2 set(s) of digital one-piece composite laminated halftone proofs on the actual production stock (Kodak Approval, Polaroid PolaProof, CreoSpectrum, or Fuji Final Proof) with a minimum resolution of 2400 x 2400 dpi.

At contractors option, (2) set(s) of inkjet proofs that are G7 profiled and use pigment-based inks may be submitted in lieu of digital one-piece composite laminated halftone proofs. A proofing RIP that provides an option for high quality color matching such as Device Links Technology and/or ICC Profiles Technology, and meets or exceeds industry tolerance to ISO 12647-7 standard for Graphic Technology (as of 2016 and future amendments) must be utilized. Proofs must be ripped and sent at plate resolution (minimum of 2400 x 2400 dpi). If using a 1 bit tiff, the tiff must be made at a minimum of 2400 dpi. Output must be a minimum of 2400 x 1200 dpi on a GRACoL or SWOP certified proofing media. Proofs must contain both of the following to be evaluated for accuracy: 3-tier color control strip: IDEAlliance ISO 12647-7 2013(1), and the GPO Resolution target found at: www.gpo.gov/gporestarget.pdf. NOTE: If a contractor chooses this proof option, prior evaluation and approval of this proofing method must be provided by GPO, Quality Control for Published Products, to ensure that the final product will be produced in accordance with contract specifications. See instructions at: https://www.gpo.gov/docs/default-source/forms-and-standards-files-for-ENDORs/qslsamples6f200c30b44a64308413ff00001d133d.pdf. Failure to obtain this evaluation and approval may be cause for the job to be rejected should the final product not match the proofs for color.
Proofs must contain color control bars (such as Brunner, GATF, GRETAG, or RIT) for each color of ink on the sheet. Control bars must be placed parallel to the press ink rollers and must show areas consisting of minimum 1/8 x 1/8 solid color patches; tint patches of 25, 50 and 75%; dot gain scale; and gray balance patches for process color (if applicable). These areas must be repeated consecutively across the sheet.

The make and model number of the proofing system utilized shall be furnished with the proofs. These proofs must contain all elements, be in press configuration, and indicate margins. Proofs will be used for color match on press. Direct to plate must be used to produce the final product with a minimum of 2400 x 2400 dpi.

Pantone colors may be substituted with a similar color (with the exception of process yellow) but may not be built out of the four process colors. If producing Inkjet proofs, Pantone colors must be simulated on proofs and must be proofed separately on a digital color content, overlay, or inkjet proof.

Digital color content proof shall be used to represent spot varnish.

2 set(s) of digital color content proofs. Direct to plate must be used to produce the final product with a minimum resolution of 2400 x 2400 dpi.

Proofs must be created using the same Raster Image Processor (RIP) that will be used to produce the product.

Proofs shall be collated with all elements in proper position (not pasted up), imaged face and back, trimmed and folded to the finished size of the product, as applicable.

Samples must be of the kind and quality required by the specifications. The Government will rely on the samples only as a reference to the general appearance of the stock that will be provided by the contractor in conformance to the specifications. The Government assumes no contractual obligation to perform any inspection and test for the benefit of the contractor. The Government's failure to inspect and accept or reject the paper samples shall not relieve the contractor from responsibility, nor impose liability on the Government, for nonconforming paper.

The customer will not be held financially responsible for any stock procurement for this job that was not previously provided to the customer for review and in conformance to the paper specifications.
