(ii) The name and qualifications of the construction supervisor who will be directly in charge of construction, the names and qualifications of the construction foremen, and the availability of qualified construction personnel. The construction supervisor must have at least 5 years outside plant construction experience with at least 2 years at the supervisory level on RUS financed projects. Construction foremen must have at least 3 years of outside plant construction experience.

(iii) The availability of equipment for construction, exclusive of equipment needed for normal operation and maintenance.

(2) [Reserved]

(b) Force Account Proposal (FAP). Upon receiving RUS approval to use the force account method, the borrower, prior to any construction activity or the purchase of materials or equipment, shall submit to RUS two copies of its FAP. The FAP shall consist of:

(1) The RUS Contract Form 515 and appropriate supporting attachments that normally would be provided as plans and specifications for contract construction. See §1753.47.

(2) The cost estimate, using Form 515 as a convenient means of showing the following:

(i) The quantity and cost estimates of the various assembly units required. “Labor and other” cost will not include the cost of engineering, legal,
and other professional services, interest during construction, preliminary survey and investigation charges, and right-of-way easement procurement costs.

(ii) A list identifying materials or construction for which loan funds will not be requested.

(3) The estimated completion time.

(c) Storage of materials. All materials ordered for the construction shall be stored separate from normal maintenance materials.

(d) Construction—(1) Preconstruction conference. The borrower shall arrange a conference, attended by the manager, construction supervisor, construction foremen, resident engineer and the GFR prior to the beginning of construction to clarify any questions pertaining to the construction. Notes of the conference shall be provided to each conference participant.

(2) Construction schedule and progress reports. The borrower shall obtain from the engineer a construction schedule and submit one copy to the GFR. The schedule shall include the starting date and a statement indicating that materials are either delivered or deliveries are assured to permit construction to proceed in accordance with the construction schedule. The borrower shall obtain from the engineer progress reports and submit one copy of each to the GFR. RUS Form 521 may be used for the construction schedule and the progress report.

(3) Borrower’s management responsibilities. (i) Obtain all right-of-way easements, permits, etc., prior to construction.

(ii) Maintain records on all expenditures for materials, labor, transportation, and other costs of construction, in order that all costs may be fully accounted for upon completion of construction.

(iii) Ensure that all the required inspections and tests are made.

(4) Engineer’s responsibilities. (i) Inspect and inventory construction as completed.

(ii) Require timely corrections and cleanup.

(iii) Perform acceptance tests as construction is completed.

(iv) Provide “as built” staking sheets of completed construction when the final inspections are made.

(v) Maintain accurate and current inventories of completed construction.

(5) Construction supervisor’s responsibilities. (i) Correct construction errors as construction progresses.

(ii) Maintain an accurate inventory of completed construction.

(iii) Perform cleanup as construction is completed.

(iv) Perform all the inspections and acceptance tests a contractor would be required to make under the construction contract.

(v) Promptly perform cleanup required after final inspection.

§ 1753.58 Closeout documents.

(a) General. (1) This section outlines the procedure to be followed in the preparation of closeout documents for the FAP.

(2) The period between the completion of construction and submission of the closeout documents to RUS should not exceed 60 days.

(b) Documents. The documents required to close the FAP are listed in appendix E. The following is a brief description of the closeout documents:

(1) Final Inventory and Certificate of Engineer. RUS Forms 817, 817a, and 817b are prepared by the engineer.

(i) Assembly units inventoried on Form 817a shall be grouped according to the applicable plant account classification as specified in 7 CFR part 1770, Revision and Codification of RUS’s Accounting System Requirements for Telephone Borrowers of the Rural Utilities Service.

(ii) On Form 817, the engineer provides a comparison between the final inventory total price (based on assembly prices in the approved FAP) and the actual cost of construction (from the borrower’s accounting records).

(iii) The actual costs from the borrower’s accounting records are not to include costs for (a) engineering, legal and other professional services, (b) interest during construction and (c) preliminary survey charges.

Key Map, prepared by the engineer, is a permanent record of the general location of the lines and facilities of the borrower’s system.

Detail Maps, prepared by the engineer, show the details of the outside plant of the telephone system, the location of subscribers and other pertinent operating details.

Staking Sheets, prepared by the engineer, show by assembly units the outside plant constructed, and serve as the permanent outside plant record.

Tabulation of Staking Sheets, prepared by the engineer, is a summary of the assembly units shown on the staking sheets for preparing the final inventory.

Treated Forest Products Inspection Reports, prepared by an RUS approved inspection company, certify that wood products furnished for construction meet all requirements of the RUS specifications.

Closeout procedures. (1) The borrower shall notify the GFR when the project is ready for final inspection. (2) The GFR shall make the final inspection accompanied by the engineer and the borrower. (3) The borrower shall correct all deficiencies found during the final inspection. (4) The borrower may request the assistance of an RUS field accountant to review the borrower’s record of construction expenditures and assist the borrower with any accounting problems in connection with construction expenditures.

After inspection, the final inventory documents shall be assembled and distributed as indicated on appendix E. The documents listed for RUS are to be submitted to the GFR.

Upon approval of the closeout documents, RUS will notify the borrower of approval and of any adjustments to be made in funds advanced in connection with the construction.

The above are not intended to be a complete description of the requirements of the documents relating to RUS’s closeout procedure. Refer to the documents for additional requirements.

Subpart H—Purchase and Installation of Special Equipment

§ 1753.66 General.

(a) This subpart implements and explains the provisions of the Loan Documents setting forth the requirements and the procedures to be followed by borrowers in purchasing and installing special equipment financed with loan funds.

(b) Terms used in this subpart are defined in §1753.2 and RUS Contract Forms 397 and 398.

(c) Special equipment purchased with loan funds must be included in the List of Materials Acceptable for Use on Telephone Systems of RUS Borrowers (See Bulletin 344-2) and meet RUS’s standards and specifications (See 7 CFR part 1755) unless otherwise approved by RUS.

(d) Borrowers must obtain RUS review and approval of the LD for their telephone systems. Applications of special equipment not included in an approved LD must conform to the modernization plan as required by 7 CFR part 1751, subpart B, and must be submitted to RUS for review and approval.

(e) RUS Form 397 and applicable specifications shall be used for the purchase of special equipment for major construction on a furnish and install basis.

(f) RUS Form 398 and applicable specifications shall be used for the purchase of equipment for major construction on a furnish only basis. The procedures provided in subpart I, if applicable, or a FAP approved by RUS may be used for the installation of special equipment purchased with a Form 398 contract.

(g) For special equipment purchases for minor construction, the borrower may at its option use the Methods of Minor Construction procedures contained in subpart I or the purchase procedures contained in this subpart H.
§ 1753.67 Contracts and specifications.

(a) Special Equipment Contract, RUS Form 397 shall be used to purchase equipment on a furnish and install basis.

(b) Special Equipment Contract, RUS Form 398 shall be used to purchase equipment on a furnish only basis.

(c) The equipment specifications must accompany the selected contract form.

(1) Each specification consists of performance specifications, installation requirements (if applicable) and application engineering requirements.

(2) RUS specifications for the Special Equipment Contract are listed in 7 CFR part 1755.

§ 1753.68 Purchasing special equipment.

(a) General. (1) Equipment purchases are categorized as initial equipment purchase, equipment additions to existing systems and new system additions.

(i) An initial equipment purchase is a first time purchase by a borrower of a complete system of special equipment.

(ii) Equipment additions to existing systems are additions of components to complete operating systems to increase system capacity that require components made by the manufacturer of the existing system.

(iii) New system additions are purchases of complete systems of special equipment when the purpose can be accomplished either with equipment of the same type and manufacture as other complete operating systems in the borrower's system, or with complete systems of special equipment from other manufacturers.

(iv) Where equipment is obtained under a Form 398 Contract, the borrower shall require the supplier to provide a detailed proposed bonding and grounding plan and detailed installation information. The installation information is to enable acceptance testing by the borrower upon completion of the installation.

(2) For initial equipment purchases that qualify as major construction, the borrower shall obtain proposals from at least three suppliers of equipment of different manufacturers.

(3) For equipment additions to increase the capacity of existing systems, the borrower may negotiate for equipment of a specific type and manufacture. RUS approval to negotiate in this instance is not required if these additions were specifically described in the LD approved by RUS.

(4) For new system additions, the borrower may request RUS approval to negotiate for additional equipment for the purpose of standardization on a system basis, provided RUS approved the procurement method used for the initial equipment purchase. RUS approval to negotiate must be obtained before release of the P&S to the seller.

(5) RUS will not approve negotiation with a seller of non-domestic equipment for the purpose of standardization, because such a purchase does not meet the "Buy American" provision.

(6) RUS recommends, but does not require, that borrowers include installation by the seller for initial installations of special equipment that qualify as major construction.

(7) Special equipment may be installed by the borrower if it has qualified personnel and test equipment available to install the equipment and make the required acceptance tests, and written approval is given by RUS.

(8) Installations, whether by the borrower or the seller, must meet the installation requirements of Form 397 specifications. A copy of the acceptance tests results must be attached to the closeout documents or work order summary.

(9) Detailed considerations and guidelines for the preparation of the specifications for the various applications of special equipment can be found in RUS Telecommunications Engineering and Construction Manuals.

(10) The borrower must obtain authorization from the Federal Communications Commission (FCC) to construct and operate radio transmitting...
equipment. Evidence of FCC authorization is required for RUS contract approval. Where required, the borrower must obtain approval of state regulatory bodies regarding tariffs and related matters.

(b) Procurement procedures—(1) General. The following are the procurement procedure steps required for the purchase of special equipment by borrowers.

(2) Initial equipment purchase. (i) The borrower prepares the P&S and sends two copies to the GFR for approval.

(ii) RUS approves the P&S in writing (or notifies the borrower of any reason for withholding approval).

(iii) The borrower obtains proposals from three or more sellers.

(iv) The borrower selects the proposal to be accepted and sends notification of this selection supported by a summary of all proposals and an engineer's recommendation to RUS for approval.

(v) RUS approves the proposal selection in writing (or notifies the borrower of any reason for withholding approval).

(vi) The borrower sends three executed contracts including specifications to RUS for approval.

(vii) After RUS approval of the contract, one copy will be returned to the borrower and one copy will be sent to the seller.

(3) Equipment additions to existing systems. Purchase procedures for equipment additions to existing systems are the same as for initial system purchase except that the borrower may negotiate for equipment of a specific type and manufacture instead of obtaining proposals from three or more sellers.

(4) New system additions. (i) The borrower prepares the P&S and sends two copies to the GFR for approval. The borrower may request RUS approval to negotiate for the purpose of standardization on a system basis.

(ii) RUS notifies the borrower in writing of RUS's decision as to whether to approve the P&S and whether to allow the borrower to negotiate for specific equipment.

(iii) The remainder of the purchase procedure for new system additions is the same as for initial equipment purchase.

(c) Contract amendments. (1) The general requirements for contract amendments are set forth in §1753.11.

(2) The borrower shall prepare any required amendments to special equipment contracts, arrange for the execution by all parties, and submit these amendments to RUS, so that any changes in the contract will have been submitted by the time closeout documents are submitted. RUS Form 238, Construction or Equipment Contract Amendment shall be used for this purpose.

(d) Closeout procedures—(1) Acceptance tests for Form 397. (i) Immediately upon completion of the installation and alignment of the equipment, the borrower shall arrange with the contractor's installer and the GFR for acceptance tests.

(ii) The borrower shall obtain from the contractor, in writing, the results of all inspections and tests made by the contractor as required in the specifications. The borrower will analyze the test results and determine whether the performance of the equipment meets the contract specifications.

(2) Acceptance tests for Form 398. (i) Upon completion of the installation and alignment of the equipment (under this contract the installation alignment will be by other than the seller), the borrower shall perform all the inspections and tests outlined in the specifications.

(3) Closeout documents. (i) When the acceptance tests have been completed and all deficiencies have been corrected, the borrower shall:

(A) Assemble the documents listed in appendix F that are required for the closeout of the special equipment contract.

(B) Notify the GFR that the installation is ready for final acceptance.

(C) Make available for the GFR the documents listed in appendix F.

(ii) The GFR reviews the final documents and distributes all the documents as indicated in appendix F.

(iii) Final payment shall be made according to the payment terms of the contract.

§ 1753.69—1753.75 [Reserved]

Subpart I—Minor Construction

§ 1753.76 General.
(a) This subpart implements and explains the provisions of the Loan Documents (as defined in 7 part CFR 1758) setting forth the requirements and procedures to be followed by borrowers for minor construction of telecommunications facilities using RUS loan funds. Terms used in this subpart are defined in §1753.2.
(b) [Reserved]

(Approved by the Office of Management and Budget under control number 0572-0062)

§ 1753.77 Methods of minor construction.
Minor construction may be performed by contract using RUS Contract Form 773, “Miscellaneous Construction Work and Maintenance Services”, or by work order construction.

§ 1753.78 Construction by contract.
(a) RUS Form 773 shall be used for minor construction by contract. Compensation may be based upon unit prices, hourly rates, or another basis agreed to in advance by the borrower and the contractor. A single work project may require more than one contractor.
(b) The borrower shall prepare the contract form and attach any diagrams, sketches and tabulations necessary to specify clearly the work to be performed and who shall provide which materials. Neither the selection of the contractor nor the contract requires RUS approval.
(c) Borrowers are urged to obtain quotations from several contractors before entering into a contract to be assured of obtaining the lowest cost. The borrower must ensure that the contractor selected meets all Federal and State licensing and bonding requirements, and that the contractor maintains the insurance coverage required by the contract for the duration of the work. (See 7 part CFR 1788)
(d) Upon completion and final inspection of the construction the borrower shall obtain from the Contractor a final invoice and an executed copy of RUS Form 743, Certificate of Contractor and Indemnity Agreement.
(e) RUS Contract Form 773 may also be used to contract for the maintenance and repair of telephone equipment and facilities. Generally, RUS will not finance maintenance and repair contracts.

§ 1753.79 Construction by force account.
The borrower shall require that:
(a) Minor construction by the force account method be supervised by a competent foreman. The work shall be performed in accordance with all regulatory and safety codes.
(b) Daily time and material reports, referenced by the work project number, shall be kept to record labor and materials used as construction is performed.
(c) The construction foreman shall maintain a tabulation of all construction units installed.

§ 1753.80 Minor construction procedure.
(a) If the borrower performs minor construction financed with loan funds, the borrower’s regular work order procedure shall be used to administer construction activities that may be performed entirely by a contractor under Form 773 contract, by work order, or jointly by work order and one or more contractors under Form 773 contracts.
(b) RUS financing under Form 773 contracts is limited in any twelve month period to the following amounts for the following discrete categories of minor construction. A borrower could, for example, receive financing of Form 773 contracts in a twelve month period in amounts up to $400,000 of central office equipment and $200,000 of special equipment and $200,000 of buildings. The date of the Form 773 contract is the date the Form 773 contract is executed.
(1) For outside plant construction, the limit is $400,000 or ten per cent
§ 1753.81 Inspection and certification.

(a) Upon completion and prior to closeout, minor construction must be inspected and certified to be in compliance with RUS construction standards, to be reasonable in cost, and to meet applicable codes. The certification is made by an experienced telephone engineer who is either licensed in the state where the inspection will be performed, or is a borrower's staff engineer, who meets the requirements of the "employee in charge" of force account engineering as described in subpart B of this part. The GFR will periodically audit the inspection of minor construction to ensure integrity of the procedure. RUS borrowers with less than 2000 subscribers may use the above procedure or have construction inspection performed by the GFR.

(b) Engineering services for minor construction may be contracted using RUS Form 245, Engineering Service Contract—Special Services. Costs for these services may be included in the costs for construction on the Form 771. (See subpart B of this part.)

(c) Upon completion of construction, the borrower shall obtain the engineer's certification on RUS Form 771. An official of the borrower, designated by the board of directors, shall also execute the borrower's certification on Form 771.

§ 1753.82 Minor construction closeout.

(a) For minor construction inspected by the borrower's engineer, an original and two copies of Form 771 shall be sent to the GFR. The GFR will initial and return the original and one copy.
When funds are requested for minor construction, the original Form 771 signed or initialed by the GFR, shall be submitted with the FRS. Forms 771 should be submitted only with the FRS which they support. RUS does not encumber funds pursuant to Forms 771 unless an advance is made to the borrower. (See 7 CFR part 1744 subpart C).

§§ 1753.83–1753.90 [Reserved]

Subpart J—Construction Certification Program

§ 1753.91 General.

(a) This subpart implements and explains the provisions of the loan documents setting forth the requirements and procedures to be followed by borrowers accepting nomination for the construction certification program. Terms used in this subpart are defined in §1753.2.

(b) [Reserved]

(Approved by the Office of Management and Budget under control number 0572–0062)

§ 1753.92 Policies and requirements.

(a) It is RUS policy that, as borrowers gain in experience and maturity, the advice and assistance rendered by RUS shall progressively diminish. Prior to approval of a loan, RUS may nominate certain borrowers to fulfill the responsibilities for administration and construction of projects financed with RUS loans. Borrowers who accept this nomination will be known as “certification borrowers,” and the program in which they participate will be known as the “certification program.”

(b) Generally, initial loan borrowers are not eligible for the certification program.

(c) Generally, the factors which RUS will consider in selecting borrowers for the certification program will include:

(1) The experience of the staff of the borrower.

(2) The RUS assessment of the borrower’s ability to handle the certification program requirements considering the size and complexity of the proposed construction in the L.D.

(3) The history of the borrower in following RUS’s policies and procedures.

(4) Other factors deemed relevant by RUS.

(d) Except as specifically stated in this subpart, certification borrowers must comply with all requirements applicable to other borrowers.

(e) RUS reserves the right at any time to require submission of construction documents or to remove the borrower from the certification program.

§ 1753.93 Responsibilities.

(a) Responsibilities transferred to certification borrowers. (1) Approval of engineering and architectural service contracts.

(2) Approval of P&S.

(3) Approval of price quotations and bids, except where the low price bid is not accepted.

(4) Approval of award of construction contracts and amendments.

(5) Approval of FAP’s if RUS has approved the force account method of construction for the construction project.

(6) Inspection and certification of construction.

(7) Approval of closeout documents.

(8) Other responsibilities as may be specifically granted in writing by RUS.

(b) Responsibilities retained by RUS. (1) Approval to deviate from RUS requirements, except as provided in (a) above.

(2) Approval of use of loan funds for projects other than those included in the loan construction budget. See 7 CFR part 1744 subpart C.

(3) Approval of use of loan funds in excess of amounts included in the loan budget.

(4) Approval of force account methods of engineering and construction.

(5) Approval to make significant deviations from the work plan approved by RUS.

(6) Approval of interim construction.

(7) Approval to use materials not listed in the List of Materials Acceptable for Use on Telephone Systems of RUS Borrowers.

(8) Approval of field trials.

(9) Approval to modify or alter standard forms and contracts.
§ 1753.94 Procedures.

(a) Certification borrowers shall appoint three certification officials. These appointments shall be subject to RUS approval.

(1) The “Certifying Officer” shall be an officer or employee of the borrower who is authorized to execute binding agreements. This officer shall sign all contracts, amendments, closeout documents, and the certification on RUS Form 158, Certification of Contract or Force Account Proposal Approval, and RUS Form 159, Summary of Completed Construction.

(2) The “Construction Certifier” shall be an experienced telephone engineer who is either licensed in the state where the inspection will be performed, or is a borrower’s staff engineer who meets the requirements of the “employee in charge” of force account engineering as described in subpart B of this part. RUS may determine that it will accept the certification only for matters within the staff engineer’s area of specialization. In such cases the position of “Construction Certifier” shall be filled by more than one engineer. This official is responsible for certifying that the construction complies with all technical and code requirements.

(3) The “Certification Coordinator” shall administer the certification program and serve as the official point of contact for RUS. The certifying officer or construction certifier may also serve as the certification coordinator.

(b) Certification borrowers, shall submit and obtain RUS approval of a work plan before construction and related engineering begin.

(1) The work plan shall provide a description of the proposed construction and methods of purchasing in such detail as to enable RUS to monitor the construction program to ensure its satisfaction that loan purposes are accomplished in an organized construction program. The work plan shall include the following:

(i) The names and qualifications of the proposed certification officials defined in §1753.94(a).

(ii) A listing of the proposed work projects to accomplish the loan purposes showing the estimated cost, method of performing the construction, and the proposed commencement and completion dates for each work project. The proposed work projects shall be summarized on RUS Form 157, Construction Work Plan and Cost Distribution, or a form providing essentially the same information.

(iii) The proposed source of funds for meeting cost overruns if the total estimated cost of work projects exceeds the loan budget.

(iv) A statement signed by the borrower’s certification officials and the GFR that the work plan is accurate and complete.

(c) Under the certification program, the borrower shall follow all standard RUS postloan engineering and construction procedures except that the approvals shown in §1753.93(a) will be made by certification officials rather than RUS. The approvals noted in §1753.93(a)(1), (4) and (5) will be reported immediately to RUS using RUS Form 158. Approval of closeouts, §1753.93(a) (6) and (7), will be reported immediately on RUS Form 159.

(d) As the construction program progresses, the certification borrower shall request, by letter, RUS approval of any significant changes in work plan schedules and budgets and in certification officials.

§ 1753.95 Advance of loan funds.

Advance of loan funds needed to meet the certification borrower’s current financial obligations are to be requested on RUS Form 481 for construction and engineering items supported by appropriate RUS Forms 158 and 159. For items other than construction or engineering, other supporting data shall be submitted. (See 7 CFR part 1744 subpart C.)
§ 1753.96 Certification addendum.

The certification borrower shall modify standard RUS forms of contract for use under the certification program by inserting an executed copy of the following certification addendum in each copy of the contract.

CERTIFICATION ADDENDUM

Permission has been obtained by the Owner to proceed with this contract under 7 CFR part 1753 subpart J, pursuant to which the references in the RUS construction document requiring approvals and other actions of the RUS Administrator will not apply unless RUS gives specific notice in writing to the affected parties that designated approval(s) or action(s) will be required. Certifications by the Contractor of amounts due and certifications of completions of work under the contract are to be construed to be rendered for the purpose of inducing the Rural Utilities Service or Rural Telephone Bank to advance funds to the Owner to make, or reimburse the Owner for, payments under this contract.

Sec. 1755.1—1755.2 [Reserved]
1755.3 Field trials.
1755.4—1755.92 [Reserved]
1755.93 List of standard forms of telecommunications contracts.
1755.94—1755.96 [Reserved]
1755.97 Incorporation by reference of telephone standards and specifications.
1755.98 List of telephone standards and specifications included in other 7 CFR parts.
1755.99—1755.199 [Reserved]
1755.200 RUS standard for splicing copper and fiber optic cables.
1755.201—1755.216 [Reserved]
1755.217 Postloan engineering services contract, RUS Form 217.
1755.218—1755.399 [Reserved]
1755.370 RUS specification for seven wire galvanized steel strand.
1755.371—1755.399 [Reserved]
1755.390 RUS specifications for filled telephone cables.
1755.391—1755.396 [Reserved]
1755.397 RUS performance specification for line concentrators.
1755.398—1755.399 [Reserved]
1755.400 RUS standard for acceptance tests and measurements of telecommunications plant.
1755.401 Scope.
1755.402 Ground resistance measurements.
1755.403 Copper cable telecommunications plant measurements.
1755.404 Fiber optic cable telecommunications plant measurements.
1755.405 Voiceband data transmission measurements.
1755.406 Shield or armor ground resistance measurements.
1755.407 Data formats.
1755.408—1755.521 [Reserved]
1755.522 RUS general specification for digital, stored program controlled central office equipment.
1755.523—1755.524 [Reserved]
1755.525 Form 525, central office equipment contract (including installation).
1755.526—1755.699 [Reserved]
1755.700 RUS specification for aerial service wires.
1755.701 Scope.
1755.702 Copper coated steel reinforced (CCSR) aerial service wire.
1755.703 Nonmetallic reinforced (NMR) aerial service wire.
1755.704 Requirements applicable to both CCSR and NMR aerial service wires.
1755.705—1755.899 [Reserved]
1755.860 RUS specification for filled buried wires.
1755.861—1755.869 [Reserved]
1755.870 RUS specification for terminating cables.
1755.871—1755.889 [Reserved]
1755.890 RUS specification for filled telephone cables with expanded insulation.
1755.900 RUS specification for filled fiber optic cables.
1755.910 RUS specification for outside plant housings and serving area interface systems.

Authority: 7 U.S.C. 901 et seq., 1921 et seq., 6941 et seq.

Editorial Note: Nomenclature changes to part 1755 appear at 55 FR 39397, Sept. 27, 1990.

§§ 1755.1—1755.2 [Reserved]

§ 1755.3 Field trials.

(a) Except as covered in Bulletin 345-3, no loan funds shall be advanced for any product if any item to be included in the project is not included in the "List of Materials Acceptable for Use on Telephone Systems of RUS Borrowers," RUS Bulletin 344-2. When new items of materials or equipment are considered for acceptance by RUS or when a previously accepted item has been subjected to such major modifications that its suitability cannot be determined based on laboratory data and/ or field experience, a field trial shall be required if RUS so determines. This field trial consists of limited field installations of the materials or equipment in closely monitored situations designed to determine, to RUS's satisfaction, their operational effectiveness under actual field conditions. Field trials are to be used only as a means for determining, to RUS's satisfaction, the operational effectiveness of a new or revised product under actual field conditions. Both the manufacturer and borrower are responsible for assuring that the field trial is carried out and that the required information on the product's performance is received by RUS in a timely manner. The use of materials or equipment derived from new inventions or concepts untried within the telephone industry is defined as "an experiment" and shall be handled as a special case using procedures considered appropriate by RUS to meet the individual experiment.
§ 1755.3

(b) To qualify for a field trial, the new and improved materials and equipment must appear to RUS to offer one or more of the following benefits:

(1) Improved performance.
(2) Decreased cost.
(3) Broader application.

(c) The item of material or equipment subject to field trial may be only part of the total amount of materials or equipment included in a bid or it may be the key component of the facility or system provided; therefore, RUS shall have authority to require that a satisfactory plan be provided to maintain or restore service in the event that the materials and equipment fail to meet established performance requirements. RUS shall limit the quantity of new materials and equipment installed on any field trial and shall also limit the number of field trials for a given product to what RUS considers reasonable to provide the necessary information.

(d) A borrower may participate in a field trial only if, in RUS's opinion, the borrower possesses:

(1) Adequate financial resources so that no delay in the project will result from lack of funds.
(2) The financial stability to overcome difficulties which may result from an unsuccessful field trial. The borrower must be able to restore and maintain service until the manufacturer meets its financial obligations with respect to the field trial.
(3) Qualified personnel to enable it to discharge its responsibilities.
(4) A record satisfactory to RUS for maintaining equipment and plant facilities and for providing RUS with information when requested.
(5) Willingness to participate in the field trial and awareness of the effort and responsibility this entails.
(6) The test site for the field trial shall be, in RUS's opinion, readily accessible and provide the conditions, such as temperature extremes, high probability of lightning damage, etc., for which the product is being evaluated. The material or equipment involved shall be covered by an RUS specification or a suitable standard acceptable to RUS. The supplier is required to submit test data to show conformance with the applicable specification or standard. Further testing shall be performed if required by RUS personnel.

(f) A field trial shall normally continue for a minimum of six months, or for a longer period of time determined by RUS to be required to obtain conclusive data that the item either fulfills all requirements or is unacceptable. Either the borrower or supplier may terminate a field trial at any time, in accordance with their contractual agreement. Such termination, if prior to the time required by RUS, shall constitute withdrawal of the product from consideration by RUS. RUS has authority to terminate field trials based on its determination that the equipment is not performing satisfactorily and that this lack of performance may, in RUS's opinion, cause service degradation or hazards to life or property.

(g) Field trials shall be conducted in accordance with the instructions set forth in this regulation and the agreement relating to the specific application. Both the supplier and the borrower shall agree, and obtain RUS approval before the start of the trial, on the following:

(1) The specific purpose of the field trial;
(2) Ownership of items during trial;
(3) Starting date and duration;
(4) Responsibility for costs and removal of items in the event of non-compliance with the specification or purpose intended and arrangements for service continuity or restoration;
(5) Responsibility for testing, test equipment and normal operation and maintenance during the trial period;
(6) Availability of test equipment on site during the trial period; and
(7) Responsibility for spare parts and components consumed during the trial period.

(h) Both the supplier and the borrower shall keep RUS informed of the status of a field trial. These reports shall not be limited to details of problems of failures encountered during installation and subsequent operation but shall include information on progress of the field trial. If these reports are not received in accordance with the requirements of the RUS
§ 1755.3  

Form 399b, RUS shall have the authority to deny or suspend loan funds related to these products until the delinquent reports are received.

(i) Before a borrower purchases materials or equipment that require a field trial, prior approval must be obtained from RUS and RUS Form 399b, RUR Telecommunications Equipment Field Trial (available from the Director, Administrative Services Division, Rural Utilities Service, Room 0175, South Building, U.S. Department of Agriculture, Washington, DC 20250) will be completed by RUS and must be signed by both the borrower and supplier as an indication that they understand their responsibilities in the field trial. Assurance must also be obtained from RUS that the “particular item” that is the subject of the field test is eligible for a field trial. To obtain this assurance, any proposal for use of an item on a field trial basis shall be forwarded to the Chief, Area Engineering Branch, for review and approval.

(j) Procedures for establishing field trials for the various categories of equipment after RUS has approved the 399b:

(1) Electronic transmission equipment. The procedure set forth in Bulletin 385-2 “Purchasing and Installing Special Electronic Equipment” shall be followed except that the Special Equipment Contract (Including Installation), RUS Form 397, shall be used in all purchases of electronic equipment for field trials. In addition, the borrower and supplier shall execute three copies of a “Supplemental Agreement to Equipment Contract for Field Trial,” RUS Form 399, or a “Supplemental Agreement to Equipment Contract for Field Trial (Secondary—Delivery, Installation, Operation), RUS Form 399a, as well as three copies of the RUS Form 399b, “RUS Telecommunications Equipment Field Trial”, and forward them, together with three copies of the executed contract and specification to the Chief, Area Engineering Branch. This category includes:

(i) Voice frequency repeaters;
(ii) Trunk carriers;
(iii) Subscriber carrier;
(iv) Point-to-point radio (Microwave);
(v) Coaxial cable system electronics;
(vi) Fiber optic cable system electronics;
(vii) Multiplex equipment;
(viii) Mobile and fixed radiotelephone; and

(ix) Other items of electronic equipment associated with transmission.

(2) Central office equipment. The procedure set forth in Bulletin 384-1 “Purchasing and Installing Central Office Equipment” shall be followed except that “The Central Office Equipment Contract (Including Installation), RUS Form 525, shall be used to purchase switching equipment for field trials. In addition, the borrower and supplier shall execute three copies of a “Supplemental Agreement to Equipment Contract for Field Trial,” RUS Form 399, or a “Supplemental Agreement to Equipment Contract for Field Trial (Secondary—Delivery, Installation, Operation), RUS Form 399a, as the case may be, as well as three copies of the RUS Form 399b, “RUS Telecommunications Equipment Field Trial”, and forward them, together with three copies of the executed contract and specification to the Chief, Area Engineering Branch. This category includes:

(i) Central office dial equipment;
(ii) Direct distance dialing equipment;
(iii) Automatic number identification equipment;
(iv) Line concentrators;
(v) Remote switching equipment; and
(vi) All other items of equipment associated with switching equipment, such as loop extenders.

(3) Protection equipment and materials, outside plant equipment and materials, and all other equipment and materials, which includes all items not covered in paragraph (j) (1) or (2) of this section, shall be handled as described in Bulletin 344-1 “Methods of Purchasing Materials and Equipment.
§ 1755.93 List of standard forms of telecommunications contracts.

Following is a list of the current standard forms of contracts that RUS prepared for use by telephone borrowers when procuring engineering and architectural services, purchasing telephone materials and equipment, and constructing telephone facilities with RUS loan funds. Copies of the contract forms are available from the sources indicated in the listing. A notice of any change in these contract forms will be published in the Federal Register. The terms “RUS form”, “RUS standard form”, “RUS specification”, and “RUS bulletin” have the same meanings as the terms “REA form”, “REA standard form”, “REA specification”, and “REA bulletin”, respectively, unless otherwise indicated.

§ 1755.97 Incorporation by reference of telephone standards and specifications.

The following telephone Bulletins have been approved for incorporation by reference by the Director of the Office of the Federal Register on December 30, 1983. Bulletin 345±150 (Form 515a) containing the specifications and drawings for construction of direct buried utility cable systems will be published in the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. These materials are incorporated as they exist on the date of the approval and a notice of any change in these materials will be published in the Federal Register. The terms "RUS form", "RUS standard form", "RUS specification", and "RUS bulletin" have the same meanings as the terms "REA form", "REA standard form", "REA specification", and "REA bulletin", respectively, unless otherwise indicated.

§ 1755.98 List of telephone standards and specifications included in other 7 CFR parts.

The following standards and specifications are included throughout 7 CFR chapter XVII. These standards and specifications are not incorporated by reference elsewhere in the chapter. The terms “RUS form”, “RUS standard form”, “RUS specification”, and “RUS bulletin” have the same meanings as the terms “REA form”, “REA standard form”, “REA specification”, and “REA bulletin”, respectively, unless otherwise indicated.

§§ 1755.99–1755.199 [Reserved]

§ 1755.200 RUS standard for splicing copper and fiber optic cables.

(a) Scope. (1) This section describes approved methods for splicing plastic insulated copper and fiber optic cables. Typical applications of these methods include aerial, buried, and underground splices.

(2) American National Standard Institute/National Fire Protection Association (ANSI/NFPA) 70, 1993 National Electrical Code (NEC) referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. A copy of the ANSI/NFPA 1993 NEC standard is available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register,
§ 1755.200

General. (1) Only Rural Utilities Service (RUS) accepted filled cable and splicing materials shall be used on outside plant projects financed by RUS.

(2) The installation instructions provided by the manufacturer of splicing materials shall be followed except where those instructions conflict with the procedures specified in this section.

(3) Precautions shall be taken to prevent the ingress of moisture and other contaminants during all phases of the splicing installation. When an uncompleted splice must be left unattended, it shall be sealed to prevent the ingress of moisture and other contaminants.

(4) Minor sheath damage during construction may be repaired if the repair is completed immediately and approved by the borrower’s resident project representative. Minor damage is typically repaired by:
   (i) Scuffing the cable sheath associated with the damaged area;
   (ii) Applying several layers of DR tape over the scuffed and damaged area;
   (iii) Applying several layers of plastic tape over the DR tape; and
   (iv) If damage is severe enough to rupture the cable shield, a splice closure shall be installed.

(5) All splice cases installed on RUS toll trunk and feeder cables shall be filled, whether aerial, buried, or underground.

(c) Splicing considerations for copper cables—(1) Preconstruction testing. It is desirable that each reel of cable be tested for grounds, opens, shorts, crosses, and shield continuity before the cable is installed. However, manufacturer supplied test results are acceptable. All cable pairs shall be free from electrical defects.

(2) Handling precautions. The cable manufacturer’s instructions concerning pulling tension and bending radius shall be observed. Unless the cable manufacturer’s recommendation is more stringent, the minimum bending radius shall be 10 times the cable diameter for copper cables and 20 times the cable diameter for fiber optic cables.

(3) Cable sheath removal. (i) The length of cable sheath to be removed shall be governed by the type of splicing hardware used. Follow the splice case manufacturer’s recommendations. For pedestals or large pair count splice housings, consider removing enough cable sheath to allow the conductors to extend to the top of the pedestal and then to hang downward to approximately 15 centimeters (cm) (6 inches (in.)) above the baseplate.

   (ii) Caution shall be exercised to avoid damaging the conductor insulation when cutting through the cable shield and removing the shield. Sharp edges and burrs shall be removed from the cut end of the shield.

(4) Shield bonding and grounding. For personnel safety, the shields of the cables to be spliced shall be bonded together and grounded before splicing activities are started. (See paragraphs (g)(2), and (g)(5)(i) through (g)(5)(iii) of this section for final bonding and grounding provisions.)

(5) Binder group identification. (i) Color coded plastic tie wraps shall be placed loosely around each binder group of cables before splicing operations are attempted. The tie wraps shall be installed as near the cable sheath as practicable and shall conform to the same color designations as...
§ 1755.200

the binder ribbons. Twisted wire pig-
tails shall not be used to identify bind-
er groups due to potential transmission
degradation.

(ii) The standard insulation color code used to identify individual cable
pairs within 25-pair binder groups shall
be as shown in Table 1:

(6) Cleaning conductors. It is not nec-
essary to remove the filling compound
from cable conductors before splicing.
However, it is permissible to wipe indi-
vidual conductors with clean paper
towels or clean cloth rags. No cleaning
chemicals, etc., shall be used. Caution
shall be exercised to maintain individ-
ual cable pair and binder group iden-
tity. Binder group identity shall be
maintained by using color coded plas-
tic tie wraps. Individual pair identi-
fication shall be maintained by care-
fully twisting together the two conduc-
tors of each pair.

(7) Expanded plastic insulated conduc-
tor (PIC) precautions. Solid PIC and ex-
}
spliced in the same manner, using the same tools and materials and, in general, should be treated the same. However, the insulation on expanded PIC is much more fragile than solid PIC. Twisting or forming expanded PIC into extremely compact splice bundles and applying excessive amounts of tension when tightening tie wraps causes shinners and, thus shall be avoided.

(8) Splice connectors. (i) Only RUS accepted filled splice connectors shall be used on outside plant projects financed by RUS.

(ii) Specialized connectors are available for splicing operations such as butt splices, in line splices, bridge taps, clearing and capping, and multiple pair splicing operations. The splice connector manufacturer's recommendations shall be followed concerning connector selection and use.

(iii) Caution shall be exercised to maintain conductor and pair association both during and after splicing operations.

(iv) Splicing operations that involve pairs containing working services shall utilize splice connectors that permit splicing without the interruption of service.

(9) Piecing out conductors. Conductors may be pieced-out to provide additional slack or to repair damaged conductors. However, the conductors shall be pieced-out with conductors having the same gauge and type and color of insulation. The conductors used for piecing-out shall be from cables having RUS acceptance.

(10) Splice organization. Spliced pair bundles shall be arranged in firm lay-ups with minimum conductor tension in accordance with the manufacturer's instructions.

(11) Binder tape. Perforated nonhydroscopic and nonwicking binder tape should be applied to splice housings in filled splice cases. The binder tape allows the flow of filling compound while holding the splice bundles near the center of the splice case to allow adequate coverage of filling compound.

(12) Cable tags. Cables shall be identified by a tag indicating the cable manufacturer's name, cable size, date of placement, and generic route information. Information susceptible to changes caused by future cable throws and rearrangements should not be included. Tags on load coil stubs shall include the serial number of the coil case, the manufacturer's name, and the inductance value.

(13) Screened cable. Screened PIC cable is spliced in the same manner as nonscreened PIC cable. However, special considerations are necessary due to differences in the cable design. The transmit and receive bundles of the cable shall be separated and one of the bundles shall be wrapped with shielding material in accordance with the cable manufacturer's recommendations.

When acceptable to the cable manufacturer, it is permissible to use either the scrap screening tape removed from the cable during the sheath opening process provided the screening tape is edge coated or new pressure sensitive aluminum foil tape over polyethylene tape.

(14) Service wire connections. (i) Buried service wires may be spliced directly to cable conductors inside pedestals using the same techniques required for branch cables. Buried service wires may also be terminated on terminal blocks inside pedestals in areas where high service order activity or fixed count cable administration policies require terminal blocks. However, only RUS accepted terminal blocks equipped with grease or gel filled terminations to provide moisture and corrosion resistance shall be used.

(ii) Only filled terminal blocks having RUS acceptance shall be used on aerial service wire connections.

(15) Copper cable testing. Copper cable testing shall be performed in accordance with RUS Bulletin 345-63, "RUS Standard for Acceptance Tests and Measurements of Telephone Plant," PC-4, (Incorporated by reference at §1755.97).

(16) Cable acceptance. Installed cable shall be tested and pass the inventory and acceptance testing specified in the Telephone System Construction Contract (Labor and Materials), RUS Form 515. The tests and inspections shall be witnessed by the borrower's resident project representative. All conductors shall be free from grounds, shorts, crosses, splits, and opens.

(d) Splice arrangements for copper cables—(1) Service distribution closures. (i)
Ready access closures permit cable splicing activities and the installation of filled terminal blocks for service wire connections in the same closure. Ready access designs shall allow service technicians direct access to the cable core as well as the terminal block.

(ii) Fixed count terminals shall restrict service technician access to the cable core. Predetermined cable pairs shall be spliced to the terminal leads or stub cable in advance of service assignments.

(2) Aerial splices. Aerial splice cases accommodate straight splices, branch splices, load coils, and service distribution terminals. Aerial splicing arrangements having more than 4 cables spliced in the same splice case are not recommended. Stub cabling to a second splice case to avoid a congested splice is acceptable.

(3) Buried splices. (i) Direct buried splice cases accommodate straight splices, branch splices, and load coils. Direct buried splices shall be filled and shall be used only when above ground splicing in pedestals is not practicable.

(ii) A treated plank or equivalent shall be placed 15 cm (6 in.) above the buried splice case to prevent damage to the splice case from future digging. Where a firm base for burying a splice cannot be obtained, a treated plank or equivalent shall be placed beneath the splice case.

(iii) Each buried splice shall be identified for future locating. One method of marking the splice point is the use of a warning sign. Another method is the burying of an electronic locating device.

(4) BD-type pedestals. (i) BD-type pedestals are housings primarily intended to house, organize, and protect cable terminations incorporating splice connectors, ground lugs, and load coils. Activities typically performed in pedestals are cable splicing, shield bonding and grounding, loading, and connection of subscriber service drops.

(ii) The recommended splice capacities for BD-type pedestals are shown in Table 5. However, larger size pedestals are permissible if service requirements dictate their usefulness. Table 5 is as follows:

Table 5.—Splice Capacities for BD-Type Pedestals

<table>
<thead>

</tr>
</tbody>
</table>

Note 1: This table refers to load coil cases that are to be direct buried with stub cables extending into the pedestal for splicing. Requirements involving individual coil arrangements inside the pedestal should be engineered on a case-by-case basis.

(iii) Special distribution pedestals having a divider plate for mounting filled terminal blocks are available. Distribution pedestals are also equipped with service wire channels for installation of buried service wires without disturbing the cabling and gravel inside the base of the pedestal. Distribution pedestals are recommended in locations where the connection of service wires is required.

(5) Large pair count splice housings. Large pair count splice housings are recommended for areas not suitable for manholes. The recommended capacities are shown in Table 6:

Table 6.—Splice Capacities for Large Count Housings

<td>5,000 Pair</td>
</tr>
</tbody>
</table>

(6) Pedestal restricted access inserts. Restricted access inserts may be used to protect splices susceptible to unnecessary handling where subsequent work activities are required or expected to occur after splices have been completed. Restricted access inserts also provide moisture protection in areas susceptible to temporary flooding. A typical restricted access insert is shown in Figure 1.
(7) Serving Area Interface (SAI) Systems. SAI systems provide the cross-connect point between feeder and distribution cables. Connection of feeder to distribution pairs is accomplished by placing jumpers between connecting blocks. Only RUS accepted connecting blocks having grease or gel filled terminations to provide moisture and corrosion resistance shall be used.

(8) Buried cable splicing arrangements. Typical buried cable splicing arrangements are illustrated in Figures 2 through 5.
FIGURE 2
SERVICE WIRE CONNECTION TO BURIED CABLE

Note: See Figures 13 through 16 for cable tags, tie wraps, and bonding and grounding details.
FIGURE 3
TYPICAL SPLICE USING SINGLE PAIR CONNECTORS

Note: Cable tags, bonding and grounding details, and plastic tie wraps have been omitted for clarity. See Figures 13 through 16 for cable tags, tie wraps, and bonding and grounding details.
FIGURE 4

LARGE SPLICE USING MULTIPLE PAIR CONNECTORS

Splice Bundles → Splice Support Bar

Splice Housing → Multiple Pair Connectors

Note: Cable tags, bonding and grounding details, and plastic tie wraps have been omitted for clarity. See Figures 13 through 16 for cable tags, tie wraps, and bonding and grounding details.
(9) Underground splice cases (manholes). Underground splice cases accommodate straight splices, branch splices, and load coils. Underground splices shall be filled.

(10) Central office tip cable splices. (i) Filled cable or filled splices are not recommended for use inside central offices, except in cable vault locations. Outside plant cable sheath and cable filling compound are susceptible to fire and will support combustion. Fire, smoke, and gases generated by these materials during burning are detrimental to telephone switching equipment. (ii) Tip cables should be spliced in a cable vault. However, as a last resort, tip cables may be spliced inside a central office if flame retardant splice cases or a noncombustible central office splice housing is used to contain the splice. (iii) Splices inside the central office shall be made as close as practical to the point where the outside plant cables enter the building. Except in cable

Note: Cable tags, bonding and grounding details, and plastic tie wraps have been omitted for clarity. See Figures 13 through 16 for cable tags, tie wraps, and bonding and grounding details.
vault locations, outside plant cables within the central office shall be wrapped with fireproof tape or enclosed in noncombustible conduit.

(e) Splicing considerations for fiber optic cables—(1) Connection characteristics. Splicing efficiency between optical fibers is a function of light loss across the fiber junctions measured in decibels (dB). A loss of 0.2 dB in a splice corresponds to a light transmission efficiency of approximately 95.5 percent.

(2) Fiber core alignment. Fiber splicing techniques shall be conducted in such a manner that the cores of the fibers will be aligned as perfectly as possible to allow maximum light transmission from one fiber to the next. Without proper alignment, light will leave the fiber core and travel through the fiber cladding. Light outside the fiber core is not a usable light signal. Core misalignment is illustrated in Figure 6:

![Figure 6: Core Misalignment](image)

(3) Splice loss. (i) Splice loss can also be caused by fiber defects such as non-identical core diameters, cores not in center of the fiber, and noncircular cores. Such defects are depicted in Figure 7:
(ii) Undesirable splice losses are caused by poor splicing techniques including splicing irregularities such as improper cleaves and dirty splices. Typical cleave problems are illustrated in Figure 8:
(4) Handling precautions. The following precautions shall be observed:

(i) Avoid damaging the cable during handling operations prior to splicing. Minor damage may change the transmission characteristics of the fibers to the extent that the cable section will have to be replaced;

(ii) The cable manufacturer's recommendations concerning pulling tension shall be observed. The maximum pulling tension for most fiber optic cable is 2669 newtons (600 pound-force);

(iii) The cable manufacturer's recommendations concerning bending radius shall be observed. Unless the cable manufacturer's recommendation is more stringent, the minimum bending radius for fiber optic cable shall be 20 times the cable diameter;

(iv) The cable manufacturer's recommendations concerning buffer tube bending radius shall be observed. Unless the cable manufacturer's recommendation is more stringent, the minimum bending radius for buffer tubes is usually between 38 millimeters (mm) (1.5 in.) and 76 mm (3.0 in.). The bending limitations on buffer tubes are intended to prevent kinking. Buffer tube kinking may cause excessive optical loss or fiber breakage; and

(v) Handle unprotected glass fibers carefully to avoid introducing flaws such as scratched or broken fibers.

(5) Personnel safety. The following safety precautions shall be observed:

(i) Safety glasses shall be worn when handling glass fibers;
(ii) Never view open-ended fibers with the naked eye or a magnifying device. Improper viewing of a fiber end that is transmitting light may cause irreparable eye damage; and

(iii) Dispose of bare scrap fibers by using the sticky side of a piece of tape to pick up and discard loose fiber ends. Fiber scraps easily penetrate the skin and are difficult to remove.

(6) Equipment requirements. (i) Fiber optic splices shall be made in areas where temperature, humidity, and cleanliness can be controlled. Both fusion and mechanical splicing techniques may require a splicing vehicle equipped with a work station that will allow environmental control.

(ii) Both fusion and mechanical splicing techniques are permitted on RUS financed projects. When using the mechanical splicing technique, only RUS accepted mechanical fiber optic splice connectors can be used.

(iii) Fusion splicing machines shall be kept in proper working condition. Regular maintenance in accordance with the machine manufacturer's recommendations shall be observed.

(iv) Mechanical splicing tools shall be in conformance with the tool manufacturer's recommendations.

(v) An optical time domain reflectometer (OTDR) shall be used for testing splices. The OTDR shall be stationed at the central office or launch point for testing individual splices as they are made and for end-to-end signature tests for the fiber optic link.

(vi) An optical power meter shall be used for end-to-end cable acceptance tests.

(vii) A prerequisite for the successful completion of a fiber optic splicing endeavor is the presence of a talk circuit between the splicing technician in the splicing vehicle and the operator of the OTDR in the central office. The splicing technician and the OTDR operator shall have access to communications with each other in order to inform each other as to:

(A) Which splices meet the loss objectives;

(B) The sequence in which buffer tubes and fibers are to be selected for subsequent splicing operations; and

(C) The timing required for the performance of OTDR testing to prevent making an OTDR test at the same time a splice is being fused.

(7) Cable preparation. (i) Engineering work prints shall prescribe the cable slack needed at splice points to reach the work station inside the splicing vehicle. Consideration should be given to the slack required for future maintenance activity as well as initial construction activities. The required slack may be different for each splice point, depending on the site logistics. However, the required slack is seldom less than 15 meters (50 feet). The amount of slack actually used shall be recorded for each splice point to assist future maintenance and restoration efforts.

(ii) The splice case manufacturer's recommendations concerning the amount of cable sheath to be removed shall be followed to facilitate splicing operations. The length of the sheath opening shall be identified with a wrap of plastic tape.

(iii) If the cable contains a rip cord, the cable jacket shall be ring cut approximately 15 cm (6 in.) from the end and the 15 cm (6 in.) of cable jacket shall be removed to expose the rip cord. The rip cord shall be used to slit the jacket to the tape mark.

(iv) If the cable does not contain a rip cord, the cable jacket shall be slit using a sheath splitter. No cuts shall be made into the cable core nor shall the buffer tubes be damaged.

(v) If the cable contains an armor sheath, the outer jacket shall be opened along the slit and the jacket shall be removed exposing the armor sheath. The armor shall be separated at the seam and pulled from the cable exposing the inner jacket. The armor shall be removed making allowances for a shield bond connector. The cable core shall not be damaged nor shall there be any damage to the buffer tubes. The jacket shall be peeled back and cut at the end of the slit. The exposed buffer tubes shall not be cut, kinked, or bent.

(vi) After the cable sheath has been removed, the binder tape shall be removed from the cable. The cable shall not be crushed or deformed.

(vii) The buffer tubes shall be unstranded one at a time. The buffer tubes shall not be kinked.
§ 1755.200

(viii) If the cable is equipped with a strength member, the strength member shall be cut to the length recommended by the splice case manufacturer.

(ix) Each buffer tube shall be inspected for kinks, cuts, and flat spots. If damage is detected, an additional length of cable jacket shall be removed and all of the buffer tubes shall be cut off at the point of damage.

(x) The cable preparation sequence shall be repeated for the other cable end.

(8) Shield bonding and grounding. For personnel safety, the shields and metallic strength members of the cables to be spliced shall be bonded together and grounded before splicing activities are started. (See paragraphs (g)(4), and (g)(5)(i) through (g)(5)(iii) of this section for final bonding and grounding provisions).

(9) Fiber optic color code. The standard fiber optic color code for buffer tubes and individual fibers shall be as shown in Table 7:

<table>

(10) Buffer tube removal. (i) The splice case manufacturer’s recommendation shall be followed concerning the total length of buffer tube to be removed. Identify the length to be removed with plastic tape.

(ii) Experiment with a scrap buffer tube to determine the cutting tool adjustment required to ring cut a buffer tube without damaging the fibers.

(iii) Buffer tubes shall be removed by carefully ring cutting and removing approximately 15 to 46 cm (6 to 18 in.) of buffer tube at a time. The process shall be repeated until the required length of buffer tube has been removed, including the tape identification marker.

(11) Coated fiber cleaning. (i) Each coated fiber shall be cleaned. The cable manufacturer’s recommendations shall be followed concerning the solvent required to clean the coated fibers. Reactive grade isopropyl alcohol is a commonly used cleaning solvent.

(ii) A tissue or cotton ball shall be soaked in the recommended cleaning solvent and the coated fibers shall be carefully wiped one at a time using a clean tissue or cotton ball for each coated fiber. Caution shall be exercised to avoid removing the coloring agent from the fiber coating.

(12) Fiber coating removal. (i) Fiber coatings shall be removed. In accordance with the splicing method used, the splice case manufacturer’s recommendation shall be followed concerning the length of fiber coating to be removed.

(ii) The recommended length of fiber coating shall be removed only on the two fibers to be spliced. Fiber coating removal shall be performed on a one-fiber-at-a-time basis as each splice is prepared.

(13) Bare fiber cleaning. After the fiber coating has been removed, the bare fibers shall be cleaned prior to splicing. Each fiber shall be wiped with a clean tissue or cotton ball soaked with the cleaning solvent recommended by the cable manufacturer. The bare fiber shall be wiped one time to minimize fiber damage. Aggressive wiping of bare fiber shall be avoided as it lowers the fiber tensile strength.

(14) Fiber cleaving. Cleaving tools shall be clean and have sharp cutting edges to minimize fiber scratches and improper cleave angles. Cleaving tools that are recommended by the manufacturer of the splicing system shall be used.

(15) Cleaved fiber handling. The cleaved and cleaned fiber shall not be allowed to touch other objects and
shall be inserted into the splicing device.

(16) Completion of the splice. (i) In accordance with the method of splicing selected by the borrower, the splice shall be completed by either fusing the splice or by applying the mechanical connector.

(ii) Each spliced fiber shall be routed through the organizer tray one at a time as splices are completed. The fibers shall be organized one at a time to prevent tangled spliced fibers. The splice case manufacturer’s recommendation shall be followed concerning the splice tray selection.

(18) Cable acceptance. Installed cable shall be tested and pass the inventory and acceptance testing specified in the Telephone System Construction Contract (Labor and Materials), RUS Form 515. The tests and inspections shall be witnessed by the borrower’s resident project representative.

(f) Splice arrangements for fiber optic cables—(1) Aerial splices. Cable slack at aerial splices shall be stored either on the messenger strand, on the pole, or inside a pedestal at the base of the pole. A typical arrangement for the storage of slack cable at aerial splices is shown in Figure 9.
(2) Buried splices. Buried splices shall be installed in handholes to accommodate the splice case and the required splicing slack. An alternative to the handhole is a pedestal specifically designed for fiber optic splice cases. Typical arrangements for buried cable splices are shown in Figures 10 and 11.
FIGURE 10
BURIED SPLICE STORED INSIDE HANDHOLE

Note: Ground wires omitted for clarity. See Figure 19 for bonding and grounding details.
(3) Underground manhole splices. Underground splices shall be stored in manholes on cable hooks and racks fastened to the manhole wall. The cable slack shall be stored on cable hooks and racks as shown in Figure 12.
(4) Central office cable entrance. (i) Filled cable or filled splices are not recommended for use inside central offices except in cable vault locations. Outside plant cable sheath and cable filling compound are susceptible to fire and will support combustion. Fire, smoke, and gases generated by these materials during burning are detrimental to telephone switching equipment.

(ii) As a first choice, the outside plant fiber optic cable shall be spliced to an all-dielectric fire retardant cable in a cable vault with the all-dielectric cable extending into the central office and terminating inside a fiber patch panel.

(iii) As a second choice, the outside plant cable may be spliced inside the central office if a flame retardant fiber optic splice case or a noncombustible central office splice housing equipped with organizer trays is used to contain the splice.

(iv) In cases referenced in paragraphs (f)(4)(ii) and (f)(4)(iii) of this section, as a minimum the fire retardant all-dielectric cable used to provide the connection between the cable entrance splice and the fiber patch panel shall be listed as Communication Riser Cable (Type CMR) in accordance with Sections 800-50 and 800-51(b) of the 1993 National Electrical Code.

(v) Splices inside the central office shall be made as close as practicable to the point where the outside plant cables enter the building. Except in cable
§ 1755.200

vault locations, outside plant cables within the central office shall be wrapped with fireproof tape or enclosed in noncombustible conduit.

(g) Bonding and grounding fiber optic cable, copper cable, and copper service wire—

(1) Bonding. Bonding is electrically connecting two or more metallic items of telephone hardware to maintain a common electrical potential. Bonding may involve connections to another utility.

(2) Copper cable shield bond connections. (i) Cable shields shall be bonded at each splice location. Only RUS accepted cable shield bond connectors shall be used to provide bonding and grounding connections to metallic cable shields. The shield bond connector manufacturer's instructions shall be followed concerning installation and use.

(ii)(A) Shield bonding conductors shall be either stranded or braided tinned copper wire equivalent to a minimum No. 6 American Wire Gauge (AWG) and shall be RUS accepted. The conductor connections shall be tinned or of a compatible bimetallic design to avoid corrosion problems associated with dissimilar metals. The number of shield bond connectors required per pair size and gauge shall be as shown in Table 8:

<table>

</tr>
</tbody>
</table>

(B) It is permissible to strap across the shield bond connectors of several cables with a single length of braided wire. However, both ends of the braid shall be terminated on the pedestal ground bracket to provide a bonding loop. Shield bond connection methods for individual cables are shown in Figures 13 through 15, and the bonding of several cables inside a pedestal using the bonding loop is shown in Figure 16.

(3) Buried service wire shield bond connections. Buried service wire shields shall be connected to the pedestal bonding and grounding system. Typical buried service wire installations are shown in Figures 17 and 18. In addition to the methods referenced in Figures 17 and 18, the shields of buried service wires may also be connected to the pedestal bonding and grounding system using buried service wire bonding harnesses listed on Page 3.3.1, Item "gs-b," of RUS Bulletin 1755I-100. RUS Bulletin 1755I-100 may be purchased from the...
Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. When those harnesses are used they shall be installed in accordance with the manufacturer's instructions. Figures 17 and 18 are as follows:

FIGURE 17
GROUNDING SERVICE WIRE SHIELDS USING SERVICE WIRE CLAMP

Note: Provide a loop in service drops to allow for movement of the drops without damage to the grounding connection.
(4) Fiber optic cable bond connections.
   (i) The cable shield and metallic strength members shall be bonded at each splice location. Only RUS accept-
   ed fiber optic cable shield bond connectors shall be used to provide bonding connections to the metallic cable
   shields. The shield bond connector manufacturer’s instructions shall be followed concerning installation and
   use.
   (ii) Shield bonding conductors shall be either stranded or braided tinned copper wire equivalent to a minimum
   No. 6 American Wire Gauge (AWG) and shall be RUS accepted. The conductor connections shall be tinned or of a
   compatible bimetallic design to avoid corrosion problems associated with dis-
   similar metals.

(5) Grounding.
   (i) Grounding is ele-
   trically connecting metallic telephone hardware to a National Electrical Safety Code (NESC) acceptable grounding
   electrode. Acceptable grounding elec-
   trodes are defined in the Rule 99A of
   the NESC.
(ii) The conductor used for grounding metallic telephone hardware shall be a minimum No. 6 AWG solid, bare, copper conductor.

(iii) For copper and fiber optic cable plant, all cable shields, all metallic strength members, and all metallic hardware shall be:

(A) Grounded at each splice location to a driven grounding electrode (ground rod) of:

1. At least 1.5 meters (5 feet) in length where the local frost level is normally less than 0.30 meters (1 foot) deep; or

2. At least 2.44 meters (8 feet) in length where the local frost level is normally 0.30 meters (1 foot) or deeper; and

(B) Bonded to a multi-grounded power system neutral when the splice is within 1.8 meters (6 feet) of access to the grounding system of the multi-grounded neutral system. Bonding to the multi-grounded neutral of a parallel power line may help to minimize telephone interference on long exposures with copper cable plant. Consideration, thus, should be given to completing such bonds, at least four (4) times each mile, when splices are greater than 1.8 meters (6 feet) but less than 4.6 meters (15 feet) from access to the multi-grounded neutral.

(6) Bonding and grounding splice cases.

(i) Splice cases are equipped with bonding and grounding devices to ensure that cable shields and metallic strength members maintain electrical continuity during and after cable splicing operations. The splice case manufacturer's recommendations shall be followed concerning the bonding and grounding procedures. Conductors used for bonding shall be either stranded or braided tinned copper wire equivalent to 6 AWG. Conductors used for grounding shall be a solid, bare, copper wire equivalent to minimum No. 6 AWG.

(ii) Buried splice cases installed in either handholes or pedestals shall be grounded such that the cable shield grounds are attached to a common ground connection that will allow the lifting of a ground on the cable shield in either direction to permit efficient cable locating procedures. As a first choice, buried grounding conductor(s) shall be bare. However, if two or more grounding conductors are buried in the s they shall be insulated to avoid shorts when a locating tone is applied.

(iii) A typical bonding and grounding method for fiber optic splices is shown in Figure 19.
(7) Bonding and grounding central office cable entrances. The RUS Telecommunications Engineering and Construction Manual (TE&CM) Section 810 provides bonding and grounding guidance for central office cable entrances. Splicing operations shall not be attempted before all metallic cable shield and strength members are bonded and grounded.

[60 FR 5097, Jan. 26, 1995; 60 FR 9079, Feb. 16, 1995]
§§ 1755.201—1755.216 [Reserved]

§ 1755.217 Postloan engineering services contract, RUS Form 217.

Engineering services provided for major construction are to be covered by the Postloan Engineering Services Contract, RUS Form 217. The requirements and procedures for the use of this contract are contained in 7 CFR 1753.17.

**POSTLOAN ENGINEERING SERVICES CONTRACT—TELECOMMUNICATIONS SYSTEMS**

AGREEMENT made ______, ______, between ______________________ (hereinafter called the “Owner”) and ______________________ (hereinafter called the “Engineer”).

In consideration of the mutual undertakings herein contained, the parties hereto agree as follows:

Section 1. Definitions. For purposes of this Agreement the following definitions shall be used:

**Administrator.** The Administrator of RUS or personnel delegated authority to act for the Administrator.

**Borrower’s Environmental Report.** An environmental study as described in 7 CFR 1794. For the purposes of this Agreement, this is the level of environmental review as described in 7 CFR 1794 required for the Project by RUS. In most cases of telecommunications construction, this will be a Borrower’s Environmental Report.

**Contractor.** A provider of goods or services for the Project, other than the Engineer.

**Construction Administration.** The coordination of construction activities.

**Construction Drawings.** The drawings developed through the Staking used to guide the construction of outside plant facilities.

**Cut Sheets.** The complete and sequential plans for Cutover.

**Cutover.** The orderly integration of new facilities with existing facilities.

**Description of Project.** The work and facilities listed by principal subdivisions in Table 1.

**Inspect.** To monitor and examine the work of the Contractor, compare the work to the contract, and note the details and quantities of construction on records and progress reports.

**Inspector.** A competent representative of the Engineer who inspects construction and reports compliance or noncompliance to the Resident.

**Loan Design.** Supplemental information which supports a loan application, as described in 7 CFR 1737.32.

**Marker.** A physical indicator at the construction site to guide the Contractor in construction of facilities.

**Project.** The telecommunications construction and procurements financed by a particular RUS loan.

**Resident.** The competent representative of the Engineer who is delegated full time “on site” Construction Administration responsibilities of the Engineer.

**Staking.** The determination of the approximate location of the facilities to be placed and creation of schematic drawings which show the facilities located with respect to the physical terrain.

**Work Sector.** A localized portion of the Project.

Section 2. General

2.01 Financing of the Project. All or part of the financing of the Project, including costs of materials, construction, installation, and engineering, shall be by a loan administered by RUS.

If the Project is financed in part by the Rural Telephone Bank, an agency of the United States of America, the references in this Agreement to “The United States of America” and to the “Government” shall mean the “Rural Telephone Bank” and the “Government” shall mean the “Rural Telephone Bank” as well. If the Project is financed wholly by the Rural Telephone Bank, the references to “The United States of America” and to the “Government” shall mean the “Rural Telephone Bank” and the references to the “Administrator” shall mean the “Governor” of the Rural Telephone Bank.

2.02 Compliance with Regulations. The objective of this Agreement is for the Owner to obtain engineering assistance in completing a Project, while complying with RUS postloan construction regulations. The Engineer shall, therefore, perform all engineering services requested by the Owner hereunder, and render engineering advice and assistance, so as to enable the Owner to comply with 7 CFR Part 1753 and other applicable RUS regulations.

2.03 General Obligation. The Engineer shall, consistent with sound professional practices, diligently and competently render the engineering services required in this Agreement. These engineering services shall be reasonably necessary or advisable for the expeditious, economical, and sound design and construction of the Project listed in Table 1 by means of the services described in this agreement and its attachments. The Engineer shall also render other preparatory work as is necessary to place such portion of the Project in service, except where such duties are excluded from the terms of this Agreement. The enumeration of specific duties and obligations to be performed by the Engineer and included herewith, shall not be construed to limit the foregoing general undertaking of the Engineer, with reference to such portion of the Project.
Section 3. Miscellaneous

3.01 Insurance. The Engineer shall take out and maintain throughout the contract period the minimum insurance as required in Subpart C of 7 CFR part 1788 in effect at the date of this Agreement.

3.02 Project Schedule. The Engineer shall prepare a work plan and schedule with the Owner, a work and progress report schedule to facilitate coordination of activities for Cutover of the Owner's Project. The Engineer shall report progress to the Owner monthly during all times when one or more contracts are open.

3.03 Plans and Specifications. Complete sets of plans and specifications, drawings, maps and other engineering documents as required for the construction of the Project (all of the foregoing being herein sometimes collectively called the "plans and specifications"), shall be prepared by the Engineer, pursuant to the various attachments to this Agreement, and made a part hereof.

3.04 Scope of Services. The Engineer shall not be obligated to perform any services for the Project or any part thereof except to the extent that the Project as defined in Table 1, (or the parts thereof and the services related thereto) are delineated in (1) the attachments to this Agreement and (2) the plans and specifications approved by the Owner and the Administrator, as they may be amended from time to time, prepared pursuant to this Agreement.

3.05 Standards. All maps, drawings, plans, specifications, estimates, studies and other engineering documents prepared or submitted by the Engineer under this Agreement shall conform to the applicable standard specifications and other forms prescribed by the Administrator and in effect at the date of this Agreement.

3.06 Termination by Owner. The Owner may at any time terminate this Agreement by giving notice to the Engineer, in writing, to that effect not less than thirty (30) days prior to the effective date of termination specified in this notice. Such notice shall be deemed given if delivered or mailed to the last known address of the Engineer. From and after the effective date specified in such notice this Agreement shall be terminated.

When termination is initiated by the Owner, compensation for services hereunder shall be computed as far as possible in accordance with the provisions of the applicable attachment to this Agreement. To the extent that such provisions of any such attachment cannot be applied because construction is incomplete at the effective date of such termination, the Engineer shall be paid for engineering services in respect to such incomplete construction, a sum which shall bear the same ratio to the compensation which would have been payable under the provisions of any such attachment to this Agreement, if such construction had been completed. If requested by the Owner, the Engineer shall submit to the Owner in duplicate a certified statement of the Engineer's actual expenses in respect of such incomplete construction. All compensation invoiced by the Engineer and payable under this paragraph shall be due and payable thirty (30) days after the approval by the Owner and the Administrator of the amount due. In any case, compensation shall be due 30 days after the date Project documentation is delivered to the Owner under paragraph 3.08 of this Agreement.

3.07 Termination by the Engineer. The Engineer shall have the right, by giving to the Owner not less than thirty (30) days notice in writing, to terminate this Agreement if the Owner shall have been prevented by conditions beyond the control and without the fault of the Engineer: (i) from commenc ing performance of this Agreement for a period of twelve (12) months from the date of this Agreement; or (ii) from proceeding with the completion of full performance of any remaining services, required of the Engineer pursuant to this Agreement, for a period of six (6) months from the date of last performance by the Engineer of other services required pursuant to this Agreement. From and after the effective date specified in such notice this Agreement shall be terminated, except that the Engineer shall be entitled to receive compensation for services performed hereunder, computed and payable in the same manner as set forth in paragraph 3.06. 3.08 Project Documents. Upon final payment by the Owner to the Engineer in accordance with the Statement of Engineering Fees, RUS Form 506, the following documents in final form become the property of the Owner and may be used by the Owner for Project operation and future development:

1. "Final record" system maps, in master form (electronic or original hard copy)
2. Cable schematics
3. Construction sheets
4. Cable assignment sheets
5. All contract documents including attached plans and specifications and final inventories.

All other documents and engineering records, including preliminary forms of the above documents, remain the property of the Engineer.

Upon termination of this Agreement the Engineer shall deliver to the Owner at a mutually agreeable place within 5 working days after the date of termination all Project documents (electronic or original hard copy) including records, map tracings, plans and specifications, test data, and field notes.
§ 1755.217

Rural Utilities Service, USDA

If requested by the Owner upon completion of the Project, the Engineer shall deliver to the Owner those documents which are the Owner’s property, at a mutually agreed upon price.

3.09 Employee’s Qualifications. The obligations and duties to be performed by the Engineer under this Agreement shall be performed by persons qualified to perform such duties efficiently. The Engineer, if the Owner shall so direct, shall promptly replace any Resident or other person employed by the Engineer in connection with the Project.

For information of the Owner and the Administrator, the Engineer shall file with the Owner statements signed by the Engineer of the qualifications, including resumes of specific experience, and the duties to be assigned to each Resident, Inspector and such other personnel assigned to the Project as may be requested by the Owner and Administrator.

The term Resident and Inspector, as used in this Agreement, shall mean a person properly trained and experienced to perform the services required under the terms of this Agreement, and does not mean that the person performing those duties must be a licensed or a registered professional engineer.

3.10 License. The Engineer shall comply with all applicable statutes pertaining to engineering and warrants that (Fill in name of individual) who shall be in responsible charge of the Project possesses license number ______ issued by the State of ______ on the ______ day of ______.

3.11 Payments of Engineer’s Employees. For each invoice the Engineer, if requested by the Owner, shall furnish to the Owner as a prior condition to payment, a certificate to the effect that all salaries or wages earned by the employees of the Engineer in connection with the Project have been fully paid by the Engineer up to and including a date not more than thirty (30) days prior to the date of such invoice. Before final payment under this Agreement the Engineer shall furnish to the Owner a certificate that all of the employees of the Engineer have been paid for services rendered by them in connection with the Project, and that all other obligations which might become a lien upon the Project have been paid.

3.12 Engineer’s Records. The Owner and the Administrator shall have the right to inspect and audit all payrolls, records, and accounts of the Engineer relevant to the work performed for the purposes of this Agreement and the Engineer agrees to provide all reasonable facilities necessary for such inspection and audit.

3.13 Compensation. For the purpose of this Agreement, compensation for each type of work covered by the attachments and thereby made a part of this Agreement shall be as outlined in said attachments except where compensation is listed as being a ‘time and expense’ basis, in which case the rates in Table 2 attached hereto (or as subsequently modified by approved amendments to this Agreement) shall apply.

3.14 Taxes. Any taxes or levies (excluding Federal, State, and local income taxes) which may be assessed against the Engineer for services performed or payments for services performed by the Engineer per this Agreement shall be in addition to the compensation set forth in the attachments to this Agreement. Such taxes or levies when paid by the Engineer shall be stated separately on all invoices and paid by the Owner.

3.15 Interest. Interest at the rate of percent (%) per annum shall be paid by the Owner to the Engineer on any unpaid balance due the Engineer, commencing thirty (30) days after the receipt of the Engineer’s invoice, provided that the delay in payment beyond such time shall not have been caused by any conditions within the control of the Engineer. Such interest shall be paid ten (10) days after the amount of interest has been determined by the Engineer and the Owner. The start date of interest accrual is irrespective of the date of the Owner’s approval of the invoice, but the interest computation shall be based on the invoice approved by the Owner.

3.16 Non-Assignment. The obligations of the Engineer under this Agreement shall not be assigned without the approval in writing of the Owner and the Administrator.

3.17 Attachments. The following listed attachments, when checked in appropriate boxes, are attached to and made a part of this contract, by this reference:

- RUS Form 217a—Project Design, Assistance and Coordination;
- RUS Form 217b—Central Office Equipment Engineering Services;
- RUS Form 217c—Transmission Facilities Engineering Services;
- RUS Form 217d—Building Engineering Services;
- RUS Form 217e—Outside Plant Staking Services;
- RUS Form 217f—Outside Plant Contract Document Phase Engineering Services; and
- RUS Form 217g—Outside Plant Construction Phase Engineering Services.

3.18 Service Addition. When a service listed in paragraph 3.17 above is added to this contract after execution, an amendment to the contract is required.

3.19 Engineering Fee. The Engineer shall provide an initial estimate, monthly updates and a final statement of engineering fees using RUS Form 506, Statement of Engineering Fees, or a facsimile thereof. Where a fixed amount or percentage is used in the attachments checked in section 3.17 above, the same fixed amount or percentage shall be used in the statement of engineering fees.
§ 1755.217

3.20 Contract Amendment. When the total engineering fee exceeds the initial contract estimate by 20% or more, an amendment to the contract shall be required as set forth in 7 CFR Part 1753.

3.21 Compensation for Corrections. No compensation shall be due or payable to the Engineer, pursuant to this Agreement, for any engineering services performed by the Engineer in connection with effecting of corrections to the design or construction of the Project, when such corrections are required as a direct result of failure by the Engineer to properly fulfill one or more of the Engineer’s obligations as set forth in this Agreement.

3.22 Force Majeure. The Engineer shall not be held responsible for Project delays which are a result of Owner delays, Contractor delays or acts of God. The Engineer shall not be entitled to additional compensation unless the delays are the result of the Owner’s negligence.

3.23 Contract Beneficiaries. Nothing under this Agreement shall be construed to give any rights or benefits in this Agreement to anyone other than the Owner, the Engineer and the Administrator, and all duties and responsibilities undertaken pursuant to this Agreement shall be for the sole and exclusive benefit of the Owner, Engineer and Administrator and not for the benefit of any other party. This paragraph does not relieve the Engineer of any obligation or responsibilities conferred upon licensed engineers under State law.

3.24 Addenda. Any addenda required for this contract should be placed before Table 1. Upon completion of all services covered by this Contract, the Engineer shall execute the Statement of Engineering Fees, RUS Form 506, and submit copies to the Owner as prescribed under 7 CFR 1753 Subpart B.

In witness whereof, the parties hereto have caused this Agreement to be duly executed.

TABLE 2.—SCHEDULE OF TIME, EXPENSE AND EQUIPMENT USAGE RATES, DATED ______
1. Time Rates. Includes all costs associated with the employees except for those itemized in Paragraph 2, below.
Job Classification and Employee Name, if Known
Hourly Billing Rate ______ (Attached supplemental sheet, as required)

2. Expense Rates. These shall include subsistence expense, if any, paid to (or on behalf of) employees; plus reasonable employee transportation costs; plus the cost of printing (including mailing and transportation expenses), telephone, facsimile, and other materials and equipment related to the Project.

3. Test Equipment and Computer Usage Rates.
Description of Equipment
Hourly Billing Rate ______ (Attached supplemental sheet, as required)

4. Review of Rates. To the extent that the completion date of the Agreement, to which this Table 2 applies, shall extend 12 months beyond the date when this Agreement is originally executed; and on each subsequent anniversary of such Agreement this schedule of rates shall be verified or modified in writing by the Parties, to new rates mutually agreeable to the Parties to such Agreement, until Completion or Termination of such Agreement as provided therein.

5. Information for Owner. With each invoice for payment, the Engineer shall furnish the Owner information of the type outlined in a jointly approved format similar to that shown in Exhibit A.

6. Compensation Payment. Unless otherwise specified in this Agreement, compensation payable pursuant to Table 2 shall be due and payable ten (10) days after approval of the Owner of the service performed and the invoice of the Engineer, including the detail breakdown of the cost by the portion of the Project and section of the contract for which the service was performed. The Engineer shall be notified, within ten (10) days of receipt of invoices, of any discrepancies which require correction or addition as precedent for payment of such invoices by the Owner.

### CERTIFICATE OF ENGINEER

(Complete for Final Statement Only)

1. _______________, certify that (I) I am the ____________________________ of ____________________________, the Engineer in a contract entered into between the Engineer and the Owner, for engineering services in a rural telecommunications Project, which Project bears the Rural Utilities Service Project designation ____________________________; and that (2) this is a true and correct statement of the facts due under the terms of the engineering service contract, and that (3) all persons employed by the Engineer in connection with the engineering on the Project have been paid in full.

---

RUS Form 506 (Rev 12-96)
necessary the Loan Design and Borrower’s Environmental Report; (2) prepare or revise as necessary the outside plant design; (3) make measurements and analyses of existing traffic; (4) make tests of existing cable, including the determination of field locations for treatment of existing facilities associated with installation of carrier equipment; and (5) submit the resulting Loan Design and Borrower’s Environmental Report to the Owner in a format suitable for approval by the Administrator.

Section 4. Plant Records. The Owner shall furnish to the Engineer current and accurate plant records. If such records are not available the Owner may direct the Engineer to update existing records to current status. This may include conversion of existing records to a new medium.

Section 5. Compensation. The Owner shall pay the Engineer for services performed pursuant to this RUS Form 217a the “time and expense” compensation as defined in Table 2 of this Agreement.

Section 6. Section Reference. Unless otherwise specified or indicated, any reference to “section” shall mean within this attachment (RUS Form 217a—Project Design, Assistance and Coordination).

ATTACHMENT—FORM 217B
Central Office Equipment Engineering Services

Section 1. Review of Requirements. Prior to the preparation of plans and specifications, the Engineer shall review with the Owner the current and future requirements of the Project, in respect to central office equipment additions, replacements, modifications or complete new offices. The Engineer, to the extent requested by the Owner, shall prepare such studies as the Owner may require to support the selection by the Owner of the final design plan.

Section 2. Plans and Specifications and Contracts.
A. Preparation of Plans and Specifications. Plans and specifications shall be prepared by the Engineer in accordance with standard RUS specifications and requirements for central office equipment, and shall be submitted to the Owner in a format suitable for approval by the Administrator.
B. Bidders Qualifications. The Engineer shall review with the Owner all Bidder qualifications and shall prepare and furnish to the qualified bidders the plans and specifications upon the conditions provided in the applicable standard RUS contract forms and in accordance with 7 CFR Part 1253.
C. Bid or Proposal. The Engineer shall be available to each prospective bidder for consultation with respect to the details of the plans and specifications and all other matters pertaining to the preparation of the proposals for the supply of equipment or services therefore. All changes to or clarifications of the plans and specifications provided to one prospective bidder shall be provided by the Engineer in writing to all other prospective bidders and to the Owner.

The Engineer shall attend and supervise all technical prebid review meetings and openings of quotes for the furnishing of equipment or services therefor. Where additions to existing equipment are proposed, a quote may be solicited from the original supplier or separate materials and installation contracts may be requested from several suppliers. The Engineer shall carefully check all quotes received and shall render to the Owner assistance in connection with the Owner’s consideration of the quotes received so that contracts may be prudently and properly awarded.

The Engineer shall submit in writing to the Owner recommendations of first and second choice of bidders stating the reasons.
therefor, or, if the analysis of quotes indicates that no quote is satisfactory because of prices or other conditions, the Engineer shall recommend to the Owner that all quotes be rejected, giving reasons therefor. Unless otherwise directed by the Owner, the Engineer shall proceed in respect to rebidding in the manner provided for herein for the initial bidding.

D. Award of Contract. The Engineer shall prepare and furnish to the Owner three (3) copies of a detailed tabulation of all the bids or quotes and a tabulation showing the bidders’ names and totals. The Owner shall submit to the Administrator the bidding information required for approval of the award of the contract by the Administrator. Upon receipt of notice from the Owner of the Administrator’s approval of the award of the contract, the Engineer shall prepare contracts in accordance with 7 CFR Part 1753.

E. Contract Amendments. If, after the equipment contract and the installation contract have been approved by the Owner and the Administrator, it shall be determined by the Owner that any change or changes in the plans and specifications are advisable, the Engineer shall prepare and submit a contract amendment in accordance with 7 CFR Part 1753.

F. Customer Information and Engineering Meeting. If necessary, the Engineer shall arrange, at a mutually agreeable time, a Customer Information and Engineering Meeting with the Owner, Contractor and Engineer to review the Contractor’s proposal, equipment lists, software, data requirements, translation requirements, etc. prior to beginning of manufacture.

G. Compliance. The Engineer shall review all equipment lists, manufacturer’s drawings, and other data submitted by the Contractor, to determine apparent compliance of such lists, drawings and other data with the approved contract. This shall not relieve the Contractor of its obligation to meet the performance specifications of the contract.

H. Pre-Installation Meeting. The Engineer shall arrange at a mutually agreeable time, a pre-installation meeting between the Contractor, Owner and Engineer, after the Contractor’s installer has arrived at the contract site, to clarify areas of responsibility, check scheduling and to determine the Contractor’s proposed compliance with the plans and specifications.

I. Progress Reports. A competent representative of the Engineer shall make periodic visits to the equipment installation site to inspect the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract. The Engineer shall report at least monthly to the Owner in writing stating the results of Inspections. When the Engineer observes any failure of the executed work or work in progress to comply with the requirements of the contract, this shall be reported to the Owner immediately. These reports shall include suitable recommendations. If the engineer observes an unsafe practice, his only responsibility shall be to consult immediately with the Contractor and if his concerns are not satisfied, to notify the Owner immediately.

Section 3. Tests. The Engineer shall conduct, or cause to be conducted by the installer, such tests of all such equipment as required by the Owner and the Administrator to determine that the equipment meets the performance requirements of the plans and specifications. The Engineer shall make recommendations for the correction of performance or operational difficulties. All cases of performance or operational difficulties due to faulty installation or defective equipment shall be reported to the Contractor, for correction. When the corrections have been made, the Engineer shall retest the equipment. The Engineer shall furnish test equipment, when required, for all required tests or measurements performed by the Engineer.

The Owner and a representative of the Administrator will normally conduct a final inspection of completed construction. When requested by the Owner, a qualified representative of the Engineer shall be present.

Section 4. Final Documents. The Engineer shall prepare or cause to be prepared, and shall submit to the Owner for approval, in a format suitable for approval by the Administrator, complete and detailed final documents as specified in 7 CFR 1753 and a statement showing the total amounts due the Contractor, pursuant to the terms of the contract, including any amendments thereto. The final documents shall be submitted for the Owner’s approval within forty (40) calendar days after the completion of construction based on the date on the certificate of completion covered by each central office equipment contract and each installation contract.

Section 5. Compensation.

A. Time and Expense. The Owner shall pay the Engineer “time and expense” compensation as outlined in the current Table 2 of this Agreement for: (1) All services performed pursuant to section 1; (2) “rebidding” pursuant to paragraph C of section 2; (3) all services in connection with additions to, replacement of components in, modifications of, or removal of, existing central office equipment; (4) all services pursuant to paragraphs F, H, and I of section 2; and (5) all services pursuant to section 3.

B. Percent of Cost. The Owner shall pay the Engineer for all other services performed pursuant to this RUS Form 217b, including final documents, for each central office equipment contract an amount equal to:
Section 6. Section Reference. Unless otherwise specified or indicated, any reference to "section" shall mean within this attachment (RUS Form 217b—Central Office Equipment Engineering Services).

ATTACHMENT—RUS FORM 217C

Transmission Facilities Engineering Services

Section 1. Review of Requirements. Prior to the preparation of plans and specifications for transmission facilities the Engineer shall review with the Owner the up-to-date requirements of the Project, as related to transmission facilities.

Section 2. Plans and Specifications. The Engineer shall prepare, and submit to the Owner in a format suitable for approval by the Administrator, the plans and specifications for the purchase and installation of such transmission facilities in sufficient time to allow normal scheduled delivery and installation of such equipment as shown on the final inventory documents.

Section 6. Section Reference. Unless otherwise specified or indicated, any reference to “section” shall mean within this attachment (RUS Form 217b—Central Office Equipment Engineering Services).
the contract. The Engineer shall report at least monthly to the Owner in writing stating the results of Inspections. When the Engineer observes any failure of the executed work or work in progress to comply with the requirements of the contract, this shall be reported to the Owner immediately. These reports shall include suitable recommendations. If the engineer observes an unsafe practice, his only responsibility shall be to consult immediately with the Contractor and if his concerns are not satisfied, to notify the Owner immediately.

Section 4. Tests. The Engineer shall conduct, or cause to be conducted, such tests as required by the Owner and the Administrator to determine that the equipment meets the performance requirements of the plans and specifications. The Engineer shall make recommendations for the correction of performance or operational difficulties. All cases of performance or operational difficulties due to faulty installation or defective equipment shall be reported to the Contractor for correction. When the corrections have been made, the Engineer shall retest the equipment. The Engineer shall furnish test equipment, when required, for all required tests or measurements performed by the Engineer.

The Owner and a representative of the Administrator will normally conduct a final inspection of completed construction. When requested by the Owner, a qualified representative of the Engineer shall be present.

Section 5. Final Documents. The Engineer shall prepare or cause to be prepared, and shall submit to the Owner for approval, in a format suitable for approval by the Administrator, complete and detailed final documents as specified in 7 CFR Part 1753 and a statement showing the total amounts due the Owner and the Administrator. For a material's only contract, "installed cost" shall mean the amount for materials shown on the final documents prepared by the Engineer and approved by the Owner and the Administrator. For a material's only contract, "installed cost" shall mean the amount for materials shown on the final inventory documents.

Section 7. Section Reference. Unless otherwise specified or indicated, any reference to "section" shall mean within this attachment (RUS Form 217c—Transmission Facilities Engineering Services).

**ATTACHMENT—RUS FORM 217c**

Building Engineering Services

Section 1. Review of Requirements. Prior to the preparation of plans and specifications, the Engineer shall review with the Owner the current and future requirements for buildings to be constructed as a part of the Project.

Section 2. Plans and Specifications. The plans and specifications for the construction of buildings shall be prepared in sufficient time to allow normal completion of construction of the buildings at least thirty (30) days prior to delivery of central office equipment as specified in the central office equipment contract. The plans and specifications shall, unless otherwise directed by the Owner, be prepared in accordance with standard RUS specifications and construction drawings relating thereto. Additionally, the plans and specifications shall include such details as the characteristics of the building sites (s) may require, including, without limitation, a plot plan and description of site development work, if any. The plans and specifications shall be submitted to the Owner in a format suitable for approval by the Administrator.

Section 3 Contracts

A. Bidder’s Qualifications. After approval of the plans and specifications by the Owner
and Administrator, notices shall be sent to prospective bidders in accordance with 7 CFR Part 1753. The names of those so notified shall be forwarded to the Owner at the time such notices are sent. The Engineer shall then review with the Owner and the shall approve the qualifications of all prospective bidders. The Engineer shall prepare and furnish to the Owner that all requesting them, the plans and specifications upon the conditions provided in the applicable standard RUS contract forms.

B. Proposals. The Engineer shall be available to each prospective bidder for consultation with respect to the details of the plans and specifications and all other matters pertaining to the preparation of the proposals for the construction of the buildings(s) or the supply of materials and equipment or services therefor. All changes to or clarifications of the plans and specifications provided to one prospective bidder shall be provided in writing to all other prospective bidders and to the Owner.

The Owner shall return unopened the bids received from bidders not specifically qualified to bid the plans and specifications. The Engineer shall attend and supervise all openings of bids for the construction of the buildings(s) or for the furnishing of materials and equipment or services therefor. In the event that less than three (3) bids are received from qualified bidders, the bids shall remain unopened and the Engineer shall notify the Administrator thereof immediately. Unless otherwise directed by the Owner, the Engineer shall proceed, in respect of the rebidding, in the manner provided for herein for the initial bidding. The Engineer shall carefully check all bids received and shall render to the Owner all such assistance as shall be required in connection with consideration of the bids received so that contracts may be prudently and properly awarded.

The Engineer shall submit in writing to the Owner recommendations of first, second and third choice of bidders, stating the reasons therefor, or if the analysis of bids indicates that no bid is satisfactory because of prices or other conditions, the engineer shall recommend that all bids be rejected, giving the reasons therefor.

C. Award of Contract. The Engineer shall prepare and furnish to the Owner three (3) copies of a detailed tabulation of all the bids and a tabulation showing the bidders’ names and totals of all bids. The Owner shall submit to the Administrator the bidding information required for approval of the award of the contract by the Administrator. Upon receipt of notice from the Owner of the Administrator’s approval of the award of the contract, the Engineer shall prepare contracts in accordance with 7 CFR Part 1753.

D. Contract Amendments. If, after the contract has been approved by the Administrator it shall be determined by the Owner that any change or changes in the plans and specifications are advisable, the Engineer shall prepare and submit a contract amendment in accordance with 7 CFR Part 1753.

E. Compliance. The Engineer shall review all shop and manufacturer’s drawings, construction detail variations, and other data submitted by the Contractor, to determine apparent compliance of such lists, drawings and other data with the approved contract. This shall not relieve the Contractor of its obligation to comply with the plans and specifications.

