indicated that there is a ''conflict'' between the State laws cited in the comments and this rulemaking, but the comment did not give any basis for the alleged conflict. State medical boards can perform their oversight function—and State law definitions of the ''practice of medicine'' can inform the application of State law—concurrent with FDA's exercise of its own authority under Federal law. Several comments inferred conflict from State law definitions, but if a State law defines particular activities to fall within the practice of medicine, that does not mean that FDA oversight of those same activities is impermissible, just as CMS's administration of CLIA with respect to laboratory activities that fall within the State's ''practice of medicine'' is not impermissible. *See*

Pharm. Mfrs. Ass'n v. *FDA,* 484 F. Supp. 1179, 1187–88 (D. Del.), aff'd, 634 F.2d 106 (3d Cir. 1980) (''The fact that the practice of medicine is an area traditionally regulated by the states does not invalidate those provisions of the [statute] which may at times impinge on some aspect of a doctor's practice.''). Even assuming there were a conflict, it is Federal law, not State law, that would trump. Const. Art. VI, Cl. 2 (''[T]he Laws of the United States . . . shall be the supreme Law of the land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.'').

FDA also does not agree that it should read State law definitions of the ''practice of medicine'' into 21 U.S.C. 396. Section 396 does not prohibit regulation of the ''practice of medicine'' in general terms, nor does it explicitly or implicitly incorporate State law to define the scope of FDA authority. Instead, that provision carves out a specific and defined scope of physician conduct that falls outside FDA's statutory authority. *See* Lars Noah, Ambivalent Commitments to Federalism in Controlling the Practice of Medicine (February 21, 2004) (Provisions such as 21 U.S.C. 396 ''endorse deference to professional autonomy rather than the primacy of state regulation.'') (Ref. 142). Under the statute's plain language, State law does not control the analysis of FDA authority—nor would it be sensible to apply State law in this way given differences in definitions of the ''practice of medicine'' across the states. See *United States* v. *Regenerative Scis., LLC,* 741 F.3d 1314, 1319 (''[A]ppellants are wrong to suggest that the scope of the FDCA depends on state-by-state definitions of the 'practice of medicine.' '').

Finally, the presence of State tort law is not a reason to conclude that FDA lacks authority over IVDs manufactured by laboratories. The FD&C Act was enacted against the backdrop of State regulation and common-law liability. *Wyeth* v. *Levine,* 555 U.S. 555 at 566. Congress delegated power to FDA based on a view that the then-existing controls, including state controls, were not adequate to protect the public from dangerous products. Id. As explained in response to comment 53, Congress then increased FDA's powers over devices in the MDA based on concerns about unsafe and ineffective devices on the market, all while state tort liability continued. *See Medtronic, Inc.* v. *Lohr,* 518 U.S. 470, 475–76 (1996). These facts show that the FD&C Act is not constrained by, but rather provides an extra layer of public-health protection over, state tort law.

(Comment 77) Two comments argued that the statutory exemptions for licensed practitioners who manufacture products solely for use in the course of their professional practice apply for laboratories, or some subset of laboratories. One comment asserted that the exemptions apply to corporate and hospital laboratories that employ licensed practitioners, because construing the exemption to exclude corporate entities would impose liability on a solo practitioner's personal service corporation and would ''conflict[ ] with baseline common-law principles'' related to vicarious immunity. The same comment suggested that these statutory exemptions also should be construed to constitute an exemption from other ''more burdensome and costly provisions'' under the FD&C Act and FDA regulations.

(Response 77) The statutory exemptions cited by comments exempt covered practitioners from several specific requirements: (1) establishment registration requirements (this exemption, by operation of law, also constitutes an exemption from listing and 510(k) requirements); (2) adverse-event reporting requirements; and (3) an expansive FDA inspection that ''extend[s] to all things'' within a relevant factory, warehouse, establishment, or consulting laboratory. 21 U.S.C. 360(g)(2), 360i(c)(1), 374(a)(2)(B). These exemptions apply when a ''practitioner[ ]'' (1) is ''licensed by law to prescribe or administer'' a device, such as an IVD, (2) ''manufacture[s]'' that device, and (3) does so ''solely for use in the course of their [or his] professional practice.'' The exemptions are only relevant when a particular individual meets all three criteria. The language is precise and limited in scope; the possessive terms ''their'' and ''his,'' for example, make clear that the exemption applies only to specific individuals, not institutions. Thus, to the extent that comments are arguing that the exemptions apply to: (1) all activities of a laboratory that employs such an individual or (2) any laboratory activities in which personnel collectively meet the criteria (*e.g.,* one individual is licensed to administer the device and others manufacture the device), FDA disagrees. By their plain terms, the exemptions do not apply to an institution or an entity; they apply only to an individual practitioner who meets all criteria. And construing the exemptions to apply more broadly would create a significant loophole: every device manufacturer could escape the relevant requirements simply by hiring the right personnel. That is not a rational understanding of Congress's intent: as one committee report made clear, the exemption was not intended to apply to ''commercial activity.'' H.R. Rpt. 94–853 at 24. This evidence of congressional purpose underscores the plain language of the statute.

FDA also disagrees that exemptions from certain requirements in the FD&C Act should be read as exemptions from all, or any other, requirements of the FD&C Act. Congress included the licensed-practitioner exemption for certain requirements and excluded it from others. This means that Congress knew how to apply the exemption when it wanted to, and did so only in particular circumstances. Interpreting the exemption to apply to other requirements, not specified by Congress, would directly conflict with Congress's intent as expressed through the statutory text. Courts have come to the same conclusion. *See Cowan* v. *United States*, 5 F. Supp. 2d 1235, 1240 (N.D. Okla. 1998) (''[T]he 'medical practice exemption' referenced by Plaintiff is a very limited exemption from the registration requirements of the FDCA. Plaintiff's assertion that this exception provides a broad-based exemption to all physicians from the requirements of the Food, Drug, and Cosmetic Act is incorrect.''); *cf. United States* v. *Algon Chem., Inc.,* 879 F.2d 1154, 1160 (3d Cir. 1989) (''the medical practitioner exemptions by their terms afford no more than the right to be free from inspection and registration requirements when veterinarians and other practitioners compound medicine with legally acquired materials, not the right to acquire unapproved drug substances'').

