HOLLY H. SHIMIZU

The United States Botanic Garden informs visitors about the aesthetic, cultural, economic, therapeutic, and ecological importance of plants to the well-being of humankind.

The U.S. Botanic Garden has artistic displays of plants, exhibits, and educational programs promoting botanical knowledge through the cultivation of an ordered collection of plants; fostering plant conservation by acting as a repository for endangered species; and growing plants for the beautification of the Capitol complex. Uniquely situated at the heart of the U.S. Government, the Garden seeks to promote the exchange of ideas and information relevant to its mission among national and international visitors and policymakers.

The Garden's collections include orchids, epiphytes, bromeliads, carnivorous plants, ferns, cycads, cacti, succulents, medicinal plants, rare and endangered plants, and plants valued as sources of food, beverages, fibers, cosmetics, and industrial products.

The U.S. Botanic Garden's facilities include the Conservatory, Bartholdi Park,

an administration building, and an off-site Production facility. The Garden is currently undergoing a significant expansion and transformation. The Conservatory, one of the largest structures of its kind in this country, reopened on December 11, 2001, after undergoing major renovation that required more than 4 years to complete. In addition to upgraded amenities for visitors, it features 12 new exhibit and plant display areas. Renovation of the administration building and Bartholdi Park are scheduled for 2005-2006. A new public feature, the National Garden, is planned for the three-acre site just west of the Conservatory.

Outdoor plantings are showcased in Bartholdi Park, a home landscape demonstration area located across from the Conservatory. Each of the displays is sized and scaled for suitability in an urban or suburban setting. The gardens display ornamental plants that perform

well in this region arrayed in a variety of styles and themes. Also located in this park is Bartholdi Fountain, created by Frédéric Auguste Bartholdi (1834–1904), sculptor of the Statue of Liberty.

The Garden's staff is organized into horticulture, operations, administration, and public programs divisions. Programs for the public are listed in a quarterly calendar of events and also on the Garden's Web site. A horticultural hotline is available to answer questions from the public.

The U.S. Botanic Garden was founded in 1820 under the auspices of the Columbian Institute for the Promotion of Arts and Sciences, an organization that was the outgrowth of an association known as the Metropolitan Society, which received its charter from Congress on April 20, 1818. The Garden continued under the direction of the Institute until 1837, when the Institute ceased to exist as an active organization.

In June 1842, the U.S. Exploring Expedition under the command of Captain Charles Wilkes returned from its 4-year voyage with a wealth of information, artifacts, pressed-plant specimens, and living plants. The living plants were temporarily placed on exhibit on a lot behind the old Patent Office under the care of William D. Brackenridge, the Expedition's botanist. By November, the plants were moved into a greenhouse built there with funds appropriated by Congress. Subsequently, the greenhouse was expanded with two additions and a small growing area to care for the burgeoning collection. In 1843, stewardship of the collection was placed under the direction and control of the Joint Committee on the Library,

which had also assumed responsibility for publication of the results of the Expedition. Expansion of the Patent Office in 1849 necessitated finding a new location for the botanical collections.

The act of May 15, 1850 (9 Stat. 427), provided for the relocation of the Botanic Garden under the direction of the Joint Committee on the Library. The site selected was on The Mall at the west end of the Capitol Grounds, practically the same site the Garden occupied during the period it functioned under the Columbia Institute. This site was later enlarged, and the main area continued to serve as the principal Garden site from 1850 to 1933, when the Garden was relocated to its present site.

Although the Government had assumed responsibility for the maintenance and stewardship of the plant collection in 1842, the two functions were divided between the Commissioner of Public Buildings and the Joint Committee on the Library, respectively. In 1856, in recognition of their increasing stature, the collections and their associated operations and facilities were officially named the United States Botanic Garden, and the Joint Committee on the Library assumed jurisdiction over both its direction and maintenance (11 Stat. 104). An annual appropriation has been provided by Congress since 1856.

Presently, the Joint Committee on the Library exercises its supervision through the Architect of the Capitol, who has held the title of Acting Director since 1934.