F. Progress Reports. A competent representative of the Engineer shall make periodic visits to the construction site to inspect the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract. The Engineer shall report at least monthly to the Owner in writing stating the results of Inspections. When the Engineer observes any failure of the executed work or work in progress to comply with the requirements of the contract, this shall be reported to the Owner immediately. These reports shall include suitable recommendations. If the engineer observes an unsafe practice, his only responsibility shall be to consult immediately with the Contractor and if his concerns are not satisfied, to notify the Owner immediately.

G. Final Inspection. The Owner and a representative of the Administrator will normally conduct a final inspection of completed construction. When requested by the Owner, a qualified representative of the Engineer shall be present.

Section 4. Final Documents. The Engineer shall prepare, and shall submit to the Owner in a format suitable for approval by the Administrator, complete and detailed final documents as specified in 7 CFR 1753 and a statement showing the total amounts due the Contractor pursuant to the terms of the construction contract, including any approved amendments thereto. The final documents shall be submitted for the Owner’s approval within sixty (60) calendar days after the completion of construction based on the date shown on the certificate of completion covered by each contract.

Section 5. Compensation

A. Time and Expense. The Owner shall pay the Engineer “time and expense” compensation as defined in the current Table 2 of this Agreement for: (1) all services performed pursuant to section 1; (2) services performed for rebidding pursuant to paragraph B of section 3; (3) all services in connection with additions to or modifications of existing buildings; and (4) inspection of construction pursuant to paragraphs F and G of section 3.

B. Percent of Cost. The Owner shall pay the Engineer for all other services performed pursuant to this RUS Form 210, including
final documents, for each new building contract included in the Project an amount equal to: percent (%) of the first fifty thousand dollars ($50,000.00); plus percent (%) of the balance of the cost of construction thereof, of which sums ninety percent (90%) shall be due and payable ten (10) days after approval by the Administrator of a contract (or force account proposal) for the construction of the buildings; and the balance of the compensation shall be due and payable ten (10) days after approval by the Owner and the Administrator of a certificate of completion of construction for all such buildings included in the Project (or in a completed section of the Project).

``section'' shall mean within this attachment wise specified or indicated, any reference to "section" shall mean within this attachment (RUS Form 217d—Building Plans and Specifications and Contracts).

ATTACHMENT—RUS FORM 217E

Outside Plant Staking Services

Section 1. Review of Requirements. Prior to the commencement of Staking, the Engineer shall review with the Owner the current requirements of the Project with respect to outside plant and service entrance Staking. At this review, decisions shall be reached concerning public and private rights-of-way, nominal width of construction corridors, and design status.

Section 2. Staking Requirements

A. General

1. Staking for aerial plant shall include locating the proposed line and marking all new pole and other locations as necessary to construct the facilities.

2. Staking for buried plant shall include locating the proposed facilities indicating all pertinent construction information including details of the construction corridor.

3. Staking for underground plant shall include locating conduit systems, construction corridors, marking manhole sites and detailing all other pertinent information.

4. Staking for service entrances shall include locating protectors on the structure, the routing of aerial or buried entrances and the placement of markers, if required, to indicate construction information.

B. Commencement. The Engineer, with the approval of the Owner, shall determine when Staking of the Project shall begin. The Engineer shall not commence Staking in any area of the Project until the Owner has:

1. Either (a) stated in writing that right-of-way authorizations and easements reasonably required therefor have been procured, or (b) directed the Engineer in writing to perform right-of-way procurement under section 2, paragraph D, of RUS Form 217a—Project Design, Assistance, and Coordination;

2. Identified to the Engineer, by map locations, which line segments shall be staked on public right-of-way and which line segments shall be staked on privately owned right-of-way; and

3. Provided information to the Engineer pertaining to limitations on width of construction corridors for each such line segment.

The Owner shall review with the Engineer, and shall inform the Engineer, which specific lines are to be staked. The Owner shall furnish to the Engineer a current list of all existing and potential subscribers by map location and grade of service for whom service is to be furnished. When requested by the Engineer, the Owner shall also furnish the telephone numbers of the existing subscribers. In determining when to proceed with Staking, farming operations and other relevant conditions shall be taken into consideration so as to minimize the need for restaking. The Owner, when requested by the Engineer, shall furnish a qualified person to accompany each Staking crew for the purpose of negotiating with landowners or tenants with respect to such right-of-way authorizations and easements, widths of construction corridors, and locations of proposed facilities.

C. Changes

1. If, during the progress of Staking by the Engineer, the Owner shall change the routing or location of a particular line segment, the Owner shall as early as practicable, notify the Engineer in writing of such changes. Upon such notice the Engineer shall duly note such change and instruct the Staking crews accordingly. The same procedure shall be followed for changes made in type or quantity of facilities during the Staking phase of the Project.

2. If during the process of Staking, the Engineer determines that the routing of facilities along the right-of-way designated by the Owner would result in high costs of placement due to obstacles, inadequate construction corridors, or other circumstances, the Engineer shall notify the Owner and recommend alternative routing. If alternative routing is approved by the Owner and right-of-way can be obtained, the Engineer shall arrange to stake the facilities along the alternate route.

D. Time of Staking

1. The Engineer shall proceed diligently with Staking and continue therewith in such
§ 1755.217

a manner that, prior to the release of plans and specifications to bidders, the Staking of all outside plant facilities except service entrances shall be complete in order that the plans and specifications shall be complete and accurate.

2. If service entrances are included in the construction contract, Staking of the service entrances shall be completed prior to beginning of construction in a Work Sector. If such Staking is being performed by the Owner, the Engineer shall keep the Owner advised of the status of construction and the Owner shall do the Staking in a timely manner.

3. The Engineer shall perform all restaking made necessary by changes discussed under paragraph C of section 2, above, as necessary to minimize delays in construction.

E. Manner of Staking. The Staking shall be done in a thorough and workmanlike manner such that construction can be completed in accordance with the latest revision of the National Electrical Safety Code, National Electrical Code, local and State laws, rules, regulations and orders of regulatory bodies having jurisdiction; and the Loan Design, Borrower’s Environmental Report, and specifications approved by the Owner and the Administrator. The Engineer shall in no case stake lines other than those shown in the approved Loan Design except for minor re-routing and minor changes dictated by field conditions, unless such change shall have been previously approved by the Owner and the Administrator. The Engineer shall replace all markers lost or removed prior to or during construction of the Project. All costs, including costs of markers, equipment, and other materials used in connection with the Staking, shall be borne by the Engineer. All markers and existing poles shall be properly identified with corresponding listing on the construction sheets. Where it is probable that the Contractor or the Owner will have difficulty in locating markers, the Engineer shall provide some other suitable means to identify the location. When Staking service entrances, the Engineer shall give due consideration to the location of the station protector (or network interface device if it incorporates a station protector) in relation to the availability of adequate grounding and the length of the service drop and station wiring.

F. Construction Sheets. The Engineer shall prepare or maintain construction sheets in such standard form as the Owner shall require (and as hereinafter described) to: Serve as the means by which directions are given for the construction of the Project; serve as the permanent plant record by the Owner’s facilities as built; and identify adequately the geographical location of the facilities, including non-standard construction corridors and cable placement locations. The Engineer shall enter thereon all pertinent and useful design, specifications and data governing the construction of the Project, including, without limitations:

1. Detailed instructions on the point of attachment of the Owner’s facilities on existing pole lines employed in joint use with others;
2. Non-standard depths for installing buried and underground facilities;
3. The presence, but not location of, buried facilities of other utilities when known;
4. The presence of rock when known;
5. Vegetation clearing requirements; and
6. Surface type and surface features of terrain if appropriate.

Copies of construction sheets shall be made available for sale to all prospective bidders in advance of the pre-bid conference. For contract construction five counterparts of the construction sheets shall be supplied by the Engineer to the Contractor for construction use and two copies shall be supplied to the Owner. For force account construction three copies of the construction sheets shall be supplied to the Owner. When revisions in Staking are necessary, the Engineer shall issue copies of the revised construction sheets.

G. Resident. A Resident, with full authority to act for the Engineer per this attachment, shall be maintained by the Engineer at the site of the Project at all times when Staking or other services required under this attachment are being performed at the site of this Project. The Resident may also be engaged in Staking as well as in supervising the Staking activities of other Staking crews of the Engineer. The Engineer shall establish and maintain, in the proximity of the Project, a field office with telephone service at all times when Staking or other services required under this RUS Form 217e are in progress.

H. Reporting. The Engineer shall prepare, execute, and submit to the Owner (insert frequency of reporting—minimal monthly) all estimates, certificates, reports and other documents required to be executed by the Engineer pursuant to the loan contract.

1. Joint Use or Joint Occupancy. In connection with Staking of joint use or joint occupancy facilities the Engineer shall:
   1. Prepare and submit to the Owner for approval, detailed information on pole changes, additional poles, and other changes or additions required in existing facilities of other parties to joint use or joint occupancy agreements to accommodate the Owner’s facilities; and
   2. Coordinate engineering activities under direction of the Owner with other parties to joint use or joint occupancy agreements.
   J. The Engineer with the approval of the Owner shall have the option of performing staking on the project under the circumstances described below on a time and
expansion basis consistent with Table 2 of this Agreement:

1. Less than 10 miles of buried or aerial plant.
2. Emergency restoration of service, or
3. Natural disasters.

Section 3. Compensation. The Owner shall pay the Engineer for services performed pursuant to this RUS Form 217e as follows:

A. Staking Fee. For all services in connection with the Staking of the Project lines as provided for in the approved Project design, including lines which, pursuant to the direction of the Owner, with the approval of the Administrator, shall not be constructed, and for all other services outlined in this RUS Form 217e (except as provided in paragraph C of section 3):

1. The sum of $______ per mile of existing buried plant Project lines to be modified; plus
2. The sum of $______ per mile of new buried plant Project lines; plus
3. The sum of $______ per mile of underground cable to be installed in ducts; plus
4. The sum of $______ per mile of new aerial Project lines; plus
5. The sum of $______ per mile of existing aerial Project lines to be modified; plus
6. The sum of $______ per mile of new joint use or joint occupancy Project lines; plus
7. The sum of $______ per mile of existing Project lines to be removed where no construction or modification work is to be performed; plus
8. The sum of $______ for each new service entrance staked and for which a construction sheet is prepared and each existing service drop to be modified as part of the Project; plus
9. The sum of $______ for each subscriber shown on the construction sheets.

For purposes of this section “modified” means rearrangements, additions, change of pair assignments, etc., which require preparation of construction sheets to implement.

The length of the Project lines shall be determined by taking the sum of all distances between terminal points for underground cable and buried cable or conductor, and new service entrances added as part of the Project and all distances between pole markers or from center to center of poles carrying aerial conductor or cable, including joint use or joint occupancy poles, plus the vertical distances parallel to vertical cable runs for aerial cable installations.

B. Time and Expenses. The Owner shall pay the Engineer “time and expense” compensation as defined in the current Table 2 of this Agreement for all services performed in this RUS Form 217e in connection with: section 1; paragraph C of section 2; paragraph I of section 2; paragraph J of section 2; and for the replacement of markers made necessary by causes beyond the control of the Engineer.

C. Payments. Compensation under paragraph A of this section 3 shall be due and payable ten (10) days after delivery to the Owner, on a monthly basis, a copy of the construction sheets representing the Staking completed during that month and a recapitulation of the mileage of the various types of line covered by such construction sheets and by previous construction sheets for which compensation has been requested.

The Staking shall be subject to review and inspection by the Owner and the Administrator. The Engineer, when notified to do so by the Owner or the Administrator, shall correct such Staking as the review and inspection may indicate to be necessary. Such review and payments shall not constitute unqualified approval of the Staking. Where restaking is required for reasons within the control of the Engineer, no additional compensation shall be payable.

The compensation payable for lines actually constructed, shall be adjusted to the number of units actually constructed or actually completed as part of the construction of the Project, as reflected in the final documents. Compensation payable for lines which have been staked, but which shall not be constructed, shall be determined from the construction sheets as covered by line abandonment order.

D. Plant Retained in Place. Compensation under this section, for Staking existing Project lines on which modification work is to be performed, shall include compensation for the designation of assembly units of existing plant to be retained in place, and shown on the construction sheets.

Section 4. Section Reference. Unless otherwise specified or indicated, any reference to “section” shall mean within this attachment (RUS Form 217e—Outside Plant Staking Services).

ATTACHMENT—RUS FORM 217

Outside Plant Contract Document Phase Engineering Services

Section 1. Review of Requirements. The Engineer shall use the Loan Design and other information furnished by the Owner under this Agreement as the basis for the preparation of the plans and specifications. Prior to the beginning of the preparation of the plans and specifications, the Engineer shall review with the Owner all data furnished to determine the most recent requirements for facilities to be included in the plans and specifications.

Section 2. Map Tracings and Other Data. Prior to and during the preparation of the plans and specifications by the Engineer, the Owner, if it has not previously done so by
§ 1755.217

7 C.F.R. Ch. XVII (1-1-98 Edition)

other provisions of this Agreement, shall furnish any of the following items needed by the Engineer:

A. Up-to-date tracings of the detail and town maps of the area of the proposed system on which the Loan Design was based and which show the existing system, and a tracing of the key map when a key map is required by the Owner;

B. Up-to-date cable schematics (cable plant layout), and construction sheets showing the existing system construction;

C. Up-to-date line and station data on existing subscribers;

D. The Loan Design and Borrower’s Environmental Report on which the loan was based;

E. Current information as to the location and extent of electric and other lines available for joint use, together with conformed copies of all existing joint use or joint occupancy agreements covering such lines;

F. Current listing of existing, signed, and potential subscribers by map location and grade of service to be considered in the preparation of the plans and specifications. The list of existing subscribers shall be properly referenced to the line and station data;

G. Detailed lists of materials on hand, or on order, which are to be furnished by the Owner in the construction of the Project, together with the quantity and value of each item of such materials; and

H. A written statement setting forth the scope of plans and specifications and the sequence in which the construction shall be performed and whether service entrances are to be included in the plans and specifications.

The map tracings, schematics, and construction sheets are to be of suitable material capable of allowing corrections to be made of the information shown thereon and capable of being reproduced.

Section 3. Schematics, Assignments, and Cut Sheets

A. Cable Schematics. The Engineer shall prepare cable schematics in such form as the Owner shall require: (a) serve as a means by which directions are given for connecting feeder cable and distribution cable pairs, cross-connection terminals, connecting load coils, and such other directions as may be necessary for properly splicing the feeder cables, distribution cables and other facilities being installed; (b) serve as the permanent circuit assignment record of the Owner’s cable and wire facilities; and (c) adequately identify the physical location of all equipment, devices and connections other than services, associated with the pairs of such feeder cable and distribution cable facilities.

B. Circuit and Number Assignments. If requested by the Owner, the Engineer shall prepare telephone number assignments and shall identify the circuit to which the service is to be connected for station installations, including without limitation such information with respect to central office equipment connections as may be required.

C. Cut Sheets. Where modification of existing lines is to be performed, the Engineer shall furnish in such form as the Owner shall require complete and detailed information, collectively known as “Cut Sheets” for: (a) Making such changes in circuit connections in the existing outside plant as may be required, including without limitation all associated devices such as load coils, terminals, and temporary connections; (b) making such changes in telephone number assignments and service connections as may be required, including without limitations, the corresponding connection changes required at the central office end; and (c) designating the sequence to be followed in making such changes.

Section 4. Outside Plant Plans and Specifications and Contracts

A. Plans and Specifications. The Engineer shall, to the extent not previously prepared under other provisions of this Agreement, prepare and review with the Owner complete and detailed plans and specifications, drawings, maps and other documents required for the construction of the outside plant facilities to be included as a part of the Project. During the preparation of the plans and specifications, the Engineer shall make such changes in the plans and specifications as may be reasonably required by the Owner as a condition of approval by the Owner and Administrator.

B. Content of Plans and Specifications. The plans and specifications for outside plant shall be prepared in sufficient time to allow normal completion of construction of the outside plant to coincide with the established service dates and shall include the following:

1. One copy of the key map of the system, when a tracing is furnished by the Owner.

2. One copy (or more if necessary for clarity) of the central office area detail maps (sometimes referred to as exchange detail maps) and town maps of the system, on which there shall be indicated the following:
   a. Location of lines to be constructed, indicating joint use or joint occupancy lines;
   b. Location of switching centers and pairgain devices;
   c. Location of existing lines included as part of the proposed system and modification of such lines;
   d. Location of existing lines to be retired;
   e. Locations other than service entrances, where right-of-way has not been obtained;
   f. Work Sectors indicating sequence of construction;

3. Complete drawings of each type of non-standard RUS unit covering the construction and the materials to be used.
4. An estimate of quantities of the various units of construction.

5. A complete cable plant layout and cable schematics, when applicable, for each central office area as prepared pursuant to paragraph A of section 3.

6. If the Project contains requirements for installation of underground conduit, manholes and associated appurtenances, the Engineer, during the preparation of the plans and specifications, shall secure field data necessary for the proper design of such facilities (including plan and profile data, if required, and detail construction drawings, including cable to be installed), and shall proceed with the preparation of detailed plans and specifications for the construction of such facilities. Such drawings and specifications, when completed, shall be added to, and made a part of, the construction plans and specifications.

7. An itemized list of materials on hand or on order to be furnished by the Owner, showing the locations of delivery points and delivery schedules of such materials, the quantity, unit price and extended price.

8. The form of the contract to be entered into between a Contractor and the Owner for the construction of the outside plant, including forms of notice and instructions to bidders, Contractor’s proposal, materials and equipment or services therefor. The Owner shall return unopened bids received from Bidders not previously qualified under paragraph C2 of this section. In the event that bids are received from less than three (3) qualified bidders, the bids shall remain unopened and the Owner shall notify the Administrator thereof immediately. If directed by the Owner, the Engineer shall proceed in respect of the re-bidding, in the manner provided for herein for the initial bidding. The Engineer shall render to the Owner assistance in connection with the Owner’s consideration of the bids received so that contracts may be prudently and properly awarded. The Engineer shall submit to the Owner a written recommendation for award of the contract or rejection of all bids stating the reasons thereof.

5. The Engineer shall prepare and furnish, upon payment of reasonable charges, to material suppliers requesting them, copies of the Contractor’s proposal sheets for outside plant together with any special drawings or material specifications pertaining thereto and a list of materials to be furnished by the Owner.

3. The Engineer shall conduct a Pre-Bid Conference in accordance with Subpart F of 7 CFR Part 1753 and shall be available to each prospective bidder for consultation with respect to the details of the plans and specifications and all other matters pertaining to the preparation of the proposals for the construction, or the supply of materials and equipment or services therefor. All changes to or clarifications of the plans and specifications provided to one prospective bidder shall be provided in writing to all other prospective bidders and to the Owner.

4. The Engineer shall attend and supervise all openings of bids for the construction, or for the furnishing of materials and equipment or services therefor. The Owner shall render to the Owner assistance in connection with the Owner’s consideration of the bids received so that contracts may be prudently and properly awarded. The Engineer shall submit to the Owner a written recommendation for award of the contract or rejection of all bids stating the reasons thereof.

6. If, after the construction contract has been approved by the Owner and the Administrator, it shall be determined by the Owner that any changes in the plans and specifications are advisable, the Engineer shall prepare and submit a contract amendment in accordance with 7 CFR Part 1753.
§ 1755.217

7 CFR Ch. XVII (1-1-98 Edition)

D. Force Account

1. If all or a portion of the Project, shall be constructed by force account, the Engineer shall prepare a force account proposal in accordance with Subpart G of 7 CFR Part 1753.

   a. When requested by the Owner, the Engineer shall prepare an itemized list of the total quantities of all items of materials required for the construction showing in addition the quantity of each item of materials the Owner has on hand based on the list furnished by the Owner pursuant to paragraph G of section 2.

   b. The force account proposal shall include an estimate, prepared in collaboration with the Owner, of the unit construction costs in substantially the same form as the Contractor’s proposal in the standard contract form, and a summary of the total estimated cost of construction, setting forth the following:

   (1) The total Cost of labor and other;

   (2) The total Cost of materials; and

   (3) The number of calendar days required for the construction.

2. After receipt of notice by the Engineer from the Owner of approval by the Administrator of the force account proposal, the Engineer, in collaboration with the Owner, shall fix a date for the commencement of construction. In the determination of this date, consideration shall be given to the status of material deliveries, Staking, easements, and the availability of competent construction personnel and adequate equipment to facilitate continuous construction in an efficient and expeditious manner. Such date as agreed upon shall be submitted to the Administrator by the Owner and the date thus established shall be the “Commencement Date” for the construction. The Engineer shall be available to the Owner for consultation with respect to the details of the plans and specifications and all other matters pertaining to the construction of the Project.

3. If, after the force account proposal has been approved by the Owner and the Administrator, it shall be determined by the Owner that any change or changes in the force account proposal are advisable, the Engineer shall prepare and submit to the Owner all necessary details in connection with the change or changes, and upon approval thereof by the Owner, the proposed change or changes shall be submitted by the Owner to the Administrator. To the extent that the Administrator approves such proposed change or changes they shall be included as part of the force account proposal, and the Engineer shall immediately proceed in respect of any additional Staking, construction, and material contracts or amendments required thereby in like manner as though such Staking, construction, and material contracts or amendments were originally included as part of the force account proposal.

Section 5. Compensation

A. The Owner shall pay the Engineer for services performed pursuant to this RUS Form 217f (except as provided in paragraph B of this section) as follows:

1. The sum of __________ dollars ($______) or when the outside plant is divided into sections for construction purposes requiring separate plans and specifications for each section; a sum of __________ dollars ($______) for each such section for which complete plans and specifications are prepared; plus,

2. The sum of __________ dollars ($______) for each approved amendment to the contract; plus

3. The sum of __________ dollars ($______) per mile for each mile of Project line facilities included in the plans and specifications, and (2) added or deleted by approved amendments to the plans and specifications; plus

4. The sum of __________ dollars ($______) for each approved force account proposal.

The compensation payable under paragraph A of this section shall be due and payable ten (10) days after the approval of the plans and specifications or approved amendments by the Owner and the Administrator.

B. The Owner shall pay the Engineer “time and expense” compensation as defined in the current Table 2 of this Agreement for services: (1) As requested by the Owner, in connection with corrections to, or the furnishing of, items required to be furnished by the Owner per section 2; (2) required under section 3; (3) in connection with underground conduits, paragraph B6 of section 4; (4) for changes in force account plans and specifications, paragraph D3 of section 4; and (5) in connection with the conducting of the Pre-Bid Conference, paragraph C3 of section 4, and for rebidding, paragraph C4 of section 4.

Section 6. Section Reference

Unless otherwise specified or indicated, any reference to “section” shall mean within this attachment (RUS Form 217f—Outside Plant Plans and Specifications and Contracts).

ATTACHMENT—RUS FORM 217G

Outside Plant Construction Phase Engineering Services

Section 1. Construction Phase

A. General. As engineering representative of the Owner, and in accordance with sound and accepted engineering practices, the Engineer: (1) Shall provide Construction Administration and Inspection services; (2) shall assist the Owner in obtaining the expeditious and economical construction of the Project in accordance with the approved plans and specifications, the terms of the construction contract or force account proposal, and 7 CFR Part 1753; and (3) shall have and exercise sole responsibility for the issuance of supplemental directives to the
Contractor regarding the Contractor's performance in accordance with the terms of the construction contract as approved by the Owner and the Administrator. The Engineer's undertaking hereunder shall not relieve the Contractor of the Contractor's obligation to perform the work in conformity with the plans and specifications and in a workmanlike manner and shall not impose upon the Engineer any obligation to see that the work is performed in a safe manner. The Engineer shall not be responsible for the failure of the Contractor to perform the work in accordance with the contract or to perform the work in a safe workmanlike manner. In fulfilling the above responsibility, the Engineer shall as necessary:

1. Interpret the plans and specifications and convey such interpretation to the Contractor;
2. Inspect the progress of and quality of construction, in sufficient detail to provide reasonable assurance to the Owner of the adequacy of such progress and quality of construction, pursuant to the requirements of the plans and specifications and contract;
3. Confirm the acceptability of materials and equipment proposed by the Contractor to be utilized in the construction prior to the use of such materials or equipment on the Project and promptly reject materials and equipment not in compliance with the plans and specifications; and
4. Inspect the manner of incorporation of the materials and equipment into the Project, and the workmanship which the Engineer determines will not be in compliance with the plans and specifications. Such inspection shall be deemed to be adequate if a reasonable percentage of all routine construction units (other than units requiring detailed inspection) are observed at the time of installation and found free of error.

The above enumeration of specific requirements shall not limit the general undertakings of the Engineer to perform services set forth in the first sentence of paragraph A of this section. The obligations of the Engineer hereunder are for the benefit of only the Owner and the Administrator, and shall not relieve the Contractor of any of its own responsibilities under its contract with the Owner.

B. Residents and Inspectors

1. A Resident with full authority to act for the Engineer shall be maintained by the Engineer at the site of the Project at all times during the entire period of scheduled construction (including times when the Resident is available and through no fault of the Engineer scheduled construction is not performed, and including times when corrective work is being performed) unless specifically directed otherwise by the Owner with the approval of the Administrator. A Resident shall be necessary for each outside plant construction contract.

2. If, at any time during construction, a Resident, or Inspector, is not required at the Project site, or such personnel are not available because of other responsibilities on the Project, the Engineer shall assign a Resident and/or Inspector on an intermittent basis, to effect necessary observations of construction during any critical phase of such construction.

3. If the Engineer determines that particular components of the work or particular circumstances during construction require the presence of a specialized representative of the Engineer, such as an architect, structural engineer, design engineer or other specialist for the purpose of interpreting contract requirements, or performing special inspections or tests to facilitate compliance by the Contractor with the plans and specifications and terms of the construction contract, the Engineer with prior approval of the Owner shall assign such personnel to the Project site.

4. The Engineer shall maintain at the site of the Project and under the direct supervision of the Resident a sufficient number of qualified Inspectors, to fully discharge the responsibility of the Engineer pursuant to paragraph A of this section (including times when such assigned Inspectors are available and through no fault of the Engineer scheduled construction is not performed). The number of Inspectors so required will vary with the size of the Project, the number of construction crews, and the speed of construction.

5. The number of Residents and Inspectors required by the Engineer for a routine construction schedule for this Project to effect completion within the allowed number of scheduled “working days” is as follows:
   a. ____ (_____ ) Resident(s);
   b. ____ (_____ ) Inspector(s);

6. In the event conditions should arise, through no fault of and beyond control of the Engineer, which would require the placement by the Engineer of additional Inspectors (or Residents) on the Project, to accommodate special needs of the Owner (or Contractor, with approval of the Owner), then, with the approval of the Owner prior to their assignment to the Project, the Engineer shall assign such additional qualified personnel to the Project for the limited time of such requirements.

C. Pre-Construction Conference. A competent representative from the office of the Engineer, and the Resident (or Residents) to be assigned to the Project, shall conduct the outside plant pre-construction conference. The detailed notes taken by the Engineer on
§ 1755.217

items discussed shall be furnished to all parties. Such notes shall be used by the Resident, as applicable, in interpreting the plans and specifications pursuant to paragraph A1 of this section.

D. Project Office. The Engineer shall establish and maintain a field office, with telephone service, in the proximity of the Project when construction is in progress and shall notify the Owner of the address and telephone number of such field office. Any notices, instructions or communications delivered to such field office shall be deemed to have been delivered to the Engineer.

E. Defective Construction. If the construction is by contract, the Engineer shall notify the Contractor in writing of all observed or otherwise determined defects in workmanship or materials in accordance with the terms of the construction contract. If the construction is by force account, the Engineer shall advise the Owner relative to the correction of such defects.

F. Joint Use or Joint Occupancy. In connection with all joint use or joint occupancy construction, the Engineer shall:

1. Coordinate construction activities for the Owner with the designated representative of other parties to joint use or joint occupancy agreements;
2. Review for the Owner all changes proposed by other parties to joint use or joint occupancy agreements for changes in and additions to their existing pole lines under such agreements and submit to the Owner recommendations thereon.

G. Tests. The Engineer shall conduct, or cause to be conducted, such tests of circuits and equipment as required by the Owner and the Administrator to determine compliance with the performance requirements of the plans and specifications. The Engineer shall make recommendations in writing for the correction of defective materials, workmanship, or equipment. All cases of transmission or operational difficulties due to faulty construction or defective materials or equipment in the Project shall be reported in writing to the Contractor for correction if the construction is by contract or to the Owner if construction is by force account. When the corrections have been made, the circuits and equipment shall again be tested. The Engineer shall furnish test equipment as required for performing all required tests or measurements.

The outside plant tests to be made on this Project are noted in the table below:

<table>
<thead>
<tr>
<th>Description of Test or Measurements</th>

As appropriate, complete the table using these symbols:
X—These are standard tests and measurements required on facilities as desired by the owner or required by the Administrator.
N/A—Not Applicable.

H. Connecting Companies. The Engineer shall coordinate all engineering and construction activities with connecting companies and shall notify the Owner when the Project, or a section thereof, is ready to be placed in service. After giving such notice, the Engineer shall, when directed to do so by the Owner, cause the Project, or such section thereof as may be ready, to be placed in service.

I. Reporting. The Engineers shall prepare, execute and submit to the Owner (insert frequency of reporting—minimal monthly) all estimates, certificates, reports, and other documents required to be executed by the Engineer pursuant to a construction contract, a force account proposal, or the 7 CFR
§ 1755.217

Part 1753. The Engineer shall review and, if satisfactory, recommend for approval each periodic estimate submitted by contractors prior to approval and payment by the Owner. Such recommendations shall include a statement by the Engineer based on the Engineer’s Inspection of executed work and the progress of the work and subject to evaluation and testing of the work as a completed Project, that all construction for which payment is requested has been completed and cleaned up in accordance with the terms of the construction contract and that all defective construction of which the Contractor shall have received fifteen (15) or more days written notice, has been corrected.

The Engineer shall maintain a cumulative inventory of all units of construction incorporated in the Project, showing unit prices and extended totals, for all such units of construction. When it appears that the previously approved contract total is likely to be exceeded, the Engineer shall immediately notify the Owner in a format suitable for notifying the Administrator. When requested by the Owner or when the “Overrun” results in 20% above the contract total, the Engineer shall prepare a contract amendment in accordance with 7 CFR Part 1753 for execution by the Parties to the construction contract, to cover the additions or changes in construction units that are resulting in such “Overrun”.

J. Final Inspection. The Owner and a representative of the Administrator will normally conduct a final inspection of completed construction. When requested by the Owner, a qualified representative of the Engineer shall be present.

Section 2. Final Documents

A. Contract Construction. If the Project or any portion thereof shall be constructed pursuant to a construction contract, the Engineer shall prepare and submit to the Owner complete and detailed final documents as specified in 7 CFR 1753 and a statement of all amounts payable by the Owner under the construction contract. The final documents shall be in a format suitable for approval by the Owner and subsequent submission to the Administrator for approval. These final documents shall be submitted to the Owner within forty-five (45) calendar days after the completion of construction based on the date shown on the certificate of completion covered by each contract.

B. Force Account Construction. If the Project or any portion thereof shall be constructed by force account:

1. Within thirty (30) calendar days after completion of construction of the Project, the Owner shall furnish to the Engineer the following data:
   a. The cost of all materials used in construction of the Project;
   b. Cost of right-of-way clearing (direct labor costs);
   c. All direct labor costs chargeable to construction exclusive of the right-of-way clearing; and
   d. A list of all items of overhead cost applicable to the construction of the Project, but excluding the cost of engineering, legal, accounting and other professional services, interest during construction and preliminary survey charges.

2. Within forty-five (45) calendar days after the completion of construction of the Project, the Engineer shall prepare and submit to the Owner for approval complete and detailed final documents in such form as the Administrator may prescribe, including without limitation, a final inventory of construction and a final inventory of retirements. The final documents shall contain the labor and material unit costs based on data supplied by the Owner.

C. Number of Copies. Copies of final documents shall be furnished in accordance with 7 CFR Part 1753.

Section 3. Plant Records

A. Prior to Cutover. If the Owner shall have notified the Engineer not later than ten (10) days prior to the start of construction in a central office area that the Owner elects to assign to the Engineer the preparation of any of the following plant records, the Engineer shall prepare and deliver these records to the Owner, not later than fifteen (15) calendar days prior to the start of Cutover of each central office area included as a part of the Project. These records cover the Cutover work on facilities completed as of the date of delivery of such records for each such area. The following records shall be in such form as the Owner, with the approval of the Administrator, may prescribe:

1. Cable schematics, corrected to show “as constructed” conditions of that portion of the Project as of such date;
2. Cable records data, for completed line segments as of such date;
3. Line and station data for completed line segments as of such date; and
4. Terminal assignment records.

B. After Cutover. The Engineer shall deliver to the Owner, within thirty (30) calendar days after Cutover of facilities in any completed exchange area or completed section of the Project, the record drawings of the following plant records covering such Project area (excluding any of such records that the Owner has previously elected to prepare with its own forces):

1. Cable schematics, corrected to show “as constructed” conditions of such Project area;
2. Cable record data, for all construction completed in such Project area;
§§ 1755.218—1755.369 7 CFR Ch. XVII (1-1-98 Edition)

3. Line and station records for all lines completed in such Project area as a part of the Project;
4. Final maps, showing record drawings facilities completed in such Project area; and
5. Final complete and detailed construction sheets, showing facilities completed in such Project area, including the designation of assembly units of existing plant retained in place along existing plant lines segments on which modification work was performed as a part of the Project.

Section 4. Inventory and Appraisal. When requested by the Owner, the Engineer shall prepare within thirty (30) calendar days after completion of construction of the Project and submit to the Owner an inventory and appraisal of all existing telephone plant retained as part of the Owner's system. The inventory and appraisal shall be in such form and provide such data as the Owner, with the approval of the Administrator, may prescribe.

Section 5. Compensation

A. For Services Under Sections 1, 3 and 4. The Owner shall pay the Engineer "time and expense" compensation, as defined and detailed in current Table 2 of this Agreement for all services performed under sections 1, 3 and 4. Compensation under this section shall not exceed ________ dollars ($________) unless said amount has been increased by a contract amendment approved by the Owner and the Administrator. Appropriate documentation justifying the increase shall accompany the contract amendment.

Compensation under paragraph A of this section shall be due and payable as follows:
1. Ninety-five Percent (95%) thereof shall be due and payable ten (10) days after delivery each month of the invoice of the Engineer;
2. The balance of such compensation shall be due and payable ten (10) days after delivery of a statement by the Engineer to the Owner certifying that all final documents prepared by the Engineer, for execution by the Contractor, have been mailed or delivered to the Contractor for execution.

B. For Services Under Section 2. The Owner shall pay the Engineer for all services performed under section 2 as follows:
1. The sum of ________ dollars ($________) for each service entrance to be installed, replaced or modified during the construction of the Project; plus
2. The sum of ________ dollars ($________), or when the Project is divided into sections for which separate outside plant plans and specifications are prepared, the sum of ________ dollars ($________) for each section requiring final documents; plus the sum of ________ dollars ($________) for each mile of Project line facilities included in the final documents. Ninety-five (95%) percent of the compensation under this paragraph shall be due and payable ten (10) days after approval by the Owner and the Administrator of the respective final documents and the balance of the compensation under this paragraph shall be due and payable ten (10) days after completion of the Project as defined in the Table 1.

C. Bi-weekly Statement. For compensation covered by paragraph A this section, the Engineer shall submit to the Owner a biweekly statement showing the names of the Residents and Inspectors, and the actual time spent on the Project by each Resident and each Inspector during the preceding period. The statement shall be prepared and submitted to the Owner in a format similar to that shown in RUS Form 217, Exhibit A.

Section 6. Section Reference. Unless otherwise specified or indicated, any reference to "section" shall mean within this attachment RUS Form 217—Outside Plant Construction-Project Direction, Inspection, Testing and Contract Closeout.

[End of clause]

§§ 1755.218—1755.369 [Reserved]

§ 1755.370 RUS specification for seven wire galvanized steel strand.

(b) In addition to the requirements of ASTM 475-78, all coils and reels having Class B or C coatings shall be marked with a 3-inch wide and 6-inch long deep-colored stripe, green or orange, respectively, to identify the class of galvanized coating of the strand. This
marking shall be applied to the exposed convolutions of the strand in the eye of the coils and located near the midpoint on the outside layer of strand on the reels. The marking shall not cover any welded joint markings.

§§ 1755.371–1755.389 [Reserved]

§ 1755.390 RUS specification for filled telephone cables.

(a) Scope. (1) This section covers the requirements for filled telephone cables intended for direct burial installation either by trenching or by direct plowing, for underground application by placement in a duct, or for aerial installations by attachment to a support strand.

(i) The conductors are solid copper, individually insulated with an extruded solid insulating compound.

(ii) The insulated conductors are twisted into pairs which are then stranded or oscillated to form a cylindrical core.

(iii) For high frequency applications, the cable core may be separated into compartments with screening shields.

(iv) A moisture resistant filling compound is applied to the stranded conductors completely covering the insulated conductors and filling the interstices between pairs and units.

(v) The cable structure is completed by the application of suitable core wrapping material, a flooding compound, a shield or a shield/armor, and an overall plastic jacket.

(2) The number of pairs and gauge size of conductors which are used within the RUS program are provided in the following table:

<table>

NOTE: Cables larger in pair sizes than those shown in this table must meet all requirements of this section.

(3) Screened cable, when specified, must meet all requirements of this section. The pair sizes of screened cables used within the RUS program are referenced in paragraph (e)(2)(i) of this section.

(4) All cables sold to RUS borrowers for projects involving RUS loan funds under this section must be accepted by RUS Technical Standards Committee "A" (Telephone). For cables manufactured to the specification of this section, all design changes to an accepted design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.

(5) Materials, manufacturing techniques, or cable designs not specifically addressed by this section may be allowed if accepted by RUS. Justification for acceptance of modified materials, manufacturing techniques, or cable designs must be provided to substantiate product utility and long-term stability and endurance.

(6) The American National Standard Institute Insulated Cable Engineers Association, Inc. (ANSI/ICEA) S-84-608-1988 Standard for Telecommunications Cable, Filled, Polyolefin Insulated, Copper Conductor Technical Requirements referenced throughout this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/ICEA S-84-608-1988 are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.
are available from ICEA, P. O. Box 440, South Yarmouth, MA 02664, telephone number (508) 394-4424.

(b) Conductors and conductor insulation. (1) The gauge sizes of the copper conductors covered by this specification must be 19, 22, 24, and 26 American Wire Gauge (AWG).

(2) Each conductor must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 2.1.

(3) Factory joints made in conductors during the manufacturing process must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 2.2.

(4) The raw materials used for conductor insulation must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.1 through 3.3.

(5) The finished conductor insulation must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.2.1 and 3.3.

(6) Insulated conductors must not have an overall diameter greater than 2 millimeters (mm) (0.081 inch (in.)).

(7) A permissible overall performance level of faults in conductor insulation must average not greater than one fault per 12,000 conductor meters (40,000 conductor feet) for each gauge of conductor.

(i) All insulated conductors must be continuously tested for insulation faults during the twinning operation with a method of testing acceptable to RUS. The length count and number of faults must be recorded. The information must be retained for a period of 6 months and be available for review by RUS when requested.

(ii) The voltages for determining compliance with the requirements of this section are as follows:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Direct Current Voltages (kilovolts)</th>
</tr>
</thead>
<tbody>
<tr>
<td>19</td>
<td>8.0</td>
</tr>
<tr>
<td>22</td>
<td>6.0</td>
</tr>
<tr>
<td>24</td>
<td>5.0</td>
</tr>
<tr>
<td>26</td>
<td>4.0</td>
</tr>
</tbody>
</table>

(8) Repairs to the conductor insulation during manufacture are permissible. The method of repair must be accepted by RUS prior to its use. The repaired insulation must be capable of meeting the relevant electrical requirements of this section.

(9) All repaired sections of insulation must be retested in the same manner as originally tested for compliance with paragraph (b)(7) of this section.

(10) The colored insulating material removed from or tested on the conductor, from a finished cable, must meet the performance requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.4.1, 3.4.2, 3.4.4, 3.4.5, and 3.4.6.

(c) Identification of pairs and twisting of pairs. (1) The insulation must be colored to identify:

(i) The tip and ring conductor of each pair; and

(ii) Each pair in the completed cable.

(2) The colors to be used in the pairs in the 25 pair group, together with the pair numbers, must be in accordance

600
with the table specified in ANSI/ICEA S-84-608-1988, paragraph 3.5.

(3) Positive identification of the tip and ring conductors of each pair by marking each conductor of a pair with the color of its mate is permissible. The method of marking must be accepted by RUS prior to its use.

(4) Other methods of providing positive identification of the tip and ring conductors of each pair may be employed if accepted by RUS prior to its use.

(5) The insulated conductors must be twisted into pairs.

(6) In order to provide sufficiently high crosstalk isolation, the pair twists must be designed to enable the cable to meet the capacitance unbalance and crosstalk loss requirements of paragraphs (k)(5), (k)(6), and (k)(8) of this section.

(7) The average length of pair twists in any pair in the finished cable, when measured on any 3 meter (10 foot) length, must not exceed the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 3.5.

(d) Forming of the cable core. (1) Twisted pairs must be assembled in such a way as to form a substantially cylindrical group.

(2) When desired for lay-up reasons, the basic group may be divided into two or more subgroups called units.

(3) Each group, or unit in a particular group, must be enclosed in bindings of the colors indicated for its particular pair count. The pair count, indicated by the colors of insulation, must be consecutive as indicated in paragraph (d)(6) of this section through units in a group.

(4) The filling compound must be applied to the cable core in such a way as to provide as near a completely filled core as is commercially practical.

(5) Threads and tapes used as binders must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 4.2 and 4.2.1.

(6) The colors of the bindings and their significance with respect to pair count must be as follows:

<table>
<thead>
<tr>
<th>Group No.</th>
<th>Color of Bindings</th>
<th>Group Pair Count</th>
</tr>

<tr>
<td>24</td>
<td>Violet-Brown</td>
<td>576–600</td>
</tr>
</tbody>
</table>

(7) The use of the white unit binder in cables of 100 pairs or less is optional.

(8) When desired for manufacturing reasons, two or more 25 pair groups may be bound together with nonhygroscopic and nonwicking threads or tapes into a super-unit. Threads or tapes must meet the requirements specified in paragraph (d)(5) of this section. The group binders and the super-unit binders must be color coded such that the combination of the two binders must positively identify each 25 pair group from every other 25 pair group in the cable. Super-unit binders must be of the color shown in the following table:

<table>
<thead>
<tr>
<th>Super-Unit Binder Colors</th>

</tr>
<tr>
<td>1801–2400</td>
</tr>
<tr>
<td>2401–3000</td>
</tr>
</tbody>
</table>

(9) Color binders must not be missing for more than 90 meters (300 feet) from any 25 pair group or from any subgroup used as part of a super-unit. At any cable cross-section, no adjacent 25 pair groups and no more than one subgroup of any super-unit may have missing binders. In no case must the total number of missing binders exceed three. Missing super-unit binders must not be permitted for any distance.
(10) Any reel of cable which contains missing binders must be labeled indicating the colors and location of the binders involved. The labeling must be applied to the reel and also to the cable.

(e) Screened cable. (1) Screened cable must be constructed such that a metallic, internal screen(s) must be provided to separate and provide sufficient isolation between the compartments to meet the requirements of this section.

(2) At the option of the user or manufacturer, identified service pairs providing for voice order and fault location may be placed in screened cables.

(i) The number of service pairs provided must be one per twenty-five operating pairs plus two for a cable size up to and including 400 pairs, subject to a minimum of four service pairs. The pair counts for screened cables are as follows:

<table>
<thead>
<tr>
<th>Carrier Pair Count</th>
<th>Service Pairs</th>
<th>Total Pair Count</th>
</tr>

<td>418</td>
</tr>
</tbody>
</table>

(ii) The service pairs must be equally divided among the compartments. The color sequence must be repeated in each compartment.

(iii) The electrical and physical characteristics of each service pair must meet all the requirements set forth in this section.

(iv) The colors used for the service pairs must be in accordance with the requirements of paragraph (b)(5) of this section. The color code used for the service pair number are shown in the following table:

<table>
<thead>
<tr>
<th>Service Pair No.</th>
<th>Color</th>

</table>

(3) The screen tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 5.1 through 5.4.

(4) The screen tape must be tested for dielectric strength by completely removing the protective coating from one end to be used for grounding purposes.

(i) Using an electrode, over a 30 centimeter (1 foot) length, apply a direct current voltage at the rate of rise of 500 volts/second until failure.

(ii) No breakdown should occur below 8 kilovolts.

(f) Filling compound. (1) After or during the stranding operation and prior to application of the core wrap, filling compound must be applied to the cable core. The compound must be as nearly colorless as is commercially feasible and consistent with the end product requirements and pair identification.

(2) The filling compound must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 4.4 through 4.4.4.

(3) The individual cable manufacturer must satisfy RUS that the filling compound selected for use is suitable for its intended application. The filling compound must be applied to the cable in such a manner that the cable components will not be degraded.

(g) Core wrap. (1) The core wrap must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 4.3.

(2) If required for manufacturing reasons, white or colored binders of non-hygroscopic and nonwicking material
may be applied over the core and/or wrap. When used, binders must meet the requirements specified in paragraph (d)(5) of this section.

(3) Sufficient filling compound must be applied to the core wrap so that voids or air spaces existing between the core and the inner side of the core wrap are minimized.

(h) Flooding compound. (1) Sufficient flooding compound must be applied on all sheath interfaces so that voids and air spaces in these areas are minimized. When the optional armored design is used, the flooding compound must be applied between the core wrap and shield, between the shield and armor, and between the armor and the jacket so that voids and air spaces in these areas are minimized. The use of floodant over the outer metallic substrate is not required if uniform bonding, per paragraph (i)(7) of this section, is achieved between the plastic-clad metal and the jacket.

(2) The flooding compound must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 4.5 and the jacket slip test requirements of appendix A, paragraph (III)(5) of this section.

(3) The individual cable manufacturer must satisfy RUS that the flooding compound selected for use is acceptable for the application.

(i) Shield and optional armor. (1) A single corrugated shield must be applied longitudinally over the core wrap.

(2) For unarmored cable the shield overlap must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.2. Core diameter is defined as the diameter under the core wrap and binding.

(3) For cables containing the coated aluminum shield/coated steel armor (CACSP) sheath design, the coated aluminum shield must be applied in accordance with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.2, Dual Tape Shielding System.

(4) General requirements for application of the shielding material are as follows:

(i) Successive lengths of shielding tapes may be joined during the manufacturing process by means of cold weld, electric weld, soldering with a nonacid flux, or other acceptable means.

(ii) Shield splices must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.3.

(iii) The corrugations and the application process of the coated aluminum and copper bearing shields must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.1.

(iv) The shielding material must be applied in such a manner as to enable the cable to pass the cold bend test specified in paragraph (i)(3) of this section.

(5) The following is a list of acceptable materials for use as cable shielding. Other types of shielding materials may also be used provided they are accepted by RUS prior to their use.

</table>

(A) The electrical conductivity of the clad tape must be a minimum of 28 percent of the International Annealed
Copper Standard (IACS) when measured per ASTM B 193-87.

(B) The tape must be nominally 0.13 millimeter (0.005 inch) thick with a minimum thickness of 0.11 millimeter (0.0045 inch).

(vi) The 5-mil copper clad alloy steel tape must be in the fully annealed condition and the copper component must conform to the requirements of ASTM B 224-80 and the alloy steel component must conform to the requirements of ASTM A 505-87, with a cladding ratio of 16/68/16.

(A) The electrical conductivity of the copper clad alloy steel tape must comply with the requirement specified in paragraph (i)(5)(v)(A) of this section.

(B) The thickness of the copper clad alloy steel tape must comply with the requirements specified in paragraph (i)(5)(v)(B) of this section.

(vii) The 6-mil and 7-mil copper clad tapes must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.6.

(6) The corrugations of the armor tape must coincide with the corrugations of the coated aluminum shield.

(ii) Overlapped portions of the armor tape must be in register (corrugations must coincide at overlap) and in contact at the outer edge.

(11) The arming material must be so applied to enable the cable to pass the cold bend test as specified in paragraph (i)(3) of this section.

(12) The 6-mil steel tape must be electrolytic chrome-coated steel (ECCS) plastic coated on both sides and must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.8.

(13) When the jacket is bonded to the plastic-coated steel armored, the bond between the jacket and armor must comply with the requirement specified in ANSI/ICEA-S-84-608-1988, paragraph 7.2.6.

(j) Cable jacket. (1) The jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.

(2) The raw materials used for the cable jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.1.

(3) Jacketing material removed from or tested on the cable must meet the performance requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 7.2.3 and 7.2.4.

(4) The thickness of the jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.2.

(k) Electrical requirements—(1) Conductor resistance. The direct current resistance of any conductor in a completed cable and the average resistance of all conductors in a Quality Control Lot must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.1.

(ii) The resistance unbalance between tip and ring conductors shall be random with respect to the direction of
unbalance. That is, the resistance of the tip conductors shall not be consistently higher with respect to the ring conductors and vice versa.

(3) Mutual capacitance. The average mutual capacitance of all pairs in a completed cable and the individual mutual capacitance of any pair in a completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.3.

(4) Capacitance difference. (i) The capacitance difference for completed cables having 75 pairs or greater must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 8.4.

(ii) When measuring screened cable, the inner and outer pairs must be selected from both sides of the screen.

(5) Pair-to-pair capacitance unbalance—(i) Pair-to-pair. The capacitance unbalance as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.5.

(ii) Screened cable. In cables with 25 pairs or less and within each group of multigroup cables, the pair-to-pair capacitance unbalance between any two pairs in an individual compartment must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.5. The pair-to-pair capacitance unbalances to be considered must be:

(A) Between pairs adjacent in a layer in an individual compartment;
(B) Between pairs in centers of 4 pairs or less in an individual compartment; and
(C) Between pairs in adjacent layers in an individual compartment when the number of pairs in the inner (smaller) layer is 6 or less. The center is counted as a layer.

(iii) In cables with 25 pairs or less, the root-mean-square (rms) value must include all the pair-to-pair unbalances measured for each compartment separately.

(iv) In cables containing more than 25 pairs, the rms value must include the pair-to-pair unbalances in the separate compartments.

(6) Pair-to-ground capacitance unbalance—(i) Pair-to-ground. The capacitance unbalance as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.6.

(ii) When measuring pair-to-ground capacitance unbalance all pairs except the pair under test are grounded to the shield and/or shield/armor except when measuring cables containing super units in which case all other pairs in the same super unit must be grounded to the shield.

(iii) The screen tape must be left floating during the test.

(iv) Pair-to-ground capacitance unbalance may vary directly with the length of the cable.

(7) Attenuation. (i) For nonscreened and screened cables, the average attenuation of all pairs on any reel when measured at 150 and 772 kilohertz must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.7, Solid Column.

(ii) For T1C type cables over 12 pairs, the maximum average attenuation of all pairs on any reel must not exceed the values listed below when measured at a frequency of 1576 kilohertz. The test must be conducted in accordance with ASTM D 4566-90.

(8) Crosstalk loss. (i) The equal level far-end power sum crosstalk loss (FEXT) as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.8, FEXT Table.

(ii) The near-end power sum crosstalk loss (NEXT) as measured on completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.8, NEXT Table.

(iii) Screened cable. (A) For screened cables the NEXT as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 8.9 and 8.9.1.

(B) For TIC screened cable the NEXT as measured on the completed cable must comply with the requirements
specified in ANSI/ICEA S-84-608-1988, paragraphs 8.9 and 8.9.2.
(9) Insulation resistance. The insulation resistance of each insulated conductor in a completed cable must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 8.11.
(10) High voltage test. (i) In each length of completed cable, the insulation between conductors must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.12, Solid Column.
   (ii) In each length of completed cable, the dielectric between the shield and/or armor and conductors in the core must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.13, Single Jacketed, Solid Column. In screened cable the screen tape must be left floating.
   (iii) Screened cable. (A) In each length of completed screened cable, the dielectric between the screen tape and the conductors in the core must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 8.14.
(B) In this test, the cable shield and/or armor must be left floating.
   (iv) Electrical variations. (i) Pairs in each length of cable having either a ground, cross, short, or open circuit condition will not be permitted.
   (ii) The maximum number of pairs in a cable which may vary as specified in paragraph (k)(11)(ii) of this section from the electrical parameters given in this section are listed below. These pairs may be excluded from the arithmetic calculation.

<table>
<thead>
<tr>

(iii) Parameter variations. (A) Capacitance unbalance-to-ground. If the cable fails either the maximum individual pair or average capacitance unbalance-to-ground requirement and all individual pairs are 3937 picofarad/kilometer (1200 picofarad/1000 feet) or less, the number of pairs specified in paragraph (k)(11)(ii) of this section may be eliminated from the average and maximum individual calculations.
(B) Resistance unbalance. Individual pair of 7 percent for all gauges.
(C) Conductor resistance, maximum. The following table shows maximum conductor resistance:

NOTE: RUS recognizes that in large pair count cable (600 pair and above) a cross, short or open circuit condition occasionally may develop in a pair which does not affect the performance of the other cable pairs. In these circumstances rejection of the entire cable may be economically unsound or repairs may be impractical. In such circumstances the manufacturer may desire to negotiate with the customer for acceptance of the cable. No more than 0.5 percent of the pairs may be involved.

(I) Mechanical requirements—(1) Compound flow test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the compound flow test specified in ANSI/ICEA S-84-608-1988, paragraph 9.1 using a test temperature of 80 ± 1°C.
(2) Water penetration. All cables manufactured in accordance with the requirements of this section must be capable of meeting the water penetration test specified in ANSI/ICEA S-84-608-1988, paragraph 9.2.
(3) Cable cold bend test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the cable cold bend test specified in ANSI/ICEA S-84-608-1988, paragraph 9.3.
(4) Cable impact test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the cable impact test specified in ANSI/ICEA S-84-608-1988, paragraph 9.4.
(5) Jacket notch test (CACSP sheath only). All cables utilizing the coated aluminum/coated steel sheath (CACSP) design manufactured in accordance with the requirements of this section must be capable of meeting the jacket notch test specified in ANSI/ICEA S-84-608-1988, paragraph 9.5.
(6) Cable torsion test (CACSP sheath only). All cables utilizing the coated
aluminum/coated steel sheath (CACSP) design manufactured in accordance with the requirements of this section must be capable of meeting the cable torsion test specified in ANSI/ICEA S-84-608-1988, paragraph 9.6.

(m) Sheath slitting cord (optional). (1) Sheath slitting cords may be used in the cable structure at the option of the manufacturer unless specified by the end user.

(2) When a sheath slitting cord is used it must be nonhygroscopic and nonwicking, continuous throughout a length of cable and of sufficient strength to open the sheath without breaking the cord.

(n) Identification marker and length marker. (1) Each length of cable must be identified in accordance with ANSI/ICEA S-84-608-1988, paragraphs 10.1 through 10.1.4. The color of the ink used for the initial outer jacket marking must be either white or silver.

(2) The markings must be printed on the jacket at regular intervals of not more than 0.6 meter (2 feet).

(3) The completed cable must have sequentially numbered length markers in accordance with ANSI/ICEA S-84-608-1988, paragraph 10.1.5. The color of the ink used for the initial outer jacket marking must be either white or silver.

(o) Preconnectorized cable (optional).

(1) At the option of the manufacturer and upon request by the purchaser, cables 100 pairs and larger may be factory terminated in 25 pair splicing modules.

(2) The splicing modules must meet the requirements of RUS Bulletin 345-54, PE-52, RUS Specification for Telephone Cable Splicing Connectors (incorporated by reference at §1755.97), and be accepted by RUS prior to their use.

(p) Acceptance testing and extent of testing. (1) The tests described in appendix A of this section are intended for acceptance of cable designs and major modifications of accepted designs. What constitutes a major modification is at the discretion of RUS. These tests are intended to show the inherent capability of the manufacturer to produce cable products having long life and stability.

(2) For initial acceptance, the manufacturer must submit:

(i) An original signature certification that the product fully complies with each section of the specification;

(ii) Qualification Test Data, per appendix A of this section;

(iii) To periodic plant inspections;

(iv) A certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.);

(v) Written user testimonials concerning field performance of the product; and

(vi) Other nonproprietary data deemed necessary by the Chief, Outside Plant Branch (Telephone).

(3) For requalification acceptance, the manufacturer must submit an original signature certification that the product fully complies with each section of the specification, excluding the Qualification Section, and a certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.), for acceptance by August 30 of each year. The required data must have been gathered within 90 days of the submission. If the initial acceptance of a product to this specification was within 180 days of August 30, then requalification for that product will not be required for that year.

(4) Initial and requalification acceptance requests should be addressed to:

Chairman, Technical Standards Committee “A” (Telephone), Telecommunications Standards Division, Rural Utilities Service, Washington, DC 20250-1500.

(5) Tests on 100 percent of completed cable. (i) The shield and/or armor of each length of cable must be tested for continuity in accordance with ANSI/ICEA S-84-608-1988, paragraph 8.16.

(ii) The screen tape of each length of screened cable must be tested for continuity in accordance with ANSI/ICEA S-84-608-1988, paragraph 8.16.

(iii) Dielectric strength between conductors and shield and/or armor must be tested to determine freedom from grounds in accordance with paragraph (k)(10)(ii) of this section.

(iv) Dielectric strength between conductors and screen tape must be tested...
to determine freedom from grounds in accordance with paragraph (k)(10)(iii) of this section.

(v) Each conductor in the completed cable must be tested for continuity in accordance with ANSI/ICEA S-84-606-1988, paragraph 8.16.

(vi) Dielectric strength between conductors must be tested to insure freedom from shorts and crosses in each length of completed cable in accordance with paragraph (k)(10)(i) of this section.

(vii) Each conductor in the completed preconnectorized cable must be tested for continuity.

(viii) Each length of completed preconnectorized cable must be tested for split pairs.

(ix) The average mutual capacitance must be measured on all cables. If the average mutual capacitance for the first 100 pairs tested from randomly selected groups is between 50 and 53 nanofarad/kilometer (nF/km) (80 and 85 nanofarad/mile), the remainder of the pairs need not be tested on the 100 percent basis (See paragraph (k)(3) of this section).

(6) Capability tests. Tests on a quality assurance basis must be made as frequently as is required for each manufacturer to determine and maintain compliance with:

(i) Performance requirements for conductor insulation, jacketing material, and filling and flooding compounds;

(ii) Bonding properties of coated or laminated shielding and armoring materials and performance requirements for screen tape;

(iii) Sequential marking and lettering;

(iv) Capacitance difference, capacitance unbalance, crosstalk, and attenuation;

(v) Insulation resistance, conductor resistance and resistance unbalance;

(vi) Cable cold bend and cable impact tests;

(vii) Water penetration and compound flow tests; and

(viii) Jacket notch and cable torsion tests.

(q) Summary of records of electrical and physical tests. Each manufacturer must maintain suitable summary records for a period of at least 3 years of all electrical and physical tests required on completed cable by this section as set forth in paragraphs (p)(5) and (p)(6) of this section. The test data for a particular reel must be in a form that it may be readily available to the purchaser or to RUS upon request.

(2) Measurements and computed values must be rounded off to the number of places or figures specified for the requirement according to ANSI/ICEA S-84-606-1988, paragraph 1.3.

(r) Manufacturing irregularities. (1) Repairs to the shield and/or armor are not permitted in cable supplied to end users under this section.

(2) Minor defects in jackets (defects having a dimension of 3 millimeters (0.125 inch) or less in any direction) may be repaired by means of heat fusion in accordance with good commercial practices utilizing sheath grade compounds.

(s) Preparation for shipment. (1) The cable must be shipped on reels. The diameter of the drum must be large enough to prevent damage to the cable from reeling or unreeling. The reels must be substantial and so constructed as to prevent damage to the cable during shipment and handling.

(2) The thermal wrap must comply with the requirements of ANSI/ICEA S-84-606-1988, paragraph 10.3. When a thermal reel wrap is supplied, the wrap must be applied to the reel and must be suitably secured in place to minimize thermal exposure to the cable during storage and shipment. The use of the thermal reel wrap as a means of reel protection will be at the option of the manufacturer unless specified by the end user.

(3) The outer end of the cable must be securely fastened to the reel head so as to prevent the cable from becoming loose in transit. The inner end of the cable must be securely fastened in such a way as to make it readily available if required for electrical testing. Spikes, staples, or other fastening devices which penetrate the cable jacket must not be used. The method of fastening the cable ends must be accepted by RUS prior to its use.

(4) Each length of cable must be wound on a separate reel unless otherwise specified or agreed to by the purchaser.
§ 1755.390

Rural Utilities Service, USDA

(5) The arbor hole must admit a spindle 63 millimeters (2.5 inches) in diameter without binding. Steel arbor hole liners may be used but must be accepted by RUS prior to their use.

(6) Each reel must be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the cable on the reel.

(7) Each reel must be stenciled or labeled on either one or both sides with the information specified in ANSI/ICEA S-84-608-1988, paragraph 10.4 and the RUS cable designation:

| Cable Designation | BFC | Cable Construction | Pair Count | Conductor Gauge | (I) The test procedures described in this appendix are for qualification of initial designs and major modification of accepted designs. Included in (V) of this appendix are suggested formats that may be used in submitting the test results to RUS.

(II) Sample selection and preparation. (1) All testing must be performed on lengths removed sequentially from the same 25 pair, 22 gauge jacketed cable. This cable must not have been exposed to temperatures in excess of 38°C since its initial cool down after sheathing. The lengths specified are minimum lengths and if desirable from a laboratory testing standpoint longer lengths may be used.

(a) Length A shall be 10 ± 0.2 meters (33 ± 0.5 feet) long and must be maintained at 23 ± 3°C. One length is required.

(b) Length B shall be 12 ± 0.2 meters (40 ± 0.5 feet) long. Prepare the test sample by removing the jacket, shield or shield/armor and core wrap for a sufficient distance on both ends to allow the insulated conductors to be flared out. Remove sufficient conductor insulation so that appropriate electrical test connections can be made at both ends. Coil the sample with a diameter of 15 to 20 times its sheath diameter. Three lengths are required.

(c) Length C shall be one meter (3 feet) long. Four lengths are required.

(d) Length D shall be 300 millimeters (1 foot) long. Four lengths are required.

(e) Length E must be 600 millimeters (2 feet) long. Four lengths are required.

(f) Length F shall be 3 meters (10 feet) long and must be maintained at 23 ± 3°C for the duration of the test. Two lengths are required.

(2) Data reference temperature. Unless otherwise specified, all measurements must be made at 23 ± 3°C.

(III) Environmental tests—(1) Heat aging test—(a) Test samples. Place one sample each of lengths B, C, D and E in an oven or environmental chamber. The ends of Sample B must exit from the chamber or oven for electrical tests. Securely seal the oven exit holes.

(b) Sequence of tests. The samples are to be subjected to the following tests after conditioning:

(i) For Sample B measure the open circuit capacitance for each odd numbered pair at 1, 150, and 772 kilohertz, and the attenuation at 150 and 772 kilohertz after conditioning the sample at the data reference temperature for 24 hours. Calculate the average and standard deviation for the data of the 13 pairs on a per kilometer or (on a per mile) basis.

(ii) The attenuation at 150 and 772 kilohertz may be calculated from open circuit admittance (YoC) and short circuit impedance (Zsc) or may be obtained by direct measurement of attenuation.
§ 1755.390

(iii) Record on suggested formats in (V) of this appendix or on other easily readable formats.

(d) Heat conditioning. (i) Immediately after completing the initial measurements, condition the sample for 14 days at a temperature of 65±2°C.

(ii) At the end of this period note any extrusion of cable filler. Measure and calculate the parameters given in (III)(1)(c) of this appendix. Record on suggested formats in (V) of this appendix or on other easily readable formats.

(iii) Cut away and discard a one meter (3 foot) section from each end of length B.

(e) Overall electrical deviation. (i) Calculate the percent change in all average parameters between the final parameters after conditioning and the initial parameters in (III)(1)(c) of this appendix.

(ii) The stability of the electrical parameters after completion of this test must be within the following prescribed limits:

(A) Capacitance. The average mutual capacitance must be within 5 percent of its original value;

(B) The change in average mutual capacitance must be less than 5 percent over frequency 1 to 150 kilohertz;

(C) Attenuation. The 150 and 772 kilohertz attenuation must not have increased by more than 5 percent over their original values.

(2) Water immersion electrical test—(a) Test sample preparation. The 10 meter (33 foot) section of length B must be tested.

(b) Test sample preparation. Prepare the sample by removing the jacket, shield or shield/armor, and core wrap for sufficient distance to allow one end to be accessed for test connections. Cut out a series of 6 millimeter (0.25 inch) diameter holes along the test sample, at 30 centimeters (1 foot) intervals progressing successively 90 degrees around the circumference of the cable. Assure that the cable core is exposed at each hole by slitting the core wrapper. Place the prepared sample in a dry vessel which when filled will maintain a one meter (3 foot) head of water over 6 meters (20 feet) of uncoiled cable. Extend and fasten the ends of the cable so they will be above the water line and the pairs are rigidly held for the duration of the test.

(c) Capacitance testing. Measure the initial values of mutual capacitance of all odd pairs in each cable at a frequency of 1 kilohertz before filling the vessel with water. Be sure the cable shield or shield/armor is grounded to the test equipment. Fill the vessels until there is a one meter (3 foot) head of water on the cables.

(i) Remeasure the mutual capacitance after the cables have been submerged for 24 hours and again after 30 days.

(ii) Record each sample separately on suggested formats in (V) of this appendix or on other easily readable formats.

(d) Overall electrical deviation. (i) Calculate the percent change in all average parameters between the final parameters after conditioning with the initial parameters in (III)(2)(c) of this appendix.

(ii) The average mutual capacitance must be within 5 percent of its original value.

(3) Water penetration testing. (a) A watertight closure must be placed over the jacket of length C. The closure must not be placed over the jacket so tightly that the flow of water through pre-existing voids of air spaces is restricted. The other end of the sample must remain open.

(b) Test per Option A or Option B—(i) Option A. Weigh the sample and closure prior to testing. Fill the closure with water and place under a continuous pressure of 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Collect the water leakage from the end of the test sample during the test and weigh to the nearest 0.1 gram. Immediately after the one hour test, seal the ends of the cable with a thin layer of grease and remove all visible water from the closure, being careful not to remove water that penetrated into the core during the test. Re-weigh the sample and determine the weight of water that penetrated into the core. The weight of water that penetrated into the core must not exceed 8 grams.

(ii) Option B. Fill the closure with a 0.2 gram sodium fluorescein per liter water solution and apply a continuous pressure 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Catch and weigh any water that leaks from the end of the cable during the one hour period. If no water leaks from the sample, carefully remove the water from the closure. Then carefully remove the jacket, shield or shield/armor and core wrap one at a time, examining with an ultraviolet light source for water penetration. After removal of the core and examine for water penetration within the core. Where water penetration is observed, measure the penetration distance. The distance of water penetration into the core must not exceed 127 millimeters (5.0 inches).

(4) Insulation compression test—(a) Test Sample D. Remove jacket, shield or shield/armor, and core wrap being careful not to damage the conductor insulation. Remove one pair from the core and carefully separate, wipe off core filler, and straighten the insulated conductors. Retwist the two insulated conductors together under sufficient tension to form 10 evenly spaced 360 degree twists in a length of 10 centimeters (4 inches).

(b) Sample testing. Center the mid 50 millimeters (2 inches) of the twisted pair between 2 smooth rigid parallel metal plates that are 50 millimeters × 50 millimeters (2 inches × 2 inches).

§ 1755.397 RUS performance specification for line concentrators.

(a) General. (1) This section covers general requirements for a line concentrator (LC) system. This system shall operate in accordance with the manufacturer's specifications. Reliability shall be of prime importance in the design, manufacture and installation of the equipment. The equipment shall automatically provide for:

(i) Terminating subscriber lines at a location remote from the serving central office;

(ii) Concentrating the subscriber lines over a few transmission and supervisory paths to the serving central office; and

(iii) Terminating the lines at the central office without loss of individual identity. A subscriber connected to a line concentrator shall be capable of having essentially the same services as a subscriber connected directly to the central office equipment (COE). Intra-unit calling among subscribers connected to the concentrator may be provided, but is not required.

(2) Industry standards, or portions thereof, referred to in this paragraph (a) are incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552 (a) and 1 CFR part 51. Copies of these standards are available for inspection during normal business hours at RUS, room 2838, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(3) American National Standards Institute (ANSI) standards are available from ANSI Inc., 11 West 42nd Street, 13th floor, New York, NY 10036, telephone 212-642-4900.

(i) ANSI Standard S1.4-1983, Specification for Sound Level Meters, including Amendment S1.4A-1985.

(ii) [Reserved]

(i) ASTM Specification B33-91, Standard Specifications for Tinned Soft or Annealed Copper Wire for Electrical Purposes.

(ii) [Reserved]

(5) Bell Communications Research (Bellcore) standards are available from Bellcore Customer Service, 8 Corporate Place, Piscataway, NJ 08854, telephone 1-800-521-2673.

(i) TR-TSY-000008, Issue 2, August 1987, Digital Interface between the SLC 96 Digital Loop Carrier System and a Local Digital Switch.

(ii) Bell Communications Research (Bellcore) document TR-TSY-000057, Issue 1, April 1987, including Revision 1, November 1988, Functional Criteria for Digital Loop Carrier Systems.

(7) IEEE standards are available from IEEE Service Center, 445 Hoes Lane,
§ 1755.397

P.O. Box 1331, Piscataway, NJ 08854, telephone 1-800-521-2673.

(ii) [Reserved]

(8) RUS standards are available from Publications and Directives Management Branch, Administrative Services Division, Rural Utilities Service, room 1080, South Building, U.S. Department of Agriculture, Washington, DC 20250-1500.

(ii) [Reserved]

(b) Types of requirements.

(1) Unless otherwise indicated, the requirements listed in this section are considered to be fixed requirements.

(2) The concentrator system shall communicate with standard T1 digital transmission format at a minimum between the concentrator and central office terminals. Analog conversion functions at remote and central office terminals shall be capable of being eliminated to accommodate end-to-end digital transmission.

(3) The LC shall operate properly as an integral part of the telephone network when connected to physical or carrier derived circuits and central offices meeting RUS specifications and other generally accepted telecommunications practices, such as Bellcore documents TR-NWT-000303, Integrated Digital Loop Carrier System Generic Requirements, Objectives and Interface; TR-TSY-000008, Digital Interface between the SLC 96 Digital Loop Carrier System and a Local Digital Switch; and TR-TSY-000057, Functional Criteria for Digital Loop Carrier Systems.

(4) For RUS acceptance consideration of a LC, the manufacturer must certify and demonstrate that all requirements specified in this section are available and in compliance with this section.

(5) Certain requirements are included in this section for features which may not be needed for every application. Such features are identifiable by the inclusion in the requirements of some such phrases as “when specified by the owner” or “as specified by the owner.” In some cases where an optional feature will not be required by an owner, either now or in the future, a system which does not provide this feature shall be considered to be in compliance with the specification for the specific installation under consideration, but not in compliance with the entire specification.

(6) The owner may properly request bids from any supplier of an RUS accepted LC whose system provides all the features which will be required for a specific installation.

(7) When required by the owner, the supplier shall state compliance to the Carrier Serving Area (CSA) requirements, as stated in Bell Communications Research (Bellcore) Standard TR-TSY-000057, Functional Criteria for Digital Loop Carrier Systems.

(c) Reliability.

(1) The failure rate of printed circuit boards shall not exceed an average of 2.0 percent per month of all equipped cards in all system terminals during the first 3 months after cutover, and shall not exceed an average of 1.0 percent per month of all equipped cards in all system terminals during the second 3-month period. The failure rate for the equipment shall be less than 0.5 percent per month of all equipped cards in all system terminals after 6 months. A failure is considered to be the failure of a component on the PC board which requires it to be repaired or replaced.

(2) The line concentrator terminal units shall be designed such that there will be no more than 4 hours of total outages in 20 years.

(d) System type acceptance tests. General test results will be required on each system type. Any system provided in accordance with this section shall be capable of meeting any requirement in this section on a spot-check basis.

(e) Features required. The network control equipment and peripheral equipment shall be comprised of solid-state and integrated circuitry components as far as practical and in keeping with the state-of-the-art and economics of the subject system.

(f) Subscriber lines—(General.) The remote LC units shall operate satisfactorily with subscriber lines which meet all of the conditions under the bidder’s specifications and all the requirements
of this section. This section recognizes
that the loop limit of the line con-
centrator is dependent upon the trans-
mmission facility between the LC cen-
tral office termination and the LC re-

terminal equipment shall satisfactorily
transmit dialing information when
used with subscriber dials having a
speed of operation between 8 and 12 dial
pulses per second and a break period of
55 to 65% of the total signaling period.

(ii) Subscriber dial interdigital time.
The remote and central office LC
equipment shall permit satisfactory
telecommunications operation when
used with subscriber rotary dial inter-
digital times of 200 milliseconds mini-

(ii) Subscriber line pushbutton dialing
frequencies. The frequency pairs as-
signed for pushbutton dialing when
provided by the central office shall be
as listed in this paragraph (f)(2)(iii),
with an allowable variation of ±1.5 per-

615
§ 1755.397

(3) When required, traffic data will be stored in electronic storage registers or a block of memory consisting of one or more traffic counters for each item to be measured. The bidder shall indicate what registers are to be supplied, their purpose and the means for displaying the information locally (or at a remote location when available).

(h) Transmission requirements. (1) General. Unless otherwise stated, the requirements in paragraphs (h) (2) through (20) of this section are specified in terms of analog measurements made from Main Distributing Frame (MDF) terminals to MDF terminals excluding cabling loss.

(2) Telephone transmitter battery supply. A minimum of 20 milliamperes, dc, shall be provided for the transmitter of the telephone set at the subscriber station under all loop conditions specified by the bidder. The telephone set is assumed to have a resistance of 200 ohms.

(3) Impedance—subscriber loops. For the purpose of this section, the input impedance of all subscriber loops served by the equipment is arbitrarily considered to be 900 ohms in series with 2.16 microfarad capacitor at voice frequencies.

(4) Battery noise. Noise across the remote terminal battery at power panel distribution bus terminals shall not exceed 35 dBrnC during the specified busy hour.

(5) Stability. The long-term allowable variation in loss through the line concentrator system shall be ±0.5 dB from the loss specified by the bidder.

(6) Return loss. The specified return loss values are determined by the service and type of port at the measuring end. Two-wire ports are measured at 900 ohms in series with 2.16 microfarads, and 4-wire ports are measured at 600 ohms resistive. When other balance networks are supplied, test equipment arranged for operation with the supplied network(s) may be used. The requirement given shall meet the following cited values on each balance network available in the system:

- Line-to-Line or Line-to-Trunk (2-Wire) Echo Return Loss (ERL) Ð 18 dB, Minimum
- Singing Return Loss (SRL) Ð Low Ð 15 dB, Minimum
- Singing Return Loss (SRL) Ð High Ð 18 dB, Minimum

(7) Longitudinal balance. The minimum longitudinal balance, with dc loop currents between 20 to 70 mA, shall be 60 dB at all frequencies between 60 and 2000 Hz, 55 dB at 2700 Hz and 50 dB at 3400 Hz. The method of measurement shall be as specified in the IEEE standard 455, “Standard Testing Procedure for Measuring Longitudinal Balance of Telephone Equipment Operating in the Voice Band.” Source voltage level shall be 10 volts root mean square (rms) where conversation battery feed originates at the remote end.

(8) 60 Hz longitudinal current immunity. The LC 60 Hz longitudinal current immunity shall be measured in accordance with Figure 1 of this section. Under test conditions cited on Figure 1 of this section, the system noise shall be 23 dBrnC or less as follows:
(9) Steady noise (idle channel at 900 ohm impedance). Steady noise: Measure on terminated call. Noise measurements shall comply with the following:
- Maximum: -23 dBnC0
- Average: -18 dBnC0 or less
- 3KHz Flat: Less than 35 dBnC0 as an Objective

(10) Impulse noise. LC central office terminal equipment shall have an impulse noise limit of not more than five counts exceeding 54 dBnC0 voice band weighted in a 5-minute period on six such measurements made during the busy hour. A WILCOM T-194C Transmission Test Set, or equivalent, should be used for the measurements. The
measurement shall be made by estab-

lishing a normal connection from the
noise counter through the switching
equipment in its off-hook condition to
a quiet termination of 900 ohms imped-
ance. Office battery and signaling cir-
cuit wiring shall be suitably segregated
from voice and carrier circuit wiring,
and frame talking battery filters pro-
vided, if and as required, in order to
meet these impulse noise limits.

(11) Crosstalk coupling. Worst case
equal level crosstalk shall be 65 dB
minimum in the range 200 to 3400 Hz.
This shall be measured between any
two paths through the system by con-
necting a 0 dBm0 level tone to the dis-
turbing pair.

(12) Digital error rate. The digital line
concentrator shall not introduce more
than one error in 108 bits averaged over
a 5-minute period, excluding the least
significant bit.

(13) Quantizing distortion. (i) The sys-
tem shall meet the following require-
ments:

<table>
<thead>
<tr>
<th>Input level (dBm0)</th>
<th>Minimum signal to distortion with C-message weighting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to –30</td>
<td>33 dB</td>
</tr>
<tr>
<td>–30 to –40</td>
<td>27 dB</td>
</tr>
<tr>
<td>–40 to –45</td>
<td>22 dB</td>
</tr>
</tbody>
</table>

(ii) Due to possible loss of the least
significant bit on direct digital connec-
tions, a signal to distortion degrada-
tion of up to 2 dB may be allowed
where adequately justified by the bid-
der.

(14) Overload level. The overload level
shall be +3 dBm0.

(15) Gain tracking (linearity) shall
meet the following requirements:

<table>
<thead>
<tr>
<th>Input signal level</th>
</tr>
</thead>
<tbody>
<tr>
<td>+3 to –37 dBm0</td>
</tr>
<tr>
<td>–37 to –50 dBm0</td>
</tr>
</tbody>
</table>
| Minimum gain devi-
aton |
| ±0.5 dB           |
| ±1 dB             |

1 1004 Hz reference at 0 dBm0.

(16) Frequency response (loss relative
to 1004 Hz) for line-to-line (via trunk
group or intra-link) connections shall
meet the following requirements:

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>Loss at 0 dBm0 input</th>
</tr>
</thead>
<tbody>
<tr>
<td>60</td>
<td>20 dB Min.</td>
</tr>
<tr>
<td>300</td>
<td>–1 to +3 dB</td>
</tr>
<tr>
<td>600 to 2400</td>
<td>+1 dB</td>
</tr>
</tbody>
</table>

(17) Envelope delay distortion. On any
properly established connection, the
envelope delay distortion shall not ex-
ceed the following limits:

| Frequency (Hz) | Micro-
|----------------|seconds |
| 1000 to 2600   | 190     |
| 800 to 2800    | 350     |
| 600 to 3000    | 500     |
| 400 to 3200    | 700     |

(18) Absolute delay. The absolute one-
way delay through the line concen-
trator, excluding delays associated
with the central office switching equip-
ment, shall not exceed 1000 microseconds
analog-to-analog measured at 1800 Hz.

(19) Insertion loss. The insertion loss
in both directions of transmission at
1004 Hz shall be included in the inser-
tion loss requirements for the con-
ected COE switch and shall not in-
crease the overall losses through the
combined equipment beyond the values
for the COE alone, when operated
through a direct digital interface.

(20) Detailed requirements for direct dig-
tal connections. (i) This paragraph
(h)(20) covers the detailed require-
ments for the provision of interface units
which will permit direct digital con-
nection between the host central office
and line concentrator subscriber termi-
nals over digital facilities. The digital
transmission system shall be compat-
bile with T1 type span lines using a
DS1 interface and other digital inter-
faces that may be specified by the
owner. The RUS specification for the
T1 span line equipment is PE–60. Other
span line techniques may also be used.
Diverse span line routing may be used
when specified by the owner.

(ii) The output of a digital-to-digital
port shall be Pulse Code Modulation
(PCM), encoded in eight-bit words
using the mu–255 encoding law and D3
encoding format, and arranged to
interfacing with a T1 span line.

(iii) Signaling shall be by means of
Multifrequency (MF) or Dual Pulsing
(DP) and the system which is inherent in the A and B bits of the D3 format. In the case where A and B bits are not used for signaling or system control, these bits shall only be used for normal voice and data transmission.

(iv) When a direct digital interface between the span line and the host central office equipment is to be implemented, the following requirements shall be met:

(A) The span line shall be terminated in a central office as a minimum a DS1 (1.544Mb/s) shall be provided;

(B) The digital central office equipment shall be programmed to support the operation of the digital port with the line concentrator subscriber terminal;

(C) The line concentrator subscriber terminal used with a direct digital interface shall be interchangeable with the subscriber terminal used with a central office terminal.

(i) Alarms. The system shall send alarms for such conditions as blown fuses, blocked controls, power failure in the remote terminal, etc., along with its own status indication and status of dry relay contact closures or solid-state equivalent to the associated central office alarm circuits. Sufficient system alarm points shall be provided from the remote terminal to report conditions to the central office alarm system. The alarms shall be transmitted from the remote terminal to the central office terminal as long as any part of the connecting link is available for this transmission. Fuses shall be of the alarm and indicator type, and their rating designated by numerals or color code on fuse positions.

(j) Electrical protection—(i) Surge protection. (i) Adequate electrical protection of line concentrator equipment shall be included in the design of the system. The characteristics and application of protection devices must be such that they enable the line concentrator equipment to withstand, without damage or excessive protector maintenance, the dielectric stresses and currents that are produced in line-to-ground and tip-to-ring circuits through the equipment as a result of induced or conducted lightning or power system fault-related surges. All wire terminals connected to outside plant wire or cable pairs shall be protected from voltage and current surges.

(ii) Equipment must pass laboratory tests, simulating a hostile electrical environment, before being placed in the field for the purpose of obtaining field experience. For acceptance consideration RUS requires manufacturers to submit recently completed results (within 90 days of submittal) of data obtained from the prescribed testing. Manufacturers are expected to detail how data and tests were conducted. There are five basic types of laboratory tests which must be applied to exposed terminals in an effort to determine if the equipment will survive. Figure 2 of this section, Summary of Electrical Requirements and Tests, identifies the tests and their application as follows:
**Figure 2.—Summary of Electrical Requirements and Tests**

</tbody>
</table>
(iii) Electrical protection requirements for line concentrator equipment can be summarized briefly as follows:

(A) Current surge tests simulate the stress to which a relatively low impedance path may be subjected before main frame protectors break down. Paths with a 100 Hz impedance of 50 ohms or less shall be subjected to current surges, employing a 10 x 1000 microsecond waveshape as defined in Figure 3 of this section, Surge Waveshape. For the purpose of determining this impedance, arresters which are mounted within the equipment are to be considered zero impedance. The crest current shall not exceed 500A; however, depending on the impedance of the test specimen this value of current may be lower. The crest current through the sample, multiplied by the sample's 100 Hz impedance, shall not exceed 1000 V. Where sample impedance is less than 2 ohms, peak current shall be limited to 500A as shown in Figure 4 of this section, Current Surge Tests. Figures 3 and 4 follow:

**Figure 3**

*Explanation of Surge Waveshape*

![Surge Waveshape](image)

Surge Waveshape is defined as follows:

- **Rise Time x Time to Decay to Half Crest Value**
  (For example, 10 x 1000 μs)

**Notes:**

- $T_1$ = Time to determine the rate of rise. The rate of rise is determined as the slope between 10% and 90% of peak voltage or current.
- $T_2$ = Time to 50% of peak voltage (decay to half value).
(B) Sixty Hertz (60 Hz) current carrying tests shall be applied to simulate an ac power fault which is conducted to the unit over the cable pairs. The test shall be limited to 10 amperes Root Mean Square (rms) of 60 Hz ac for a period of 11 cycles (0.1835 seconds) and shall be applied longitudinally from line to ground. (C) AC power service surge voltage tests shall be applied to the power input terminals of ac powered devices.
to simulate switching surges or lightning-induced transients on the AC power system. The test shall employ a 1.2 x 50 microsecond waveshape with a crest voltage of 2500 V. Communications line protectors may be left in place for these tests.

(D) Voltage surge tests which simulate the voltage stress to which a relatively high impedance path may be subjected before primary protectors break down and protect the circuit. To ensure coordination with the primary protection while reducing testing to the minimum, voltage surge tests shall be conducted at a 1000 volts with primary arresters removed for devices protected by carbon blocks, or the +3 sigma dc breakdown voltage of other primary arresters. Surge waveshape should be 10 x 1000 microseconds.

(E) Arrester response delay tests are designed to stress the equipment in a manner similar to that caused by the delayed breakdown of gap type arresters when subjected to rapidly rising voltages. Arresters shall be removed for these tests, the peak surge voltage shall be the +3 sigma breakdown voltage of the arrester in question on a voltage rising at 100 V per microsecond, and the time for the surge to decay to half voltage shall equal at least the delay time of the tube as explained in Figure 5 of this section, Arrester Response Delay Time as follows:

Figure 5

Explanation of Arrester Response Delay Time

![Diagram of Arrester Response Delay Time]

Note: The delay time is that period of time when the potential across an arrester exceeds its dc firing level.

(iv) Tests shall be conducted in the following sequence. As not all tests are required in every application, non-applicable tests should be omitted:

(A) Current Impulse Test;
(B) Sixty Hertz (60 Hz) Current Carrying Tests;
(C) AC Power Service Impulse Voltage Test;
(D) Voltage Impulse Test; and
(E) Arrester Response Delay Time Test.
(v) A minimum of five applications of each polarity for the surge tests and three for the 60 Hz Current Carrying Tests are the minimum required. All tests shall be conducted with not more than 1 minute between consecutive applications in each series of three or five applications to a specific configuration so that heating effects will be cumulative. See Figure 6 of this section, 60 Hz Current Surge Tests as follows:

Figure 6

60 Hz Current Surge Test

V - 700 Volts root mean square (rms) (Approximately 1000V Peak).
Z_{60} - Test specimen impedance to be measured at 60 Hz.
R_{S} - Series Resistance (current limiting) in each side of line. (Source impedance never less than 50 Ω longitudinal.)

(vi) Tests shall be applied between each of the following terminal combinations for all line operating conditions:

(A) Line tip to ring;
(B) Line ring to ground;
(C) Line tip to ground; and
(D) Line tip and ring tied together to ground.

(2) Dielectric strength. (i) Arresters shall be removed for all dielectric strength tests.

(ii) Direct current potentials shall be applied between all line terminals and the equipment chassis and between these terminals and grounded equipment housings in all instances where the circuitry is dc open circuit from the chassis, or connected to the chassis through a capacitor. The duration of all dielectric strength tests shall be at least 1 second. The applied potential shall be at a minimum equal to the plus 3 sigma dc breakdown voltage of the arrester, provided by the line concentrator manufacturer.

(3) Insulation resistance. Following the dielectric tests, the insulation resistance of the installed electrical circuits between wires and ground, with the normal equipment grounds removed, shall not be less than 10 megohms at 500 volts dc at a temperature of 68 °F (20 °C) and at a relative humidity of approximately 50 percent. The measurement shall be made after the meter stabilizes, unless the requirement is met sooner. Arresters shall be removed for these tests.

(4) Self-protection. (i) All components shall be capable of being continuously energized at rated voltage without injury. Design precautions must be taken to prevent damage to other equipment components when a particular component fails.

(ii) Printed circuit boards or similar equipment employing electronic components should be self-protecting against external grounds applied to the connector terminals. Board components and coatings applied to finished products shall be of such material or so treated that they will not support combustion.

(iii) Every precaution shall be taken to protect electrostatically sensitive components from damage during handling. This shall include written instructions and recommendations.

(k) Miscellaneous—(1) Interconnect wire. All interconnect wire shall be of soft annealed tinned copper wire meeting the requirements of ASTM Specification B39-91 and of suitable cross-section to provide safe current carrying capacity and mechanical strength. The insulation of installed wire, connected to its equipment and frames, shall be capable of withstanding the same insulation resistance and dielectric strength requirements as given in paragraphs (j)(2) and (j)(3) of this section at a temperature of 120°F (49°C), and a relative humidity of 90 percent.

(2) Wire wrapped terminals. These terminals are preferred and where used shall be of a material suitable for wire wrapping. The connections to them shall be made with a wire wrapping tool with the following minimum number of successive non-overlapping turns of bare tinned copper wire in contact with each terminal:

(i) 6 turns of 30 gauge;
(ii) 6 turns of 26 gauge;
(iii) 6 turns of 24 gauge; or
(iv) 5 turns of 22 gauge.

(3) Protection against corrosion. All metal parts of equipment frames, distributing frames, cable supporting framework and other exposed metal parts shall be constructed of corrosion resistant materials or materials plated or painted to render them adequately corrosion resistant.

(4) Screws and bolts. Screw threads for all threaded securing devices shall be of American National Standard form in accordance with Federal Standard H28, unless exceptions are granted to the manufacturer of the switching equipment. All bolts, nuts, screws, and washers shall be of nickel-copper alloy, steel, brass or bronze.