One comment argued that it is not reasonable to say that a licensed practitioner acting within the scope of the exemption is exempt from ''basic'' requirements such as registration, listing, and adverse-event reporting but still subject to ''more burdensome'' requirements, like De Novo review and premarket approval. FDA disagrees. De Novo review generally applies when FDA lacks experience with a device type, and premarket approval applies to class III devices, the highest-risk devices regulated by FDA. It is entirely reasonable for Congress to conclude that an exemption should apply with respect to some FD&C Act requirements but not with respect to FDA's premarket review of devices that are unknown or ''present[ ] a potential unreasonable risk of illness or injury,'' for example. *See* 21 U.S.C. 360c(a)(1)(C). FDA also notes that although the comment suggested that

the FD&C Act exempts licensed practitioners who are manufacturing solely within the course of their professional practice from ''inspection[s],'' that is not the case. The licensed-practitioner inspection provision limits the scope of FDA's inspection—so that the inspection does not ''extend to all things therein''—but it does not eliminate FDA's authority to inspect (21 U.S.C. 374(a)(1)–(2)). In any event, reading these exemptions into other provisions of the FD&C Act would amount to rewriting the FD&C Act, which FDA cannot do.

(Comment 78) Several comments argued that activities regulated under CLIA constitute the ''practice of medicine,'' implying that they are outside the scope of FDA's authority.

(Response 78) CLIA does not constrain FDA's authority over devices, including LDTs, and that fact is true regardless of whether the activities regulated under CLIA are described as ''the practice of medicine.'' For further discussion of CLIA, please see section VI.D.8 of this preamble.

7. Right of Healthcare Providers To Practice Medicine

(Comment 79) One comment asserted that there is a right—based on several provisions of the Constitution—of healthcare providers to practice their profession without unwarranted interference. Specifically, the comment asserted that: the First Amendment guarantees the freedom of expression and the right to petition, which implicitly supports healthcare providers' rights to advocate for their patients and express concerns about regulations they view as capricious; the Fourth Amendment guards against unreasonable searches and seizures, which can be related to the privacy of patient records and the autonomy of healthcare providers in their practice; and the 14th Amendment ensures that no state may deprive any person of life, liberty, or property without due process of law. The comment asserted that, because the right to practice medicine is constitutionally protected, any limitation on that right must withstand strict scrutiny. The comment asserted that the LDT rule fails strict scrutiny because there is ''nothing narrow'' in FDA's approach to LDTs.

(Response 79) We disagree with this comment. First, this rule does not purport to regulate healthcare providers' practice of their profession. As the phaseout of the general enforcement discretion approach is implemented, laboratories that manufacture IVDs offered as LDTs generally will be expected to comply with several pre- and post-market submission and reporting requirements applicable to devices for humans (including premarket notification/PMA requirements (as applicable), registration and listing, labeling requirements, reporting requirements regarding adverse events and corrections and removals, QS requirements, and certain IDE regulations), but this phaseout policy relates to statutory and regulatory requirements applicable to medical devices and the conduct of manufacturers and distributors, not healthcare providers. The medical profession is, of course, regulated, particularly under state law, but neither the amendment to § 809.3 nor the phaseout policy regulates healthcare providers acting in that capacity.

Second, we disagree with the assertion that there is a constitutional right to practice medicine subject to regulation only under strict scrutiny. The comment did not support its conclusory assertion of a constitutional right to practice medicine with any case law citations, and we are not aware of any. *See, e.g.,* Lars Noah, *Ambivalent Commitments to Federalism in Controlling the Practice of Medicine,* 53 U. Kan. L. Rev. 149, 192 (2004) (''[F]ederal expressions of deference to professional medical autonomy are rooted in politics rather than constitutional law.'') (Ref. 142). The comment's citation to various rights protected by the Constitution does not help bolster the argument. The right to petition, like other parts of the First Amendment, provides an ''assurance of a particular freedom of expression.'' *McDonald* v. *Smith,* 472 U.S. 479, 482 (1985). Nothing in this rule limits healthcare providers' ability to advocate for their patients and express concerns about regulations they view as capricious—in fact, that is just what the commenter did in submitting a comment on the proposed rule. Similarly, although ''private medical records warrant some privacy protection under the Fourth Amendment,'' *Big Ridge, Inc.* v. *Fed. Mine Safety & Health Review Comm'n,* 715 F.3d 631, 648 (7th Cir. 2013), the comment failed to identify anything in the rule that constitutes a search or seizure of medical records or impinges on patients' privacy.

Procedural due process guarantees ''the opportunity to be heard at a meaningful time and in a meaningful manner'' ''before an individual is finally deprived of a property interest.'' *Mathews* v. *Eldridge,* 424 U.S. 319, 333 (1976) (cleaned up). Substantive due process protects rights that are ''deeply rooted in this Nation's history and tradition'' and ''implicit in the concept of ordered liberty'' ''such that neither liberty nor justice would exist if they were sacrificed.'' *Washington* v. *Glucksberg,* 521 U.S. 702, 721 (1997) (cleaned up). Nothing in this rule implicates either doctrine; the comment did not identify anything in the rule that would cause a deprivation of life, liberty, or property without notice and opportunity for hearing or any infringement on a fundamental right.

Third, even if strict scrutiny were applied, that test would be satisfied here because the government has a compelling interest in protecting the public health, and premarket review and related requirements are narrowly tailored to achieve that result, as further explained elsewhere (see response to comment 93). The comment did not support its conclusory assertion to the contrary.

8. CMS/CLIA

(Comment 80) Several comments argued that Congress delegated the regulation of IVDs offered as LDTs not to FDA but to CMS, and that the enactment of CLIA is evidence that Congress did not intend for such IVDs to be subject to the device authorities of the FD&C Act. Some argued that the FD&C Act's failure to specifically call out IVDs offered as LDTs, in contrast with CLIA's specific provisions regarding the regulation of laboratories, demonstrates that Congress intended IVDs offered as LDTs to be solely regulated by CMS under CLIA.

(Response 80) FDA does not agree that Congress intended for IVDs offered as LDTs to be regulated solely by CMS under CLIA. CMS's CLIA authorities complement, rather than replace, FDA's regulation of laboratory-manufactured IVDs as devices under the FD&C Act. CMS determines whether a laboratory meets CLIA requirements, which is a specific role distinct from FDA's statutory responsibilities. FDA's device authorities under the FD&C Act are intended to help ensure that devices, including IVDs offered as LDTs, have appropriate assurance of safety and effectiveness. CMS's authorities under CLIA, by contrast, focus on the proficiency with which laboratories perform the testing activities. Unlike FDA can do under the FD&C Act, CMS does not regulate critical aspects of laboratory test development; does not evaluate the performance of a test before it is offered to patients and healthcare providers; does not assess clinical validity (*i.e.,* the accuracy with which a test identifies, measures, or predicts the presence or absence of a clinical

condition or predisposition in a patient); does not regulate certain manufacturing activities, such as design controls and acceptance activities; does not provide human subject protections for patients who participate in clinical trials of tests; and does not require adverse event reporting.