(5) Environmental requirements. (i) The bidder shall specify the environmental conditions necessary for safe storage and satisfactory operation of the equipment being bid. If requested, the bidder shall assist the owner in planning how to provide the necessary environment for the equipment.

(ii) To the extent practicable, the following temperature range objectives shall be met:
§1755.397  
7 CFR Ch. XVII (1-1-98 Edition)

(A) For equipment mounted in central office and subscriber buildings, the carrier equipment shall operate satisfactory within an ambient temperature range of 32 °F to 120 °F (0 °C to 49 °C) and at 80 percent relative humidity between 50 °F and 100 °F (10 °C and 38 °C); and

(B) Equipment mounted outdoors in normal operation (with cabinet doors closed) shall operate satisfactorily within an ambient temperature range (external to cabinet) of −40 °F to 140 °F (−40 °C to 60 °C) and at 95 percent relative humidity between 50 °F to 100 °F (10 °C to 38 °C). As an alternative to the (60 °C) requirement, a maximum ambient temperature of 120 °F (49 °C) with equipment (cabinet) exposed to direct sunlight may be substituted.

(6) Stenciling. Equipment units and terminal jacks shall be adequately designated and numbered. They shall be stenciled so that identification of equipment units and leads for testing or traffic analysis can be made without unnecessary reference to prints or descriptive literature.

(7) Quantity of equipment bays. Consistent with system arrangements and ease of maintenance, space shall be provided on the floor plan for an orderly layout of future equipment bays. Readily accessible terminals will be provided for connection to interbay and frame cables to future bays. All cables, interbay and intrabay (excluding power), if technically feasible, shall be terminated at both ends by connectors.

(8) Radio and television interference. Measures shall be employed by the bidders to limit the radiation of radio frequencies generated by the equipment so as not to interfere with radio, television receivers, or other sensitive equipment.

(9) Housing. (i) When housed in a building supplied by the owner, a complete floor plan including ceiling height, floor loading, power outlets, cable entrances, equipment entry and travel, type of construction, and other pertinent information shall be supplied.

(ii) In order to limit corrosion, all metal parts of the housing and mounting frames shall be constructed of suitable corrosion resistant materials or materials protectively coated to render them adequately resistant to corrosion under the climatic and atmospheric conditions existing in the area in which the housing is to be installed.

(10) Distributing frame. (i) The line concentrator terminal equipment located at the central office shall be protected by the central office main distribution frame. The bidder may supply additional protection capability as appropriate. All protection devices (new or existing) shall be arranged to operate in a coordinated manner to protect equipment, limit surge currents, and protect personnel.

(ii) The distributing frame shall provide terminals for terminating all incoming cable pairs. Arresters shall be provided for all incoming cable pairs, or for a smaller number of pairs if specified.

(iii) The current carrying capacity of each arrester and its associated mounting shall coordinate with a #22 gauge copper conductor without causing a self-sustaining fire or permanently damaging other arrester positions. Where all cable pairs entering the housing are #24 gauge or finer, the arresters and mountings need only coordinate with #24 gauge cable conductors.

(iv) Remote terminal protectors may be mounted and arranged so that outside cable pairs may be terminated on the left or bottom side of protectors (when facing the vertical side of the MDF) or on the back surface of the protectors. Means for easy identification of pairs shall be provided.

(v) Protectors shall have a “dead front” (either insulated or grounded) where live metal parts are not readily accessible.

(vi) Protectors shall be provided with an accessible terminal of each incoming conductor which is suitable for the attachment of a temporary test lead. They shall also be constructed so that auxiliary test fixtures may be applied to open and test the subscriber’s circuit in either direction. Terminals shall be suitable for wire wrapped connections or connectorized.

(vii) If specified, each protector group shall be furnished with a factory assembled tip cable for splicing to the outside cable; the tip cable shall be 20 feet (6.1 m) in length, unless otherwise
specified. Tip cable used shall be RUS accepted.

(viii) Protector makes and types used shall be RUS accepted.

(l) Power equipment—(1) General. When specified, batteries and charging equipment shall be supplied for the remote terminal of the line concentrator.

(2) Operating voltage. (i) The nominal operating voltage of the central office and remote terminal shall be 48 volts dc, provided by a battery with the positive side tied to system ground.

(ii) Where equipment is dc powered, it must operate satisfactorily over a range of 50 volts ± 6 volts dc.

(iii) Where equipment is ac powered, it must operate satisfactorily over a range of 120 ± 10 volts or 220 ± 10 volts ac.

(3) Batteries. (i) Unless otherwise specified by the owner, sealed batteries shall be supplied for the remote line concentrator terminal.

(ii) The batteries shall have an ampere hour load capacity of no less than 8 busy hours. When an emergency ac supply source is available, the battery reserve may be reduced to 3 busy hours.

(iii) The batteries shall be sealed when they are mounted in the cabinet with the concentrator equipment.

(iv) When specified by the owner, battery heaters shall be supplied in a bidder-furnished housing.

(4) Charging equipment. (i) One charger capable of carrying the full dc power load of the remote terminal shall be supplied unless otherwise specified by the owner.

(ii) Charging shall be on a full float basis. The rectifiers shall be of the full wave, self-regulating, constant voltage, solid-state type and shall be capable of being turned on and off manually.

(iii) When charging batteries, the voltage at the battery terminals shall be adjustable and shall be set at the value recommended for the particular battery being charged, provided it is not above the maximum operating voltage of the central office switching equipment. The voltage shall not vary more than ±0.02 volt dc per cell between 10% load and 100% load. Between 3% and 10% load, the output voltage shall not vary more than ±0.04 volt dc per cell. Beyond full load current the output voltage shall drop sharply. The above output voltage shall be maintained with input line voltage variations of plus or minus 10 percent. Provision shall be made to manually change the output voltage of the rectifier to 2.25 volts per cell to provide an equalization charge on the battery.

(iv) The charger noise, when measured with a suitable noise measuring set and under the rated battery capacitance and load conditions, shall not exceed 22 dBrnC. See Figure 7 of this section, Charger Noise Test as follows:
(v) The charging equipment shall be provided with a means for indicating a failure of charging current whether due to ac power failure, an internal failure in the charger, or to other circumstances which might cause the output voltage of the charger to drop below the battery voltage. Where a supplementary constant current charger is used, an alarm shall be provided to indicate a failure of the charger.

(vi) Audible noise developed by the charging equipment shall be kept to a minimum. Acoustic noise resulting from operation of the rectifier shall be expressed in terms of dB indicated on a sound level meter conforming to American National Standards Institute S1.4, and shall not exceed 65 dB (A-weighting) measured at any point 5 feet (1.5m) from any vertical surface of the rectifier.

Note (1) The manufacturer may elect to eliminate the capacitor C from the measurement.

Capacitance C in $\mu F = 30,000 \mu F$ per ampere-hour per cell. For example, 25 cells at 100 ampere-hour would be equivalent to a capacitance of:

$$\frac{(30,000 \times 100)}{25} = 120,000 \mu F$$

(2) The value of the resistive load R is determined by the nominal battery voltage in volts divided by the full load rating in amperes. For example, for a 48 volt battery and a full load current of 24 amperes, the load resistance R is 48/24 = 2 ohms of appropriate power handling capacity.
(vii) The charging equipment shall be designed so that neither the charger nor the central office equipment is subject to damage in case the battery circuit is opened for any value of load within the normal limits.

(5) Power panel. (i) Battery and charger control switches, dc voltmeters, dc ammeters, fuses and circuit breakers, supervisory and timer circuits shall be provided as required. Portable or panel mounted frequency meters or voltmeters shall be provided as specified by the owner.

(ii) Power panels, cabinets and shelves, and associated wiring shall be designed initially to handle the line concentrator terminal when it reaches its ultimate capacity as specified by the owner.

(iii) The power panel shall be of the "dead front" type.

(6) Ringing equipment. The ringing system shall provide sufficient ringing on a bridged basis over the voltage and temperature limits of this section and over subscriber drops within the limits stated by the bidder. The ringing system shall be without operational problems such as bell tapping during dialing. The bidder shall state the minimum number (not less than two) of main station ringers that can be used for each ringing option available.

(7) Interrupter equipment. The interrupter may be an integral part of the system or may be part of the associated central office equipment connected to the line concentrator central office terminal.

(8) Special systems. Manufacturers of LC systems that operate by extending ringing current from the central office shall state their required input ringing (voltage and frequency) and the limitations on the connected subscriber loop.

(m) Fusing requirements—(1) General. (i) The equipment shall be completely wired and equipped with fuses, trouble signals, and all associated equipment for the wire capacity of the frames or cabinets provided.

(ii) Design precautions shall be taken to prevent the possibility of equipment damage arising from the insertion of an electronic package into the wrong connector or the removal of a package from any connector or improper insertion of the correct card in its connector.

(2) Fuses. Fuses and circuit breakers shall be of an alarm and indicator type, except where the fuse or breaker location is indicated on the alarm printout. Their rating shall be designated by numerals or color codes on the fuse or the panel.

(n) Trouble location and test—(1) Equipment. (i) Trouble indications in the system may be displayed in the form of lights on the equipment units or printed circuit boards.

(ii) When required, a jack or other connector shall be provided to connect a fault or trouble recorder (printer or display).

(2) Maintenance system. (i) The maintenance system shall monitor and maintain the system operation without interruption of call processing except for major failures.

(ii) The maintenance system shall be arranged to provide the ability to determine trouble to an individual card, functional group of cards, or other equipment unit.

(o) Spare parts. Lists of spare parts and maintenance tools as recommended by the bidder shall be provided. The cost of such tools and spare parts shall be indicated and shall not be included in the base price.

(p) Drawings and printed material. (1) The bidder shall supply instructional material for each line concentrator system involved at the time of delivery of the equipment. It is not the intent of this section to require system documentation necessary for the repair of individual circuit boards.

(2) Three complete sets of legible drawings shall be provided for each central office to be accessed. Each set shall include all of the following:

(i) Drawings of major equipment items such as frames, with the location of major component items of equipment shown therein;

(ii) Wiring diagrams indicating the specific method of wiring used on each item of equipment and interconnection wiring between items of equipment;

(iii) Maintenance drawings covering each equipment item that contains replaceable parts, appropriately identifying each part by name and part number; and
(iv) Job drawings including all drawings that are individual to the particular line concentrator involved such as mainframe, power equipment, etc.

(3) The following information shall also be furnished:
   (i) A complete index of required drawings;
   (ii) An explanation of electrical principles of operation of overall concentrator system;
   (iii) A list of tests which can be made with each piece of test equipment furnished and an explanation of the method of making each test;
   (iv) A sample of each form recommended for use in keeping records;
   (v) The criteria for analyzing results of tests and determining appropriate corrective action;
   (vi) A set of general notes on methods of isolating equipment faults to specific printed circuit cards in the equipment;
   (vii) A list of typical troubles which might be encountered, together with general indications as to probable location of each trouble; and
   (viii) All special line concentrator system grounding requirements.

(4) When installation is to be done by the bidder a complete set of drawings shall be provided by the owner, such as floor plans, lighting, grounding and ac power access.

(q) Installation and acceptance—(1) General. Paragraphs (q)(2)(i) through (q)(3)(xxi) of this section covers the general requirements for the installation of line concentrator equipment by the bidder, and outlines the general conditions to be met by the owner in connection with such installation work. The responsibilities apply in both the central office installation and remote terminal installations, unless otherwise noted.

(2) Responsibilities of owner. The owner shall:
   (i) Allow the bidder and its employees free access to the premises and facilities at all hours during the progress of the installation;
   (ii) Provide access to the remote site and any other site for development work needed during the installation;
   (iii) Take such action as necessary to ensure that the premises are dry and free from dust and in such condition as not to be hazardous to the installation personnel or the material to be installed (not required when remote terminal is not installed in a building);
   (iv) Provide heat or air conditioning when required and general illumination in rooms in which work is to be performed or materials stored;
   (v) Provide suitable openings in buildings to allow material to be placed in position (not required when a remote terminal is not installed in a building);
   (vi) Provide the necessary conduit and commercial and dc-ac inverter output power to the locations shown on the approved floor plan drawings;
   (vii) Provide 110 volts a.c., 60 Hz commercial power equipped with a secondary arrester and a reasonable number of outlets for test, maintenance and installation equipment;
   (viii) Provide suitable openings or channels and ducts for cables and conductors from floor to floor and from room to room;
   (ix) Provide suitable ground leads, as designated by the bidder (not required when remote terminal is not installed in a building);
   (x) Provide the necessary wiring, central office ground and commercial power service, with a secondary arrester, to the location of an exterior remote terminal installation based on the voltage and load requirements furnished by the bidder;
   (xi) Test at the owners expense all lines and trunks for continuity, leakage and loop resistance and ensure that all lines and trunks are suitable for operation with the central office and remote terminal equipment specified;
   (xii) Make alterations and repairs to buildings necessary for proper installation of material, except to repair damage for which the bidder or its employees are responsible;
   (xiii) Connect outside cable pairs on the distributing frame (those connected to protectors);
   (xiv) Furnish all line, class of service assignment, and party line assignment information to permit bidder to program the data base memory within a reasonable time prior to final testing;
   (xv) Release for the bidder’s use, as soon as possible, such portions of the
existing plant as are necessary for the proper completion of such tests as require coordination with existing facilities including facilities for T1 span lines with properly installed repeaters between the central office and the remote terminal installations;

(xvi) Make prompt inspections as it deems necessary when notified by the bidder that the equipment, or any part thereof, is ready for acceptance;

(xvii) Provide adequate fire protection apparatus at the remote terminal, including one or more fire extinguishers or fire extinguishing systems of the gaseous type, that has low toxicity and effect on equipment;

(xviii) Provide necessary access ports for cable, if underfloor cabling is selected;

(xix) Install equipment and accessory plant devices mounted external to the central office building and external to the repeater and other outside housings including filters, repeater housings, splicing of repeater cable stubs, externally mounted protective devices and other such accessory devices in accordance with written instructions provided by the bidder; and

(xx) Make all cross connections (at the MDF or Intermediate Distribution Frame IDF) between the physical trunk or carrier equipment and the central office equipment unless otherwise specified in appendix A of this section.

(3) Responsibilities of bidder. The bidder shall:

(i) Allow the owner and its representatives access to all parts of the building at all times;

(ii) Obtain the owner's permission before proceeding with any work necessitating cutting into or through any part of the building structure such as girders, beams, concrete or tile floors, partitions or ceilings (does not apply to the installation of lag screws, expansion bolts, and similar devices used for fastening equipment to floors, columns, walls, and ceilings);

(iii) Be responsible for and repair all damage to the building due to carelessness of the bidder's workforce, exercise reasonable care to avoid any damage to the owner's switching equipment or other property, and report to the owner any damage to the building which may exist or may occur during its occupancy of the building;

(iv) Consult with the owner before cutting into or through any part of the building structure in all cases where the fireproofing or moisture proofing may be impaired;

(v) Take necessary steps to ensure that all fire fighting apparatus is accessible at all times and all flammable materials are kept in suitable places outside the building;

(vi) Not use gasoline, benzene, alcohol, naphtha, carbon tetrachloride or turpentine for cleaning any part of the equipment;

(vii) Be responsible for delivering the CO and remote terminal equipment to the sites where they will be needed;

(viii) Install the equipment in accordance with the specifications for the line concentrator;

(ix) Have all leads brought out to terminal blocks on the MDF (or IDF if stated in appendix A of this section) and have all terminal blocks identified and permanently labeled;

(x) Use separate shielded type leads grounded at one end only unless otherwise specified by the owner or bidder or tip cables meeting RUS cable crosstalk requirements for carrier frequencies inside the central office;

(xi) Group the cables to separate carrier frequency, voice frequency, signaling, and power leads;

(xii) Make the necessary power and ground connections (location as shown in appendix A of this section) to the purchaser's power terminals and ground bus unless otherwise stated in appendix A of this section (ground wire shall be 6 AWG unless otherwise stated);

(xiii) Place the battery in service in compliance with the recommendations of the battery manufacturer;

(xiv) Make final charger adjustments using the manufacturer's recommended procedure;

(xv) Run all jumpers, except line and trunk jumpers (those connected to protectors) unless otherwise specified in appendix A of this section;

(xvi) Establish and update all data base memories with subscriber information as supplied by the owner until an agreed turnover time;
(xvii) Give the owner notice of completion of the installation at least one week prior to completion;
(xviii) Permit the owner or its representative to conduct tests and inspections after installation has been completed in order that the owner may be assured the requirements for installation are met;
(xix) Allow access, before turnover, by the owner or its representative, upon request, to the test equipment which is to be turned over as a part of the delivered equipment, to permit the checking of the circuit features which are being tested and to permit the checking of the amount of connected equipment to which the test circuits have access;
(xx) Notify the owner promptly of the completion of work of the central office terminals, remote terminals or such portions thereof as are ready for inspection; and
(xxi) Correct promptly all defects for which the bidder is responsible.

(4) Information to be furnished by bidder. The bidder shall accompany its bid with the following information:

(i) Two copies of the equipment list and the traffic calculations from which the quantities in the equipment list are determined;
(ii) Two copies of the traffic tables from which the quantities are determined, if other than the Erlang B traffic tables;
(iii) A block diagram of the line concentrator and associated maintenance equipment will be provided;
(iv) A prescribed method and criteria for acceptance of the completed line concentrator which will be subject to review;
(v) This special grounding requirements including the recommended configuration, suggested equipment and installation methods to be used to accomplish them;
(vi) The special handling and equipment requirements to avoid damage resulting from the discharge of static electricity (see paragraph (j)(4)(iii) of this section) or mechanical damage during transit installation and testing;
(vii) The location of technical assistance service, its availability and conditions for owner use and charges for the service by the bidder; and
(viii) The identification of the subscriber loop limits available beyond the line concentrator.

(5) Installation requirements. (i) All work shall be done in a neat, workmanlike manner. Equipment frames or cabinets shall be correctly located, carefully aligned, anchored, and firmly braced. Cables shall be carefully laid with sufficient radius of curvature and protected at corners and bends to ensure against damage from handling or vibration. Exterior cabinet installations for remote terminals shall be made in a permanent, eye-pleasing manner.
(ii) All multiple and associated wiring shall be continuous, free from crosses, reverses, and grounds and shall be correctly wired at all points.
(iii) An inspection shall be made by the owner or its representatives prior to performing operational and performance tests on the equipment, but after all installing operations which might disturb apparatus adjustments have been completed. The inspection shall be of such character and extent as to disclose with reasonable certainty any unsatisfactory condition of apparatus or equipment. During these inspections, or inspections for apparatus adjustments, or wire connections, or in testing of equipment, a sufficiently detailed examination shall be made throughout the portion of the equipment within which such condition is observed, or is likely to occur, to disclose the full extent of its existence, where any of the following conditions are observed:
(A) Apparatus or equipment units failing to compare in quantity and type to that specified for the installation;
(B) Apparatus or equipment units damaged or incomplete;
(C) Apparatus or equipment affected by rust, corrosion or marred finish; and
(D) Other adverse conditions resulting from failure to meet generally accepted standards of good workmanship.
(6) Operational tests. (i) Operational tests shall be performed on all circuits and circuit components to ensure their proper functioning in accordance with appropriate explanation of the operation of the circuit.
(ii) All equipment shall be tested to ensure proper operation with all components connected in all possible combinations and each line shall be tested for proper ring, ring trip and supervision.

(iii) All fuses shall be verified for continuity and correct rating. Alarm indication shall be demonstrated for each equipped fuse position. An already failed fuse compatible with the fuse position may be used.

(iv) Each alarm or signal circuit shall be checked for correct operation.

(v) A sufficient quantity of locally originating and incoming calls shall be made to demonstrate the function of the line concentrator including all equipped transmission paths. When intra-link calling is supplied, all intra-link transmission paths shall be demonstrated.

(7) Acceptance tests and data required.

(i) Data shall be supplied to the owner by the bidder in writing as a part of the final documents in closing out the contract as follows:

(A) A detailed cross connect drawing of alarm to power board, central office battery to physical trunks or carrier system, wiring options used in terminals, channels, filters, repeaters, etc., marked in the owner's copy of the equipment manual or supplied separately;

(B) The measured central office supply voltages applied to the equipment terminals or repeaters at the time the jack and test point readings are made and ac supply voltages where equipment is powered from commercial ac sources;

(C) A list of all instruments, including accessories, by manufacturer and type number, used to obtain the data; and

(D) The measurements at all jack or test points recommended by the manufacturer, including carrier frequency level measurements at all carrier terminals and repeaters where utilized.

(ii) Data in the form of a checklist or other notations shall be supplied showing the results of the operational tests.

(iii) The bidder shall furnish to the owner a record of the battery cell or multicell unit voltages measured at the completion of the installation of the switching system before it is placed in commercial service. This is not required at a site where the owner furnishes dc power.

(B) Joint inspection requirements. (i) The bidder shall notify the owner in writing at least one week before the date the complete system will be ready for inspection and tests. A joint inspection shall be made by the bidder and the owner (or owner's engineer) to determine that the equipment installation is acceptable. The inspection shall include physical inspection, a review of acceptance test data, operational tests, and sample measurements.

(A) The owner shall review the acceptance test data and compare it to the requirements of this section.

(B) Sample measurements shall be made on all systems installed under this contract. Test methods should follow procedures described in paragraph (g)(5) of this section.

(C) A check shall be made of measured test point and jack readings for compliance with the manufacturer's specifications. This applies also to channels, terminals, carrier frequency and fault locating circuits.

(ii) In the event that the measured data or operational tests show that equipment fails to meet the requirements of this section, the bidder shall notify the owner. The reports of the bidder and the owner shall be detailed as to deficiencies, causes, corrective action necessary, corrective action to be taken, completion time, etc.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget (OMB) under the control number 0572-0059.)

APPENDIX A TO §1755.397—SPECIFICATION FOR LINE CONCENTRATOR DETAILED EQUIPMENT REQUIREMENTS

(INFORMATION TO BE SUPPLIED BY OWNER)

Telephone Company (Owner)

Name: __________________________

Location: _______________________

Number of LC's Required: ________

Line Concentrator Locations: ________
§ 1755.397

1. General

1.1 Notwithstanding the bidder's equipment lists, the equipment and materials furnished by the bidder must meet the requirements of paragraphs (a) through (p) of this section, and this appendix A.

1.2 Paragraph (a) through (p) of this section cover the minimum general requirements for line concentrator equipment.

1.3 Paragraph (q) of this section covers the requirements for installation, inspection and testing when such service is included as part of the contract.

1.4 This appendix A covers the technical data for application engineering and detailed equipment requirements insofar as they can be established by the owner. This appendix A shall be filled in by the owner.

1.5 Appendix B of this section covers detailed information on the line concentrator equipment, information on system reliability and traffic capacity as proposed by the bidder. Appendix B of this section is to be filled in by the bidder and must be presented with the bid.

2. Number of Subscriber Lines

<table>
<thead>
<tr>
<th>Location</th>
<th>No. of Lines</th>
<th>Central Office</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. Loop Resistance

3.1 Number of non-pay station lines having a loop resistance, including the telephone set as follows:

3.1.1 For physical trunks between the remote and the office units, the loop resistance is to include the resistance of the trunk.

<table>
<thead>
<tr>
<th>No. of lines</th>
</tr>
</thead>
<tbody>
<tr>
<td>1200–1900 ohms</td>
</tr>
<tr>
<td>1901–3200 ohms</td>
</tr>
<tr>
<td>3201–4000 ohms</td>
</tr>
</tbody>
</table>

3.1.2 Number of pay station lines having a loop resistance, excluding the telephone set, greater than:

<table>
<thead>
<tr>
<th>No. of lines</th>
</tr>
</thead>
<tbody>
<tr>
<td>1200 ohms (Prepay)</td>
</tr>
</tbody>
</table>

4. Traffic Data

4.1 Average combined originating and terminating hundred call seconds (CCS) per line in the busy hour:

<table>
<thead>
<tr>
<th>CCS/Line. (Assume originating &amp; terminating equal.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>By Bidder</td>
</tr>
<tr>
<td>By Owner</td>
</tr>
</tbody>
</table>

4.2 Percent Intra-Calling

4.3 Total Busy Hour Calls

5. Type or Ringing

5.1 Frequency No.

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
</tr>
<tr>
<td>2.</td>
</tr>
<tr>
<td>3.</td>
</tr>
<tr>
<td>4.</td>
</tr>
</tbody>
</table>

5.2 Minimum ringing generator capacity to be supplied shall be sufficient to serve _______ lines (each frequency).

6. Central Office Equipment Interface

6.1 COE will be:

<table>
<thead>
<tr>
<th>COE Manufacturer</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.1.1</td>
</tr>
</tbody>
</table>

6.2 Interface will be:

<table>
<thead>
<tr>
<th>Line Circuit(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.2.1</td>
</tr>
<tr>
<td>Direct Digital Interface</td>
</tr>
<tr>
<td>6.2.2</td>
</tr>
<tr>
<td>Other (Describe)</td>
</tr>
<tr>
<td>6.2.3</td>
</tr>
</tbody>
</table>

6.3 Mounting rack for line concentrator furnished by:

<table>
<thead>
<tr>
<th>Bidder</th>
</tr>
</thead>
<tbody>
<tr>
<td>Owner</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(Specify width and height of rack available)</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Width) (Height)</td>
</tr>
<tr>
<td>Yes (Attach detailed plan)</td>
</tr>
<tr>
<td>No</td>
</tr>
</tbody>
</table>

7. Transmission Facilities

7.1 Transmission facilities between the central office and remote terminals shall be:
7.1.1 Type:  
- VF Carrier Derived Circuits  
- Digital Span Line (DS1)  
- Other

(Attach a layout of the transmission facilities between the central office and the remote terminals describing transmission and signaling parameters, routing and resistance where applicable.)

7.1.2 Utilizes physical plant  
- Cable Pairs (Existing/New)  
- Other

Manufacturer and type  
- Central office voice terminations  
- Equipped

NOTE: Unless otherwise stated, physical plant will be supplied by the owner.

7.1.3 Terminal equipment for transmission facility to be supplied by:  
- Owner  
- Bidder  
- Carrier e/w voice terminations  
- Yes  
- No

Manufacturer and type  
- Central office voice terminations  
- Equipped

7.1.3.2 Digital span line (DS1) supplied by  
- Owner  
- Bidder

8. Power Equipment Requirements  
8.1 Central Office Terminal  
- Owner-furnished   - 48 volt dc power  
- Yes  
- No

8.1.3 Standby power is available  
- Yes  
- No

8.2 Remote Terminal  
- Owner-furnished   - 48 vdc power  
- Yes  
- No

8.2.2 Bidder-furnished power supply  
- Yes  
- No

8.2.3 AC power available at site:  
- 110 vac, 60 Hz, single-phase

8.2.4 A battery reserve of ______ busy hours shall be provided for this line concentrator terminal when it reaches ______ lines at the traffic rates specified.

8.2.5 Batteries supplied shall be:  
- Lead Calcium  
- Stabilized Electrolyte  
- Sealed Lead Acid  
- Other (Describe in item 11)

8.2.6 Standby power is available  
- Yes  
- No

9. Remote Terminal  
9.1 Mounting  
9.1.1 Outside Housing (To be furnished by bidder)  
9.1.2 Concrete Slab to be furnished by owner (Bidder to supply construction details after award.)  
9.1.3 Manhole, environmentally controlled (Describe in item 11)

9.1.4 Pedestal Mounting  
9.1.5 Pole Mounting (Owner-furnished installed pole)  
9.1.6 Prefab Building (Owner-furnished site)

9.2 Equipment is to be installed in an existing building.

10. Alternates

6. Explanatory Notes

§§ 1755.398—1755.399 [Reserved]

§ 1755.400 RUS standard for acceptance tests and measurements of telecommunications plant.

Sections 1755.400 through 1755.407 cover the requirements for acceptance tests and measurements on installed copper and fiber optic telecommunications plant and equipment.

§ 1755.401 Scope.

(a) Acceptance tests outlined in §§ 1755.400 through 1755.407 are applicable to plant constructed by contract or force account. This testing standard provides for the following:

(1) Specific types of tests or measurements for the different types of telecommunications plant and equipment;

(2) The method of measurement and types of measuring equipment;

(3) The expected results and tolerances permitted to meet the acceptable standards and objectives;

(4) Suggested formats for recording the results of the measurements and tests; and

(5) Some probable causes of nonconformance and methods for corrective action, where possible.

(b) Alternative methods of measurements that provide suitable alternative results shall be permitted with the concurrence of the Rural Utilities Service (RUS).

(c) For the purpose of this testing standard, a “measurement” shall be defined as an evaluation where quantitative data is obtained (e.g., resistance in ohms, structural return loss in decibels (dB), etc.) and a “test” shall be defined as an evaluation where no quantitative data is obtained (e.g., a check mark indicating conformance is usually the result of the test).
§ 1755.402 Ground resistance measurements.

(a) The resistance of the central office (CO) and the remote switching terminal (RST) ground shall be measured before and after it has been bonded to the master ground bar (MGB) where it is connected to the building electric service ground.

(b) The ground resistance of electronic equipment such as span line repeaters, carrier terminal equipment, concentrators, etc. shall be measured.

(c) Method of measurement. The connection of test equipment for the ground resistance measurement shall be as shown in Figure 1. Refer to RUS Bulletin 1751F-802, "Electrical Protection Grounding Fundamentals," for a comprehensive discussion of ground resistance measurements.

(d) Test equipment. The test equipment for making this measurement is shown in Figure 1 as follows:
(e) Applicable results. (1) For the CO and RST, the resistance after the bond has been made to the MGB electric service ground shall not exceed 5 ohms. Where the measured ground resistance exceeds 5 ohms, the borrower shall determine what additional grounding, if any, shall be provided.

(2) For electronic equipment, the ground resistance shall not exceed 25 ohms. Where the measured ground resistance exceeds 25 ohms, the borrower shall determine what additional grounding, if any, shall be provided.
§ 1755.403 Copper cable telecommunications plant measurements.

(a) Shield or shield/armor continuity. (1) Tests and measurements shall be made to ensure that cable shields or shield/armors are electrically continuous. There are two areas of concern. The first is shield or shield/armor bonding within a pedestal or splice and the second is shield or shield/armor continuity between pedestals or splices.

(2) Measurement techniques outlined here for verification of shield or shield/armor continuity are applicable to buried cable plant. Measurements of shield continuity between splices in aerial cable plant should be made prior to completion of splicing. Conclusive results cannot be obtained on aerial plant after all bonds have been completed to the supporting strand, multi-grounded neutral, etc.

(3) Method of measurement. (i) The shield or shield/armor resistance measurements shall be made between pedestals or splices using either a Wheatstone bridge or a volt-ohm meter. For loaded plant, measurements shall be made on cable lengths that do not exceed one load section. For nonloaded plant, measurements shall be made on cable lengths that do not exceed 5,000 feet (1,524 meters (m)). All bonding wires shall be removed from the bonding lugs at the far end of the cable section to be measured. The step-by-step measurement procedure shall be as shown in Figure 2.

(ii) Cable shield or shield/armor continuity within pedestals or splices shall be measured with a cable shield splice continuity test set. The step-by-step measurement procedure outlined in the manufacturer's operating instructions for the specific test equipment being used shall be followed.

(4) Test equipment. (i) The test equipment for measuring cable shield or shield/armor resistance between pedestals or splices is shown in Figure 2 as follows:
(ii) A cable shield splice continuity tester shall be used to measure shield or shield/armor continuity within pedestals or splices.

(5) Applicable results. (i) The shield or shield/armor resistance per 1000 ft and per kilometer (km) for cable diameters and types of shielding materials are given in Table 1 (English Units) and Table 2 (Metric Units), respectively as follows:

### Table 1—Shield Resistance @ 68 °F (20°C) Cable diameters versus shield types

(ii) All values of shield and shield/armor resistance provided in Tables 1 and 2 in (a)(5)(i) of this section are considered approximations. If the measured value corrected to 68°F (20°C) is within ±30 percent (%) of the value shown in Table 1 or 2, the shield and shield/armor shall be assumed to be continuous.

(iii) To correct the measured shield resistance to the reference temperature of 68°F (20°C) use the following formulae:

\[
R_{68} = R_t / [1 + A(t - 68)] \quad \text{for English Units}
\]

\[
R_{20} = R_t / [1 + A(t - 20)] \quad \text{for Metric Units}
\]

Where:

- \(R_{68}\) = Shield resistance corrected to 68°F in ohms.
- \(R_{20}\) = Shield resistance corrected to 20°C in ohms.
- \(R_t\) = Shield resistance at measurement temperature in ohms.
- \(A\) = Temperature coefficient of the shield tape.
- \(t\) = Measurement temperature in °F or °C.

(iv) The temperature coefficients (A) for the shield tapes to be used in the formulae referenced in paragraph (a)(5)(iii) of this section are as follows:

- (A) 5 and 10 mil copper = 0.0021 for English units and 0.0039 for Metric units;
- (B) 8 mil coated aluminum and 8 mil coated aluminum/6 mil coated steel = 0.0022 for English units and 0.0040 for Metric units;
- (C) 5 mil copper clad stainless steel and 5 mil copper clad alloy steel = 0.0024 for English units and 0.0044 for Metric units;
- (D) 6 mil copper clad stainless steel = 0.0019 for English units and 0.0035 for Metric units; and
- (E) 6 and 7 mil alloy 194 = 0.0013 for English units and 0.0024 for Metric units.

(v) When utilizing shield continuity testers to measure shield and shield/armor continuity within pedestals or splices, refer to the manufacturer’s published information covering the specific test equipment to be used and for anticipated results.

(6) Data record. Measurement data from shield continuity tests shall be recorded together with anticipated Table 1 or 2 values (see paragraph (a)(5)(i) of this section) in an appropriate format to permit comparison. The recorded data shall include specific location, cable size, cable type, type of shield or shield/armor, if known, etc.
(7) Probable causes for nonconformance. Among probable causes for nonconformance are broken or damaged shields or shield/armors, bad bonding harnesses, poorly connected bonding clamps, loose bonding lugs, etc.

(b) Conductor continuity. After placement of all cable and wire plant has been completed and joined together in continuous lengths, tests shall be made to ascertain that all pairs are free from grounds, shorts, crosses, and opens, except for those pairs indicated as being defective by the cable manufacturer. The tests for grounds, shorts, crosses, and opens are not separate tests, but are inherent in other acceptance tests discussed in this section. The test for grounds, shorts, and crosses is inherent when conductor insulation resistance measurements are conducted per paragraph (c) of this section, while tests for opens are inherent when tests are conducted for loop resistance, insertion loss, noise, or return loss measurements, per paragraphs (d), (e), or (f) of this section. The borrower shall make certain that all defective pairs are corrected, except those noted as defective by the cable manufacturer in accordance with the marking provisions of the applicable cable and wire specifications. All defective pairs that are not corrected shall be reported in writing with details of the corrective measures attempted.

(c) Dc insulation resistance (IR) measurement. (1) IR measurements shall be made on completed lengths of insulated cable and wire plant.

(2) Method of measurement. (i) The IR measurement shall be made between each conductor and all other conductors, sheath, shield and/or shield/armor, and/or support wire electrically connected together and to the main distributing frame (MDF) ground. The measurement shall be made from the central office with the entire length of the cable under test and, where used with all protectors and load coils connected. For COs containing solid state arresters, the solid state arresters shall be removed before making the IR measurements. Field mounted voice frequency repeaters, where used, may be left connected for the IR test but all carrier frequency equipment, including carrier repeaters and terminals, shall be disconnected. Pairs used to feed power remote from the CO shall have the power disconnected and the tip and ring conductors shall be opened before making IR tests. All conductors shall be opened at the far end of the cable being measured.

(ii) IR tests are normally made from the MDF with all CO equipment disconnected at the MDF, but this test may be made on new cables at field locations before they are spliced to existing cables. The method of measurement shall be as shown in Figure 3 as follows:
(iii) If the IR of the conductor cannot be measured because of breakdown of lightning arresters by the test voltage, the arrester units shall be removed and the conductor IR retested. If the IR then meets the minimum requirements, the conductor will be considered satisfactory. Immediately following the IR tests, all arrester units which have been removed shall be reinstalled.

(3) Test equipment. (i) IR measurements shall be made with either an insulation resistance test set or a direct current (dc) bridge type megohmmeter.
(ii) The IR test set shall have an output voltage not to exceed 500 volts dc and shall be of the hand cranked or battery operated type.

(iii) The dc bridge type megohmmeter, which may be alternating current (ac) powered, shall have scales and multipliers which make it possible to accurately read IR from 1 megohm to 1 gigohm. The voltage applied to the conductors under test shall not exceed "250 volts dc" when using an instrument having adjustable test voltage levels. This will help to prevent breakdown of lightning arresters.

(4) Applicable results. (i) For all new insulated cable or wire facilities, the expected IR levels are normally greater than 1,000 to 2,000 megohm-mile (1,609 to 3,218 megohm-km). A value of 500 megohm-mile (805 megohm-km) at 68°F (20°C) shall be the minimum acceptable value of IR. IR varies inversely with the length and the temperature.

(ii) The megohm-mile (megohm-km) value for a conductor may be computed by multiplying the actual scale reading in megohms on the test set by the length in miles (km) of the conductor under test.

(iii) The objective insulation resistance may be determined by dividing 500 by the length in miles (805 by the length in km) of the cable or wire conductor being tested. The resulting value shall be the minimum acceptable meter scale reading in megohms.

(iv) Due to the differences between various insulating materials and filling compounds used in manufacturing cable or wire, it is impractical to provide simple factors to predict the magnitude of variation in insulation resistance due to temperature. The variation can, however, be substantial for wide excursions in temperature from the ambient temperature of 68°F (20°C).

(v) Borrowers should be certain that tip and ring IR measurements of each pair are approximately the same. Borrowers should also be certain that IR measurements are similar for cable or wire sections of similar length and cable or wire type. If some pairs measure significantly lower, borrowers should attempt to improve these pairs in accordance with cable manufacturer’s recommendations.

NOTE: Only the megohm-mile (megohm-km) requirement shall be cause for rejection, not individual measurement differences.

(5) Data record. The measurement data shall be recorded. Suggested formats similar to Format I, Outside Plant Acceptance Tests—Subscriber Loops, or Format II, Outside Plant Acceptance Tests—Trunk Circuits, in §1755.407 or formats specified in the applicable construction contract may be used.

(6) Probable causes for nonconformance. (i) When an IR measurement is below 500 megohm-mile (805 megohm-km), the cable or wire temperature at the time of testing must then be taken into consideration. If this temperature is well above 68°F (20°C), the measurement shall be disregarded and the cable or wire shall be remeasured at a time when the temperature is approximately 68°F (20°C). If the result is then 500 megohm-mile (805 megohm-km) or greater, the cable or wire shall be considered satisfactory.

(ii) Should the cable or wire fail to meet the 500 megohm-mile (805 megohm-km) requirement when the temperature is known to be approximately 68°F (20°C) there is not yet justification for rejection of the cable or wire. Protectors, lightning arresters, etc., may be a source of low insulation resistance. These devices shall be removed from the cable or wire and the cable or wire IR measurement shall be repeated. If the result is acceptable, the cable or wire shall be considered acceptable. The removed devices which caused the low insulation resistance value shall be identified and replaced, if found defective.

(iii) When the cable or wire alone is still found to be below the 500 megohm-mile (805 megohm-km) requirement after completing the steps in paragraph (c)(6)(i) and/or paragraph (c)(6)(ii) of this section, the test shall be repeated to measure the cable or wire in sections to isolate the piece(s) of cable or wire responsible. The cable or wire section(s) that is found to be below the 500 megohm-mile (805 megohm-km) requirement shall be either repaired in accordance with the cable or wire manufacturer’s recommended procedure or shall be replaced as directed by the borrower.
(d) Dc loop resistance and dc resistance unbalance measurement. (1) When specified by the borrower, dc loop resistance and dc resistance unbalance measurements shall be made on all cable pairs used as trunk circuits. The dc loop resistance and dc resistance unbalance measurements shall be made between CO locations. Measurements shall include all components of the cable path.

(2) Dc loop resistance and dc resistance unbalance measurements shall be made on all cable pairs used as subscriber loop circuits when:

(i) Specified by the borrower;

(ii) A large number of long loops terminate at one location (similar to trunk circuits); or

(iii) Circuit balance is less than 60 dB when computed from noise measurements as described in paragraph (e) of this section.

(3) Dc resistance unbalance is controlled to the maximum possible degree by the cable specification. Allowable random unbalance is specified between tip and ring conductors within each reel. Further random patterns should occur when the cable conductor size changes. Cable meeting the unbalance requirements of the cable specification may under some conditions result in unacceptable noise levels as discussed in paragraph (d)(6)(iii) of this section.

(4) Method of measurement. The method of measurement shall be as detailed in Figures 4 and 5.

(5) Test equipment. The test equipment is shown in Figures 4 and 5 as follows:
FIGURE 4
DC LOOP RESISTANCE MEASUREMENT

MULTIPLY BY

DECADE DIAL

Wheatstone Bridge
(Leeds & Northrup 5430A or equivalent)

Cable Pair Under Test

Line Terminals With CO Equipment Disconnected

Short & Ground at Far-End

SETTINGS ON TEST SET
1. Set "RES.—VAR—MUR" Key to "RES".
2. Set "RVM—GA—HIL" Switch to "RVM".
3. Set "INT—BA—EXT" Switch to "INT".
4. Connect Pair to Terminals X₁ and X₂ as shown.

PROCEDURE
1. Null galvanometer by operating "MULTIPLY BY" and "DECADE" dials of bridge. Use lowest sensitivity range.
2. Multiply "DECADE" reading in ohms by "MULTIPLY BY" ratio to obtain value of the Loop Resistance.
(6) Applicable results. (i) The measured dc loop resistance shall be within ±5% of the calculated dc loop resistance when corrected for temperature.

(ii) The calculated dc loop resistance is computed as follows:

(A) Multiply the length of each different gauge by the applicable resistance per unit length as shown in Table 3 as follows:
TABLE 3.—DC LOOP RESISTANCE @ 68°F (20°C)

<table>
<thead>
<tr>
<th>American wire gauge (AWG)</th>
<th>Loop resistance</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>24</td>
<td>51.9</td>
</tr>
<tr>
<td>26</td>
<td>83.3</td>
</tr>
</tbody>
</table>

(B) Add the individual resistances for each gauge to give the total calculated dc loop resistance at a temperature of 68°F (20°C).

(C) Correct the total calculated dc loop resistance at the temperature of 68°F (20°C) to the measurement temperature by the following formulae:

\[ R_t = R_{68} \times [1 + 0.0022(t - 68)] \] for English Units

\[ R_t = R_{20} \times [1 + 0.0040(t - 20)] \] for Metric Units

Where:

- \( R_t \) = Loop resistance at the measurement temperature in ohms.
- \( R_{68} \) = Loop resistance at a temperature of 68°F in ohms.
- \( R_{20} \) = Loop resistance at a temperature of 20°C in ohms.
- \( t \) = Measurement temperature in °F or °C.

(D) Compare the calculated dc loop resistance at the measurement temperature to the measured dc loop resistance to determine compliance with the requirement specified in paragraph (d)(6)(i) of this section.

(iii) Resistance varies directly with temperature change. For copper conductor cables, the dc resistance changes by ±1% for every ±5°F (2.8°C) change in temperature from 68°F (20°C).

(iv) The dc resistance unbalance between the individual conductors of a pair shall not exceed that value which will result in a circuit balance of less than 60 dB when computed from noise measurements as described in paragraph (e) of this section. It is impractical to establish a precise limit for overall circuit dc resistance unbalance due to the factors controlling its contribution to circuit noise. These factors include location of the resistance unbalance in relation to a low impedance path to ground (close to the central office) and the magnitude of unbalance in short lengths of cable making up the total circuit length. The objective is to obtain the minimum unbalance throughout the entire circuit when it is ascertained through noise measurements that dc resistance unbalance may be contributing to poor cable balance.

(v) Pairs with poor noise balance may be improved by reversing tip and ring conductors of pairs at cable splices. Where dc resistance unbalances are systematic over the total trunk circuit or loop circuit length, tip and ring reversals may be made at frequent intervals. Where the unbalances are concentrated in a shorter section of cable, only one tip and ring reversal should be required. Concentrated dc resistance unbalance produces maximum circuit noise when located adjacent to the central office. Concentrated dc resistance unbalance will contribute to overall circuit noise at a point approximately two-thirds (\( \frac{2}{3} \)) of the distance to the subscriber. The number of tip and ring reversals shall be held to a minimum.

(vi) A systematic dc resistance unbalance can sometimes be accompanied by other cable parameters that are marginal. Among these are pair-to-pair capacitance unbalance, capacitance unbalance-to-ground, and 150 kilohertz (kHz) crosstalk loss. Engineering judgment has to be applied in each case. Rejection of cable for excessive dc resistance unbalance shall only apply to a single reel length, or shorter.

(7) Data record. The measurement data for dc loop resistance and dc resistance unbalance shall be recorded. Suggested formats similar to Format I for subscriber loops and Format II for trunk circuits in §1755.407 or formats...
specified in the applicable construction contract may be used.

(b) Probable causes for nonconformance. Dc loop resistance and dc resistance unbalance are usually the result of the resistance of individual conductors used in the manufacture of the cable. Resistance unbalance can be worsened by defective splicing of the conductors (splicing connectors, improper crimping tool, etc.).

(e) Subscriber loop measurement (loop checking). (1) When specified by the borrower, insertion loss and noise measurements shall be performed on subscriber loops after connection of a line circuit to the loop by the one person method using loop checking equipment from the customer access location. For this method, the central office should be equipped with a 900 ohm plus two microfarad quiet termination and a milliwatt generator having the required test frequencies; or a portable milliwatt generator having the desired frequencies may be used, especially, where several small offices are involved.

(2) At a minimum, insertion loss and frequency response of subscriber loop plant shall be measured at 1,000, 1,700, 2,300, and 2,800 Hertz (Hz). When additional testing frequencies are desired, the additional frequencies shall be specified in the applicable construction contract.

(3) Measurements of insertion loss and noise shall be made on five percent or more of the pairs. A minimum of five pairs shall be tested on each route. Pairs shall be selected on a random basis with greater consideration in the selection given to the longer loops. Consideration shall be given to measuring a large percentage, up to 100 percent, of all loops.

(4) Method of measurement—(i) Insertion loss. The step-by-step measurement procedure shall be as shown in Figure 6. The output level of the milliwatt generator tones shall be determined prior to leaving the CO. This shall be accomplished by dialing the milliwatt generator number from a spare line at the MDF and measuring with the same equipment to be used in the tests at customer access locations. The output levels shall be recorded for reference later. Insertion loss measurements shall be made across the tip and ring terminals of the pair under test. Figure 6 is as follows:
(ii) Noise. The step-by-step measurement procedure shall be as shown in Figure 7. Prior to leaving the CO for testing, dial the 900 ohm plus two microfarad quiet termination from a spare pair and measure the termination to determine that it actually is quiet. Circuit noise (noise-metallic) shall be measured at the customer access location across the tip and ring terminals of the pair under test. Power influence (direct reading with loop checking equipment) shall be measured at the customer access location from tip and ring conductors-to-ground (this connection is completed via the test
The power influence measurement includes the entire talking connection from the quiet termination to the customer. (That is, the power influence measurement includes all the CO equipment which normally makes up the connection.) Figure 7 is as follows:

**FIGURE 7**

NOISE MEASUREMENT AT SUBSCRIBER LOCATION USING LOOP CHECKING EQUIPMENT

Calibration
1. Before leaving CO connect Loop Checking equipment to idle line at MDF (no outside plant attached).

A. Dial number of Quiet Termination.
B. Read and record Circuit Noise in dBmC.

Measurement Procedure
1. Connect Loop Checking equipment at subscriber's NID as shown.
2. Dial number of Quiet Termination in central office.
3. Switch test set to Circuit Noise (NM) mode.
4. Read and record Circuit Noise value in dBmC.
5. Switch test set to Power Influence (PI) mode.
6. Read and record Power Influence value in dBmC.
7. Compute and record apparent Balance (Balance = PI - NM).
8. Disconnect leads of test equipment from NID when tests are completed.

Note:
2. Do not leave test equipment connected and exposed to ringing voltage of incoming call. Ringing voltage could damage test equipment.

(5) Test equipment. (i) Loop checking equipment which is available from several manufacturers may be used for these measurements. The equipment should have the capability of measuring loop current, insertion loss, circuit
noise (NM) and power influence (PI). The test equipment manufacturer’s operating instructions shall be followed.

(ii) There should be no measurable transmission loss when testing through loop extenders.

(6) Applicable results—(i) Insertion loss.
(A) For D66 loaded cables (a specific loading scheme using a 66 millihenry inductor spaced nominally at 4,500 ft [1,371 m] intervals) measured at a point one-half section length beyond the last load point, the measured nonrepeated insertion loss shall be within ±10% at 1000, 1700, 2300, and 2800 Hz, ±15% at 3400 Hz and ±20% at 4000 Hz of the calculated insertion loss at the same frequencies and temperature.

(B) For H88 loaded cables (a specific loading scheme using an 88 millihenry inductor spaced nominally at 6,000 ft [1,829 m] intervals) measured at a point one-half section length beyond the last load point, the measured nonrepeated insertion loss shall be within ±10% at 1000, 1700, and 2300 Hz, ±15% at 2800 Hz, and ±20% at 3400 Hz of the calculated insertion loss at the same frequencies and temperature.

(C) For nonloaded cables, the measured insertion loss shall be within ±10% at 1000, 1700, 2300, and 2800 Hz, ±15% at 3400 Hz, and ±20% at 4000 Hz of the calculated insertion loss at the same frequencies and temperature.

(D) For loaded cables, the calculated loss at each desired frequency shall be computed by adding the individual losses determined in paragraphs (e)(6)(i)(D)(1) and (e)(6)(i)(D)(2) of this section.

(E) For nonloaded cables, the calculated loss at each desired frequency shall be computed by multiplying the length in miles (km) of each different gauge by the applicable dB/mile (dB/km) value shown in Table 6 and then adding the individual losses for each gauge to determine the total calculated insertion loss for the nonloaded loop.

(F) The attenuation information in Tables 4, 5, and 6 are based on a cable temperature of 68 °F (20 °C). Insertion loss varies directly with temperature. To convert measured losses for loaded cables to a different temperature, use the following value for copper conductors: For each ±5 °F (±2.8 °C) change in the temperature from 68 °F (20 °C), change the insertion loss at any frequency by ±1%. To convert measured losses for nonloaded cables to a different temperature, use the following value for copper conductors: For each ±10 °F (±5.6 °C) change in the temperature from 68 °F (20 °C), change the insertion loss at any frequency by ±1%.

654
For loaded subscriber loops, the 1 kHz loss shall be approximately 0.45 dB per 100 ohms of measured dc loop resistance. This loss shall be the measured loss less the net gain of any voice frequency repeaters in the circuit. Testing shall also be conducted to verify that the loss increases gradually as the frequency increases. The loss on H88 loaded loops should be down only slightly at 2.8 kHz but drop rapidly above 2.8 kHz. The loss on D66 loaded loops shall be fairly constant to about 3.4 kHz and there shall be good response at 4.0 kHz. When voice frequency repeaters are in the circuit there will be some frequency weighting in the build-out network and the loss at the higher frequencies will be greater than for nonrepeatered loops.

For nonloaded subscriber loops, the 1 kHz loss shall be approximately 0.9 dB per 100 ohms of measured dc loop resistance. Testing shall also be conducted to verify that the loss is approximately a straight line function with no abrupt changes. The 3 kHz loss should be approximately 70% higher than the 1 kHz loss.

(ii) Noise. The principal objective related to circuit noise (noise-metallic) and the acceptance of new plant is that circuit noise levels be 20 dBrnc or less (decibels above reference noise, C-message weighted (a weighting derived from listening tests, to indicate the relative annoyance or speech impairment by an interfering signal of frequency (f) as heard through a "500-type" telephone set)). For most new, properly installed, plant construction, circuit noise will usually be considerably less than 20 dBrnc unless there are unusually long sections of telephone plant in parallel with electric power facilities and/or power influence of paralleling electric facilities is abnormally high. When circuit noise is 20 dBrnc or less, the loop plant shall be considered acceptable. When measured circuit noise is greater than 20 dBrnc, loop plant shall still be considered acceptable providing circuit balance (power influence reading minus circuit noise readings) is 60 dB or greater and power influence of paralleling electric facilities is less than 85 dBrnc, loop plant shall not be considered acceptable and the loop plant shall be remedied to make circuit balance equal to or greater than 60 dB.

(7) Data record. Measurement data shall be recorded. A suggested format similar to Format I for subscriber loops in §1755.407 or a format specified in the applicable construction contract may be used.

(iii) Probable causes for nonconformance—(i) Insertion loss. Some of the more common causes for failing to obtain the desired results may be due to reversed load coil windings, missing load coils, bridge taps between load coils, load coil spacing irregularities, excessive end sections, cables having high or low mutual capacitance, load coils having the wrong inductance, load coils inadvertently installed in nonloaded loops, moisture or water in cable, split pairs, and improperly spliced connections. The above factors can occur singularly or in combination. Experience to date indicates that the most common problems are missing load coils, reversed load coil windings or bridge taps.

(ii) Noise. Some of the common causes for failing to obtain the desired results may be due to high power influence from paralleling electrical power systems, poor telephone circuit balance, discontinuous cable shields, inadequate bonding and grounding of cable shields, high capacitance unbalance-to-ground of the cable pairs, high dc loop resistance unbalance, dc loop current less than 20 milliamperes, etc. The above factors can occur singularly or in combination. See TE&CM Section 451, Telephone Noise Measurement and Mitigation, for steps to be taken in reducing telecommunications line noise.

(f) One-person open circuit measurement (subscriber loops). (1) When specified by the borrower, open circuit measurements shall be made on all loaded and nonloaded subscriber loops upon completion of the cable work to verify that the plant is free from major impedance irregularities.

(2) For loaded loops, open circuit measurements shall be made using one of the following methods:

(i) Impedance or pulse return pattern, with cable pair trace compared to
that of an artificial line of the same length and gauge. For best results, a level tracer or fault locator with dual trace capability is required;

(ii) Return loss using a level tracer, with cable pair connected in lieu of a Precision Balance Network (PBN). This method can be made with level tracers having only single trace capability; or

(iii) Open circuit structural return loss using a level tracer. This method can be made with level tracer having only single trace capability.

(3) Of the three methods suggested for loaded loops, the method specified in paragraph (f)(2)(ii) of this section is the preferred method because it can yield both qualitative and quantitative results. The methods specified in paragraphs (f)(2)(i) and (f)(2)(iii) of this section can be used as trouble shooting tools should irregularities be found during testing.

(4) For nonloaded loops, open circuit measurements shall be made using the method specified in paragraph (f)(2)(i) of this section.

(5) Method of measurement. Open circuit measurements shall be made at the CO on each loaded and nonloaded pair across the tip and ring terminals of the pair under test. All CO equipment shall be disconnected at the MDF for this test. For loaded loops containing voice frequency repeaters installed in the CO or field mounted, the open circuit measurement shall be made after the repeaters have been disconnected. Where field mounted repeaters are used, the open circuit measurement shall be made at the repeater location in both directions.

(i) Impedance or pulse return pattern. The step-by-step measurement procedure using the impedance or pulse return pattern for loaded and nonloaded loops shall be as shown in Figure 8. An artificial line of the same makeup as the cable to be tested shall be set up. The traces of the impedance or pulse return pattern from the cable pair and the artificial line shall be compared and should be essentially identical. If the impedance or pulse return traces from the cable pair are different than the artificial line trace, cable faults are possible. When the cable pair trace indicates possible defects, the defects should be identified and located. One method of identifying and locating defects involves introducing faults into the artificial line until its trace is identical with the cable trace.

(ii) Return loss balanced to artificial line. The step-by-step measurement procedure using the return loss balanced to artificial line for loaded loops shall be as shown in Figure 9. An artificial line of the same makeup as the cable to be tested shall be set up. The artificial line is connected to the external network terminals of the test set. The cable pair under test is compared to this standard. When defects are found, they should be identified and located by introducing faults into the artificial line. This is more difficult than with the method referenced in paragraph (f)(5)(i) of this section since this measurement is more sensitive to minor faults and only a single trace is used.

(iii) Open circuit structural return loss using level tracer. The step-by-step measurement procedure using the level tracer for loaded loops shall be as shown in Figure 10. The cable pair is compared to a PBN.

(6) Test equipment. Equipment for performing these tests is shown in Figures 8 through 10. For loaded loops, artificial loaded lines must be of the same gauge and loading scheme as the line under test. For nonloaded loops, artificial nonloaded lines must be of the same makeup as the line under test. Artificial lines should be arranged using switches or other quick connect arrangements to speed testing and troubleshooting. Figures 8 through 10 are as follows:
FIGURE 8
ONE-PERSON OPEN CIRCUIT MEASUREMENT
IMPEDANCE OR PULSE RETURN PATTERN

Measurement Procedure

1. Set up Artificial Line to same make-up [Length & Gauge(s)] as the cable pair.
2. Connect to test set (See Note 1).
3. Connect cable pair to test set (See Note 1).
4. Compare traces of Artificial Line and cable pair. They should be essentially identical. Differences indicate cable faults.
5. Location and type of fault may be determined by introducing faults in the Artificial Line until its trace is identical to that of the cable pair.

Notes:

1. Terminals to which cable pair and artificial line are attached shall be determined from the manufacturer’s operating instructions. Proper settings for various switches and adjustments on the test set shall also be determined from the same source.
2. With test sets having trace storage capability only one set of terminals need be used. Connect Artificial Line to test set, store trace and disconnect line. Connect cable pair and compare trace to stored trace. To identify fault, store cable pair trace and connect Artificial Line. Introduce faults in the Artificial Line until traces are identical.
FIGURE 9
ONE-PERSON OPEN CIRCUIT MEASUREMENT
RETURN LOSS BALANCED TO ARTIFICIAL LINE

Level Tracer

Artificial Line

EXT BAT

Line 1

Cable Pair

Open Circuit

Telephone set if present, shall be on hook.

Measurement Procedure
1. Connect the test equipment and cable pair under test as shown above (See Note 1). Set up Artificial Line to same make-up [Length & Gauge(s)] as the cable pair.

2. Observe Return Loss from 200 to 3500 Hz (D66) or 200 to 3000 Hz (H88) noting maximum and minimum values. Note the value and frequency of the poorest (Lowest Numerical Value) SRL. (SRL becomes better as the readings become more negative). Record this value and frequency.

Notes:
1. Terminals to which cable pair and Artificial Line are attached shall be determined from the manufacturer's operating instructions. Proper settings for various switches and adjustments on the test set shall also be determined from the same source.

2. Wilcom-T132, Wilcom-T195, or equivalent.
FIGURE 10
ONE-PERSON OPEN CIRCUIT MEASUREMENT
STRUCTURAL RETURN LOSS USING LEVEL TRACER

Measurement Procedure

1. Connect the test equipment and cable pair under test as shown above. (See Note 1). Set gauge of PBN for: Single Gauge — Same gauge as cable being measured; Mixed Gauge — Most predominant gauge adjacent to test set.

2. Observe Return Loss between 1000 and 3500 Hz (D66) or 1000 and 3000 Hz (H88) observing maximum and minimum values. Note the value and frequency of the poorest (Lowest Numerical Value) SRL. Single Gauge: Record this value. Mixed Gauge: Change gauge of PBN and note if SRL becomes better. (SRL becomes better as readings become more negative). If it does, record this value and frequency; if not, record value obtained with original gauge setting. (Varying gauge will be necessary, depending on actual cable layout, to obtain best SRL).

Notes:

1. Terminals to which cable pair and Artificial Line are attached shall be determined from the manufacturer's operating instructions. Proper settings for various switches and adjustments on the test set shall also be determined from the same source.

2. Wilcom-T132, Wilcom-T195, or equivalent.

(7) Applicable results. (i) For loaded and nonloaded loops, the two traces in the pulse return pattern or impedance method (paragraph (f)(5)(i) of this section) shall be essentially identical. The degree of comparison required of the two traces is to be determined by experience.

(ii) For loaded loops, results for return loss measurements using a level tracer, with artificial line, in lieu of a PBN (paragraph (f)(5)(ii) of this section) shall meet the following requirements:

(A) For D66 and H88 loaded cables the structural return loss (SRL) values shall range between 28 and 39 dB, respectively, at the critical frequency of structural return loss (CFSRL) within the pass band of the loading system being used. The minimum SRL value for uniform gauge shall be 25 dB CFSRL. These SRL values apply for loaded cables of uniform gauge for the
entire length of the subscriber loop circuit. Subscriber loop circuits shall meet the loading spacing deviations and the cable mutual capacitance requirements in the applicable RUS cable specifications;

(B) For mixed gauge loaded cables the SRL values shall be 25 and 27 dB CFSRL, respectively, and the minimum SRL value shall be 22 dB CFSRL; and

(C) The two traces in the pulse return pattern should be essentially identical. The degree of comparison required of the two traces is determined by experience.

(iii) For loaded loops, the results of open circuit structural return loss measurements using a level tracer (paragraph (f)(5)(iii) of this section) shall meet the following requirements. For D66 and H88 loaded cables with uniform or mixed gauges, the worst value allowed for measured open circuit structural return loss between 1,000-3,500 Hz and 1,000-3,000 Hz, respectively, shall be approximately 0.9 dB (round trip) for each 100 ohms outside plant dc loop resistance including the resistance of the load coils. The value of 0.9 dB per 100 ohms for the round trip loss remains reasonably accurate as long as:

(A) The subscriber end section of the loaded pair under test is approximately 2,250 ft (685 m) for D66 loading or 3,000 ft (914 m) for H88 loading. Mixing gauges and cable sizes will result in undesirable small reflections whose frequency characteristics and magnitude cannot be accurately predicted. In subscriber loop applications, cable gauge may be somewhat uniform but the cable pair size most likely will not be uniform as cable pair sizes taper off toward the customer access location and a downward adjustment of 1 dB of the allowed value shall be acceptable.

(B) The one-way 1,000 Hz loss does not exceed 10 dB.

(iv) For loaded loops, the measured value of open circuit structural return loss can only be as accurate as the degree to which the dc loop resistance of the loaded pair under test is known. Most accurate results shall be obtained when the dc loop resistance is known by actual measurements as described in paragraph (d) of this section. Furthermore, where the dc loop resistance is measured at the same time as the open circuit structural return loss, no correction for temperature is needed because the loss is directly proportional to the loop resistance. Where it is not practical to measure the dc loop resistance, it shall be calculated and corrected for temperature as specified in paragraph (d)(6)(ii) of this section. When measuring existing plant, care shall be taken to verify the accuracy of the records, if they are used for the calculation of the dc loop resistance. For buried plant, the temperature correction shall be based at the normal depth of the cable in the ground. (Temperature can be measured by boring a hole to cable depth with a ground rod, placing a thermometer in the ground at the cable depth, and taking and averaging several readings during the course of the resistance measurements.) For aerial cable it shall be based on the temperature inside the cable sheath.

(v) For loaded loops, the best correlation between the measured and the expected results shall be obtained when the cable is of one gauge, one size, and the far end section is approximately 2,250 ft (685 m) for D66 loading or 3,000 ft (914 m) for H88 loading. Mixing gauges and cable sizes will result in undesirable small reflections whose frequency characteristics and magnitude cannot be accurately predicted. In subscriber loop applications, cable gauge may be somewhat uniform but the cable pair size most likely will not be uniform as cable pair sizes taper off toward the customer access location and a downward adjustment of 1 dB of the allowed value shall be acceptable.

(vi) For loaded loops, the limiting factor when making open circuit structural return loss measurements is when the 1,000 Hz one-way loss of the loaded cable pair under test becomes 10 dB or greater; it becomes difficult to detect the presence of irregularities beyond the 10 dB point on the loop. To overcome this difficulty, loaded loops having a one-way loss at 1,000 Hz greater than 10 dB shall be opened at some convenient point (such as a pedestal or ready access enclosure) and loss measurements at the individual portions measuring less than 10 dB one-way shall be made separately. When field mounted voice frequency repeaters are used, the measurement shall be made at the repeater location in both directions.

(8) Data record. (i) When performing a pulse return pattern or impedance open...
circuit measurement on loaded and nonloaded loops, a “check mark” indicating that the pair tests good or an “X” indicating that the pair does not test good shall be recorded in the SRL column. A suggested format similar to Format I for subscriber loops in §1755.407 or a format specified in the applicable construction contract may be used.

(ii) When performing open circuit return loss measurements using the return loss balanced to an artificial line or return loss using a level tracer on loaded loops, the value of the poorest (lowest numerical value) SRL and its frequency in the proper column between 1,000 and 3,500 Hz for D66 loading or between 1,000 and 3,000 Hz for H88 loading shall be recorded. A suggested format similar to Format I for subscriber loops in §1755.407 or a format specified in the applicable construction contract may be used.

(9) Probable causes for nonconformance. Some of the more common causes for failing to obtain the desired results may be due to reversed load coil windings, missing load coils, bridge taps between load coils, load coil spacing irregularities, excessive end sections, cables having high or low mutual capacitance, load coils inadvertently installed in nonloaded loops, moisture or water in the cable, load coils having the wrong inductance, split pairs, and improperly spliced connectors. The above can occur singularly or in combination. Experience to date indicates that the most common problems are missing load coils, reversed load coil windings or bridge taps.

(g) Cable insertion loss measurement (carrier frequencies). (1) When specified by the borrower, carrier frequency insertion loss measurements shall be made on cable pairs used for T1, T1C, and/or station carrier systems. Carrier frequency insertion loss shall be made on a minimum of three pairs. Select at least one pair near the outside of the core unit layup. If the three measured pairs are within 10% of the calculated loss in dB corrected for temperature, no further testing is necessary. If any of the measured pairs of a section are not within 10% of the calculated loss in dB, all pairs in that section used for carrier transmission shall be measured.

(2) Method of measurement. The step-by-step method of measurement shall be as shown in Figure 11.

(3) Test equipment. The test equipment is shown in Figure 11 as follows:
§ 1755.403

(4) Applicable results.

(i) The highest frequency to be measured is determined by the type of carrier system. For T1 type carrier, the highest frequency is normally 772 kHz. For T1C type carrier, the highest frequency is normally 1576 kHz. The highest frequency to be measured for station carrier is 140 kHz.

(ii) The measured insertion loss of the cable shall be within ±10% of the calculated loss in dB when the loss is corrected for temperature.

(iii) The calculated insertion loss is computed as follows:

Notes:

1. H.P.—204B, H.P.—204C, H.P.—355, Siemens—W2057, or equivalent.

(A) Multiply the length of each different gauge by the applicable dB per unit length as shown in Table 7 or 8 as follows:

</table>
(B) Add the individual losses for each gauge to give the total calculated insertion loss at a temperature of 68°F (20°C);

(C) Correct the total calculated insertion loss at the temperature of 68°F (20°C) to the measurement temperature by the following formulae:

\[ A_t = A_{68} \times [1 + 0.0012 \times (t - 68)] \]

for English Units

\[ A_t = A_{20} \times [1 + 0.0022 \times (t - 20)] \]

for Metric Units

Where:

\[ A_t \] = Insertion loss at the measurement temperature in dB.

\[ A_{68} \] = Insertion loss at a temperature of 68°F in dB.

\[ A_{20} \] = Insertion loss at a temperature of 20°C in dB.

\[ t \] = Measurement temperature in °F or °C; and

(D) Compare the calculated insertion loss at the measurement temperature to the measured insertion loss to determine compliance with the requirement specified in paragraph (g)(4)(ii) of this section. (Note: Attenuation varies directly with temperature. For each ±10°F (5.6°C) change in temperature increase or decrease the attenuation by ±1%.)

(iv) If the measured value exceeds the ±10% allowable variation, the cause shall be determined and corrective action shall be taken to remedy the problem.

(5) Data record. Results of carrier frequency insertion loss measurements for station, T1, and/or T1C type carrier shall be recorded. Suggested formats similar to Format III, Outside Plant Acceptance Tests—T1 or T1C Carrier Pairs, and Format IV, Outside Plant Acceptance Tests—Station Carrier Pairs, in §1755.407 or formats specified in the applicable construction contract may be used.

(6) Probable causes for nonconformance. If the measured loss is low, the cable records are likely to be in error. If the measured loss is high, there may be bridge taps, load coils or voice frequency build-out capacitors connected to the cable pairs or the cable records may be in error. Figures 12 and 13 are examples that show the effects of bridge taps and load coils in the carrier path. Figures 12 and 13 are as follows:
§ 1755.404 Fiber optic cable telecommunications plant measurements.

(a) Armor continuity. (1) Tests and measurements shall be made to ensure that the armor of fiber optic cables is continuous. There are two areas of concern. The first is armor bonding within a splice and the second is armor continuity between splices.

(2) Measurement techniques outlined here for verification of armor continuity are applicable to buried fiber optic cable plant. Measurements of armor continuity between splices in aerial, armored, fiber optic cable should be made prior to completion of splicing. Conclusive results cannot be obtained on aerial plant after all bonds have been completed to the supporting strand, multigrounded neutral, etc.

(3) Method of measurement. Armor continuity within splices shall be measured with a cable shield splice
continuity test set. The step-by-step measurement procedure outlined in the manufacturer’s operating instructions for the specific test equipment being used shall be followed.

(4) Test equipment. A cable shield splice continuity tester shall be used to measure armor continuity within splices.

(5) Applicable results. When utilizing shield continuity testers to measure armor continuity within splices, refer to the manufacturer’s published information covering the specific test equipment to be used and for anticipated results.

(6) Data record. Measurement data from armor continuity tests shall be recorded together with anticipated values in an appropriate format to permit comparison. The recorded data shall include specific location, cable size, and cable type, if known, etc.

(7) Probable causes for nonconformance. Among probable causes for nonconformance are broken or damaged armors, bad bonding harnesses, poorly connected bonding clamps, loose bonding lugs, etc.

(b) Fiber optic splice loss measurement. (1) After placement of all fiber optic cable plant has been completed and spliced together to form a continuous optical link between end termination points, splice loss measurements shall be performed on all field and central office splice points.

(2) Method of measurement. (i) Field splice loss measurements shall be made between the end termination points at 1310 and/or 1550 nanometers for single mode fibers and in accordance with Figure 14. Two splice loss measurements shall be made between the end termination points. The first measurement shall be from termination point A to termination point B. The second measurement shall be from termination point B to termination point A.

(ii) CO splice loss measurements shall be made at 1310 and/or 1550 nanometers for single mode fibers and in accordance with Figure 15. Two splice loss measurements shall be made between the end termination points. The first measurement shall be from termination point A to termination point B. The second measurement shall be from termination point B to termination point A.

(3) Test equipment. The test equipment is shown in Figures 14 and 15. The optical time domain reflectometer (OTDR) used for the testing should have dual wavelength capability. Figures 14 and 15 are as follows:
FIGURE 14
FIBER OPTIC FIELD SPLICE LOSS MEASUREMENT

Note:
1 Tektronix-TFP2, H.P.-8146A, Opto-Electronics-DFM10, Photo Kinetics-6000, or equivalent.
(4) Applicable results. (i) The splice loss for each single mode field splice shall be the bi-directional average of the two OTDR readings. To calculate the actual splice loss, substitute the OTDR readings maintaining the sign of the loss (+) or apparent gain (−) into the following equation:
Actual Splice Loss (dB) = \frac{\text{OTDR Reading From A to B} + \text{OTDR Reading From B to A}}{2}

(ii) When specified in the applicable construction contract, the splice loss of each field splice at 1310 and/or 1550 nanometers shall not exceed the limit specified in the contract.

(iii) When no limit is specified in the applicable construction contract, the splice loss of each field splice shall not exceed 0.2 dB at 1310 and/or 1550 nanometers.

(iv) The splice loss for each single mode CO splice shall be the bi-directional average of the two OTDR readings. To calculate actual splice loss, substitute the OTDR reading, maintaining the sign of the loss (+) or apparent gain (−), into the equation specified in paragraph (b)(4)(i) of this section.

(v) When specified in the applicable construction contract, the splice loss of each central office splice at 1310 and/or 1550 nanometers shall not exceed the limit specified in the contract.

(vi) When no limit is specified in the applicable construction contract, the splice loss of each central office splice shall not exceed 1.2 dB at 1310 and/or 1550 nanometers.

(6) Probable causes for nonconformance. When the results of the splice loss measurements exceed the specified limits the following factors should be checked:

(i) Proper end preparation of the fibers;

(ii) End separation between the fiber ends;

(iii) Lateral misalignment of fiber cores;

(iv) Angular misalignment of fiber cores;

(v) Fresnel reflection;

(vi) Contamination between fiber ends;

(vii) Core deformation;

(viii) Mode-field diameter mismatch.

(c) End-to-end attenuation measurement. (1) After placement of all fiber optic cable plant has been completed and spliced together to form a continuous optical link between end termination points, end-to-end attenuation measurements shall be performed on each optical fiber within the cable.

(2) Method of measurement. For single mode fibers, the end-to-end attenuation measurements of each optical fiber at 1310 and/or 1550 nanometers in each direction between end termination points shall be performed in accordance with Figure 16.

(3) Test equipment. The test equipment is shown in Figure 16 as follows:
Applicable results. The end-to-end attenuation of each single mode optical fiber at 1310 and/or 1550 nanometers shall not exceed the limits specified in the applicable construction contract.

Data record. The measurement data shall be recorded. A suggested format similar to Format V for fiber optic telecommunications plant in §1755.407 or on a format specified in the applicable construction contract may be used.

Probable causes for nonconformance. Failure of each optical fiber to meet the end-to-end attenuation limit could be attributed to the following:

(i) Excessive field or central office splice loss;
(ii) Excessive cable attenuation; or
(iii) Damage to the fiber optic cable during installation.

(d) End-to-end fiber signature measurement. (1) After placement of all fiber optic cable plant has been completed and spliced together to form a continuous optical link between end termination points, end-to-end fiber signature testing shall be performed on each optical fiber within the cable.

(2) Method of measurement. For single mode fibers, the end-to-end fiber signature measurement of each optical fiber in each direction shall be performed between end termination points at 1310 and/or 1550 nanometers in accordance with Figure 17.

(3) Test equipment. The test equipment is shown in Figure 17 as follows:
| FIGURE 17 |
| END-TO-END FIBER OPTIC SIGNATURE MEASUREMENT SHOWING MEASUREMENT IN ONE DIRECTION ONLY |

Notes:

1. Tektronix-TFP2, H.P.—8146A, Opto-Electronics—DFM10, Photo Kinetics—6000, or equivalent.
2. Measurement is repeated by reversing location of optical source and optical power meter in the respective central offices.
§ 1755.405 Voiceband data transmission measurements.

(a) The data transmission measurements listed in this section shall be used to determine the acceptability of trunk and nonloaded subscriber loop circuits for data modem transmission.

(b) Signal-to-C notched noise (S/CNN) measurement. (1) When specified by the borrower, S/CNN measurements shall be made on trunk circuits and nonloaded subscriber loops. For trunk circuits, the measurement shall be made between CO locations. For nonloaded subscriber loops, the measurement shall be made from the CO to the station protector of the NID at the customer's access location.

(2) S/CNN is the logarithmic ratio expressed in dB of a 1,004 Hz holding tone signal compared to the C-message weighted noise level. S/CNN is one of the most important transmission parameters affecting the performance of data transmission because proper modem operation requires low noise relative to received power level. Since modulated carriers are used in data communication systems, noise measurements need to be performed with power on the connection to activate equipment having signal-level-dependent noise sources. For 4 kHz channels, a 1,004 Hz holding tone is used to activate the signal-dependent equipment on the channel or connection.

(4) Test equipment. The equipment for performing the measurement shall be in accordance with ANSI/IEEE 743-1984.

(5) Applicable results. The S/CNN for both trunk and nonloaded subscriber loop circuits shall not be less than 31 dB.

(6) Data record. The measurement data shall be recorded. Suggested formats similar to Format VI, Voiceband Data Transmission Tests—Nonloaded Subscriber Loops, and Format VII, Voiceband Data Transmission Tests—Trunk Circuits, in §1755.407 or formats specified in the applicable construction contract may be used.

(7) Probable causes for nonconformance. Some of the causes for failing to obtain the desired results may be due to excessive harmonic distortion, quantizing noise, phase and amplitude jitter, and loss in digital pads used for level settings.

(c) Signal-to-intermodulation distortion (S/I/MD) measurement. (1) When specified by the borrower, S/I/MD measurements shall be made on trunk circuits and nonloaded subscriber loops. For trunk
(2) S/IMD is a measure of the distortion produced by extraneous frequency cross products, known as intermodulation products, when a multi-tone tone signal is applied to a system.

(3) Intermodulation distortion (IMD) is caused by system nonlinearities acting upon the harmonic frequencies produced from an input of multiple tones. The products resulting from IMD can be more damaging than noise in terms of producing data transmission errors.

(4) IMD is measured as a signal to distortion ratio and is expressed as the logarithmic ratio in dB of the composite power of four resulting test frequencies to the total power of specific higher order distortion products that are produced. The higher order products are measured at both the 2nd order and 3rd order and are designated R2 and R3, respectively. The four frequency testing for IMD is produced with four tones of 857, 863, 1,372, and 1,388 Hz input at a composite power level of $-13 \text{ dBm0}$.

(6) Test equipment. The equipment for performing the measurement shall be in accordance with ANSI/IEEE 743-1984.

(7) Applicable results. The 2nd order (R2) S/IMD for both trunk and nonloaded subscriber loop circuits shall not be less than 40 dB. The 3rd order (R3) S/IMD for both trunk and nonloaded subscriber loop circuits shall not be less than 40 dB.

(8) Data record. The measurement data shall be recorded. Suggested formats similar to Format VI for nonloaded subscriber loops and Format VII for trunk circuits in §1755.407 or formats specified in the applicable construction contract may be used.

(9) Probable causes for nonconformance. Some of the causes for failing to obtain the desired results may be due to channel nonlinearities, such as compression and clipping, which cause harmonic and intermodulation distortion in a voiceband signal.

(d) Envelope delay distortion (EDD) measurement. (1) When specified by the borrower, EDD measurements shall be made on trunk circuits and nonloaded subscriber loops. For trunk circuits, the measurement shall be made between CO locations. For nonloaded subscriber loops, the measurement shall be made from the CO to the station protector of the NID at the customer's access location.

(2) EDD is a measure of the linearity or uniformity of the phase versus frequency characteristics of a transmission facility. EDD is also known as relative envelope delay (RED).

(3) EDD is specifically defined as the delay relative to the envelope delay at the reference frequency of 1,704 Hz. EDD is typically measured at two frequencies, one low and one high in the voiceband. The low frequency measurement is made at 604 Hz. The high frequency measurement is made at 2,804 Hz.

(4) Method of measurement. The EDD measurement shall be performed in accordance with ANSI T1.506-1990 and ANSI/IEEE 743-1984.

(5) Test equipment. The equipment for performing the measurement shall be in accordance with ANSI/IEEE 743-1984.

(6) Applicable results. The EDD for both trunk and nonloaded subscriber loop circuits at the low frequency of 604 Hz shall not exceed 1,500 microseconds. The EDD for both trunk and nonloaded subscriber loop circuits at the high frequency of 2,804 Hz shall not exceed 1,000 microseconds.

(7) Data record. The measurement data shall be recorded. Suggested formats similar to Format VI for nonloaded subscriber loops and Format VII for trunk circuits in §1755.407 or formats specified in the applicable construction contract may be used.

(8) Probable causes for nonconformance. Some of the causes for failing to obtain the desired results may be due to nonlinearity of the phase versus frequency characteristic of the transmission facility. This nonlinear phase versus frequency characteristic of the transmission facility causes the various frequency components to travel at different transit times which results in
successively transmitted data pulses to overlap at the receive end. The overlapping of the pulses at the receive end results in distortion of the received signal. Excessive EDD on the transmission facility may be reduced using data modems with equalization or by conditioning the transmission line.

(e) Amplitude jitter (AJ) measurement.
(1) When specified by the borrower, AJ measurements shall be made on trunk circuits and nonloaded subscriber loops. For trunk circuits, the measurement shall be made between CO locations. For nonloaded subscriber loops, the measurement shall be made from the CO to the station protector of the NID at the customer’s access location.
(2) AJ is any fluctuation in the peak amplitude value of a fixed tone signal at 1,004 Hz from its nominal value. AJ is expressed in peak percent amplitude modulation.
(3) AJ is measured in two separate frequency bands, 4–300 Hz and 20–300 Hz. The 4–300 Hz band is important for modems employing echo canceling capabilities. The 20–300 Hz band is used for modems that do not employ echo cancelers.
(4) Amplitude modulation can affect the error performance of voiceband data modems. The measurement of amplitude jitter indicates the total effect on the amplitude of the holding tone of incidental amplitude modulation and other sources including quantizing and message noise, impulse noise, gain hits, phase jitter, and additive tones such as single-frequency interference.
(6) Test equipment. The equipment for performing the measurement shall be in accordance with ANSI/IEEE 743-1984.
(7) Applicable results. The AJ for both trunk and nonloaded subscriber loop circuits in the 4–300 Hz frequency band shall not exceed 6%. The AJ for both trunk and nonloaded subscriber loop circuits in the 20–300 Hz frequency band shall not exceed 5%.
(8) Data record. The measurement data shall be recorded. Suggested formats similar to Format VI for nonloaded subscriber loops and Format VII for trunk circuits in §1755.407 or formats specified in the applicable construction contract may be used.
(9) Probable causes for nonconformance. Some of the causes for failing to obtain the desired results may be due to excessive S/CNN, impulse noise, and phase jitter.

(f) Phase jitter (PJ) measurement.
(1) When specified by the borrower, PJ measurements shall be made on trunk circuits and nonloaded subscriber loops. For trunk circuits, the measurement shall be made between CO locations. For nonloaded subscriber loops, the measurement shall be made from the CO to the station protector of the NID at the customer’s access location.
(2) PJ is any fluctuation in the zero crossings of a fixed tone signal (usually 1,004 Hz) from their nominal position in time within the voiceband. PJ is expressed in terms of either degrees peak-to-peak (°p-p) or in terms of a Unit Interval (UI). One UI is equal to 360° p-p.
(3) PJ measurements are typically performed in two nominal frequency bands. The frequency bands are 20–300 Hz and either the 2–300 Hz band or the 4–300 Hz band. The 20–300 Hz band is important for all phase-detecting modems. The 4–300 Hz band or the 2–300 Hz band is important for modems employing echo canceling capabilities.
(4) Phase jitter can affect the error performance of voiceband data modems that use phase detection techniques. The measurement of phase jitter indicates the total effect on the holding tone of incidental phase modulation and other sources including quantizing and message noise, impulse noise, phase hits, additive tones such as single-frequency interference, and digital timing jitter.
(6) Test equipment. The equipment for performing the measurement shall be in accordance with ANSI/IEEE 743-1984.
(7) Applicable results. The PJ for both trunk and nonloaded subscriber loop circuits in the 4–300 Hz frequency band shall not exceed 6.5° p-p. The PJ for both trunk and nonloaded subscriber loop circuits in the 20–300 Hz frequency band shall not exceed 10.0° p-p.
§ 1755.406 Shield or armor ground resistance measurements.

(a) Shield or armor ground resistance measurements shall be made on completed lengths of copper cable and wire plant and fiber optic cable plant.

(b) Method of measurement. (1) The shield or armor ground resistance measurement shall be made between the copper cable and wire shield and ground and between the fiber optic cable armor and ground, respectively. The measurement shall be made either on cable and wire lengths before splicing and before any ground connections are made to the cable or wire shields or armors. Optionally, the measurement may be made on cable and wire lengths after splicing, but all ground connections must be removed from the section under test.

(2) The method of measurement using either an insulation resistance test set or a dc bridge type megohmmeter shall be as shown in Figure 18 as follows:
Test equipment. (1) The shield or armor ground resistance measurements may be made using an insulation resistance test set, a dc bridge type megohmmeter, or a commercially available fault locator.

(2) The insulation resistance test set should have an output voltage not to exceed 500 volts dc and may be hand cranked or battery operated.

(3) The dc bridge type megohmmeter, which may be ac powered, should have
scales and multipliers which make it possible to accurately read resistance values of 50,000 ohms to 10 megohms. The voltage that is applied to the shield or armor during the test should not be less than “250 volts dc” nor greater than “1,000 volts dc” when using an instrument having adjustable test voltage levels.

(4) Commercially available fault locators may be used in lieu of the above equipment, if the devices are capable of detecting faults having resistance values of 50,000 ohms to 10 megohms. Operation of the devices and method of locating the faults should be in accordance with manufacturer’s instructions.

(d) Applicable results.

(1) For all new copper cable and wire facilities and all new fiber optic cable facilities, the shield or armor ground resistance levels normally exceed 1 megohm-mile (1.6 megohm-km) at 68°F (20°C). A value of 100,000 ohm-mile (161,000 ohm-km) at 68°F (20°C) shall be the minimum acceptable value of the shield or armor ground resistance.

(2) Shield or armor ground resistance varies inversely with length and temperature. In addition other factors which may affect readings could be soil conditions, faulty test equipment and incorrect test procedures.

(3) For the resistance test method and dc bridge type megohmmeter, the ohm-mile (ohm-km) value for the shield or armor ground resistance shall be computed by multiplying the actual scale reading in ohms on the test set by the length in miles (km) of the cable or wire under test.

(4)(i) The objective shield or armor ground resistance may be determined by dividing 100,000 by the length in miles (161,000 by the length in km) of the cable or wire under test. The resulting value is the minimum acceptable meter scale reading in ohms. Examples for paragraphs (d)(3) and (d)(4) of this section are as follows:

Equation 1. Test Set: Scale Reading *

\[
\text{Length} = \text{Resistance} \div \text{Length}
\]

75,000 ohms * 3 miles = 225,000 ohm-mile (75,000 ohms * 4.9 km = 367,000 ohm-km)

Equation 2. Minimum Acceptable Meter Scale Reading

\[
100,000 \div \text{Length} = 33,333 \text{ ohms}
\]

(ii) Since the 33,333 ohms (32,857 ohms) is the minimum acceptable meter scale reading and the meter scale reading was 75,000 ohms, the cable is considered to have met the 100,000 ohm-mile (161,000 ohm-km) requirement.

(5) Due to the differences between various jacketing materials used in manufacturing cable or wire and to varying soil conditions, it is impractical to provide simple factors to predict the magnitude of variation in shield or armor to ground resistance due to temperature. The variations can, however, be substantial for wide excursions in temperature from the ambient temperature of 68°F (20°C).

(e) Data record. The data shall be corrected to the length requirement of ohm-mile (ohm-km) and a temperature of 68°F (20°C) and shall be recorded on a form specified in the applicable construction contract.

(f) Probable causes for nonconformance.

(1) When results of resistance measurements are below the 100,000 ohm-mile (161,000 ohm-km) requirement at 68°F (20°C), the jacket temperature, soil conditions, test equipment and method shall be reviewed before the cable or wire is considered a failure. If the temperature is approximately 68°F (20°C) and soil conditions are acceptable, and a reading of less than 100,000 ohm-mile (161,000 ohm-km) is indicated, check the calibration of the equipment; as well as, the test method. If the equipment was found to be out of calibration, recalibrate the equipment and re-measure the cable or wire. If the temperature was 86°F (30°C) or higher, the cable or wire shall be remeasured at a time when the temperature is approximately 68°F (20°C). If the test was performed in unusually wet soil, the cable or wire shall be retested after the soil has reached normal conditions. If after completion of the above steps, the resistance value of 100,000 ohm-mile (161,000 ohm-km) or greater is obtained, the cable or wire shall be considered acceptable.

(2) When the resistance value of the cable or wire is still found to be below 100,000 ohm-mile (161,000 ohm-km) requirement after completion of the steps listed in paragraph (f)(1) of this section, the fault shall be isolated by
performing shield or armor ground resistance measurements on individual cable or wire sections.

(3) Once the fault or faults have been isolated, the cable or wire jacket shall be repaired in accordance with §1755.200, RUS Standard for Splicing Copper and Fiber Optic Cables or the entire cable or wire section may be replaced at the request of the borrower.

§ 1755.407 Data formats.

The following suggested formats listed in this section may be used for recording the test data:

§§ 1755.408—1755.521

RUS general specification for digital, stored program controlled central office equipment.

(a) General. (1) This section covers general requirements for a digital telephone central office switching system, which is fully electronic and controlled by stored program processors. A digital switching system transfers information which is digitally encoded from any input port to a temporarily addressed exit port. The information may enter the system in either analog or digital form and may or may not be converted to analog at the exit port depending on the facility beyond. The switching system shall operate properly as an integral part of the telephone network when connected to physical and carrier derived circuits meeting RUS specifications and other generally accepted telecommunications practices.

(2) The output of a digital-to-digital port shall be Pulse Code Modulation.
(PCM), encoded in eight-bit words using the mu-255 encoding law and D3 encoding format, and arranged to interface with a T1 span line.