The lack of language in the FD&C Act specifically mentioning IVDs offered as LDTs does not change this conclusion. Congress did not define the scope of FDA's device authority by enumerating every device type subject to that authority; instead, it wrote a broad device definition at 21 U.S.C. 321(h)(1), which captures a wide range of articles without listing each one. FDA's device authorities thus are not limited to those few device types specifically mentioned in the FD&C Act. To the contrary FDA can, and does, regulate hundreds of device types that are not specifically mentioned in the FD&C Act. The controlling question is whether a product meets the FD&C Act's definition of device, and under the plain language of the statute as well as FDA's long-standing position this inquiry is resolved in the affirmative for IVDs offered as LDTs.

As explained in the NPRM, CLIA does not expressly repeal FDA's authority, nor was FDA's authority repealed by implication, and the comments do not demonstrate otherwise (88 FR 68006 at 68019). ''An implied repeal will only be found where provisions in two statutes are in irreconcilable conflict, or where the latter Act covers the whole subject of the earlier one and is clearly intended as a substitute.'' *Branch* v. *Smith,* 538 U.S. 254, 273 (2003) (cleaned up). Here, as CMS itself has explained, ''the regulatory schemes of the two agencies are different in focus, scope and purpose'' and ''are intended to be complementary'' (Ref. 26). As explained above, CLIA puts a focus on the proficiency with which laboratories perform clinical testing, and the FD&C Act puts a focus on the tests themselves. CMS and FDA have different areas of expertise, and CLIA does not address a wide range of activities regulated under the FD&C Act, such as clinical validation and design activities. Thus, ''CLIA does not preempt the FDA's authority to regulate facilities like [Clinical Reference Laboratory]. When two statutes are 'capable of co-existence, it is the duty of the courts, absent a clearly expressed congressional intent to the contrary, to regard each as effective.' '' *Clinical Reference Lab.,* 791 F. Supp. at 1509 (quoting *Ruckelshaus* v. *Monsanto Co.,* 467 U.S. 986, 1018, (1984)), aff'd in part and rev'd in part on other grounds sub nom. *United States* v. *Undetermined No. of Unlabeled Cases,* 21 F.3d 1026 (10th Cir. 1994).

(Comment 81) Some comments stated that CLIA's legislative history does not mention FDA jurisdiction over LDTs, or that it characterized CLIA as directing HHS ''to regulate all laboratories under a single statute,'' arguing that this is evidence that Congress did not intend for LDTs to be subject to the device authorities of the FD&C Act.

(Response 81) FDA disagrees with the comments' characterization of CLIA's legislative history. As FDA has noted, CLIA serves a distinct role from FDA oversight and establishes requirements for laboratories and laboratory personnel pertaining to operations, inspections, and certification, with a focus on the proficiency with which laboratories conduct clinical testing, rather than on the test systems themselves, and its legislative history reflects this. The full context surrounding the enactment of CLIA reveals that Congress was not focused on the oversight of test systems themselves but rather on whether laboratory personnel were performing their jobs in a setting and in a manner that helped ensure accurate, reliable, and timely patient test results. CLIA's enactment was prompted in large part by Congress's concern with the low quality of cytology services associated with Pap testing for cervical cancer. For example, the Senate Report accompanying the bill noted: ''In too many instances, such errors [in pap smear testing] are the result of overworked and under-supervised cytotechnologists charged with the crucial responsibility of examining and categorizing cervical slides.'' S. Rep. No. 100–561, at 27 (1988). This concern led Congress to conclude that ''lack of quality assurance and quality control in the medical testing industry is pervasive.'' Id. at 20. Congress reaffirmed this intent in 1997 when it noted that ''[t]he purpose of CLIA quality control, proficiency testing, and personnel requirements is to ensure consistent, reliable, and appropriate *use* of a test system [61] by users of the test.'' H.R. Rep. No. 105–310, at 76 (1997) (emphasis added). CMS has interpreted its authority consistent with this congressional intent, stating in the preamble to the final rule implementing the 1988 CLIA: ''CLIA specifically requires the regulation of the provision of laboratory services. On the other hand, CLIA and those implementing regulations are not intended to affect FDA's existing jurisdiction under the [FD&C Act] to regulate as devices, products used by providers of laboratory services.'' (57 FR 7002 at 7010). CLIA's legislative history thus reflects a distinct and complementary role for CMS in the regulation of IVDs offered as LDTs.

(Comment 82) Some comments argued that CLIA's quality control and assurance provisions are incompatible with or duplicative of, or were intended to apply to laboratories in place of, FDA's QS requirements, and therefore IVDs offered as LDTs cannot be regulated as devices.

(Response 82) FDA disagrees. CLIA's quality control and assurance provisions do not supplant FDA's QS requirements, because FDA and CMS regulation, including these requirements, are complementary. Although the phaseout policy described in section V.C acknowledges that compliance with CLIA requirements provides certain quality assurances, FDA's QS requirements are neither duplicative of, nor incompatible with, CLIA. As noted in response to comment 12, the portion of CLIA that addresses quality systems relates to laboratory operations, laboratory personnel, and requirements for laboratory procedures relevant to testing. FDA's QS requirements are focused on the IVD offered as an LDT, including design control and validation, complaint handling, and other requirements intended to ensure that the IVD has appropriate assurance of safety and effectiveness for its intended use.

Moreover, nothing in CLIA suggests that Congress intended it to supersede FDA's ability to apply its QSR to IVDs offered as LDTs. As described in more detail in response to comment 80 and in the NPRM, CLIA does not expressly repeal FDA's authority, nor was FDA's authority repealed by implication (88 FR 68006 at 68019).

(Comment 83) FDA received comments asserting that IVDs offered as LDTs cannot be regulated under FDA's device authorities, because the application of FDA labeling requirements and prohibitions to these test systems would prevent manufacturers from complying with CMS's CLIA regulations requiring laboratories to offer consultation on interpreting test results and to provide pertinent updates on testing information that affect test results or their interpretation.

[61] It is our understanding that CMS's role is, in part, to determine and ensure that a laboratory is following the manufacturer's instructions for a test (including how the test kit is stored, what specimens are used, how the specimens are stored, how the test is interpreted, and other aspects of the manufacturer's instructions). This is distinct from regulation by FDA, which focuses on the test itself and its manufacture.