(3) American National Standards Institute (ANSI) Standard S1.4-1983, Specification for Sound Level Meters, is incorporated by reference by RUS. This includes S1.4A-1985 that is also incorporated by reference. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from ANSI Inc., 11 West 42nd Street, 13th Floor, New York, NY 10036, telephone 212-642-4900. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(4) American Society for Testing Materials (ASTM) Specification B 33-91, Standard Specification for Tinned Soft or Annealed Copper Wire for Electrical Purposes, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from ASTM, 1916 Race Street, Philadelphia, PA, telephone 215-299-5400. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(5) Bell Communications Research (Bellcore) document SR-TSV-002275, BOC Notes on the LEC Networks—1990, March 1991, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Bellcore Customer Service, 60 New England Avenue, Piscataway, NJ 08854, telephone 1-800-521-2673. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(6) Bellcore TR-TSY-000508, Automatic Message Accounting, July 1987, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Bellcore Customer Service, 60 New England Avenue, Piscataway, NJ 08854, telephone 1-800-521-2673. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(8) Institute of Electrical and Electronics Engineers (IEEE) Std 455-1985, IEEE Standard Test Procedure for Measuring Longitudinal Balance of Telephone Equipment Operating in the Voice Band, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from IEEE Service Center, 445 Hoes Lane, P. O. Box 1331, Piscataway, NJ 08854, telephone (201) 981-0060. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

§ 1755.522
of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(9) Institute of Electrical and Electronics Engineers (IEEE) Std 730-1989, IEEE Standard for Software Quality Assurance Plans, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from IEEE Service Center, 445侯e Lane, P. O. Box 1331, Piscataway, NJ 08854, telephone (201) 981-0060. Copies may be inspected during normal business hours at RUS, room 2838-S, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(10) RUS Bulletin 345-50, PE-60, RUS Specification for Trunk Carrier Systems, September 1979, is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from the Rural Utilities Service, Administrative Services Division, room 0175-S, Washington, DC 20250. The bulletin may be inspected at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(b) Reliability. (1) Quality control and burn-in procedures shall be sufficient so the failure rate of printed circuit boards does not exceed an average of 1.0 percent per month of all equipped cards in the central office during the first three months after cutover, and an average of 0.5 percent per month of all equipped cards in the central office during any 6-month period thereafter. A failure is considered to be the failure of a component on the PC board which requires it to be repaired or replaced.

(2) The central office switching system shall be designed such that the expected individual line downtime does not exceed 30 minutes per year. This is the interval that the customer is out of service as a result of all failure types, excluding dispatch and travel time, i.e., hardware, software, and procedural errors.

(3) The central office switching system shall be designed such that there will be no more than 1 hour of total outages in 20 years, excluding dispatch and travel time for unattended offices.

(c) System type acceptance tests. (1) System type acceptance tests (general acceptance tests) are performed for the purpose of determining whether or not a type of switching system should be added or retained as an RUS accepted system. While general acceptance tests will be required on each system type, they will not be expected to cover every requirement in this section. However, any installation of a system provided in accordance with this section shall be capable of meeting any requirement in this section on a spot-check basis.

(2) A “completed call” test shall be made part of these system type acceptance tests. There shall be no more than two in 10,000 locally originating and incoming calls misdirected, unsuccessfully terminated, prematurely disconnected or otherwise failing as a result of equipment malfunction and/or equipment failures, or as a result of transients, noise or design deficiencies. This test shall be made with a load box
(3) System type acceptance testing applies basically to factory type testing, and not to owner acceptance testing for individual installations. The overall installed and operating system shall also meet these requirements, except for unusual circumstances or where specifically excluded by this or other RUS requirements.

(d) Types of requirements. (1) Unless otherwise indicated, the requirements listed in this section are fixed requirements.

(2) Optional requirements are those which may not be needed for every office and are identifiable by a phrase such as, “when specified by the owner,” or, “as specified by the owner.”

(3) In some cases where an optional feature specified in paragraph (e) of this section will not be required by an owner, either now or in the future, a system which does not provide this feature will be considered to be in compliance with this section for the specific installation under consideration, but not in compliance with the entire section.

(4) The owner may request bids from any RUS accepted supplier whose system provides all the features which will be required for a specific installation.

(5) The Application Guide, RUS TE&CM 322, provides information about the economic and service factors involved in all optional features, as well as instructions for the completion of appendices A and B of this section.

(e) General requirements. (1) The equipment shall provide for terminating and automatically interconnecting subscriber lines and trunks in response to dial pulses (or pushbutton dialing signals, if specified) without the aid of an operator.

(2) Complete flexibility shall be provided for assigning any subscriber directory number to any central office line equipment by the use of internal programmed memory. Thus, any subscriber line and/or directory number may be moved to another terminal to distribute traffic loads, if the line equipment hardware is compatible with the service provided.

(3) The system shall be arranged to interface with interexchange carrier trunks and networks using single or multi-digit access codes. The system shall be equipped to handle at least 20-digit subscriber dialed numbers. All subscriber directory numbers in the office shall be seven-digit numbers.

(4) The network and the control equipment shall be comprised of solid-state and integrated circuitry components. Peripheral equipment shall be comprised of solid-state and integrated circuitry components as far as practical and consistent with the state-of-the-art and economics of the subject system.

(5) The basic switching system shall include the provision of software programming and necessary hardware, including memory, for optional custom calling services such as call waiting, call forwarding, three-way calling, and abbreviated dialing. It shall be possible to provide these services to any individual line (single-party) subscriber. The addition of these services shall not reduce the anticipated ultimate engineered line, trunk, and traffic capacity of the switching system as specified in appendix A of this section.

(6) The requirements in this specification apply only to single party lines. Although only single frequency ringing is required, other types may be requested in appendix A of this section.

(7) Provision shall be made for local automatic message accounting (LAMA), and for traffic service position system (TSPS) trunks, or equivalent, to the operator's office when required either initially or in the future.

(8) Tandem switching features shall be provided if specified in appendix A of this section.

(9) The system shall be arranged to serve a minimum of eight All Number Calling (ANC) office codes per office, with discrimination on terminating calls by trunk group, numbering plan, or programmed memory and class mark, if specified in appendix A of this section.
§ 1755.522

10 Busy hour load handling capacity is an important feature when an office approaches capacity. The delays which may occur in call completion during busy hour periods may prove to be excessive in some system designs. Accordingly, each bidder shall provide, in appendix C of this section, data satisfactory to RUS regarding the busy hour load handling capacity and traffic delays of the system.

11 Provision shall be made for hotel-motel arrangements, as required by the owner, to permit the operation of message registers at the subscriber’s premises to record local outdial calls by guests (see Item 10.5, appendix A of this section).

12 Provision shall be made to identify the calling line or incoming trunk on nuisance calls (see paragraph (g)(10) of this section for details).

13 Full access from every subscriber line to every interoffice trunk shall be provided.

14 Facilities shall be provided to implement service orders, make traffic studies, and perform switching and transmission tests by means of remote control devices if such operations are specified in Items 11.2 and 11.3 of appendix A of this section.

15 Provision shall be made for the addition of facilities to record all subscriber originated calls based on dialed directory number, time of day, and duration of conversation. They shall be such that the additional equipment (if any is required) may be added to an in-service system without interruption of service and a minimum of equipment, wiring and software modifications.

16 The system shall be capable of distributed switching operation where groups of subscriber lines can be remotely located from the central office. The remotely situated units are known as “Remote Switching Terminals” (RST’s) (see paragraph (w) of this section). This does not eliminate the use of pair gain devices such as direct digitally connected concentrators, regular concentrators or subscriber carrier equipment, where specifically ordered by the owner and its engineer.

17 The switching system shall have means to synchronize its clock with switches above it in the network hierarchy, when specified by the owner in item 3, appendix A of this section (see paragraph (j) of this section).

18 Consistent with system arrangements and ease of maintenance, space shall be provided on the floor plan for an orderly layout of future equipment bays that will be required for anticipated traffic when the office reaches its ultimate size. Readily accessible terminals shall be provided for connection to interbay and frame cables to future bays. All cables, interbay and intrabay (excluding power), if technically feasible, shall be terminated at both ends by use of connectors.

19 When specified in appendix A of this section, the system shall be capable of processing emergency calls to a 911 service bureau connected either by a group of one-way 911 lines or a trunk group.

(i) It shall be possible to reach the service bureau by dialing 911, 1+911, or a 7-digit number.

(ii) The system shall select an idle 911 line or trunk.

(iii) The system shall provide usual ringing and ringback signal until the called 911 line answers.

(iv) If the calling line goes on-hook first, the system shall hold the connection from the called 911 line and return steady low tone to the service bureau. The system shall then begin a 45-minute timeout, after which the calling line is disconnected and an alarm message is printed on a TTY. If the calling line goes off-hook before timeout, the system shall reestablish the conversation path.

(v) If the calling line does not disconnect, the service bureau attendant shall have the ability to force a disconnect of the established connection with the calling party.

(vi) When the 911 call is answered, the equipment shall be arranged so that coin lines are not charged for the call. Similarly, if some form of local call charging is used, there shall be no charge for the 911 call.

(vii) If the 911 service bureau is holding a calling line, it shall be possible for the 911 line to cause the equipment to ring back the calling line. This is done by providing a flash of on-hook signal from the 911 line lasting from 200 to 1,100 milliseconds. The signal to the calling line shall be ringing current if
the line is on-hook, or receiver off-hook (ROH) tone if the line is off-hook.

(viii) Calls shall not be originated from the service bureau via the dedicated 911 lines. If an attempt is made to originate a call, it shall receive reorder tone. After 6 minutes, the system shall print an alarm message.

(ix) If 911 calls pass through intermediate switching, the forced-hold control, emergency ringback, and calling line status monitoring capabilities are lost.

(f) Line circuit requirements—(1) General. (i) The range of direct current (dc) resistances of subscriber loops, measured from the main frame in the central office and including the telephone set shall be at least 0-1900 ohms without loop extension and 1900-3600 ohms with loop extenders, or equivalent. The range when using extension equipment may be significantly reduced for straight line ringers. These limits apply under maximum adverse environmental and manufacturing variation tolerance conditions. Central office voltage shall be stabilized at a value necessary to provide at least a nominal 21 milliamperes current with a non-treated loop of at least 1900 ohms. Minimum loop insulation resistance without loop extenders shall be 25,000 ohms between conductors or from either conductor or both conductors in parallel to ground. Loop insulation resistance for loop extension devices may be 100,000 ohms minimum between conductors or from either conductor or both conductors in parallel to ground.

(ii) In addition to operating on non-loaded cable pairs and subscriber carrier, the equipment shall function properly with D-66 and H-88 loaded cable pairs, including any provisions the equipment must control for the purposes of proper transmission.

(2) Dialing—(i) Subscriber dial speed. The line equipment and central office equipment (COE) in tandem shall operate satisfactorily when used with subscriber dials having a speed of operation between eight and twelve impulses per second and a break period of 55 to 65 percent of the total impulse period.

(ii) Subscriber dial interdigital time. The line equipment and central office equipment shall operate satisfactorily with subscriber rotary dial interdigital times of 200 milliseconds minimum, and with pushbutton dialing interdigital times of 50 milliseconds minimum.

(iii) Subscriber line pushbutton dialing frequencies. (A) The frequency pairs assigned for pushbutton dialing shall be as follows, with an allowable variation of ±1.5 percent:

(B) The receiver shall comply with the operating parameters of the dual-tone multifrequency (DTMF) central office receiver as described in section 6 of Bell Communications Research (Bellcore) document SR-TSV-002275, BOC Notes on the LEC Networks—1990.

(3) Impedance. For the purpose of this section, the input impedance of all subscriber loops served by the equipment is arbitrarily considered to be 900 ohms at voice frequencies.

(4) Lockout. (i) All line circuits shall be arranged for line lockout. When a permanent condition occurs prior to placing a line into lockout, a timed low level warning followed by a timed high level receiver off-hook (ROH) tone (see paragraph (i)(2)(xi) of this section) or a howler circuit (see paragraph (o)(2)(iii)(C) of this section) shall be applied to the line.

(ii) The line on lockout shall be reconnected automatically to the central office when the permanent off-hook condition is cleared.

(5) Pay stations. Pay stations may be prepay, or semi-postpay, as specified by the owner.

(6) Loop extension. (i) The number of lines which exceed 1900 ohms will be specified by the owner. When requested by the owner, the bidder shall furnish equipment to guarantee satisfactory operation of all lines.

(ii) Working limits for subscriber lines with loop extenders are covered in RUS Bulletin 345-55, PE-61, Central Office Loop Extenders and Loop Extender Voice Frequency Repeater Combinations.

(iii) Ranging from RUS accepted loop extenders, or their equivalent, shall be
cut off from the called line when the handset at the called station is removed during the ringing or the silent interval.

(7) Private branch exchange (PBX) lines. PBX trunk hunting shall be available. It will not be necessary to segregate PBX lines to certain line groups.

(8) Quantity. A sufficient number of terminations shall be provided, in addition to the quantity specified by the owner for subscriber line service, to meet the requirements of the system for equipment testing, alarm checking, tone transfer, loop around test and other features.

(9) Types. There shall be provisions for types of lines such as ground start, loop start, regular subscriber, pay stations, etc.

(g) Intrastate switching requirements.

(1) The switching system shall:

(i) Provide dial tone in response to origination of a call by a subscriber, except on special lines where the application of dial tone is not applicable, such as manual and hot lines;

(ii) Remove dial tone immediately after the first digit has been dialed;

(iii) Recognize the class of service of the calling subscriber;

(iv) Register the digits dialed by the calling subscriber where the rotary dial or pushbutton dialing characteristics and the minimum interdigital times are as specified;

(v) Perform the necessary translation functions when the required number of digits have been registered, and select a channel to a proper outgoing trunk, if one is available, to the designated interexchange carrier;

(vi) Provide a transmission path from the calling subscriber line to the selected trunk, if an idle one is found;

(vii) Provide for more than one alternate route to the desired destination when specified by the owner, select an idle outgoing trunk in the first or second choice alternate route trunk group, if all trunks in the higher choice groups are busy, and provide a reorder signal (see paragraph (i)(2)(iv) of this section) to the subscriber if no trunks are available in the last choice alternate route;

(viii) Translate the proper part of the registered incoming routing data on tandem calls into an identification of an outgoing trunk group, select an idle trunk in that group, initiate the connection of the incoming trunk to the outgoing trunk, set the trunks in the proper configuration for tandem operation, and transmit information as required to permit completion to the desired destination in the distant office;

(ix) Transmit the proper stored information over the selected trunk to permit completion of outgoing calls to the desired destination by the distant office or offices, and provide multifrequency (MF) outpulsing when specified;

(x) Register all the digital information on calls incoming from a distant office, when dial or MF pulsing characteristics and interdigital times are as specified;

(xi) Translate internally a registered directory number into line equipment location, ringing code and terminating class (such as "PBX hunting") on incoming or intraoffice calls;

(xii) Test the called line for a busy condition;

(xiii) Connect the incoming trunk or locally originated call to the called line if the called line is idle;

(xiv) Permit any type of ringing voltage available in the central office to be associated with any Subscriber Directory Number (SDN), cause the proper type of ringing voltage to be connected to the called line, and remove ringing from the line upon answer whether in the ringing or silent period; and

(xv) Test and monitor the switching system continually during periods of low traffic using the maintenance and diagnostic subsystem.

(2) The switching system shall offer at least the following originating and terminating class-of-service indications on a per-line basis to subscribers, as specified by the owner:

(i) Flat rate individual line, bridged ringing;

(ii) Flat rate PBX and trunk hunting numbers, bridged ringing;

(iii) Pay station;

(iv) Message rate subscriber line;

(v) Wide Area Telephone Service (WATS);

(vi) Extended Area Service (EAS);

(vii) Data service;

(viii) Hotel-Motel capability;

(ix) Denied originating;
§ 1755.522

(x) Denied terminating;
(xi) Custom calling features;
(xii) Special interexchange carrier accesses; and
(xiii) Presubscription to designated interexchange carrier.

(3) The switching system shall provide PBX hunting.
(i) At least one trunk hunting group in each 100 SDN's equipped shall be provided. More may be provided as specified by the owner.
(ii) PBX groups shall be of a reasonable size commensurate with the ultimate size of the switching system.
(iii) Any available SDN may be used for PBX trunk hunting.
(iv) Each PBX group shall have the capability of being assigned one or more nonhunting SDN's for night service.
(v) If the called line is a PBX hunting line, the switching system shall test all assigned lines in the hunting group for a busy condition.
(vi) If the called PBX group is busy, line busy tone, as specified in paragraph (i)(2)(iii) of this section, shall be returned to the originating end of the connection.

(4) The switching system shall provide pay stations which may be prepay or semi-postpay. The system shall be arranged so that an operator and emergency service (911) may be reached from prepay or semi-postpay coin lines without the use of a coin, when the proper pay station equipment is provided.

(5) To meet dialing requirements, the switching system shall:
(i) Initiate the line lockout function after a delay, as specified in paragraph (r)(3) of this section, if dial or pushbutton dialing pulses are not received after initiation of a call, preferably routing the subscriber line to a holding circuit for tones and then automatically to lockout;
(ii) Connect 120 interruptions per minute (IPM) per busy tone, recorded message, or other distinctive tone to the calling subscriber if an interval longer than that specified in paragraph (r)(4) of this section elapses between dialed digits;
(iii) Register the standard tone calling signals received from a subscriber station arranged for pushbutton dialing if specified by the owner, provide arrangements to function properly with 12-button pushbutton dialing sets, and return a reorder signal to the subscriber upon receipt of signal from the 11th or 12th buttons if neither of these buttons is assigned functions; and
(iv) Connect the incoming trunk to the digit register equipment within 120 milliseconds after seizure where direct dialing is received on calls from a distant office, cancel the bid for a register, and return reorder tone to the calling end if dial pulses are received before a register is attached.

(6) The switching system shall provide for appropriate circuit usage.
(i) To avoid inefficient utilization of the switching network, that portion of the common equipment that establishes the connection on intramachine calls shall not require more than 500 milliseconds, exclusive of ringing and ring trip, to complete its function under no-delay conditions.
(ii) The switching system shall provide for duplication in a load sharing or redundant configuration any circuit elements or components, the failure of which would reduce the grade of service of 100 or more lines by more than 25 percent of the traffic carrying capacity.
(iii) The switching system shall ensure that failure of access to a high choice circuit will not prevent subsequent calls from being served by lower choice circuits, wherever possible.
(iv) Where only two circuits of a type are provided, circuits shall be designed so that failure of one circuit will not permanently block any portion of the system for the duration of the failure.
(v) Where more than two circuits of a type are provided, successive usages should be on a rotational or random basis rather than the step-up selection with the possible exception of a last choice trunk.

(7) The switching system shall provide busy verification facilities with the method of access specified by the owner.
(i) Only an operator or a switchman shall be able to override a busy line condition.

(ii) If the called line is busy, off-hook supervision shall be given the operator or switchman.

(iii) The responsibility of restricting subscribers in distant offices from having access to busy verification shall be on the distant office personnel when the toll trunks are used for both toll connecting and verification traffic.

(iv) When a verification code is used, all digits of the code must be dialed before cut-through to the called line can be accomplished.

(8) The switching system shall provide intercept facilities.

(i) All unused numbering plan area codes, home numbering plan area office codes, service codes and subscriber directory numbers (SDN’s) shall be routed to intercept. All intercept administration shall be by changes in memory administrable by telephone company personnel. Maximum machine time to place a subscriber on intercept shall be 15 seconds.

(ii) Unequipped SDN’s intercept shall be effective if the processor memory does not have information concerning the SDN in question.

(iii) The intercept equipment shall be arranged so that specific SDN’s can be routed to a separate intercept circuit for changed numbers.

(iv) When an intercept call is answered, either by an operator or by a recorded announcement, an off-hook or charge supervision signal shall not be returned, even momentarily, to the originating end.

(v) When intercepting service is to be handled over the regular interoffice toll trunks, a distinctive identifying tone shall be transmitted when the operator answers. This tone shall be of the frequency and duration specified in paragraph (i)(2)(x) of this section.

(9) The switching system shall provide nuisance call trap facilities which, when activated, provide a permanent record of the calling and called numbers complete with date and time of day. Where the call originates over an interoffice trunk, the actual trunk number shall be recorded. There shall be provision for the called subscriber to hold the connection and for the positive trace of the call from origination to termination within the office.

(10) The switching system shall follow appropriate release procedures.

(i) The office shall be arranged so a connection to a terminating channel other than assistance operator shall be released under control of the calling party so that the channel can be re-seized, unless the call is to emergency 911 service or other termination arranged for called party control.

(ii) If the called party disconnects first, the channel used in the originally established connection shall be held until the calling party disconnects or until the timing interval specified in paragraph (r)(7) of this section has elapsed. This feature shall not interfere with the normal operation of calls to intercept, fire alarm, or other special services.

(11) The switching system shall provide line load control facilities, when specified by the owner, to give preference for originating service to a limited group of subscribers during emergencies.

(i) These facilities may be activated manually by input-output (I/O) device or automatically after a manual setting of a key (or equivalent) to put line load control into effect, as determined by the bidder. The automatic procedure is preferable.

(ii) Procedures shall be established to avoid the unauthorized use of the line load control facilities.

(iii) Where automatic activation is provided, service may be provided to small groups of nonemergency subscribers on limited grade of service whenever the office load becomes low enough to permit this to be done safely.

(h) Interoffice trunk circuit requirements—(1) General. (i) The bidder shall supply, as requested by the owner, solid-state technology type trunk and signaling circuits of any of the types described in RUS TE&CM 319, Interoffice Trunking and Signaling, or, with the approval of RUS, any other more recent and desirable types not as yet covered in the manual. For dc signaling, the duplex (DX) and loop types of signaling are preferred.
(ii) Trunks shall not be directly driven from the subscriber's dial on outward calls.

(iii) In order to reduce the spares inventory and minimize incidence of improper maintenance replacement of circuit assemblies, the types of trunk circuits shall be kept to a minimum. Variation in assemblies should be mainly limited to variation in signaling modes.

(iv) Trunk circuits which connect with carrier or 4-wire transmission facilities shall be arranged for 4-wire transmission to avoid an intermediate 2-wire interface between a 4-wire switching system and trunk facilities.

(2) Quantity. Trunk quantities shall be as specified in appendix A of this section. Sufficient space shall be provided for an orderly layout of trunks. Trunks of a certain type going to the same destination may be grouped together on the original installation.

(3) Requirements for interoffice connections. (i) When operator trunks are used in common for both coin and noncoin lines, they shall be arranged to provide an indication to the operator by means of a visual signal or tone when calls are from pay stations. When a tone is used, it shall be of the type specified in paragraph (i)(2)(v) of this section and shall be connected to be heard only by the operator upon answer. It shall be possible to repeat the tone signal.

(ii) There are no requirements for trunks arranged for manual re-ring by a toll operator, either with the receiver on or off the hook, except to coin stations with the receiver on the hook.

(iii) On calls from subscribers to the assistance operator, the release of the connection shall be under control of the last party to disconnect. An exception is operator control of disconnect that is used on outgoing trunks to a TSP/TSPS system.

(iv) On calls originated by an operator, the release of the connection shall be under control of the operator.

(v) Where trunks with E and M lead signaling are used, the trunk circuits for Type I signaling shall be arranged to place ground on the M lead during the on-hook condition and battery on the M lead in the off-hook condition. For E and M Type II, only a make contact between the MA and MB lead will be required. In either type, current limiting shall be provided in the E lead of the trunk circuit itself, as required for proper operation. It shall be assumed that connection equipment in the form of trunk carrier, multiplex, or associated signaling apparatus furnishes only a contact closure to ground (Type I) or to a signal ground lead (Type II) for an off-hook condition on the E lead.

(vi) Where answer supervision is used to determine the initiation of the charging interval for a call, such answer supervision shall not be effective for charging until after the elapse of the timing interval listed in paragraph (r)(5) of this section.

(vii) When necessary, provision shall be made for reception of start and stop dial signals on toll trunk equipment.

(viii) When trunks arranged for automatic message accounting (AMA), toll ticketing, or centralized automatic message accounting (CAMA) are specified by the owner, these trunks shall provide the pertinent features described in paragraph (k) of this section applicable to such functions.

(4) Requirements for direct digital connections. (i) Interface units which will permit direct digital connection to other digital switches, channel banks and remote line and/or trunk circuits over digital facilities shall be provided when specified by the owner. The digital transmission system shall be compatible with T1 type span lines using a DS1 interface and other digital interfaces that may be specified by the owner. The RUS specification for the span line equipment is Bulletin 345-50, PE-60, RUS Specification for Trunk Carrier Systems.

(ii) Each interface circuit shall connect 24 voice channels to the switching system from a 1.544 megabit per second DS1 bit stream. The DS1 bit stream entering or exiting the system shall be in the D3 format and the voice signals shall be encoded in 8 bit mu-255 PCM. The format and processing of the bit stream must be compatible with characteristics of the D3 channel bank such as alarm and maintenance characteristics. Loss of receive signal (DS1) shall be detected and the equivalent of a carrier group alarm shall be executed in
§ 1755.522

2.5 ± 0.5 seconds. Loss of synchronization shall be detected by slips, timing jitter, and wander in accordance with industry standards.

(iii) Signaling shall be by means of MF or dial pulse (DP) and the system which is inherent in the A and B bits of the D3 format. In the case where they are not used for signaling, the A and B bits shall be used only for normal voice and data transmission.

(i) Tone requirements—(1) General. Tones shall be provided to indicate the progress of a call through the office. Tone generators should be an integral part of the switching systems. The tones should be introduced digitally by the application of the appropriate bit stream to the line or trunk circuit via the digital switching network. The necessary precautions shall be made to ensure tone sources automatically if the primary sources fail.

(2) Tone specifications. (i) Dial tone shall consist of 350 Hz plus 440 Hz at a composite level of −10 dBm0 which equates to −13 dBm0 per frequency. This is the precise tone suitable for use with pushbutton dialing.

(ii) Low tone shall consist of 480 Hz plus 620 Hz at a composite level of −21 dBm0 which equates to −24 dBm0 per frequency.

(iii) Line busy tone shall be low tone interrupted at 60 IPM, with tone on 0.5 seconds and off 0.5 seconds.

(iv) Reorder, all paths busy, and no circuit tone shall be low tone interrupted at 120 IPM, with tone on 0.25 seconds and off 0.25 seconds.

(v) Identifying tone on calls from coin lines shall be uninterrupted low tone.

(vi) High tone shall consist of 480 Hz at −17 dBm0.

(vii) Audible ringback tone shall consist of 440 plus 480 Hz at a composite level of −16 dBm0 which equates to −19 dBm0 per frequency.

(viii) The call progress tones listed in this section are described in Bellcore document SR-TSV-002275, BOC Notes on the LEC Networks—1990, section 6. The 350, 440, 480, and 620 Hz tones shall be held at ±0.5 percent frequency tolerance and ±3 dB amplitude variation. The amplitude levels specified are to be measured at the main distributing frame, excluding cable loss.

(ix) Distinctive tone, when required for alarm calls, or other features, shall consist of high tone interrupted at 200 IPM with tone on 150 ms and off 150 ms.

(x) Identifying tone on intercepted calls shall consist of uninterrupted high tone impressed on the trunk circuit 300 to 600 milliseconds following the operator’s answer of intercepted calls.

(xi) An ROH circuit shall have output tones which do not interfere with the pushbutton or multifrequency signaling tones. The ROH tone may be introduced digitally internal to the system near the overload level of +3 dBm0. No power adjustment will be required. The frequency of the output shall be distinctive and urgent in order to attract the subscriber’s attention to an off-hook situation. (Warning: In order to determine the signal level, a frequency selective voltmeter must be used to determine the level of each signal component and mathematical power addition used to combine these measurements into a single level value.)

(xii) During application of tones, office longitudinal balance shall be maintained within 15 dB of that specified in paragraph (q)(8) of this section.

(j) System clock. (1) The central office clock and network synchronization system shall have the ability to be synchronized with external clocks for network synchronization, including detection of slips, timing, jitter and wander, in a digital-to-digital environment or operate initially in an independent network (refer to Bellcore document SR-TSV-002275, BOC Notes on the LEC Networks—1990, section 11).

(2) The end office central office system clock shall be a Stratum 3 clock with:

(i) A minimum long-term accuracy of ±4.6 × 10⁻⁶ (±7 Hz @ 1.544 MHz);

(ii) A minimum stability of 3.7 × 10⁻⁷ day upon loss of all frequency references; and

(iii) A “Pull-In Range” for the capability of synchronizing to a clock with accuracy of ±4.6 × 10⁻⁶.

(3) The access tandem central office system clock shall be a Stratum 2 clock with:

(i) A minimum long-term accuracy of ±1.6 × 10⁻⁸ (±0.025 Hz @ 1.544 MHz);
(ii) A minimum stability of $1 \times 10^{-10}$ day upon loss of all frequency references; and

(iii) A “Pull-In Range” for the capability of synchronization to a clock with accuracy of $\pm 1.6 \times 10^{-8}$.

(k) Switched access service arrangements—(1) General. The equipment shall be capable of providing Feature Group A, Feature Group B, Feature Group C, and Feature Group D switched access service arrangements, as described in Bellcore document SR-TSV-002275, BOC Notes on the LEC Networks—1990, section 6 and section 15, including arrangements for automatic number identification (ANI).

(2) Operation. (i) All equipment shall be arranged for Feature Group A (Line Side Connection).

(ii) All equipment shall be arranged for Feature Group B given that appendix A of this section requires the equipment of the necessary trunks (Trunk Side Connection).

(iii) The equipment shall be arranged for Feature Group C on the trunk groups specified in appendix A of this section. Even though appendix A of this section specifies Feature Group D or some other trunk group, it shall be possible through software commands available to the owner to use Feature Group C signaling protocols on a trunk group basis until such time that the trunk group in question converts to Feature Group D signaling protocols.

(iv) The equipment shall be arranged for Feature Group D on the trunk groups specified in appendix A of this section.

(v) Calls originating from coin lines toward switched access service shall be arranged either to provide signaling protocols for TSPS, or in the absence of TSPS-type service, such calls shall be blocked.

(vi) The equipment shall be arranged for forwarding routing information, calling party identification, and called party numbers in the proper feature group protocols, by trunk group as specified in appendix A of this section.

(vii) The equipment shall be arranged for AMA data collection as specified in appendix A of this section by trunk group. Unless otherwise specified by the owner, the equipment shall be arranged to collect the billing data in the Bellcore AMA format as described in Bellcore document TR-TSY-000508, Automatic Message Accounting.

(viii) If specified in item 9.4, appendix A of this section, the equipment shall be arranged to store the billing data in a pollable system. If specified in item 9.5, appendix A of this section, equipment shall be furnished to poll the pollable systems associated with the contract.

(l) Fusing and protection requirements—(1) General. (i) The equipment shall be completely wired and equipped with fuses, trouble signals, and arranged for printout of fault conditions, with all associated equipment for the wired capacity of the frames or cabinets provided.

(ii) Design precautions shall be taken to prevent the possibility of equipment damage arising from the insertion of an electronic package into the wrong connector, the removal of a package from any connector, or the improper insertion of the correct card in its connector.

(2) Fuses. Fuses and circuit breakers shall be of an alarm and indicator type, except where the fuses or breaker location is indicated on the alarm printout. Their rating shall be designated by numerals or color code on the fuse panel, where feasible.

(3) Components. (i) In so far as possible, all components shall be capable of being continuously energized at rated voltage without injurious results. In so far as possible, design precautions shall be taken to prevent damage to other equipment and components when a particular component fails.

(ii) Printed circuit boards or similar equipment employing electronic components shall be self-protecting against external grounds applied to the connector terminals, where feasible. Board components and coatings applied to finished products shall be of such material or treated so they will not support combustion.

(iii) Every precaution shall be taken to protect electrostatically sensitive components from damage during handling. This shall include written instructions and recommendations (see item 6.1h of appendix C of this section).
§ 1755.522

(m) Switching network requirements—
(1) The network. (i) All networks shall be comprised of solid-state components.

(ii) The switching network shall employ time division digital switching and be compatible for connection to D3 type PCM channel banks without conversion to analog.

(iii) Equipment shall be available as required to connect analog lines and trunks, analog or digital service circuits, digital carriers to RST's, D3 channel banks or other digital switching units.

(2) Network quantity. Where the number of stages in the switching network and their control varies with the capacity of the system, sufficient equipment and wiring shall be supplied initially in order that there will be no service interruptions when additions are made up to the ultimate capacity as specified in appendix A of this section. This does not imply the necessity of supplying empty cabinets unless this is the only way the necessary wiring can be accomplished.

(n) Stored program control (SPC) equipment requirements. (1) The system shall provide redundancy in call processing such that the failure of a call processing unit does not degrade the call processing capabilities of the switching system nor result in the loss of established calls.

(2) Programs shall be modular, flexible and structured. In the interest of more dependable and more easily read programs, it is desirable to use a language which is more person-oriented leaving the detailed machine-oriented problems to a compiler program. Quality assurance of all software programs shall be in accordance with IEEE Std 730-1989, IEEE Standard for Software Quality Assurance Plans, or equivalent.

(3) The office administration program shall have checks within it to prevent failure due to erroneous or inconsistent input data. It shall safeguard against the possibility of upsetting machine performance with improper instructions or information. In addition, modular structure shall allow the use of a variety of human-engineered service order formats. Service changes may be performed remotely if so desired. Average machine time for service change shall be 15 seconds or less. Service changes shall not be registered in permanent memory until verified. The access to the service change shall not have access to generic program.

(4) The switching system shall be able to offer, by request, at least the following printouts of its routine stored data for administrative purposes:

(i) A list of all assigned directory numbers, in numerical order, with their assigned class of service and line terminal numbers;

(ii) A list of all directory numbers, in numerical order, associated with a class of service;

(iii) A list of all unassigned line terminals;

(iv) Traffic data in proper form for separation studies in accordance with the revenue separations procedures current at the time of the contract;

(v) All lines on lockout;

(vi) All lines assigned to intercept;

(vii) All available (unassigned) directory numbers in the working thousands group; and

(viii) A list of equipment busied out for maintenance.

(5) The printouts in paragraph (n)(4) of this section may be delayed to times of light traffic.

(6) Maintenance diagnostics shall be performed by a fault recognition system utilizing both software and hardware, each being used where they are most effective for maintenance and reliability. In the economic interests of providing early and efficient fault detection and accurate pinpointing of faulty areas, it is desirable to have a comprehensive person-machine interface supported by extensive automatic fault detection and analysis, involving diagnostic software for fault resolution and automatic recovery mechanisms to maintain continuous service. Maintenance messages may be channeled to a remote maintenance center if so desired.

(7) Information in memory, having no requirement for changes to be introduced in the maintenance or operation of the system, may be stored in memory devices such as programmable
read-only memory (PROM) or other devices that cannot be reprogrammed in the field.

(o) Maintenance facilities—(1) Alarm features, including alarm sending. (i) The equipment shall be arranged to provide audible and visual alarms indicating fuse operation or other circuit malfunctions resulting from component failure, crosses or open wiring, or any other conditions affecting service which can be detected economically.

(ii) The alarms shall be classified in accordance with their effect on the system.

(A) Catastrophic alarms demand immediate attention and require notification of the highest level of supervisory personnel. Conditions such as loss of service, loss of one or more remote line switches or line concentrators connected through Direct Digital Interface, loss of network control, and loss of computer program in all processors shall produce catastrophic alarms.

(B) Major alarms demand rapid action. Conditions such as loss of one or more groups of subscribers or trunk ports, blown fuses for common groups of channels, loss of control to groups of channels, failure of one or both redundant units, and total loss of battery charging current for more than 15 minutes shall produce major alarms.

(C) Minor alarms indicate non-emergency conditions which cause degraded service or fault conditions which causes the system to operate within less-than-optimum performance. Conditions discovered in automatic routine which have not shown in the operation of the equipment but require attention and cumulative line lockout (level adjustable) are examples of minor alarm conditions.

(iii) When the office is arranged for unattended operation, facilities shall be provided for extending the alarm indications to an attended point.

(iv) When the use of a separate outside plant facility for alarm sending is specified, the nature of the alarm may be indicated to the distant point by machine printout or other display device.

(v) When alarm sending is accomplished over a regular operator office trunk, the operator shall be apprised that the call is an alarm indication by a distinctive tone, as specified by the owner in appendix A of this section. It shall be possible for the operator to determine at any time the presence of a trouble condition by dialing a number set aside for that purpose. This number shall also be accessible from lines classmarked for this feature.

(vi) When the alarm sending circuit seizes an interoffice operator trunk, the operator must dial the alarm checking code over another trunk before the first trunk can be released except where the alarm condition has disappeared first.

(vii) The alarm sending circuit shall have access to two or more trunks if the trunks are used for subscriber traffic.

(viii) An alarm indication of higher priority shall supersede an original alarm indication and seize an interoffice operator trunk.

(ix) In any group of offices purchased under one contract, the same codes shall be used in each office for alarm checking and test.

(x) When the alarm checking number is dialed, the alarm indications received shall be as follows:

(A) Catastrophic alarm—No tone.

(B) Major alarm—Continuous busy tone 60 IPM, unless alarm is overridden.

(C) Minor alarm—Continuous 1-ring code ringback tone, unless alarm is overridden.

(D) No trouble—Continuous 2-ring code ringback tone, unless alarm is overridden.

(xi) Audible and visual local alarms and transmitted alarms shall be provided as follows:

<table>

</tbody>
</table>

*Except no change alarm delayed 15 minutes.*

(xii) The central office alarm circuits shall be arranged to provide optional wiring to transmit either a minor alarm or a major alarm and a printout to accommodate various types of trunk and subscriber carrier systems, micro-wave, mobile radio, other transmission systems, and environmental protection.
systems with different priorities when a set of contacts is closed in the equipment of such systems and the alarm checking code is dialed. The alarm relay shall be furnished by the supplier of the carrier multiplex and/or mobile radio equipment. The option or options shall be specified by the owner.

2. Trouble location and test. (i) Equipment. (A) A maintenance center shall be provided with a fault recorder (printer and/or display) for troubles. Here, system and sub-system visual trouble indications are shown for maintenance aid.

(B) The fault recorder shall provide a permanent or semi-permanent record of the circuit elements involved whenever a trouble is encountered. It shall be arranged to recognize an existing fault condition and not cause multiple printouts of the same fault, except during test routine.

(ii) Maintenance system. (A) The maintenance system shall monitor and maintain the system operation without interruption of call processing, except for major failures.

(B) The maintenance system shall provide both specialized maintenance hardware circuits and an extensive software package to enable maintenance to determine trouble to an individual card or functional group of cards.

(C) Maintenance programs may be both on-line and off-line. On-line maintenance programs are activated by system errors and shall be scheduled to execute call tests during low traffic periods and periodic hardware tests at specific time intervals. Programs shall provide diagnostic tools for the maintenance personnel and be initiated by them.

(D) Scheduled periodic hardware tests shall automatically detect faults and alert maintenance personnel via alarm or appropriate input/output device(s) at local and/or remote locations.

(E) Facilities shall be provided so that test calls can be set up using pre-selected items of switching equipment.

(F) The maintenance personnel shall be able to make tests to determine if every trunk and every item of switching equipment are functioning properly. Also, it shall be possible to make each trunk and each SPC equipment, or part thereof, busy to service calls. Where possible, equipment which is made busy to service calls shall still be accessible for test calls.

(iii) Outside plant and subscriber stations. (A) A subscriber loop test set or equivalent shall be provided either as a separate set or as a part of the maintenance center, as specified in item 11.2 of appendix A of this section. This circuit shall include a high resistance volt-ohm meter, wiring to tip and ring terminals to permit a portable wheatstone bridge to be used, an operator's telephone circuit, a dial circuit (and pushbutton dialing keys, if specified), outgoing trunks to dial equipment for access to lines under test without use of the main distributing frame (MDF) test shoe and the necessary test keys. No dry cell batteries shall be accepted for test potentials. Circuits shall be designed so that alternating current (ac) induction on the line will have no effect on dc measurements. All functions shall be under control of lever or pushbutton keys. As a minimum the test system shall:

1. Test for bridged foreign electromotive force (EMF);
2. Test for regular line battery;
3. Test for booster battery voltage and polarity using the test shoe;
4. Test for open circuits, short, tip ground, and ring ground;
5. Test for tip or ring negative potential;
6. Test for capacitance of a subscriber's line;
7. Supply talking battery to the line with and without booster battery;
8. Ring the subscriber through the test access circuit or through a test shoe;
9. Test in and out of the central office; and
10. Supply a reverse polarity key for voltage readings, except when positive or negative values are displayed directly.

(B) An acceptable arrangement for making the tests shown in paragraph (o)(2)(iii)(A) of this section is to have them under software control with results displayed at one of the system's I/O ports.

(C) A howler circuit for maintenance purposes, if ordered by the owner, shall
have output tones which do not interfere with the pushbutton or multifrequency signaling tones. The harmonics of the output tones shall be attenuated at least 26 dB below the fundamental frequency for all load conditions. The frequency stability shall be 2 percent or less for all output tones when the unit is operated in the specified load and environmental range. It shall be possible to vary the output voltage (power) of the howler circuit. It shall remove tone and restore the line to service when the telephone instrument receiver is placed on-hook. The frequency of the output shall be chosen to be distinctive and urgent in order to attract the subscriber's attention to an off-hook situation.

(D) When a dial speed test facility is specified by the owner, it shall be accessed by dialing a special code and shall return to the calling station readily identifiable signals to indicate that the dial speed is slow, normal, or fast.

(E) When the office is arranged for pushbutton dialing, optional facilities shall be provided for testing the pushbutton dialing equipment at the subscriber station.

(F) When a system for testing subscriber lines in remote offices from a test position in a centrally located office is specified by the owner, it shall be capable of working with all the central offices and RST's in the remote areas. This testing equipment shall preferably be solid-state with a minimum of electromechanical devices and shall operate from central office battery. It shall be capable of working over any voice grade telephone circuit and shall not require a dedicated trunk. There shall be no interference to or from "in-band" voice channel tones. When used over a network, the verification or access shall be guarded to prevent unauthorized access by subscribers. Access to this system shall only be available to the test operator in all cases.

(3) Transmission testing. (i) When transmission test circuits are specified in Item 11.3 of appendix A of this section, they shall permit testing of trunks by a distant office without any assistance in the local dial office. Analog test ports shall meet appropriate trunk requirements. If Centralized Automatic Reporting on Trunks (CAROT), or equivalent, is to be used, the equipment at the end office shall comply with Bellcore document SR-TSV-002275, BOC Notes on the LEC Networks—1990, section 8, Item 2.

(ii) Transmission test circuits are available with a variety of options. These include single frequency and multifrequency tone generators with one or more generator output terminals, quiet terminations, and loop around test arrangements for both one-way and two-way trunks.

(iii) Where multifrequency generators are used, they are usually arranged to provide a minimum of three frequencies. With some equipment, up to seven additional frequencies may be provided if needed. No industry standardization of test frequencies is as yet provided. Therefore, it is important that the selection of frequencies, the order in which they are applied and the time interval for application of each frequency be agreed upon by the connecting company and the RUS borrower and listed in appendix A of this section in those situations where connecting companies request the installation of multifrequency generators in borrowers' central offices.

(iv) The milliwatt generator shall be solid-state and generate the analog or digital equivalent of 1004 Hz. The milliwatt generator shall be assigned to a 4-wire analog test port or be digitally generated. All 2-wire and 4-wire voice frequency ports are at a nominal 0 dBm0 level. The level of the 1004 Hz tone generator shall appear at outgoing 2-wire and 4-wire ports at 0 dBm ± 0.5 dB. For direct digital connections, the encoded output shall be the digital equivalent of a 0 dBm0 ± 0.5 dB signal.

(v) Reference tone generators can be used individually or they can be part of a loop around test arrangement. If both single frequency and multifrequency reference tone generators are to be provided, only one can be arranged as part of a loop around test. Where a loop around arrangement is provided, the generator output can be obtained by dialing singly one of the two line terminals. By dialing the other line terminal singly, usually a 900 ohm resistor in series with a 2.16 microfarad capacitor is connected to the circuit under test to
act as a "quiet termination" for noise measurements and other tests. Whenever both line terminals are held simultaneously, both the milliwatt supply and the quiet termination shall be lifted off and a "loop around" condition established. This permits the overall loss to be determined from the distant office by going out over one trunk, looping around in the end office and returning over the other trunk. The insertion loss of this test arrangement when used in a loop around configuration should not exceed 0.1 dB at the frequencies specified for the milliwatt supply. Unless otherwise specified, continuous off-hook supervision is to be provided on both line terminals to prevent collusive calling without charge. It will be permissible to accomplish the quiet termination by opening the 4-wire path internally and to accomplish the loop around by digital switching.

(vi) Provision shall be made so that the milliwatt supply can be manually patched to circuits.

(vii) Test jack access shall be provided for all interoffice trunks of the voice frequency type. The jack access shall be properly designated for line, drop, monitor, and signaling leads plus any other jacks as requested by the owner. This may be accomplished by a set of jacks located at the maintenance center which have access to each trunk on a switching basis.

(p) Traffic—(1) General engineering guidelines. (i) The Traffic Table, based on the Erlang Lost-Calls-Cleared Formula, shall be used for determining the quantity of intraoffice paths, registers, and senders where full availability conditions apply. The following table shows the traffic capacity in CCS for 1 to 200 trunks at nine grades of service.

(ii) The traffic capacity for all inter-office trunks shall be based on full availability, even though the distant office itself is not engineered to provide full availability access.

(iii) The Traffic Table may also be used to determine the approximate traffic capacity of high-usage intertoll trunks. The traffic offered to high-usage groups may be read at B.10, signifying that 10 percent of the traffic overflows to the alternate route. This approximates the HU12 table used by AT&T.

(iv) In reading the trunk quantity from the table, the higher quantity shall be used when the CCS load is three or more CCS over the lower quantity. For example, the number of trunks justified for 294 CCS at B.005 is 16, but for 295 CCS 17 trunks are justified.

(v) Limited availability is not permitted.

(vi) The traffic capacity in the following table should be used for small trunk groups such as pay station, special service trunks, intercept, and PBX trunks, unless otherwise specified in appendix A of this section:

<table>
<thead>
<tr>
<th>Number of Circuits</th>
<th>Permissible CCS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>10</td>
</tr>
<tr>
<td>2</td>
<td>20</td>
</tr>
<tr>
<td>3</td>
<td>30</td>
</tr>
<tr>
<td>4</td>
<td>40</td>
</tr>
</tbody>
</table>

(vii) The percentage of lines equipped for pushbutton dialing is to be used to determine the number of tone receivers. Local registers, if required, shall be supplied on the basis of all dial pulse.

(2) Grade of service. (i) Grade of service specifies the expected performance when there are adequate service facilities for an assumed volume of traffic. It is expressed as a portion of the total traffic during a busy hour that cannot be terminated immediately or within a predetermined time period due to congestion. This places responsibility on the traffic engineers to specify facilities which will be entirely satisfactory to the users and which can be equipped...
(ii) The number of calls encountering dial tone delay in excess of 3 seconds, measured over the busy hour of the four high-consecutive week (4HW) period, shall not be more than 1.5 percent.

(iii) The average post dialing delay objective for an intraoffice call shall not exceed 1 second. This includes all connect, operate, and translation time.

(iv) The line to line (intraoffice) network matching loss objective shall be 0.02 or less.

(v) The blocking probabilities related to trunks include both “mismatch” probability and probability of “all trunks busy.” It is likely that the “mismatch” will be negligible in that many digital central offices have essentially nonblocking switching characteristics. The objectives for trunk connections are as follows:

(A) Subscriber to outgoing trunk objective 0.01 or less;

(B) Incoming trunk to subscriber objective 0.02 or less; and

(C) Local trunk tandem objective 0.01 or less.

(vi) Groups of common service circuits are to be engineered utilizing the full availability traffic tables that appear in paragraph (p)(3)(i) of this section at the following stipulated probabilities:

(A) Outgoing trunks to 2/6 MF or dial pulse senders at B.001;

(B) Incoming trunks to 2/6 MF receivers at B.001;

(C) Incoming nondelay dial trunks to receivers at B.001; and

(D) Incoming trunks with start dial at B.01.

(vii) Remote Switching Terminals (RST’s) shall meet the same grade of service objectives as the host.

(3) Holding times. For the purpose of estimating the quantity of common control circuits, the following average holding times may be used. These holding times are conservative and represent the average effective and ineffective call. If these holding times are to be used, it must be so stated in appendix A of this section.

(i) The following average call holding times (HT) may be used.

<table>
<thead>
<tr>

1 Add 1.3 seconds for ANI outpulsing on special toll (0+) calls and on DDD calls if AMA is not provided.
2 Assumes overlap outpulsing starting on receiving of third digit; applies only to calls handled on direct trunk groups.

(4) Traffic data requirements. (i) Traffic measurements are composed of primarily two types—counts and usage. The following types of traffic data recording are required:

(A) Peg count registers shall be incremented when a successful network connection is established to a particular circuit group such as trunks, senders, digital receivers, etc.
(B) Overflow count registers shall be incremented when access to a particular circuit group is denied due to all source busy condition.
(C) Network blockage count registers shall be incremented due to an unavailability of a path in an access or switching matrix network.
(D) Usage measurements of the length of time associated with a particular setup event or network connection shall be made. Usage data measurements are normally collected by scanning circuit groups resources every 10 or 100 seconds to determine busy/idle states. Measurements are accumulated and read directly in CCS (hundred call seconds).
(E) Service delay measurements shall provide percentage counts of the calls for a particular service that are delayed beyond a specified interval of time, e.g., calls not receiving dial tone within 3 seconds after call origination.

(ii) Traffic data shall be stored in electronic storage registers or block of memory consisting of one or more traffic counters for each item to be measured. The registers listed in paragraph (p)(4)(i) of this section shall be associated with the interoffice trunks, switching network and central control equipment in such a manner that the register readings can be used to determine the traffic load and flow to, from and within the system. Two-way trunks shall be metered to indicate inward and outward seizures. The bidder shall indicate what registers are to be supplied and their purpose.

(iii) The measured data shall be shown on a printout. It should be possible to have local or remote printout, or both. Arrangement shall be made for automatic data printout on command for 15-, 30-, or 60-minute intervals as required, and be arranged for automatic start-stop and in accordance with revenue separation procedures current at the time of contract.

(iv) All traffic records shall have dates and times and office identification.

(q) Transmission—(1) General. The transmission characteristics will be governed by the fact that the switching matrix will be based on digital operation. Unless otherwise stated, the requirements are in terms of analog measurements made from Main Distributing Frame (MDF) to MDF terminals, excluding cabling loss.

(2) Impedance. For the purpose of this section, the nominal input impedance of analog ports in an end office shall be 900 ohms for 2-wire ports and 600 ohms for 4-wire ports. Where the connecting facility or equipment is other than this impedance, suitable impedance matching shall be provided by the bidder when specified by the owner.

(3) Insertion loss. The insertion loss in both directions of transmission at 1004 Hz shall meet the following requirements when measured with a 0 dBm input signal at 900 ohms (or 600 ohms, when required) at a temperature of 77° F ± 9° F (25° C ± 5° C).

(i) Trunk-to-trunk or trunk-to-line. The loss shall be set between 0 and 0.5 dB for 2-wire to 2-wire, 2-wire to 4-wire, or 4-wire to 4-wire voice frequency connections.

(ii) Line-to-line. The loss shall be set between 0 and 2 dB.

(iii) Direct digital interface. On a direct digital interface, the loss through the office shall be adjusted to the proper level in the receive side.

(iv) Stability. The long-term allowable variation in loss through the office shall be ± 0.5 dB from the loss specified by the bidder.

(4) Frequency response (loss relative to 1004 Hz) shall meet the following requirements:

(i) Trunk-to-trunk.
§ 1755.522

Rural Utilities Service, USDA

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>

</tr>
</tbody>
</table>

¹(−) means less loss and (+) means more loss.
²Transmit End

(iii) Trunk-to-line. The trunk-to-line frequency response requirements shall be a compromise between those values specified in paragraphs (q)(4)(i) and (q)(4)(ii) of this section.

(5) Overload level. The overload level at 900 ohm impedance shall be +3 dBm0.

(6) Gain tracking (linearity) shall meet the following requirements.

<table>
<thead>
<tr>
<th>Input Signal Level¹</th>
<th>Maximum Gain Deviation</th>
</tr>
</thead>
<tbody>
<tr>
<td>+3 to −37 dBm0</td>
<td>±0.5 dB</td>
</tr>
<tr>
<td>−37 to −50 dBm0</td>
<td>±1 dB</td>
</tr>
</tbody>
</table>

¹004 Hz reference at 0 dBm0.

(7) Return loss. (i) The specified return loss values are determined by the service and type of port at the measuring (near) end. Two-wire ports are measured (near end) at 900 ohms in series with 2.16 microfarads and 4-wire ports are measured at 600 ohms resistive.

(ii) Far end test terminations shall be as follows:

(A) Loaded line circuit—800 ohms in parallel with the series combination of .05 microfarads and 100 ohms;

(B) Nonloaded line circuit—800 ohms in parallel with the series combination of.05 microfarads and 100 ohms;

(C) Special service line circuit including electronic lines and carrier lines—900 ohms in series with 2.16 microfarads;

(D) Two-wire trunk—900 ohms in series with 2.16 microfarads; and

(E) Four-wire trunk—600 ohms.

(iii) For trunk-to-trunk (2-wire or 4-wire) connections the echo return loss (ERL) shall be 27 dB, minimum and the singing return loss (SRL) shall be 20 dB, minimum low and 23 dB, minimum high.

(iv) For trunk-to-line (2-wire or 4-wire) connections the ERL shall be 24 dB, minimum and the SRL shall be 17 dB, minimum low and 20 dB, minimum high.

(v) For line-to-line or line-to-trunk (2-wire or 4-wire) connections the ERL shall be 18 dB, minimum and the SRL shall be 12 dB, minimum low and 15 dB, minimum high.

(vi) For line-to-line or line-to-trunk (2-wire or 4-wire) connections the ERL shall be 18 dB, minimum and the SRL shall be 12 dB, minimum low and 15 dB, minimum high.

(8) Longitudinal balance. The minimum longitudinal balance, with dc loop currents of 20 to 70 mA, shall be 60 dB at all frequencies between 60 and 2000 Hz, 55 dB at 2700 Hz and 50 dB at 3400 Hz. The method of measurement shall be as specified in the IEEE Std 455-1985, IEEE Standard Test Procedure for Measuring Longitudinal Balance of Telephone Equipment Operating in the Voice Band. Source voltage level shall be 10 volts root-mean-square (rms).

(9) 60 Hz longitudinal current immunity. Under test conditions with 60 Hz, the system noise shall be no greater than 23 dBm0 as measured using the configuration in Figure 1.
Fig. 1—Measuring the Effects of Low Frequency Induction

NOTES:
1. 900 ohm termination, C-message weighting, hold coil off
2. 5NC Noise Choke 35 W, or equivalent
3. Test at 0.020 A dc and 0.070 A dc
4. 2 ± 0.001 microfarad, 150 V dc

(10) Steady noise (idle channel at 900 ohms impedance) measured on a terminated call shall be 23 dBm0C0 maximum and average 18 dBmC0 or less. The 3K Hz Flat noise should be less than 35 dBmC0 as an objective.

(11) Impulse noise. The central office switching equipment shall be capable of meeting an impulse noise limit of not more than five counts exceeding 54 dBmC0 voice band weighted in a 5-minute period on six such measurements made during the busy hour. A Northeast Electronics Company TTS 4002 Impulse Noise Counter, Wilcom T194C, Hewlett Packard 4945, or equivalent, should be used for the measurements. The measurement shall be made by establishing a normal connection from the noise counter through the switching equipment in its off-hook condition to a quiet termination of 900 ohms impedance. Office battery and signaling circuit wiring shall be suitably segregated from voice and carrier circuit wiring, and frame talking battery filters provided, if and as required, in order to meet these impulse noise limits.

(12) Crosstalk coupling. Worst case equal level crosstalk is to be 75 dB minimum in the range 200-3400 Hz. This is to be measured between any two paths of the system connecting a 0 dBm0 level tone to the disturbing pair.

(13) Quantizing distortion. (i) The switching system shall meet the following requirements.

<table>
<thead>
<tr>
<th>Input Level (dBm0)</th>
<th>0 to −30</th>
<th>−30 to −40</th>
<th>−40 to −45</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Signal to Distortion</td>
<td>33 dB</td>
<td>27 dB</td>
<td>22 dB</td>
</tr>
</tbody>
</table>

(ii) Due to the possible loss of the least significant bit on direct digital...
connections, a signal to distortion degradation of up to 2 dB may be allowed where adequately justified by the bidder.

(14) Absolute delay. The absolute one-way delay through the switching system, excluding delays associated with RST switching, shall not exceed 1000 microseconds analog-to-analog measured at 1800 Hz.

(15) Envelope delay distortion. On any properly established connection, the envelope delay distortion shall not exceed the following limits.

<table>
<thead>
<tr>
<th>Frequency Range (Hz)</th>
<th>Microseconds</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 to 2600</td>
<td>190</td>
</tr>
<tr>
<td>800 to 2800</td>
<td>350</td>
</tr>
<tr>
<td>600 to 3000</td>
<td>500</td>
</tr>
<tr>
<td>400 to 3200</td>
<td>700</td>
</tr>
</tbody>
</table>

(16) Digital error rate. The digital switching system shall not introduce an error into digital connections which is worse than one error in 10^8 bits averaged over a 5-minute period.

(17) Battery noise. Noise across battery at power board distribution bus terminals shall not exceed 35 dBrnC during the busy hour.

(18) Radio and television interference. The central office switching equipment shall be designed and installed so that radiation of high frequency noise will be limited so as not to interfere with radio and television receivers.

(r) Timing intervals—(1) Type of equipment required. The equipment for providing the specified timing intervals shall be solid-state.

(2) Tolerance. Where a range of time is specified as minimum and maximum, the lower limits shall be considered as controlling and the variation between this minimum and the actual maximum shall be kept as small as practicable. In no case shall the quoted upper limit be exceeded.

(3) Permanent signal timing. Lockout shall occur after an interval of 20 to 30 seconds after receipt of dial tone if a “permanent” condition occurs prior to the transmission of dial pulses or push-button dialing signals. This interval may be reduced appreciably during periods of heavy traffic.

(4) Partial dial timing. Partial dial timing shall be within 15 to 37 seconds. This timing may be reduced appreciably during periods of heavy traffic.

(5) Charge delay timing. Charge delay timing shall be within 2 seconds.

(6) Called party disconnect timing. Timed disconnect of a terminating path under control of the called party shall be 10 to 32 seconds.

(7) Timing intervals for signals involved in distance dialing. Timing intervals shall be provided to meet the requirements for distance dialing equipment, which have been established in Bellcore document SR-TSV-002275, BOC Notes on the LEC Networks—1990. Some of the more important times which this document specifies are for:

(i) Disconnect signal;
(ii) Wink signal;
(iii) Start dialing signal;
(iv) Pulse delay signal;
(v) Go signal;
(vi) Digit timing; and
(vii) Sender, register, and link attachment timing.

(s) Power requirements and equipment—(1) Operating voltage. The nominal operating voltage of the central office shall be 48 volts dc, provided by a battery with the positive side tied to system ground.

(2) Batteries. (i) When battery cells of the lead antimony type are specified, the pasted plate type shall be considered adequate.

(ii) When lead calcium cells are specified, no cell shall differ from the average voltage of the string of fully charged cells by more than ±0.03 volt when measured at a charging rate in amperes equivalent to 10 percent of the ampere hour capacity of the cells. Similarly, when cells are fully charged and floating between 2.30 and 2.33 volts per cell, the cell voltage of any cell in a given string shall not differ more than ±0.03 volt from the average. These requirements are for test purposes only and do not apply to operating conditions.

(iii) Voltage readings shall be corrected by a temperature coefficient of 0.0033 volt per degree F (0.006 per degree C), whenever temperature variations exist between cells in a given string. This correction factor shall also be applied when comparing cell voltages taken at different times and at different temperatures. The correction...
§ 1755.522

7 CFR Ch. XVII (1-1-98 Edition)

factor shall be added to the measured voltage when the temperature is above 77°F (25°C) and subtracted when the temperature is below 77°F (25°C).

(iv) The specific gravity readings of lead antimony cells at full charge shall be 1.210 ± .010 at 77°F (25°C) at maximum electrolyte height.

(v) When counter cells are supplied by the bidder, they shall be the dry counter electromotive force (CEMF) type.

(vi) When lead antimony batteries are specified, they shall be designed to last a minimum of 10 years when maintained on a full float operation between 2.15 and 2.17 volts per cell. When lead calcium batteries are specified, they shall be designed to last a minimum of 20 years when maintained on full float operation between 2.17 and 2.25 volts per cell. The battery shall be clearly designated as “antimony” or “calcium” by means of stencils, decals or other devices.

(vii) Each battery cell shall be equipped with an explosion control device.

(viii) The battery size shall be calculated in accordance with standard procedures. The battery in no case shall have a reserve capacity in ampere hours less than four times the current capacity of the largest charger.

(3) Charging equipment. (i) Charging shall be on a full float basis. The rectifiers shall be of the full wave, self-regulating, constant voltage, solid-state type and shall be capable of being turned on and off manually.

(ii) When charging batteries, the voltage at the battery terminals shall be adjustable and shall be set at the value recommended for the particular battery being charged, providing it is not above the maximum operating voltage of the switching system equipment. The voltage shall not vary more than plus or minus 0.02 volt per cell between 10 percent load and 100 percent load. Between 3 percent and 10 percent load, the output voltage shall not vary more than plus or minus 0.04 volt per cell. Beyond full load current, the output voltage shall drop sharply. The output voltage shall be maintained with the line voltage variations of plus or minus 10 percent. Provision shall be made to change the output voltage of the rectifier manually to 2.25 volts per cell to provide an equalization charge on the battery.

(iii) The charger noise shall not exceed 22 dBrnC when measured with a suitable noise measuring set and under the rated battery capacitance and load conditions as determined in Figure 2.
The manufacturer may elect to eliminate the capacitor C from the measurement.

A. Capacitance in $\mu F = 30,000 \mu F$ per ampere-hour per cell. For example, 25 cells at 100 ampere-hour would be equivalent to a capacitance of:

\[
(30,000 \times 100) / 25 = 120,000 \mu F
\]

B. The value of the resistive load $R$ is determined by the nominal battery voltage in volts divided by the full load rating in amperes. For example, for a 48 volt battery and a full load current of 24 amperes, the load resistance $R$ is $48/24 = 2$ ohms of appropriate power handling capacity.

(iv) The charging equipment shall indicate a failure of charging current, whether due to ac power failure, an internal failure in the charger, or to other circumstances which might cause the output voltage of the charger to drop below the battery voltage. Where a supplementary constant current charger is used, an alarm shall be provided to indicate a failure of the charger.

(v) Audible noise developed by the charging equipment shall be kept to a minimum. Acoustic noise resulting from operation of the rectifier shall be expressed in terms of dB indicated on a sound level meter conforming to ANSI S1.4-1983, Specification for Sound Level Meters, and shall not exceed 65 dB (A-weighting) measured at any point 5 feet (152.4 cm) from any vertical surface of the rectifier.

(vi) The charging equipment shall be designed so that neither the charger nor the central office switching equipment is subject to damage in case the battery circuit is opened for any value of load within the normal limits.

(vii) The charging equipment shall have a capacity to meet the requirements of central office size and special requirements of the owner in appendix A of this section.

(viii) Minimum equipment requirement for chargers is one of the following:

(A) Two chargers either capable of carrying the full office load as specified in Item 12 of appendix A of this section; or

(B) Three chargers each capable of carrying half the office load as specified in Item 12 of appendix A of this section.

(4) Miscellaneous voltage supplies. (i) Any power supply required for voltages other than the primary battery voltage shall be provided by either a solid-state dc-to-dc converter or dc-to-ac inverter, operating from the central office battery or from a separate battery and...
charger. These power supplies shall meet the noise limit specified for chargers in paragraph (s)(3)(iii) of this section, except the capacitor “C” shall be eliminated and the resistive load “R” shall be determined by the nominal output voltage in volts divided by the full load current rating in amperes. This requirement does not preclude the use of commercial ac power to operate input/output devices.

(ii) Power converters required for the purpose of providing various operating voltages to printed circuit boards or similar equipment employing electronic components shall be provided in duplicate with each unit capable of immediately assuming the full operating load upon failure of a unit. An exception to the duplicate power converter requirement permits nonduplicated power converter(s) to be utilized where there is full compliance with the following criteria.

(A) The failure of any single nonduplicated power converter shall not reduce the grade of service of common control and service circuits to any individual line or trunk by more than 50 percent.

(B) The failure of any single nonduplicated power converter shall not reduce the traffic carrying capacity of any interoffice trunk group by more than 50 percent.

(C) In central office switching systems of 400 or more equipped lines, any single nonduplicated power converter failure shall not cause a complete loss of service to more than 100 equipped lines.

(D) In central office switching systems of less than 400 equipped lines, any single nonduplicated power converter failure shall not cause a complete loss of service to more than 25 percent of the total equipped lines.

(ii) Output voltage.

(A) The ringing generators shall have an output voltage which approximates a sine wave and, as a minimum, shall be suitable for ringing straight-line ringers. Although not a requirement for RUS listing, decimonic, synchromonic, or harmonic ringing may also be specified in appendix A of this section.

(B) The ringing generator shall obtain its energy from the nominal 48-volt office battery.

(C) The output of each generator shall have three or more voltage taps or a single tap with associated variable control. Taps or control shall be easily accessible as installed in the field. Software control of ringing generator outputs via I/O devices may be provided in lieu of taps. The taps, or equivalent, shall be designated L, M, and H. The variable control shall have a locking device to prevent accidental readjustment. The outputs at the terminals of the generators with a voltage input of 52.1 volts and rated full resistive load shall be as follows for the ringing frequencies provided:
Rural Utilities Service, USDA § 1755.522

</tr>
</tbody>
</table>

(D) No voltages in excess of the values in column H of the table in paragraph (s)(5)(ii)(C) of this section shall be provided at the output taps. Additional intermediate and/or lower taps may be provided without restriction.

(iii) Voltage regulation. (A) The output voltage for resistive, capacitive power factor of 0.8, and inductive power factor of 0.5 loads from no load to full rated output with 52.1 volts input battery shall not vary more than ±3 percent from the output voltage measured at 1/2 rated output, 1.0 power factor with 52.1 volts dc input applied.

(B) The output voltage for resistive, capacitive power factor of 0.8, and inductive power factor of 0.5 loads from no load to full rated output with input battery variations between 48-56 volts dc shall not vary more than ±10 percent from the output voltage measured at 1/2 rated output and 1.0 power factor with 52.1 volts dc input applied.

(C) The output voltage for resistive, capacitive power factor of 0.8, and inductive power factor of 0.5 loads from no load to full rated output and with input battery variations between 44-56 volts dc shall not vary more than +10% −15 percent from the output voltage measured at 1/2 rated output and 1.0 power factor with 52.1 volts dc input applied.

(iv) Cross ringing. Unwanted voltage caused by harmonic distortion or intermodulation distortion shall not exceed 15 volts rms when measured within ±5 Hz of any other assigned ringing frequency under any condition of load or input battery specified by paragraph (s)(5)(iii) of this section.

(v) Frequency stability. At ambient temperature of 70°F (21°C), for any combination of capacitive power factor of 0.8, inductive power factor of 0.5, and resistive loads with variations in input battery ranging from 44 to 56 volts, the output frequency shall not vary more than ±1/3 Hz or ±1 percent, whichever is less stringent. At temperatures between 15°F (5°C) to 130°F (54°C), and for any combination of resistive load and variations in input battery ranging from 44-56 volts, the output frequency shall not vary more than ±1/3 Hz or ±1 percent, whichever is less stringent.

(vi) Self-protection on overloads. The ringing generator equipment shall be capable of withstanding a short circuit across any pair of output terminals for a period of 5 minutes without fuse operation or damage.

(6) Interrupter equipment. (i) The interrupter shall be an integral part of the switching system and shall be controlled by any call processor or equivalent.

(ii) The ringing cycle provided by the interrupter equipment shall not exceed 6 seconds in length. The ringing period shall be 2 seconds.

(7) Power panels. (i) Battery and charger control switches, dc voltmeters, dc ammeters, fuses and circuit breakers, supervisory and timer circuits shall be provided as required. Voltmeters shall be provided as specified by the owner.

(ii) Portable or panel mounted frequency meters shall be provided as specified by the owner unless the system is equipped to measure actual ringing generator voltage and frequency outputs internally. If the system is equipped to make such measurements and print the results, the bidder is not required to provide a frequency meter.

(iii) Power panels, cabinets and shelves, and associated wiring shall be designed initially to handle the exchange when it reaches its ultimate capacity as specified by the owner.

(iv) The power panel shall be of the “dead front” type.

(t) Main distributing frames. (1) The main distributing frame shall provide terminals for terminating all incoming cable pairs. Arresters shall be provided for all incoming cable pairs, or for a smaller number of pairs if specified, provided an acceptable means of temporarily grounding all terminated pairs which are not equipped with arresters is furnished.

(2) The current carrying capacity of each arrester and its associated mounting shall coordinate with a #22 gauge...
§ 1755.522

7 CFR Ch. XVII (1-1-98 Edition)

copper conductor without causing a self-sustaining fire or permanently damaging other arrester positions. Where all cable pairs entering the central office are #24 gauge or finer, the arresters and mountings need only coordinate with #24 gauge cable conductors. Item 13 of appendix A of this section designates the gauge of the cable conductors serving the host office. Item 7 of appendix B of this section designates the gauge of the cable conductors serving the RST(s).

(3) Central office protectors shall be mounted and arranged so that outside cable pairs may be terminated on the left side of protectors (when facing the vertical side of the MDF) or on the back surface of the protectors. Means for easy identification of pairs shall be provided.

(4) Protectors shall have a “dead front” (either insulated or grounded) whereby live metal parts are not readily accessible.

(5) Protectors shall be provided with an accessible terminal of each incoming conductor which is suitable for the attachment of a temporary test lead. They shall also be constructed so that auxiliary test fixtures may be applied to open and test the subscriber’s circuit in either direction. Terminals shall be tinned or plated and shall be suitable for wire wrapped, insulation displacement or connectorized connections.

(6) If specified in appendix A of this section, each protector group shall be furnished with a factory assembled tip cable for splicing to the entrance cable; the tip cable to be 20 feet (610 cm) in length unless otherwise specified. Factory assembled tip cable shall be #22 gauge and selected from RUS Bulletin 1755I-100, List of Materials Acceptable for Use on Telephone Systems of RUS Borrowers. Protectors shall be capable of easy removal.

(u) Electrical protection—(1) Surge protection.

(i) Adequate electrical protection of central office switching equipment shall be included in the design of the system. The characteristics and application of protection devices shall be such that they enable the central office switching equipment to withstand, without damage or excessive protector maintenance, the dielectric stresses and currents that are produced in line-to-ground and tip-to-ring circuits through the equipment as a result of induced or conducted lightning or power system fault-related surges. All wire terminals connected to outside plant wire or cable pairs shall be protected from voltage and current surges.

(ii) Central office switching equipment shall pass laboratory tests, simulating the hostile electrical environment, before being placed in the field for the purpose of obtaining field experience. There are five basic types of laboratory tests which shall be applied to exposed terminals in an effort to determine if the equipment will survive. Figure 3 summarizes these tests and the minimum acceptable levels of protection for equipment to pass them.

(iii) Two categories of surge tests. (A) Current surge tests simulate the stress to which a relatively low impedance path may be subjected before main frame protectors break down. Paths with a 100 Hz impedance of 50 ohms or less shall be subjected to current surges, employing a $10 \times 1000$ microseconds waveshape as defined in Figure 4. For the purpose of determining this impedance, arresters which are mounted within the equipment are to be considered zero impedance. The crest current shall not exceed 500A; however, depending on the impedance of the test specimen this value of current may be lower. The crest current through the sample, multiplied by the sample's 100 Hz impedance, shall not exceed 1000 volts (V). Where sample impedance is less than two ohms, crest current shall be limited to 500A as shown in Figure 5.
Surge Waveshape is defined as follows:
Rise Time × Time to Decay to Half Crest Value
(For example, 10 × 1000 µs)

Notes:

T₁ = Time to determine the rate of rise.
The rate of rise is determined as the slope between 10% and 90% of peak voltage or current.

T₂ = Time to 50% of peak voltage (decay to half value).
**V**<sub>L</sub> = Not to exceed 1000V
**V**<sub>B</sub> = Charging Voltage
**Z**<sub>100</sub> = Test Specimen Impedance to be measured at 100 Hz.
**R**<sub>p</sub> = Parallel Resistance (Waveshape)
**R**<sub>s</sub> = Series Resistance (Current Limiting)

(B) Sixty Hertz (60 Hz) current-carrying tests should be applied to simulate an ac power fault which is conducted to the unit over the cable pairs. The test should be limited to 10 amperes rms at 60 Hz for a period of 11 cycles (0.1835 seconds) and should be applied longitudinally from line to ground (see Figures 3 and 6 of this section).
Figure 6—60 Hz Current Surge Test

(C) AC power service surge voltage tests should be applied to the power input terminals of ac powered devices to simulate switching surges or lightning-induced transients on the ac power system. The test shall employ a 1.2 × 50 microseconds waveshape with a crest voltage of 2500V. Communications line protectors may be left in place for this test. Borrowers are urged to install commercially available surge protectors at the ac service entrance as part of their COE building program.

(D) Voltage surge tests simulate the voltage stress to which a relatively high impedance path may be subjected before primary protectors break down and protect the circuit. To assure coordination with the primary protection while reducing testing to the minimum, voltage surge tests should be conducted at a 1000 volts with primary arresters removed for devices protected by carbon blocks, or the +3 sigma dc breakdown of other primary arresters. Surge waveshape should be 10 × 1000 microseconds.

(E) Arrester response delay tests are designed to stress the equipment in a manner similar to that caused by the delayed breakdown of gap type arresters when subjected to rapidly rising voltages. Arresters shall be removed for these tests, the peak surge voltage should be the +3 sigma breakdown of the arrester in question on a voltage rising at 100V per microsecond and the time for the surge to decay to half voltage shall equal at least the delay time of the tube, as explained in Figure 7.
The delay time is that period of time when the potential across an arrester exceeds its dc firing level.

(iv) Five applications of each polarity for the surge tests and three for the 60 Hz Current Carrying Test are the minimum required. All tests should be conducted with not more than 1 minute between consecutive applications in each series of three or five to a specific configuration so that heating effects will be cumulative. As not all tests are required in every application, non-applicable tests should be omitted. Tests should be conducted in the following sequence.

(A) Current Impulse Test.
(B) Sixty Hertz (60 Hz) Current Carrying Test.
(C) AC Power Service Impulse Voltage Test.
(D) Voltage Impulse Test.
(E) Arrester Response Delay Test.

(v) Tests should be applied between each of the following terminal combinations for all line operating conditions:

(A) Line tip to ring.
(B) Line ring to ground.
(C) Line tip to ground.
(D) Line tip to ring tied together to ground.

(2) Extraordinary surge protection. A central office or RST may be located in an area where ground conditions prevent the reasonable economic achievement of a low resistance to ground and/or there exists a greater than average probability of surge damage. Such an unusually hostile operating environment shall be recognized and taken into consideration by the bidder in the engineering and specification of the central office switching system and line protection. This subject of operating environment, ground conditions, etc., should be discussed at the time of technical presentation to assure the owner that adequate system protection will be provided by the bidder.

(3) Dielectric strength. Arresters shall be removed for all dielectric strength tests. The duration of all dielectric strength tests shall be at least 1 second. The applied potential shall equal or exceed the +3 sigma dc breakdown voltage of the arrester, provided by the
§ 1755.522  
COE manufacturer. Direct current potentials shall be applied between all line terminals and equipment chassis and between these terminals and grounded equipment housings in all instances where the circuitry is dc open circuit from the chassis, or connected to the chassis through a capacitor.  

(4) Insulation resistance. Following the dielectric tests, the insulation resistance of the installed electrical circuits between wires and ground, with the normal equipment grounds removed, shall not be less than 10 megohms at 500 volts dc at approximately room temperature (68°F (20°C)) and a relative humidity of approximately 50 percent. The measurement shall be made after the meter stabilizes, unless the requirement is met sooner. Arresters shall be removed for these tests.

(5) Self-protection. (i) All components shall be of the self-protecting type, capable of being continuously energized at rated voltage without injurious results.

(ii) The unit equipment shall not be permanently damaged by accidental short circuits of any duration across either the central office side tip and ring or the line side tip and ring. A test is to be made with the unit energized at the highest recommended voltages.

(6) Static discharge. Assemblies subject to damage by static discharge shall be identified and special handling instructions shall be supplied.

(v) Miscellaneous—(1) Office wire. All office wire shall be of soft annealed tinned copper wire meeting the requirements of ASTM Specification B 33-91, Standard Specification for Tinned Soft or Annealed Copper Wire for Electrical Purposes, and of suitable cross-section to provide safe current carrying capacity and mechanical strength. The insulation of installed wire, connected to its equipment and frames, shall be capable of withstanding the same insulation resistance and dielectric strength requirements as given in paragraphs (u)(3) and (u)(4) of this section at a temperature of 120°F (49°C) and a relative humidity of 90 percent.

(2) Wire wrapped terminals. These terminals are preferred and where used shall be of a material suitable for wire wrapping. The connections to them shall be made with a wire wrapping tool with the following minimum number of successive nonoverlapping turns of bare tinned copper wire in contact with each terminal.

(i) 6 Turns of 30 Gauge.

(ii) 6 Turns of 26 Gauge.

(iii) 6 Turns of 24 Gauge.

(iv) 5 Turns of 22 Gauge.

(3) Protection against corrosion. All metal parts of equipment frames, distributing frames, cable supporting framework, and other exposed metal parts shall be constructed of corrosion resistant materials or materials plated or painted to render them adequately corrosion resistant.

(4) Screws and bolts. Screw threads for all threaded securing devices shall be of American National Standard form in accordance with Federal Standard H28, Screw-Thread Standards for Federal Services, unless exceptions are granted to the manufacturer of the switching equipment. All bolts, nuts, screws, and washers shall be of nickel-copper alloy, steel, brass or bronze.

(5) Temperature and humidity range. The supplier shall furnish the operating temperature and humidity ranges of the equipment being provided in order that adequate heating and cooling may be supplied (see Items 5.2.1 and 5.2.2 of appendix C of this section).

(6) Stenciling. Equipment units and terminal jacks shall be adequately designated and numbered. They shall be stenciled so that identification of equipment units and leads for testing or traffic analysis can be made without unnecessary reference to prints or descriptive literature.

(7) Equipment frame design. For newly designed systems, consideration should be given to the desirability of providing frames which can be installed in rooms of normal ceiling height [up to 10 feet (305 cm)]. Where feasible, frames and equipment units shall be designed for ready portability and high salvage value.

(8) Quantity of equipment bays. Consistent with system arrangements and ease of maintenance, space shall be provided on the floor plan for an orderly layout of future equipment bays that will be required for anticipated traffic when the office reaches its ultimate size. Readily accessible terminals...
shall be provided for connection to interbay and frame cables to future bays. All cables, interbay and intrabay (excluding power), if technically feasible, shall be terminated at both ends by use of connectors.

(w) Remote switching terminal (RST)—
(1) General. The RST is a remotely located digital switching terminal which is placed at a subordinate wire center for subscriber lines and is a part of the host central office from a switching standpoint, and has hardware interchangeable with the host office, except for items that are applicable only to RST control and associated peripheral equipment. This does not preclude the use of existing in-service remote units on a new or upgraded host central office of the latest series generic or release.

(2) Span line. The RST is to be connected to the host central office via a means compatible with T1 type span lines using a DS-1 interface. This connection will be for control supervision and subscriber communication. The RUS equipment specification for a span line is PE-60.

(3) Switching. (i) The RST may have its switching functions controlled either by the host central office stored program control processors or by local subordinate processors which communicate with the host office processors.

(ii) As long as the connecting span line is intact, the subscribers served by the RST shall have all features, traffic capacity, and services including busy verification, available to all other subscribers in the system.

(iii) The RST shall have available an emergency call processing option which permits calling among all subscribers and from subscribers to emergency numbers within the RST if control link connections to the host central office are severed or otherwise disabled. The RST shall be capable of rerouting normally used emergency numbers, such as 911, to predetermined line terminations in this emergency stand-alone operating condition. This RST emergency call processing option shall be provided only when specified by the owner in Item 6.1 of appendix B of this section.

(4) Subscriber line test. (i) Means shall be available on an optional basis to the maintenance personnel to make subscriber line tests from a common location for all subscriber lines including the RST.

(ii) If tests in paragraph (w)(4)(i) of this section are not requested by the owner for a particular installation, a subscriber loop test set (see paragraph (o)(2)(iii)(A) of this section) shall be supplied at the RST with a means to access all lines.

(5) Housing. When housed in a building supplied by the owner, a complete floor plan including ceiling height, power outlets, cable entrances, equipment entry and travel, type of construction, and other pertinent dimensions shall be supplied with this section.

(6) Power—(i) Chargers. A single charger meeting the requirements of paragraph (s)(3) of this section (with the exception of paragraph (s)(3)(viii) of this section) is required. An additional charger capable of carrying the full load or a combination of three chargers each capable of carrying half the load shall be supplied if redundant chargers are specified in appendix B of this section.

(ii) Ringing equipment provisioning. (A) Ringing sources shall be supplied in duplicate.

(B) An exception to the duplicated ringing source requirement permits nonduplicated ringing source(s) to be utilized where there is full compliance with the following service criteria.

(1) In a remote switching terminal (RST) of 400 or more equipped lines, a single nonduplicated ringing source failure shall not cause the complete loss of ringing capability to more than 100 lines.

(2) In a remote switching terminal (RST) of less than 400 equipped lines, a single nonredundant ringing source failure shall not cause the complete loss of ringing capability to more than 25 percent of the total equipped lines.

(iii) Power converter. (A) Power converters required for the purpose of providing various operating voltages to printed circuit boards or similar equipment employing electronic components shall be provided in duplicate with each unit capable of immediately assuming the full operating load upon failure of a unit.
(B) An exception to the duplicate power converter requirement permits nonduplicated power converter(s) to be utilized where there is full compliance with the following criteria:

1. The failure of any single nonduplicated power converter shall not reduce the grade of service of common control and service circuits to any individual line or trunk by more than 50 percent.
2. The failure of any single nonduplicated power converter shall not reduce the traffic carrying capacity of any trunk group or service links to a host office by more than 50 percent.
3. In a remote switching terminal (RST) of 400 or more equipped lines, any single nonduplicated power converter failure shall not cause a complete loss of service to more than 100 equipped lines.
4. In a remote switching terminal (RST) of less than 400 equipped lines, any single nonduplicated power converter failure shall not cause a complete loss of service to more than 25 percent of the total equipped lines.

(7) Alarm. Sufficient system alarm points shall be provided from the RST to report conditions to the host alarm system.

(x) Responsibilities of the bidder—(1) Central office layout. (i) The successful bidder shall furnish tentative floor plan layout drawings showing the arrangement of the equipment and the dimensions of major equipment units. These drawings shall include minimum door dimensions and ceiling heights required for installation, maintenance and ventilation. If requested by the owner, the floor plan shall be such that the battery, charger, power board, main distributing frame and wire chief’s test equipment are isolated from the other equipment by a partition.
(ii) The layout drawings shall also show provision for the ultimate capacity of the central office as specified by the owner.
(iii) After approval by the owner of the tentative floor plan, and within 10 calendar days after approval of the contract by the Administrator, the owner shall furnish the bidder the necessary data on the actual floor plan. Within 20 calendar days after receiving the necessary building data, the bidder shall then supply floor plan drawings showing exact locations of all equipment, both initial and ultimate, including points where connection to commercial power are required, with voltage and wattage indicated at each point. Within 20 calendar days after receiving the floor plan drawings from the bidder, the owner shall approve these drawings or take the necessary steps to have the drawings changed to meet his approval. The layout planning must be so coordinated between the owner and the bidder as not to delay the scheduled equipment installation date.

(2) Shipment of main distributing frame (MDF). The bidder shall ship the MDF equipment, with all necessary instructions to permit its installation by the owner, at the time requested by the owner in writing, provided such time is not earlier than 90 days prior to the date specified for the shipment of the rest of the central office equipment. If the owner or the owner’s agent installs the main distributing frame, the owner shall assume the responsibility and the expense of proper installation according to information furnished by the bidder.

(3) Drawings and printed material. (i) The bidder shall supply instructional material for each exchange involved at the time of delivery of the equipment. It is not the intent of this section to require system documentation necessary for the repair of individual circuit boards. The bidder shall supply three complete sets of legible drawings, each set to include all of the following drawings and documentation:
   (A) A floor plan showing exact dimensions and location of each equipment frame or item to a convenient scale;
   (B) A block schematic drawing showing the various equipment components in the system, and their identifying circuit number (e.g., MDF, line circuits, memory, trunks, etc.);
   (C) Drawings of major equipment items such as frames, with the location of major component items of equipment shown;
   (D) Individual functional drawings for electrical circuits in the system;
(E) A detailed description of the operation of each circuit down to a circuit package level;
(F) Wiring diagrams indicating the specific method of wiring used on each item of equipment and interconnection wiring between items of equipment;
(G) Sufficient software documentation to maintain and service the system, including drawings showing principal aspects of the software architecture;
(H) Individual maintenance drawings covering each equipment item that contains replaceable parts, appropriately identifying each part by name and part number, or, complete ordering instructions for all replaceable parts if individual item drawings are not provided; and
(i) Job drawings including all drawings that are individual to the particular office involved, such as main frame, power panel, test board, etc.

(ii) The following information shall also be furnished:
(A) Complete index of the required drawings;
(B) Explanation of electrical principles of operation of the overall switching system;
(C) List of tests which can be performed with each piece of test equipment furnished, and explanation of the method of performing each test;
(D) Sample of each form recommended for use in keeping records of tests;
(E) Criteria for analyzing results of tests and determining appropriate corrective action;
(F) General notes on the methods of isolating equipment faults to specific printed circuit cards in the equipment;
(G) List of typical troubles which might be encountered, together with general indications as to the probable location of each trouble;
(H) Special office grounding requirements;
(I) A site specific central office ground system acceptance checklist that is consistent with industry practice; and
(J) A site specific layout of the master ground bar (MGB) showing assignment of P, A, N, and I equipment areas.

(4) Distributing frame wire. The bidder shall provide sufficient tinned copper conductor distributing frame wire for the initial installation. The insulation of this wire shall be such that it will not support combustion. The insulation shall have good abrasion resistance and cut-through properties, exhibit good solder heat resistance, and be suitable for wire wrap connections or insulation displacement connections.

(5) Technical assistance service. A technical assistance service shall be made available to assist the owner and its maintenance personnel on a 24-hour, 7 days a week basis. There is to be assistance available for both hardware and software problems. The necessary interface devices shall be supplied by the bidder.

(6) Spare parts. (i) The spare parts bid price shall be based upon the required quantities of spares shown in Item 6.2 of appendix C of this section, and shall be added to the base bid for comparison purposes in awarding the bid. It is the supplier’s responsibility to provide all spares required by this section. If the supplier neglects to list certain spare parts in Item 6.2 of appendix C of this section, but they are necessary to comply with this section, they shall be provided by the supplier at no additional cost to the owner.

(A) "Units" are defined as user replaceable components used in the central office equipment. "Spare Parts" are direct replacements for units. Spare parts are necessary for the maintenance and diagnostic operations where the suspected faulty unit may be removed and a spare part substituted in anticipation that the trouble will be cleared.

(B) Examples of units for which spare parts should be furnished are printed circuit cards; circuit pack assemblies; fuses; and power supplies.

(C) Spare parts are not required as part of this addendum for items such as connectorized cables, nuts, bolts, and similar hardware; nor for items which can be obtained from sources other than the bidder such as battery cells, chargers, powerboards, magnetic tape transport assemblies, disk drives, ringing machines, recorded announcement machines, loop extenders and voice frequency repeaters, fire bars, teletype writers, and video monitors.
§ 1755.522  

(D) When 100 or more like units are used in the hosts and RST’s to be bid, the quantity of spares to be furnished is determined by multiplying the total number of like units in the contract by .05 or .03, as applicable, and rounding off to the next lowest integer. For example, 119 Class 1 units require five spares; 120 require six.

(E) When alternates are required, the price of the spare parts for the alternates shall be included with the price of the alternate.

(F) For equipment in which the line cards consist of a number of plug-in “daughter” boards on a “mother” board, the line card is defined as the “daughter” board unit. In a similar manner for those designs which have line cards backed up by a “control card,” the “control card” is not, by definition, a line card.

(G) The quantities of spare parts determined in paragraph (x)(6)(vi) of this section are a minimum quantity. The bidder may add quantities of spare parts to bring the number of spare parts up to the bidder’s list of spare parts necessary for proper operation in the field.

(ii) A Class 1 unit does not have automatic transfer to a redundant or standby pool of identical units, and provides any function for 24 or more lines or trunks or for all trunks in a group. Nonredundant digital trunk interfaces are included in this category.