(Response 83) FDA disagrees that these policies are in conflict. CMS's CLIA consultation regulations, 42 CFR 493.1445(e)(9) and 493.1457(d), provide that laboratory directors and clinical consultants must ''[e]nsure that consultation is available to the laboratory's clients on matters relating to the quality of the test results reported and their interpretation concerning specific patient conditions.'' As noted in more detail in response to comment 93, a laboratory director or clinical consultant's ability to comply with the cited regulatory requirements is unaffected by FDA's oversight of LDTs. Premarket review for LDTs is intended to help assure that LDTs generate accurate and reliable test results. As noted in response to comment 93, FDA does not generally consider professional advice regarding a patient's results as evidence of a new intended use, and nothing in this rule is intended to change this practice.[62] FDA recognizes that laboratory directors and clinical consultants help with interpretation and consulting to the healthcare provider, and they can and do give recommendations that are not limited to the content of FDA-required labeling.[63]

CMS's CLIA test report requirements provide, in relevant part, that ''[p]ertinent updates on testing information must be provided to clients whenever changes occur that affect the test results or interpretation of test results.'' 42 CFR 493.1291(e). As further explained in CMS's interpretive guidelines: ''When the laboratory changes methods, establishes a new procedure or refers tests to another laboratory, the laboratory must make the updated information concerning parameters such as patient preparation, preservation of specimens, specimen collection, or new 'normal' ranges or units of measure available to its clients.'' CMS Manual Pub. 100–07. (Ref. 143). This requirement would not conflict with FDA requirements associated with certain labeling changes as the comment asserts. As noted above, interpretations and recommendations are not limited to the content of FDA-required labeling.

(Comment 84) Some comments argued that IVDs offered as LDTs are not devices because the CLIA regulatory requirement for the establishment of performance specifications for tests that are not cleared or approved by FDA, 42 CFR 493.1253, indicates that such test systems are not intended to be regulated by FDA.

(Response 84) FDA disagrees that the regulation of LDTs as devices is inconsistent with the CLIA regulatory requirements for the establishment of performance specifications for tests that are not FDA-approved or -cleared. The CLIA regulation provides, ''[e]ach laboratory that modifies an FDA-cleared or approved test system, or introduces a test system not subject to FDA clearance or approval'' must establish performance specifications for certain performance characteristics specified in the regulation. *See* 42 CFR 493.1253(b)(2). Although the regulation uses the term ''not subject to FDA clearance or approval,'' the purpose of the regulation is not to state what tests are and are not devices that are required to undergo FDA premarket review (which would not be within CMS's expertise). It merely differentiates those tests that have not undergone FDA premarket review and thus must adhere to certain additional CLIA requirements. The regulation was issued in 2003—long after FDA had publicly stated that IVDs offered as LDTs fall within the device authorities of the FD&C Act—but its preamble does not discuss any intent to overrule FDA on this issue (see 68 FR 3640 at 3707). Instead, statements from CMS both preceding and following issuance of the CLIA regulation indicate that IVDs offered as LDTs are devices. *See* 57 FR 7002 at 7010 (''CLIA and those implementing regulations are not intended to affect FDA's existing jurisdiction under the [FD&C Act] to regulate as devices, products used by providers of laboratory services''); CMS, ''Laboratory Developed Tests (LDTs) Frequently Asked Questions'' (Ref. 26). (''Similar to other in vitro diagnostic tests, LDTs are considered 'devices,' as defined by the FFDCA, and are therefore subject to regulatory oversight by FDA.''). Tests might not have undergone premarket review for a number of reasons, including a test not requiring premarket review due to its classification (or exemption from 510(k)) or a test being marketed without premarket authorization as a result of an FDA exercise of enforcement discretion.

(Comment 85) A comment argued that the CLIA regulation requiring laboratory directors to ensure quality laboratory services for ''all aspects of test performance,'' 42 CFR 493.1407(e)(1), includes both analytical and clinical performance, and therefore FDA cannot regulate IVDs offered as LDTs. Another comment stated that CLIA assessments administered through CLIA-approved accrediting agencies, such as CAP, COLA, and the Joint Commission, account for clinical validity, and that laboratories whose tests are approved by NYS CLEP must show clinical validity.

(Response 85) The comments are incorrect about the scope of CLIA regulation. CMS has stated explicitly that the ''CLIA program does not address the clinical validity of any test'' (Ref. 26). The NYS CLEP requirement to demonstrate clinical validity does not limit FDA's authority over laboratory-manufactured IVDs, as State requirements cannot preempt Federal law. Further, as noted in response to comment 12, FDA and CMS enforce two different regulatory schemes, and there are many aspects of IVDs offered as LDTs that CMS does not regulate under CLIA, including, but not limited to, design control and validation and other requirements intended to ensure that the IVD has appropriate assurance of safety and effectiveness for its intended use.

(Comment 86) One comment argued that Congress's establishment of a reimbursement system for laboratory tests that lack FDA clearance or approval, including section 216 of PAMA and CMS's reliance on Palmetto GBA's MolDX Program for local coverage determinations, indicates that Congress did not intend for IVDs offered as LDTs to be regulated as devices under the FD&C Act.

(Response 86) FDA disagrees that the Medicare payment requirements established under section 216 of PAMA evidence a congressional intent to exclude IVDs offered as LDTs from FDA's device authorities, and, to the contrary, believes the requirements support an interpretation that such test systems are devices under the FD&C Act. PAMA established Medicare payment requirements for certain ''advanced diagnostic laboratory tests'' (ADLTs), which the statute defines as ''a clinical diagnostic laboratory test covered under this part that is offered and furnished only by a single laboratory and not sold for use by a laboratory other than the original developing laboratory (or a successor owner)'' and meets one of the following criteria: ''(A) The test is an analysis of multiple biomarkers of DNA, RNA, or proteins combined with a unique algorithm to yield a single patient-specific result. (B) The test is cleared or approved by the Food and Drug Administration. (C) The test meets other similar criteria established by the Secretary'' (*see* 42 U.S.C. 1395m–1(d)(5)). As ADLTs are developed,

[62] In contrast, if a laboratory offers a test on its website for an unapproved use, FDA would likely consider that offer to be evidence of a new intended use.

[63] For products not subject to premarket approval, but instead subject to premarket notification (510(k)) requirements or exempt from premarket review, we use the term *FDA-required labeling* to include labeling that provides adequate directions for use and other information required to appear on the label or in labeling.

offered, and furnished by a single laboratory they may include IVDs offered as LDTs. If ADLTs that are IVDs offered as LDTs were not subject to the FD&C Act's device authorities, FDA would have no jurisdiction to clear or approve the tests. If FDA lacked jurisdiction to clear or approve the tests, Congress would not have enacted 42 U.S.C. 1395m–1(d)(5)(B), which includes FDA clearance or approval as a criterion for an ADLT and, thus, a basis for Medicare payment. Two allegedly conflicting statutes must be interpreted ''to give effect to each if [one] can do so while preserving their sense and purpose.'' *Watt* v. *Alaska,* 451 U.S. 259, 267 (1981). Because excluding IVDs offered as LDTs from FDA's device authorities could render part of PAMA's payment scheme a dead letter, this principle applies here.