(iii) A Class 2 unit has automatic transfer to a redundant or standby pool of identical units, and provides any function for 24 or more lines or trunks or for all trunks in a group. Redundant digital trunk interfaces and units of a redundant stored program processor are included in this category.

(iv) A Class 3 unit does not have automatic transfer to a redundant or standby pool of identical units and provides any function for no more than 23 lines or trunks or for less than all trunks in a group. Nonredundant analog trunks are included in this category. Excluded from this category are line cards, which are in Class 4.

(v) A Class 4 unit has automatic transfer to a redundant or standby pool of identical units and provides any function for no more than 23 lines or trunks or for less than all trunks in a group. Also, any line cards are in Class 4.

(vi) The spare parts for all of the hosts and the RST’s included in this contract shall be provided as follows:

<table>
<thead>
<tr>
<th>Quantity of Units used in the CO’s &amp; RST’s To Be Bid</th>
<th>Required Quantity of Spares By Class of Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 through 9</td>
<td>1   1   0   0</td>
</tr>
<tr>
<td>10 through 24</td>
<td>2   2   1   0</td>
</tr>
<tr>
<td>25 through 49</td>
<td>3   2   2   0</td>
</tr>
<tr>

<td>4   3   2   0</td>
</tr>
<tr>
<td>100 or More</td>
<td>5%  3%  3%  0</td>
</tr>
</tbody>
</table>

(vii) As a part of the response to the bid, the supplier shall furnish a list of units used by class and a list of spare parts to be furnished with this contract. This list shall be placed in Item 6.2 of appendix C of this section for only one of the host specifications included in the entire contract.

(7) Environmental requirements. The bidder shall specify the environmental conditions necessary for safe storage and satisfactory operation of the equipment being bid. If requested, the bidder shall assist the owner in planning how to provide the necessary environment for the equipment.

(8) Unit costs for cost separation purposes. The successful bidder shall present a cost breakdown of the central office equipment on a discrete element basis 90 days after installation completion. This shall include the various frames, switching and transmission components, and software.

(9) Single-point grounding system acceptance. Qualified representatives of the central office system supplier and the owner are to conduct a thorough joint acceptance audit of the grounding system prior to the central office being placed into service. A grounding system acceptance checklist provided by RUS, which is consistent with standard industry practice, will be used in conducting this audit. All required grounding system corrections are to be made prior to placing the central office system into full service operation. The successful completion of this grounding system audit will constitute an acceptance on the part of both parties, the owner and the central office supplier (refer to paragraph (y)(5) of this
section, and appendix D of this section).

(y) Installation. The following responsibilities apply to the central office equipment installation and Remote Switching Terminal (RST) installations, unless otherwise noted.

(1) Responsibilities of owner. The owner shall:

(i) Allow the bidder and its employees free access to the premises and facilities at all hours during the progress of the installation;

(ii) Take such action as necessary to ensure that the premises are dry and free from dust and in such condition as not to be hazardous to the installation personnel or the material to be installed (not required for an RST installed in a self-contained environmentally controlled cabinet);

(iii) Provide heat or air conditioning when required and general illumination in rooms in which work is to be performed or materials stored (not required for an RST installed in a self-contained environmentally controlled cabinet);

(iv) Provide suitable openings in buildings to allow material to be placed in position (not required for an RST installed in a self-contained environmentally controlled cabinet);

(v) Provide the necessary conduit and commercial and dc-ac inverter output power to the locations shown on the approved floor plan drawings; provide 120 volts, 60 Hz commercial power equipped with a secondary arrester and a reasonable number of outlets for test, maintenance and installation equipment; provide suitable openings or channels and ducts for cables and conductors, from floor to floor and from room to room; provide an acceptable central office grounding system and at a ground resistance level that is reasonable for office site conditions (not required for an RST installed in a self-contained environmentally controlled cabinet);

(vi) Provide the necessary wiring, central office grade ground and commercial power service, with a secondary arrester, to the location of an exterior RST installation based on the voltage and load requirements furnished by the bidder;

(vii) Test at the owner’s own expense all lines and trunks for continuity, leakage and loop resistance and ensure that all lines and trunks are suitable for operation with the central office equipment specified;

(viii) Make alterations and repairs to buildings necessary for proper installation of material, except to repair damage for which the bidder or its employees are responsible;

(ix) Connect outside cable pairs on the distributing frame and run all line and trunk jumpers (those connected to protectors);

(x) Furnish all trunk, line, and party assignment information to permit the bidder to program the data base memory within a reasonable time prior to final testing;

(xi) Release for the bidder’s use such portions of the existing plant as are necessary for the proper completion of such tests as require coordination with existing facilities including facilities for T1 span lines with properly installed repeaters between the central office and the RST installations;

(xii) Make prompt inspections as it deems necessary when notified by the bidder that the equipment, or any part of the equipment, is ready for acceptance;

(xiii) Provide and install adequate fire protection apparatus, including one or more fire extinguishers or fire extinguishing systems of the gaseous type that has low toxicity and effect on equipment; and

(xiv) Provide necessary access ports for cable, if underfloor cable is selected.

(2) Responsibilities of bidder. The bidder shall:

(i) Allow the owner and its representatives access to all parts of the buildings at all times during the installation;

(ii) Obtain the owner’s permission before cutting into or through any part of the building structure such as girders, beams, concrete or tile floors, partitions or ceilings (not applicable to the installation of lag screws, expansion bolts, and similar devices used for fastening equipment to floors, columns, walls and ceilings); and

(iii) Be responsible for reporting to the owner any damage to the building
which may exist or may occur during its occupancy of the building, repairing all damage to the building due to carelessness of the bidder’s workforce, and exercising reasonable care to avoid any damage to the owner’s property;

(iv) Consult with the owner before cutting into or through any part of the building structure where the fireproofing or moisture proofing may be impaired;

(v) Take necessary steps to ensure that all fire fighting apparatus is accessible at all times and all flammable materials are kept in suitable places outside the building;

(vi) Not use gasoline, benzene, alcohol, naphtha, carbon tetrachloride or turpentine for cleaning any part of the equipment;

(vii) Install the equipment in accordance with the specifications for the office;

(viii) Run all jumpers, except line and trunk jumpers (those connected to protectors);

(ix) Establish and update all data base memories with subscriber and trunk information as supplied by the owner until an agreed turnover time;

(x) Give the owner notice of completion of the installation at least 1 week prior to completion;

(xi) Permit the owner or its representative to conduct tests and inspections after installation has been completed in order that the owner may be assured that the requirements for installation are met;

(xii) Allow access, before turnover, by the owner or its representative, upon request, to the test equipment which is to be turned over as a part of the office equipment, to permit the checking of the circuit features which are being tested and to permit the checking of the amount of connected equipment to which the test circuits have access;

(xiii) Make final charger adjustments using the manufacturer’s recommended procedure;

(xiv) Notify the owner promptly of the completion of work of the central office, or such portions as are ready for inspection;

(xv) Correct promptly all defects for which the bidder is responsible;

(xvi) Provide the owner with one set of marked prints, or strapping prints, showing which of the various options and figures are in use on each switching system as specified in paragraph (x)(3)(i) of this section;

(xvii) Place the battery in service in compliance with the recommendations of the battery manufacturer; and

(xviii) Furnish the owner with a record of the cell voltages and specific gravity readings made at the completion of the installation of the switching system and before it is placed in commercial service.

(3) Installation requirements. (i) All work shall be done in a neat, workmanlike manner. Equipment frames or cabinets shall be correctly located, carefully aligned, anchored and firmly braced. Cables shall be carefully laid with sufficient radius of curvature and protected at corners and bends to ensure against damage from handling or vibration. Exterior cabinet installations for RST’s shall be made in a permanent, eye-pleasing manner.

(ii) All multiple and associated wiring shall be continuous, free from crosses, reverses and grounds and shall be correctly wired at all points.

(iii) An inspection shall be made by the owner or its representatives prior to performing operational and performance tests on the equipment. However, this inspection shall be made after all installing operations which might disturb apparatus adjustments have been completed. The inspection shall be of such character and extent as to disclose with reasonable certainty any unsatisfactory condition of apparatus or equipment. During these inspections, or inspections for apparatus adjustments, or soldering, or in testing of equipment, a sufficiently detailed examination shall be made throughout the portion of the equipment within which such condition is observed, or is likely to occur, to disclose the full extent of its existence, where any of the following conditions are observed:

(A) Apparatus or equipment units failing to compare in quantity and code with that specified for the installation;

(B) Apparatus or equipment units damaged or incomplete;

(C) Apparatus or equipment affected by rust, corrosion or marred finish; or
(D) Other adverse conditions resulting from failure to meet generally accepted standards of good workmanship.

(4) Operational test requirements. (i) Operational tests shall be performed on all circuits and circuit components to ensure their proper functioning in accordance with appropriate applicable documents supplied by the bidder.

(ii) A sufficient quantity of overall tests shall be made to ensure proper operation of all specified features.

(iii) A sufficient quantity of locally originating and incoming calls shall be made to prove the switching system can accept and process calls to completion.

(5) Grounding system audit. (i) A grounding system audit shall be performed to ensure that a viable single-point grounding system is in place prior to the time the switching system is placed into full service operation. It is suggested that such an audit be conducted at the time the switching system is ready for turnover to the owner.

(ii) This single-point grounding system audit is to be conducted by authorized representatives of the supplier and owner, and with the RUS general field representative participating at his discretion.

(iii) The single-point grounding system audit is to be conducted using the checklist contained in appendix D of this section.

(iv) Appendix D of this section shall be the principal single-point grounding system audit guideline document. A supplemental checklist may be prepared and provided by the switching system supplier which recognizes unique grounding requirements related to their particular switching system. The scope of this supplier checklist is to be confined to unique and specific switching system requirements only. Acceptable supplier supplemental grounding checklist must have prior approval and be on file with the Central Office Equipment Branch of the Telecommunications Standards Division of RUS.

(v) It is the responsibility of the central office supplier to ensure that the grounding system evaluation criteria contained in the combination of the appendix D checklist of this section and their optional supplemental checklist adequately fulfill requirements for warranty coverage.

(vi) All deficiencies in the single-point grounding system are to be corrected prior to the switching system being placed into full service operation. Exceptions are permitted only by mutual agreement of the owner and supplier and with written approval of the RUS general field representative.

(vii) The acceptance statement facesheet of the audit checklist in appendix D of this section shall be signed by authorized representatives of the supplier and owner to indicate mutual approval of the single-point grounding system. Copies of all completed grounding system audit documents are to be provided to the supplier, owner and appropriate RUS telephone program regional offices.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget (OMB) under the control number 0572-0059)

1. General

1.1 Notwithstanding the bidder’s equipment lists, the equipment and materials furnished by the bidder must meet the requirements of paragraphs (a) through (x), Appendix A and Appendix B of §1755.522.

1.2 Paragraphs (a) through (x) of §1755.522 cover the minimum general requirements for digital, stored program controlled central office switching equipment.

1.3 Paragraph (y) of §1755.522 covers requirements for installation, inspection, and testing when such service is included as part of the contract.
§ 1755.522

1.4 Appendices A and B of §1755.522 cover the technical data for application engineering and detailed equipment requirements insofar as they can be established by the owner. These appendices are to be filled in by the owner.

1.5 Appendix C of §1755.522 covers detailed information on the switching network equipment and the common control equipment, and information as to system reliability and heavy traffic delays as proposed by the bidder. This appendix is to be filled in by the bidder and must be presented with the bid.

1.6 Appendix D of §1755.522 is the single-point grounding system audit checklist.

2. Numbering Scheme

2.1 This office shall be arranged to serve the following area and office code(s):

If more than one code is to be served, discrimination shall be determined by the following:

Number Translation
Separate Trunk Groups
Both (Explain in Item 16, Appendix A)

2.2 This office shall be arranged to provide EAS service to the following:

Connecting office Code Connecting office Code

2.2.1 Seven digits shall be dialed for all local and EAS calls.

2.3 Additional dialing procedures to be provided include the following:

1 See Appendix A, Item 6.1.
2 This figure is the CCS per PBX trunk.
3 This figure is the number of PBX trunks.
4 This is the total number of line equipments required. The number to be provided will be determined by the equipment design of the system of the selected bidder. See Appendix C, Item 3.1.1.2.
Rural Utilities Service, USDA § 1755.522

7.2 Average Originating CCS per Line per Busy Hour
(d)/(e)= ___ ____ = ____ CCS/Line

This office shall be engineered to handle an initial average originating busy hour traffic of ____ CCS per line. It is anticipated that the average originating busy hour traffic will increase to ____ CCS per line.

Originating Traffic Attributed to Host Only ____ CCS/Line

7.3 Terminating Traffic—Estimated CCS per Busy Hour

It is assumed that the total CCS for terminating traffic is the same as for originating traffic. Since digital switch networks are on a terminal per line basis, the terminating CCS per line will be the same as the originating CCS per line as shown in Item 7.2, Appendix A.

Terminating Traffic Attributed to Host Only ____ CCS/Line

7.4 Percent of Pushbutton Lines ____

7.5 Anticipated Ultimate Capacity (20 years)

10. Miscellaneous Operating Features

10.1 Busy Verification

| 10.1.1 By dedicated trunk from toll operator: | |
| 10.1.1.1 One-Way, Inward | |
| 10.1.1.2 Two-Way (Busy verification inward, intercept outward) | |
| 10.1.2 By prefix digit over intertoll trunk | |

(Indicate digit(s) dialed)

| 10.1.3 Access by Switchman | |
| 10.1.3.1 Dedicated Trunk | |
| 10.1.3.2 Multiple of Operator Trunk | |

10.2 Intercept Facilities

| 10.2.1 Vacant code, disconnected number, and unassigned number intercept shall be: (Check One) | |
| 10.2.2 Changed number intercept shall be: (Check One) | |

By recorded announcement:

| Without cut-through to operator | |
| With cut-through to operator | |
| By operator | |

| 10.2.3 Method of Reaching Operator, if required: | |
| Separate trunk group | |
| Regular interoffice toll trunks with idle trunk selecting over at least three trunks when three or more toll trunks are equipped | |

10.3 Line Load Control

| 10.3.1 Line load control facilities are: | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

10.4 Service Observing Facilities

| 10.4.1 Service observing facilities are: | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

10.5 Hotel-Motel Arrangements

| 10.5.1 Hotel-motel arrangements for operation of message registers at the subscriber's premises are: | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

10.6 Nailed-Up Connections

| 10.6.1 Initial Line Reversal | |
| 10.6.2 Third Wire | |
| 10.6.3 Other | |

(Explain in Item 16, Appendix A)

10.7 Vertical Services: (RST lines are included)

10.7.1 Call Waiting—No. of Lines

| Local | Remote |

(Explain in Item 16, Appendix A)

10.7.2 Call Forwarding—No. of Lines

| Local | Remote |

(Explain in Item 16, Appendix A)

10.7.3 Abbreviated Dialing No. of Lines

| No. of Codes per Line for Lines |

(Explain in Item 16, Appendix A)

10.7.4 Three-Way Calling—No. of Lines

| CCS Per Line |

(Explain in Item 16, Appendix A)

10.7.5 Other

(Explain in Item 16, Appendix A)

11. Maintenance Facility Requirements

11.1 Alarm Signals

| 11.1.1 Handled locally | |

(Explain in Detail:)

| 11.1.2 Transmitted to attended point | |
| 11.1.2.1 Via operator office trunks | |
| 11.1.2.2 Via printout or other display service | |

(Explain in Detail:)

11.1.3 Alarm checking signals for carrier and mobile radio systems

| 11.1.3.1 Minor Alarm | |
| 11.1.3.2 Major Alarm |

(Explain in Item 16, Appendix A)

11.2 Maintenance Facilities

| 11.2.1 Hotel-motel arrangements for operation of message registers at the subscriber's premises are: | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

11.3_ALARM checking signals for carrier and mobile radio systems

| 11.3.1 Minor Alarm | |
| 11.3.2 Major Alarm | |

(Explain in Item 16, Appendix A)

11.2.3 Type of tone to operator

| 11.2.3.1 Distinctive tone (see (i)(2)(ix) of § 1755.522) | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

11.2.3.2 Other

(Explain in Detail:)

11.4 Alarm Signals

| 11.4.1 Hotel-motel arrangements for operation of message registers at the subscriber's premises are: | |

| Required | Not Required |

(Explain in Item 16, Appendix A)

11.4.2 Alarm checking signals for carrier and mobile radio systems

| 11.4.2.1 Minor Alarm | |
| 11.4.2.2 Major Alarm | |

If required, explain in Item 16, Appendix A, including number, type and location.

12 Power Equipment Requirements (Host Office Only)
12.1 Central Office Battery
12.1.1 A battery reserve of ___ busy hours shall be provided for this office when it reaches ___ lines at the ultimate anticipated traffic rates specified in Item 7.2, Appendix A.
12.1.1.1 The owner will furnish a standby generator, permanently installed in this office, with capacity sufficient to power air conditioning equipment required for cooling of the central office equipment and to maintain an adequate dc supply in the event of a failure of the commercial ac supply.
Yes ______________ No ______________
12.1.2 Type of battery: (Check One)
Lead Calcium ______________
Lead Antimony ______________

12.1.3 Voltmeter (portable 3-60-150 volt scale, 1% accuracy) shall be furnished.
Yes ______________ No ______________
12.1.4 Hydrometer in a hydrometer holder with glass or plastic drop cup shall be furnished.
Yes ______________ No ______________
211 12.1.5 Type of battery rack required: (Check One)
Two Tier ______________
Other ______________
Explain:
12.1.6 Special equipment power requirements (carrier, voice frequency repeaters, etc.). Drain in amperes
12.1.6.1 Supply all necessary equipment to provide the following 48-volt battery taps:

<table>
<thead>
<tr>
<th>Number of circuits</th>
<th>Fuse (or circuit breaker) size</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

12.2 Charging Equipment
12.2.1 Charging equipment shall be provided capable of charging the office battery on a full float basis when the office reaches ___ lines at the ultimate anticipated traffic rates specified in Item 7.2, Appendix A.
12.2.2 Charger input rating shall be:
§ 1755.522

12.3 Ringing Equipment

12.3.1 Solid-state ringing equipment in accordance with paragraph (s)(5)(i) of §1755.522 shall be provided for generating the frequencies specified by check marks in the following table. Ringing generator sets serving the entire office shall each be sized to carry the full office ringing load when the office size reaches lines at the ultimate anticipated traffic rates specified in Item 7.2, Appendix A.

12.3.2 Ringing frequencies to be supplied:

<table>
<thead>
<tr>
<th>Frequency in Hz</th>
<th>Maximum No. of telephones</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single Frequency</td>
<td></td>
</tr>
<tr>
<td>Decimonic</td>
<td></td>
</tr>
<tr>
<td>Harmonic</td>
<td></td>

</tr>
</tbody>
</table>

12.3.3 Furnish frequency meter (accurate within 1.3 Hz) and voltmeter (5% accuracy) for ringing measurements (see paragraph (s)(7)(ii) of §1755.522). Check One:

- Panel Mounted
- Portable
- Not Required

12.4 Power Board

The power panel and associated wiring shall be of ample size to meet the load requirements when this office reaches lines at the ultimate anticipated traffic rates specified in Item 7.2, Appendix A.

13 Distributing Frame Requirements (Host Office Only)

13.1 Total number of outside plant cable pairs to be terminated

13.1.1 Gauge of outside plant cable pairs

13.2 Number of outside plant cable pairs to be protected

13.3 Number of additional protector pair units to be provided on MDF

13.4 Main Frame Details

Is present MDF to be reused?

Yes

No

If "Yes," Type

- Reused protectors are:

- Marinus (Type)

13.4.1 Number of pairs of arrester units (switching equipment)

13.4.2 Number of pairs of gas tube arrester units (special equipment)

13.4.2.1 Gas tubes to be:

- light,
- medium,
- heavy,
- max. duty units

13.4.2.2 Fail shorted/low breakdown failure mode required

Yes

No

13.4.2.3 Breakdown voltage of gas tube arresters

13.4.3 Number of terminated pairs to be grounded

13.4.4 Factory assembled tip cable

Yes

No

13.4.4.1 Tip cable length [if other than 20 feet (610 cm)]

13.4.4.2 Tip cable formed

Up

Down

13.4.5 Pairs per vertical

13.4.6 Height of vertical

14 Building and Floor Plan Information (Host Office Only)

14.1 Equipment is to be installed in an existing building (Attach detailed plan.)

14.2 A new building is planned

14.2.1 Tentative plan (Note to Engineer: Show sketch without dimensions.)

14.3 Detailed Arrangements

14.3.1 Partition required (to isolate space containing battery, charger, power board, test panel, main distributing frame and subscriber's loop test circuit (wire chief's test desk) from that of the remaining equipment).

Yes

No

14.3.2 Vestibule required

Yes

No

14.3.3 Cable entrance

14.4 Building and Floor Plan Information

14.4.1 Equipment is to be installed in an existing building (Attach detailed plan.)

14.4.2 A new building is planned

14.4.3 Additional floor space will be required for the following equipment which is being furnished by the owner or by the connecting company:

14.5 The office will be arranged for

- Overhead Interbay Cabling

738
Underfloor (Computer Room Type) Interbay Cabling

14.3.6 Is earthquake bracing required?
Yes
No
(If "Yes," explain zone and criteria used for zone in Item 16, Appendix A.)
14.3.7 Office ground will be ohms or less (Refer to Item 4.6.3 of RUS TE&CM 820.)
14.3.8 The office is considered to be in the following category for lightning damage probability based on the Figure 1 map of RUS TE&CM 823 (see paragraph (u)(2) of 1755.522).
Very High
Higher than Average
Average
Lower than Average
Very Low
14.3.9 The following is additional information regarding operating environment conditions which should be considered in determining system protection requirements (tower in vicinity, high exposure, etc.):
15. Alternate Requests
16. Explanatory Notes (Include a detailed description of any equipment to be reused, or otherwise supplied by the owner, loop extenders, subscriber carrier, VF repeaters, etc.)

APPENDIX B TO 7 CFR 1755.522—DETAILED INFORMATION ON REMOTE SWITCHING TERMINALS (RST’S)

(Complete One Form For Each RST)

1. Number of Subscriber Lines (These lines included in totals in Item 6, Appendix A).
   1.1 Single-Party: Flat Rate Message Rate.
   1.2 Semi-Postpay Pay Station ________
   1.3 Prepay Pay Station ________
   1.4 PABX Lines ________
   1.5 Loop Start Ground Start Restricted at Office ________
   1.6 911 Emergency Lines ________
   1.7 Anticipated ultimate capacity (20-Year) ________

2. Traffic
   2.1 Originating traffic per line—CCS/BH: Initial ________ Ultimate.
   2.2 Terminating traffic per line—CCS/BH: Initial ________ Ultimate
   2.2.1 Terminating will be made equal to originating if it is not known to be different.

3. Subscriber Loop Resistance
   3.1 Number of subscriber lines having loop resistance, including the telephone set of: No. of Lines

<table>
<thead>
<tr>

</tbody>
</table>

5.2.1 Charger shall be capable of charging the RST battery on a full float basis when the RST reaches lines at ultimate traffic rate specified in Item 2, Appendix B.
5.2.2 Charger shall be redundant ________
5.3 Battery reserve shall be ________ hours when the RST reaches lines at the ultimate anticipated traffic specified in Item 2, Appendix B.
5.4 Standby power is available. Yes ________ No ________

5.5 Special equipment power requirements amps.

5.6.1 Type of Ringing.
5.6.2 Frequency
   No. ________ 1. 2. 3. 4.
   Frequency HZ ________ Max. No. Phones/Frequency ________
5.6.3 Wattage to be sized for ________ lines.
5.6.4 Frequency Meter (see Item 12.3.3, Appendix A). Panel Mounted ________ Not Required ________

739
§ 1755.522

6. Emergency Operation

6.1 If path to central office is opened, the RST shall be able to complete calls between subscribers in its own system: Yes No

Further requirements should be listed under Item 12, Appendix B.

7. RST Distribution Frame Requirements

7.1 Total number of outside plant cable pairs to be terminated

7.1.1 Gauge of outside plant cable pairs

7.2 Number of outside plant cable pairs to be protected

7.3 Number of additional protector pair units to be provided on MDF

7.4 Main Frame Details

7.4.1 Present MDF to be reused

Yes No

If ‘‘Yes’’, Type

Reused protectors are: (Mfr.) (Type).

7.4.2 Number of pairs of arrester units (switching equipment)

7.4.3 Number of pairs of gas tube arrester units (special equipment)

7.4.3.1 Gas tubes to be: light, medium, heavy, maximum duty units.

7.4.3.2 Fail shorted/glow breakdown failure mode required

Yes No

7.4.3.3 Breakdown voltage of gas tube arresters

7.4.4 Number of terminated pairs to be grounded

7.4.5 Factory assembled tip cable

Yes No

7.4.5.1 Tip cable length [if other than 20 feet (610 cm)]

7.4.5.2 Tip cable formed Up Down

7.4.6 Pairs per vertical

7.4.7 Height of vertical feet inches.

8. Building and Floor Plan Information

8.1 RST to be mounted in building

8.1.1 Earthquake bracing required

Yes No

(see Item 14.3.6, Appendix A).

8.2 Supply building floor plan.

8.2.1 Cabinet to be mounted on pole on ground.

9. Subscriber Line Test

9.1 Remote testing of subscriber lines is required

Yes No

9.2 Subscriber loop test set

10. Span Lines to Host Central Office

10.1 To be supplied by Owner

10.2 To be supplied by Bidder

10.2.1 When the bidder is to supply the span lines, an RUS Form 397b, Trunk Carrier Systems, with the applicable parts completed must be attached with a physical layout of the span line.

11. Grounding Considerations

11.1 The RST ground will be ohms or less. (Refer to Item 4.6.3 of RUS TE&CM 810.)

11.2 This RST is considered to be in the following category for lightning damage probability based on the Figure 1 map of RUS TE&CM 823.

Very High Higher than Average Average Lower than Average Very Low

11.3 The following is additional information regarding operating environment conditions which should be considered in determining system protection requirements (tower in vicinity, high exposure, etc.):

12. Explanatory Notes

Appendix C to 7 CFR 1755.522—Specifications for Digital, Stored Program Controlled Central Office Equipment Detailed Requirements—Bidder Supplied Information

*Telephone Company*

Name ____________________________

Location ____________________________

*Central Office Name (By Location)*

Town ______________ State ______________

Attended Unattended

1. General

1.1 The equipment and materials furnished by the bidder must meet the requirements of paragraphs (a) through (x), Appendix A, and Appendix B of §1755.522.

1.2 Paragraphs (a) through (x) of §1755.522 cover the minimum general requirements for digital, stored program controlled central office switching equipment.

1.3 Paragraph (y) of §1755.522 covers requirements for installation, inspection, and testing when such service is included as part of the contract.

1.4 Appendices A and B of §1755.522 cover the technical data for application engineering and detailed equipment requirements insofar as they can be established by the owner. These appendices are to be filled in by the owner.

1.5 Appendix C of §1755.522 covers detailed information on the switching network equipment and the stored program controlled equipment.
equipment, and information as to system reliability and heavy traffic delays as proposed by the bidder. This appendix is to be filled in by the bidder and must be presented with the bid.

1.6 Appendix D of §1755.522 is the single-point grounding system audit checklist.

2. Performance Objectives

2.1 Reliability (see paragraph (b) of §1755.522).

2.2 Busy Hour Load Capacity and Traffic Delay (see paragraph (e)(10) of §1755.522. Describe basis for traffic analysis).

3. Equipment Quantities Dependent on System Design

3.1 Switch Frames and Circuits.

3.1.1 Number of Lines

3.1.1.1 The number of lines to be provided shall include the number required for the termination of subscriber lines, Item 7, Appendix A, plus the number required for routine testing plus any additional to meet the minimum switch increment of the selected system.

3.1.1.2 The number of lines provided for this office will be

3.1.2 Number of Ports Used for Trunks

3.1.2.1 The number of trunk ports to be provided shall be based on the trunk quantities required (Item 8, Appendix A) as modified by the minimum increment of the selected system. Provision shall be made for at least 5 percent additional inlet and outlet ports over those required initially. The additional ports shall be used for connecting additional trunks that may be required in the future.

3.1.2.2 The number of trunk ports provided for this office will be

3.1.3 Number of Subscriber Directory Numbers

3.1.3.1 The number of directory numbers provided shall be based on the total directory numbers required (Item 6.1.11, Appendix A), as modified by the memory increment of the proposed system.

3.1.3.2 The number of subscriber directory numbers provided for this office will be

4. RST

4.1 Information for RST’s must be supplied for each RST to be furnished.

4.2 Number of line terminals for this RST will be

4.3 Number of span line terminations to the central office being supplied

4.4 If the emergency operation option is required, it will provide the following service when connection to the main office is severed:

4.5 The ac power drain at the remote end will be:

5. Power

5.1 AC Power Drain Watts

5.2 Heat Dissipation Watts

6. Additional Information to be Furnished by Bidder

6.1 The bidder shall accompany its bid with the following information:

a. Two copies of the equipment list and the calculations from which the quantities in the equipment list are determined;

b. Two copies of the traffic tables from which the quantities are determined, other than the full availability tables shown in paragraph (p)(1)(i) of §1755.522;

c. Two copies of detailed switching diagram showing the traffic on each route, the grade of service, the quantity of circuits, and main distributing frames;

d. Block diagram of stored program control and associated maintenance equipment;

e. A prescribed method and criteria for acceptance of the completed central office, which is subject to review;

f. Location of technical assistance service with 24-hour maintenance, and conditions when owner will be charged for access to the service;

g. Calculations showing the method by which ringing machine sizes were derived;

h. Precautions to be taken against static discharge.
§ 1755.522

6.2 As a part of the response to the bid, the bidder must also list information concerning the types and quantities of spare parts to be furnished. All units, excluding those units described in paragraph (x)(6)(i)(C) of § 1755.522, must fall into one of the four classes. The information must be in the following format:

<table>
<thead>
<tr>
<th>Unit No.</th>
<th>Unit name</th>
<th>Quantity of units in the CO's and RST's which are bid</th>
<th>Quantity of spare parts furnished with this bid</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Class 1</td>
<td>Class 2</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. General Survey

2.1 This office is considered to be in the following category for probability of lightning damage based on the Figure 1 map in RUS TE&CM 823 (also refer to paragraph (u)(2) of § 1755.522):

- Very High
- Higher than Average
- Average
- Lower than Average
- Very Low

2.2 Central office ground field (COGF) to be inspected for proper bonding of conductors to ground rods, etc. COGF to earth grounding reading is ______ ohms. (Refer to RUS TE&CM 802, Appendices C and D, Measurement Techniques.) Is this resistance reading acceptable? (Refer to RUS TE&CM 810, Items 4.6.2 and 4.6.3 for protection considerations.)

Acceptable: ___ Yes ___ No
Comments: __________________________________________

2.3 Ground connection to be inspected from the master ground bar (MGB) to the central office ground field (COGF) to ensure it is properly sized and installed by most direct route with no sharp bends. (Refer to RUS TE&CM 810, Item 4.3.2 and section 8.1.)

Acceptable: ___ Yes ___ No
Comments: __________________________________________

2.4 Building structure grounds (steel rebar in footings, ironwork, etc.) are to be properly bonded and connected to the MGB. (Refer to RUS TE&CM 810, Item 4.3.4.)

Acceptable: ___ Yes ___ No
Comments: __________________________________________

2.5 Metallic central office door(s) are to be painted with metallic paint with door-knobs left bare. Door(s) and frames are to be grounded to the building structural ground or the MGB.

Acceptable: ___ Yes ___ No
Comments: __________________________________________

2.6 Metallic fences within 6 feet (183 cm) of the exchange building, storage facilities ground field, etc., are to be properly bonded to the COGF outside of the central office building. Handhole enclosure is to be used...
for the COGF connection to permit inspection and disconnect for earth resistance testing. (Refer to RUS TE&CM 810, Appendix C, Item 4.6.1.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.7 Lightning rod systems are to be grounded by a separate dedicated ground field. A bond should be provided between the COGF and the lightning rod ground field. Handhole enclosure is to be used for the COGF connection to permit inspection and disconnect for earth resistance testing. (Refer to RUS TE&CM 810, Item 4.3.2.1.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.8 Radio/microwave tower ground grid is to be properly bonded to the COGF by a direct outside connection. Handhole enclosure is to be used for the COGF connection to permit inspection and disconnect for earth resistance testing. (Refer to RUS TE&CM 810, Item 4.3.2 and section 18.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.9 If a qualified metallic water system is present, inspect the MGB connecting conductor to ensure that it is properly sized and installed by the most direct route with no sharp bends and that it is clamped solidly on the water pipes. (Refer to RUS TE&CM 810, Item 4.3.3 for details on metallic water system grounding.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.10 All power and grounding conductors are to be continuous, end to end, with no splices, size discontinuity or intermediate terminations. If an exception is necessary, unusual care must be taken to assure proper bonding between the two sections. (Refer to RUS TE&CM 810, Appendix C, section 8.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.11 All ground conductors should be void of sharp bends along their entire lengths. (Refer to RUS TE&CM 810, Item 8.2.2.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.12 Ground conductors should only be placed in nonmetallic conduit. Those routed through metallic conduit require that both ends of the conduit be bonded to the ground conductor. (Refer to RUS TE&CM 810, Item 8.2.4.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.13 Ground conductors should not be encircled by metallic clamp. Metallic straps are to be removed and replaced with nonmetallic clamps. (Refer to RUS TE&CM 810, Item 8.2.4.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.14 If metallic conduit is used, it is to be insulated from all ironwork.
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.15 Inspect to determine if the required central office supplier electrostatic discharge plates, wrist wraps, antistatic floor mats, etc. are available and properly installed. (Refer to RUS TE&CM 810, Item 12.3.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

2.16 Ground conductors, except green wires, should not be routed close and parallel to other conductors so as to minimize induction on surges into equipment wiring. It is also better not to route these ground conductors through cable racks or troughs, or within the confines of any iron work. (Refer to RUS TE&CM 810, Item 8.2.3.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

3. Master Ground Bar (MGB)
3.1 The designated P, A, N, and I segments of the master ground bar (MGB) should be clearly identified. (Refer to RUS TE&CM 810, Figure 1 for MGB segmentation arrangement.)
Acceptable: ___ Yes ___ No
Comments: -------------------------------

3.2 Check for appearance and proper location of following on MGB:
§ 1755.522

(a) R—Interior radio equipment
(b) C—Cable entrance ground bar
(c) M—MDF ground bar
(d) G—Standby power equipment frame ground
(e) N—Commercial power MGN
(f) B—Building structure ground
(g) L—Central office ground field
(h) W—Water pipe system
(i) N—Battery Return
(j) N1—Outside IGZ:
(k) N2—Outside IGZ:
(l) I—Ground window bar

Acceptable: Yes No

Comments: 

3.3 All connections to MGB are to be two-hole bolted down copper crimped or compression type terminal lugs. (NOTE: No solder connections are permitted.)

Acceptable: Yes No

Comments: 

3.4 MGB is to be properly insulated from the mounting surface.

Acceptable: Yes No

Comments: 

3.5 All connections are to be tight.

Acceptable: Yes No

Comments: 

3.6 The MGB is to have an anticorrosion coating of the type which enhances conductivity.

Acceptable: Yes No

Comments: 

3.7 Bar is to be clearly stenciled or legibly labeled “MGB.”

Acceptable: Yes No

Comments: 

3.8 All ground leads are to be properly sized and labeled as to point of origin. (Refer to RUS TE&CM 810, Item 8.1 and section 8.1.)

Acceptable: Yes No

4. Ground Window Bar (GWB)

4.1 All equipment grounds that originate inside of an Isolated Ground Zone (IGZ) are to be terminated on the GWB which is preferably located physically inside the IGZ and insulated from its support. (Refer to RUS TE&CM 810, Item 5.1.)

Acceptable: Yes No

Comments: 

4.2 Each GWB is to be connected to the MGB by the most direct route with a conductor of 20-gauge or coarser, or resistance of less than 0.005 ohms. Parallel conductors for redundancy if required by the supplier. (Refer to RUS TE&CM 810, Item 8.1.2.)

Acceptable: Yes No

Comments: 

4.3 The metal framework grounds of only that switching equipment and associated electrical equipment located inside of the IGZ should be connected to the GWB as required by the central office equipment supplier. (Refer to RUS TE&CM 810, Item 5.5.)

Acceptable: Yes No

Comments: 

4.4 GWB is to be clearly stenciled or labeled “GWB.”

Acceptable: Yes No

Comments: 

4.5 All connections are to be tight.

Acceptable: Yes No

Comments: 

5. Isolated Ground Zone (IGZ)

5.1 IGZ areas are to be clearly marked on the floor or in some other easily recognizable manner. (Refer to RUS TE&CM 810, Item 6.1.1)

Acceptable: Yes No

Comments: 

5.2 Confirm that all framework, cabinets, etc., within the IGZ are ground connected only to the GWB. (Refer to RUS TE&CM 810, Item 5.5.)
### § 1755.522

6. **Entrance and Tip Cables**

6.1 When neither a cable vault nor a splicing trough exists, the outside plant cable should be brought into the central office and spliced to tip cables with a PVC outer jacket (ALVYN®) or equivalent as close as practical to the cable entrance. (Refer to RUS TE&CM 810, Item 7.3.4.)

<table>
<thead>
<tr>
<th>Acceptable</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comments:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.2 All outside entrance cables and all tip cable shields are to be separated by at least a 3-inch (7.6 cm) gap between shield ends.

<table>
<thead>
<tr>
<th>Acceptable</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comments:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.3 All entrance cable shields are to be bonded separately to #6 AWG or larger insulated wire or bonding ribbon and connected to the Cable Entrance Ground Bar (CEGB) by most direct route with minimum bends.

<table>
<thead>
<tr>
<th>Acceptable</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comments:</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.4 Outside plant cable shields are to be connected only to the CEGB, and the tip cable shields are to be connected only to the Main Distributing Frame Bar (MDFB).

<table>
<thead>
<tr>
<th>Acceptable</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comments:</td>
<td></td>
<td></td>
</tr>
</tbody>

§ 1755.522

7.7 The CEGB is to have an anticorrosion coating of the type which enhances conductivity.

Acceptable: Yes No

Comments: ____________________________

7.8 The CEGB is to be connected to the MGB by a properly sized conductor and by the most direct route. (Refer to RUS TE&CM 810, section 8.1.)

Acceptable: Yes No

Comments: ____________________________

8. Main Distributing Frame (MDF)

8.1 RUS strongly recommends that MDF protectors be furnished without heat coils. (Refer to RUS TE&CM 810, section 7.6.)

Acceptable: Yes No

Comments: ____________________________

8.2 Incoming cable pairs terminated on MDF protector assemblies should be protected with protector modules. These modules should contain white coded carbon blocks or orange coded gas tube arrestors that are included in the RUS List of Materials. (Refer to RUS TE&CM 810, Item 7.4)

Acceptable: Yes No

Comments: ____________________________

8.3 All incoming subscriber cable pairs are to be properly terminated at either a protector equipped terminal or connected to ground.

Acceptable: Yes No

Comments: ____________________________

8.4 MDF protector assemblies may be mounted directly on the vertical frame ironwork. Protector assemblies on each vertical are interconnected with each other and the Main Distributing Frame Bar (MDFB) with a #6 copper grounding conductor. Alternative means of connecting to the MDFB are also acceptable which do not rely on the frame ironwork for conducting surge currents to ground. (Refer to RUS TE&CM 810, section 7.)

Acceptable: Yes No

Comments: ____________________________

8.5 Protective "ground connections" should be provided between the MDFB and the frame ironwork for personnel protection regardless of the type of protector assembly used. Protective ground leads should be 14-gauge, less than 12 inches (30.5 cm) in length with paint thoroughly removed at point of connection to the ironwork. (Refer to RUS TE&CM 810, Item 7.1.3.)

Acceptable: Yes No

Comments: ____________________________

8.6 The MDFB should be insulated from the frame ironwork in all cases where it is used as a Master Ground Bar (MGB). (Refer to RUS TE&CM 810, Item 7.1.2.)

Acceptable: Yes No

Comments: ____________________________

8.7 Where the MDFB is used as the MGB in very small offices the protective "ground connections" should be connected on the N section of the bar. The MDF line protector assembly grounds should be connected to the P section of the bar. (Refer to RUS TE&CM 810, Item 7.1.4.)

Acceptable: Yes No

Comments: ____________________________

8.8 The MDFB is to be connected to the MGB by the most direct path with minimum bends and proper conductor size. (Refer to RUS TE&CM 810, Item 8.1.4.)

Acceptable: Yes No

Comments: ____________________________

8.9 The MDFB should be free of all other ground leads when not used as an MGB.

Acceptable: Yes No

Comments: ____________________________

8.10 Alternative arrangements which insulate the line protector assemblies and MDFB from the frame ironwork may require a direct ground connection of the frame ironwork to the MGB for personnel protection. Conductor is properly sized and tightened with paint removal on main frame ironwork at point of connection.

Acceptable: Yes No

Comments: ____________________________

9. Power Service Protection and Grounding

9.1 The ground conductor between the ac power system multigrounded neutral (MGN) at the main ac disconnect panel and the master ground bar (MGB) is to be properly sized.
§ 1755.525 Form 525, central office equipment contract (including installation).

The RUS Form 525, Central Office Equipment Contract (Including Installation), in this section shall be used for all purchases of central office equipment (other than such purchases of special equipment using Form 397) using RUS financial assistance when the equipment is supplied and installed by the seller or installed by a firm under contract with the seller as defined in 7 CFR part 1753, subparts E and H. The RUS Form 525 Central Office Equipment Contract follows:

9.2 If there is a non-MGN ac power system, there is to be a properly sized and connected insulated conductor bond between the power service ground electrode and the MGB. (Refer to RUS TE&CM 810, Item 4.3.1.1.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

9.3 AC conductors including ground conductors serving 120-volt ac electric convenience receptacles and all direct wire peripheral equipment, located in the IGZ, should be sized in accordance with normal ‘green wire’ criteria. (Refer to RUS TE&CM 810, Items 5.5.4, 5.5.5, and 5.5.6.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

9.4 Minimum protection for ac power serving the central office buildings should consist of an RUS accepted secondary arrester at the service entrance. (Refer to RUS TE&CM 810, section 9.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

9.5 A properly sized conductor for ground bonding between the standby power plant framework (not separately derived) and the MGB is to be provided to equalize framework voltages for personnel safety reasons. (Refer to RUS TE&CM 810, Item 4.2.4.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

10. Miscellaneous
10.1 All non-IGZ equipment frames, relay racks, cable racks and other ironwork are to be properly connected to the MGB. (Refer to TE&CM 810, Item 4.4.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

10.2 Shields on high frequency intra-office cables are to be properly isolated and connected only to an isolation ground bar in the relay rack. All shielded cables entering the IGZ should only be referenced at the IGZ termination point as given by the manufacturer. (Refer to RUS TE&CM 810, Item 7.2.1.2.)
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

10.3 Isolation ground bars in the relay racks are to be properly connected to the MGB with appropriate sized conductor with no sharp bends.
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

10.4 All radio equipment cabinet(s) are to be at least 10 feet (305 cm) from the IGZ.
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

10.5 The metal spare parts cabinet is to be grounded with a #6 AWG or larger insulated wire to non-IGZ cable rack, etc. or directly to the MGB.
Acceptable: ____ Yes ____ No
Comments: ______________________________________
_____________________________________________________

§ 1755.525

CENTRAL OFFICE EQUIPMENT CONTRACT (INCLUDING INSTALLATION)

Notice and Instructions to Bidders; Central Office Equipment Project (Including Installation)

1. Sealed Proposals for the engineering, furnishing, delivery, and installation of central office equipment, materials and software for the (hereinafter called the "Owner") which is to be part of the system known as

------------------------------------------------------------------------------------------------------------------

2. The Bid Documents (composed of plans, specifications and drawings), together with all necessary forms and other documents for Bidders, may be obtained from the Owner or from the Engineer, at the latter's office at

------------------------------------------------------------------------------------------------------------------

3. A pre-bid technical session will be held at the office of the Owner or at the office of the Engineer. A copy of the loan contract between the Owner and the Government may be examined at the office of the Owner and the Government may be examined at the office of the Owner. Each set of Bid Documents will have a serial number, assigned by the Engineer, and the number of each set with the name of the Bidder will be recorded by the Engineer. Bids will be accepted only from original Bidders, or from other qualified Bidders to whom such a set has been transferred by the original Bidder with the approval of the Engineer prior to the pre-bid technical session.

4. Proposals shall be submitted on the forms furnished by the Owner and must be delivered in a sealed envelope addressed to the Owner. The name and address of the Bidder, its license number, if a license is required for bidding on a project by the State, and the date and hour of the opening of bids must appear on the envelope in which the Proposal is submitted. Proposals must be in ink or typewritten. No alterations or interlineations will be permitted, unless made, initialed, and dated before submission.

5. Prior to the submission of the Proposal, the Bidder shall make and shall be deemed to have made a careful examination of the Specifications, forms of Bidder's Proposal and Acceptance, and Contractor's License, and the Bid shall be accompanied by the Bidder's Technical Proposal, discussing details of the Project(s), and considering suggestions from Bidders. The Owner shall attach to this Notice a list of the information required in the Bidder's Technical Proposal. Each Bidder will be given a specific time period for the pre-bid technical session. At the pre-bid technical session, the Bidder shall fully describe to the Owner any exceptions to the Specifications the Bidder may request. In addition, the Bidder shall identify all features and capabilities that are not fully developed or do not have a verifiable satisfactory field performance record. If the Owner decides to incorporate any changes into the Specifications, the Owner shall furnish all prospective Bidders a copy of the Specifications containing such revisions (the "Revised Specifications") and all Bids shall be made on the basis of the Revised Specifications. At this session, the Bidder shall identify all documentation and materials that it claims constitute agreed excluded documentation under section (2)(xi) of the Software License. The Bidder shall claim as agreed excluded documentation only those items it may be unable to provide to the Borrower as required by said section (2)(xi). The Engineer shall immediately provide a list of all items so identified to [appropriate RUS office]. The Engineer shall inform the Bidder at least days before the scheduled bid opening whether the Engineer or [RUS] will reject the Bid because of items so identified. Licensor agrees that certain Licensed Software cannot be excluded from the requirements of said section (2)(xi), including but not limited to software that would significantly impair the operation of the System, would significantly impair the ability of the Owner to generate revenue, or would pose a risk to RUS loan security. If allowed, the agreed excluded documentation shall be individually identified in an attachment to the Bid. No bid shall be accepted from a Bidder who fails to attend the pre-bid technical session or fails to demonstrate to the Owner that its equipment meets the requirements of the Plans and Specifications.

6. Prior to the submission of the Proposal, the Bidder shall make and shall be deemed to have made a careful examination of the Specifications, forms of Bidder's Proposal and Acceptance, and Contractor's License, and the Bid shall be accompanied by the Bidder's Technical Proposal, discussing details of the Project(s), and considering suggestions from Bidders. The Owner shall attach to this Notice a list of the information required in the Bidder's Technical Proposal. Each Bidder will be given a specific time period for the pre-bid technical session. At the pre-bid technical session, the Bidder shall fully describe to the Owner any exceptions to the Specifications the Bidder may request. In addition, the Bidder shall identify all features and capabilities that are not fully developed or do not have a verifiable satisfactory field performance record. If the Owner decides to incorporate any changes into the Specifications, the Owner shall furnish all prospective Bidders a copy of the Specifications containing such revisions (the "Revised Specifications") and all Bids shall be made on the basis of the Revised Specifications. At this session, the Bidder shall identify all documentation and materials that it claims constitute agreed excluded documentation under section (2)(xi) of the Software License. The Bidder shall claim as agreed excluded documentation only those items it may be unable to provide to the Borrower as required by said section (2)(xi). The Engineer shall immediately provide a list of all items so identified to [appropriate RUS office]. The Engineer shall inform the Bidder at least days before the scheduled bid opening whether the Engineer or [RUS] will reject the Bid because of items so identified. Licensor agrees that certain Licensed Software cannot be excluded from the requirements of said section (2)(xi), including but not limited to software that would significantly impair the operation of the System, would significantly impair the ability of the Owner to generate revenue, or would pose a risk to RUS loan security. If allowed, the agreed excluded documentation shall be individually identified in an attachment to the Bid. No bid shall be accepted from a Bidder who fails to attend the pre-bid technical session or fails to demonstrate to the Owner that its equipment meets the requirements of the Plans and Specifications.

7. Proposals shall be submitted on the forms furnished by the Owner and must be delivered in a sealed envelope addressed to the Owner. The name and address of the Bidder, its license number, if a license is required for bidding on a project by the State, and the date and hour of the opening of bids must appear on the envelope in which the Proposal is submitted. Proposals must be in ink or typewritten. No alterations or interlineations will be permitted, unless made, initialed, and dated before submission.

8. Prior to the submission of the Proposal, the Bidder shall make and shall be deemed to have made a careful examination of the Specifications, forms of Bidder's Proposal and Acceptance, and Contractor's License, and the Bid shall be accompanied by the Bidder's Technical Proposal, discussing details of the Project(s), and considering suggestions from Bidders. The Owner shall attach to this Notice a list of the information required in the Bidder's Technical Proposal. Each Bidder will be given a specific time period for the pre-bid technical session. At the pre-bid technical session, the Bidder shall fully describe to the Owner any exceptions to the Specifications the Bidder may request. In addition, the Bidder shall identify all features and capabilities that are not fully developed or do not have a verifiable satisfactory field performance record. If the Owner decides to incorporate any changes into the Specifications, the Owner shall furnish all prospective Bidders a copy of the Specifications containing such revisions (the "Revised Specifications") and all Bids shall be made on the basis of the Revised Specifications. At this session, the Bidder shall identify all documentation and materials that it claims constitute agreed excluded documentation under section (2)(xi) of the Software License. The Bidder shall claim as agreed excluded documentation only those items it may be unable to provide to the Borrower as required by said section (2)(xi). The Engineer shall immediately provide a list of all items so identified to [appropriate RUS office]. The Engineer shall inform the Bidder at least days before the scheduled bid opening whether the Engineer or [RUS] will reject the Bid because of items so identified. Licensor agrees that certain Licensed Software cannot be excluded from the requirements of said section (2)(xi), including but not limited to software that would significantly impair the operation of the System, would significantly impair the ability of the Owner to generate revenue, or would pose a risk to RUS loan security. If allowed, the agreed excluded documentation shall be individually identified in an attachment to the Bid. No bid shall be accepted from a Bidder who fails to attend the pre-bid technical session or fails to demonstrate to the Owner that its equipment meets the requirements of the Plans and Specifications.
the time of completion of the installations. Bidders will be required to comply with all applicable statutes, codes, and regulations, including those pertaining to the licensing of contractors and the "Anti Kick-Back Acts," as amended, (40 U.S.C. 276c; 41 U.S.C. 51 et seq.) and regulations issued pursuant there-to, and 18 U.S.C. 287, 87a, 1001, as amended.

6. Each Bidder shall be required to furnish a Bid Bond, in the form attached, or a certified check on a bank that is a member of the Federal Deposit Insurance Corporation, payable to the order of the Owner, in an amount equal to ten percent (10%) of the maximum possible bid price. The maximum possible bid price is the sum of the total base bid, spare parts, maintenance tools and all positive amounts for alternates. Each Bidder agrees that, if its Proposal is one of the three low Proposals, its Bid Bond or check shall be held by the Owner until a Proposal is accepted and Contractor’s Bond, when required, is furnished by the successful Bidder and such acceptance has been approved by the Administrator, or for a period not to exceed ninety (90) days from the date hereinbefore set for the opening of Proposals whichever period shall be the shorter. If such Proposal is not one of the three low Proposals, the Bid Bond or check will be returned to the Bidder within a period of thirty (30) days.

7. The successful Bidder will be required to furnish to the Owner a Contractor’s Bond in accordance with the requirements of 7 CFR part 1788, subpart C, Insurance for Contractors, Engineers, and Architects.

8. Should the successful Bidder fail or refuse to furnish a Contractor’s Bond within thirty (30) days after written notification of the award of the Contract by the Owner, the Bidder will be considered to have abandoned the Proposal. In such event, the Owner shall be entitled (a) to enforce the Bid Bond in accordance with its terms, or (b) if a certified check has been delivered with the Proposal, to retain the difference (not exceeding the amount of the Proposal and such larger amount for which the Owner may in good faith contract with another party to construct the Project(s). The term “successful Bidder” shall be deemed to include any Bidder whose Proposal is accepted after another Bidder has previously refused or has been unable to execute the Contract or to furnish a Contractor’s Bond.

9. If requested by the Owner or the Administrator, the Bidder shall furnish evidence, satisfactory to the Owner and the Administrator, that the Bidder has the necessary facilities, ability, and financial resources to perform the Contract.

10. The Contract, when executed, shall be deemed to include the entire agreement between the parties thereto and neither party shall claim any modification thereof resulting from any representation or promise made at any time by any officer, agent, or employee of the other or by any other person.

11. The Owner reserves the right to waive minor irregularities or minor errors in any Proposal, if it appears to the Owner that such irregularities or errors were made through inadvertence. Any such irregularities or errors so waived must be corrected on the Proposal in which they occur prior to the execution of any Contract which may be awarded thereon. Failure to provide a Bid Bond or check as specified in item six (6) above is not a minor irregularity.

12. The Owner reserves the right to reject any or all Proposals.

13. The equipment to be furnished for all central offices and remote switching terminals included in the Proposal is to be one and the same basic design. A Proposal submitted on any other basis will not be considered.

14. Equal Opportunity and Employment
(a) The Offeror’s or Bidders’s attention is called to the “Equal Opportunity Clause” and the “Standard Federal Equal Employment Specifications” set forth herein.
(b) The goals and timetables for minority and female participation, expressed in percentage terms for the Contractor’s aggregate workforce in each trade on all construction work in the covered area, are as follows:

<table>
<thead>
<tr>
<th>Timetables</th>
<th>Goals for minority participation for each trade</th>
<th>Goals for female participation in trade</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Insert goals for each year)</td>
<td>(Insert goals for each year)</td>
<td></td>
</tr>
</tbody>
</table>

These goals are applicable to all the Contractor’s construction work (whether or not it is federal or federally assisted) performed in the covered area. If the Contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where work is actually performed. With regard to this second area, the Contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

The Contractor’s compliance with Executive Order 11246 (3 CFR, 1963-1965 Comp., p. 340) and the regulations in 41 CFR part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. Transfer of minority or female employees or trainees from...
§ 1755.525

Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor’s goals shall be a violation of the contract, Executive Order 11246 and the regulations in 41 CFR part 60-4. Compliance with the goals will be measured against the total work hours performed.

(c) The Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 working days of award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

(d) As used in this Notice, and in the contract resulting from this solicitation, the “covered area” is

(insert description of the geographical areas where the contract is to be performed giving the state, county and city, if any).

NOTE: Paragraph 14 is applicable to the extent required by law. If applicable, certain information needs to be inserted at subparagraphs (b) and (d). In determining whether and how this paragraph is applicable, reference should be made to Office of Federal Contract Compliance Programs regulations (41 CFR Chapter 60).

Title: ________________________________
Bidder’s Proposal to Engineer, Furnish, Deliver, and Install Equipment, Materials and Software (Proposal shall be submitted in ink or type-written)
To: ________________________________

(Hereinafter called the “Owner”)
The undersigned (hereinafter called the “Bidder”) hereby proposes to engineer, furnish, deliver, and install the equipment, materials and software for each Project listed under Column 1, “Project,” in Article I, section 1, and described in the plans, specifications and drawings (hereinafter called the “Specifications”) prepared by the Owner and attached hereto and made a part hereof, financed by a loan to the Owner made or guaranteed by the United States of America, acting through the Administrator of the Rural Utilities Service (hereinafter called the “Administrator”), or by loans to the Owner by the United States of America and by the Rural Telephone Bank, and designated

The Bidder has become informed as to the location and characteristics of the proposed installations, has become informed as to the kind of facilities required before and during the delivery and installation of the equipment, material, and software and has become acquainted with the labor conditions which would affect the work.

The Bidder agrees that if its bid is accepted the following terms and conditions shall govern.

If, in submitting this Proposal, the Bidder has taken any exception to the form of proposal furnished by the Owner, the Bidder understands that the Owner and the Administrator may evaluate the effect of such change as they see fit and they may exclude the Proposal from consideration in determining the award of the Contract.
### ARTICLE I

[Section 1. Bid Price. The Bidder will engineer, furnish, deliver, and install the equipment, materials, and software described in the Specifications for the following sums:]

Note 1: If a remote switching terminal, so designate and list after host office.
Note 2: All items included in a Project shall have the same completion schedule.
Note 3: Each Project shall be separated by a blank line.
Note 4: Time in calendar days for Completion of the Project shall be 60 days after the time established for Completion of Installation.
§ 1755.525

ARTICLE II

Delivery and Installation

Section 1. Time of Completion of Installation. The time of delivery of materials, equipment, and software of and completion of installation are of the essence of this Contract. The Bidder shall deliver the materials, equipment, and software required hereunder for each Project upon the time intervals established under Column 5, "Delivery," in Article I, section 1, after the Administrator has approved this Contract in writing, and shall prosecute diligently and complete the installation of materials, equipment and software for each Project in accordance with the terms of this Contract and Specifications to the satisfaction of the Administrator within thirty (30) days after Bidder becomes aware of the happening of any event relied upon by the Bidder for such an extension of the Project(s). If any such extension of time shall be granted the Bidder shall have made a written request therefor in writing to the Owner. Further, no delay in such time for delivery of materials, equipment and software or completion of installation or in the progress of the work shall result in any liability on the part of the Owner, except that the Owner shall be responsible for and shall pay the Bidder on demand additional, supportable compensation for any such change or addition shall be added to the Contract price. Additional compensation shall be reasonable for any such change or addition will be considered unless the Bidder shall have made a written request therefor to the Owner within thirty (30) days after any such change is made. Further, if the cost to the Bidder shall be increased or decreased by any such change or addition, the Contract price shall be increased or decreased by a reasonable amount in accordance with contract amendments. The Superintendent shall represent the Owner and the Bidder and approved by the Administrator. No claim for additional compensation for any such change or addition will be considered unless the Bidder shall have made a written request therefor to the Owner prior to the commencement of work in connection with such change or addition. The delivery or completion of installation times specified under Columns 5, "Delivery," and 6, "Completion of Installation," in Article I, section 1, can be changed by a contract amendment approved by the Bidder, the Owner and RUS.

Section 2. Acceptable Equipment. Unless otherwise specified by the Owner (and agreed to in advance of writing by RUS), the Bidder agrees to furnish under this Proposal only equipment which is currently covered by a letter of acceptance issued by the Chairman, Committee "A" (Telephone). [Note: for convenience of borrowers and others, domestic and foreign equipment is included in RUS Bulletin 17551-100.] The Bidder agrees also to furnish only materials, equipment and software which are new and of most recent issue and manufacture, as of the date of the bid opening, or of near future release for which the Bidder can assure timely delivery.

Section 3. Changes in Project. The Owner, with the approval of the Administrator, may, from time to time during the performance of the Contract effected by the acceptance of this Proposal, make reasonable changes, additions or subtractions from the Specifications which are part of the Proposal as conditions may warrant. However, if substantial changes in the Project require an extension of time, a reasonable extension will be granted if the Bidder shall make a written request therefor to the Owner within thirty (30) days after any such change is made. Further, if the cost to the Bidder shall be increased or decreased by any such change or addition, the Contract price shall be increased or decreased by a reasonable amount in accordance with a contract amendment signed by the Owner and the Bidder and approved by the Administrator. No claim for additional compensation for any such change or addition will be considered unless the Bidder shall have made a written request therefor to the Owner prior to the commencement of work in connection with such change or addition. The delivery or completion of installation times specified under Columns 5, "Delivery," and 6, "Completion of Installation," in Article I, section 1, can only be changed by a contract amendment approved by the Bidder, the Owner and RUS.

Section 4. Taxes. The bid prices herein set forth do not include any amounts payable by the Bidder or the Owner on account of taxes imposed by any taxing authority upon the sale, purchase or use of materials, supplies, equipment or software to be incorporated in the Project(s). If any such tax is applicable to the sale, purchase or use of materials, supplies, equipment or software hereunder, the amount thereof shall be stated separately on all invoices and paid by the Owner.

ARTICLE II

Delivery and Installation

Section 1. Time of Completion of Installation. The time of delivery of materials, equipment, and software of and completion of installation are of the essence of this Contract. The Bidder shall deliver the materials, equipment, and software required hereunder...
Section 7. Defective Workmanship, Materials or Software. Throughout the warranty period defined below the Bidder shall, within thirty (30) days of written notice from the Owner, at the Bidder’s option, either remedy or replace any materials, equipment or software found to be defective in material, workmanship or installation, or not in conformity with the Specifications. This warranty is subject to the following definitions and conditions:

(a) The warranty start date for a Project is the date of delivery of possession and control by the Bidder to the Owner of that Project included in the Contract. Refer to Article II, section 5. The warranty period is twelve (12) months from the warranty start date, or six (6) months from Completion of the Project, whichever results in the longer period of coverage.

(b) Without regard to the expiration of the warranty period set forth above, the Bidder warrants to the Owner that any Software furnished under this Contract shall function, for a period of five (5) years from the warranty start date defined in the Contract, in accordance with the specifications and any written or printed technical material provided by the Bidder to explain the operation of the Software and aid in its use. The Bidder shall correct all deficiencies within thirty (30) days from the date of receipt by the Bidder of written notice of such deficiencies from the Owner. An extension of this thirty (30) day period may be allowed only if agreed upon by the Owner. It shall be the Bidder’s obligation to insert and thoroughly test, at no charge to the Owner, any software amendment or alteration provided to satisfy the obligations of this Section 7. If a deficiency is detected or a correction made within the final ninety (90) days of the warranty, the warranty shall be extended to a date ninety (90) days after the deficiency has been corrected.

(c) The Owner shall pay the Bidder for any use of the Bidder’s technical assistance center except for usage to diagnose defects covered by this warranty.

(d) This warranty is not diminished by the acceptance of workmanship, materials, equipment, or software, or by the issuing of any certificate with respect to Completion of the Project.

(e) This warranty does not cover defects in materials, equipment or software that are caused by modifications to or abuse of materials, equipment or software by the Owner.

(f) The Owner shall bear the cost and risk of shipping defective components to the Bidder’s designated repair center. The Bidder shall bear the cost and risk of shipping new or repaired replacement components to the Owner.

Section 5. Delivery of Possession and Control to the Owner. The Bidder shall deliver to the Owner, and the Owner shall accept, full possession and control of each Project on the date of Completion of the Project or on an earlier date if agreed under Article IV, section 2.

Section 6. Employees. The Owner shall have the right to require the removal of any employee of the Bidder from the Project site if in the judgment of the Owner such removal is necessary in order to protect the interest of the Owner.
§ 1755.525  7 CFR Ch. XVII (1-1-98 Edition)

ARTICLE III
Payments and Releases of Lien

Section 1. Payment to Bidder.

(a) The Owner shall pay the Bidder upon the basis of written estimates of the materials, equipment, and software delivered at the site of the Project, presented by the Bidder, and approved by the Owner, the following percentages of the price of the materials, equipment, and software for each Project set forth under Column 2, “Materials, Equipment, and Software,” in Article I, Section 1, as and if revised:

(i) Forty-five percent (45%) when fifty percent (50%) of the materials, equipment, and software for each Project has been delivered at the site of the Project, and

(ii) Ninety percent (90%) when all the materials, equipment, and software required to place each Project into operation has been delivered at the site of the Project.

(b) Upon written notification of the completion of installation of each Project, the Owner shall pay the Bidder ninety percent (90%) of the Base Bid plus accepted alternates for that Project.

(c) Upon the completion of installation, but prior to the payment to the Bidder of any amount in excess of ninety percent (90%) of the Total Contract Price, the Owner shall inspect the work performed hereunder and if the work shall be found to be in accordance with the Specifications and all provisions hereunder, the Owner shall certify as to that fact and as to the amount of the balance found to be due to the Bidder. No later than thirty (30) days after the completion of the Contract, as defined in Article VII, section 1, “Definitions,” the Owner shall submit such final certificate to the Administrator for approval and when such approval has been given, the Owner shall pay to the Bidder all unpaid amounts to which the Bidder shall be entitled hereunder, provided, however, such final payments shall be made not later than sixty (60) days after completion of the Contract unless approval by the Administrator shall be withheld or delayed due to Bidder’s actions or failure to act.

(d) Payment on undisputed invoices submitted by the Bidder shall be due thirty (30) days after receipt. Any amounts of these invoices not paid when due shall accrue interest at a rate one and one-half percent (1-1/2%) higher than the “Prime Rate” published in the Wall Street Journal in its first issue of the month in which payment becomes due and changing each subsequent month with the first issue published in the respective month.

(e) Notwithstanding other provisions of this Article III, the Bidder, shall, at its request in writing, receive payment in full for each Project upon completion of installation of such and upon:

(i) Completion of the final acceptance tests of such Project as certified on RUS Form 754, Certificate of Completion, Central Office(s) and approved by the Owner.

(ii) Submission to the Owner and Administrator of the releases of lien and Certificate of Contractor referred to in section 2 hereof or in lieu thereof, where the Bidder is the manufacturer, the execution of the Certificate of Contractor and Indemnity Agreement on RUS Form 754, all in respect of such Project.

(iii) Approval by the Administrator of the Certificate of Completion, RUS Form 754 in respect of such Project.

Ten percent (10%) of the contract price of each central office shall be retained unless the Bidder shall have furnished the certificates and releases of lien or indemnity agreement in respect of the Project required by section 2 of this Article III. (This Section 1(e) is to be used only if (1) the Contract includes at least one central office and (2) the Owner wishes to allow the partial closeout procedure. The Owner shall strike out this Section 1(e) if the partial closeout procedure is not to be allowed)

(f) Acceptance by the Owner of equipment, materials, workmanship or software while the Bidder is in default under any provision of this Contract shall not be construed as a waiver by the Owner of any right hereunder including, without limitation, any right to liquidated damages the Owner may have by virtue of Article V, section 2.

Section 2. Release of Liens. Upon the completion of installation by the Bidder, but prior to the payment to the Bidder of any amount in excess of ninety percent (90%) of the Total Contract Price, except as specified in Article III, section 1(e), the Owner shall deliver to the Owner (a) two original Waiver and Release of Lien in the form attached hereto, from manufacturers, material suppliers and subcontractors who have furnished materials or services for the work, and (b) two original Certificate of Contractor referred to in section 2 hereof, or in lieu thereof, where the Bidder is the manufacturer, the execution of the Certificate of Contractor and Indemnity Agreement, stating that all manufacturers, material suppliers and subcontractors who have furnished materials or services for the Project(s) have been paid in full, and agreeing to indemnify the Owner against any liens arising out of the Bidder’s performance hereunder which may have been or may be filed against the Owner.
In this Article III “manufacturer” shall mean a Bidder who makes, produces, or manufactures the equipment and whose interest, including non-contracted installation, represents more than fifty percent (50%) of the value of the Total Contract Price.

ARTICLE IV

Particular Undertakings of the Bidder

Section 1 Protection to Persons and Property. At all times when equipment and materials are being delivered and installed the Bidder shall exercise reasonable precautions for the safety of employees on the job and of the public and shall comply with all applicable provisions of Federal, State and Municipal safety laws and building and construction codes. All machinery and equipment and other physical hazards shall be guarded in accordance with the “Manual of Accident Prevention in Construction” of the Associated General Contractors of America unless such instructions are incompatible with Federal, State or Municipal laws or regulations. The following provisions shall not limit the generality of the above requirements:

(a) The Bidder shall at all times keep the premises free from accumulations of waste material or rubbish caused by its employees or work, and at the completion of the work the Bidder shall remove all rubbish from and about the Project(s) and all its tools, scaffolding and surplus materials and shall leave its work “broom clean.”

(b) The work, from its commencement to completion, or to such earlier date or dates when the Owner may take possession and control, shall be under the charge and control of the Bidder and during such period of control by the Bidder all risks in connection therewith, and in connection with the equipment, materials and software to be used therein, shall be borne by the Bidder. The Bidder shall make good and fully repair all injuries and damages to the equipment, materials and software under the control of the Bidder by reasons of any act of God, or any other casualty or cause whether or not the same shall have occurred by reason of the Bidder’s negligence. The Bidder shall hold the Owner harmless from any and all claims for injuries of persons or for damage to property happening by reason of any negligence on the part of the Bidder or any of the Bidder’s agents, subcontractors or employees during the control by the Bidder of the Project(s) or any part thereof. The Owner shall promptly notify the Bidder in writing of any such claims received and, except where the Owner is the claimant, shall give to the Bidder full authority and opportunity to settle such claims, and reasonably cooperate with the owner in obtaining information relative to such claims.

(c) Monthly reports of all accidents shall be promptly submitted to the Owner by the Bidder giving such data as may be prescribed by the Owner.

Section 2 Termination of Bidder’s Risks and Obligations. The Bidder shall deliver to the Owner, and the Owner shall accept, full possession and control of each Project on the date of Completion of the Project. However, at any time after payment by the Owner to the Bidder of ninety percent (90%) of the Total Base Bid plus accepted alternates for that Project, but prior to Completion of the Project, the Owner and the Bidder may agree in writing to an earlier date of delivery of possession and control. Upon such delivery of possession and control of any Project the Bidder’s risks and obligations as set forth in Article IV, section 1(b), pertaining to such Project shall be terminated; provided, however, that nothing herein contained shall relieve the Bidder of its obligation for full performance under the Specifications, or its liability with respect to defective workmanship or materials as specified in Article II, section 7 hereof. The equipment shall not be placed in service until delivery of possession and control to the Owner has been accomplished, as set forth above.

Section 3. Insurance. During the Bidder’s performance hereunder, the Bidder shall take out and maintain fully paid insurance providing not less than the minimum coverage required by 7 CFR part 1788, subpart C. The Owner shall have the right to require public liability insurance and property damage liability insurance in an amount greater than those required in 7 CFR part 1788, subpart C. If this requirement is included in the plans and specifications used for bidding, the added costs shall be included in the bid price. If the requirement is added after the Contract is approved, the additional premium or premiums payable solely as the result of such additional insurance shall be added to the Contract price, by Contract amendment. Upon request by the Administrator, the Bidder shall furnish to the Administrator a certificate in such form as the Administrator may prescribe evidencing compliance with the foregoing requirements.

Section 4. Purchase of Materials. The Bidder shall purchase all materials and supplies except software outright and not subject to any conditional sales agreements, bailment lease or other agreement reserving unto the seller any right, title or interest therein. Materials and supplies other than software shall become the property of the Owner as the Owner makes payments therefor to the Bidder in accordance with Article III, Section 1(a).

Section 5. Software License. The software licensing agreement, if required, covering the rights, terms and conditions of the use and assignability of all software integral to the operation of the Project(s), shall be in the form of Addendum 1 to this Contract.
§ 1755.525

Section 6. Assignment of Guarantees. All guarantees of materials, equipment, workmanship and software running in favor of the Bidder shall be transferred and assigned to the Owner upon Completion of the Project and at such time as the Bidder receives final payment. Any such guarantees shall be in addition to the Bidder’s warranty defined in Article II, section 7. This provision may be modified with respect to a particular warranty if the Bidder demonstrates to the satisfaction of RUS and the Owner that a transfer is not possible.

Section 7. Patent, Copyright, Trademark and Trade Secret Infringement. The Bidder shall hold harmless and indemnify the Owner from any and all claims, suits, and proceedings for the infringement of any patent, copyright, trademark or violation of trade secrets covering any equipment or software used in the work, except for items of the Owner’s design or selection. If the Owner’s use of equipment or software is enjoined, the Bidder shall promptly, at its own expense, modify or replace the infringing equipment or software so that it no longer infringes but remains functionally equivalent, or obtain for the Owner a license or other right to use. This shall be in addition to any other rights or claims which the Owner may have. The Bidder shall, at its own expense, (and the Owner agrees to permit Bidder to do so,) defend any suits which may be instituted by any party against the Owner for alleged infringement of patents, copyright, trademark or violation of trade secrets relative to the Bidder’s performance hereunder. Either party shall notify the other promptly of any such claims, and the Owner shall give to the Bidder full authority and opportunity to settle such claims, and shall reasonably cooperate with the Bidder in obtaining information relative to such claims.

Section 8. Compliance with Statutes and Regulations. The Bidder shall comply with all applicable laws, statutes, ordinances, rules and regulations. The Bidder acknowledges that it is familiar with the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 et seq.), the Anti-Kickback Acts, as amended (40 U.S.C. 276c; 41 U.S.C. 51 et seq.), and any rules and regulations issued pursuant thereto, and 18 U.S.C. 201, 296, 297, 641, 666, 874, 1001, 1361 and 1366, as amended. The Bidder understands that the obligations of the parties hereunder are subject to the applicable regulations and orders of the Governmental agencies having jurisdiction in the premises.

The Bidder represents that to the extent required, it has complied with the requirements of Public Law 101–121, section 319, 103 Stat. 704, 750–765 (31 U.S.C. 1352), entitled “Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions,” and any rules and regulations issued pursuant thereto.

ARTICLE V

Remedies

Section 1. Completion on Bidder’s Default. If default shall be made by the Bidder in the performance of any of the work hereunder, the Owner, without in any manner limiting its legal and equitable remedies in the circumstances, may serve upon the Bidder and the surety or sureties upon the Bidder’s Bond or Bonds a written notice requiring the Bidder to cause said default to be corrected forthwith. Unless within thirty (30) days after the service of such notice upon the Bidder such default shall be corrected or arrangements for the correction thereof, satisfactory to both the Owner and the Administrator, shall have been made by the Bidder or its surety or sureties, the Owner may take over the performance of the Bidder’s obligations hereunder and prosecute the same to completion by contract or otherwise for the account and at the expense of the Bidder, and the Bidder and its surety or sureties shall be liable to the Owner for any supportable cost or expense in excess of the bid price occasioned thereby. In such event, the Owner may take possession of and utilize, in completing the Project(s), any tools, supplies, equipment, appliances and plant belonging to the Bidder which may be situated at the site of the Project(s). The Owner, in such contingency, may exercise any rights, claims or demands which the Bidder may have against third persons in connection herewith and for such purpose the Bidder does hereby assign, transfer and set over unto the Owner all such rights, claims and demands.

Section 2. Liquidated Damages. Should the Bidder fail to complete any Project as shown under Column 7, “Completion of the Project,” in Article I, Section 1, within the time herein agreed upon, after giving effect to extensions of time, if any, herein provided, then, in that event and in view of the difficulty of estimating with exactness damages caused by such delay, the Owner shall, so long as the subject Project shall not have been placed in service, have the right to deduct from and retain out of such moneys which may be then due, or which may become due and payable to the Bidder, the sum of:

$ _______________________
Section 1. The Bidder.

(a) The Bidder represents that:

(1) It has, does not have _________, 100 or more employees, and if it has, that

(2) It has _________, has not _________, furnished the Equal Employment Opportunity Employer's Information Report EEO-1, Standard Form 100, required of employers with 100 or more employees pursuant to Executive Order 11246 and Title VII of the Civil Rights Act of 1964.

(b) The Bidder agrees that it will obtain, prior to the award of any subcontract for more than $10,000 hereunder to a subcontractor with 100 or more employees, a statement, signed by the proposed subcontractor, that the proposed subcontractor has filed a current report on Standard Form 100.

(c) The Bidder agrees that if it has 100 or more employees and has not submitted a report on Standard Form 100 for the current reporting year and that if this contract will amount to more than $10,000, the Bidder will file such report, as required by law, and notify the Owner in writing of such filing prior to the Owner’s acceptance of this Proposal.

(d) The Bidder certifies that it does not maintain or provide for its employees any segregated facilities at any of its establishments, and that it does not permit its employees to perform their services at any location, under its control, where segregated facilities are maintained. The Bidder certifies further that it will not maintain or provide for its employees any segregated facilities at any of its establishments, and that it will not permit its employees to perform their services at any location, under its control, where segregated facilities are maintained. The Bidder agrees that a breach of this certification is a violation of the Equal Opportunity Clause in this contract. As used in this certification, the term “segregated facilities” means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, timeclocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, or national origin, because of habit, local custom, or otherwise. The Bidder agrees that (except where it has obtained identical certifications from proposed subcontractors for specific time periods) it will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity Clause, and that it will retain such certifications in its files.
§ 1755.525

Section 2. During the performance of this contract, the Contractor agrees as follows:

(a) The Contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex or national origin. The Contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer; recruitment or selection; recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

(b) The Contractor will, in all solicitations or advertisements for employment placed by or on behalf of the Contractor, state that all qualified applicants shall receive consideration for employment without regard to race, color, religion, sex or national origin.

(c) The Contractor will send to each labor union or representative of workers with which the Bidder has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers’ representative of the Contractor’s commitments under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(d) The Contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations and relevant orders of the Secretary of Labor.

(e) The Contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by rules, regulations and orders of the Secretary of Labor, or pursuant thereto, and will permit access to the Contractor’s books, records and accounts by the administering agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations and orders.

(f) In the event of the Contractor’s noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations or orders, this contract may be canceled, terminated or suspended in whole or in part, and the Contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with provisions of Executive Order 11246 of September 24, 1965, and such other sanctions as may be imposed and remedies invoked as provided in the said Executive Order 11246 of September 24, 1965, or by rule, regulation or order of the Secretary of Labor, or as otherwise provided by law.

(g) The Contractor will include the portion of the sentence immediately preceding paragraph (a) and the provisions of paragraphs (a) through (g) in every subcontract or purchase order unless exempted by rules, regulations or orders of the Secretary of Labor issued pursuant to Section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The Contractor will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including actions for noncompliance: Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the administering agency, the Contractor may request the United States to enter into such litigation to protect the interests of the United States.

(a) As used in these specifications:

“Covered area” means the geographical area described in the solicitation from which this contract resulted.

“Director” means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;

“Employer identification number” means the Federal Social Security number used on the Employer’s Quarterly Federal Tax Return, U.S. Treasury Department Form 941, and

“Minority” includes:

(i) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);

(ii) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);

(iii) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands);

(iv) American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

(b) Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of $10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.
The Contractor shall provide notice of these action steps at least as extensive as the following:

(i) Maintain a current file of the names, addresses and telephone numbers of each minority and female individual referred to the Contractor or if referred, not employed by the Contractor, this shall be documented in the file with the reason therefore, along with whatever additional actions the Contractor may have taken.

(iv) Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not re-ferred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor’s efforts to meet its obligations.

(v) Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor’s employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these
programs to the sources compiled under (g)(iii) above.

(vi) Disseminate the Contractor’s EEO policy by providing notice of the policy to unions, trade associations, and other persons requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

(vii) Review, at least annually, the company’s EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

(viii) Disseminate the Contractor’s EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor’s EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.

(ix) Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor’s recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

(x) Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a Contractor’s work force.

(xi) Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.

(xii) Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

(xiii) Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor’s obligations under these specifications are being carried out.

(xiv) Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

(xv) Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

(xvi) Conduct a review, at least annually, of all supervisors’ adherence to and performance under the Contractor’s EEO policies and affirmative action obligations.

(h) Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (g) (i) through (xvi). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar group of which the Contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under (g) (i) through (xvi) of these specifications provided that the Contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor’s minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor’s and failure of such a group to fulfill an obligation shall not be a defense for the Contractor’s noncompliance.

(i) A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of Executive Order 11246 if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goals for women...
generally, the Contractor may be in violation of Executive Order 11246 if a specific minority group of women is underutilized.

(i) The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.

(k) The Contractor shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.

(l) The Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

(m) The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph (g) of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of Executive Order 11246, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60–4.8.

(n) The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

(o) Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g. those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

Section 4. In this Article VI—

(a) The term “Contractor” shall also mean “Bidder” or “Subcontractor” as applicable.

(b) The provisions of sections 2 & 3 are applicable to the extent required by law. In determining whether these Sections are applicable to the extent required by law, reference should be made to Office of Federal Contract Compliance Programs regulations (41 CFR part 60).

ARTICLE VII
MISCELLANEOUS

Section 1. Definitions.

The term “Completion of the Contract” shall mean accomplishment of Completion of the Project for all central offices (and associated remote switching terminals), features and services listed under Column 1, “Project,” in Article I, Section 1, and all alternatives accepted by the Owner, on the Owner’s Acceptance.

The term “Completion of Installation” shall mean full performance by the Owner and all amendments and revisions thereof, for a Project, except that it shall not include the acceptance tests nor performance of the Contractor’s obligations under the Contract and all amendments and revisions thereof, for a Project, except that it shall not include the acceptance tests nor performance of the Contractor’s obligations in respect of (i) releases of lien and Certificate of Contractor under Article III, section 2, hereof and (ii) other final documents. The actual date of Completion of Installation shall be the date the Contractor submits to the Owner written notification that the Project is completed in conformance with the Specifications and ready for the Owner’s acceptance inspection and tests as provided for under Article II, section 4.

The term “Completion of the Project” shall mean full performance by the Bidder of the Contractor’s obligations herein set out and all amendments and revisions thereof for a Project, except that it shall not include the acceptance tests nor performance of the Contractor’s obligations herein set out and all amendments and revisions thereof for a Project, except that it shall not include the acceptance tests nor performance of the Bidder’s obligations in respect of (i) releases of lien and Certificate of Contractor under Article III, section 2, hereof and (ii) other final documents. The actual date of Completion of the Project is sixty (60) days after Completion of Installation as specified under Column 7, “Completion of Installation,” in Article I, section 1, as amended or adjusted under Article II, section 1, and section 4. The scheduled date for Completion of the Project is the date from which liquidated damages are computed. The actual date of Completion of the Project shall be the date of the receipt by the Owner from the Bidder of (a) all documents listed in Article III, section 2, (b) other final documents, and (c) written notification that all deficiencies listed on the RUS Form 517, Results of Acceptance Test, have been corrected; provided, that the final inspection and tests by the Owner finds the deficiencies satisfactorily resolved. If the deficiencies have not been satisfactorily resolved, the actual date of Completion of the Project shall be the date that the deficiencies are fully and satisfactorily resolved as determined by subsequent Owner’s tests. The Certificate of
Completion approved and signed by the Owner and approved in writing by the Administrator shall be conclusive evidence as to the fact of Completion of the Project and the fact of Acceptance thereof. Full compliance with the procedure for “Completion of the Project” and an individual Certificate of Completion is required for each Project listed under Column 1, “Project,” in Article I, section 1. The Contract shall consist of the Notice and Instructions to Bidders, the Bidder’s Proposal and the Owner’s Acceptance, the Contractor’s Bond and the Specifications.

The term “days” shall mean calendar days.

The term “minor errors or irregularities” shall mean a defect or variation in a Bidder’s bid that is a matter of form and not of substance. Errors or irregularities are “minor” if they can be corrected or waived without being prejudicial to other Bidders and when they do not affect the price, quantity, quality, or timeliness of construction. Unless otherwise noted, the borrower determines whether an error or irregularity is “minor.”

The term “placed in service” shall mean used by the Owner to earn revenue.

The term “Project” shall mean a central office and all associated remote switching terminals (if any), a remote switching terminal if purchased without a supporting central office, a feature (or group of features), or a service (or group of services), which is listed under Column 1, “Project,” in Article I, section 1. The only instance in which a remote switching terminal can constitute a separate Project is where such remote switching terminal is purchased with associated modifications to its supporting host switch but no other modifications to the host switch are specified. A Project will have a single completion schedule listed under Column 7, “Completion of Installation,” in Article I, section 1, and a single liquidated damages amount shown in Article V, section 2. The Contract may consist of one or more Projects.

The term “Software” shall mean computer programs contained on a tape, disc, semiconductor device or other memory device or system memory consisting of logic instructions and instruction sequences in machine-readable object code, which manipulate data in the central processor, control and perform input/output operations, perform error diagnostic and recovery routines, control call processing, and perform peripheral control, and administrative and maintenance functions, as well as associated documentation, excluding source code, used to describe, maintain and use the programs provided under the Contract.

The term “Specifications” shall mean the minimum performance requirements of the Owner as contained in the documents listed below, which are either attached or become a part of the Contract by reference, as amended by specific written exceptions contained in the Bidder’s proposal and accepted by the Owner and the Administrator:

RUS Form ______, dated ______
RUS Form ______, dated ______

Section 2. Continuing Equipment Support—Parts, Service, and Software. In addition to warranty repairs and replacement, the Bidder shall offer repair service and repair parts to the Owner in accordance with the Bidder’s practices and terms then in effect, for the Bidder’s manufactured equipment furnished pursuant to this Agreement. Such repair service or repair parts shall be available for as long as the Bidder is manufacturing or stocking such equipment, or for no less than eight (8) years after the Bidder has ceased manufacturing or offering for sale such equipment. The Bidder shall also offer software support services to the Owner in accordance with the Bidder’s practices, terms, and charges then in effect, but in any event for no less than five (5) years after the Bidder has ceased manufacturing or offering for sale such software.

Section 3. Materials and Supplies. The Bidder shall use only such unmanufactured articles, materials and supplies as have been mined or produced in the United States, Mexico or Canada and only such manufactured articles, materials and supplies as have been manufactured in the United States, Mexico or Canada substantially all from articles, materials or supplies mined, produced or manufactured, as the case may be, in the United States, Mexico or Canada; provided that foreign articles, materials or supplies may be used in the event and to the extent that the Administrator shall expressly authorize in writing such use pursuant to the provisions of the Rural Electrification Act of 1938, being Title IV of Public Resolution No. 122, 75th Congress, approved June 21, 1938.

The Bidder agrees to submit to the Owner such certificate or certificates, signed by the Bidder and all subcontractors, with respect to compliance with the foregoing provision as the Administrator from time to time may require.

Section 4. Bond. The Bidder shall furnish to the Owner a Contractor’s Bond in conformance with the requirements of 7 CFR part 1788, subpart C.

Section 5. Confidentiality. All information supplied by the Bidder to the Owner which bears a legend or notice restricting its use, copying, or dissemination, except insofar as it may be in the public domain through no acts attributable to the Owner, shall be treated by the Owner as confidential information, and the Owner shall not reproduce any such information except for its own internal use and as authorized by this Contract, and shall use any information only for archival backup, in-house training, operating, maintenance and administrative purposes and in conjunction with its use of the
equipment, materials and software furnished hereunder. All information supplied to the Bidder by the Owner which bears a legend or notice restricting its use, copying, or dissemination, or which is clearly in the public domain through no acts attributable to the Bidder, shall be treated by the Bidder as confidential information, and shall not be used by the Bidder for any purpose adverse to the interests of the Owner, and shall not be reproduced or distributed by the Bidder except for the Bidder’s use in its performance under this Contract. The foregoing confidentiality obligations do not apply to information which is independently developed by the receiving party or which is lawfully received by the receiving party free of restriction from another source having a right to so furnish such information, or is already known to the receiving party at the time of disclosure free of restriction. If the Bidder has failed to provide continuing equipment support as described in Article VII, section 2, the Owner is released from this obligation. This provision does not restrict release of information by the United States of America pursuant to the Freedom of Information Act or other legal process.

Section 6. Entire Agreement. The terms and conditions of this Contract as approved by RUS supersede all prior oral or written understandings between the parties. There are no understandings or representations, expressed or implied, not expressly set forth herein.

Section 7. Survival of Obligations. The rights and obligations of the parties, which by their nature, would continue beyond the termination, cancellation, or expiration of this Contract, shall survive such termination or expiration.

Section 8. Non-Waiver. No waiver of any terms or conditions of this Contract, or the failure of either party to enforce strictly any such term or condition on one or more occasions, shall be construed as a waiver of the same or of any other terms or conditions of this Contract on any other occasion.

Section 9. Releases Void. Neither party shall require releases or waivers of any personal rights from representatives or employees of the other in connection with visits to its premises, nor shall such parties plead such releases or waivers in any action or proceeding.

Section 10. License. The Bidder shall comply with all applicable construction codes.

(a) The Bidder warrants that it possesses contractor’s license number ______, which is valid in the State of ______, in which the installation site (as distinguished from furnishing and delivery of equipment and materials), provided that; (a) the Bidder shall remain responsible for the performance thereof and (b) the Bidder shall obtain the consent of the Surety to such subcontract. A copy of such consent shall be submitted to the Owner and the Administrator.

Section 11. Nonassignment of Contract. The Bidder shall not assign the Contract, effected by acceptance of this proposal, or any part hereof, or enter into any contract with any person, firm or corporation, for the performance of the Bidder’s obligations hereunder, or any part hereof, without the approval in writing of the Owner, the Surety, and the Administrator. However, the Bidder may subcontract the whole or any part of the installation work to be performed at the installation site, (as distinguished from furnishing and delivery of equipment and materials), provided that; (a) the Bidder shall remain responsible for the performance thereof and (b) the Bidder shall obtain the consent of the Surety to such subcontract. A copy of such consent shall be submitted to the Owner and the Administrator.

Section 12. Choice of Law. The rights and obligations of the parties and all interpretations and performance of this Contract shall be governed in all respects by the laws of the State of ______, except for its rules with respect to the conflict of laws.

Section 13. Approval of the Administrator. The acceptance of this proposal by the Owner shall not create a contract unless such acceptance shall be approved in writing by the Administrator within ninety (90) days after the date hereof.

DATE OF ACCEPTANCE

[End of clause]

(The information collection and record-keeping requirements of this section have been approved by the Office of Management and Budget (OMB) under control number 0572-0059)

[59 FR 31126, June 17, 1994, as amended at 60 FR 1711, Jan. 5, 1995]

§§ 1755.526—1755.699 [Reserved]

§ 1755.700 RUS specification for aerial service wires.

§ 1755.701 Scope.

(a) This section covers the requirements for aerial service wires intended for aerial subscriber drops.

(b) The aerial service wires can be either copper coated steel reinforced or nonmetallic reinforced designs.

(c) For the copper coated steel reinforced design, the reinforcing members are the conductors.

(1) The conductors are solid copper-covered steel wires.

(2) The wire structure is completed by insulating the conductors with an overall extruded plastic insulating compound.

(d) For the nonmetallic reinforced design, the conductors are solid copper individually insulated with an extruded solid insulating compound.

(1) The insulated conductors are either laid parallel (two conductor design only) or twisted into pairs (a star-quad configuration is permitted for two pair wires).

(2) The wire structure is completed by the application of nonmetallic reinforcing members and an overall plastic jacket.

(e) All wires sold to RUS borrowers for projects involving RUS loan funds under §§ 1755.700 through 1755.704 must be accepted by RUS Technical Standards Committee “A” (Telecommunications). For wires manufactured to the specification of §§ 1755.700 through 1755.704, all design changes to an accepted design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.

(f) Materials, manufacturing techniques, or wire designs not specifically addressed by §§ 1755.700 through 1755.704 may be allowed if accepted by RUS. Justification for acceptance of modified materials, manufacturing techniques, or wire designs must be provided to substantiate product utility and long term stability and endurance.

[61 FR 26074, May 24, 1996]

§ 1755.702 Copper coated steel reinforced (CCSR) aerial service wire.

(a) Conductors. (1) Each conductor shall comply with the requirements specified in the American National Standard Institute/Insulated Cable Engineers Association, Inc. (ANSI/ICEA) S-89-648-1993, paragraphs 2.1 through 2.1.5. The ANSI/ICEA S-89-648-1993 Standard for Telecommunications Aerial Service Wire, Technical Requirements (approved by ANSI July 11, 1994) is incorporated by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/ICEA S-89-648-1993 are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from ICEA, P. O. Box 440, South Yarmouth,
Rural Utilities Service, USDA § 1755.702

MA 02664, telephone number (508) 394-4424.

(2) Factory joints in conductors shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 2.1.6.

(b) Conductor insulation. (1) The raw materials used for the conductor insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.1.1.

(2) The raw materials shall be accepted by RUS prior to their use.

(3) The finished conductor insulation shall be free from holes, splits, blisters, or other imperfections and shall be as smooth as is consistent with best commercial practice.

(4) The finished conductor insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraphs 3.1.5 through 3.1.5.4.

(5) The insulation shall have a minimum spot thickness of not less than 0.9 millimeters (mm) (0.03 inches (in.)) at any point.

(c) Wire assembly. (1) The two conductors shall be insulated in parallel to form an integral configuration.

(2) The finished wire assembly shall be either a flat or a notched oval. Other finished wire assemblies may be used provided that they are accepted by RUS prior to their use.

(3) The overall dimensions of the finished wire assembly shall be in accordance with the following requirements:

<table>
<thead>
<tr>
<th>Diameter</th>
<th>Minimum mm (in.)</th>
<th>Maximum mm (in.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Major</td>
<td>5.5 (0.22)</td>
<td>8.0 (0.31)</td>
</tr>
<tr>
<td>Minor</td>
<td>3.0 (0.12)</td>
<td>5.0 (0.19)</td>
</tr>
</tbody>
</table>

(d) Conductor marking. The insulated conductors of a finished wire shall be marked in accordance with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.1.4.

(e) Electrical requirements—(1) Conductor resistance. The direct current (dc) resistance of each conductor in a completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.2.

(2) Wet mutual capacitance. The wet mutual capacitance of the completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.3.

(3) Wet attenuation. The wet attenuation of the completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.4.

(4) Wet insulation resistance. The wet insulation resistance of the completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.5.

(5) Dielectric strength. (i) The wet dielectric strength between conductors and between each conductor of the completed CCSR aerial service wire and the surrounding water shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.6.

(ii) The dry dielectric strength between conductors of the completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.7.

(6) Fusing coordination. The completed CCSR aerial service wire shall comply with the fusing coordination requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.8.

(7) Insulation imperfections. Each length of completed CCSR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.1.9.

(f) Mechanical requirements—(1) Impact test. (i) All CCSR aerial service wires manufactured in accordance with this section shall comply with the unaged impact test specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.2.

(ii) All CCSR aerial service wires manufactured in accordance with this section shall comply with the aged impact test specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.3.

(2) Abrasion resistance test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the abrasion resistance test specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.4.

(3) Static load test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the static load test specified in...
§ 1755.703 Nonmetallic reinforced (NMR) aerial service wire.

(2) Factory joints made in the conductors during the manufacturing process shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 9.2.2.

(b) Conductor insulation. (1) The raw materials used for the conductor insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraphs 3.2 through 3.2.2.

(2) The finished conductor insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.2.3.

(3) The dimensions of the insulated conductors shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.2.3.1.

(4) The colors of the insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.2.3.2.

(5) A permissible overall performance level of faults in conductor insulation shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 3.2.3.3.

§ 1755.703 Plasticizer compatibility test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the plasticizer compatibility test specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.8.

(g) Environmental requirements—(i) All CCSR aerial service wires manufactured in accordance with this section shall comply with the unaged cold temperature handling test specified in ANSI/ICEA S-89-648-1993, paragraph 8.2.1.

(ii) All CCSR aerial service wires manufactured in accordance with this section shall comply with the aged cold temperature handling test specified in ANSI/ICEA S-89-648-1993, paragraph 8.2.2.

(2) Light absorption test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the light absorption test specified in ANSI/ICEA S-89-648-1993, paragraph 8.2.3.

(3) Low temperature separation test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the low temperature separation test specified in ANSI/ICEA S-89-648-1993, paragraph 8.2.4.

(4) Flammability test. All CCSR aerial service wires manufactured in accordance with this section shall comply with the flammability test specified in ANSI/ICEA S-89-648-1993, paragraph 8.3.

(h) Identification marker. Each length of CCSR aerial service wire shall be identified in accordance with ANSI/ICEA S-89-648-1993, paragraph 9.1.4. When surface marking is employed, the color of the initial marking shall be either white or silver.

(i) Durability of marking. The durability of the marking of the CCSR aerial service wire shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 9.1.6.
The length count and number of faults shall be recorded. The information shall be retained for a period of 6 months and be available for review by RUS when requested.

(6) Repairs to the conductor insulation during manufacture are permissible. The method of repair shall be accepted by RUS prior to its use. The repaired insulation shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 3.2.3.3.

(7) All repaired sections of insulation shall be retested in the same manner as originally tested for compliance with paragraph (b)(5) of this section.

(8) The colored insulating material removed from or tested on the conductor, from a finished wire shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraphs 3.2.4 through 3.2.4.5.

(c) Identification of pairs and layup of pairs.

(i) The insulation shall be colored coded to identify:

(a) The tip and ring conductor of each pair; and
(b) Each pair in the completed wire.

(ii) The colors to be used in the pairs together with the pair numbers shall be in accordance with the table specified in ANSI/ICEA S-89-648-1993, paragraph 4.1.1.

(iii) The insulated conductors shall be either layed parallel (two conductor design only) or twisted into pairs.

(iv) When using parallel conductors for the two conductor design, the parallel conductors shall be designed to enable the wire to meet the electrical requirements specified in paragraph (g) of this section.

(v) When twisted pairs are used, the following requirements shall be met:

(a) The pair twists shall be designed to enable the wire to meet the electrical requirements specified in paragraph (g) of this section; and
(b) The average length of pair twists in any pair in the finished wire, when measured on any 3 meter (10 foot) length, shall not exceed the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 4.1.

(vi) An alternative method of forming the two-pair wire is the use of a star-quad configuration.

(a) The assembly of the star-quad shall be such as to enable the wire to meet the electrical requirements specified in paragraph (g) of this section.

(b) The star-quad configuration shall be assembled in accordance with ANSI/ICEA S-89-648-1993, paragraph 4.1.2.

(c) The average length of twist for the star-quad in the finished wire, when measured on any 3 meter (10 foot) length, shall not exceed the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 4.1.

(d) The color scheme used to provide identification of the tip and ring conductors of each pair in the star-quad shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraphs 6.1 and 6.1.1.

(e) Wire jacket. (1) The jacket shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraphs 5.1 and 5.1.1.

(f) Wire assembly. The finished wire assembly shall be in accordance with ANSI/ICEA S-89-648-1993, paragraph 5.1.3 and Figure 5-1.

(g) Electrical requirements—(1) Conductor resistance. The dc resistance of each conductor in a completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.2.

(2) Resistance unbalance. (i) The dc resistance unbalance between the two conductors of any pair in a completed NMR aerial service wire and the average resistance unbalance of all pairs in a Quality Control Lot shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.3.

(ii) The resistance unbalance between the tip and ring conductors shall be random with respect to the direction of unbalance. That is, the resistance of the tip conductors shall not be consistently higher with respect to the ring conductors and vice versa.

(3) Dry mutual capacitance. The dry mutual capacitance of the completed NMR aerial service wire shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.4, Type 1.
7 CFR Ch. XVII (1-1-98 Edition)

§ 1755.703

(4) Pair-to-pair capacitance unbalance. The pair-to-pair capacitance unbalance as measured on the completed NMR aerial service wire shall comply with the requirements specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.5.

(5) Attenuation. (i) The dry attenuation of the completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.7.

(ii) The wet attenuation of the completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.8.

(6) Insulation resistance. (i) The dry insulation resistance of the completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.9.

(ii) The wet insulation resistance of the completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.10.

(7) Wet dielectric strength. The wet dielectric strength between conductors and between each conductor of the completed NMR aerial service wire and the surrounding water shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.11.

(8) Fusing coordination. The completed NMR aerial service wire shall comply with the fusing coordination requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.13.

(9) Crosstalk loss. (i) The output-to-output far-end crosstalk loss (FEXT) for any pair of completed NMR aerial service wire shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 7.2.14.

(ii) All NMR aerial service wires manufactured in accordance with this section shall comply with the aged impact test specified in §1755.702(f)(1)(ii).

(2) Abrasion resistance test. All NMR aerial service wires manufactured in accordance with this section shall comply with the abrasion resistance test specified in §1755.702(f)(2).

(3) Static load test. All NMR aerial service wires manufactured in accordance with this section shall comply with the static load test specified in §1755.702(f)(3).

(4) Elongation test. All NMR aerial service wires manufactured in accordance with this section shall comply with the elongation test specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.7.

(5) Plasticizer compatibility test. All NMR aerial service wires manufactured in accordance with this section shall comply with the plasticizer compatibility test specified in §1755.702(f)(4).

(i) Environmental requirements—(1) Cold temperature handling test. (i) All NMR aerial service wires manufactured in accordance with this section shall comply with the unaged cold temperature handling test specified in §1755.702(g)(1)(i).

(ii) All NMR aerial service wires manufactured in accordance with this section shall comply with the aged cold temperature handling test specified in §1755.702(g)(1)(ii).

(2) Light absorption test. All NMR aerial service wires manufactured in accordance with this section shall comply with the light absorption test specified in §1755.702(g)(2).

(3) Flammability test. All NMR aerial service wires manufactured in accordance with this section shall comply with the flammability test specified in §1755.702(g)(3).

(4) Wire listing. All NMR aerial service wires manufactured in accordance with this section shall comply with the listing requirements specified in §1755.702(g)(4).

(j) Ripcord (optional). (1) A ripcord may be used in the NMR aerial service wire structure at the option of the manufacturer unless specified by the end user.

(2) When a ripcord is used it shall comply with the requirements specified
in ANSI/ICEA S-89-648-1993, paragraphs 4.2 through 4.2.3.

(k) Identification marker. Each length of NMR aerial service wire shall be identified in accordance with ANSI/ICEA S-89-648-1993, paragraphs 4.2 through 9.1.4. When surface marking is employed, the color of the initial marking shall be either white or silver.

(1) Length marking (optional). (1) Sequentially numbered length marking of the completed NMR aerial service wire may be used at the option of the manufacturer unless specified by the end user.

(2) When sequentially numbered length markings are used, the length markings shall be in accordance with §1755.702(i)(2).

(m) Durability of marking. The durability of the marking of the NMR aerial service wire shall comply with the requirements specified in §1755.702(j).

§ 1755.704 Requirements applicable to both CCSR and NMR aerial service wires.

(a) Acceptance testing. (1) The tests described in §§1755.700 through 1755.704 are intended for acceptance of wire designs and major modifications of accepted designs. What constitutes a major modification is at the discretion of RUS. These tests are intended to show the inherent capability of the manufacturer to produce wire products having long life and stability.

(2) For initial acceptance, the manufacturer shall:

(i) Certify that the product fully complies with each paragraph in §§1755.700 through 1755.704;

(ii) Agree to periodic plant inspections by RUS;

(iii) Certify whether the product complies with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 903 note), as amended (the “REA Buy American provision”);

(iv) Submit at least three written user testimonials concerning field performance of the product; and

(v) Provide any other nonproprietary data deemed necessary by the Chief, Outside Plant Branch (Telecommunications).

(3) In order for RUS to consider a manufacturer’s request that a product be requalified, the manufacturer shall certify not later than June 30 of the year in which requalification is required, that the product:

(i) Fully complies with each paragraph in §§1755.700 through 1755.704; and

(ii) Does or does not comply with the domestic origin manufacturing provisions of the REA Buy American provisions. The required certifications shall be dated within 90 days of the submission.

(4) Initial and requalification acceptance requests should be addresses to: Chairman, Technical Standards Committee “A” (Telecommunications), Telecommunications Standards Division, Rural Utilities Service, AG Box 1598, Washington, DC 20250-1598.

(b) Extent of testing—(1) Tests on 100 percent of completed wire. (i) Each conductor in the completed CCSR and NMR aerial service wire shall be tested for continuity in accordance with ANSI/ICEA S-89-648-1993, paragraphs 7.1.1 and 7.2.1, respectively. The ANSI/ICEA S-89-648-1993 Standard For Telecommunications Aerial Service Wire, Technical Requirements (approved by ANSI July 11, 1994) is incorporated by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/ICEA S-89-648-1993 are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from ICEA, P. O. Box 440, South Yarmouth, MA 02664, telephone number (508) 394-4424.

(ii) Each conductor in the completed CCSR and NMR aerial service wire shall be tested for shorts in accordance with ANSI/ICEA S-89-648-1993, paragraphs 7.1.1 and 7.2.1, respectively.

(iii) Each length of completed CCSR and NMR aerial service wire shall be tested for insulation imperfections in accordance with §1755.702(e)(7) and §1755.703(b)(5), respectively.

(2) Capability tests. Tests on a quality assurance basis shall be made as frequently as is required for each manufacturer to determine and maintain compliance with:
(i) Performance of the conductors; 
(ii) Performance of the conductor insulation and jacket material; 
(iii) Sequential marking and lettering; 
(iv) Mutual capacitance, capacitance unbalance, attenuation, and crosstalk; 
(v) Conductor resistance, resistance unbalance, and insulation resistance; 
(vi) Dielectric strength and fusing coordination; 
(vii) Impact, abrasion, static load, elongation, and plasticizer compatibility tests; and 
(viii) Cold temperature handling, light absorption, low temperature separation, and flammability tests.

(c) Summary of records of electrical and physical tests. (1) Each manufacturer shall maintain suitable summary records for a period of at least 3 years of all electrical and physical tests required on completed wire as set forth in paragraph (b) of this section. The test data for a particular lot of aerial service wire shall be in a form such that it may be readily available to the purchaser or to RUS upon request.

(2) Measurements and computed values shall be rounded off to the number of places or figures specified for the requirement according to ANSI/ICEA S-89-648-1993, paragraph 1.3.

(d) Manufacturing irregularities. (1) Repairs to the insulation of CCSR aerial service wires are not permitted in wires supplied to end users under §§ 1755.700 through 1755.704.

(2) Repairs to the jacket of NMR aerial service wires are not permitted in wires supplied to end users under §§ 1755.700 through 1755.704.

(e) Splicing. Splicing of completed CCSR and NMR aerial service wires shall comply with the requirement specified in ANSI/ICEA S-89-648-1993, paragraph 8.1.1.

(f) Preparation for shipment. (1) CCSR and NMR aerial service wire shall be shipped either in coils or on reels.

(ii) A waterproof corrugated board or other suitable means of protection accepted by RUS prior to its use may be applied to the reel. If the waterproof corrugated board or other suitable material is used for protection, it shall be suitably secured in place to prevent damage to the wire during storage and handling. The use of the waterproof corrugated board or other suitable means of protection shall be at the option of the manufacturer unless specified by the end user; 
(iii) The outer end of the wire shall be securely fastened to the reel head so as to prevent the wire from becoming loose in transit. The inner end of the wire shall be securely fastened in such a way as to make it readily available if required for electrical testing. Spikes, staples, or other fastening devices which penetrate the conductor insulation of the CCSR aerial service wire and the jacket of the NMR aerial service wire shall not be used. The method of fastening the wire ends shall be accepted by RUS prior to their use; 
(iv) Each length of wire shall be wound on a separate reel;

(v) Each reel shall be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the wire on the reel; and 
(vi) Each reel shall be stenciled or labeled on either one or both sides with the following information:

(A) Customer order number;
(B) Manufacturer’s name and product code;
(C) Factory reel number and year of manufacture;
(D) Gauge of conductors and pair size of wire;
(E) Length of wire; and
(F) RUS designation letter “K.”

(3) When CCSR and NMR aerial service wires are shipped in coils the following provisions shall apply:

(i) The diameter of the coil shall be large enough to prevent damage to the wire from coiling or uncoiling; 
(ii) The nominal length of the wire in a coil shall be 305 meters (1,000 feet). No coil shall be less than 290 meters (950 feet) long or more than 460 meters (1,500 feet) long; however, 25 percent of the total number of coils may be less than 305 meters (1,000 feet).
(iii) The coils of wire shall be wound securely with strong tape in four separate evenly spaced places;
(iv) The coils may be protected from damage by wrapping the coil with heavy paper, burlap, or other suitable material accepted by RUS prior to its use. The use of the heavy paper, burlap, or other suitable means of protection shall be at the option of the manufacturer unless specified by the end user; and
(v) Each coil shall be tagged with the following information:
A. Customer order number;
B. Manufacturer’s name and product code;
C. Year of manufacture;
D. Gauge of conductors and pair size of wire;
E. Length of wire; and
F. RUS designation letter “K.”
(4) In lieu of wrapping the coil with heavy paper, burlap, or other suitable material, the coil may be packaged in a moisture resistant carton.
(5) When the coils are shipped in moisture resistant cartons, each carton shall be marked with the information specified in paragraphs (f)(3)(v)(A) through (f)(3)(vi)(F) of this section.
(6) Other methods of shipment may be used if accepted by RUS prior to their use.
(7) When NMR aerial service wire is shipped, the ends of the wire shall be sealed in accordance with ANSI/ICEA S-89-648-1993, paragraph 9.2.

§ 1755.860 RUS specification for filled buried wires.

(a) Scope. (1) This section covers the requirements for filled buried wires intended for direct burial as a subscriber drop and/or distribution wire.
(i) The conductors are solid copper, individually insulated with an extruded solid insulating compound.
(ii) The insulated conductors are twisted into pairs (a star-quad configuration is permitted for the two pair wires) which are then stranded or oscillated to form a cylindrical core.
(iii) A moisture resistant filling compound is applied to the stranded conductors completely covering the insulated conductors and filling the interstices between the pairs.
(iv) The wire structure is completed by the application of an optional core wrapping material, an inner jacket, a flooding compound, a shield, a flooding compound, and an overall plastic jacket.
(2) The number of pairs and gauge size of conductors which are used within the RUS program are provided in the following table:

<table>
<thead>
<tr>
<th>American Wire Gauge (AWG)</th>
<th>Pairs</th>
</tr>
</thead>
<tbody>
<tr>
<td>22 ........................</td>
<td>24</td>
</tr>
<tr>
<td>2 .......................</td>
<td>2</td>
</tr>
<tr>
<td>3 .......................</td>
<td>3</td>
</tr>
</tbody>
</table>

(3) All wires sold to RUS borrowers for projects involving RUS loan funds under this section must be accepted by RUS Technical Standards Committee “A” (Telephone). For wires manufactured to the specification of this section, all design changes to an accepted design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.
(4) Materials, manufacturing techniques, or wire designs not specifically addressed by this section may be allowed if accepted by RUS. Justification for acceptance of modified materials, manufacturing techniques, or wire designs must be provided to substantiate product utility and long term stability and endurance.
(5) The American National Standards Institute/Electronic Industries Association (ANSI/EIA) 359-A-84, EIA Standard Colors for Color Identification and Coding, referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/EIA 359-A-84 are available for inspection during normal business hours at RUS, room 2845, U.S Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from EIA, 2001 Pennsylvania Avenue, NW., suite 900, Washington, DC 20006, telephone number (202) 457-4966.
(6) American Society for Testing and Materials specifications (ASTM) A 505-87, Standard Specification for Steel,

(b) Conductors and conductor insulation. (1) Each conductor must be a solid round wire of commercially pure annealed copper. Conductors must meet the requirements of the American Society for Testing and Materials (ASTM) B 3-90 except that requirements for Dimensions and Permissible Variations are waived and elongation requirements are superseded by this section.

(2) The minimum conductor elongation in the final wire must comply with the following limits when tested in accordance with ASTM E 8-91.

<table>
<thead>
<tr>
<th>Conductor—AWG</th>
<th>Minimum Elongation—Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>22</td>
<td>20</td>
</tr>
<tr>
<td>24</td>
<td>16</td>
</tr>
</tbody>
</table>

(3) Joints made in conductors during the manufacturing process may be brazed, using a silver alloy solder and nonacid flux, or they may be welded using either an electrical or cold welding technique. Without made in uninsulated conductors, the two conductor ends must be butted. Splices made in insulated conductors need not be butted but may be joined in a manner acceptable to RUS.

(4)(i) The tensile strength of any section of a conductor containing a factory joint must not be less than 85 percent of the tensile strength of an adjacent section of the solid conductor of equal length without a joint.

(ii) Engineering Information: The sizes of wire used and their nominal diameters shall be as shown in the following table:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Nominal Diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Millimeters (mm)</td>
</tr>
<tr>
<td>22</td>

</tbody>
</table>
(5) Each conductor must be insulated with either a colored, solid, insulating grade, high density polyethylene or crystalline propylene/ethylene copolymer or with a solid natural primary layer and a colored, solid outer skin using one of the insulating materials listed in paragraphs (b)(5)(i) through (b)(5)(iii) of this section.

(i) The polyethylene raw material selected to meet the requirements of this section must be Type III, Class A, Category 4 or 5, Grade E9, in accordance with ASTM D 1248-84(1989).

(ii) The crystalline propylene/ethylene raw material selected to meet the requirements of this section must be Class PP 2008 40003 E11 in accordance with ASTM D 4101-82(1988).

(iii) Raw materials intended as conductor insulation furnished to these requirements must be free from dirt, metallic particles, and other foreign matter.

(iv) All insulating raw materials must be accepted by RUS prior to their use.

(6) All conductors in any single length of wire must be insulated with the same type of material.

(7) A permissible overall performance level of faults in conductor insulation must average not greater than one fault per 12,000 conductor meters (40,000 conductor feet) for each gauge of conductor.

(i) All insulated conductors must be continuously tested for insulation faults during the twinning operation with the method of test acceptable to RUS. The length count and number of faults must be recorded. The information must be retained for a period of 6 months and be available for review by RUS when requested.

(ii) The voltages for determining compliance with the requirements of this section are as follows:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Direct Current Voltages (Kilo-volts)</th>
</tr>
</thead>
<tbody>
<tr>
<td>22</td>
<td>6.0</td>
</tr>
<tr>
<td>24</td>
<td>5.0</td>
</tr>
</tbody>
</table>

(8) Repairs to the conductor insulation during manufacturing are permissible. The method of repair must be accepted by RUS prior to its use. The repaired insulation must be capable of meeting the relevant electrical requirements of this section.

(9) All repaired sections of insulation must be retested in the same manner as originally tested for compliance with paragraph (b)(7) of this section.

(10) Colored insulating material removed from or tested on the conductor, from a finished wire, must be capable of meeting the following performance requirements:

<table>
<thead>
<tr>
<th>Property</th>
<th>Polyethylene</th>
<th>Crystalline Propylene/Ethylene Copolymer</th>
</tr>
</thead>

(11) Testing procedures. The procedures for testing the insulation samples for compliance with paragraph (b)(10) of this section must be as follows:

(i) Melt flow rate. The melt flow rate must be determined as described in ASTM D 1238-90b. Condition E must be used for polyethylene. Condition L must be used for crystalline propylene/ethylene copolymer. The melt flow test must be conducted prior to the filling operation.
(ii) Tensile strength and ultimate elongation. Samples of the insulation material, removed from the conductor, must be tested in accordance with ASTM D 4565-90a using the following conditions. The minimum length of unclamped specimen must be 50 mm (2.0 in.). The minimum speed of jaw separation must be 25 mm (1.0 in.) per minute per 25 mm (1.0 in.) of unclamped specimen. The temperature of specimens and surrounding shall be $23 \pm 1\, ^\circ C$.

NOTE: Quality assurance testing at a jaw separation speed of 500 mm/min (20 in./min) is permissible. Failures at this rate must be retested at the 50 mm/min (2 in./min) rate to determine section compliance.

(iii) Cold bend. Samples of the insulation material on the conductor must be tested in accordance with ASTM D 4565-90a at a temperature of $-40 \pm 1\, ^\circ C$ with a mandrel diameter equal to 3 times the outside diameter of the insulated conductor. There must be no cracks visible to normal or corrected-to-normal vision.

(iv) Shrinkback. Samples of insulation must be tested for four hours in accordance with ASTM D 4565-90a. The temperature for the type of material is listed as follows:

<table>
<thead>
<tr>
<th>Material</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polyethylene</td>
<td>$115 \pm 1, ^\circ C$</td>
</tr>
<tr>
<td>Crystalline propylene/ethylene Copolymer</td>
<td>$130 \pm 1, ^\circ C$</td>
</tr>
</tbody>
</table>

(v) Oxygen induction time. Samples of insulation, which have been conditioned in accordance with paragraph 17.3 of ASTM D 4565-90a, must be tested in accordance with the procedures of ASTM D 4565-90a using copper pans and a test temperature of $199 \pm 1\, ^\circ C$.

(12) Other methods of testing may be used if acceptable to RUS.

(c) Identification of pairs and twisting of pairs. (1) The insulation must be colored to identify:

(i) The tip and ring conductor of each pair; and

(ii) Each pair in the completed wire.

(2) The colors to be used to provide identification of the tip and ring conductor of each pair are shown in the following table:

<table>
<thead>
<tr>
<th>Pair No.</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Tip</td>
</tr>
<tr>
<td>1</td>
<td>White</td>
</tr>
<tr>
<td>2</td>
<td>White</td>
</tr>
<tr>
<td>3</td>
<td>White</td>
</tr>
</tbody>
</table>

(3) Standards of color. The colors of the insulated conductors supplied in accordance with this section are specified in terms of the Munsell Color System (ASTM D 1535-89) and must comply with the "Table of Wire and Cable Limit Chips" as defined in ANSI/EIA-359-A-84. (Visual color standards meeting these requirements may be obtained directly from the Munsell Color Company, Inc., 2441 North Calvert Street, Baltimore, Maryland 21218).

(4) Positive identification of the tip and ring conductors of each pair by marking each conductor of a pair with the color of its mate is permissible. The method of marking must be accepted by RUS prior to its use.

(5) Other methods of providing positive identification of the tip and ring conductors of each pair may be employed if accepted by RUS prior to its use.

(6) The insulated conductors must be twisted into pairs.

(7) In order to provide sufficiently high crosstalk isolation, the pair twists must be designed to enable the wire to meet the capacitance unbalance and the crosstalk loss requirements of paragraphs (m)(2), (m)(3), and (m)(4) of this section.

(8) The average length of pair twists in any pair in the finished wire, when measured on any 3 meter (m) (10 foot(ft)) length, must not exceed 152 mm (6 in.).

(9) An alternative method of forming the two pair wire is the use of a star-quad configuration.

(i) The assembly of the star-quad must be such as to enable the wire to meet the capacitance unbalance and the crosstalk loss requirements of paragraphs (m)(2), (m)(3), and (m)(4) of this section.

(ii) The four individual insulated conductors must be twisted together to form a star-quad configuration with the tip and ring conductors of each pair diagonally opposite each other in the quad.
(iii) The average length of twist for the star-quad in the finished wire, when measured on any 3 m (10 ft) length, must not exceed 152 mm (6 in.).

(iv) The following color scheme must be used to provide identification of the tip and ring conductor of each pair in the star-quad:

<table>
<thead>
<tr>
<th>Pair No.</th>
<th>Color</th>
<th>Tip</th>
<th>Ring</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>White with blue stripe.</td>
<td>Blue</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>White with orange stripe.</td>
<td>Orange</td>
<td></td>
</tr>
</tbody>
</table>

(v) If desired, the blue and orange conductors may contain a white stripe. The stripes in this case must be narrow enough so that the tip and ring identification is obvious.

(d) Forming of the wire core. (1) Twisted pairs or star-quad configuration must be assembled in such a way as to form a substantially cylindrical group.

(2) The filling compound must be applied to the wire core in such a way as to provide a completely filled core as is commercially practical.

(3) If desired for manufacturing reasons, white or colored binders of non-hygroscopic and nonwicking material may be applied over the core.

(e) Filling compound. (1) After or during the stranding operation and prior to application of the optional core wrap and inner jacket, a homogeneous filling compound free of agglomerates must be applied to the wire core. The compound must be as nearly colorless as is commercially feasible and consistent with the end product requirements and pair identification.

(2) The filling compound must be free from dirt, metallic particles, and other foreign matter. It must be applied in such a way as to fill the space within the wire core.

(3) The filling compound must be nontoxic and present no dermal hazards.

(4) The filling compound must exhibit the following dielectric properties at a temperature of 23 ± 3°C when measured in accordance with ASTM D 150-87 or ASTM D 4872-88.

(i) The dissipation factor must not exceed 0.0015 at a frequency of 1 megahertz (MHz).

(ii) The dielectric constant must not exceed 2.30.

(5) The volume resistivity must not be less than 10^12 ohm-cm at a temperature of 23 ± 3°C when measured in accordance with ASTM D 257-91 or ASTM D 4872-88.

(6) The individual wire manufacturer must satisfy RUS that the filling compound selected for use is suitable for its intended application. The filling compound must be compatible with the wire components when tested in accordance with ASTM D 4568-86 at a temperature of 80°C.

(f) Core wrap (optional). (1) When a core wrap is used, it must consist of a layer of nonhygroscopic and nonwicking dielectric material. The wrap must be applied with an overlap.

(2) The core wrap must provide a sufficient heat barrier to prevent visible evidence of conductor insulation deformation or adhesion between conductors, caused by adverse heat transfer during the inner jacketing operation.

(3) If required for manufacturing reasons, white or colored binders of nonhygroscopic and nonwicking material may be applied over the core wrap.

(4) Sufficient filling compound must be applied to the core wrap that voids or air spaces existing between the core and inner side of the core wrap are minimized.

(g) Inner jacket. (1) An inner jacket must be applied over the core and/or core wrap.

(2) The jacket must be free from holes, splits, blisters, or other imperfections and must be as smooth and concentric as is consistent with the best commercial practice.

(3) The inner jacket material and test requirements must be as specified for the outer jacket material per paragraphs (j)(3) through (j)(5)(iv) of this section.

(4) The inner jacket thickness at any point must not be less than 0.5 mm (0.020 in.). The thickness must be determined from measurements on 50 mm (2 in.) samples taken not less than 0.3 m (1 ft) from either end of the wire. The average must be determined from 4 readings taken approximately 90° apart
on any cross section of the samples. The maximum and minimum points must be determined by exploratory measurements. The maximum thickness minus the minimum thickness at any cross section must not exceed 43 percent of the average thickness at that cross section.

(h) Flooding compound. (1) Sufficient flooding compound must be applied on all sheath interfaces so that voids and air spaces in these areas are minimized.

(2) The flooding compound must be compatible with the jacket when tested in accordance with ASTM D 4568-86 at a temperature of 80° C. The floodant must exhibit adhesive properties sufficient to prevent jacket slip when tested in accordance with the requirements of appendix A, paragraph (III)(5), of this section.

(3) The individual wire manufacturer must satisfy RUS that the flooding compound selected for use is acceptable for the application.

(i) Shield. (1) A shield must be applied either longitudinally or helically over the inner jacket.

(ii) If the shield is applied longitudinally, it must be corrugated.

(iii) If the shield is applied helically, it must be smooth.

(2) The overlap for longitudinally applied shields must be a minimum of 2 mm (0.075 in.) The overlap for helically applied shields must be a minimum of 23 percent of the tape width.

(3) General requirements for application of the shielding material are as follows:

(i) Successive lengths of shielding tapes may be joined during the manufacturing process by means of cold weld, electric weld, soldering with a nonacid flux, or other acceptable means;

(ii) Where two ends of a metal shield are to be joined together, care shall be taken to clean the metal surfaces in order to provide for a good mechanical and electrical connection;

(iii) The shields of each length of wire must be tested for continuity. A one meter (3 ft) section of shield containing a factory joint must exhibit not more than 110 percent of the resistance of a shield of equal length without a joint;

(iv) The breaking strength of any section of a shield tape containing a factory joint must not be less than 80 percent of the breaking strength of an adjacent section of the shield of equal length without a joint;

(v) The reduction in thickness of the shielding material due to the corrugating or application process must be kept to a minimum and must not exceed 10 percent at any spot; and

(vi) The shielding material must be applied in such a manner as to enable the wire to pass the bend test as specified in paragraph (n)(3) of this section.

(4) The following materials are acceptable for use as wire shielding:

(ii) Copper alloy 220. The shielding material, prior to application to the wire, must be in the fully annealed condition and shall conform to the requirements of ASTM B 694-86 for C22000 commercial bronze.

(iii) Copper-clad stainless steel. In addition to meeting the requirements of paragraph (ii)(4)(i) of this section, the shielding material, prior to application to the wire, must be in the fully annealed condition and must conform to the requirements of ASTM B 694-86, with a cladding ratio of 16/68/16 and 0.1016 ± 0.0076 mm.
Rural Utilities Service, USDA § 1755.860

must have a minimum electrical conductivity of 28 percent IACS when measured in accordance with ASTM B 193-87.

(iv) Copper alloy 664. In addition to meeting the requirements of paragraph (i)(4)(i) of this section, the shielding material, prior to application to the wire, must be annealed temper and must conform to the requirements of ASTM B 694-86 and must have a minimum electrical conductivity of 28 percent IACS when measured in accordance with ASTM B 193-87.

(v) Copper-clad alloy steel. In addition to meeting the requirements of paragraph (i)(4)(i) of this section, the shielding material, prior to application to the wire, must be in the fully annealed condition and the copper component must conform to the requirements of ASTM B 224-91 and the alloy steel component must conform to the requirements of ASTM A 505-87, with a cladding ratio of 16/68/16, and must have a minimum electrical conductivity of 28 percent IACS when measured in accordance with ASTM B 193-87.

(j) Outer jacket. (1) The outer jacket must provide the wire with a tough, flexible, protective covering which can withstand exposure to sunlight, to atmospheric temperatures and stresses reasonably expected in normal installation and service.

(2) The jacket must be free from holes, splits, blisters, or other imperfections and must be as smooth and concentric as is consistent with the best commercial practice.

(3) The raw material used for the outer jacket must be one of the five types listed in paragraphs (j)(3)(i) through (j)(3)(v) of this section. The raw material must contain an antioxidant to provide long term stabilization and the materials must contain a 2.60 ± 0.25 percent concentration of furnace black to provide ultraviolet shielding. Both the antioxidant and furnace black must be compounded into the material by the raw material supplier.

(i) Low density, high molecular weight polyethylene (LDHMW) must conform to the requirements of ASTM D 1248-84(1989), Type I, Class C, Category 4 or 5, Grade J 3.

(ii) Low density, high molecular weight ethylene copolymer (LDHMW) must conform to the requirements of ASTM D 1248-84(1989), Type I, Class C, Category 4 or 5, Grade J 3.

(iii) Linear low density, high molecular weight polyethylene (LLDHWM) must conform to the requirements of ASTM D 1248-84(1989), Type II, Class C, Category 4 or 5, Grade J 4.

(iv) Medium density polyethylene (MD) must conform to the requirements of ASTM D 1248-84(1989), Type II, Class C, Category 4 or 5, Grade J 4.

(v) Particle size of the carbon selected for use must not average greater than 20 nanometers.

(vi) Absorption coefficient must be a minimum of 400 in accordance with the procedures of ASTM D 3349-86.

(4) The outer jacketing material removed from or tested on the wire must be capable of meeting the following performance requirements:

<table>
<thead>
<tr>

(5) Testing procedures. The procedures for testing the jacket samples for compliance with paragraph (j)(4) of this section must be as follows:
§ 1755.860

(i) Melt flow rate. The melt flow rate must be as determined by ASTM D 1238-90b, Condition E. Jacketing material must be free from flooding and filling compound.

(ii) Tensile strength and ultimate elongation. Test in accordance with ASTM D 4565-90a, using a jaw separation speed of 500 mm/min (20 in./min) for low density material and 50 mm/min (2 in./min) for high and medium density materials.

(iii) Shrinkback. Test in accordance with the procedures specified in ASTM D 4565-90a using a test temperature of 100 ± 1 °C for low density material and a test temperature of 115 ± 1 °C for high and medium density materials.

(iv) Impact. The test must be performed in accordance with ASTM D 4565-90a using an impact force of 4 newton-meter (3 pound force-foot) at a temperature of −20 ± 2 °C. The cylinder must strike the sample at the shield overlap. A crack or split in the jacket constitutes failure.

(6) Jacket thickness. The minimum jacket thickness must be 0.64 mm (0.025 in.) except that the minimum thickness over the sheath slitting cord, if present, must be 0.46 mm (0.018 in.). The minimum point must be determined by exploratory measurements. The average thickness at any cross section must be determined from four readings including the minimum point, taken approximately 90° apart. The thickness measurement must exclude any jacket material that has formed into the corrugation. The maximum thickness at any cross section must not be greater than 155 percent of the minimum thickness.

(7) Eccentricity. The eccentricity of the jacket must not exceed 43 percent when calculated using the formula as follows:

\[
\text{Percent Eccentricity} = \left( \frac{\text{Maximum Thickness} - \text{Minimum Thickness}}{\text{Average Thickness}} \right) \times 100
\]

(k) Sheath slitting cord (optional). (1) Sheath slitting cords may be used in the wire structure at the option of the manufacturer.

(2) When a sheath slitting cord is used it must be nonhygroscopic and nonwicking, continuous throughout a length of wire, and of sufficient strength to open the sheath without breaking the cord.

(3) Sheath slitting cords must be capable of consistently slitting the jacket(s) and/or shield for a continuous length of 0.6 m (2 ft) when tested in accordance with the procedure specified in appendix B of this section.

(l) Identification marker and length marker. (1) Each length of wire must be permanently identified as to manufacturer and year of manufacture.

(2) The number of conductor pairs and their gauge size must be marked on the jacket.

(3) The marking must be printed on the jacket at regular intervals of not more than 1.5 m (5 ft).

(4) An alternative method of marking may be used if accepted by RUS prior to its use.

(5) The completed wire must have sequentially numbered length markers in FEET OR METERS at regular intervals of not more than 1.5 m (5 ft) along the outside of the jacket.

(6) The method of length marking must be such that for any single length of wire, continuous sequential numbering must be employed.

(7) The numbers must be dimensioned and spaced to produce good legibility and must be approximately 3 mm (0.125 in.) in height. An occasional illegible marking is permissible if there is a legible marking located not more than 1.5 m (5 ft) from it.

(8) The method of marking must be by means of suitable surface markings producing a clear, distinguishable, contrasting marking acceptable to RUS. Where direct or transverse printing is employed, the characters should be indented to produce greater durability of marking. Any other method of length marking must be acceptable to RUS as producing a marker suitable for the field. Size, shape and spacing of numbers, durability, and overall legibility of the marker will be considered in acceptance of the method.

(9) The accuracy of the length marking must be such that the actual length of any wire section is never less than the length indicated by the marking and never more than one percent greater than the length indicated by the marking.
(10) The color of the initial marking must be white or silver. If the initial marking fails to meet the requirements of the preceding paragraphs, it will be permissible to either remove the defective marking and re-mark with the white or silver color or leave the defective marking on the wire and re-mark with yellow. No further re-marking is permitted. Any re-marking must be on a different portion of the wire circumference than any existing marking when possible and have a numbering sequence differing from any other existing marking by at least 5,000.

(11) Any reel of wire which contains more than one set of sequential markings must be labeled to indicate the color and sequence of marking to be used. The labeling must be applied to the reel and also to the wire.

(m) Electrical requirements—(1) Mutual capacitance and conductance. (i) The average mutual capacitance (corrected for length) of all pairs in any reel must not exceed 52 ± 4 nanofarad/kilometer (nF/km) (83 ± 7 nanofarad/mile (nF/mile)) when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kilohertz (kHz) and a temperature of 23 ± 3°C. (ii) The mutual conductance (corrected for length and gauge) of any pair must not exceed 2 micromhos/kilometer (micromhos/km) (3.3 micromhos/mile) when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kHz and a temperature of 23 ± 3°C.

(2) Pair-to-pair capacitance unbalance. The capacitance unbalance between any pair of the completed wire must not exceed 145 picofarad/kilometer (pf/km) (80 picofarad/1000 ft (pf/1000 ft)) when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kHz and a temperature of 23 ± 3°C.

(3) Pair-to-ground capacitance unbalance—(i) Pair-to-ground. The capacitance unbalance as measured on the individual pair of the completed wire must not exceed 2625 pf/km (800 pf/1000 ft) when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kHz and a temperature of 23 ± 3°C. (ii) When measuring pair-to-ground capacitance unbalance, all pairs, except the pair under test, are grounded to the shield.

(iii) Pair-to-ground capacitance unbalance may vary directly with the length of the wire.

(4) Far-end crosstalk loss. (i) The output-to-output far-end crosstalk loss (FEXT) between any pair combination of a completed wire when measured in accordance with ASTM D 4566-90 at a test frequency of 150 kHz must not be less than 58 decibel/kilometer (dB/km) (63 decibel/1000 ft). If the loss $K_o$ at a frequency $F_o$ for length $L_o$ is known, then $K_X$ can be determined for any other frequency $F_X$ or length $L_X$ by:

$$ FEXT \text{ loss } (K_X) = K_O - 20 \log_{10} \left( \frac{F_X}{F_O} \right) - 10 \log_{10} \left( \frac{L_X}{L_O} \right) $$

(5) Attenuation. The attenuation of any individual pair on any reel of wire must not exceed the following limits when measured at or corrected to a temperature of 20 ± 1°C and a test frequency of 150 kHz. The test must be conducted in accordance with ASTM D 4566-90.

<table>

</tr>
<tr>
<td>22</td>
<td>6.6 (11.0)</td>
</tr>
<tr>
<td>24</td>
<td>8.7 (14.0)</td>
</tr>
</tbody>
</table>

(6) Insulation resistance. Each insulated conductor in each length of completed wire, when measured with all other insulated conductors and the shield grounded, must have an insulation resistance of not less than 1600 megohm-kilometer (1000 megohm-mile) at 20 ± 1°C. The measurement must be made in accordance with the procedures of ASTM D 4566-90.

(7) High voltage test. (i) In each length of completed wire, the insulation between conductors when tested in accordance with ASTM D 4566-90 must withstand for 3 seconds a direct current (dc) potential whose value is not less than:

- (A) 5.0 kilovolts for 22-gauge conductors; and
- (B) 4.0 kilovolts for 24-gauge conductors.
(ii) In each length of completed wire, the dielectric strength between the shield and all conductors in the core must be tested in accordance with ASTM D 4566-90 and must withstand, for 3 seconds, a dc potential whose value is not less than 20 kilovolts.

(ii) After the one hour period, there must be no water leakage in the sheath interfaces, under the core wrap or between any insulated conductors in the core.

(iii) If water leakage is detected in the first sample, one 3 m (10 ft) additional adjacent sample from the same reel of wire must be tested in accordance with paragraph (n)(4)(iii) of this section. If the second sample exhibits water leakage, the entire reel of wire is to be rejected. If the second sample exhibits no leakage, the entire reel of wire is considered acceptable.

(5) Compound flow test. The completed wire must be capable of meeting the compound flow test specified in ASTM D 4565-90a when exposed for a period of 24 hours at a temperature of 80 ± 1°C. At the end of this test period, there must be no evidence of flowing or dripping of compound from either the core or sheath interfaces.

(9) Resistance unbalance. (i) The difference in dc resistance between the two conductors of any pair in the completed wire must not exceed 5.0 percent when measured in accordance with the procedures of ASTM D 4566-90.

(ii) The resistance unbalance between tip and ring conductors shall be random with respect to the direction of unbalance. That is, the resistance of the tip conductors shall not be consistently higher with respect to the ring conductors and vice versa.

(n) Mechanical requirements—(1) Defective wire. Pairs in each length of wire will not be permitted to have either a ground, cross, short or open circuit condition.

(2) Wire breaking strength. The breaking strength of the completed wire must not be less than 890 newtons (200 pound-force) when tested in accordance with ASTM D 4565-90a using a jaw separation speed of 25 mm/min (1.0 in./min).

(3) Wire bending test. The completed wire must be capable of meeting the requirements of ASTM D 4565-90a after conditioning at -20 ± 2°C and at 23 ± 2°C.

(4) Water penetration test. (i) A one meter (3 ft) length of completed wire must be stabilized at 23 ± 2°C and tested in accordance with ASTM D 4565-90a using a one meter (3 ft) water head over the sample or placed under the equivalent continuous pressure for one hour.

(ii) If water leakage is detected in the first sample, one 3 m (10 ft) additional adjacent sample from the same reel of wire must be tested in accordance with paragraph (n)(4)(iii) of this section. If the second sample exhibits water leakage, the entire reel of wire is to be rejected. If the second sample exhibits no leakage, the entire reel of wire is considered acceptable.

(5) Compound flow test. The completed wire must be capable of meeting the compound flow test specified in ASTM D 4565-90a when exposed for a period of 24 hours at a temperature of 80 ± 1°C. At the end of this test period, there must be no evidence of flowing or dripping of compound from either the core or sheath interfaces.

(o) Acceptance testing and extent of testing. (1) The tests described in appendix A of this section are intended for acceptance of wire designs and major modifications of accepted designs. RUS decides what constitutes a major modification. These tests are intended to show the inherent capability of the manufacturer to produce wire products having long life and stability.

(2) For initial acceptance, the manufacturer must submit: (i) An original signature certification that the product fully complies with each requirement of this section; (ii) Qualification Test Data, per appendix A of this section; (iii) To periodic plant inspections; (iv) A certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.); (v) Written user testimonials concerning performance of the product; and (vi) Other nonproprietary data deemed necessary by the Chief, Outside Plant Branch (Telephone).

(3) For requalification acceptance, the manufacturer must submit an original signature certification that the product fully complies with each section of the specification, excluding...
the Qualification Section, and a certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.) for acceptance by June 30 every three years. The required data and certification must have been gathered within 90 days of the submission.

(4) Initial and requalification acceptance requests should be addressed to: Chairman, Technical Standards, Committee “A”, (Telephone), Telecommunications Standards Division, Rural Utilities Service, Washington, DC 20250-1500.

(5) Tests on 100 percent of completed wire. (i) The shield of each length of wire must be tested for continuity using the procedures of ASTM D 4566-90.

(ii) Dielectric strength between all conductors and the shield must be tested to determine freedom from grounds in accordance with paragraph (m)(7)(ii) of this section.

(iii) Each conductor in the completed wire must be tested for continuity using the procedures of ASTM D 4566-90.

(iv) Dielectric strength between conductors must be tested to ensure freedom from shorts and crosses in accordance with paragraph (m)(7)(i) of this section.

(v) The average mutual capacitance must be measured on all wires.

(6) Capability tests. Tests on a quality assurance basis must be made as frequently as is required for each manufacturer to determine and maintain compliance with:

(i) Performance requirements for conductor insulation and jacket material;

(ii) Performance requirements for filling and flooding compounds;

(iii) Sequential marking and lettering;

(iv) Capacitance unbalance and crosstalk;

(v) Insulation resistance;

(vi) Conductor resistance and resistance unbalance;

(vii) Wire bending and wire breaking strength tests;

(viii) Mutual conductance and attenuation; and

(ix) Water penetration and compound flow tests.

(p) Summary of records of electrical and physical tests. (1) Each manufacturer must maintain suitable summary of records for a period of at least 3 years for all electrical and physical tests required on completed wire by this section as set forth in paragraphs (o)(5) and (o)(6) of this section. The test data for a particular reel shall be in a form that it may be readily available to the purchaser or to RUS upon request.

(2) Measurements and computed values must be rounded off to the number of places of figures specified for the requirement according to ASTM E 29-90.

(q) Manufacturing irregularities. (1) Repairs to the inner jacket and shield are not permitted in wire supplied to the end user under this section.

(2) Minor defects in the outer jackets (defects having a dimension of 3 mm (0.125 in.) or less in any direction) may be repaired by means of heat fusing in accordance with good commercial practices utilizing sheath grade compound.

(r) Preparation for shipment. (1) The wire must be shipped on reels. The diameter of the drum must be large enough to prevent damage to the wire from reeling or unreeling. The reels must be substantial and so constructed as to prevent damage to the wire during shipment and handling.

(2) The thermal wrap must comply with the requirements of appendix C of this section. When a thermal reel wrap is supplied, the wrap must be applied to the reel and must be suitably secured in place to minimize thermal exposure to the wire during storage and shipment. The use of the thermal reel wrap as a means of reel protection will be at the option of the manufacturer unless specified by the end user.

(3) The outer end of the wire must be securely fastened to the reel head so as to prevent the wire from becoming loose in transit. The inner end of the wire must be securely fastened in such a way as to make it readily available if required for electrical testing. Spikes, staples, or other fastening devices which penetrate the wire jacket must not be used. The method of fastening the wire ends must be accepted by RUS prior to it being used.
§ 1755.860

Each length of wire must be wound on a separate reel unless otherwise specified or agreed to by the purchaser.

(5) Each reel must be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the wire on the reel.

(6) Each reel must be stenciled or labeled on either one or both sides with the name of the manufacturer, year of manufacture, actual shipping length, an inner and outer end sequential length marking, description of the wire, reel number and the RUS wire designation:

Wire Designation
BFW
Wire Construction
Pair Count
Conductor Gauge
N = Copper Alloy 220 (Bronze) Shield
Y = Gopher Resistant Shields
Example: BFW/Y 3/24
Buried Filled Wire, Gopher Resistant Shield, 3 pair, 24 AWG

(7) Both ends of the filled buried wire, manufactured to the requirements of this section, must be equipped with end caps which are acceptable to RUS.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget (OMB) under the control number 0572-0059)

APPENDIX A TO 7 CFR 1755.860—QUALIFICATION TEST METHODS

(1) The test procedures described in this appendix are for qualification of initial designs and major modifications of accepted designs. Included in (V) of this appendix are suggested formats that may be used in submitting test results to RUS.

(II) Sample Selection and Preparation. (1) All testing must be performed on lengths removed sequentially from the same 3 pair, 22 gauge jacketed wire. This wire must not have been exposed to temperatures in excess of 38 °C since its initial cool down after sheathing. The lengths specified are minimum lengths and if desirable from a laboratory testing standpoint longer lengths may be used.

(a) Length A shall be 10 ± 0.2 meters (33 ± 0.5 feet) long and must be maintained at 23 ± 3 °C. One length is required.

(b) Length B shall be 12 ± 0.2 meters (40 ± 0.5 feet) long. Prepare the test sample by removing the inner and outer jacket, shield, and core wrap, if present, for a sufficient distance on both ends to allow the insulated conductors to be flared out. Remove sufficient conductor insulation so that appropriate electrical test connections can be made at both ends. Coil the specimen with a diameter of 15 to 20 times its sheath diameter. Three lengths are required.

(c) Length C shall be one meter (3 feet) long. Four lengths are required.

(d) Length D shall be 300 millimeters (1 foot) long. Four lengths are required.

(e) Length E shall be 600 millimeters (2 feet) long. Four lengths are required.

(f) Length F shall be 3 meters (10 feet) long and must be maintained at 23 ± 3 °C for the duration of the test. Two lengths are required.

(2) Data Reference Temperature. Unless otherwise specified, all measurements shall be made at 23 ± 3 °C.

(III) Environmental Tests—(1) Heat Aging Test—(a) Test Samples. Place one sample each of lengths B, C, D, and E in an oven or environmental chamber. The ends of sample B must exit from the chamber or oven for electrical tests. Securely seal the oven exit holes.

(b) Sequence of Tests. After conditioning the samples are to be subjected to the following tests:

(i) Water Immersion Test outlined in (III)(2) of this appendix;

(ii) Water Penetration Test outlined in (III)(3) of this appendix;

(iii) Insulation Compression Test outlined in (III)(4) of this appendix; and

(iv) Jacket Slip Strength Test outlined in (III)(5) of this appendix.

(c) Initial Measurements. (i) For sample B, measure the open circuit capacitance and conductance for each pair at 1 and 150 kilohertz and the attenuation at 150 kilohertz after conditioning the sample at the data reference temperature for 24 hours. Calculate the average and standard deviation for the data of the 3 pairs on a per kilometer (per mile) basis.

(ii) The attenuation at 150 kilohertz may be calculated from open circuit admittance (Yo) and short circuit impedance (Zsc) or may be obtained by direct measurement of attenuation.

(iii) Record on suggested formats attached in (V) of this appendix or on other easily readable formats.

(d) Heat Conditioning. (i) Immediately after completing the initial measurements, condition the sample for 14 days at a temperature of 65 ± 2 °C.

(ii) At the end of this period note any excitation of filling compound. Measure and calculate the parameters given in (III)(3)(c) of this appendix. Record on suggested formats attached in (V) of this appendix or on other easily readable formats.

(iii) Cut away and discard a one meter (3 foot) section from each end of length B.
Rural Utilities Service, USDA

§ 1755.860

(e) Overall Electrical Deviation. (i) Calculate the percent change in all average parameters between the final parameters after conditioning with the initial parameters in (III)(1)(c) of this appendix.

(ii) The stability of the electrical parameters after completion of this test must be within the following prescribed limits:

(A) Capacitance. The average mutual capacitance must be within 5 percent of its original value;

(B) Conductance. The average mutual conductance must not exceed 2 micromhos/kilometer (3.3 micromhos/mile) at a frequency of 1 kilohertz.

(3) Water Penetration Testing. (a) A watertight closure must be placed over the jacket of length C. The closure must not be placed over the jacket so tightly that the flow of water through preexisting voids or air spaces is restricted. The other end of the sample must remain open.

(b) Test per Option A or Option B. (i) Option A. Weigh the sample and closure prior to testing. Fill the closure with water and place under a continuous pressure of 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Collect the water leakage from the end of the test sample during the test and weigh to the nearest 0.1 gram. Immediately after the one hour test, seal the ends of the wire with a thin layer of grease and remove all visible water from the closure, being careful not to remove water that penetrated into the core during the test. Reweigh the sample and determine the weight of water that penetrated into the core. The weight of water that penetrated into the core must not exceed 1 gram.

(ii) Option B. Fill the closure with a 0.2 gram sodium fluorescein per liter water solution and apply a continuous pressure of 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Catch and weigh any water that leaks from the end of the wire during the one hour period. If no water leaks from the sample, carefully remove the water from the closure. Then carefully remove the outer jacket, shield, inner jacket and core wrap, if present, carefully dissect the core and examine for water penetration within the core. Where water penetration is observed, measure the penetration distance. The distance of water penetration into the core must not exceed 127 millimeters (5.0 inches).

(4) Insulation Compression Test. (a) Test Sample D. Remove inner and outer jacket, shield, and core wrap, if present, being careful not to damage the conductor insulation. Remove one pair from the core and carefully separate, wipe off core filler and straighten the insulated conductors. Retwist the two insulated conductors together under sufficient tension to form 10 evenly spaced 360 degree twists in a length of 100 millimeters (4 inches).

(b) Sample Testing. Center the mid 50 millimeters (2 inches) of the twisted pair between two smooth rigid parallel metal plates measuring 50 millimeters (2 inches) in length or...

785
APPENDIX B TO 7 CFR 1755.860—SHEATH SLITTING CORD QUALIFICATION

(I) The test procedures described in this appendix are for qualification of initial and subsequent changes in sheath slitting cords.

(II) Sample Selection. All testing must be performed on two 1.2 meters (4 feet) lengths of wire removed sequentially from the same 3 pair, 22 gauge jacketed wire. This wire must not have been exposed to temperatures in excess of 38 °C since its initial cool down after sheathing.

(III) Test Procedure. (1) Using a suitable tool, expose enough of sheath slitting cord to permit grasping with needle nose pliers.

(2) The prepared test specimens must be maintained at a temperature of 23 ± 1 °C for at least 4 hours immediately prior to and during the test.

(3) Wrap the sheath slitting cord around the plier jaws to ensure a good grip.

(4) Grasp and hold the wire in a convenient position while gently and firmly pulling the sheath slitting cord longitudinally in the direction away from the wire end. The angle of pull may vary to any convenient and functional degree. A small starting notch is permissible.

(5) The sheath slitting cord is considered acceptable if the cord can slit the jacket and/or shield for a continuous length of 0.6 meter (2 feet) without breaking the cord.

APPENDIX C TO 7 CFR 1755.860—THERMAL REEL WRAP QUALIFICATION

(I) The test procedures described in this appendix are for qualification of initial and subsequent changes in thermal reel wraps.

(II) Sample Selection. All testing must be performed on two 450 millimeter (18 inch) lengths of wire removed sequentially from the same 3 pair, 22 gauge jacketed wire. This wire must not have been exposed to temperatures in excess of 38 °C since its initial cool down after sheathing.

(III) Test Procedure. (1) Place the two samples on an insulating material such as wood, etc.

(2) Tape thermocouples to the jackets of each sample to measure the jacket temperature.

(3) Cover one sample with the thermal reel wrap.

(4) Expose the samples to a radiant heat source capable of heating the uncovered jacket sample to a minimum of 71 °C. A 600 watt photoflood lamp or an equivalent lamp having the light spectrum approximately that of the sun shall be used.

(5) The height of the lamp above the jacket shall be 380 millimeters (15 inches) or a height that produces the 71 °C jacket temperature on the unwrapped sample.

(6) After the samples have stabilized at the temperature, the jacket temperatures of the samples must be recorded after one hour of exposure to the heat source.

(7) Compute the temperature difference between the jackets.

(8) For the thermal reel wrap to be acceptable to RUS, the temperature differences between the jacket with the thermal reel wrap and the jacket without the reel wrap must be greater than or equal to 17 °C.

APPENDIX C TO 7 CFR 1755.860—THERMAL REEL WRAP QUALIFICATION

American Wire Gauge (AWG) | 22 | 24
---|---|---
Number of Pairs | 12 | 12
| 50 | 50
| 100 | 100
| 200 | 200
| 300 | 300
| 400 | 400
| 600 | 600
| 800 | 800

Note: Cables larger in pair sizes from those shown in this table shall meet all the requirements of this section.
design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.

(4) Materials, manufacturing techniques, or cable designs not specifically addressed by this section may be allowed if accepted by RUS. Justification for acceptance of modified materials, manufacturing techniques, or cable designs shall be provided to substantiate product utility and long term stability and endurance.

(5) The American National Standard Institute/Electronic Industries Association (ANSI/EIA) 359-A-84, EIA Standard Colors for Color Identification and Coding, referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/EIA 359-A-84 are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from Global Engineering Documents, 15 Inverness Way East, Englewood, CO 80112, telephone number (303) 792-2181.

(7) American National Standards Institute/National Fire Protection Association (ANSI/NFPA), NFPA 70-1993 National Electrical Code referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. A copy of the ANSI/NFPA standard is available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from NFPA, Batterymarch Park, Quincy, Massachusetts 02269, telephone number 1 (800) 344-3555.

(8) Underwriters Laboratories Inc. (UL) 1666, Standard Test for Flame Propagation Height of Electrical and Optical-Fiber Cables Installed Vertically in Shafts, dated January 22, 1991, referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. A copy of the UL standard
is available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from UL Inc., 333 Pfingsten Road, Northbrook, Illinois 60062-2096, telephone number (708) 272-8800.

(b) Conductors and conductor insulation. (1) Each conductor shall be a solid round wire of commercially pure annealed tin coated copper. Conductors shall meet the requirements of the American Society for Testing and Materials (ASTM) B 33-91 except that requirements for Dimensions and Permissible Variations are waived.

(2) Joints made in conductors during the manufacturing process may be brazed, using a silver alloy solder and nonacid flux, or they may be welded using either an electrical or cold welding technique. In joints made in uninsulated conductors, the two conductor ends shall be butted. Splices made in insulated conductors need not be butted but may be joined in a manner acceptable to RUS.

(3) The tensile strength of any section of a conductor, containing a factory joint, shall not be less than 85 percent of the tensile strength of an adjacent section of the solid conductor of equal length without a joint.

(4) Engineering Information: The sizes of wire used and their nominal diameters shall be as shown in the following table:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Nominal diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Millimeters</td>
</tr>
<tr>
<td>22</td>
<td>0.643 (0.0253)</td>
</tr>
<tr>
<td>24</td>
<td>0.511 (0.0201)</td>
</tr>
</tbody>
</table>

(5) Each conductor shall be insulated with a primary layer of natural or white solid, insulating grade, high density polyethylene or crystalline propylene/ethylene copolymer and an outer skin of colored, solid, insulating grade, polyvinyl chloride (PVC) using one of the insulating materials listed in paragraphs (b)(5)(i) through (iii) of this section.

(i) The polyethylene raw material selected to meet the requirements of this section shall be Type III, Class A, Category 4 or 5, Grade E9, in accordance with ASTM D 1248-84 (1989).

(ii) The crystalline propylene/ethylene raw material selected to meet the requirements of this section shall be Class PP 2008 40003 E11 in accordance with ASTM D 4101-82 (1988).

(iii) The PVC raw material selected to meet the requirements of this section shall be either Type PVC-64751E3X0, Type PVC-76751E3X0, or Type PVC-77751E3X0 in accordance with ASTM D 2287-81 (1988).

(iv) Raw materials intended as conductor insulation furnished to these requirements shall be free from dirt, metallic particles, and other foreign matter.

(v) All insulating raw materials shall be accepted by RUS prior to their use.

(6) All conductors in any single length of cable shall be insulated with the same type of material.

(7) A permissible overall performance level of faults in conductor insulation when using the test procedures in paragraph (b)(8) of this section shall average not greater than one fault per 12,000 conductor meters (40,000 conductor feet) for each gauge of conductor.

(ii) The test used to determine compliance with paragraph (b)(7) of this section shall be conducted as follows:

(i) Samples tested shall be taken from finished cables selected at random from standard production cable. The samples tested shall contain a minimum of 300 conductor meters (1,000 conductor feet) for cables sizes less than 50 pairs and 1,500 conductor meters (5,000 conductor feet) for cables sizes greater than or equal to 50 pairs. No further sample need be taken from the same cable production run within 6,000 conductor meters (20,000 conductor feet) of the original test sample from that run.

(ii) The cable sample shall have its jacket, shield, and core wrap removed and its core shall be immersed in tap water for a minimum period of 6 hours. In lieu of removing the jacket, shield, and core wrap from the core, the entire cable may be tested. In this case, the core shall be completely filled with tap water, under pressure; then the cable assembly shall be immersed for a minimum period of 6 hours. With the cable core still fully immersed, except for
end connections, the insulation resistance (IR) of all conductors to water shall be measured using a direct current (dc) voltage of 100 volts to 550 volts.

(iii) An IR value of less than 500 megohms for any individual insulated conductor tested at or corrected to a temperature of 23 °C is considered a failure. If the cable sample is more than 7.5 meters (25 feet) long, all failing conductors shall be retested and reported in 7.5 meter (25 foot) segments.

(iv) The pair count, gauge, footage, and number of insulation faults shall be recorded. This information shall be retained on a 6 month running basis for review by RUS when requested.

(v) A fault rate, in a continuous length in any one reel, in excess of one fault per 3,000 conductor meters (10,000 conductor feet) due to manufacturing defects is cause for rejection. A minimum of 6,000 conductor meters (20,000 conductor feet) is required to develop a noncompliance in a reel.

(9) Repairs to the conductor insulation during manufacturing are permissible. The method of repair shall be accepted by RUS prior to its use. The repaired insulation shall be capable of meeting the relevant electrical requirements of this section.

(10) All repaired sections of insulation shall be retested in the same manner as originally tested for compliance with paragraph (b)(7) of this section.

(11) The colored composite insulating material removed from or tested on the conductor, from a finished cable, shall be capable of meeting the following performance requirements:

<table>
<thead>
<tr>
<th>Property</th>
<th>Composite insulation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tensile Strength, Minimum MPa</td>
<td>16.5 (2400)</td>
</tr>
<tr>

</tr>
<tr>
<td>Adhesion, Maximum Newtons (N)</td>
<td>13.3 (3)</td>
</tr>
<tr>
<td>Compression Minimum, N (bf)</td>
<td>1780 (400)</td>
</tr>
</tbody>
</table>

(12) Testing procedures. The procedures for testing the composite insulation samples for compliance with paragraph (b)(11) of this section shall be as follows:

(i) Tensile strength and ultimate elongation. Samples of the insulation material, removed from the conductor, shall be tested in accordance with ASTM D 2633-82(1989), except that the speed of jaw separation shall be 50 millimeters/minute (20 mm/min) (2 inches/minute (2 in./min)).

Note: Quality assurance testing at a jaw separation speed of 200 mm/min (8 in./min) is permissible. Failures at this rate shall be retested at the 50 mm/min (2 in./min) rate to determine specification compliance.

(ii) Cold bend. Samples of the insulation material on the conductor shall be tested in accordance with ASTM D 4565-90a at a temperature of −40±1 °C with a mandrel diameter of 6 mm (0.25 in.). There shall be no cracks visible to normal or corrected-to-normal vision.

(iii) Shrinkback. Samples of insulation shall be tested for four hours at a temperature of 115±1 °C in accordance with ASTM D 4565-90a.

(iv) Adhesion. Samples of insulation material on the conductor shall be tested in accordance with ASTM D 4565-90a with a crosshead speed of 50 mm/min (2 in./min).

(v) Compression. Samples of the insulation material on the conductor shall be tested in accordance with ASTM D 4565-90a with a crosshead speed of 5 mm/min (0.2 in./min).

(13) Other methods of testing may be used if acceptable to RUS.

(c) Identification of pairs and twisting of pairs. (1) The PVC skin shall be colored to identify:

(i) The tip and ring conductor of each pair; and

(ii) Each pair in the completed cable.

(2) The colors used to provide identification of the tip and ring conductor of each pair shall be as shown in the following table:

<table>
<thead>
<tr>

§ 1755.870  

(3) Standards of color. The colors of the insulated conductors supplied in accordance with this section are specified in terms of the Munsell Color System (ASTM D 1535-89) and shall comply with the “Table of Wire and Cable Limit Chips” as defined in ANSI/EIA-359-A-84. Visual color standards meeting these requirements may be obtained directly from the Munsell Color Company, Inc., 2441 North Calvert Street, Baltimore, Maryland 21218.

(4) Positive identification of the tip and ring conductors of each pair by marking each conductor of a pair with the color of its mate is permissible. The method of marking shall be accepted by RUS prior to its use.

(5) Other methods of providing positive identification of the tip and ring conductors of each pair may be employed if accepted by RUS prior to its use.

(6) The insulated conductors shall be twisted into pairs.

(7) In order to provide sufficiently high crosstalk isolation, the pair twists shall be designed to enable the cable to meet the capacitance unbalance and the crosstalk loss requirements of paragraphs (h)(2), (h)(3), and (h)(4) of this section.

(8) The average length of pair twists in any pair in the finished cable, when measured on any 3 meter (m) (10 foot (ft)) length, shall not exceed 152 mm (6 in.).

(d) Forming of the cable core. (1) Twisted pairs shall be assembled in such a way as to form a substantially cylindrical group.

(2) When desired for lay-up reasons, the basic group may be divided into two or more subgroups called units.

(3) Each group, or unit in a particular group, shall be enclosed in bindings of the colors indicated for its particular pair count. The pair count, indicated by the color of insulation, shall be consecutive as indicated in paragraph (d)(5) of this section through units in a group.

(4) Threads or tapes used as binders shall be nonhygroscopic and nonwicking. The threads shall consist of a suitable number of ends of each color arranged as color bands. When tapes are used as binders, they shall be colored. Binders shall be applied with a lay of not more than 100 mm (4 in.). The colored binders shall be readily recognizable as the basic intended color and shall be distinguishable from all other colors.

(5) The colors of the bindings and their significance with respect to pair count shall be as shown in the following table:

(6) The use of the white unit binder in cables of 100 pair or less is optional.

(7) When desired for manufacturing reasons, two or more 25 pair groups may be bound together with nonhygroscopic and nonwicking threads or tapes into super-units. The group binders and the super-unit binders shall be colored such that the combination of the two binders shall positively identify each 25 pair group from every other 25 pair group in the cable.
(8) Super-unit binders shall be of the colors shown in the following table:

<table>
<thead>
<tr>
<th>Pair No.</th>
<th>Binder color</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-600</td>
<td>White</td>
</tr>
<tr>
<td>601-1200</td>
<td>Red</td>
</tr>
</tbody>
</table>

(e) Core wrap. (1) The core shall be completely covered with a layer of nonhygroscopic and nonwicking dielectric material. The core wrap shall be applied with an overlap.

(2) The core wrap shall provide a sufficient heat barrier to prevent visible evidence of conductor insulation deformation or adhesion between conductors, caused by adverse heat transfer during the jacketing operation.

(3) Engineering Information: If required for manufacturing reasons, white or uncolored binders of nonhygroscopic and nonwicking material may be applied over the core and/or core wrap.

(f) Shield. (1) An aluminum shield, plastic coated on one side, shall be applied longitudinally over the core wrap.

(2) The shield may be applied over the core wrap with or without corrugations (smooth) and shall be bonded to the outer jacket.

(3) The shield overlap shall be a minimum of 3 mm (0.125 in.) for cables with core diameters of 15 mm (0.625 in.) or less and a minimum of 6 mm (0.25 in.) for cables with core diameters greater than 15 mm (0.625 in.). The core diameter is defined as the diameter under the core wrap and binding.

(4) General requirements for application of the shielding material shall be as follows:

(i) Successive lengths of shielding tapes may be joined during the manufacturing process by means of cold weld, electric weld, soldering with a nonacid flux, or other acceptable means;

(ii) The metal shield with the plastic coating shall have the coating removed prior to joining the metal ends together. After joining, the plastic coating shall be restored without voids using good manufacturing techniques;

(iii) The shields of each length of cable shall be tested for continuity. A one meter (3 ft) section of shield containing a factory joint shall exhibit not more than 110 percent of the resistance of a shield of equal length without a joint;

(iv) The breaking strength of any section of a shield tape containing a factory joint shall not be less than 80 percent of the breaking strength of an adjacent section of the shield of equal length without a joint;

(v) The reduction in thickness of the shielding material due to the corrugating or application process shall be kept to a minimum and shall not exceed 10 percent at any spot; and

(vi) The shielding material shall be applied in such a manner as to enable the cable to pass the bend test as specified in paragraph (i)(1) of this section.

(5) The dimensions of the uncoated aluminum tape shall be 0.2030±0.0254 mm (0.0080±0.0010 in.).

(6) The aluminum tape shall conform to either Alloy AA-1100-0, AA-1145-0, or AA-1235-0 as covered in the latest edition of Aluminum Standards and Data, issued by the Aluminum Association, except that requirements for tensile strength are waived.

(7) The single-sided plastic coated aluminum shield shall conform to the requirements of ASTM B 736-92a, Type I Coating, Class 1 or 2, or Type II Coating, Class 1. The minimum thickness of the Type I Coating shall be 0.038 mm (0.0015 in.). The minimum thickness of the Type II Coating shall be 0.008 mm (0.0003 in.).

(8) The plastic coated aluminum shield shall be tested for resistance to water migration by immersion of a one meter (3 ft) length of tape under a one meter (3 ft) head of water containing a soluble dye plus 0.25 percent (%) wetting agent.

(i) After a minimum of 5 minutes, no dye shall appear between the interface of the shield tape and the plastic coating.

(ii) The actual test method shall be acceptable to RUS.

(9) The bond between the plastic coated shield and the jacket shall conform to the following requirements:

(i) Prepare test strips approximately 200 mm (8 in.) in length. Slit the jacket and shield longitudinally to produce 4 strips evenly spaced and centered in 4 quadrants on the jacket circumference. One of the strips shall be centered over
§ 1755.870

the overlapped edge of the shielding tape. The strips shall be 13 mm (0.5 in.) wide. For cable diameters less than 19 mm (0.75 in.) make two strips evenly spaced.

(ii) Separate the shield and jacket for a sufficient distance to allow the shield and jacket to be fitted in the upper and lower jaws of a tensile machine. Record the maximum force required to separate the shield and jacket to the nearest newton (pound-force). Repeat this action for each test strip.

(iii) The force required to separate the jacket from the shield shall not be less than 9 N (2 lbf) for any individual strip when tested in accordance with paragraph (f)(9)(ii) of this section. The average force for all strips of any cable shall not be less than 18 N (4 lbf).

g. Cable jacket and extraneous material.

(1) The jacket shall provide the cable with a tough, flexible, protective covering which can withstand stresses reasonably expected in normal installation and service.

(2) The jacket shall be free from holes, splits, blisters, or other imperfections and shall be as smooth and concentric as is consistent with the best commercial practice.

(3) The raw material used for the cable jacket shall be one of the following four types:

(i) Type PVC-55554EOXO in accordance with ASTM D 2287-81(1988);

(ii) Type PVC-65554EOXO in accordance with ASTM D 2287-81(1988);

(iii) Type PVC-55556EOXO in accordance with ASTM D 2287-81(1988); or

(iv) Type PVC-66554EOXO in accordance with ASTM D 2287-81(1988).

(4) The jacketing material removed from or tested on the cable shall be capable of meeting the following performance requirements:

<table>
<thead>
<tr>
<th>Property</th>
<th>Jacket performance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tensile Strength-Unaged Minimum, MPa (psi)</td>
<td>13.8 (2000)</td>

</tr>
<tr>
<td>Impact Failures, Maximum</td>
<td>2/10</td>
</tr>
</tbody>
</table>

(5) Testing procedures. The procedures for testing the jacket samples for compliance with paragraph (g)(4) of this section shall be as follows:

(i) Tensile strength and ultimate elongation-unaged. The test shall be performed in accordance with ASTM D 2633-82(1989), using a jaw separation speed of 50 mm/min (2 in./min).

NOTE: Quality assurance testing at a jaw separation speed of 500 mm/min (20 in./min) is permissible. Failures at this rate shall be retested at the 50 mm/min (2 in./min) rate to determine specification compliance.

(ii) Tensile strength and ultimate elongation-aged. The test shall be performed in accordance with paragraph (g)(9)(ii) of this section after being aged for 7 days at a temperature of 100±1 °C in a circulating air oven conforming to ASTM D 2436-85.

(iii) Impact. The test shall be performed in accordance with ASTM D 4565-90a using an impact force of 4 newton-meter (3 pound force-foot) at a temperature of 10±1 °C. The cylinder shall strike the sample at the shield overlap. A crack or split in the jacket constitutes failure.

(g) Cable jacket and extraneous material.

(1) The jacket shall provide the cable with a tough, flexible, protective covering which can withstand stresses reasonably expected in normal installation and service.

(2) The jacket shall be free from holes, splits, blisters, or other imperfections and shall be as smooth and concentric as is consistent with the best commercial practice.

(3) The raw material used for the cable jacket shall be one of the following four types:

(i) Type PVC-55554EOXO in accordance with ASTM D 2287-81(1988);

(ii) Type PVC-65554EOXO in accordance with ASTM D 2287-81(1988);

(iii) Type PVC-55556EOXO in accordance with ASTM D 2287-81(1988); or

(iv) Type PVC-66554EOXO in accordance with ASTM D 2287-81(1988).

(4) The jacketing material removed from or tested on the cable shall be capable of meeting the following performance requirements:

<table>
<thead>
<tr>
<th>Property</th>
<th>Jacket performance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tensile Strength-Unaged Minimum, MPa (psi)</td>
<td>13.8 (2000)</td>

<td>80</td>
</tr>
<tr>
<td>Ultimate Elongation-Aged Minimum, % of original value</td>
<td>50</td>
</tr>
<tr>
<td>Impact Failures, Maximum</td>
<td>2/10</td>
</tr>
</tbody>
</table>

(5) Testing procedures. The procedures for testing the jacket samples for compliance with paragraph (g)(4) of this section shall be as follows:

(i) Tensile strength and ultimate elongation-unaged. The test shall be performed in accordance with ASTM D 2633-82(1989), using a jaw separation speed of 50 mm/min (2 in./min).

NOTE: Quality assurance testing at a jaw separation speed of 500 mm/min (20 in./min) is permissible. Failures at this rate shall be retested at the 50 mm/min (2 in./min) rate to determine specification compliance.

(ii) Tensile strength and ultimate elongation-aged. The test shall be performed in accordance with paragraph (g)(9)(ii) of this section after being aged for 7 days at a temperature of 100±1 °C in a circulating air oven conforming to ASTM D 2436-85.

(iii) Impact. The test shall be performed in accordance with ASTM D 4565-90a using an impact force of 4 newton-meter (3 pound force-foot) at a temperature of 10±1 °C. The cylinder shall strike the sample at the shield overlap. A crack or split in the jacket constitutes failure.

(6) Jacket thickness. The nominal jacket thickness shall be as specified in the following table. The test method used shall be either the End Sample Method (paragraph (g)(6)(i) of this section) or the Continuous Uniformity Thickness Gauge Method (paragraph (g)(6)(ii) of this section):

<table>
<thead>
<tr>
<th>No. of pairs</th>
<th>Nominal jacket thickness mm (in.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>25 or less</td>
<td>1.4 (0.055)</td>
</tr>
<tr>
<td>50</td>
<td>1.5 (0.060)</td>
</tr>
<tr>
<td>100</td>
<td>1.7 (0.065)</td>
</tr>
<tr>
<td>200</td>
<td>1.9 (0.075)</td>
</tr>
<tr>
<td>300</td>
<td>2.2 (0.085)</td>
</tr>
<tr>
<td>400</td>
<td>2.4 (0.095)</td>
</tr>
<tr>
<td>600</td>
<td>2.9 (0.115)</td>
</tr>
<tr>
<td>800 and over</td>
<td>3.3 (0.130)</td>
</tr>
</tbody>
</table>

(i) End sample method. The jacket shall be capable of meeting the following requirements:

Minimum Average Thickness—90% of nominal thickness
Minimum Thickness—70% of nominal thickness

(ii) Continuous uniformity thickness gauge method. (A) The jacket shall be capable of meeting the following requirements:
Minimum Average Thickness—90% of nominal thickness
Minimum (Min.) Thickness—70% of nominal thickness
Maximum (Max.) Eccentricity—55%

Eccentricity = Max. Thickness - Min. Thickness (Average Thickness) × 100

(B) Maximum and minimum thickness values. The maximum and minimum thickness values shall be based on the average of each axial section.

(7) The color of the jacket shall be either black or dark grey in conformance with the Munsell Color System specified in ASTM D 1535-89.

(8) There shall be no water or other contaminants in the finished cable which would have a detrimental effect on its performance or its useful life.

(h) Electrical requirements—(1) Mutual capacitance and conductance.

(i) The average mutual capacitance (corrected for length) of all pairs in any reel shall not exceed the following when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kilohertz (kHz) and a temperature of 23 ± 3°C:

<table>
<thead>
<tr>
<th>Number of cable pairs</th>
<th>Mutual capacitance</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Nanofarad/kilometer</td>
</tr>
<tr>
<td>12</td>
<td>52 ± 4</td>
</tr>
<tr>
<td>Over 12</td>
<td>52 ± 2</td>
</tr>
</tbody>
</table>

(ii) The root mean square (rms) deviation of the mutual capacitance of all pairs from the average mutual capacitance of that reel shall not exceed 3.0% when calculated in accordance with ASTM D 4566-90.

(iii) The mutual conductance (corrected for length and gauge) of any pair shall not exceed 3.7 micromhos/kilometer (micromhos/km) (6.0 micromhos/mile) when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kHz and a temperature of 23 ± 3°C.

(2) Pair-to-pair capacitance unbalance. The capacitance unbalance as measured on the completed cable shall not exceed 45.3 picofarad/kilometer (pf/km) (25 picofarad/1000 ft (pf/1000 ft)) rms when tested in accordance with ASTM D 4566-90 at a frequency of 1.0 ± 0.1 kHz and a temperature of 23 ± 3°C.

(3) Pair-to-ground capacitance unbalance. (i) The average capacitance unbalance as measured on the completed cable shall not exceed 574 pF/km (175 pF/1000 ft) when tested in accordance with ASTM D 4566-90 at a frequency of 1 ± 0.1 kHz and a temperature of 23 ± 3°C.

(ii) When measuring pair-to-ground capacitance unbalance all pairs except the pair under test are grounded to the shield except when measuring cable containing super-units in which case all other pairs in the same super-unit shall be grounded to the shield.

(iii) Pair-to-ground capacitance unbalance may vary directly with the length of the cable.

(4) Crosstalk loss. (i) The rms output-to-output far-end crosstalk loss (FEXT) measured on the completed cable in accordance with ASTM D 4566-90 at a test frequency of 150 kHz shall not be less than 68 decibel/kilometer (dB/km) (73 decibel/1000 ft (dB/1000 ft)). The rms calculation shall be based on the combined total of all adjacent and alternate pair combinations within the same layer and center to first layer pair combinations.

(ii) The FEXT crosstalk loss between any pair combination of a cable shall not be less than 58 dB/km (63 dB/1000 ft) at a frequency of 150 kHz. If the loss \( K_o \) at a frequency \( F_o \) for length \( L_o \) is known, then \( K_o \) can be determined for any other frequency \( F_x \) or length \( L_x \) by:

\[
F_{EXT} (K_x) = K_o - 20 \log \left( \frac{F_x}{F_o} \right) - 10 \log \left( \frac{L_x}{L_o} \right)
\]

(iii) The near-end crosstalk loss (NEXT) as measured within and between units of a completed cable in accordance with ASTM D 4566-90 at a frequency of 772 kHz shall not be less than the following mean minus sigma (M-S) crosstalk requirement for any unit within the cable:

\[
F_{NEXT} = K_o - 20 \log \left( \frac{F_x}{F_o} \right) - 10 \log \left( \frac{L_x}{L_o} \right)
\]
Where M-S is the Mean near-end coupling loss based on the combined total of all pair combinations, less one Standard Deviation, Sigma, of the mean value.

(5) Insulation resistance. Each insulated conductor in each length of completed cable, when measured with all other insulated conductors and the shield grounded, shall have an insulation resistance of not less than 152 megohm-kilometer (500 megohm-mile) at 20±1°C. The measurement shall be made in accordance with the procedures of ASTM D 4566-90.

(6) High voltage test. (i) In each length of completed cable, the dielectric strength of the insulation between conductors shall be tested in accordance with ASTM D 4566-90 and shall withstand, for 3 seconds, a direct current (dc) potential whose value is not less than:

(A) 3.6 kilovolts for 22-gauge conductors; or
(B) 3.0 kilovolts for 24-gauge conductors.

(ii) In each length of completed cable, the dielectric strength between the shield and all conductors in the core shall be tested in accordance with ASTM D 4566-90 and shall withstand, for 3 seconds, a dc potential whose value is not less than 10 kilovolts.

(7) Conductor resistance. The dc resistance of any conductor shall be measured in the completed cable in accordance with ASTM D 4566-90 and shall not exceed the following values when measured at or corrected to a temperature of 20±1°C:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Maximum resistance</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>ohms/kilometer</td>
</tr>
<tr>
<td>22</td>
<td>60.7</td>
</tr>
<tr>
<td>24</td>
<td>95.1</td>
</tr>
</tbody>
</table>

(8) Resistance unbalance. (i) The difference in dc resistance between the two conductors of a pair in the completed cable shall not exceed the values listed in this paragraph when measured in accordance with the procedures of ASTM D 4566-90:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Resistance unbalance</th>
<th>Maximum for any reel</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Average percent</td>
</tr>
<tr>
<td>22</td>
<td></td>
<td>1.5</td>
</tr>
<tr>
<td>24</td>
<td></td>
<td>1.5</td>
</tr>
</tbody>
</table>

(ii) The resistance unbalance between tip and ring conductors shall be random with respect to the direction of unbalance. That is, the resistance of the tip conductors shall not be consistently higher with respect to the ring conductors and vice versa.

(9) Electrical variations. (i) Pairs in each length of cable having either a ground, cross, short, or open circuit condition shall not be permitted.

(ii) The maximum number of pairs in a cable which may vary as specified in paragraph (h)(9)(iii) of this section from the electrical parameters given in this section are listed in this paragraph. These pairs may be excluded from the arithmetic calculation:

<table>
<thead>
<tr>
<th>Nominal pair count</th>
<th>Maximum No. of pairs with allowable electrical variation</th>
</tr>
</thead>
<tbody>
<tr>
<td>12-100</td>
<td>1</td>
</tr>
<tr>
<td>101-300</td>
<td>2</td>
</tr>
<tr>
<td>301-400</td>
<td>3</td>
</tr>
<tr>
<td>401-600</td>
<td>4</td>
</tr>
<tr>
<td>601 and above</td>
<td>6</td>
</tr>
</tbody>
</table>

(iii) Parameter variations—(A) Capacitance unbalance-to-ground. If the cable fails either the maximum individual pair or average capacitance unbalance-to-ground requirement and all individual pairs are 3280 pF/km (1000 pF/1000 ft) or less the number of pairs specified in paragraph (h)(9)(ii) of this section may be eliminated from the average and maximum individual calculations.

(B) Resistance unbalance. Individual pair of not more than 7 percent for all gauges.

(C) Far end crosstalk. Individual pair combination of not less than 52 dB/km (57 dB/1000 ft).

NOTE: RUS recognizes that in large pair count cables (600 pair and above) a cross, short, or open circuit condition occasionally may develop in a pair which does not affect
the performance of the other cable pairs. In these circumstances rejection of the entire cable may be economically unsound or repairs may be impractical. In such circumstances the manufacturer may desire to negotiate with the customer for acceptance of the cable. No more than 0.5 percent of the pairs may be involved.

(i) Mechanical requirements—(1) Cable cold bend test. The completed cable shall be capable of meeting the requirements of ASTM D 4565±90a after conditioning at $-20 \pm 2^\circ$ C except the mandrel diameters shall be as specified below:

<table>
<thead>
<tr>
<th>Cable outside diameter</th>
<th>Mandrel diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>$&lt;$40 mm (1.5 in.)</td>
<td>15x</td>
</tr>
<tr>
<td>$\geq$40 mm (1.5 in.)</td>
<td>20x</td>
</tr>
</tbody>
</table>

(2) Cable flame test. The completed cable shall be capable of meeting a maximum flame height of 3.7 m (12.0 ft) when tested in accordance with Underwriters Laboratories (UL) 1666 dated January 22, 1991.

(3) Cable listing. All cables manufactured to the specification of this section at a minimum shall be listed as Communication Riser Cable (Type CMR) in accordance with Sections 800-50 and 800-51(b) of the 1993 National Electrical Code.

(j) Sheath slitting cord (optional). (1) Sheath slitting cords may be used in the cable structure at the option of the manufacturer.

(2) When a sheath slitting cord is used it shall be nonhygroscopic and nonwicking, continuous throughout a length of cable, and of sufficient strength to open the sheath without breaking the cord.

(3) Sheath slitting cords shall be capable of consistently slitting the jacket and/or shield for a continuous length of 0.6 m (2 ft) when tested in accordance with the procedure specified in appendix B of this section.

(k) Identification marker and length marker. (1) Each length of cable shall be permanently identified as to manufacturer and year of manufacture.

(2) The number of conductor pairs and their gauge size shall be marked on the jacket.

(3) The marking shall be printed on the jacket at regular intervals of not more than 1.5 m (5 ft).

(4) An alternative method of marking may be used if accepted by RUS prior to its use.