PAMA's inclusion of criteria other than FDA clearance or approval within the definition of an ADLT does not suggest that IVDs offered as LDTs are not devices under the FD&C Act. Nor does the fact that the MolDX program—which evaluates certain tests to determine whether the test meets Medicare's reasonable and necessary criteria—may list tests that are not cleared or approved by FDA. As noted in the response to comment 84, regarding the lack of a conflict with 42 CFR 493.1253(b)(2), the marketing of a laboratory-manufactured IVD without FDA clearance or approval in certain situations is not incompatible with its regulation as a device by FDA.

(Comment 87) FDA received comments asserting that the application of registration requirements and fees under FDA's device authorities to IVDs offered as LDTs would be duplicative of such requirements under CLIA.

(Response 87) FDA disagrees that such requirements are duplicative, as they go to different regulators for different activities. As noted in response to comment 12, FDA's device authorities and CMS's CLIA authorities are complementary, not duplicative. CMS determines whether a laboratory and its personnel meet CLIA requirements, whereas FDA's statutory mandate is to review and evaluate the tests themselves, including IVDs offered as LDTs, to ensure that they have appropriate assurance of safety and effectiveness for their intended use.

(Comment 88) Some comments, citing *FDA* v. *Brown & Williamson Tobacco Corp.,* 529 U.S. 120 (2000), argued that FDA jurisdiction over IVDs offered as LDTs is precluded by the supposed inconsistency of FDA regulation of LDTs as devices with the regulatory structures for reimbursement for ADLTs and the regulation of clinical laboratories set forth in CLIA.

(Response 88) FDA disagrees that *FDA* v. *Brown & Williamson* precludes FDA jurisdiction. In that case, the Supreme Court found that FDA's regulation of tobacco products as devices contravened the intent of Congress. The Court explained that Congress enacted six pieces of legislation, outside of the FD&C Act, regarding tobacco and human health, and did so against the ''backdrop of the FDA's consistent and repeated statements that it lacked authority under the [FD&C Act] to regulate tobacco absent claims of therapeutic benefit by the manufacturer.'' Id. at 144. The Court also concluded that the FD&C Act's mandate to ensure products are safe and effective for their intended use would require the removal of tobacco products from the market. *See* id. at 133–39. Because such a ''ban would contradict Congress' clear intent as expressed in its more recent, tobacco-specific legislation,'' the ''inescapable conclusion'' was that tobacco products without therapeutic claims did not ''fit'' within the FD&C Act's regulatory scheme for medical products. Id. at 143.

That is not the case here. FDA's regulation of LDTs as devices will not result in a categorical ban on LDTs. Moreover, FDA has long understood and publicly maintained that LDTs are devices, and Congress has not manifested a contrary intent. Indeed, as noted in response to comment 86, Congress has since enacted legislation that assumes LDTs are subject to FDA approval or clearance. As explained in response to comments 82–87, FDA regulation of IVDs offered as LDTs does not conflict with either the regulation of clinical laboratories under CLIA or the provisions for reimbursement for ADLTs cited in the comments to this rulemaking. The lack of a conflict here makes this situation clearly different from that in *FDA* v. *Brown & Williamson.*

Moreover, to the extent that the supposed inconsistencies are based on CMS regulations, and not Federal statutes, *FDA* v. *Brown & Williamson* is inapposite. There, the Court turned to six pieces of Federal legislation outside of the FD&C Act in order to determine whether Congress intended tobacco products to be regulated as devices under the FD&C Act. *See* id. at 137–38. Here, comments citing to individual CMS regulations or the presence of unapproved, uncleared LDTs in the MolDX program are not compelling because, unlike statutes, those sources do not shed light on Congress's intent in enacting the FD&C Act or its amendments.

(Comment 89) One commenter argued that because the performance of a test is a ''service'' or ''examination'' regulated under CLIA, even if a laboratory engages in IVD manufacturing or development activities, those activities should be understood to be governed by CLIA and not the FD&C Act because ''the lab's primary responsibility is still to perform the service.''

(Response 89) FDA does not agree that a laboratory's ''primary responsibility'' is relevant to FDA's jurisdiction or that a laboratory engaged in both manufacturing an IVD and performing a medical service has greater or ''primary'' responsibility for performing the medical service such that it is no longer obligated to comply with requirements related to manufacturing the IVD. The mere fact that laboratories conduct a CMS-regulated activity—performing a test—does not exempt them from other relevant statutory or regulatory authorities related to test manufacturing or design.

(Comment 90) One comment stated that, generally, Congress has appropriated sufficient funds for CMS to regulate clinical laboratories under CLIA, but it has not provided FDA with adequate funds to exercise regulatory authority over LDTs. This asserted disparity in funding, the comment argued, is evidence that Congress did not intend for FDA to have authority over LDTs.

(Response 90) FDA fails to see how the amount of funds appropriated to CMS that are available to implement CLIA and the amount of funds appropriated to FDA that are available to regulate devices reflects a congressional intent that these tests are not regulated as devices under the FD&C Act. FDA's device program is funded through a combination of budget authority and user fees. As enforcement discretion is phased out, FDA will receive user fees associated with establishment registrations and premarket submissions for IVDs offered as LDTs. As with all products FDA regulates, FDA intends to prioritize its available resources to oversee LDTs in a risk-based manner. Even if FDA were not provided adequate funds, the Supreme Court recently acknowledged that funding does not always match apparent statutory mandates. *See Biden* v. *Texas,* 142 S. Ct. 2528, 2535 (2022) (''The INA states that if 'an alien seeking admission is not clearly and beyond a doubt entitled to be admitted, the alien shall be detained for a proceeding.' Due to consistent and significant funding shortfalls, however, DHS has never had

'sufficient detention capacity to maintain in custody every single person described in section 1225.' '' (cleaned up)). Moreover, FDA's jurisdiction over devices and other products is established in the FD&C Act, and is not based on annual funding decisions and the relative amount of funding appropriated.

(Comment 91) One comment suggested that, rather than regulate IVDs offered as LDTs under the FD&C Act, FDA should consult with CMS and CDC on an alternative approach whereby CLIA regulations are updated with additional requirements for validation of IVDs offered as LDTs, including modifications to authorized IVDs and novel LDTs.

(Response 91) While FDA has consulted with CMS and CDC on the topic of IVDs offered as LDTs, including as part of this rulemaking, FDA disagrees that an alternative approach through updating CLIA regulations would suffice. As discussed in more detail in response to comment 10, CMS determines whether a laboratory and its personnel meet CLIA requirements, whereas FDA's statutory mandate is to review and evaluate the tests themselves, including IVDs offered as LDTs, to ensure that they have appropriate assurance of safety and effectiveness for their intended use. FDA has the resources and expertise to assess whether tests work for their intended clinical purpose; CMS does not.

9. Major Questions Doctrine

(Comment 92) Various comments argued that this rulemaking implicates the ''major questions doctrine'' under *West Virginia* v. *EPA,* 142 S. Ct. 2587 (2022). These comments asserted that: (1) the rulemaking presents the type of ''extraordinary case'' in which courts should hesitate before concluding that Congress granted the relevant authority to an agency and (2) the FD&C Act lacks the ''clear congressional authorization'' necessary to conclude that Congress granted this authority to FDA. To support their position, these comments generally focused on the facts that: (1) Congress previously has considered but declined to enact bills related to LDTs; (2) LDTs are a topic of congressional debate and therefore, in the commenters' view, a matter for Congress; (3) the claimed authority would affect a significant number of parties, ''would have a major impact on the delivery of healthcare,'' and would ''alter the market''; and (4) the Agency's approach would require billions of dollars in spending each year. Some comments also pointed to ''the overall FDCA regulatory scheme'' and ''subsequent legislation specific to clinical laboratories'' (*i.e.,* CLIA). Several comments analogized to other cases such as *FDA* v. *Brown and Williamson Tobacco Corp.,* 529 U.S. 120, *Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302 (2014), and *United States* v. *Franck's Lab, Inc.,* 816 F. Supp. 2d 1209 (M.D. Fla. 2011).

(Response 92) FDA does not agree that it lacks authority for this rulemaking under the major questions doctrine. First, we do not agree that the major questions doctrine applies, because this is not the type of ''extraordinary case'' in which there is ''reason to hesitate'' before concluding that Congress intended to confer on FDA authority over laboratory-manufactured IVDs. Second, even if a court were to hold that the major questions doctrine applies, the FD&C Act supplies clear congressional authorization.

a. This rulemaking is not ''extraordinary'' for purposes of the major questions doctrine. As explained by the Supreme Court, the major questions doctrine does not apply to every agency action, or even every agency action that involves significant costs and benefits and congressional interest. Rather, it applies only in those ''extraordinary cases'' in which ''the history and the breadth of the authority that the agency has asserted, and the economic and political significance of that assertion, provide a reason to hesitate before concluding that Congress meant to confer such authority.'' *West Virginia* v. *EPA,* 142 S. Ct. 2587 at 2608 (cleaned up). The Court has indicated that whether there is a ''reason to hesitate'' depends on specific ''circumstances'' and ''common sense as to the manner in which Congress would have been likely to delegate.'' Id. at 2609 (cleaned up). It has identified specific factors that can signal such an extraordinary case, such as whether:

- The Agency appears to be assuming ''extravagant'' or ''broad and unusual'' power—as measured in terms of cost, politics, or policy, for example—that Congress would have been ''highly unlikely'' to leave to Agency discretion. Id. at 2608–09, 2612 (internal quotations omitted).
- The asserted authority relies on an ''ancillary,'' ''rarely . . . used'' or otherwise ''modest'' statutory provision. Id. at 2609–10 (internal quotations omitted).
- The Agency, through statements or practice, previously appeared to view the relevant language more narrowly, such that the Agency's new view seems ''unheralded'' or ''newly discovered.'' Id. at 2610, 2612 (internal quotations omitted).
- Implementation of the Agency's decision will require ''technical and policy expertise'' not traditionally within the Agency's wheelhouse. Id. at 2612 (internal quotations omitted).
- There is inconsistency between the asserted authority and the larger statutory scheme—for example, Congress has not ''conferred a like authority'' on the Agency elsewhere in the statute. Id. at 2613.

Under the major questions doctrine, the Court has described these factors as indicating that Congress may not have meant to confer the power claimed by the Agency.

Application of the factors here shows that courts should not hesitate before concluding that Congress granted FDA authority over laboratory-manufactured IVDs, consistent with the statute's plain language. In this rulemaking, FDA is not asserting any ''new'' authority at all. Over 30 years ago, FDA unambiguously stated that it has authority over laboratory-made IVDs, (Ref. 111), and in the last decade, it has applied that authority to hundreds of laboratory-made IVDs, including LDTs, without legal challenge (see, *e.g.,* Refs. 144 to 155). This Rule clarifies the statutory definition of a ''device,'' which is not an ''ancillary'' provision of the FD&C Act but rather the bedrock definition that governs the application of each device provision that FDA administers. As explained elsewhere in this preamble, the device definition encompasses diagnostic test systems, so there is nothing ''unusual'' or ''extravagant'' about concluding that it reaches test systems made by laboratories. In fact, that understanding is in lockstep with FDA's statutory mandate and the other authorities it implements, is consistent with FDA's longstanding approach, and makes the most of FDA's expertise. What would be ''unusual'' is to read an atextual laboratory exemption into the FD&C Act—thus elevating laboratories above any other type of manufacturer—of entirely amorphous breadth and scope. *See Bostock* v. *Clayton Cty.,* 140 S. Ct. 1731 at 1749 (inferring from ''broad language'' ''Congress's 'presumed point [to] produce general coverage—not to leave room for courts to recognize ad hoc exceptions.' '') (quoting A. Scalia & B. Garner, Reading Law: The Interpretation of Legal Texts 101 (2012)). In the following paragraphs, FDA addresses each of the major questions factors to show why this is not an ''extraordinary case'' under that doctrine.

First, FDA is not asserting ''extravagant'' or ''broad and unusual''

power that Congress would have been ''highly unlikely'' to leave to Agency discretion. Congress enacted the MDA ''to provide for the safety and effectiveness of medical devices intended for human use'' without qualification. Medical Device Amendments of 1976, Public Law 94–295 (May 28, 1976) (purpose clause). In that legislation, it tasked FDA with overseeing the safety and effectiveness of all devices used in the United States—a substantial delegation that, according to FDA's estimates, encompasses a $374.5 billion industry today. Although FDA has estimated that this rule will have important public health impacts, the costs of the rule are not ''extravagant'' or ''unusual,'' particularly when viewed in the context of FDA's regulatory responsibility for devices overall. And device regulation is just one small part of FDA's overall remit: as of January 2024, FDA-regulated products accounted for about 21 cents of every dollar spent by U.S. consumers, and FDA had responsibility for ''more than $3.6 trillion in consumption of food, medical products, and tobacco.'' [64] Given the breadth and scope of FDA's overall mandate, and its mandate with respect to devices, there is no reason to doubt that the mandate includes the subset of IVDs that are manufactured by laboratories, and the economic impact of this rule alone does not provide a reason to hesitate under the major questions doctrine.[65]