(5) The completed cable shall have sequentially numbered length markers in FEET OR METERS at regular intervals of not more than 1.5 m (5 ft) along the outside of the jacket.

(6) The method of length marking shall be such that for any single length of cable, continuous sequential numbering shall be employed.

(7) The numbers shall be dimensioned and spaced to produce good legibility and shall be approximately 3 mm (0.125 in.) in height. An occasional illegible marking is permissible if there is a legible marking located not more than 1.5 m (5 ft) from it.

(8) The method of marking shall be by means of suitable surface markings producing a clear, distinguishable, contrasting marking acceptable to RUS. Where direct or transverse printing is employed, the characters should be indented to produce greater durability of marking. Any other method of length marking shall be acceptable to RUS as producing a marker suitable for the field. Size, shape and spacing of numbers, durability, and overall legibility of the marker shall be considered in acceptance of the method.

(9) The accuracy of the length marking shall be such that the actual length of any cable section is never less than the length indicated by the marking and never more than one percent greater than the length indicated by the marking.

(10) The color of the initial marking for a black colored jacket shall be either white or silver. The color of the initial marking for a dark grey colored jacket shall be either red or black. If the initial marking of the black colored jacket fails to meet the requirements of the preceding paragraphs, it will be permissible to either remove the defective marking and re-mark with the white or silver color or leave the defective marking on the cable and re-mark with yellow. If the initial marking of the dark grey colored jacket fails to meet the requirements of the preceding paragraphs, it will be permissible to either remove the defective marking and re-mark with the red or black color or leave the defective
marking on the cable and re-mark with yellow. No further re-marking is permitted. Any re-marking shall be on a different portion of the cable circumference than any existing marking when possible and have a numbering sequence differing from any other existing marking by at least 5,000.

(11) Any reel of cable which contains more than one set of sequential markings shall be labeled to indicate the color and sequence of marking to be used. The labeling shall be applied to the reel and also to the cable.

(l) Preconnectorized cable (optional).

(1) At the option of the manufacturer and upon request by the purchaser, cables 100 pairs and larger may be factory terminated in 25 pair splicing modules.

(2) The splicing modules shall meet the requirements of RUS Bulletin 34554, PE-52, RUS Specification for Telephone Cable Splicing Connectors (Incorporated by Reference at §1755.97), and be accepted by RUS prior to their use.

(m) Acceptance testing and extent of testing. (1) The tests described in appendix A of this section are intended for acceptance of cable designs and major modifications of accepted designs. RUS decides what constitutes a major modification. These tests are intended to show the inherent capability of the manufacturer to produce cable products having long life and stability.

(2) For initial acceptance, the manufacturer shall submit:

(i) An original signature certification that the product fully complies with each section of the specification;

(ii) Qualification Test Data, per appendix A of this section;

(iii) To periodic plant inspections;

(iv) A certificate that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.) for acceptance by j une 30 every three years. The required data and certification shall have been gathered within 90 days of the submission.

(4) Initial and requalification acceptance requests should be addressed to: Chairman, Technical Standards Committee “A” (Telephone), Telecommunications Standards Division, Rural Utilities Service, Washington, DC 20250-1500.

(5) Tests on 100 percent of completed cable. (i) The shield of each length of cable shall be tested for freedom from grounds in accordance with paragraph (h)(6)(ii) of this section.

(ii) Dielectric strength between all conductors and the shield shall be tested to determine freedom from shorts and crosses in accordance with paragraph (h)(6)(i) of this section.

(v) Each conductor in the completed preconnectorized cable shall be tested for continuity.

(vi) Each length of completed preconnectorized cable shall be tested for split pairs.

(vii) The average mutual capacitance shall be measured on all cables. If the average mutual capacitance for the first 100 pairs tested from randomly selected groups is between 50 and 53 nF/km (80 to 85 nF/mile), the remainder of the pairs need not to be tested on the 100 percent basis. (See paragraph (h)(1) of this section).

(6) Capability tests. Tests on a quality assurance basis shall be made as frequently as is required for each manufacturer to determine and maintain compliance with:
(i) Performance requirements for conductor insulation and jacket material;
(ii) Bonding properties of coated or laminated shielding materials;
(iii) Sequential marking and lettering;
(iv) Capacitance unbalance and crosstalk;
(v) Insulation resistance;
(vi) Conductor resistance and resistance unbalance;
(vii) Cable cold bend and cable flame tests; and
(viii) Mutual conductance.

(n) Summary of records of electrical and physical tests. (1) Each manufacturer shall maintain a suitable summary of records for a period of at least 3 years for all electrical and physical tests required on completed cable by this section as set forth in paragraphs (m)(5) and (m)(6) of this section. The test data for a particular reel shall be in a form that it may be readily available to the purchaser or to RUS upon request.

(2) Measurements and computed values shall be rounded off to the number of places of figures specified for the requirement according to ASTM E 29-90.

(o) Manufacturing irregularities. (1) Repairs to the shield are not permitted in cable supplied to the end user under this section.

(2) No repairs or defects in the jacket are allowed.

(p) Preparation for shipment. (1) The cable shall be shipped on reels unless otherwise specified or agreed to by the purchaser. The diameter of the drum shall be large enough to prevent damage to the cable from reeling or unreeling. The reels shall be substantial and so constructed as to prevent damage to the cable during shipment and handling.

(2) A waterproof corrugated board or other means of protection acceptable to RUS shall be applied to the reel and shall be suitably secured in place to prevent damage to the cable during storage and shipment.

(3) The outer end of the cable shall be securely fastened to the reel head so as to prevent the cable from becoming loose in transit. The inner end of the cable shall be securely fastened in such a way as to make it readily available if required for electrical testing. Spikes, staples, or other fastening devices which penetrate the cable jacket shall not be used. The method of fastening the cable ends shall be accepted by RUS prior to it being used.

(4) Each length of cable shall be wound on a separate reel unless otherwise specified or agreed to by the purchaser.

(5) The arbor hole shall admit a spindle 63 mm (2.5 in.) in diameter without binding. Steel arbor hole liners may be used but shall be acceptable to RUS prior to their use.

(6) Each reel shall be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the cable on the reel.

(7) Each reel shall be stenciled or labeled on either one or both sides with the name of the manufacturer, year of manufacture, actual shipping length, an inner and outer end sequential length marking, description of the cable, reel number and the RUS cable designation:

</tbody>
</table>

(8) When preconnectorized cable is shipped, the splicing modules shall be protected to prevent damage during shipment and handling. The protection method shall be accepted by RUS prior to its use.

(The information collection and record-keeping requirements of this section have been approved by the Office of Management and Budget (OMB) under control number 0572-0059)

APPENDIX A TO 7 CFR 1755.870—QUALIFICATION TEST METHODS

(I) The test procedures described in this appendix are for qualification of initial designs and major modifications of accepted designs. Included in paragraph (V) of this appendix are suggested formats that may be used in submitting test results to RUS.

(II) Sample Selection and Preparation. (1) All testing shall be performed on lengths removed sequentially from the same 25 pair, 22
§ 1755.870 7 CFR Ch. XVII (1-1-98 Edition)
gauge jacketed cable. This cable shall not have been exposed to temperatures in excess of 38 °C since its initial cool down after sheathing. The lengths specified are minimum lengths and if desirable from a laboratory testing standpoint longer lengths may be used.

(a) Length A shall be 12 ± 0.2 meters (40 ± 0.5 feet) long. Prepare the test sample by removing the jacket, shield, and core wrap for a sufficient distance on both ends to allow the insulated conductors to be flared out. Remove sufficient conductor insulation so that appropriate electrical test connections can be made at both ends. Coil the sample with a diameter of 15 to 20 times its sheath diameter. Two lengths are required.

(b) Length B shall be 300 millimeters (1 foot) long. Three lengths are required.

(c) Length C shall be 3 meters (10 feet) long and shall be maintained at 23 ± 3 °C for the duration of the test. Two lengths are required.

(2) Data Reference Temperature. Unless otherwise specified, all measurements shall be made at 23 ± 3 °C.

(III) Environmental Tests—(1) Heat Aging Test—(a) Test Samples. Place one sample each of lengths A and B in an oven or environmental chamber. The ends of sample A shall exit from the chamber or oven for electrical tests. Securely seal the oven exit holes.

(b) Sequence of Tests. Sample B referenced in paragraph (III)(1)(a) of this appendix shall be subjected to the insulation compression test outlined in paragraph (III)(1)(c)(ii) of this appendix.

(c) Initial Measurements. (i) For sample A, measure the open-circuit capacitance and conductance for each odd pair at 1, 150, and 772 kilohertz after conditioning the sample to the data reference temperature for 24 hours. Calculate the average and standard deviation for the data of the 13 pairs on a per kilometer (per mile) basis.

(ii) Record on suggested formats in paragraph (V) of this appendix or on other easily readable formats.

(d) Heat Conditioning. (i) Immediately after completing the initial measurements, condition the sample for 14 days at a temperature of 62 ± 2 °C.

(ii) At the end of this period. Measure and calculate the parameters given in paragraph (III)(1)(c) of this appendix. Record on suggested formats in paragraph (V) of this appendix or on other easily readable formats.

(2) Overall Electrical Deviation. (i) Calculate the percent change in all average parameters between the final parameters after conditioning with the initial parameters in paragraph (III)(1)(c) of this appendix.

(ii) The stability of the electrical parameters after completion of this test shall be within the following prescribed limits:

(A) Capacitance. The average mutual capacitance shall be within 10 percent of its original value;

(B) The change in average mutual capacitance shall be less than 10 percent over the frequency range of 1 to 150 kilohertz; and

(C) Conductance. The average mutual conductance shall not exceed 3.7 micromhos/kilometer (6 micromhos/mile) at a frequency of 1 kilohertz.

(2) Insulation Compression Test—(a) Test Sample B. Remove jacket, shield, and core wrap being careful not to damage the conductor insulation. Remove one pair from the core and carefully separate and straighten the insulated conductors. Retwist the two insulated conductors together under sufficient tension to form 10 evenly spaced 360 degrees twists in a length of 100 millimeters (4 inches).

(b) Sample Testing. Center the mid 50 millimeters (2 inches) of the twisted pair between two smooth rigid parallel metal plates measuring 50 millimeters (2 inches) in length or diameter. Apply a 1.5 volt direct current potential between the conductors, using a light or buzzer to indicate electrical contact between the conductors. Apply a constant load of 67 newtons (15 pound-force) on the sample for one minute and monitor for evidence of contact between the conductors. Record results on suggested formats in paragraph (V) of this appendix or on other easily readable formats.

(3) Temperature Cycling. (a) Repeat paragraphs (III)(1)(a) through (III)(1)(c)(ii) of this appendix for a separate set of samples A and B which have not been subjected to prior environmental conditioning.

(b) Immediately after completing the measurements, subject the test samples to 10 cycles of temperature between 40 °C and +60 °C. The test samples shall be held at each temperature extreme for a minimum of 1.5 hours during each cycle of temperature. The air within the temperature cycling chamber shall be circulated throughout the duration of the cycling.

(c) Repeat paragraphs (III)(1)(d)(ii) through (III)(2)(b) of this appendix.

(IV) Control Sample—(1) Test Samples. One length of sample B shall have been maintained at 23 ± 3 °C for at least 48 hours before the testing.

(2) Repeat paragraphs (III)(2) through (III)(2)(b) of this appendix.

(3) Surge Test. (a) One length of sample C shall be used to measure the breakdown between conductors while the other length of C shall be used to measure core to shield breakdown.

(b) The samples shall be capable of withstanding, without damage, a single surge voltage of 20 kilovolts peak between conductors, and 35 kilovolts peak between conductors and the shield as hereinafter described. The surge voltage shall be developed from a
capacitor discharge through a forming resistor connected in parallel with the dielectric of the test sample. The surge generator constants shall be such as to produce a surge of 1.5 \times 40 \text{ microseconds} wave shape.

(c) The shape of the generated wave shall be determined at a reduced voltage by connecting an oscilloscope across the forming resistor with the cable sample connected in parallel with the forming resistor. The capacitor bank is charged to the test voltage and then discharged through the forming resistor and test sample. The test sample shall be considered to have passed the test if there is no distinct change in the wave shape obtained with the initial reduced voltage compared to that obtained after the application of the test voltage.

(V) The following suggested formats may be used in submitting the test results to RUS:

APPENDIX B TO 7 CFR 1755.870—SHEATH SLITTING CORD QUALIFICATION

(I) This test procedure described in this appendix is for qualification of initial and subsequent changes in sheath slitting cords.

(II) Sample selection. All testing shall be performed on two 1.2 m (4 ft) lengths of cable removed sequentially from the same 25 pair, 22 gauge jacketed cable. This cable shall not have been exposed to temperatures in excess of 38 °C since its initial cool down after sheathing.

(III) Test procedure. (1) Using a suitable tool, expose enough of the sheath slitting cord to permit grasping with needle nose pliers.

(2) The prepared test specimens shall be maintained at a temperature of 23 ± 1 °C for at least 4 hours immediately prior to and during the test.

(3) Wrap the sheath slitting cord around the plier jaws to ensure a good grip.

(4) Grasp and hold the cable in a convenient position while gently and firmly pulling the sheath slitting cord longitudinally in the direction away from the cable end. The angle of pull may vary to any convenient and functional degree. A small starting notch is permissible.

(5) The sheath slitting cord is considered acceptable if the cord can slit the jacket and/or shield for a continuous length of 0.6 m (2 ft) without breaking the cord.

§§ 1755.871—1755.889 [Reserved]

§ 1755.890 RUS specification for filled telephone cables with expanded insulation.

(a) Scope. (1) This section covers the requirements for filled telephone cables intended for direct burial installation either by trenching or by direct plowing, for underground application by placement in a duct, or for aerial installation by attachment to a support strand.

(ii) The insulated conductors are twisted into pairs which are then stranded or oscillated to form a cylindrical core.

(iii) For high frequency applications, the cable core may be separated into compartments with screening shields.

(iv) A moisture resistant filling compound is applied to the stranded conductors completely covering the insulated conductors and filling the interstices between pairs and units.

(v) The cable structure is completed by the application of suitable core wrapping material, a flooding compound, a shield or a shield/armor, and an overall plastic jacket.

(2) The number of pairs and gauge size of conductors which are used within the RUS program are provided in the following table:

<table>

     2400
     2700

Note: Cables larger in pair sizes than those shown in this table must meet all requirements of this section.

(3) Screened cable, when specified, must meet all requirements of this section. The pair sizes of screened cables used within the RUS program are referenced in paragraph (e)(2)(i) of this section.

(4) All cables sold to RUS borrowers for projects involving RUS loan funds under this section must be accepted by RUS Technical Standards Committee "A" (Telephone). For cables manufactured to the specification of this section, all design changes to an accepted design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.

(5) Materials, manufacturing techniques, or cable designs not specifically addressed by this section may be allowed if accepted by RUS. Justification for acceptance of modified materials, manufacturing techniques, or cable designs must be provided to substantiate product utility and long-term stability and endurance.

(6) The American National Standard Institute/Insulated Cable Engineers Association, Inc. (ANSI/ICEA) S-84-608-1988, Standard For Telecommunications Cable, Filled, Polyolefin Insulated, Copper Conductor Technical Requirements referred throughout this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of ANSI/ICEA S-84-608-1988 are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from ICEA, P. O. Box 440, South Yarmouth, MA 02664, telephone number (508) 394-4424.

(b) Conductors and conductor insulation. (1) The gauge sizes of the copper conductors covered by this section must be 19, 22, 24, and 26 American Wire Gauge (AWG).

(2) Each conductor must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 2.1.

(3) Factory joints made in conductors during the manufacturing process must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 2.2.
§ 1755.890  

(4) The raw materials used for conductor insulation must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.1 through 3.1.3.

(5) The finished conductor insulation must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.2.2, 3.2.3, and 3.3.

(6) Insulated conductor must not have an overall diameter greater than 2 millimeters (mm) (0.081 inch (in.)).

(7) A permissible overall performance level of faults in conductor insulation must average not greater than one fault per 12,000 conductor meters (40,000 conductor feet) for each gauge of conductor.

(i) All insulated conductors must be continuously tested for insulation faults during the twinning operation with a method of testing acceptable to RUS. The length count and number of faults must be recorded. The information must be retained for a period of 6 months and be available for review by RUS when requested.

(ii) The voltages for determining compliance with the requirements of this section are as follows:

<table>
<thead>
<tr>
<th>AWG</th>
<th>Direct Current Voltages (kilo-volts)</th>
</tr>
</thead>
<tbody>
<tr>
<td>19</td>
<td>4.5</td>
</tr>
<tr>
<td>22</td>
<td>3.6</td>
</tr>
<tr>
<td>24</td>
<td>3.0</td>
</tr>
<tr>
<td>26</td>
<td>2.4</td>
</tr>
</tbody>
</table>

(8) Repairs to the conductor insulation during manufacture are permissible. The method of repair must be accepted by RUS prior to its use. The repaired insulation must be capable of meeting the relevant electrical requirements of this section.

(9) All repaired sections of insulation must be retested in the same manner as originally tested for compliance with paragraph (b)(7) of this section.

(10) The colored insulating material removed from or tested on the conductor, from a finished cable, must meet the performance requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 3.4.1 through 3.4.6.

(c) Identification of pairs and twisting of pairs. (1) The insulation must be colored to identify:

(i) The tip and ring conductor of each pair; and

(ii) Each pair in the completed cable.

(2) The colors to be used in the pairs in the 25 pair group, together with the pair numbers must be in accordance with the table specified in ANSI/ICEA S-84-608-1988, paragraph 3.5.

(3) Positive identification of the tip and ring conductors of each pair by marking each conductor of a pair with the color of its mate is permissible. The method of marking must be accepted by RUS prior to its use.

(4) Other methods of providing positive identification of the tip and ring conductors of each pair may be employed if accepted by RUS prior to its use.

(5) The insulated conductors must be twisted into pairs.

(6) In order to provide sufficiently high crosstalk isolation, the pair twists must be designed to enable the cable to meet the capacitance unbalance and crosstalk loss requirements of paragraphs (k)(5), (k)(6), and (k)(8) of this section.

(7) The average length of pair twists in any pair in the finished cable, when measured on any 3 meter (10 foot) length, must not exceed the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 3.5.

(d) Forming of the cable core. (1) Twisted pairs must be assembled in such a way as to form a substantially cylindrical group.

(2) When desired for lay-up reasons, the basic group may be divided into two or more subgroups called units.

(3) Each group, or unit in a particular group, must be enclosed in bindings of the colors indicated for its particular pair count. The pair count, indicated by the colors of insulation, must be consecutive as indicated in paragraph (d)(6) of this section through units in a group.

(4) The filling compound must be applied to the cable core in such a way as to provide as near a completely filled core as is commercially practical.

(5) Threads and tapes used as binders must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 4.2 and 4.2.1.

(6) The colors of the bindings and their significance with respect to pair count must be as follows:
(7) The use of the white unit binder in cables of 100 pairs or less is optional.

(8) When desired for manufacturing reasons, two or more 25 pair groups may be bound together with nonhygroscopic and nonwicking threads or tapes into a super-unit. Threads or tapes must meet the requirements specified in paragraph (d)(5) of this section. The group binders and the super-unit binders must be color coded such that the combination of the two binders must positively identify each 25 pair group from every other 25 pair group in the cable. Super-unit binders must be of the color shown in the following table:

<table>

(9) Color binders must not be missing for more than 90 meters (300 feet) from any 25 pair group or from any subgroup used as part of a super-unit. At any cable cross-section, no adjacent 25 pair groups and no more than one subgroup of any super-unit may have missing binders. In no case must the total number of missing binders exceed three. Missing super-unit binders must not be permitted for any distance.

(10) Any reel of cable which contains missing binders must be labeled indicating the colors and location of the binders involved. The labeling must be applied to the reel and also to the cable.

(e) Screened cable. (1) Screened cable must be constructed such that a metallic, internal screen(s) must be provided to separate and provide sufficient isolation between the compartments to meet the requirements of this section.

(2) At the option of the user or manufacturer, identified service pairs providing for voice order and fault location may be placed in screened cables.

(i) The number of service pairs provided must be one per twenty-five operating pairs plus two for a cable size up to and including 400 pairs, subject to a minimum of four service pairs. The pair counts for screened cables are as follows:

<table>
<thead>
<tr>
<th>Screened Cable Pair Counts</th>

</table>

(ii) The service pairs must be equally divided among the compartments. The color sequence must be repeated in each compartment.

(iii) The electrical and physical characteristics of each service pair must meet all the requirements set forth in this section.

(iv) The colors used for the service pairs must be in accordance with the requirements of paragraph (b)(5) of this section. The color code used for the service pairs together with the service pair number are shown in the following table:
§ 1755.890

(3) The screen tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 5.1 through 5.4.

(4) The screen tape must be tested for dielectric strength by completely removing the protective coating from one end to be used for grounding purposes.

(i) Using an electrode, over a 30 centimeter (1 foot) length, apply a direct current (dc) voltage at the rate of rise of 500 volts/second until failure.

(ii) No breakdown should occur below 8 kilovolts.

(f) Filling compound. (1) After or during the stranding operation and prior to application of the core wrap, filling compound must be applied to the cable core. The compound must be as nearly colorless as is commercially feasible and consistent with the end product requirements and pair identification.

(2) The filling compound must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 4.4 through 4.4.4.

(3) The individual cable manufacturer must satisfy RUS that the filling compound selected for use is suitable for its intended application. The filling compound must be applied to the cable in such a manner that the cable components will not be degraded.

(g) Core wrap. (1) The core wrap must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 4.3.

(2) If required for manufacturing reasons, white or colored binders of non-hygrosopic and nonwicking material may be applied over the core and/or wrap. When used, binders must meet the requirements specified in paragraph (d)(5) of this section.

(3) Sufficient filling compound must have been applied to the core wrap so that voids or air spaces existing between the core and the inner side of the core wrap are minimized.

(h) Flooding compound. (1) Sufficient flooding compound must be applied on all sheath interfaces so that voids and air spaces in these areas are minimized. When the optional armored design is used, the flooding compound must be applied between the core wrap and shield, between the shield and armor, and between the armor and the jacket so that voids and air spaces in these areas are minimized. The use of floodant over the outer metallic substrate is not required if uniform bonding, per paragraph (i)(7) of this section, is achieved between the plastic-clad metal and the jacket.

(2) The flooding compound must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 4.5 and the jacket slip test requirements of appendix A, paragraph (III)(5) of this section.

(3) The individual cable manufacturer must satisfy RUS that the flooding compound selected for use is acceptable for the application.

(i) Shield and optional armor. (1) A single corrugated shield must be applied longitudinally over the core wrap.

(2) For unarmored cable the shield overlap must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.2. Core diameter is defined as the diameter under the core wrap and binding.

(3) For cables containing the coated aluminum shield/coated steel armor (CACSP) sheath design, the coated aluminum shield must be applied in accordance with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.2, Dual Tape Shielding System.

(4) General requirements for application of the shielding material are as follows:

(i) Successive lengths of shielding tapes may be joined during the manufacturing process by means of cold weld, electric weld, soldering with a nonacid flux or other acceptable means.

(ii) Shield splices must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.3.
(iii) The corrugations and the application process of the coated aluminum and copper bearing shields must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.1. (iv) The shielding material must be applied in such a manner as to enable the cable to pass the cold bend test specified in paragraph (i)(3) of this section.

(5) The following is a list of acceptable materials for use as cable shielding. Other types of shielding materials may also be used provided they are accepted by RUS prior to their use.

¹Dimensions of uncoated metal.

(i) The 8-mil aluminum tape must be plastic coated on both sides and must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.3.

(ii) The 5-mil copper tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.3.

(iii) The 10-mil copper tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.4.

(iv) The 6-mil copper clad stainless steel tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.5.

(v) The 5-mil copper clad stainless steel tape must be in the fully annealed condition and must conform to the requirements of American Society for Testing and Materials (ASTM) B 694-86, with a cladding ratio of 16/68/16.

(A) The electrical conductivity of the copper clad alloy steel tape must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.4.

(B) The thickness of the copper clad alloy steel tape must comply with the requirements specified in (5)(v)(A) of this section.

(vi) The 5-mil copper clad alloy steel tape must be in the fully annealed condition and the copper component must conform to the requirements of ASTM B 224-80 and the steel component must conform to the requirements of ASTM A 505-87, with a cladding ratio of 16/68/16.

(A) The electrical conductivity of the copper clad alloy steel tape must comply with the requirement specified in (5)(v)(A) of this section.

(B) The thickness of the copper clad alloy steel tape must comply with the requirements specified in (5)(v)(B) of this section.

(vii) The 6-mil and 7-mil 194 copper alloy tapes must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.5.

(viii) The corrugation extensibility of the coated aluminum shield must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.4.

(6) The corrugation extensibility of the coated aluminum shield must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.4.

(7) When the jacket is bonded to the plastic coated aluminum shield, the bond between the jacket and shield must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.6.

(8) A single plastic coated steel corrugated armor must be applied longitudinally directly over the coated aluminum shield listed in paragraph (ii)(5) of this section with an overlap complying with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.2, Outer Steel Tape.

(9) Successive lengths of steel armor tapes may be joined during the manufacturing process by means of cold weld, electric weld, soldering with a nonacid flux or other acceptable means. Armor splices must comply with the breaking strength and resistance requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.3.

(10) The corrugations and the application process of the coated steel armor must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.3.1.

(i) The corrugations of the armor tape must coincide with the corrugations of the coated aluminum shield.

(ii) Overlapped portions of the armor tape must be in register (corrugations must coincide at overlap) and in contact at the outer edge.
§ 1755.890

(11) The armoring material must be so applied to enable the cable to pass the cold bend test specified in paragraph (l)(3) of this section.

(12) The 6-mil steel tape must be electrolytic chrome coated steel (ECCS) plastic coated on both sides and must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 6.2.8.

(13) When the jacket is bonded to the plastic coated steel armor, the bond between the jacket and armor must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.6.

(j) Cable jacket. (1) The jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.

(2) The raw materials used for the cable jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.1.

(3) Jacketing material removed from or tested on the cable must meet the performance requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 7.2.3 and 7.2.4.

(4) The thickness of the jacket must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 7.2.2.

(k) Electrical requirements—(1) Conductor resistance. The direct current resistance of any conductor in a completed cable and the average resistance of all conductors in a Quality Control Lot must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.1.

(2) Resistance unbalance. (i) The direct current resistance unbalance between the two conductors of any pair in a completed cable and the average resistance unbalance of all pairs in a completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.2.

(ii) The resistance unbalance between tip and ring conductors shall be random with respect to the direction of unbalance. That is, the resistance of the tip conductors shall not be consistently higher with respect to the ring conductors and vice versa.

(3) Mutual capacitance. The average mutual capacitance of all pairs in a completed cable and the individual mutual capacitance of any pair in a completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.3.

(4) Capacitance difference. (i) The capacitance difference for completed cables having 75 pairs or greater must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 8.4.

(ii) When measuring screened cable, the inner and outer pairs must be selected from both sides of the screen.

(5) Pair-to-pair capacitance unbalance—(i) Pair-to-pair. The capacitance unbalance as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.5.

(ii) Screened cable. In cables with 25 pairs or less and within each group of multigroup cables, the pair-to-pair capacitance unbalance between any two pairs in an individual compartment must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.5. The pair-to-pair capacitance unbalances to be considered must be:

(A) Between pairs adjacent in a layer in an individual compartment;

(B) Between pairs in centers of 4 pairs or less in an individual compartment; and

(C) Between pairs in adjacent layers in an individual compartment when the number of pairs in the inner (smaller) layer is 6 or less. The center is counted as a layer.

(iii) In cables with 25 pairs or less, the root-mean-square (rms) value is to include all the pair-to-pair unbalances measured for each compartment separately.

(iv) In cables containing more than 25 pairs, the rms value must include the pair-to-pair unbalances in the separate compartments.

(6) Pair-to-ground capacitance unbalance—(i) Pair-to-ground. The capacitance unbalance as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.6.

(ii) When measuring pair-to-ground capacitance unbalance all pairs except the pair under test are grounded to the shield and/or shield armor except when measuring cables containing super
units in which case all other pairs in the same super unit must be grounded to the shield.

(iii) The screen tape must be left floating during the test.

(iv) Pair-to-ground capacitance unbalance may vary directly with the length of the cable.

(7) Attenuation. (i) For nonscreened and screened cables, the average attenuation of all pairs on any reel when measured at 150 and 772 kilohertz must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.7, Foam and/or Foam-Skin Column.

(ii) For TIC type cables over 12 pairs, the maximum average attenuation of all pairs on any reel must not exceed the values listed below when measured at a frequency of 1576 kilohertz at or corrected to a temperature of 20 ± 1°C. The test must be conducted in accordance with ASTM D 4566-90.

<table>

(8) Crosstalk loss. (i) The equal level far-end power sum crosstalk loss (FEXT) as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.8, FEXT Table.

(ii) The near-end power sum crosstalk loss (NEXT) as measured on completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.8, NEXT Table.

(iii) Screened cable. (A) For screened cables the NEXT as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 8.9 and 8.9.1.

(B) For TIC screened cable the NEXT as measured on the completed cable must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraphs 8.9 and 8.9.2.

(9) Insulation resistance. The insulation resistance of each insulated conductor in a completed cable must comply with the requirement specified in ANSI/ICEA S-84-608-1988, paragraph 8.11.

(10) High voltage test. (i) In each length of completed cable, the insulation between conductors must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.12, Foam and/or Foam-Skin Column.

(ii) In each length of completed cable, the dielectric between the shield and/or armor and conductors in the core must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.13, Single Jacketed, Foam and/or Foam-Skin Column. In screened cable the screen tape must be left floating.

(iii) Screened cable. (A) In each length of completed screened cable, the dielectric between the screen tape and the conductors in the core must comply with the requirements specified in ANSI/ICEA S-84-608-1988, paragraph 8.14.

(B) In this test, the cable shield and/or armor must be left floating.

(11) Electrical variations. (i) Pairs in each length of cable having either a ground, cross, short, or open circuit condition will not be permitted.

(ii) The maximum number of pairs in a cable which may vary as specified in paragraph (k)(11)(iii) of this section from the electrical parameters given in this section are listed below. These pairs may be excluded from the arithmetic calculation.

<table>
<thead>
<tr>

(iii) Parameter variations. (A) Capacitance unbalance-to-ground. If the cable fails either the maximum individual pair or average capacitance unbalance-to-ground requirement and all individual pairs are 3937 picofarad/kilometer (1200 picofarad/1000 feet) or less, the number of pairs specified in paragraph (k)(11)(ii) of this section may be eliminated from the average and maximum individual calculations.

(B) Resistance unbalance. Individual pair of 7 percent for all gauges.
§ 1755.890

(C) Conductor resistance, maximum. The following table shows maximum conductor resistance:

NOTE: RUS recognizes that in large pair count cable (600 pair and above) a cross, short, or open circuit condition occasionally may develop in a pair which does not affect the performance of the other cable pairs. In these circumstances rejection of the entire cable may be economically unsound or repairs may be impractical. In such circumstances the manufacturer may desire to negotiate with the customer for acceptance of the cable. No more than 0.5 percent of the pairs may be involved.

(l) Mechanical requirements—(1) Compound flow test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the compound flow test specified in ANSI/ICEA S-84-608-1988, paragraph 9.1 using a test temperature of 80 ± 1°C.

(2) Water penetration test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the water penetration test specified in ANSI/ICEA S-84-608-1988, paragraph 9.2.

(3) Cable cold bend test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the cable cold bend test specified in ANSI/ICEA S-84-608-1988, paragraph 9.3.

(4) Cable impact test. All cables manufactured in accordance with the requirements of this section must be capable of meeting the cable impact test specified in ANSI/ICEA S-84-608-1988, paragraph 9.4.

(m) Sheath slitting cord (optional). (1) Sheath slitting cord may be used in the cable structure at the option of the manufacturer unless specified by the end user.

(2) When a sheath slitting cord is used it must be nonhygroscopic and nonwicking, continuous throughout a length of cable and of sufficient strength to open the sheath without breaking the cord.

(n) Identification marker and length marker. (1) Each length of cable must be identified in accordance with ANSI/ICEA S-84-608-1988, paragraphs 10.1 through 10.1.4. The color of the ink used for the initial outer jacket marking must be either white or silver.

(2) The markings must be printed on the jacket at regular intervals of not more than 0.6 meter (2 feet).

(o) Preconnectorized cable (optional). (1) At the option of the manufacturer and upon request by the purchaser, cables 100 pairs and larger may be factory terminated in 25 pair splicing modules.

(2) The splicing modules must meet the requirements of RUS Bulletin 345-54, PE-52, RUS Specification for Telephone Cable Splicing Connectors (incorporated by reference at §1755.97), and be accepted by RUS prior to their use.

(p) Acceptance testing and extent of testing. (1) The tests described in appendix A of this section are intended for acceptance of cable designs and major modifications of accepted designs. What constitutes a major modification is at the discretion of RUS. These tests are intended to show the inherent capability of the manufacturer to produce cable products having long life and stability.

(2) For initial acceptance, the manufacturer must submit:

(i) An original signature certification that the product fully complies with each section of the specification;

(ii) Qualification Test Data, per appendix A of this section;

(iii) To periodic plant inspections;
(iv) A certification that the product does or does not comply with the domestic origin manufacturing provisions of the "Buy American" requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.);
(v) Written user testimonials concerning field performance of the product; and
(vi) Other nonproprietary data deemed necessary by the Chief, Outside Plant Branch (Telephone).

(3) For requalification acceptance, the manufacturer must submit an original signature certification that the product fully complies with each section of the specification, excluding the Qualification Section, and a certification that the product does or does not comply with the domestic origin manufacturing provisions of the "Buy American" requirements of the Rural Electrification Act of 1938 (7 U.S.C. 901 et seq.), for acceptance by August 30 of each year. The required data must have been gathered within 90 days of the submission. If the initial acceptance of a product to this specification was within 180 days of August 30, then requalification for that product will not be required for that year.

(4) Initial and requalification acceptance requests should be addressed to:
Chairman, Technical Standards Committee "A" (Telephone), Telecommunications Standard Division, Rural Utilities Service, Washington, DC 20250-1500.

(5) Tests on 100 percent of completed cable. (i) The shield and/or armor of each length of cable must be tested for continuity in accordance with ANSI/ICEA S-84-608-1988, paragraph 8.16.
(ii) The screen tape of each length of screened cable must be tested for continuity in accordance with ANSI/ICEA S-84-608-1988, paragraph 8.16.
(iii) Dielectric strength between conductors and shield and/or armor must be tested to determine freedom from grounds in accordance with paragraph (k)(10)(ii) of this section.
(iv) Dielectric strength between conductors and screen tape must be tested to determine freedom from grounds in accordance with paragraph (k)(10)(iii) of this section.
(v) Each conductor in the completed cable must be tested for continuity in accordance with ANSI/ICEA S-84-608-1988, paragraph 8.16.
(vi) Dielectric strength between conductors, in each length of completed cable, must be tested to insure freedom from shorts and crosses in each length of completed cable in accordance with paragraph (k)(10)(i) of this section.
(vii) Each conductor in the completed preconnectorized cable must be tested for continuity.
(viii) Each length of completed preconnectorized cable must be tested for split pairs.
(ix) The average mutual capacitance must be measured on all cables. If the average mutual capacitance for the first 100 pairs tested from randomly selected groups is between 50 and 53 nanofarad/kilometer (nF/km) (80 and 85 nanofarad/mile), the remainder of the pairs need not be tested on the 100 percent basis (See paragraph (k)(3) of this section).

(6) Capability tests. Tests on a quality assurance basis must be made as frequently as is required for each manufacturer to determine and maintain compliance with:
(i) Performance requirements for conductor insulation, jacketing material, and filling and flooding compounds;
(ii) Bonding properties of coated or laminated shielding and armoring materials and performance requirements for screen tape;
(iii) Sequential marking and lettering;
(iv) Capacitance difference, capacitance unbalance, crosstalk, and attenuation;
(v) Insulation resistance, conductor resistance, and resistance unbalance;
(vi) Cable cold bend and cable impact tests;
(vii) Water penetration and compound flow tests; and
(viii) Jacket notch and cable torsion tests.

(q) Summary of records of electrical and physical tests. (1) Each manufacturer must maintain suitable summary records for a period of at least 3 years of all electrical and physical tests required on completed cable by this section as set forth in paragraphs (p)(5) and (p)(6) of this section. The test data for a particular reel must be in a form
that it may be readily available to the purchaser or to RUS upon request.

(2) Measurements and computed values must be rounded off to the number of places or figures specified for the requirement according to ANSI/ICEA S-84-608-1988, paragraph 1.3.

(r) Manufacturing irregularities. (1) Repairs to the shield and/or armor are not permitted in cable supplied to end users under this section.

(2) Minor defects in jackets (defects having a dimension of 3 millimeters (0.125 inch) or less in any direction) may be repaired by means of heat fusing in accordance with good commercial practices utilizing sheath grade compounds.

(s) Preparation for shipment. (1) The cable must be shipped on reels. The diameter of the drum must be large enough to prevent damage to the cable from reeling or unreeling. The reels must be substantial and so constructed as to prevent damage to the cable during shipment and handling.

(2) The thermal wrap must comply with the requirements of ANSI/ICEA S-84-608-1988, paragraph 10.3. When a thermal reel wrap is supplied, the wrap must be applied to the reel and must be suitably secured in place to minimize thermal exposure to the cable during storage and shipment. The use of the thermal reel wrap as a means of reel protection will be at the option of the manufacturer unless specified by the end user.

(3) The outer end of the cable must be securely fastened to the reel head so as to prevent the cable from becoming loose in transit. The inner end of the cable must be securely fastened in such a way as to make it readily available if required for electrical testing. Spikes, staples, or other fastening devices which penetrate the cable jacket must not be used. The method of fastening the cable ends must be acceptable to RUS and accepted prior to its use.

(4) Each length of cable must be wound on a separate reel unless otherwise specified or agreed to by the purchaser.

(5) The arbor hole must admit a spindle 63 millimeters (2.5 inches) in diameter without binding. Steel arbor hole liners may be used but must be accepted by RUS prior to their use.

(6) Each reel must be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the cable on the reel.

(7) Each reel must be stenciled or labeled on either one or both sides with the information specified by RUS. ANSI/ICEA S-84-608-1988, paragraph 10.4 and the RUS cable designation:

Example: BFCEXH100±22
Buried Filled Cable, Expanded Insulation, Armored (w/separate shield), T1 Screened Cable, 100 pair, 22 AWG.

(8) When cable manufactured to the requirements of this specification is shipped, both ends must be equipped with end caps acceptable to RUS.

(9) When preconnectorized cables are shipped, the splicing modules must be protected to prevent damage during shipment and handling. The protection method must be acceptable to RUS and accepted prior to its use.

(10) All cables ordered for use in underground duct applications must be equipped with a factory-installed pull-eye on the outer end in accordance with ANSI/ICEA S-84-608-1988, paragraph 10.5.2.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget (OMB) under the control number 0572-0059)

APPENDIX A TO 7 CFR 1755.890—QUALIFICATION TEST METHODS

(I) The test procedures described in this appendix are for qualification of initial cable designs and major modifications of accepted designs. Included in (V) of this appendix are suggested formats that may be used in submitting test results to RUS.

(II) Sample selection and preparation. (1) All testing must be performed on lengths removed sequentially from the same 25 pair, 22 gauge jacketed cable. This cable must not have been exposed to temperatures in excess of 38 °C since its initial cool down after
Rural Utilities Service, USDA

§ 1755.890

sheathing. The lengths specified are minimum lengths and if desirable from a laboratory testing standpoint longer lengths may be used.

(a) Length A must be 10 ± 0.2 meters (33 ± 0.66 feet) long and must be maintained at 23 ± 3 °C. One length is required.

(b) Length B must be 12 ± 0.2 meters (40 ± 0.66 feet) long. Prepare the test sample by removing the jacket, shield or shield/armor, and core wrap for a sufficient distance on both ends to allow the insulated conductors to be flared out. Remove sufficient conductor insulation so that appropriate electrical test connections can be made at both ends. Coil the sample with a diameter of 15 to 20 times its sheath diameter. Three lengths are required.

(c) Length C must be one meter (3 feet) long. Four lengths are required.

(d) Length D must be 300 millimeters (1 foot) long. Four lengths are required.

(e) Length E must be 600 millimeters (2 feet) long. Four lengths are required.

(f) Length F must be 3 meters (10 feet) long and must be maintained at 23 ± 3 °C for the duration of the test. Two lengths are required.

(2) Data reference temperature. Unless otherwise specified, all measurements must be made at 23 ± 3 °C.

(III) Environmental tests—(1) Heat aging test—(a) Test samples. Place one sample each of lengths B, C, D, and E in an oven or environmental chamber. The ends of Sample B must exit from the chamber or oven for electrical tests. Securely seal the oven exit holes.

(b) Sequence of tests. The samples are to be subjected to the following tests after conditioning:

(i) Water Immersion Test outlined in (III)(2) of this appendix;

(ii) Water Penetration Test outlined in (III)(3) of this appendix;

(iii) Insulation Compression Test outlined in (III)(4) of this appendix;

(iv) Jacket Slip Strength Test outlined in (III)(5) of this appendix.

(c) Initial Measurements. (i) For Sample B measure the open circuit capacitance for each odd numbered pair at 1, 150, and 772 kilohertz, and the attenuation at 150 and 772 kilohertz after conditioning the sample at the data reference temperature for 24 hours. Calculate the average and standard deviation for the data of the 13 pairs on a per kilometer (or on a per mile) basis.

(ii) The attenuation at 150 and 772 kilohertz may be calculated from open circuit admittance (Yoc) and short circuit impedance (Zsc) or may be obtained by direct measurement of attenuation.

(iii) Record on suggested formats in (V) of this appendix or on other easily readable formats.

(d) Heat conditioning. (i) Immediately after completing the initial measurements, condition the sample for 14 days at a temperature of 65 ± 2 °C.

(ii) At the end of this period note any exudation of cable filler. Measure and calculate the parameters given in (III)(1)(c) of this appendix. Record on suggested formats in (V) of this appendix or other easily readable formats.

(iii) The stability of the electrical parameters after completion of this test must be within the following prescribed limits:

(A) Capacitance. The average mutual capacitance must be within 5 percent of its original value.

(B) The change in average mutual capacitance must be less than 5 percent over frequency from 1 to 150 kilohertz and

(C) Attenuation. The 150 and 772 kilohertz attenuation must not have increased by more than 5 percent over their original values.

(2) Water immersion electrical test—(a) Test sample selection. The 10 meter (33 foot) section of length B must be tested.

(b) Test sample preparation. Prepare the sample by removing the jacket, shield or shield/armor, and core wrap for sufficient distance to allow one end to be accessed for test connections. Cut out a series of 6 millimeter (0.25 inch) diameter holes along the test sample, at 30 centimeters (1 foot) intervals progressing successively 90 degrees around the circumference of the cable. Assure that the cable core is exposed at each hole by slitting the core wrapper. Place the prepared sample in a dry vessel which when filled will maintain a one meter (3 foot) head of water over 6 meters (20 feet) of uncoiled cable. Extend and fasten the ends of the cable so they will be above the water line and the pairs are rigidly held for the duration of the test.

(c) Capacitance testing. Measure the initial values of mutual capacitance of all odd pairs in each cable at a frequency of 1 kilohertz before filling the vessel with water. Be sure the cable shield or shield/armor is grounded to the test equipment. Fill the vessels until there is a one meter (3 foot) head of water on the cables.

(i) Remeasure the mutual capacitance after the cables have been submerged for 24 hours and again after 30 days.

(ii) Record each sample separately on suggested formats attached or on other easily readable formats.

(d) Overall electrical deviation. (i) Calculate the percent change in all average parameters.
between the final parameters after conditioning with the initial parameters in (III)(2)(c) of this appendix.

(ii) The average mutual capacitance must be within 5 percent of its original value.

(3) Water penetration testing. (a) A watertight closure must be placed over the jacket of length C. The closure must not be placed over the jacket so tightly that the flow of water through pre-existing voids of air spaces is restricted. The other end of the sample must remain open.

(b) Test per Option A or Option B—(i) Option A. Weigh the sample and closure prior to testing. Fill the closure with water and place under a continuous pressure of 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Collect the water leakage from the end of the test sample during the test and weigh to the nearest 0.1 gram. Immediately after the one hour test, seal the ends of the cable with a thin layer of grease and remove all visible water from the closure, being careful not to remove water that penetrated into the core during the test. Re-weight the sample and determine the weight of water that penetrated into the core. The weight of water that penetrated into the core must not exceed 6 grams.

(ii) Option B. Fill the closure with a 0.2 gram sodium fluorescein per liter water solution and apply a continuous pressure 10 ± 0.7 kilopascals (1.5 ± 0.1 pounds per square inch gauge) for one hour. Catch and weigh any water that leaks from the end of the cable during the one hour period. If no water leaks from the sample, carefully remove the water from the closure. Then carefully remove the core from the cable, examine for water penetration within the core. Where water penetration is observed, measure the penetration distance. The distance of water penetration into the core must not exceed 127 millimeters (5.0 inches).

(4) Insulation compression test—(a) Test sample D. Remove jacket, shield or shield/armor, and core wrap being careful not to damage the conductor insulation. Remove one pair from the core and carefully separate, wipe off core filler and straighten the insulated conductors. Retwist the two insulated conductors together under sufficient tension to form 10 evenly spaced 360 degree twists in a length of 10 centimeters (4 inches).

(b) Sample testing. Center the mid 50 millimeters (2 inches) of the twisted pair between 2 smooth rigid parallel metal plates that are 50 millimeters × 50 millimeters (2 inches × 2 inches). Apply a 1.5 volt direct current potential between the conductors, using a light or buzzer to indicate electrical contact between the conductors. Apply a constant load of 67 newtons (15 pound-force) on the sample for one minute and monitor for evidence of contact between the conductors. Record results on suggested formats in (V) of this appendix or on other easily readable formats.

(5) Jacket slip strength test—(a) Sample selection. Test Sample E from (III)(1)(a) of this appendix.

(b) Sample preparation. Prepare test sample in accordance with the procedures specified in ASTM D 4565-90a. A minimum jacket slip strength of 67 newtons (15 pound-force) is required. Record the highest load attained.

(6) Humidity exposure. (a) Repeat steps (III)(2)(a) through (III)(2)(c)(iii) of this appendix for separate set of samples B, C, D, and E which have not been subjected to prior environmental conditioning.

(b) Immediately after completing the measurements, expose the test sample to 100 temperature cyclings. Relative humidity within the chamber must be maintained at ± 2 percent. One cycle consists of beginning at a stabilized chamber and test sample temperature of 52 ± 1°C, increasing the temperature to 57 ± 1°C, allowing the chamber and test samples to stabilize at this level, then dropping the temperature back to 52 ± 1°C.

(c) Repeat steps (III)(2)(d)(ii) through (III)(5)(c) of this appendix.

(7) Temperature cycling. (a) Repeat steps (III)(2)(a) through (III)(2)(c)(iii) of this appendix for separate set of samples B, C, D, and E which have not been subjected to prior environmental conditioning.

(b) Immediately after completing the measurements, subject the test sample to the 10 cycles of temperature between a minimum of −40°C and +60°C. The test sample must be held at each temperature extreme for a minimum of 1 1/2 hours during each cycle of temperature. The air within the temperature cycling chamber must be circulated throughout the duration of the cycling.

(c) Repeat steps (III)(2)(d)(ii) through (III)(5)(c) of this appendix.

(IV) Control sample—(1) Test samples. A separate set of lengths A, C, D, E, and F must have been maintained at 23 ± 3°C for at least 48 hours before the testing.

(2) Repeat steps (III)(2) through (III)(5)(c) of this appendix except use length B instead of length B.

(3) Surge test. (a) One length of sample F must be used to measure the breakdown between conductors while the other length of F must be used to measure the core to shield breakdown.

(b) The samples must be capable of withstanding without damage, a single surge
must be such as to produce a surge of 1.5
Test sample. The surge generator constants
connected in parallel with the dielectric of the
discharged through a forming resistor con-
tors, and a 25 kilovolts peak surge voltage
between conductors and the shield or shield/
armor as hereinafter described. The surge
generator constants must be such as to produce a surge of 1.5 × 40
microsecond wave shape.
(c) The shape of the generated wave must
determined at a reduced voltage by con-
necting an oscilloscope across the forming
resistor with the cable sample connected in
parallel with the forming resistor. The ca-
pacitor bank is charged to the test voltage
and then discharged through the forming re-
sistor and test sample. The test sample will
be considered to have passed the test if there
is no distinct change in the wave shape ob-
tained with the initial reduced voltage com-
pared to that obtained after the application
of the test voltage.
(V) The following suggested formats may
be used in submitting the test results to
RUS:

§ 1755.900 RUS specification for filled fiber optic cables.

(a) Scope. (1) This section covers the requirement for filled fiber optic cables intended for aerial installation either by attachment to a support strand or by an integrated self-supporting arrangement, for underground application by placement in a duct, or for buried installations either by trenching or by direct plowing.

(i) The optical waveguides are glass fibers having directly-applied protective coatings, and are called “fibers”, herein. These fibers may be assembled in either loose fiber bundles with a protective core tube, encased in several
Rural Utilities Service, USDA § 1755.900

protective buffer tubes, or in tight buffer tubes.

(ii) Fillers, strength members, core wraps, and bedding tapes may complete the cable core.

(iii) The core or buffer tubes containing the fibers and the interstices between the buffer tubes, fillers, and strength members in the core structure are filled with a suitable material to exclude water.

(iv) The cable structure is completed by an extruded overall plastic jacket. This jacket may have strength members embedded in it, in some designs.

(v) Buried installation requires an armor under the outer jacket.

(vi) For self-supporting cable the outer jacket may be extruded over the support messenger and cable core.

(2) The cable is fully color coded so that each fiber is distinguishable from every other fiber. A basic color scheme of twenty-four colors allows individual fiber identification. Colored tubes, binders, threads, stripings, or markings provide fiber group identification.

(3) Cable manufactured to this section must demonstrate compliance with the qualification testing requirements to ensure satisfactory end-use performance characteristics for the intended applications.

(4) Optical cable designs not specifically addressed by this section may be allowed if accepted by RUS. Justification for acceptance of a modified design must be provided to substantiate product utility and long term stability and endurance.

(5) All cables sold to RUS borrowers for projects involving RUS loan funds under this section must be accepted by RUS Technical Standards Committee “A” (Telephone). For cables manufactured to the specification of this section, all design changes to an accepted design must be submitted for acceptance. RUS will be the sole authority on what constitutes a design change.

§ 1755.900

Copies are available from ASTM, 1916 Race Street, Philadelphia, Pennsylvania 19103-1187, telephone number (215) 299-5585.

(8) Electronic Industries Association Standards (EIA)–455–20, Measurement of Change in Optical Transmittance; EIA–455–41, Compressive Loading Resistance of Fiber Optic Cables; EIA–455–86, Fiber Optic Cable Jacket Shrinkage; EIA–455–89A, Fiber Optic Cable Jacket Elongation And Tensile Strength; and EIA–455–174, Mode Field Diameter of Single-Mode Optical Fiber by Knife-Edge Scanning in the Far Field, referenced in this section are incorporated by reference by RUS. These incorporations by references were approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of EIA standards are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250–1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from Global Engineering Documents, 15 Inverness Way East, Englewood, CO 80112, telephone number (303) 792-2281.

§ 1755.900

are available for inspection during normal business hours at RUS, room 2845, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from Global Engineering Documents, 15 Inverness Way East, Englewood, CO 80112, telephone number (303) 792-2181.

(10) RUS intends that the optical fibers contained in the cables manufactured in accordance with this section have characteristics that will allow signals, having a range of wavelengths, to be carried simultaneously.

(b) Optical fibers.

(1) The solid glass optical fibers must consist of a cylindrical core and cladding covered by either an ultraviolet-cured acrylate or other suitable coating.

(2) The optical fiber types must be one of the following:

(i) Dispersion-unshifted single mode fiber EIA Class IVa;

(ii) Dispersion-shifted single mode fiber EIA Class IVb;

(iii) 50/125 micrometer multimode fiber EIA Class Ia; or

(iv) 62.5/125 micrometer multimode fiber EIA Class Ia.

(3) The dispersion-unshifted single mode fiber core must have either a matched or depressed clad step refractive index profile with a mode-field diameter of 9.0±1.0 micrometers when measured at 1300 nanometers and 10.5±1.0 micrometers/±1.5 micrometers when measured at 1550 nanometers in accordance with any one of the following test methods:

(i) EIA/TIA±455±164A;

(ii) EIA/TIA±455±165A;

(iii) EIA/TIA±455±167A; or

(iv) EIA/TIA±455±174.

(4) The dispersion-shifted single mode fiber core must have either a segmented core design or depressed clad step refractive index profile with a mode-field diameter of 7.5±1.5 micrometers/±1.3 micrometers when measured at 1550 nanometers in accordance with any one of the test procedures specified in paragraph (b)(3) of this section.

(5) The clad off-set of the dispersion-unshifted and dispersion-shifted single mode fibers must not be greater than 1.0 micrometer when measured in accordance with either EIA/TIA±455-45B or EIA/TIA±455-176.

(6) The multimode fiber cores must have graded (parabolic) refractive index profiles with core diameters of 50.0±3.0 micrometers or 62.5±3.0 micrometers when measured in accordance with either EIA/TIA±455-59A, or EIA/TIA±455-176.

(7) The core noncircularity of multimode fibers must not exceed 6 percent when measured in accordance with either EIA/TIA±455-45B or EIA/TIA±455-176.

(8) The outside diameter of the glass fiber for both single mode and multimode fibers must be 125±2.0 micrometers when measured in accordance with any one of the following test methods:

(i) EIA/TIA±455±45B;

(ii) EIA/TIA±455±176;

(iii) EIA/TIA±455±48B, Methods A or B.

(9) The outside diameter of the glass fiber must be nominally concentric with the fiber core as is consistent with the best commercial practice.

(10) The individual fibers must be proof tested at a minimum tensile stress of 0.35 gigapascal for approximately one second when measured in accordance with EIA/TIA±455-31B.

(11) Factory splices of fibers are allowed provided that prior acceptance from RUS is obtained for the splice technique, that all splices are documented and reported to the customer and that the spliced fiber meets all requirements of this section.

(12) The optical fiber must be coated with a suitable material to preserve the intrinsic strength of the glass having an outside diameter of 250±15 micrometers when measured in accordance with either EIA/TIA±455-55B or EIA/TIA±455-173.

(13) The maximum force required to remove 25 millimeters of protective fiber coating must not exceed 13 newtons when measured in accordance with EIA/TIA±455-178.

(14) All optical fibers in any single length of cable must be of the same type.

(c) Buffer/coating.

(1) The optical fibers contained in a tube buffer (loose tube), an inner jacket (unit core), a channel or otherwise loosely packaged
must have a clearance between the fibers and the inside of the container sufficient to allow for thermal expansions without constraining the fibers. The protective container must be manufactured from a material having a coefficient of friction sufficiently low to allow the fibers free movement.

(2) Optical fibers covered in near contact with an extrusion (tight tube) must have an intermediate soft buffer to allow for thermal expansions and minor pressures.

(3) All protective coverings in any single length of cable must be continuous and be of the same material except at splice locations.

(4) The protective coverings must be free from holes, splits, blisters, and other imperfections and must be as smooth and concentric as is consistent with the best commercial practice.

(5) Repairs to the fiber coatings are not allowed except at splice locations.

(6) Both loose tube and tight tube coverings of each color and other fiber package types removed from the finished cable must meet the following shrinkback and cold bend performance requirements. The fibers may be left in the tubes.

(i) Shrinkback. Testing must be conducted in accordance with ASTM D 4565-90a, paragraph 14.1, using a talc bed at a temperature of 95 °C. Shrinkback must not exceed 5 percent of the original 150 millimeter length of the specimen. The total shrinkage of the specimen must be measured.

(ii) Cold bend. Testing must be conducted on at least one tube from each color in the cable. Stabilize the specimen to −20 ± 1 °C for a minimum of four hours. While holding the specimen and mandrel at the test temperature, wrap the tube in a tight helix ten times around a mandrel with a diameter not greater than five times the tube diameter. The tube must show no evidence of cracking when observed with normal or corrected-to-normal vision.

NOTE: Channel cores and similar slotted single component core designs need not be tested for cold bend.

(d) Fiber and buffer tube identification.

(1) The colors designated for identification of loose buffer tubes, tight tube buffer fibers and individual fibers in multifiber tubes, slots or bundles are shown in the following table:

<table>

(2) Standards of color. Except for the aqua color, the colors of fibers and tubes supplied in accordance with this section are specified in terms of the Munsell Color System (ASTM D 1535-89) and must comply with the color limits as defined in EIA/TIA−598. A visual color standard meeting these requirements and entitled “Munsell Color Charts for Color Coding,” may be obtained from the Munsell Color Company, Inc., 2441 North Calvert Street, Baltimore, Maryland 21218. The latest edition of the color standard should be used.

(i) The aqua color limits using the Munsell Color System must be as follows:

<table>

(ii) Other coloring schemes used for providing identification of buffer tubes and optical fibers which deviate from the requirements of paragraph (d)(1) of this section will not be accepted by RUS.
(e) Strength members. (1) Strength members must be an integral part of the cable construction, but are not considered part of the support messenger for self-supporting optical cable.

(2) The combined strength of all the strength members must be sufficient to support the stress of installation and to protect the cable in service.

(3) Strength members may be incorporated into the core as a central support member or filler, as fillers between the fiber packages, as an annular serving over the core, as an annular serving over the intermediate jacket, embedded in the outer jacket or as a combination of any of these methods.

(4) The central support member or filler must contain no more than one splice per kilometer of cable. Individual fillers placed between the fiber packages and placed as annular servings over the core must contain no more than one splice per kilometer of cable. Cable sections having central member or filler splices must meet the same physical requirements as unspliced cable sections.

(5) Strength member materials and splicing techniques must be accepted by RUS prior to their use.

(6) In each length of completed cable having a metallic central member, the dielectric strength between the armor and the metallic center member must withstand at least 15 kilovolts direct current for 3 seconds.

(f) Forming the cable core. (1) Protected fibers must be assembled with the optional central support member, fillers and strength members in such a way as to form a cylindrical group.

(2) The standard cylindrical group or core designs shall consist of 4, 6, 8, 10, 12, 16, 18, 20, or 24 fibers. Cylindrical groups or core designs larger than the sizes shown above must meet all the requirements of this section.

(3) When threads or tapes are used as core binders, they must be colored either white or natural and must be a nonhygroscopic and nonwicking dielectric material.

(4) When threads or tapes are used as unit binders to define optical fiber units in loose tube, tight tube, slotted, or bundled cored designs, they must be colored in accordance with the table listed below and must be a nonhygroscopic and nonwicking dielectric material or be rendered such by the filling compound. The colors of the binders must be in accordance with paragraphs (d)(2) introductory text and (d)(2)(i) of this section.

(g) Filling compound. (1) To prevent the ingress of water into the core, a filling compound must be applied into the interior of the loose fiber tubes and into the interstices of the core. When a core wrap is used, the filling compound must also be applied to the core wrap, over the core wrap and between the core wrap and inner jacket when required.

(2) The materials must be homogeneous and uniformly mixed; free from dirt, metallic particles and other foreign matter; easily removed; nontoxic and present no dermal hazards.

(h) Core wrap (optional). (1) At the option of the manufacturer, one or more layers of nonhygroscopic and nonwicking dielectric material may be applied over the core.

(2) The core wrap(s) can be used to provide a heat barrier to prevent deformation or adhesion between the fiber...
tubes or can be used to contain the core.

(3) When core wraps are used, sufficient filling compound must be applied to the core wraps so that voids or air spaces existing between the core wraps and between the core and the inner side of the core wrap are minimized.

(i) Inner jacket. (1) Inner jackets may be applied directly over the core or over the strength members.

(2) For armored cable an inner jacket is optional but recommended. The inner jacket may absorb stresses in the cable core that may be introduced by armor application or by armored cable installation.

(ii) For unarmored cable an inner jacket is optional.

(2) The inner jacket material and test requirements must be as for the outer jacket material per paragraphs (m)(3) introductory text through (m)(3)(v) of this section, except that either black or natural polyethylene may be used. In the case of natural polyethylene, the requirements for absorption coefficient and the inclusion of furnace black are waived.

(j) Flooding compound. (1) Sufficient flooding compound must be applied between the inner jacket and armor and between the armor and outer jacket so that voids and air spaces in these areas are minimized. The use of floodant between the armor and outer jacket is not required when uniform bonding, per paragraph (k)(10) of this section, is achieved between the plastic-clad armor and the outer jacket.

(2) The flooding compound must be compatible with the jacket when tested in accordance with ASTM D 4568-86 at a temperature of 80°F. The floodant must exhibit adhesive properties sufficient to prevent jacket slip when tested in accordance with the requirements of appendix A, paragraph (III)(3), of this section.

(3) The individual cable manufacturer must satisfy RUS that the flooding compound selected for use is acceptable for the application.

(4) In lieu of a flooding compound, water blocking tapes may be applied between the inner jacket and armor and between the armor and outer jacket to prevent water migration. The use of the water blocking tape between the armor and outer jacket is not required when uniform bonding, per paragraph (k)(10) of this section, is achieved between the plastic-clad armor and the outer jacket.

(k) Armor. (1) A steel armor, plastic coated on both sides, is required for direct buried cable manufactured under the provisions of this section. An armor is optional for duct and aerial cable as required by the purchaser. The plastic coated steel armor must be applied longitudinally directly over the core wrap or the intermediate jacket and have a minimum overlap of 3.0 millimeters.

(2) The uncoated steel tape must be electrolytic chrome coated steel (ECCS) with a thickness of 0.155 ± 0.015 millimeters.

(3) The breaking strength of any section of an armor tape, containing a factory splice joint, must not be less than 80 percent of the breaking strength of an adjacent section of the armor of equal length without a joint.

(4) The armor of each length of cable must be electrically continuous with no more than one joint or splice allowed per kilometer of cable. This requirement does not apply to a joint or splice made in the raw material by the raw material manufacturer.

(5) The breaking strength of any section of an armor tape, containing a factory splice joint, must not be less than 80 percent of the breaking strength of an adjacent section of the armor of equal length without a joint.

(6) The protective coating on the steel armor must meet the Bonding-to-Metal, Heat Sealability, Lap-Shear and Moisture Resistance requirements of
Type I, Class 2 coated metals in accordance with ASTM B 736-92a.

(9) The ability of the plastic-clad metal to resist the flooding compound must be determined as required by ASTM D 4568-86 using a one meter length of coated steel which must be aged for 7 days at 60±1 °C. There must be no delamination of the coating from the steel at the conclusion of the test.

(10) When the jacket is bonded to the plastic coated armor, the bond between the plastic coated armor and the outer jacket must not be less than 525 newtons per meter over at least 90 percent of the cable circumference when tested in accordance with ASTM D 4565-90a. For cables with strength members embedded in the jacket, and residing directly over the armor, the area of the armor directly under the strength member is excluded from the 90 percent calculation.

(1) Optional support messenger (aerial cable). (1) When a self-supporting aerial cable containing an integrated support messenger is supplied, the support messenger must comply with the requirements specified in paragraphs (1)(2) introductory text through (1)(6) of this section.

(2) The fully flooded, stranded support messenger must be 6.35 millimeters diameter, 7 wire, extra high strength grade, Class A galvanized steel strand conforming to ASTM A 640±91 with exceptions and additional provisions as follows:

(i) The maximum lay of the individual wires of the strand must be 140 millimeters.

(ii) Any section of a completed strand containing a joint must have minimum tensile strength and elongation of 29,500 newtons and 3.5 percent, respectively, when tested in accordance with the procedures specified ASTM A 640-91.

(iii) The individual wires from a completed strand which contain joints must not fracture when tested according to the “Ductility of Steel” procedures specified in ASTM A 640-91 except that the mandrel diameter must be equal to 5 times the nominal diameter of the individual wires.

(3) The support strand must be completely covered with a corrosion protective floodant. The floodant must be homogeneous and uniformly mixed.

(4) The floodant must be nontoxic and present no dermal hazard.

(5) The floodant must be free from dirt, metallic particles, and other foreign matter that may interfere with the performance of the cable.

(6) The floodant must be compatible with the polyethylene outer jacket and must be acceptable to RUS.

(7) Other methods of providing self-supporting cable specifically not addressed in this section may be allowed if accepted by RUS. Justification for acceptance of a modified design must be provided to substantiate product utility and long term stability and endurance.

(m) Outer jacket. (1) The outer jacket must provide the cable with a tough, flexible, protective covering which can withstand exposure to sunlight, to atmosphere temperatures and to stresses reasonably expected in normal installation and service.

(2) The jacket must be free from holes, splits, blisters, or other imperfections and shall be as smooth and concentric as is consistent with the best commercial practice.

(3) The raw material used for the outer jacket must be one of the five types listed in paragraphs (m)(3)(i) through (m)(3)(v) of this section. The raw material must contain an antioxidant to provide long term stabilization and the materials must contain a 2.60±0.25 percent concentration of furnace black to provide ultraviolet shielding. Both the antioxidant and furnace black must be compounded into the material by the raw material supplier.

(i) Low density, high molecular weight polyethylene (LDHMW) must conform to the requirements of ASTM D 1248-84(1989), Type I, Class C, Category 4 or 5, Grade J3.

(ii) Low density, high molecular weight ethylene copolymer (LDHMW) must conform to the requirements of ASTM D 1248-84(1989), Type I, Class C, Category 4 or 5, Grade J3.

(iii) Linear low density, high molecular weight polyethylene (LLDHMW) must conform to the requirements of ASTM D 1248-84(1989), Type I, Class C, Category 4 or 5, Grade J3.
(iv) High density polyethylene (HD) must conform to the requirements of ASTM D 1248-84(1989), Type III, Class C, Category 4 or 5, Grade J 4.

(v) Medium density polyethylene (MD) must conform to the requirements of ASTM D 1248-84(1989), Type II, Class C, Category 4 or 5, Grade J 4.

(vi) Particle size of the carbon selected for use must not average greater than 20 nanometers.

(vii) Absorption coefficient must be a minimum of 400 in accordance with the procedures of ASTM D 3349-86.

(4) The outer jacketing material removed from or tested on the cable must be capable of meeting the following performance requirements:

(5) Testing procedures. The procedures for testing jacket specimens for compliance with paragraph (m)(4) of this section must be as follows:

(i) Melt flow rate. The melt flow rate must be determined by ASTM D 1238-90b, Condition E. Jacketing material must be free from flooding and filling compound.

(ii) Tensile strength and ultimate elongation. Test in accordance with EIA-455-89A, using a jaw separation speed of 500 millimeters per minute for low density material and 50 millimeters per minute for high and medium density materials.

(iii) Environmental stress cracking. Test in accordance with ASTM D 4565-90a.

(iv) Shrinkback. Test in accordance with the procedures specified in EIA-455-86 using a temperature of 100 ± 1°C for a 4 hour period for low density material and a test temperature of 115 ± 1°C for a 4 hour period for high and medium density materials.

(v) Impact. The test must be performed in accordance with ASTM D 4565-90a using an impact force of 4 newton-meters at a temperature of −20 ± 2°C. A cracked or split jacket constitutes failure.

(6) Jacket thickness. The nominal outer jacket thickness must not be less than 1.3 millimeters. The test method used must either be the End Sample Method (paragraph (m)(6)(i) of this section) or the Continuous Uniformity Thickness Gauge Method (paragraph (m)(6)(ii) of this section).

(i) End sample method. The jacket must be capable of meeting the following requirements:

Minimum Average Thickness: 90 percent (%) of nominal thickness

Minimum Spot Thickness: 70 % of nominal thickness

(ii) Continuous uniformity thickness gauge. (A) The jacket must be capable of meeting the following requirements:

Minimum Average Thickness: 75 % of nominal thickness

Minimum Thickness: 70 % of nominal thickness

Maximum Eccentricity: 40 % of nominal thickness
Eccentricity = \frac{\text{Max. Thickness} - \text{Min. Thickness}}{\text{Average Thickness}} \times 100

(B) The maximum and minimum thickness values shall be based on the average of each axial section.

(7) For jackets having embedded strength members, the jacket thickness must meet the requirements of paragraph (m)(6) of this section except that the jacket thickness over the strength members must not be less than 0.50 millimeters.

(8) The minimum jacket thickness at any point over the support messenger for self-supporting aerial cable utilizing such an element must be 1.1 millimeters.

(9) The web dimension for self-supporting aerial cable utilizing such a feature must be as follows:

Height: 2.29 + 0.75 millimeters

Width: 1.52 + 0.51 millimeters

(n) Sheath slitting cord (optional). (1) A sheath slitting cord is optional.

(2) When a sheath slitting cord is used it must be nonhygroscopic and nonwicking or be rendered such by the filling or flooding compound, continuous throughout a length of cable and of sufficient strength to open the sheath over at least a one meter length without breaking the cord at a temperature of 23 ± 5°C.

(o) Identification marker and length marker. (1) Each length of cable must be permanently labeled either Optical Cable, OC, Optical Fiber Cable, or OF on the outer jacket and identified as to manufacturer and year of manufacture.

(3) Mark the number of fibers on the jacket.

(4) The markings must be printed on the jacket at regular intervals of not more than 2 meters.

(5) An alternative method of marking may be used if acceptable to RUS.

(6) The completed cable must have sequentially numbered length markers in Meters or Feet at regular intervals of not more than 2 meters along the outside of the jacket.

(7) Continuous sequential numbering must be employed in a single length of cable.

(8) The numbers must be dimensioned and spaced to produce good legibility and must be approximately 3 millimeters in height. An occasional illegible marking is permissible if there is a legible marking located not more than 2 meters from it.

(9) The method of marking must be by means of suitable surface markings producing a clear distinguishable contrasting marking acceptable to RUS. Where direct or transverse printing is employed, the characters should be indented to produce greater durability of marking. Any other method of length marking must be acceptable to RUS as producing a marker suitable for the field. Size, shape and spacing of numbers, durability and overall legibility of the marker will be considered in acceptance of the method.

(10) Agreement between the actual length of the cable and the length marking on the cable jacket must be within the limits of +1 percent, −1 percent.

(11) The color of the initial marking must be white or silver. If the initial marking fails to meet the requirements of the preceding paragraphs, it will be permissible to either remove the defective marking and re-mark with the white or silver color or leave the defective marking on the cable and re-mark with yellow. No further re-marking is permitted. Any re-marking must be on a different portion of the cable circumference than any existing marking when possible and have a numbering sequence differing from any other existing marking by at least 3,000.

(12) Any reel of cable that contains more than one set of sequential markings must be labeled to indicate the
color and sequence of marking to be used. The labeling must be applied to the reel and also to the cable.

(p) Optical performance. (1) The optical performance of the single mode fibers must be in accordance with the requirements specified in paragraphs (p)(1)(i) through (p)(1)(viii) of this section.

(i) The attenuation values of the single mode fibers within the cable must not exceed 0.5 decibel per kilometer (dB/km) for dispersion-unshifted single mode fiber at 1310 and 1550 nanometers and must not exceed 0.5 dB/km for dispersion-shifted single mode fiber at 1550 nanometers. The test method used for measuring the attenuation must be in accordance with either:

(A) EIA/TIA-455-78A; or
(B) EIA/TIA-455-61.

(ii) The attenuation values for wavelengths between 1285 and 1330 nanometers and between 1525 and 1575 nanometers for dispersion-unshifted fibers must not exceed the attenuation at 1310 and 1550 nanometers by more than 0.1 dB/km. The attenuation values for wavelengths between 1525 and 1575 nanometers for dispersion-shifted fibers must not exceed the attenuation at 1550 nanometers by more than 0.1 dB/km. The test method used for measuring the attenuation must be in accordance with any one of the methods specified in paragraph (p)(1)(i) of this section.

(iii) Attenuation discontinuities in the fiber's length must not exceed 0.1 decibel (dB) for dispersion-unshifted fiber at 1310±20 and 1550±20 nanometers and must not exceed 0.1 dB for dispersion-shifted fiber at 1550±20 nanometers when measured in accordance with EIA/TIA-455-59.

(iv) Measurement of the attenuation must be conducted at the wavelength specified for application and must be expressed in decibels per kilometer.

(v) Because the accuracy of attenuation measurements for single mode fibers becomes questionable when measured on short cable lengths, attenuation measurements are to be made utilizing characterization cable lengths. If the ship length of cable is less than one kilometer, the attenuation values measured on longer lengths of cable (characterization length of cable) before cutting to the ship lengths of cable may be applied to the ship lengths.

(vi) For dispersion-unshifted fiber the zero dispersion wavelength must be between 1300 and 1322 nanometers, and the value of the dispersion slope at the zero-dispersion wavelength must not be greater than 0.092 picosecond per nanometer squared times kilometer (ps/(nm²-km)) when measured in accordance with either:

(A) EIA/TIA-455-169A; or
(B) EIA/TIA-455-175A.

(vii) For dispersion-shifted fiber, the dispersion over the wavelength range between 1525 and 1575 nanometers must not exceed 3.5 picosecond per nanometer times kilometer (ps/(nm-km)) and must have a maximum dispersion slope of 0.095 ps/(nm²-km) at the zero dispersion wavelength when measured in accordance with any one of the test procedures specified in paragraph (p)(1)(vi) of this section.

(viii) The cut off wavelength of the dispersion-unshifted and the dispersion-shifted fibers in a cable must be less than 1260 nanometers when measured in accordance with EIA/TIA-455-170.

(2) The optical performance of the multimode fibers must be in accordance with the requirements specified in paragraphs (p)(2)(i) through (p)(2)(vi) of this section.

(i) The attenuation values of the 50/125 and 62.5/125 micrometer multimode fibers within the cable must not exceed 1.5 dB/km at 1300 nanometers when measured in accordance with either:

(A) EIA/TIA-455-46A; or
(B) EIA/TIA-455-59A; or
(C) EIA/TIA-455-61.

(ii) Measurement of the attenuation must be conducted at the wavelength specified for application and must be expressed in decibels per kilometer.

(iii) Because the accuracy of attenuation measurements for multimode fibers becomes questionable when measured on short cable lengths, attenuation measurements are to be made...
utilizing characterization cable lengths. If the ship length of cable is less than one kilometer, the attenuation values measured on longer lengths of cable (characterization length of cable) before cutting to the ship lengths of cable may be applied to the ship lengths.

(v) The bandwidth of the multimode fibers at the $-3\,\text{dB}$ optical power of the optical fibers within the cable must be within the limits prescribed in the purchase order.

(vi) The test methods used to measure bandwidth must be in accordance with either EIA/TIA-455-30B or EIA/TIA-455-51A.

(3) Numerical aperture (NA) for each multimode optical fiber in the cable must be $0.20 \pm 0.015$ for the $50/125$ micrometer design and $0.275 \pm 0.015$ for the $62.5/125$ micrometer design when measured in accordance with EIA/TIA-455-177A.

(q) Mechanical requirements—(1) Cable bend test. (i) All cables manufactured in accordance with the requirements of this section must be capable of meeting the following bend test without exhibiting an increase in fiber attenuation greater than $0.10\,\text{dB}$ for single mode fibers and $0.40\,\text{dB}$ for multimode fibers.

(ii) Measure the attenuation of dispersion-unshifted single mode fibers at $130\pm 20$ and $1550\pm 20$ nanometers, dispersion-shifted single mode fibers at $1550\pm 20$ nanometers and multimode fibers at $1300\pm 20$ nanometers.

(iii) After measuring the attenuation of the optical fibers, test the cable sample in accordance with EIA/TIA-455-37A, Test Condition E, Turns Test Level 3. The following detailed test conditions shall apply:

(A) Section 4.2—Mandrel diameter must be $20$ times the cable diameter.

(B) Section 4.5—Measure the attenuation increase of the wound sample at the test temperature and specified wavelengths in accordance with EIA-455-20.

(C) For armored cable, the armor overlap must be on the outside of the bend.

(D) For self-supporting cable, the jacketed support messenger and connection web must be removed prior to testing.

(iv) The cable may be allowed to warm to room temperature before visual inspection. The bent area of the cable must show neither visible evidence of fracture of the jacket nor delamination of the bond at the overlap and to the outer jacket in non-flooded cable. After removal of the jacket, there must be no visible evidence of fracture of the armor, when present, and of the components in the core.

(2) Cable impact test. (i) All cables manufactured in accordance with the requirements of this section must be capable of meeting the following impact test without exhibiting an increase in fiber attenuation greater than $0.10\,\text{dB}$ for single mode fibers and $0.40\,\text{dB}$ for multimode fibers, and without cracking or splitting of the cable jacket.

(ii) Measure the attenuation of the optical fibers in accordance with paragraph (q)(1)(ii) of this section.

(iii) After measuring the attenuation of the optical fibers, test the cable in accordance with EIA/TIA-455-25A.

(3) Cable compression test. (i) All cables manufactured in accordance with the requirements of this section must be capable of meeting the following compressive strength test without exhibiting an increase in fiber attenuation greater than $0.10\,\text{dB}$ for single mode fibers and $0.4\,\text{dB}$ for multimode and without cracking or splitting of the cable jacket when subjected to a minimum compressive load of $440$ newtons per centimeter for armored cable and $220$ newtons per centimeter for nonarmored cable.

(ii) Measure the attenuation of the optical fibers in accordance with paragraph (q)(1)(ii) of this section.

(iii) After measuring the attenuation of the optical fibers, test the cable in accordance with EIA-455-41 using a rate of $3$ millimeters to $20$ millimeters per minute and maintaining the load for $10$ minutes.

(4) Cable twist test. (i) All cables manufactured in accordance with the requirements of this section must be capable of meeting the following twist test without exhibiting an increase in fiber attenuation greater than $0.10\,\text{dB}$ for single mode fibers and $0.4\,\text{dB}$ for
multimode fibers, and without cracking or splitting of the cable jacket.

(ii) Measure the attenuation of the optical fibers in accordance with paragraph (q)(3)(ii) of this section.

(iii) After measuring the attenuation of the optical fibers, test the cable in accordance with EIA/TIA-455-85A, using a maximum cable twisting length of 4 meters.

(5) Cable flex test. (i) All cables manufactured in accordance with the requirements of this section must be capable of withstanding the following flex test without exhibiting an increase in fiber attenuation greater than 0.10 dB for single mode fibers and 0.40 dB for multimode fibers.

(ii) Measure the attenuation of the optical fibers in accordance with paragraph (q)(1)(ii) of this section.

(iii) After measuring the attenuation of the optical fibers, test the cable in accordance with EIA/TIA-455-85A, using a test temperature of 80 ± 1°C.

(iv) After completion of the test, the bent area of the cable must show neither visible evidence of fracture of the jacket nor delamination of the bond at the overlap and to the outer jacket in nonflooded cable. After removal of the jacket, there must be no visible evidence of fracture of the armor, when present, and of the components in the core.

(6) Water penetration test. (i) A one meter length of completed fiber optic cable must be preconditioned for 24 hours at 23 ± 5°C and then tested in accordance with EIA/TIA-455-82B using a one meter water head over the sample or placed under the equivalent continuous pressure for one hour.

(ii) After the one hour period, there must be no water leakage through the sheath interfaces, under the core wrap, between the cable core interstices or through the fiber buffers.

(iii) If water leakage is detected in the first sample, one additional 3 meter sample from EACH END of the same reel must be tested in accordance with paragraph (q)(6)(ii) of this section. If either sample exhibits water leakage, the entire reel of cable is to be rejected. If the samples exhibit no leakage, the entire reel of cable is considered acceptable.

(7) Compound flow test. (i) Three 300 millimeter long test samples must be preconditioned for 24 hours at 23±5 °C and then tested in accordance with EIA/TIA-455-80A using a test temperature of 80 ± 1°C.

(ii) The amount of filling or flooding compounds that flowed or dripped from any of the suspended cable specimens must be less than or equal to 0.5 grams of material. The measurement of an amount greater than 0.5 grams for any of the suspended cable specimens constitutes failure.

(r) Preconnectorized cable (optional). (1) At the option of the manufacturer and upon request by the purchaser, the cable may be factory terminated with connectors acceptable to RUS.

(2) All connectors must be accepted by RUS prior to their use.

(s) Acceptance testing and extent of testing. (1) The tests described in appendix A of this section are intended for acceptance of cable designs and major modifications of accepted designs. What constitutes a major modification is at the discretion of RUS. These tests are intended to show the inherent capability of the manufacturer to produce cable products that have satisfactory performance characteristics, long life and long-term optical stability but are not intended as field tests.

(2) For initial acceptance, the manufacturer must submit:

(i) An original signature certification that the product fully complies with each section of the specification;

(ii) Qualification Test Data, per appendix A of this section;

(iii) A set of instructions for handling the cable;

(iv) OSHA Material Safety Data Sheets for all components;

(v) Agree to periodic plant inspections;

(vi) A certification that the product does or does not comply with the domestic origin manufacturing provisions, of the “Buy American” requirements of the Rural Electrification Act of 1938 (52 Stat. 818);

(vii) Written user testimonials concerning field performance of the product; and
(viii) Other nonproprietary data deemed necessary by the Chief, Outside Plant Branch (Telephone).

(3) For requalification acceptance, the manufacturer must submit an original signature certification that the product fully complies with each section of the specification, excluding the Qualification Section, and a certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (52 Stat. 818), for acceptance by September 30 every three years. The required data and certification must have been gathered within 90 days of the submission.

(4) Initial and requalification acceptance requests should be addressed to: Chairman, Technical Standards Committee “A” (Telephone), Telecommunications Standards Division, Rural Utilities Service, Washington, DC 20250-1500.

(5) Tests on 100 percent of completed cable. (i) The armor for each length of cable must be tested for continuity using the procedures of ASTM D 4566-90.

(ii) Attenuation for each optical fiber in the cable must be measured.

(iii) Optical discontinuities must be isolated and their location and amplitude recorded.

(6) Capability tests. Tests on a quality assurance basis must be made as frequently as is required for each manufacturer to determine and maintain compliance with:

(i) Numerical aperture and bandwidth of multimode fibers;

(ii) Cut off wavelength of single mode fibers;

(iii) Dispersion of single mode fibers;

(iv) Shrinkback and cold testing of loose tube and tight tube buffers;

(v) Adhesion properties of the protective fiber coating;

(vi) Dielectric strength between the armor and the metallic central member;

(vii) Performance requirements for the inner and outer jacketing materials;

(viii) Performance requirements for the filling and flooding compounds;

(ix) Bonding properties of the coated armoring material;

(x) Sequential marking and lettering;

(xi) Cable bend and cable impact tests;

(xii) Water penetration and compound flow tests;

(xiii) Cable twist, cable flex, and cable compression tests; and

(xiv) Performance requirements of support messenger.

(t) Records of optical and physical tests.

(1) Each manufacturer must maintain suitable summary records for a period of at least 3 years of all optical and physical tests required on completed cable by this section as set forth in paragraphs (s)(5) and (s)(6) of this section. The test data for a particular reel must be in a form that it may be readily available to RUS upon request. The optical data must be furnished to the purchaser on a suitable and easily readable form.

(2) Measurements and computed values must be rounded off to the number of places or figures specified for the requirement according to ASTM E 29-90.

(u) Manufacturing irregularities.

(1) Repairs to the armor, when present, are not permitted in cable supplied to end users under this section.

(2) Minor defects in the inner and outer jacket (defects having a dimension of 3 millimeter or less in any direction) may be repaired by means of heat fusing in accordance with good commercial practices utilizing sheath grade compounds.

(3) Buffer tube repair is permitted only in conjunction with fiber splicing.

(v) Packaging and preparation for shipment.

(1) The cable must be shipped on reels. The diameter of the drum must be large enough to prevent damage to the cable from reeling and unreeling. The reels must be substantial and so constructed as to prevent damage during shipment and handling.

(2) A circumferential thermal wrap or other means of protection complying with the requirements of appendix B of this section must be secured between the outer edges of the reel flange to protect the cable against damage during storage and shipment.

(3) Cable manufactured to the requirements of this section must be sealed at the ends to prevent entrance of moisture. The method of sealing
must be accepted by RUS prior to its use.

(4) The end-of-pull (outer end) of the cable must be securely fastened to prevent the cable from coming loose during transit. The start-of-pull (inner end) of the cable must project through a slot in the flange of the reel, around an inner riser, or into a recess on the reel flange near the drum and fastened in such a way to prevent the cable from becoming loose during installation.

(5) Spikes, staples or other fastening devices must be used in a manner which will not result in penetration of the cable.

(6) The arbor hole must admit a spindle 63.5 millimeters in diameter without binding. Steel arbor hole liners may be used but must be accepted by RUS prior to their use.

(7) Each reel must be plainly marked to indicate the direction in which it should be rolled to prevent loosening of the cable on the reel.

(8) Each reel must be stenciled or lettered with the name of the manufacturer.

(9) The following information must be either stenciled on the reel or on a tag firmly attached to the reel:

- Optical Cable
- Number of Fibers
- Armored or Nonarmored
- Year of Manufacture
- Name of Cable Manufacturer
- Length of Cable
- Reel Number

Example:

Optical Cable
4 fiber
Armored
XYZ Company
1050 meters
Reel Number 3
RUS 7 CFR 1755.900

(10) When preconnectorized cable is shipped, the splicing modules must be protected to prevent damage during shipment and handling. The protection method must be accepted by RUS prior to its use.

(The information collection and record-keeping requirements of this section have been approved by the Office of Management and Budget (OMB) under control number 0572-0059)
(ii) Jacket Slip Strength Test outlined in paragraph (III)(3) of this appendix. (For Flooded Designs Only)

(c) Initial measurements. (i) For sample(s) A measure the attenuation for the single mode dispersion-unshifted fibers at 1310 and 1550 nanometers, for single mode dispersion-shifted fibers at 1550 nanometers and/or for multimode fibers at 1300 nanometers at a temperature of ±2° C. Also measure the bandwidth of the multimode fibers. Calculate the attenuation data on a per kilometer basis. Calculate the bandwidth data on a megahertz-kilometer (MHz-km) basis.

(ii) Record on suggested formats in (V) of this appendix or on other easily readable formats.

(d) Heat conditioning. (i) Immediately after completing the initial measurements, condition the sample(s) for 14 days at a temperature of 65 ± 2° C.

(ii) At the end of this period note any exudation of cable filler. Measure the parameters given in paragraph (III)(3)(c) of this appendix. Record on suggested formats in (V) of this appendix or on other easily readable formats.

(e) Overall optical deviation. (i) Calculate the change in all parameters between the final parameters after conditioning with initial parameters in paragraph (III)(1)(c) of this appendix.

(ii) The stability of the optical parameters after completion of this test must be within the following prescribed limits:

(A) Attenuation. The attenuation of each multimode fiber must not change by more than 0.3 dB/km and the attenuation of each single mode fiber must not change by more than 0.1 dB/km.

(B) Bandwidth. The bandwidth of each multimode fiber must not change by more than 15 percent from their original values.

(2) Water penetration testing. (a) A watertight closure must be placed over the jacket of length B from paragraph (III)(1)(a) of this appendix. The closure must not be placed over the jacket so tightly that the flow of water through pre-existing voids or air spaces is restricted. The other end of the sample must remain open.

(b) Test per Option A or Option B. (i) Option A. Weigh the sample and closure prior to testing. Fill the closure with water and place under a continuous pressure of 10 ± 0.7 kilopascals for one hour. Collect the water leakage from the end of the test sample during the test and weigh to the nearest 0.1 gram. Immediately after the one hour test, seal the ends of the cable with a thin layer of grease and remove all visible water from the closure, being careful not to remove water that penetrated into the core during the test. Reweigh the sample and determine the weight of water that penetrated into the core.

(ii) Option B. Fill the closure with a 0.2 gram sodium fluorescein per liter water solution and apply a continuous pressure of 10 ± 0.7 kilopascals for one hour. Catch and weigh any water that leaks from the end of the cable during the one hour period. If no water leaks from the sample, carefully remove the water from the closure. Then carefully remove the outer jacket, if present, and core wrap one at a time, examining with an ultraviolet light source for water penetration. After removal of the core wrap, carefully dissect the core and examine for water penetration within the core. Where water penetration is observed, measure the penetration distance.

(3) Jacket slip strength test. (For Flooded Design Only) (a) Sample selection. Test sample C from paragraph (III)(1)(a) of this appendix.

(b) Sample preparation. Prepare test sample in accordance with the procedures specified in ASTM D 4565-90a.

(c) Sample conditioning and testing. Remove the sample from the tensile tester prior to testing and condition for one hour at 50 ± 2° C. Test immediately in accordance with the procedures specified in ASTM D 4565-90a. A minimum jacket slip strength of 67 newtons is required. Record the load attained on the suggested formats in (V) of this appendix or on other easily readable formats.

(d) Temperature and humidity exposure. (a) Repeat paragraphs (III)(1)(a) through (III)(3)(c) of this appendix for separate set of samples A, B and C which have not been subjected to prior environmental conditioning.