FDA also does not agree that ''political significance'' is a compelling factor here. Many comments pointed to recent legislative proposals related to IVDs, such as the Verifying Accurate, Leading-Edge IVCT Development Act of 2023 (VALID Act), H.R. 2369, 118th Cong. (2023). Some comments portrayed the VALID Act as a proposal to grant FDA new authority over LDTs, or interpreted Congress's decision not to enact the VALID Act as evidence that FDA lacks authority to issue the rule. These characterizations do not accurately describe the VALID Act. Congressional deliberations over the VALID Act involved the question whether a whole new statutory scheme, instead of the device framework in the FD&C Act, should apply to IVDs. Under the VALID Act, all IVDs, including LDTs, would have been carved out from the definition of a ''device''—a step that would not have been necessary were they not covered by the existing definition—and would have been subject to a novel statutory framework including, for example, a new statutory approval standard, new types of premarket review (such as ''technology certification''), and different QS requirements. Thus, contrary to commenters' suggestions, the fact that Congress has not passed that bill does not represent a decision that FDA lacks authority over LDTs, but rather that Congress has not chosen to create a statutory scheme for IVDs that is different than for all other devices. Around the same time, Congress also considered, but did not pass, a bill that, as summarized by Congressional Research Service, would have ''shift[ed] the regulation of laboratory-developed testing procedures from the Food and Drug Administration (FDA) to the Centers for Medicare & Medicaid Services (CMS).'' [66] In not passing that bill, Congress opted to maintain the longstanding, well-understood status quo: that IVDs, including LDTs, are devices subject to device requirements under the FD&C Act. Congress's consideration of these bills does not show that there is an open question whether Congress conferred this authority on FDA under the FD&C Act; instead, it provides additional evidence affirming that LDTs fall within FDA's existing authority.

In any event, even if a court were to find the foregoing economic and political facts relevant under the major questions doctrine, FDA does not agree that they are sufficient to implicate that doctrine. The Court's major-questions cases examine a variety of factors to determine whether there is a ''reason to hesitate'' before concluding that Congress meant to confer the power claimed by the Agency. For example, in West Virginia, the Court cited a range of factors to conclude that the rulemaking there presented a ''major question.'' The Court did not rest the decision solely on the ''billions of dollars in compliance costs,'' *EPA* v. *West Virginia,* 142 S. Ct. 2587 at 2604, and the fact that Congress had ''consistently rejected proposals'' to create a cap-and-trade scheme for carbon, id. at 2614. Instead, it devoted much attention to other factors, such as those described in the remaining paragraphs of this comment response. This fact suggests that economic and political factors, even where applicable, are not enough. And the other hallmarks of an ''extraordinary case'' are absent here.

For example, FDA's asserted authority does not rely on an ''ancillary,'' ''rarely . . . used'' or otherwise ''modest'' statutory provision, but on the meaning of ''device,'' which defines the scope of articles subject to device requirements under the FD&C Act. Congress knew this definition would play a central role in the application of FDA's authorities, so it gave the provision special attention in 1976, adding new terms and carefully distinguishing ''devices'' from ''drugs.'' *See, e.g.,* H.R. Rep. 94–853 at 13–15. Given the detailed nature of the definition and Congress's care in drafting it, this provision is very different from the ''vague statutory grant'' at issue in West Virginia, which, in the Court's view, was susceptible of interpretation in a manner that went ''beyond what Congress could reasonably be understood to have granted.'' *EPA* v. *West Virginia,* 142 S. Ct. 2587 at 2609, 2614. Here, the definition's text is reasonably understood to reflect the true scope of FDA's authority as intended by Congress. *See* id. at 13 (''[T]he Committee has attempted to design device authority such that the law and the intent of the Congress is clear.''); *see also United States* v. *Bacto-Unidisk,* 394 U.S. 784, 798 (1969) (''Congress fully intended that the [FD&C] Act's coverage be as broad as its literal language indicates.'').

FDA is not exercising ''newly uncovered'' or ''unheralded'' authority. *West Virginia* v. *EPA,* 142 S. Ct. 2587 at 2610, 2614. FDA publicly communicated its view that test systems are subject to the Agency's authority over 50 years ago, see 38 FR 7096; that laboratories are subject to the Agency's authority almost 50 years ago, see 42 FR 42521; and that laboratory ''in house'' tests are devices nearly 30 years ago, see 62 FR 62249. And in the years since, FDA has consistently reiterated these assertions (see NPRM section III.D.1., ''FDA's Longstanding Recognition That IVDs Manufactured by Laboratories Are Devices'' 88 FR 68006 at 68015–16). Over the last 10 years, FDA has applied its device authorities to hundreds of laboratory-manufactured tests. For example, dating back to at least 2014, it has granted premarket approval to IVDs offered as LDTs,[67] and during the

[64] Ref. 156.

[65] One commenter's discussion of the major questions doctrine emphasized the Agency workload under the NPRM. Even assuming that were a relevant factor, the Agency's workload for purposes of this rule is not so great that it raises a question about whether Congress intended to confer authority on FDA to regulate laboratory-manufactured IVDs. As stated, FDA's regulation of devices is just one small part of FDA's overall remit; and the regulation of the subset of IVDs that are manufactured by laboratories is just one part of that broader regulatory authority over devices.

[66] *See* Congressional Research Service summary, Verified Innovative Testing in American Laboratories (VITAL) Act, S. 1666, 117th Cong. (introduced May 18, 2021), available at *https://www.congress.gov/bill/117th-congress/senate-bill/1666.*

[67] Ref. 157.

COVID–19 public health emergency, the Agency issued EUAs for scores of IVDs offered as LDTs (see Ref. 18). All of these activities were predicated on the legal conclusion that test systems manufactured by laboratories are devices. *See* 21 U.S.C. 360e (premarket approval authority applicable to devices); 21 U.S.C. 360bbb–3 (EUA authorities applicable to drugs, devices, or biological products). Thus, this is not a situation in which ''the want of assertion of power by those who presumably would be alert to exercise it'' raises a question about ''whether such power was actually conferred.'' Id. at 2608. FDA has repeatedly expressed its view of its authority, including in public statements and through public actions, and its consistent position over decades—without congressional intervention—suggests that there is no ''reason to hesitate'' here. *See, e.g., United States* v. *Tuente Livestock,* 888 F. Supp. 1416, 1423 (S.D. Ohio 1995) (upholding FDA interpretation based on, among other things, the fact that ''Congress has been aware of the FDA's understanding and practice concerning live animals for almost twenty-five years, yet has in no way acted to limit the agency's jurisdiction'').[68]

Implementation of this Rule involves technical and policy expertise traditionally within FDA's wheelhouse. FDA has amassed significant experience and expertise regulating IVDs (including test systems) over the course of five decades. This work is squarely within the expertise of FDA's OHT7. OHT7 employs staff across a wide range of disciplines to evaluate test systems and other IVDs, including the principles of their operation and the analytical validity, clinical validity, and safety data behind them. As explained in the NPRM, FDA's work in this area does not meaningfully differ whether an IVD comes from a laboratory or another manufacturer (88 FR 68006 at 68014) (see also responses to comments 67 and 71). Applying this sort of technical and scientific knowledge to devices is a quintessential function performed by FDA, and undoubtedly an area where FDA has ''comparative expertise.'' Id. at 2613. Indeed, no other Federal Agency is similarly equipped to do it. These facts underscore the conclusion that FDA has a legitimate role to play—and value to add—in overseeing laboratory-made IVDs. They also reinforce the commonsense point that laboratory-manufactured IVDs fall within the basic mandate of the FD&C Act. Here, FDA is exercising authority, applying expertise, and serving its public-health mission in exactly the ways that are contemplated under the FD&C Act.

Finally, the FD&C Act as a whole supports the conclusion that the Agency has authority for this rulemaking. Congress enacted both the FD&C Act and the MDA with public-health protection in mind. See *United States* v. *Sullivan,* 332 U.S. 689, 696 (1948) (''[T]he Act as a whole was designed primarily to protect consumers from dangerous products.''); *Medtronic, Inc.* v. *Lohr,* 518 U.S. 470, 476 (''In response to the mounting consumer and regulatory concern, Congress enacted the statute at issue here: the Medical Device Amendments of 1976.''). Congress tasked FDA with protecting the public with respect to certain defined categories of articles—as relevant here, ''devices''—and sought to avoid ''language which afforded loopholes for the escape of the unscrupulous.'' S. Rep. 74–361 at 2 (March 13, 1935). Given that risky products could originate from all corners of the country by all manner of ''persons,'' see 21 U.S.C. 321(e), Congress did not key the ''device'' definition to any particular type of entity and did not limit FDA's enforcement authorities to particular actors, see 21 U.S.C. 331 (listing ''prohibited acts'' generally without reference to the identity of an actor). Instead, it delegated broad authority and crafted exemptions from certain requirements as appropriate. *See, e.g.,* 21 U.S.C. 360(g)(2), 360i(c)(1), 374(a)(2)(B) (even licensed practitioners are subject to the FD&C Act, though their activities may be exempt). Consequently, the best reading of the FD&C Act is that it contains no carveout for laboratories, and Congress has enacted legislation supporting that interpretation. *See* 42 U.S.C. 1395m–1(d)(5)(B) (certain tests developed by laboratories subject to FD&C Act). With respect to commenters' assertions regarding specific provisions of the FD&C Act and the enactment of CLIA, FDA has addressed those elsewhere in this preamble (see response to comment 54 and sections VI.D.3, VI.D.4, and VI.D.8 of this preamble).

Some commenters also analogized FDA's proposed action to those in *FDA* v. *Brown and Williamson Tobacco Corp.,* 529 U.S. 120 and *Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302. But important factors influencing the Court's opinions in those cases are not present here. For instance, here, there is no inconsistency between the FD&C Act and FDA's regulation of laboratories as ''device'' manufacturers. *See Brown and Williamson,* 529 U.S. 120 at 125 (FDA ''may not exercise its authority in a manner that is inconsistent with the administrative structure that Congress enacted into law.'') (internal quotations omitted); *Utility Air Regulatory Group,* 573 U.S. 302 at 321 (Agency interpretation ''would be inconsistent with—in fact, would overthrow—the Act's structure and design.''). Indeed, FDA has regulated in this way for years, and FDA has never disclaimed authority over laboratory-manufactured IVDs. In addition, this final rule will not have the type of ''calamitous consequences'' that have caused the Court to consider other regulatory actions to be ''incompatible with the substance of Congress' regulatory scheme.'' [69] 573 U.S. 302 at 322. Quite the opposite: FDA believes that a continuation of the status quo—or a construction of the FD&C Act that incorporates an atextual exemption for laboratories—would have serious consequences for the public, which is why FDA is issuing this rule.[70]

[68] One commenter attempted to discredit FDA's statement of authority in one preamble (62 FR 62243) on the basis that FDA lacked ''any supporting analysis,'' among other things. But FDA is aware of no basis for the position that the major-questions doctrine requires an Agency to produce a detailed legal analysis in order to show its historical view. As the Supreme Court has described it, the question is whether the Agency's asserted authority is ''unheralded,'' ''newly uncovered,'' or ''not previously exercised,'' *West Virginia* v. *EPA,* 142 S. Ct. 2587 at 2610, 2614, and that is not the case here. FDA also notes that the statement identified by the commenter was just one in a long line of public statements (*see* NPRM section III.D.1., ''FDA's Longstanding Recognition That IVDs Manufactured by Laboratories Are Devices'' 88 FR 68006 at 68015–16), and it was not the first statement of FDA's authority over laboratory-manufactured IVDs. *See, e.g.,* (Ref. 111). Draft CPG: Commercialization of Unapproved In Vitro Diagnostic Devices Labeled for Research and Investigation (Aug 3, 1992) (stating that laboratory ''home brew'' products ''are subject to the same regulatory requirements as any unapproved medical device'').

[69] One comment argued that this rulemaking will have practical consequences analogous to those in *Utility Air*—a significant increase in the number of applications, administrative costs, and the review period for applications—which shows that it presents a ''major question.'' FDA disagrees. As already discussed, FDA does not agree that the current effects of this rule are a reliable indicator of Congress's intent in 1976. In addition, we do not agree that the practical effects here have the same weight as they did in *Utility Air. See Utility Air Regulatory Group* v. *EPA,* 573 U.S. 302, 321–22 (2014) (''EPA described the calamitous consequences of interpreting the Act in that way.''). And in this rulemaking, unlike *Utility Air,* FDA has discretion to develop enforcement policies to address practical concerns about implementation, underscoring the point that practical concerns should not be understood to reflect a lack of jurisdiction. *Id.* at 326 (rule was not ''an exercise of EPA's enforcement discretion'' given the possibility of citizen suits).

[70] One comment also compared this rulemaking to the facts in *United States* v. *Franck's Lab, Inc.,* 816 F. Supp. 2d 1209 (M.D. Fla. 2011), which concerned FDA's authority over pharmacy compounding. However, that case was not a ''major questions'' case, and in any event, it was vacated

b. Even if the major-questions doctrine applies, the FD&C Act supplies ''clear congressional authorization'' for this rulemaking. In response to comment 52, FDA explained that the device definition, by its plain terms, encompasses IVDs manufactured by laboratories. This conclusion has more than ''a merely plausible textual basis.'' Id. at 2609. It is the most reasonable reading of the text, and the one that matches congressional intent as expressed through the statutory scheme overall, the legislative history, and subsequent statements from Congress.