(b) Immediately after completing the measurements, expose the test sample to 100 temperature cyclings. Relative humidity within the chamber shall be maintained at 90 ± 2 percent. One cycle consists of beginning at a stabilized chamber and test sample temperature of 52 ± 2° C, increasing the temperature to 57 ± 2° C, allowing the chamber and test samples to stabilize at this level, then dropping the temperature back to 52 ± 2° C.

(c) Repeat paragraphs (III)(1)(d)(ii) through (III)(3)(c) of this appendix.

(5) Temperature cycling. (a) Repeat paragraphs (III)(1)(a) through (III)(3)(c) of this appendix for separate set of samples A, B, and C which have not been subjected to prior environmental conditioning.

(b) Immediately after completing the measurements, subject the test sample to 10 cycles of temperature between −40°C and +60°C. The test sample must be held at each temperature extreme for a minimum of 12 hours during each cycle of temperature. The air within the temperature cycling chamber must be circulated throughout the duration of the cycling.

(c) Repeat paragraphs (III)(1)(d)(ii) through (III)(3)(c) of this appendix.

(IV) Control sample—(a) Test samples. A separate set of lengths B and C must have been
§ 1755.900

maintained at 23 ± 5°C for at least 48 hours before the testing.

(b) Repeat paragraphs (III)(2) through (III)(3)(c) of this appendix for these samples.

(V) The following suggested formats may be used in submitting the test results to RUS:

**APPENDIX B TO 7 CFR 1755.900—Thermal Reel Wrap Qualification**

(I) The test procedures described in this appendix are only for qualification of initial and subsequent changes in thermal reel wraps.

(II) Sample selection. All testing must be performed on two 450 millimeter lengths of cable removed sequentially from the same fiber jacketed cable. This cable must not have been exposed to temperatures in excess...
§ 1755.910 RUS specification for outside plant housings and serving area interface systems.

(a) Scope. (1) The purpose of this specification is to inform manufacturers and users of outside plant housings and serving area interface (SAI) systems of the engineering and technical requirements that are considered necessary for satisfactory performance in outside plant environments. Included are the mechanical, electrical, and environmental requirements, desired design features, and test methods for evaluation of the product.

(2) The housing and terminal requirements reflect the best engineering judgment available at the present time and may be subject to change due to advances in technology, economic conditions, or other factors.

(3) The test procedures described in this section are required by RUS to demonstrate the functional reliability of the product. However, other standard or unique test procedures may serve the same function. In such cases, RUS shall evaluate the test procedures and results on an individual basis.

(4) The test procedures specified herein satisfy the requirements of housings as well as the requirements of terminals that may be installed within housings. Some of the requirements are interrelated to several tests designed to determine the performance aspects of terminals and are directly affected by testing required for housings. Therefore, the manufacturer should carefully review all the test requirements in order to develop a testing schedule that is comprehensive, efficient in terms of the number of test specimens required and can be accomplished in an orderly and logical sequence.

(5) The specified tests may require special facilities to comply with Federal, State, or local regulatory requirements. Some test procedures are potentially hazardous to personnel because of the high voltages and mechanical forces involved. Safety precautions are necessary to prevent injury.

(6) Underwriters Laboratories, Inc. (UL) 94, Tests for Flammability of Plastic Materials for Parts in Devices and Appliances, fourth edition, dated June 18, 1991, referenced in this section is incorporated by reference by RUS. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. A copy of the UL standard is available for inspection during normal business hours at RUS, room 2845-S, U.S. Department of Agriculture, Washington, DC 20250-1500 or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC. Copies are available from UL Inc., 333 Pfingsten Road, Northbrook, Illinois 60062-2096, telephone number (708) 272-8800.

§ 1755.910

(b) General information. (1) Outside plant housings are fabricated of either metallic or nonmetallic materials in different sizes and configurations to suit a variety of applications. The purpose of a housing is to protect its contents from environmental elements, rodents, insects, or vandalism and unauthorized access. Housings are designed with internal brackets for accommodating splicing, bonding and grounding connections, cable terminals, cross-connect facilities, load coils, and optical and electronic equipment.

(2) Pedestals are housings primarily intended to house, organize, and protect cable terminations incorporating terminal blocks, splice connectors and modules, ground lugs and load coils. Activities typically performed in a pedestal are cable splicing, shield bonding and grounding, inductive loading, and connection of subscriber drops.

(3) Serving area interface (SAI) cabinets are housings intended to perform some of the same functions as pedestals but are primarily intended to serve as the connecting terminal between feeder cable and distribution cables.

(4) Outside plant housings shall be manufactured in accordance with National Electrical Code (NEC) requirements, Underwriters’ Laboratories (UL) requirements, Department of Labor, Occupational Safety and Health Administration Standards (OSHA), and all other applicable Federal, State, and local requirements including, but not
§ 1755.910
limited to, statutes, rules, regulations, orders, or ordinances otherwise imposed by law.

(c) General documentation requirements—(1) Installation and maintenance instructions. (i) Each product shall have available a set of instructions designed to provide sufficient information for the successful installation of the housing, cables, auxiliary equipment, and the associated splice preparation. The instructions shall be of sufficient size to be easily read and shall be printed using waterproof ink. Pedestal instruction sheets shall include a list of miscellaneous replacement parts that may be purchased locally. SAI systems shall be supplied with complete instructions for installation and use.

(ii) When requested by RUS, or an RUS borrower, the manufacturer shall prepare a training package for the purpose of training technicians in the use and installation of the product and its auxiliary equipment.

(iii) The manufacturer shall provide ordering information for repair parts. Repair parts shall be obtainable through a local distributor or shall be easily obtainable. Information describing equivalent parts and their sources should be provided for those parts that may also be obtained from other sources.

(2) Quality assurance. The manufacturer shall demonstrate the existence of an ongoing quality assurance program that includes controls, procedures, and standards used for vendor certification, source inspection, incoming inspection, manufacture, in process testing, calibration and maintenance of tools and test equipment, final product inspection and testing, periodic qualification testing and control of non-conforming materials and products. The manufacturer shall maintain quality assurance records for five years.

(3) RUS acceptance applications. (i) The tests described in this specification are required for acceptance of product designs and major modifications of accepted designs. All modifications shall be considered major unless otherwise declared by RUS. The tests are intended to show the inherent capability of the manufacturer to produce products which have an expected service life of 30 years.

(ii) For initial acceptance the manufacturer shall:

(A) Submit an original signature certification that the product complies with each section of the specification;

(B) Provide qualification test data;

(C) Provide OSHA Material Safety Data Sheets for the product;

(D) Provide a detailed explanation concerning the intended use and capacity of the product;

(E) Provide a complete set of instructions, recommendations for equipment organization and splicing;

(F) Agree to periodic plant inspections;

(G) Provide a certification that the product does or does not comply with the domestic origin manufacturing provisions of the “Buy American” requirements of the Rural Electrification Act of 1938 (52 Stat. 818);

(H) Provide user testimonials concerning field performance of the product;

(i) Provide product samples if requested by RUS; and

(j) Provide any other data required by the Chief, Outside Plant Branch (Telephone).

(iii) Each requirement of this section must be addressed in submissions for acceptance. The designation N/A may be entered when the requirements do not apply.

(iv) Acceptance requests should be addressed to: Chairman, Technical Standards, Committee “A” (Telephone), Telecommunications Standards Division, Rural Utilities Service, Washington, DC 20250-1500.

(d) Functional design criteria for housings—(1) General requirements. (i) The functional requirements for housings concern materials, finishes, environmental factors, and design features that are applicable to most above ground housings used in the outside plant.

(ii) Housings shall be of sufficient size to permit easily managed installation, operational, testing, and maintenance operations. The general shape of outside plant housings is usually comparable to that of a rectangular column or cylinder, with the shape of any particular housing being left to the manufacturer’s discretion. Each design is subject to acceptance by RUS.
§ 1755.910

(2) Housing types and capacities. (i) Housings used in outside plant are either the smaller housings generally known as pedestals or larger housings known as equipment or splice cabinets. Both categories may have designs intended for stake mounting, pole mounting, or pad mounting.

(ii) The classifications of pedestals are the general purpose channel Type H and the dome Type M. The Type H pedestal has either front only access or back and front access while the Type M pedestal has top only access. Pedestals are further designated as follows:

<table>
<thead>
<tr>
<th>Stake mounted</th>
<th>Pole mounted</th>
<th>Pole mounted (extra high)</th>
</tr>
</thead>
<tbody>
<tr>
<td>BD3</td>
<td>H</td>
<td>BD3A</td>
</tr>
<tr>
<td>BD4</td>
<td>H</td>
<td>BD4A</td>

</tbody>
</table>

Note 1: Housings designed for unique purposes will be evaluated on a case-by-case basis.

Note 2: For Type H pedestals, the minimum volume is that space as measured 5 centimeters (cm) (2 inches (in.)) below the top of the housing to a point 40 cm (16 in.) above the bottom of the lower cover plate.

Note 3: The minimum volume of the Type M pedestals shall be the space within the dome measured from the lower edge of the dome to a point 5 cm (2 in.) from the top.

(iv) Equipment cabinets intended for use as SAI housings shall be assigned size designations according to their maximum pair termination capacities. The capacity will vary depending on the type of terminating equipment used. SAI cabinets shall be suffix designated with an “A” for pole mounting, “X” for pad mounting, and “S” for stake mounting.

(v) Large pair count splice cabinets are classified according to their splice capacity. Approximately 48 cm³ (3.0 in.³) of splice area per pair straight spliced shall be permitted.

(vi) The minimum volume associated with large pair count splice cabinets shall be as shown in the following table:

<table>
<thead>
<tr>
<th>Splice cabinet 1 designation</th>
<th>Minimum volume (Cubic centimeters cm³)</th>
<th>(Cubic inches)</th>
</tr>

<td>491,000 (30,000)</td>
<td></td>
</tr>
</tbody>
</table>

Note 1: Additional sizes of splice cabinets shall be considered by RUS on a case-by-case basis.

(3) Design and fabrication requirements for housings. (i) Type H pedestal housings may consist of an enclosed channel incorporating an integrally mounted stake that serves as a backplate, or they may be designed for universal mounting on stakes or poles. The body of the housing shall have two major components; an upper cover and a base cover. The upper cover shall have a top, front and back plate with the front cover removable to permit entry and provide increased work space. The base cover shall consist of a front plate and back plate. The base cover back plate may be an extension of the upper back plate cover.

(ii) Type M pedestal housings shall consist of a one piece upper sleeve designed to fit over the base cover trapping air to prohibit water from entering the splice area when installed in locations prone to temporary flooding. Pedestals designed to be mounted extra high on poles for locations susceptible to deep snow shall have a bottom close-off option available to prohibit the ingress of birds, rodents and insects.

(iii) The external housing components on all outside plant housings shall provide reasonable protection against accidental removal or vandalism. Housings shall be equipped with a cover plate retaining bolt and cup washer that may be opened only with an industry accepted socket type wrench. Housings may be equipped with provisions to allow the purchaser to install a padlock.

(iv) Installed housings shall resist the disassembling force of frost heaving applied to the bottom of ground line cover plates. The base cover must
remain stationary to stabilize the contents of the housing cavity.

(v) In an effort to provide protection against dust penetration, blowing snow, rain, and ultraviolet light degradation of internal components, all mechanical gaps shall be restricted. The use of seals, overlaps, gaskets, and/or dovetailing is required to assure satisfactory protection of housed equipment.

(vi) Knockouts, cutouts, or notches designed to accommodate aerial service drops shall not be permitted. A design option for housings intended to accommodate service drops shall include a separate channel or equivalent in the base cover to allow future additions of service drops without the removal of gravel or the moisture barrier in the base of the housing. Service wire channels must be designed to prevent the entry of birds, reptiles, rodents and insects.

(vii) Minimal venting of SAI housings may be necessary to relieve internal pressure and condensation.

(viii) There shall be no aluminum housing components that will become buried in the soil when the housing is properly installed.

(ix) Housing components may be assembled using rivets, welds, glue, bolts and nuts, or other techniques suitable for the materials involved.

(x) Housings and their components that require field assembly must be capable of being assembled with tools normally available to outside plant technicians.

(xi) Hinged doors on SAI housings and large pair count splice housings shall be equipped with a device that restrains the doors in the open position.

(xii) Outside plant housings shall be free of sharp edges, burrs, etc., that could present a safety hazard to personnel involved in installation and use of the product or to the general public. Surfaces inside housings must not allow pinching of conductors during installation of cover plates or the opening and closing of doors.

(xiii) A ground line mark shall be provided, approximately 15 cm (6 in.) below the top edge of the housing base cover plate on housings intended for ground level mounting. Base cover plates shall have a minimum height of 31 cm (12 in.).

(xiv) Any housing, which weighs in excess of 91 kilograms (kg) (200 pounds (lb)), including its contents, shall be equipped with lifting brackets for attaching hoisting cables or chains.

(xv) Housing stakes shall be a minimum of 107 cm (42 in.) in length. If fabricated from steel, they shall have a minimum thickness of No. 13 gauge as measured according to American Society for Testing and Materials (ASTM) A 525-91b. Stakes shall be formed into a “U” channel with a minimum depth of 2 cm (0.75 in.). The stake shall be a single part of suitable design strength for driving 91 cm (36 in.) into the soil with hand tools without damage such as bending or warping. The stake shall have adequate mounting holes having a minimum separation of 15 cm (6 in.) for mounting the housing baseplate. The stake material must resist corrosion and deterioration when exposed to soil and atmospheric conditions.

(xvi) The housing design must permit a logical progression of installation steps that would normally be encountered in typical field installations.

(xvii) Provisions for attaching housings to stakes, poles, walls, other housings, or pads shall be provided for each design intended for those purposes. Locations of holes for mounting attachments may be provided by knockouts on above ground components. Mounting hole locations for below ground components may be predrilled.

(xviii) Pole mounting hardware shall provide at least 1.3 cm (0.5 in.) clearance from the pole to the housing. Pole mounting brackets shall accommodate the wide range of pole sizes used in the telephone industry.

(xix) Pad-mounted housings shall have hardware available for anchoring the housing base to the pad. A template may be provided to assist in the location of mounting attachment details for pad preparation.

(xx) Housings equipped with stub cables shall have strain relief devices to permit shipping and handling of the housing without damage to the housing or stub cables. Only RUS accepted cable shall be used for stub cables. The cable manufacturer’s recommendations
§ 1755.910

concerning minimum bend radius shall be observed. The minimum bend radius for most copper cables is 10 times the cable diameter.

(xxi) Cable supports shall be provided near the top of the ground line cover and other appropriate locations within the housing to provide cable stability consistent with the intended use and capacity of the housing. Cable supports shall be capable of holding a minimum load of 23 kg (50 lb).

(xxii) An adequate supply of non-metallic retainer clips or tie wraps capable of supporting a minimum load of 23 kg (50 lb) shall be provided with the housing. Adequate spaces for installation of the clips or tie wraps must be provided on the housing backplate and cable supports.

(xxiii) Housing chambers designed for splicing operations shall be equipped with insulated supporting straps or rods suitable for supporting splice bundles. The insulation on the straps or rods shall extend for the entire length of the device and shall have a dielectric strength of 15 kilovolts (kv) direct current (dc) minimum. Housings having an “H” frame design where both front and rear covers may be removed may incorporate insulated tie bars to be used as cable supports.

(xxiv) Housings designed to contain equipment in addition to splices shall be equipped with a device for physically separating the splice area from the service area of the housing.

(xxv) A dielectric shield rated at 15 kv dc shall be provided to enclose the cable splice area. The shield shall extend from the lower cable supports to within 2.5 cm (1 in.) of the top of the housing. The shield shall be equipped with Velcro or equivalent fastening devices designed to hold the shield in both the open or closed positions. The fastening devices shall extend along the entire vertical edge of the dielectric shield.

(xxvi) Mounting arrangements for a variety of terminal blocks and other equipment shall be provided by means of good housekeeping panels or other devices that may enhance the service aspect of the housing.

(xxvii) Housings designed for SAI cabinets may be shipped with terminal blocks installed and stub cables attached. If this option is exercised, the stub cables and terminal blocks must be RUS accepted. In all cases, SAI cabinets must be equipped with appropriate mounting devices for installing the peripheral equipment required for a serving area interface.

(xxviii) SAI cabinets shall be designed to provide physical separation between the splicing area and the area provided for running cross-connect jumpers.

(xxix) SAI cabinets and large splice housings must have an external feature for attaching a padlock to prevent unauthorized entry.

(xxx) Each housing shall have a tinned or zinc electroplated copper alloy or equivalent connector plate or bar to be used for terminating ground and cable shield bond connections. The device shall be equipped with captive studs and nuts with captive lock washers designed for attaching 6 American Wire Gauge (AWG) copper bonding harness wire or braid and a 6 AWG copper ground wire. Connector plates shall be equipped with enough studs and nuts to provide individual connections equivalent to the maximum number of cable sheaths recommended for the housing. Housings shall incorporate design features that enable the field installation of at least one additional connector plate for service conditions that require numerous connections. A bonding and grounding system capable of providing support and strain relief for service wires shall be provided for housings intended for use as distribution points. The bonding system shall be designed to provide sheath continuity as cable and service wires are installed, and prior to any other operation being performed. The bonding arrangement shall provide electrical continuity between all bonds and the ground connector plate. The bonding and grounding arrangement shall permit the lifting of individual cable ground connections for testing and cable locating activities without jeopardizing the grounding potential of other cables that may enter the housing. The bonding and grounding system shall be capable of conducting a current of 1000 amperes for at least 20 seconds.
(4) Warning sign. (i) A buried cable warning sign shall be securely attached to the outside of each housing. The lettering information on the sign shall be permanent.

(ii) For pedestals, the sign shall be centered horizontally on the front cover and the top of the sign shall be not more than 10 cm (4 in.) from the top of the housing.

(iii) For SAI cabinets, the sign shall be centered horizontally and vertically on the door. If there are two doors, the sign shall be mounted on the left door.

(iv) Deviations from warning sign location requirements are permitted only for housing design constraints. Alternate sign locations will be considered by RUS.

(v) The RUS standard sign design is shown in Figure 1.

(5) Housing materials. (i) Materials used in housings shall present no environmental or safety hazard as defined by industry standards or Federal, State, or local laws and regulations. Figure 1 is as follows:
(ii) All materials are required to have fire resistance ratings consistent with recognized industry standards. External materials must be flame resistant. (iii) All materials used in the manufacture of housings or component parts must achieve the required strength properties, resist deterioration when exposed to outdoor conditions, and be
acceptable to RUS for the specific application. New materials or materials not familiar to the RUS staff shall be supported by test and performance data which demonstrates their suitability for the intended use.

(iv) Nonmetallic housing materials shall have a fungus growth rating no greater than one according to ASTM G 21-90.

(v) Metallic components shall be either corrosion resistant or protected against corrosion and must not produce galvanic corrosion in wet or humid conditions on other metals that may be present in the housing environment.

(vi) Mill galvanized steel used in the manufacture of housings shall comply with the appropriate requirements of one of the following standards:

(A) ASTM A 109-91;
(B) ASTM A 366/A 366M-91;
(C) ASTM A 525-91b; or
(D) ASTM A 526A 526M-90.

(vii) Hot rolled steel shall comply with the appropriate requirements of one of the following standards:

(A) ASTM A 569A 569M-91a; or
(B) ASTM A 621/A 621M-92.

(viii) Cold rolled steel shall comply with the appropriate requirements of one of the following standards:

(A) ASTM A 109-91; or
(B) ASTM A 366/A 366M-91.

(ix) Steel parts used for internal housing brackets shall be hexavalent chromate coated or zinc plated in accordance with ASTM B 633-85.

(x) Hot-dip galvanized over steel per ASTM A 526/A 526M-90 or anodizing over aluminum, shall be provided to ensure reliability over the projected 30 year design life of the housing.

(xi) Painted metal housings shall have a minimum gloss of 60 (60° specular) in accordance with ASTM D 523-89.

(xii) All painted surfaces shall have a uniform color and texture in accordance with ASTM D 3928-89. Nonmetallic housings shall meet recognized industry standards concerning optical appearance for gloss and haze as applicable for the material.

(xiii) The colors of housings that RUS will consider for acceptance shall be as follows:

<table>
<thead>
<tr>
<th>Color</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gray-Green</td>
<td>Munsell 6.5 GY 6.03/1.6</td>
</tr>
<tr>
<td>Green</td>
<td>Munsell 4.4 GY 6.74/1.5</td>
</tr>
<tr>
<td>Orange</td>
<td>Federal Standard 595A</td>
</tr>
<tr>
<td>Chocolate</td>
<td>Munsell 5.27YR 5.26/13.15</td>
</tr>
</tbody>
</table>

(7) Installation requirements. (i) The design of the housing must provide for a logical and normal installation sequence, i.e., excavation, installation of
§ 1755.910

(a) Description of test housing. (i) Each distinctly designed and configured family of housings intended to perform a particular function shall be tested.

(ii) The typical test sample shall consist of the exterior housing components such as covers, backplates, good housekeeping panels, cap assembly, anchor posts, decals, etc. Interior components must include the bonding and grounding hardware for cables and service wires and the dielectric shield. The housing may include terminal blocks or cross-connect modules, cable splices, or the typical outside plant equipment the housing is designed to contain and protect.

(iii) Environmental requirement for housings—(1) Thermal shock. The test housing shall be placed in a test chamber and exposed to the temperature cycle of Figure 2 for five complete cycles. The step function nature of the temperature changes may be achieved by insertion and removal of the test housing from the chamber. The soak time at each temperature shall be four hours. The housing shall be removed from the test chamber at the conclusion of the five-cycle period. After the test housing temperature has stabilized to room temperature, the housing must be inspected for deterioration of materials and satisfactory operation of mechanical functions. Figure 2 is as follows:
(ii) Thermal shock and humidity. The test housing shall be placed in an environmental test chamber at 95 ± 3 percent (%) relative humidity (RH) and temperature cycled per Figure 3 for a period of 30 days. At the end of the test there shall be no rust or corrosion of any closure components. Minor corrosion due to surface scratches, nicks, etc. is permitted. If the closure is made of a nonmetallic material, there shall be no signs of degradation. Figure 3 is as follows:
(iii) Humidity and condensation. Test panels shall be placed in an environmental chamber and subjected to 1,008 hours (42 cycles) of exposure per ASTM D 2247-92. One cycle consists of 24 hours of 100% humidity (with condensation on the panels) at a cabinet temperature of 38±1 °C (100±2 °F) and an ambient temperature of 25±1 °C (77±2 °F) without heat input. Upon completion of cycling, the test panels shall be subjected to an 11 newton-meter (N-m) (100 pound-inches (lb-in.)) impact test using the Gardner-Impact Tester or equivalent. Test panels shall show no substrate or coating cracking or loss of coating adhesion on either side.

(iv) Weatherability. Three test panels shall be tested for weatherability in accordance with the appropriate procedures of either ASTM D 822-89 or ASTM G 23-90. Total exposure time shall be a minimum of 800 hours. Failure is defined as fading, cracking, blistering, or delamination on any of the three test panels.

(v) Low temperature durability. Low temperature durability shall be proven by exposing the three test panels from (e)(3)(iv) of this section to at least 25 continuous cycles of the following test sequence:

(A) To insure complete saturation of the three test panels, soak them for 96 hours in a container of distilled water 22±2 °C (71.6±4 °F);

(B) Lower the temperature of the water and the immersed test panels to -28±2 °C (-18.4±4 °F) and stabilize for 24 hours;

(C) Thaw the water with the samples to 22±2 °C (71.6±4 °F) and stabilize for 24 hours;
(D) Repeat the procedure 24 times. Any cracking, crazing, deforming, or delaminating on any of the three test panels shall be considered a failure; and

(E) Remove the samples from the water and impact test the three panels by delivering a force of 11.3 N-m (100 lb-in.) using a Gardner-Impact Tester to each specimen at 71, 22, and -28±2 °C (159.8, 71.6, and -18±4 °F), after stabilizing them at those temperatures for at least two hours. Visual inspection shall reveal no deformation or perforations on any of the test panels.

(vi) Corrosion resistance. Corrosivity shall be tested in accordance with the requirements of ASTM B 117-90. Both scribed and unscribed panels shall be evaluated following the procedures of ASTM D 1654-92. Scribed panels shall have a rating of at least six, following 500 hours of exposure to salt fog, and the unscribed panels shall have a rating no lower than 10, after 1,000 hours exposure. Visual rust inspection shall confirm no more than 0.03% rusting (rust grade 9) of the surface area of the test sample when evaluated in accordance with ASTM D 610-85(1989). The unscribed samples shall be impacted with an 11.3 N-m (100 lb-in.) force, using a Gardner-Impact Tester or equivalent. Visual inspection of the impacted samples shall reveal no loss of adhesion between the base material and the coating or cracking at the finish on the test panels.

(vii) Fungi resistance. Fungi resistance of nonmetallic housing materials shall be tested according to the procedures of ASTM G 21-90. Any rating greater than one shall be considered a failure.

(viii) Stress crack resistance. The stress cracking characteristics of nonmetallic housing components shall be tested in accordance with ASTM D 1693-70 (Reapproved 1988). The tests shall be performed at 49±2 °C (120±4 °F) for 14 days and exposed to the following materials:

(A) Industry recognized filling compounds;
(B) Isopar M;
(C) Industry recognized solvents;
(D) Industry recognized encapsulants; and

(E) Commonly used insect, pest, and weed control products and agricultural fertilizers.

(ix) Chemical resistance. (A) Chemical resistance shall be determined by immersing representative nonmetallic material samples in each of the following solutions for 72 hours at 22±2 °C (71.6±4 °F):

1. 3% sulfuric acid;
2. 100 parts per million (ppm) trichloroethane in water;
3. 0.2 N sodium hydroxide; and
4. Unleaded high octane gasoline.

(B) There shall be no swelling, deformation, or softening of the material samples or any discoloration of the solution.

(x) Ultraviolet resistance. Test panels of metallic and nonmetallic outer housing materials shall be subjected to 700 hours exposure per ASTM D 2565-92 using the type BH apparatus. The panels shall not exhibit fading, blistering, checking, or delamination.

(xi) Weathertightness. The housing shall be mounted in its typical field installation position and sprayed with water. The temperature of the water shall be adjusted to be equal to or warmer than the temperature of the cabinet interior to avoid the possibility of condensation. A water spray head shall be used to direct water at the housing so that the water stream will strike the assembly at a downward angle of 45 degrees. The flow of the water shall be 3.8 liters per minute (one gallon per minute), with 276 kilopascals (40 pounds per square inch) head of pressure. The spray head shall be held 1.8 meters (m) (6 feet (ft)) from the test cabinet. The spray head shall be adjusted so that water impinges uniformly over the housing surface. The duration of the test shall be five minutes. All vertical cabinet surfaces shall be tested by this procedure. The exterior of the cabinet shall be thoroughly dried with towels (no heat drying) prior to examination of the housing interior. The interior of the housing shall be checked for presence of water. Wetting of over-lapping surfaces is permitted. There shall be no presence of water inside the housing.

(xii) Wind Resistance. (A)(1) Stub pole or wall mounted SAI and large pair
count splice housings shall be subjected to a load (F) as shown in Figure 4 and the following table to simulate the turning moment equivalent to a uniform wind load of 161 kilometers per hour (km/h) (100 miles per hour (mi/h)) perpendicular to the largest surface area.

<table>

Note: The procedures for housings with larger surface area will be evaluated by RUS on a case-by-case basis.

(2) The housing shall remain in its original mounting position throughout the test and exhibit no mechanical deformation.

(3) Figure 4 is as follows:
(B)(1) Pad or ground mounted SAI or splice housings shall be subjected to a load \( F \) as shown in Figure 5 and the following table to simulate the over-turning moment equivalent to a uniform wind load of 161 km/h (100 mi/h) perpendicular to the largest surface area.

Note: The procedures for housings with larger surface areas will be evaluated by RUS on a case-by-case basis.

(2) The housing shall remain in its original mounting position throughout the test and exhibit no mechanical deformation.

(3) Figure 5 is as follows:
(xiii) Fire resistance. (A) The test housing shall be installed in a manner typical of field installation. U.S. No. 1 wheat straw shall be placed on the ground around the housing base in an one meter (3 ft) radius at an approximate depth of 10 cm (4 in.). The straw shall be ignited and permitted to burn fully. After the housing has cooled, its contents shall be inspected for evidence of ignition, melting, burning, or structural damage. Damage sufficient to impair service constitutes failure.

Notes:

1. The load "F" shall be applied perpendicular to the cabinet width where the width is greater than the depth.

2. If a foundation is used, the load "F" shall be applied toward the edge nearest to the cabinet.
(B) Polymeric materials shall be tested in accordance with the Underwriters Laboratories Publication (UL) 94, dated June 18, 1991. Materials used in housing components shall have a rating of 94V-0 or 94V-1 and shall not sustain combustion when an open flame source is removed.

(4) Mechanical requirements for housings—

(i) Impact resistance. The test housing shall be subjected to the following impacts according to its minimum volume or minimum width and depth as shown in the following table:

<table>
<thead>
<tr>
<th>Minimum volume cm$^3$ (in.$^3$)</th>
<th>Minimum width or depth cm (in.)</th>
<th>Impact force N m (lb-ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 35,000 (2,100)</td>
<td>Less than 13 (5) ....</td>
<td>68 (50)</td>
</tr>
<tr>
<td>35,000 (2,100) or greater</td>
<td>13 (5) or greater ....</td>
<td>136 (100)</td>
</tr>
</tbody>
</table>

(A) The impact force shall be delivered to the front, back, and top surfaces. Circular housings shall be impacted on side surfaces 180° apart and on the top. The device used to deliver the force shall be spherical and approximately 25 to 31 cm (10 to 12 in.) in diameter. A typical test procedure may include the use of a hard rubber bowling ball, weighing 6 to 7 kg (13 to 16 lb), enclosed in a mesh bag, attached to a rope with a metal ring. The load shall be dropped vertically on the top surface and applied to the sides with a pendulum motion using the appropriate height and extension arm to achieve the required impact force. The housing must be impacted at the approximate mid-point of the surface area.

(B) Housings shall be conditioned for a minimum of eight hours at $-40^\circ$C ($-40^\circ$F) in an environmental chamber prior to testing. If the chamber is insufficient in size to conduct tests within the chamber, the housing may be removed and shall be tested within 10 minutes after removal.

(C) After impact testing, the housing shall not exhibit fractured or ruptured surfaces sufficient to allow the ingress of moisture or dust. The housing shall not exhibit mechanical damage that would impair the functioning of hinges, latches, locks, etc.

(ii) Load deflection. Free standing buried plant housings shall be tested for load deflection in accordance with Figure 6. The assembled housing shall be rigidly held in place by a mechanical means to simulate a normal field installation. A length of wire or cable, or other suitable material, shall be placed around the top section of the housing and deadended. The wire or cable shall be initially tensioned to 23 kg (50 lb). A measurement shall then be taken of the deflection of the housing at the top as shown in Figure 6. The deflection shall be recorded at incremental loads of 23 kg (50 lb) until destruction of the housing occurs. The average load for the three directions shall not be less than 136 kg (300 lb) and the minimum load in any direction shall be 113 kg (250 lb). Failure is defined as housing component fracture or crazing of the housing’s surface finish. Figure 6 is as follows:
(iii) Vibration requirements. The test housing and its contents shall be subjected to acceleration at a sine wave frequency sweep rate as shown in Figure 7 for a housing packaged for shipment and Figure 8 for an unpackaged housing. The frequency sweep may be performed continually or sequentially. The test shall be conducted once along each of three mutually perpendicular axes of the housing. There shall be no mechanical or electrical degradation of the housing or its contents. Noticeable damage to the housing constitutes failure. Figure 7 and Figure 8 are as follows:

Notes:
1. One pedestal-mounted housing of each BD classification shall be tested to failure in each of the directions shown above.
2. A total of three pedestal-mounted housings of each BD classification shall be subjected to the required loads in each direction.
3. The average load for the three directions shall not be less than 136 kilograms (300 pounds). The minimum load shall be 113 kilograms (250 pounds).
4. Pole mounted housings shall be subjected to the same loading criteria.

(iv) Drop test requirements. Housings shall be subjected to appropriate drop tests according to their weight. The drop tests shall be performed on housings and their contents as normally packaged as well as on unpackaged housings. The tests shall be conducted on a smooth level concrete floor or similar unyielding surface. For corner drops, the packaged housing and its contents shall be oriented at impact such that a straight line drawn through the struck corner and package geometric center is approximately perpendicular to the impact surface.

(A) Packaged housings and their contents weighing 91 kg (200 lb) or less

(B) Packaged housings and their contents weighing more than 91 kg (200 lb) shall be capable of enduring a single drop on each of two diagonally opposite corners of the package without significant damage from a height specified as follows:

1. The packaged housing and contents shall be placed on its normal shipping base with one corner supported 15 cm (6 in.) above the floor and the other corner of the same end supported 30 cm (12 in.) above the floor as shown in Figure 9. The unsupported end of the package shall be raised so that the lowest corner reaches the height listed above and then allowed to fall freely. Figure 9 is as follows:

**FIGURE 9**

**CORNER DROP TESTS FOR PACKAGED HOUSINGS WEIGHING MORE THAN 91 KILOGRAMS (200 POUNDS)**
(2) The procedure of paragraph (e)(4)(iv)(B)(1) of this section shall be repeated for the diagonally opposite corner.

(3) The packaged housing and contents shall be capable of enduring a single drop on each edge of the base from the required height without damage and shall remain operational without function impairment. The packaged housing and contents shall be placed on its base with one edge supported on a sill 15 cm (6 in.) high and the unsupported edge raised to the required height as shown in Figure 10 and allowed to fall freely. Figure 10 is as follows:

![FIGURE 10](image)

(4) The procedure of (e)(4)(iv)(B)(3) of this section shall be repeated for all edges of the base.

(C) Unpackaged housings and their contents weighing 23 kg (50 lb) or less shall be capable of enduring a single drop on each face and adjacent corners without significant damage from a height specified as follows:

<table>
<thead>
<tr>
<th>Packaged housing including contents weight kg (lb)</th>
<th>Drop height cm (in.)</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

(D)(1) Unpackaged housings and their contents weighing more than 23 kg (50 lb) shall be capable of enduring a single drop without significant damage when lifted by its normal hoisting supports as shown in Figure 11 and with its lowest point at a height specified as follows:

<table>
<thead>
<tr>
<th>Packaged housing including contents weight kg (lb)</th>
<th>Drop height cm (in.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>23 to 45 (51 to 100)</td>
<td>5 (2)</td>
</tr>
</tbody>
</table>

(2) Figure 11 is as follows:
(v) Firearms resistance. All housings shall be tested for resistance to penetration by direct impact from a 12 gauge shotgun equipped with a modified choke and the use of a 3¾ dram equivalent powder charge and 35 grams #6 lead shot fired from a distance of 15 m (50 ft). The 12 gauge shotgun shall be fired from a normal standing position at the front side of the housing. Penetration through the housing wall by the lead shot shall constitute failure.

(vi) Lifting hardware requirements. The lifting hardware on housings and their contents that weigh more than 91 kg (200 lb) shall be tested. The housing shall be fastened to a restraining device such as a concrete slab and subjected to loading through the lifting attachments to simulate the lifting
§ 1755.910

load. For the first test a lifting line equipped with a dynamometer shall be attached to the housing lifting hardware and a load applied equal to three times the weight of a fully equipped housing. Deformation or damage to the housing or lifting hardware constitutes failure. A second test shall be conducted with the same arrangements as for the first except that a load shall be applied equal to six times the weight of a fully equipped housing. There shall be no catastrophic failure of the lifting hardware or housing.

(vii) Stub cable strain relief tests. Housings equipped with cable stubs and cable shipping retainer shall be tested by lifting a test housing, with the maximum length and weight of cable orderable, in a manner causing the full weight of the cable to be supported by the cabinet. Examination of the cable sheath after lifting shall reveal no tearing, rupturing, or other damage. The cable conductors and shield shall be tested for shorts and opens. Electrical defects to the stub cable or damage to the housing constitutes failure.

(viii) Door restrainer evaluation. (A) The housing shall be positioned with the door held in the open position by the door restraining device. A load, determined in accordance with the following table, shall be applied to the center of the door, perpendicular to the door and in each of the opening and closing directions.

<table>
<thead>
<tr>
<th>Maximum area of door surface cm² (in.²)</th>
<th>Load kg (lb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.200 (800) or less</td>
<td>72 (160)</td>
</tr>
<tr>
<td>5.201 to 9.100 (801 to 1,400)</td>
<td>127 (280)</td>
</tr>
<tr>
<td>9.101 to 13.000 (1,401 to 2,000)</td>
<td>181 (400)</td>
</tr>
</tbody>
</table>

Note: Test procedures for housings with larger doors will be evaluated by RUS on a case-by-case basis.

(B) There shall be no functional failure of the restraining device nor mechanical damage to the housing.

(ix) Security evaluation. The security locking device shall be capable of withstanding a maximum torque of 2.8 N-m (25 lb-in.) without incurring physical damage to the closure, thereby resulting in a condition where the closure cannot be either accessed or locked.

(5) Electrical requirements for housings. Each bonding stud and nut location shall be evaluated by attaching one lead from a dc or alternating current (ac) power source to a bonding stud with the nut torqued as specified by its manufacturer and the other power source lead connected to the closure grounding conductor connector. The current path thus established must be capable of sustaining a current of 1,000 amperes root-mean-square for at least 20 seconds without fusing or causing any damage to the closure or its contents.

(6) Finish requirements—(i) Impact resistance. The finish on painted metal surfaces shall not exhibit radial cracking on the impact surface (intrusion) when indented at 18 N-m (160 lb-in.) with a 1.6 cm (0.6 in.) diameter spherical indentor. This test shall be performed in accordance with ASTM D 2794-92 with the exception that the test panel shall be of the same material, thickness, and finish as the pedestal housing being evaluated.

(ii) Finish adhesion. Painted finishes shall be tested for adhesion of finish in accordance with ASTM D 2197-86 (Re-approved 1993), Method A. There shall be no gouging in the top coat when tested with an 8 kg (17.7 lb) load. Gouging is defined as removal or separation of paint particles or breaking of the finish by the scraping loop to the extent of exposing base metal.

(iii) Color evaluation. The color of the housing finish should be compared against the Munsell system of color notation, as described in ASTM D 1535-89 to determine color consistency with that desired.

(iv) Gloss evaluation. The finish on painted housings shall be tested on two approximately 20 cm × 20 cm (8 in. × 8 in.) samples for each color used in accordance with the procedures of ASTM D 523-89. The finish shall have a minimum gloss of 60° (Specular).

(f) Functional design criteria for binding post terminal blocks used in SAI cabinets—(1) General description. A conventional binding post terminal consists of a metallic element or post, one end of which is configured for the permanent connection of 22, 24, or 26 AWG solid copper conductors and the opposite end
Rural Utilities Service, USDA § 1755.910

is configured for recurring connections and disconnections of solid copper cross-connect wire using a threaded screw or stud and nut combination for gripping the wire. The terminal is usually housed in a SAI cabinet. However, the terminal may receive limited use in smaller pedestal-type housings and pole mounted cabinets in the outside plant environment.

(2) Design and fabrication requirements.
(i) Terminal blocks used in outside plant housings are expected to perform satisfactorily for a nominal design life of 30 years.
(ii) All individual terminals or terminal fields must be enclosed and the terminal enclosure must be totally filled with an encapsulating grease or gel which prevents connection degradation caused by moisture and corrosion. The encapsulant must provide complete encapsulation of terminal metallic connections and surfaces and totally fill all voids and cavities within individual terminal enclosures or terminal field enclosures to prevent ingress of moisture. The encapsulant must not restrict access to the terminal or restrict craft personnel from making connections. The encapsulant must be compatible with the standard materials used in cross-connect hardware and wiring.
(iii) Binding post terminals shall not be susceptible to damage under normal use of standard tools used by outside plant technicians such as screwdrivers and test set clips. In addition, use of other tools such as scissors, diagonal cutters and long nose pliers for tightening and loosening screws shall not result in damage to the terminal.
(iv) Terminals shall be designed so that a typical technician using customary tools shall be able to terminate cross-connect wire on a pair of terminals, or to remove it, without causing an electrical short between any two terminals or any other adjacent terminals.
(v) The terminal count sequence shall be indicated using numerals of at least 0.25 cm (0.10 in.) in height.
(vi) A means shall be provided to distinguish feeder terminals from distribution terminals.
(vii) A means shall be provided to identify tip terminals and ring terminals in a terminal field. The identification convention shall indicate tip on the left with ring on the right for horizontal spacing and tip on the top with ring on the bottom for vertical spacing.
(viii) The preferred height of the highest terminal in the connector field in a ground mounted SAI unit shall be 168 cm (66 in.) or less as measured from the top surface of the mounting pad. The bottom or lowest terminals in the connector field shall be at least 46 cm (18 in.) from the top surface of the pad.
(ix) Pole mounted aerial units shall be 15 cm (6 in.) or less in width. The maximum allowable height of the highest terminals in a pole mounted aerial unit is 168 cm (66 in.) as measured from the top surface of the standard balcony seat used with the interface. For computation purposes, 15 cm (6 in.) shall be allowed for the distance between the bottom of the interface and the top of the balcony seat.

(3) Auxiliary features. (i) SAI cabinets with terminal designs which do not permit direct attachment of common test instrument clips to terminal pairs without the occurrence of shorts shall be equipped with single pair auxiliary test contacts. The auxiliary test contacts shall attach to a terminal pair and provide a set of secondary terminals which will accept typical test instrument clips without the occurrence of shorts. Wire used to connect the auxiliary test contacts to the secondary terminals shall be 20 gauge minimum stranded conductor copper wire with a minimum dielectric strength between conductors of 15 kv. The test connector shall be functional on all terminal pairs.
(ii) A 25 or 50 pair test connector shall be available which can be used to make reliable electrical contact to terminals associated with discrete 25 pair binder groups. The multi-pair test connector shall be provided with a minimum of 1.8 m (6 ft) of suitable cabling terminated to a connector, for interfacing with test sets common to the industry. The multi-pair test connector shall be functional on all terminal groups.
(iii) A special service marker shall be available which must attach to a binding post terminal to identify special circuits and insulate exposed metal.
parts from accidental shorts from tools and wires. A supply of 25 special service markers shall be provided with each SAI cabinet. The color of special service markers shall be red.

(iv)(A) A supply of twisted pair cross-connect wire shall be supplied with housings that are equipped with cross-connect terminals or that have provisions for mounting cross-connect terminals. The minimum length of cross-connect wire supplied is dependent on the SAI cabinet terminal capacity as follows:

<table>
<thead>
<tr>
<th>Cabinet termination capacity (pairs)</th>
<th>Wire length</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 to 600</td>
<td>60 m (200 ft)</td>
</tr>
<tr>
<td>601 to 1200</td>
<td>120 m (400 ft)</td>
</tr>
<tr>
<td>Over 1200</td>
<td>180 m (600 ft)</td>
</tr>
</tbody>
</table>

(B) The cabinet shall be equipped to store the length of wire in a manner designed for convenient dispensing. The cross-connect wire supply shall be easily replaceable.

(g) Performance criteria and test procedures for binding post terminal blocks used in SAI cabinets—(1) General. Many of the tests described in this section require that the terminal block be installed in an appropriate housing in its typical field configuration.

(2) Environmental requirements—(i) Insulation resistance/high humidity and salt fog exposure. A test specimen shall consist of a standard ground or pole mounted housing equipped with a full complement of binding post terminals equipped with 25 special service markers. The minimum number of terminals to be tested shall be 100 pair (100 tips and 100 associated rings). The test terminals shall be selected to form a terminal array of approximate square dimensions. A 1 cm (36 in.) length of cross-connect wire shall be installed on each test terminal. All tips shall be joined together and all rings shall be joined together with a 48 volt dc potential applied as shown in Figure 12 during the high humidity/salt fog and simulated rain exposures. The 48 volt dc may be temporarily removed from the test samples during the measurement process and the ring terminal being measured shall be isolated from the remaining ring terminals. The terminal insulation resistance shall be measured at a potential of 100 volts dc using suitable instrumentation with a minimum measurement range of $10^4$ to $10^{12}$ ohms. Figure 12 is as follows:
(A) High humidity. The test housing shall be placed in an environmental test chamber at 95±3% RH and the temperature cycled as shown in Figure 3 in paragraph (e)(3)(ii) of this section for a period of 30 days. The cabinet doors shall remain in the fully open position. The insulation resistance between the ring terminal of each sample and all the common tip terminals shall be measured each 24 hours when the temperature is between 38 and 57 °C (100 and 135 °F) and increasing. The minimum insulation resistance when measured in accordance with paragraph (g)(2)(i) of this section shall not be less than 1 x 10^6 ohms.

(B) Salt fog. A test housing with its doors closed shall be placed in a salt fog 35 °C (95 °F) test chamber and exposed to a salt fog spray per ASTM B 117-90 for a period of 30 days. The insulation resistance should be measured every 24 hours as indicated in paragraph (g)(2)(i) of the section and shall not be less than 1 x 10^6 ohms. The special service markers shall exhibit no sign of fading, corrosion, swelling, warping, running color, or other signs of deterioration.

(ii) Insulation resistance/simulated rain exposure. (A) A test housing as described in paragraph (g)(2)(i) of this section shall be tested for water infiltration. The test shall be conducted using the method described in paragraph (e)(3)(xi) of this section. The cabinet doors shall remain closed for the duration of the test. The insulation resistance between the ring terminals and the common tip terminals shall be measured during and immediately following the spray application as indicated in paragraph (g)(2)(i) of this section and shall not be less than 1 x 10^6 ohms.

(B) With the cabinet doors open, a spray of tap water at a rate of 3.8 liters per minute (1 gallon per minute) at 276 kilo-pascals (40 pounds per square inch)
shall be directed on the terminal array for a period of 1 minute saturating all of the terminals. Following the spray application the doors shall be closed. The cabinet shall be maintained in a temperature environment of 26 to 28 °C (78 to 82 °F) at 95±3% RH for 6 hours. The insulation resistance shall then be measured as specified in paragraph (g)(2)(i) of this section. The minimum insulation resistance shall not be less than 1 x 10⁶ ohms.

(iii) Contact resistance. A minimum of 100 terminals equipped with cross-connect wire that has been installed in a manner typical of that used in the industry shall be temperature cycled.

(A) The test shall consist of eight-hour temperature cycles with one-hour dwells at extreme temperatures of −40 °C to +60 °C (−40 °F to +140 °F), and temperature changes at an average rate of 16 °C (60 °F) per hour between the extremes. The relative humidity shall be maintained at 95±3%. The eight-hour test shall be conducted for 512 cycles. Millivolt drop measurements shall be made initially and after 2, 8, 16, 32, 64, 256, and 512 cycles with the samples at room temperature. The resistance measurement technique must conform to ASTM B 539-90. The measurement method must have an accuracy of at least ±30 microohms for resistances less than 50 milliohms. The change in contact resistance shall not exceed 2 milliohms.

(B) A minimum of 100 terminals equipped with cross-connect wire installed in a manner typical of the industry shall be maintained at 118 °C (245 °F) during the test period, except during disturbance measurement periods where each wire connection to the terminals shall have a 0.23 kg (0.5 lb) force momentarily applied in a manner to stress the connection. Initial millivolt measurements shall be made without disturbing the joints in accordance with paragraph (g)(2)(iii)(A) of this section with the samples at room temperature. After initial measurement each sample shall be disturbed followed by a millivolt drop measurement after 1, 2, 4, 8, 16, and 33 days. The change in contact resistance should be less than 2 milliohms when compared to the initial measurement.

(iv) Fire resistance. A fully equipped cabinet including a full complement of cross-connect jumpers shall be installed in the standard field arrangement and tested for fire resistance in accordance with paragraphs (e)(3)(xiii) introductory text through (e)(3)(xiii)(B) of this section. After cooling, the cabinet, terminals, and associated wiring shall be inspected for signs of ignition, melting, burning, or structural damage of sufficient consequences such that the results are service affecting.

(v) Encapsulant material compatibility. The terminal connection encapsulant compound must be compatible with the standard materials used in cross-connect hardware and wiring when aged in accordance with ASTM D 4568-86 at a temperature of 80±1 °C (176±2 °F). The conductor insulation shall retain a minimum of 85% of its unaged tensile strength and elongation values. The cross-connect hardware shall exhibit no visible material degradation.

(vi) Encapsulant flow test. Terminal connection encapsulant must remain stable at 80±1 °C (176±2 °F) when tested in an environmental chamber. Test specimens shall be suspended in a preheated oven over a glass dish or other drip-catching medium for a period of 24 hours. At the end of the test period, the glass dish shall be examined for evidence of flowing or dripping of encapsulant from the cross-connect terminal. More than 0.5 gram of encapsulant in the dish at the end of the test constitutes failure.

(3) Mechanical requirements—(i) Vibration. A test housing equipped with a full complement of cross-connect terminals and jumper wiring shall be subjected to vibration testing in accordance with paragraph (e)(4)(iii) of this section.

(ii) Torsional capacity of binding posts. The test specimens shall consist of the complete binding post terminal consisting of the screw or nut, washers if required, and threaded post or stud respectively.

(A) Test specimens shall include the terminals along the matrix edge at mid-span locations as well as centrally located terminals. Tests shall be conducted using a torque indicating screwdriver, or wrench, with an accuracy of
±0.17 N·m (±1.5 lb-in.) or better. The torque indicating device shall be used to tighten a screw or nut until failure of the screw or nut is achieved. Tests shall be conducted while the test specimen is stabilized at temperatures of −40 °C, 20 °C, and 71 °C (−40 °F, +68 °F, and at +160 °F). Record the torques at terminal failure. At least 10 test specimens shall be tested at each temperature. The failure torque shall not be less than 2.8 N·m (25.0 lb-in.) for each temperature.

(B) The post or stud of the binding post terminal shall not fail before the screw or nut when increasing torque. The faceplate or receptacle restraining the post or stud shall not fail before the screw or nut when increasing torque.

(iii) Lateral loading capacity of binding posts. A minimum of three sets of 25 terminals shall be tested with the test specimens stabilized at temperatures of −40 °C, 20 °C and 71 °C (−40 °F, +68 °F, and 100 °F). The test arrangement shall include the terminals along the matrix edge at mid-span locations as well as centrally located terminals. A force measuring device, such as a dynamometer, shall be attached to the end of a binding post terminal and a 16 kg (35 lb) force applied orthogonally to the terminal axis in 4 perpendicular directions as shown in Figure 13. Permanent deformation in excess of 0.08 cm (0.03 in.) or any structural damage in either the terminal or faceplate constitutes a failure. Figure 13 is as follows:
(iv) Axial pullout resistance. A minimum of three sets of 25 terminals shall be tested with the test specimens stabilized at temperatures of $-40^\circ$C, $20^\circ$C, and $71^\circ$C ($-40^\circ$F, +68$^\circ$F, and 100$^\circ$F). The test arrangement shall include the terminals along the matrix edge at mid-span locations as well as centrally located terminals. A force measuring device, such as a dynamometer, shall be attached to a terminal and a force of 16 kg (35 lb) applied on axis as shown in Figure 14. There shall be no permanent deformation in excess of 0.08 cm (0.03 in.), any structural damage, or terminal pull-out in either the terminal or the faceplate. Figure 14 is as follows:
(v) Test connector reliability. (A) A single pair connector shall be capable of making a minimum of 100 successive connections to binding post terminals without the occurrence of an open circuit. The test shall include terminals along the matrix edge, center, top, and bottom.

(B) A multi-pair test connector shall be attached to the binding post terminal field and tests for opens between the binding post terminals and the test.
connector shall be conducted. All circuits must prove good. The test shall be repeated along the terminal matrix edges, center, top, and bottom.

(vi) Service cycle reliability. A torque indicating device or wrench with an accuracy of ±0.17 N-m (±1.5 lb-in.) or better shall be used to tighten the terminal screw or nut as appropriate to 1.7 N-m (15.0 lb-in.). The terminal nut or screw is then loosened and retightened to 1.7 N-m (15 lb-in.). After 50 repeated connections and disconnections, the terminal shall be placed in an environmental chamber at 95% RH where the temperature shall be cycled as indicated in Figure 3 in paragraph (e)(3)(ii) of this section for a duration of 72 hours. The terminal shall then be momentarily removed from the chamber and the test procedure repeated. After a total of 250 loosening and retightening cycles have accumulated, the terminal must be capable of withstanding a torque of 1.7 N-m (15 lb-in.).

(4) Dielectric strength. All housing components in the vicinity of unsheathed field cable conductors, unsheathed housing stub cable or harness conductors, terminals, or cross-connect wire paths shall have a minimum dielectric strength of 500 volts ac to the cabinet grounding and bonding bracket. Dielectric strength is tested by connecting one lead from a 500-volt ac at 0.5 ampere source to the cabinet ground connector and the other lead is passed along the surfaces of all cabinet components in the vicinity of unsheathed cable or harness conductors, cross-connect wire paths, and in the splice area where unsheathed field cable conductors may be located. Sparkover constitutes failure.

(5) Operational requirements—(i) Durability. In order to verify the durability requirements while minimizing the number of test housings required to complete the test program, the binding posts selected for tests shall be separately identified and then checked to establish compliance after the various tests have been conducted.

(ii) Twenty-five jumper connections shall be made on each of two binding post connectors chosen at random from a representative sample in an assembled interface unit. After exposure to this test, these and adjacent connectors shall be inspected for damage such as cracks or chips in metal or plastic parts. Failure consists of structural damage, open circuits through the connector, or inability to pass the torsional, lateral loading, or axial pullout tests described in paragraphs (g)(3)(ii) through (g)(3)(iv) of this section.

(iii) Select six binding posts at random in a representative interface. On each connector, attach any test cord included with the unit and then remove the test cord as follows. On binding post sample 1, remove the cord normally ten times. On binding post sample 2, remove the cord ten times by jerking the test leads straight out. In these and the remaining tests, do this without releasing any manual attachment mechanisms. On sample 3, remove ten times by jerking downward at 45° from horizontal; sample 4, upward at 45° ten times; sample 5, left 45° ten times; sample 6, right 45° ten times.

Check for opens and damage in the test cord, clips, and connectors. Failure consists of structural damage, open circuits through the connector, or inability of the terminal blocks to pass the torsional, lateral loading, axial pullout, test connector reliability, or dielectric strength tests described in paragraphs (g)(3)(ii) through (g)(3)(v)(B), and paragraph (g)(4) of this section.

(iv) Use craft tools such as scissors, diagonal cutters, and long nose pliers to loosen and tighten screws where the binding post design does not prohibit the possibility. Failure consists of severe structural damage.

(h) Functional design criteria for insulation displacement type cross-connect modules used in SAI cabinets—(1) General description. Cross-connect modules normally consist of multiple metallic contact elements that are retained by nonmetallic fixtures. The contact elements are spliced with permanent wire leads compatible for splicing to 22, 24, or 26 gauge cable on one side and configured for the acceptance of recurring connections and disconnections of plastic insulated cross-connect wire on the other side. Cross-connect modules are usually housed in a SAI cabinet. However, modules may receive limited usage in smaller pedestal-type
(2) Design and fabrication requirements.

(i) All individual terminals or terminal fields must be enclosed and the terminal enclosures must be totally filled with an encapsulating grease or gel which prevents connection degradation caused by moisture and corrosion. The encapsulant must provide complete encapsulation of terminal metallic connections and surfaces and totally fill all voids and cavities within individual terminal enclosures or terminal field enclosures to prevent ingress of moisture. The encapsulant must not restrict access to the terminal or restrict craft personnel from making connections. The encapsulant must be compatible with the standard materials used in cross-connect hardware and wiring.

(ii) The cross-connect module manufacturer shall make available any non-standard tools and test apparatus which are required for splicing, placing of jumpers, and the performance of maintenance operations.

(iii) The module shall be designed so that a typical outside plant technician using tools shall be able to terminate cross-connect wire on terminals, or to remove them without causing electrical shorts between any other terminals.

(iv) The pair count sequence terminated on a module shall be easily visible and shall have numerals of at least 0.25 cm (0.10 in.) in height.

(v) Feeder terminations shall be easily distinguished from distribution terminations.

(vi) Tip and ring terminations shall be easily visible and shall be identifiable as described in paragraph (f)(2)(vi) of this section.

(vii) The preferred locations for cross-connect modules to be mounted inside a housing is the same as those for terminals and are described in paragraphs (f)(2)(vii) and (f)(2)(viii) of this section.

(3) Auxiliary features.

(i) Housings equipped with cross-connect modules shall be equipped with auxiliary test contacts as described in paragraphs (f)(3)(i) and (f)(3)(ii) of this section.

(ii) Special service markers shall be available for cross-connect modules as described in paragraph (f)(3)(iii) of this section.

(iii) Housings equipped with, or designed for, cross-connect modules shall contain a supply of cross-connect wire as described in paragraph (f)(3)(iv) of this section.

(iv) Performance criteria and test procedures for insulation displacement type cross-connect modules—

(1) General. Many of the tests described in this section require that the cross-connect module be installed in an appropriate housing in its typical field configuration for testing. Resistance measurements should be made with an electrical device which measures changes in resistance for each test parameter measured. The tests specified provide an indication of the stability of the electrical connections under the test conditions encountered.

(2) Environmental requirements.

(i) A fully equipped arrangement of cross-connect modules having approximately 25 special service markers shall successfully complete environmental testing in accordance with paragraphs (e)(3) introductory text through (e)(3)(xiii)(B) of this section.

(ii) Insulation resistance/high humidity and salt fog exposure. Insulation resistance measurements shall not be less than 1 x 10^6 ohms when cross-connect modules are tested by a procedure similar to that described in paragraphs (g)(2)(ii) introductory text through (g)(2)(ii)(B) of this section.

(iii) Insulation resistance/simulated rain exposure. Insulation resistance measurements shall not be less than 1 x 10^6 ohms when cross-connect modules are tested by a procedure similar to that described in and paragraphs (g)(2)(ii) introductory text through (g)(2)(ii)(B) of this section.

(iv) Contact resistance. The change in contact resistance should not exceed 2 milliohms when cross-connect modules are tested by a procedure similar to that described in paragraphs (g)(2)(iii) introductory text through (g)(2)(iii)(B) of this section.

(v) Fire resistance. A housing fully equipped with cross-connect modules and jumper wiring shall be tested for fire resistance by a procedure similar to that described in paragraph (g)(2)(iv) of this section.
 Cross-connect wire insulation and cross-connect hardware shall exhibit no visible material degradation when tested by the procedure described in paragraph (g)(2)(v) of this section.

Encapsulant flow test. The cross-connect contact encapsulant shall drip no more than 0.5 gram when tested by the procedure described in paragraph (g)(2)(vi) of this section.

(vi) Encapsulant material compatibility. Cross-connect wire insulation and cross-connect hardware shall exhibit no visible material degradation when tested by the procedure described in paragraph (g)(2)(v) of this section.

Encapsulant flow test. The cross-connect contact encapsulant shall drip no more than 0.5 gram when tested by the procedure described in paragraph (g)(2)(vi) of this section.

(3) Mechanical requirements—(i) Vibration. A housing fully equipped with cross-connect modules shall be vibration tested in accordance with paragraph (g)(3)(i) of this section.

(ii) Test connector reliability. The test connectors supplied with housings intended for cross-connect modules shall successfully complete 100 successive connections as described in paragraphs (g)(3)(v) introductory text through (g)(3)(v)(B) of this section.

(iii) Service cycle reliability. A combination of multiple insertions of jumper wires, vibration, and temperature cycling shall be performed on cross-connect modules. The multiple insertions on approximately 100 connections shall be accomplished by 300 operations consisting of insertion, removal and reinsertion of new jumper wire. Contact resistance shall be measured and the final insertion of jumper wire shall not be removed from the connectors but may be subjected to vibration testing in accordance with paragraph (g)(3)(i) of this section and temperature cycled as indicated in Figure 3 in paragraph (e)(3)(ii) of this section for a duration of 72 hours. After vibration and temperature cycling, the average change in contact resistance shall be no greater than 2 milliohms.

(iv) Jumper wire pull-out resistance. Test modules that have received no prior conditioning shall be equipped with 100 38 cm (15 in.) jumper connections of the gauges recommended for use with the module using the insertion tool recommended by the cross-connect module manufacturer. With the test samples suitably supported, wires from each sample shall be pulled, one at a time, by a tensile machine at a cross-head speed of 6 centimeters per minute (2.4 inches per minute (in./min)). Wires shall be pulled both perpendicular and parallel to the plane of the cross-connect field and shall withstand a load of at least 1.1 kg (2.5 lb) before pulling out.

(v) Cable conductor pull-out resistance. Test modules that have received no prior conditioning shall be equipped with 100 26, 24, and 22 AWG 38 cm (15 in.) cable conductors using the insertion tool recommended by the cross-connect module manufacturer. With the test samples suitably supported, conductors from each sample shall be pulled, one at a time, by a tensile machine at a cross-head speed of 6 cm/min (2.4 in./min). Wires shall be pulled both perpendicular and parallel to the plane of the face of the splice module and shall withstand a load of at least 1.1 kg (2.5 lb) before pulling out.

(4) Electrical requirements—(i) Dielectric strength. A housing fully equipped with cross-connect modules shall be tested for dielectric strength in accordance with (g)(4) of this section.

(ii) The dielectric strength of a contact within the cross-connect module to contacts on either side shall be tested. The module shall be tested in a dry environment with an ac power source capable of supplying 8 kv at a rate of increase of 500 volts per second, a circuit breaker to open at breakdown, and a voltmeter to record the breakdown potential. Cross-connect modules shall be prepared in accordance with industry accepted splicing techniques with leads trimmed to approximately 38 cm (15 in.). The dielectric strength of each contact to the contacts on either side shall have an average dielectric strength of approximately 5.0 kv.

(5) Operational requirements—(i) Durability. In order to verify the durability requirements while minimizing the number of test housings required to complete the test program, the contacts selected for tests shall be separately identified and then checked to establish compliance after the various tests have been conducted.

(ii) Twenty-five jumper connections shall be made on each of two contacts chosen at random from a representative sample in an assembled interface unit. After this test, these and surrounding contacts shall be inspected for damage such as cracks or chips in metal or plastic parts. Failure consists of structural damage, open circuits
through the connector, or inability to pass the jumper wire pullout tests described in paragraph (i)(3)(iv) of this section.

(iii) Select six contacts at random in a representative interface. On each of these contacts attach any test cord included with the unit as specified under normal use of that cord and then remove the test cord as follows. On sample 1, remove the cord normally ten times. On sample 2, remove the clip ten times by jerking the test leads straight out. In these and the remaining tests, do this without releasing any manual attachment mechanisms. On sample 3, remove the clip ten times by jerking downward at 45° from horizontal; sample 4, upward 45° ten times; sample 5, left 45° ten times; sample 6, right 45° ten times. Check for opens and damage in the test cord, clips, and cross-connect modules. Failure consists of structural damage, open circuits through the connector, or inability to pass the test connector reliability, jumper wire pullout, and dielectric strength tests described in paragraphs (i)(3)(ii), (i)(3)(iv), and (i)(4)(ii) of this section.

(j) Packaging and identification requirements—(1) Product identification. (i) Each housing, terminal block, or cross-connect module shall be permanently marked with the manufacturer's name or trade mark.

(ii) The date of manufacture, model number, serial number and RUS assigned designations shall be placed on a decal inside housings. The product identification nomenclature must correspond with the nomenclature used in the manufacturer's quality assurance program.

(2) Packaging requirements. (i) Buried plant housings shall be packaged securely in an environmentally safe container to prevent either deterioration or physical damage to the unit during shipment, handling and storage.

(ii) The product with all the necessary parts shall be shipped in one container unless significant advantages to the user can be obtained otherwise. Packaging of parts in the carton shall be such that the parts become available in the order in which they are needed. The package should be clearly marked as to which end to open. Packages shall be clearly labeled, and correspond to the names given in the instructions.

(iii) Products packed in shipping containers shall be cushioned, blocked, braced, and anchored to prevent movement and damage.

(iv) All products shall be secured to pallets with non-metallic strapping. The strapping and the manner employed shall be of sufficient quantity, width, and thickness to preclude failure during transit and handling.

(v) The use of shrink or stretch film to secure the load to the pallet is permitted. However, such film must be applied over the required strapping.

(vi) Containers that are too large or heavy to be palletized, such as crates, shall be shipped in their own containers. When practical, these containers shall be provided with skids to facilitate fork-lift handling.

(vii) When packaged, the outer cartons shall meet the requirements of the Uniform Freight Classification and the National Motor Freight Classification.

(3) Container marking requirements. (i) The package shall be readily identifiable as to the manufacturer, model number, date of manufacture, and serial number.

(ii) The RUS assigned housing designation shall be stamped or marked on the outside of the package container with letter and number sizes large enough for easy identification.

(iii) Each package shall be marked with its approximate gross weight.

(iv) All containers carrying delicate or fragile items shall be marked to clearly identify this condition.

(v) All marking shall be clear, legible, and as large as space permits.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget under control number 0572–0059)
Subpart B—Uniform System of Accounts

1767.10 Definitions.
1767.11 Purpose.
1767.12 Accounting system requirements.

Subpart A—General [Reserved]

§§ 1767.1—1767.9 [Reserved]

Subpart B—Uniform System of Accounts

§ 1767.10 Definitions.

As used in this part:

Accounting borrower is an RUS borrower.

Accounts are the accounts prescribed in this system of accounts.

Actually issued as applied to securities issued or assumed by the utility, are those which have been sold to bona fide purchasers for a valuable consideration, those issued as dividends on stock, and those which have been issued in accordance with contractual requirements direct to trustees of sinking funds.

Actually outstanding as applied to securities issued or assumed by the utility, are those which have been actually issued and are neither retired nor held by or for the utility: provided, however, that securities held by trustees shall be considered as actually outstanding.

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized.

Associated (affiliated) companies are companies or persons that directly, or indirectly through one or more intermediaries, control, or are controlled by, or under common control with, the accounting company.

Book Cost means the amount at which property is recorded in these accounts without deduction of related provisions for accrued depreciation, amortization, or for other purposes.

Capital lease is a lease of property used in utility or nonutility operations, which meets one or more of the criteria stated in § 1767.15 (s).

CFC is the National Rural Utilities Cooperative Finance Corporation.

Continuing Property Records are company plant records for retirement units and mass property that provide, as either a single record, or in separate records readily obtainable by references made in a single record, the following information:

(1) For each retirement unit:
   (i) The name or description of the unit, or both;
   (ii) The location of the unit;
   (iii) The date the unit was placed in service;
   (iv) The cost of the unit as set forth in §1767.16 (b) and (c); and
§ 1767.10

(v) The plant control account to which the cost of the unit is charged.

(2) For each category of mass property:
(i) A general description of the property and quantity;
(ii) The quantity placed in service by vintage year;
(iii) The average cost as set forth in §1767.16 (b) and (c); and
(iv) The plant control account to which the costs are charged.

Control (including the terms controlling, controlled by, and under common control with) is the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a company, whether such power is exercised through one or more intermediary companies, or alone, or in conjunction with, or pursuant to an agreement, and whether such power is established through a majority or minority ownership or through voting of securities; common directors, officers, or stockholders; voting trusts; holding trusts; associated companies; contracts; or any other direct or indirect means.

Cost is the amount of money actually paid for property or services. When the consideration given is other than cash in a purchase and sale transaction, as distinguished from a transaction involving the issuance of common stock in a merger or a pooling of interest, the value of such consideration shall be determined on a cash basis.

Cost of removal is the cost of demolishing, dismantling, tearing down or otherwise removing electric plant, including the cost of transportation and handling incidental thereto.

Customer is a consumer or patron.

Debt expense includes all expenses incurred in connection with the issuance and initial sale of evidence of debt, such as fees for drafting mortgages and trust deeds; fees and taxes for issuing or recording evidences of debt; costs of engraving and printing bonds and certificates of indebtedness; fees paid to trustees; specific costs of obtaining governmental authority; fees for legal services; fees and commissions paid underwriters, brokers, and salesmen for marketing such evidences of debt; fees and expenses of listing on exchanges; and other like costs.

Depreciation, as applied to depreciable electric plant, is the loss in service value, not restored by current maintenance, incurred in connection with the consumption or prospective retirement of electric plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and requirements of public authorities.

Discount, as applied to the securities issued or assumed by the utility, is the excess of the par (stated value of no-par stocks) or face value of the securities plus interest or dividends accrued at the date of the sale over the cash value of the consideration received from their sale.

FASB is the Financial Accounting Standards Board.

G&T is a generation and transmission cooperative.

Investment advances are advances, represented by notes or by book accounts only, with respect to which it is mutually agreed or intended between the creditor and debtor that they shall be settled by the issuance of securities or shall not be subject to current settlement.

Minor items of property are the associated parts or items of which retirement units are composed.

Net salvage value is the salvage value of property retired less the cost of removal.

Nominally issued, as applied to securities issued or assumed by the utility, are those which have been signed, certified, or otherwise executed, and placed with the proper officer for sale and delivery, or pledged, or otherwise placed in some special funds of the utility, but which have not been sold, or issued direct to trustees of sinking funds in accordance with contractual requirements.

Nominally outstanding, as applied to securities issued or assumed by the utility, are those which, after being actually issued, have been reacquired by or for the utility under circumstances which require them to be considered as held alive and not retired, provided,
however, that securities held by trustees shall be considered as actually outstanding.

NRECA is the National Rural Electric Cooperative Association.

Operating lease is a lease of property used in utility or nonutility operations, which does not meet any of the criteria stated in §1767.15 (s).

Original cost, as applied to electric plant, is the cost of such property to the person first devoting it to public service.

Person is an individual, a corporation, a partnership, an association, a joint stock company, a business trust, or any organized group of persons, whether incorporated or not, or any receiver or trustee.

Premium, as applied to securities issued or assumed by the utility, is the excess of the cash value of the consideration received from their sale over the sum of their par (stated value of no-par stocks) or face value and interest or dividends accrued at the date of sale.

Project is a complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water rights, rights of way, ditches, dams, reservoirs, lands, or interests in lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit.

Property retired, as applied to electric plant, is property which has been removed, sold, abandoned, destroyed, or which for any cause has been withdrawn from service.

REA means the Rural Electrification Administration formerly an agency of the United States Department of Agriculture and predecessor agency to RUS with respect to administering certain electric and telephone loan programs.

Regulatory Assets and Liabilities are assets and liabilities that result from rate actions of regulatory agencies. Regulatory assets and liabilities arise from specific revenues, expenses, gains, or losses that would have been included in net income determinations in one period under the general requirements of the Uniform System of Accounts but for it being probable:

1. That such items will be included in a different period(s) for purposes of developing the rates the utility is authorized to charge for its utility services; or

2. In the case of regulatory liabilities, that refunds to customers, not provided for in the other accounts, will be required.

Replacing (including replacement) when not otherwise indicated in the context, is the construction or installation of electric plant in place of property retired, together with the removal of the property retired.

Research, Development, and Demonstration (RD&D) includes all expenditures incurred by borrowers either directly or through another person or organization (such as a research institute, industry association, foundation, university, engineering company or similar contractor) in pursuing research, development, and demonstration activities including experiment, design, installation, construction, or operation. This definition includes expenditures for the implementation or development of new and/or existing concepts until technically feasible and commercially feasible operations are verified. Such research, development, and demonstration costs should be reasonably related to the existing or future utility business; broadly defined, of the borrower or in the environment in which it operates or expects to operate. The term includes, but is not limited to, all such costs incidental to the design, development or implementation of an experimental facility, a plant process, a product, a formula, an invention, a system or similar items, and the improvement of already existing items of a like nature; amounts expended in connection with the proposed development and/or proposed delivery of alternate sources of electricity; and the costs of obtaining its own patent.
§ 1767.12

(a) The standard form of RUS loan documents for electric borrowers requires that the borrower keep books, records, and accounts in which full and true entries will be made of all of the dealings, business and affairs of the borrower in accordance with the methods and principles of accounting of this part.

(b) This subpart implements these provisions of the RUS loan documents by prescribing the RUS USoA for electric borrowers and by providing accounting methodologies and procedures which are applicable to particular situations.

§ 1767.12 Accounting system requirements.

(a) Each RUS electric borrower must maintain and keep its books of accounts and all other books and records that support the entries in such books of accounts in accordance with §§1767.18-1767.31.

§ 1767.11 Purpose.

(a) The standard form of RUS loan documents for electric borrowers requires that the borrower keep books, records, and accounts in which full and true entries will be made of all of the dealings, business and affairs of the borrower in accordance with the methods and principles of accounting of this part.

(b) This subpart implements these provisions of the RUS loan documents by prescribing the RUS USoA for electric borrowers and by providing accounting methodologies and procedures which are applicable to particular situations.

§ 1767.12 Accounting system requirements.

(a) Each RUS electric borrower must maintain and keep its books of accounts and all other books and records that support the entries in such books of accounts in accordance with §§1767.18-1767.31.
§ 1767.13 Departures from the prescribed RUS Uniform System of Accounts.

(b) Each RUS electric borrower shall maintain and keep its books of accounts and all other books and records which support the entries in such books of accounts in accordance with §1767.41, Accounting Methods and Procedures Required of All RUS Borrowers, herein, which prescribes accounting principles to be applied to specific factual circumstances.

§ 1767.13 Departures from the prescribed RUS Uniform System of Accounts.

(a) No departures are to be made to the prescribed RUS USoA without the prior written approval of RUS. RUS grants a departure to any borrower electing to delay implementation of the functional (activity-based) accounting requirements of this part through December 31, 1997. Requests for departures from the RUS USoA shall be addressed, in writing, to the Director, Program Accounting Services Division (PASD).

(b) RUS borrowers subject to the jurisdiction of a state regulatory authority with jurisdiction over rates and/or accounting for electric utilities will not:

(1) Request approval of such authority to use accounting methodologies and principles that depart from the provisions herein; or

(2) File with such authority, any documents or information, including without limitation, any filings associated with the borrower’s rates, based upon accounting methods and principles inconsistent with the provisions of this part.

(c) If any state regulatory authority with jurisdiction over an RUS borrower prescribes accounting methods or principles for the borrower that are inconsistent with the provisions of this part, the borrower must immediately notify the Director, BAD, and provide such documents, information, and reports as RUS may request to evaluate the impact that such accounting methods or principles may have on the interests of RUS.

(1) If RUS determines that the accounting methods and principles do not adversely impact RUS interests, RUS will grant the borrower to use the accounting methods and principles as prescribed by the state regulatory authority to comply with the provisions of the RUS loan documents.

(2) If RUS determines that the accounting methods and principles may adversely impact RUS’s interests, RUS may require that, for the purposes of complying with provisions of RUS loan documents, including, without limitation, those provisions relating to financial coverage standards (e.g. “TIER”), the borrower continue to maintain books, records, and accounts in accordance with this subpart.

(i) RUS may, however, approve requests by the borrower to maintain such additional books, records, and accounts as necessary to comply with the requirements of the state regulatory authority.

(ii) Such approval will not waive, modify or amend the requirements of the RUS loan documents or of this subpart.

(d) RUS borrowers will not implement the provisions of Statement of Financial Accounting Standards (SFAS) No. 71, Accounting for the Effects of Certain Types of Regulation, SFAS No. 90, Regulated Enterprises—Accounting for Abandonments andDisallowances of Plant Costs, SFAS No. 92, Regulated Enterprises—Accounting for Phase-in Plans, without the prior written approval of RUS except as provided for in paragraphs (d)(1) through (d)(5) of this section. Requests for approval shall be addressed, in writing, to the Director, PASD. The specific deferrals set forth in paragraphs (d)(1) through (d)(5) of this section may be implemented without the prior written approval of RUS provided that the deferrals comply with Statement No. 71 and that the RUS borrowers implementing such deferrals continue to meet the requirements set forth in Statement No. 71 for doing so:

(1) The deferral and amortization of prior service pension costs (See §1767.41, Interpretation No. 606, Pension Costs), remapping expenses (See §1767.41, Interpretation No. 613, Mapping Costs), and preliminary survey and investigation charges (See §1767.17, Interpretation No. 111, Engineering Contracts for System Planning);

(2) The deferral of any current period expense or expenses, on a cumulative
basis for the fiscal year, only if a borrower would have met each of its financial tests or coverage ratios that it has covenanted with RUS to meet for that fiscal year, had the deferral not been made;

3. The deferral of any cost that will be fully amortized within the next 12 succeeding months;

4. The accelerated amortization of any previously deferred expense; and

5. The deferral of revenues coincident with a moratorium imposed by the National Rural Electric Cooperative Association on its Retirement and Security Program, provided, however, that the deferral is for the sole purpose of offsetting future pension costs.

(e) RUS will consider approval of specific departures from this part upon submission of:

1. A detailed description of the proposed departure;

2. The specific accounting journal entries that will be used including the account number and title, and the dollar amounts where appropriate;

3. The total dollar amount of the departure and the impact on margins during the time period of the departure; and

4. Any additional information RUS may deem necessary to adequately evaluate the borrower’s request.

(f) RUS will, within 90 days of final receipt of this information, render a decision on the borrower’s request for a departure from the prescribed RUS USoA.

1. If, due to extenuating circumstances, RUS is unable to reach a decision within the required time period, RUS will notify the borrower of the delay within this same 90-day period, and provide a projected decision date.

2. The requested departure from the prescribed RUS USoA must not be implemented until final approval is granted by RUS.

§ 1767.14 Interpretations of the RUS Uniform System of Accounts

To maintain uniformity in accounting, borrowers must submit questions concerning interpretations of the RUS USoA, in writing, to the Director, BAD, for consideration and decision.

(Approved by the Office of Management and Budget under control number 0572-0002)

[60 FR 55429, Nov. 1, 1995]

§ 1767.15 General instructions

(a) Records. (1) Each utility shall keep its books of account, and all other books, records, and memoranda which support the entries in such books of account so as to be able to furnish readily full information as to any item included in any account.

(2) Each entry shall be supported by such detailed information as will permit ready identification, analysis, and verification of all facts relevant there-to.

(3) The books and records referred to herein include not only accounting records in a limited technical sense, but all other records, such as minute books, stock books, reports, correspondence, memoranda, etc., which may be useful in developing the history of or facts regarding any transaction.

(4) No utility shall destroy any such books or records unless the destruction thereof is permitted by the rules and regulations of RUS in 7 CFR chapter XVII.

(5) In addition to the prescribed accounts, clearing accounts, temporary or experimental accounts, and subdivisions of any accounts, may be kept, provided the integrity of the prescribed accounts is not impaired.

(6) All amounts included in the accounts prescribed herein for electric plant and operating expenses shall be just and reasonable and any payments or accruals by the utility in excess of just and reasonable charges shall be included in Account 426.5, Other Deductions.

(7) The arrangement or sequence of the accounts prescribed herein shall not be controlling as to the arrangement or sequence in report forms which may be prescribed by RUS.

(b) Numbering system. (1) The account numbering plan used herein consists of a system of three-digit whole numbers as follows:

100-199 Assets and other debits.

200-299 Liabilities and other credits.

300-399 Plant accounts.
§ 1767.15

400-432, 434-435 Income accounts.
433, 436-439 Retained earnings accounts.
440-459 Revenue accounts.
500-599 Production, transmission, and distribution expenses.
900-949 Customer accounts, customer service and informational, sales, and general and administrative expenses.

(2) In certain instances, numbers have been skipped in order to allow for possible later expansion or to permit better coordination with the numbering system for other utility departments.

(3) The numbers prefixed to account titles are to be considered as parts of the titles.

(i) Each utility, however, may adopt, for its own purposes, a different system of account numbers provided that the numbers herein prescribed shall appear in the descriptive headings of the ledger accounts and in the various sources of original entry.

(ii) If a utility uses a different group of account numbers and it is not practicable to show the prescribed account numbers in the various sources of original entry, such reference to the prescribed account numbers may be omitted from the various sources of original entry.

(iii) Each utility using different account numbers for its own purposes shall keep readily available, a list of such account numbers which it uses and a reconciliation of such account numbers with the account numbers provided herein.

(iv) The utility’s records shall be kept as to permit ready analysis by prescribed accounts (by direct reference to sources of original entry to the extent practicable) and to permit preparation of financial and operating statements directly from such records at the end of each accounting period according to the prescribed accounts.

(c) Accounting period. (1) Each utility shall keep its books on a monthly basis so that for each month, all transactions applicable thereto, as nearly as may be ascertained, shall be entered in the books of the utility.

(2) Amounts applicable or assignable to specific utility departments shall be so segregated monthly.

(3) Each utility shall close its books at the end of each fiscal year unless otherwise authorized by RUS.

(d) Submission of questions. To maintain uniformity of accounting, utilities shall submit questions of doubtful interpretation to RUS for consideration and decision.

(e) Item lists. (1) Lists of “items” appearing in the texts of the accounts or elsewhere herein are for the purpose of more clearly indicating the application of the prescribed accounting.

(2) The lists are intended to be representative, but not exhaustive.

(3) The appearance of an item in a list warrants the inclusion of the item in the account mentioned only when the text of the account also indicates inclusion inasmuch as the same item frequently appears in more than one list.

(4) The proper entry in each instance must be determined by the texts of the accounts.

(f) Extraordinary items. (1) Net income shall reflect all items of profit and loss during the period with the exception of prior period adjustments as described in §1767.15 (g) and long-term debt as described in §1767.15 (q).

(2) Those items related to the effects of events and transactions which have occurred during the current period and which are not typical or customary business activities of the company shall be considered extraordinary items.

(3) They will be events and transactions of significant effect which would not be expected to recur frequently and which would not be considered as recurring factors in any evaluation of the ordinary operating processes of business.

(i) In determining significance, items of a similar nature should be considered in the aggregate.

(ii) Dissimilar items should be considered individually; however, if they are few in number, they may be considered in the aggregate.

(iii) To be considered as extraordinary under the above guidelines, an item should be more than approximately 5 percent of income, computed before extraordinary items.

(iv) RUS approval must be obtained to treat an item of less than 5 percent, as extraordinary. (See Accounts 434 and 435.)
(g) Prior period items. (1) Items of profit and loss related to the following shall be accounted for as prior period adjustments and excluded from the determination of net income for the current year:
   (i) Correction of an error in the financial statements of a prior year
   (ii) Adjustments that result from realization of income tax benefits of preacquisition operating loss carryforwards of purchased subsidiaries.
(2) All other items of profit and loss recognized during the year shall be included in the determination of net income for that year.

(h) Unaudited items. (1) Whenever a financial statement is required by RUS, if it is known that a transaction has occurred which affects the accounts but the amount involved in the transaction and its effect upon the accounts cannot be determined with absolute accuracy, the amount shall be estimated and such estimated amount included in the proper accounts.
(2) The utility is not required to anticipate minor items which would not appreciably affect the accounts.
   (i) Distribution of pay and expenses of employees. Charges to electric plant, operating expense, and other accounts for services and expenses of employees engaged in activities chargeable to various accounts, such as construction, maintenance, and operations, shall be based upon the actual time engaged in the respective classes of work, or in case that method is impracticable, upon the basis of a study of the time actually engaged during a representative period.
   (j) Payroll distribution. (1) Underlying accounting data shall be maintained so that the distribution of the cost of labor charged direct to the various accounts will be readily available.
(2) Such underlying data shall permit a reasonably accurate distribution to be made of the cost of labor charged initially to clearing accounts so that the total labor cost may be classified among construction, cost of removal, electric operating functions (steam generation, nuclear generation, hydraulic generation, transmission, distribution, etc.) and nonutility operations.

(k) Accounting on an accrual basis. (1) The utility is required to keep its accounts on the accrual basis.
   (i) This requires the inclusion, in its accounts, of all known transactions of appreciable amount which affect the accounts.
   (ii) If bills covering such transactions have not been received or rendered, the amounts shall be estimated and appropriate adjustments made when the bills are received.
(2) When payments are made in advance for items such as insurance, rents, taxes, or interest, the amount applicable to future periods shall be charged to Account 165, Prepayments, and spread over the periods to which applicable, by credits to Account 165, and charges to the accounts appropriate for the expenditure.

(l) Records for each plant. (1) Separate records shall be maintained by electric plant accounts of the book cost of each plant owned, including additions by the utility to plant leased from others, and of the cost of operating and maintaining each plant owned or operated.
(2) The term “plant” as used herein includes each generating station and each transmission line or appropriate group of transmission lines.

(m) Accounting for other departments. (1) If the utility also operates other utility departments, such as gas or water, it shall keep such accounts for the other departments as may be prescribed by proper authority and in the absence of prescribed accounts, it shall keep such accounts as are proper or necessary to reflect the results of operating each such department.
(2) It is not intended that proprietary and similar accounts which apply to the utility as a whole shall be departmentalized.

(n) Transactions with associated companies. (1) Each utility shall keep its accounts and records so as to be able to furnish accurately and expeditiously statements of all transactions with associated companies.
(2) The statements may be required to show the general nature of the transactions, the amounts involved therein and the amounts included in each account prescribed herein with respect to such transactions.
shall be recorded in the appropriate accounts for transactions of the same nature. Nothing herein contained, however, shall be construed as restraining the utility from subdividing accounts for the purpose of recording separately transactions with associated companies.

(o) Contingent assets and liabilities. (1) Contingent assets represent a possible source of value to the utility contingent upon the fulfillment of conditions regarded as uncertain.

(2) Contingent liabilities include items which may, under certain conditions, become obligations of the utility but which are neither direct nor assumed liabilities at the date of the balance sheet. The utility shall be prepared to give a complete statement of significant contingent assets and liabilities (including cumulative dividends on preference stock) in its audited financial statements; its RUS Form 7, Financial and Statistical Report, or its RUS Form 12, Operating Report—Financial; and at such other times as may be requested by RUS.

(p) Separate accounts or records for each licensed project. The accounts or records of each borrower shall be so kept as to show for each project (including pumped storage) under license:

(1) The actual legitimate original cost of the project, including the original cost of the original project, the original cost of additions thereto and betterments thereof, and credits for property retired from service, as determined under RUS's regulations in 7 CFR chapter XVII;

(2) The charges for operation and maintenance of the project property directly assignable to the project;

(3) The credits and debits to the depreciation and amortization accounts, and the balances in such accounts; and

(4) The credits and debits to the operating revenue, income, and retained earnings accounts that can be identified with and directly assigned to the project.

Note: The purpose of this instruction is to insure that accounts or records are currently maintained by each borrower from which reports may be made to RUS for use in determining the net investment in each licensed project. The instruction covers only the debit and credit items appearing in the borrower’s accounts which may be identified with and assigned directly to any project. In the determination of the net investment, allocations of items affecting the net investment may be required where direct assignment is not practicable.

(q) Long-term debt: premium, discount and expense, and gain or loss on reacquisition—(1) Premium, discount and expense. (i) A separate premium, discount and expense account shall be maintained for each class and series of long-term debt (including receivers' certificates) issued or assumed by the utility.

(ii) The premium will be recorded in Account 225, Unamortized Premium on Long-Term Debt, the discount will be recorded in Account 226, Unamortized Discount on Long-Term Debt—Debit, and the expense of issuance shall be recorded in Account 181, Unamortized Debt Expense.

(iii) The premium, discount and expense shall be amortized over the life of the respective issues under a plan which will distribute the amounts equitably over the life of the securities.

(A) The amortization shall be charged or credited on a monthly basis with the amounts relating to discount and expense charged to Account 428, Amortization of Debt Discount and Expense.

(B) The amounts relating to premium shall be credited to Account 429, Amortization of Premium on Debt—Credit.

(2) Reacquisition, without refunding. (i) When long-term debt is reacquired or redeemed without being converted into another form of long-term debt and when the transaction is not in connection with a refunding operation (primarily redemptions for sinking fund purposes), the difference between the amount paid upon reacquisition and the face value; plus any unamortized premium less any related unamortized debt expense and reacquisition costs; or less any unamortized discount, related debt expense and reacquisition costs applicable to the debt redeemed, retired and cancelled, shall be included in Account 189, Unamortized Loss on Reacquired Debt, or Account 257, Unamortized Gain on Reacquired Debt, as appropriate.

(ii) The utility shall amortize the recorded amounts equally on a monthly
basis over the remaining life of the respective security issues (old original debt).

(iii) The amount so amortized shall be charged to Account 428.1, Amortization of Loss on Reacquired Debt, or credited to Account 429.1, Amortization of Gain on Reacquired Debt—Credit, as appropriate.

(3) Reacquisition, with refunding. (i) When the redemption of one issue or series of bonds or other long-term obligations is financed by another issue or series before the maturity date of the first issue, the difference between the amount paid upon refunding and the face value; plus any unamortized premium less related debt expense or less any unamortized discount and related debt expense, applicable to the debt refunded, shall be included in Account 189, Unamortized Loss on Reacquired Debt, or Account 257, Unamortized Gain on Reacquired Debt, as appropriate.

(ii) The utility may elect to account for such amounts as follows:

(A) Write them off immediately when the amounts are insignificant;

(B) Amortize them by equal monthly amounts over the remainder of the original life of the issue retired; or

(C) Amortize them by equal monthly amounts over the life of the new issue.

(iii) Once an election is made, it shall be applied on a consistent basis.

(iv) The amounts in paragraphs (q)(3)(ii)(A), (B), or (C) of this section shall be charged to Account 428.1, Amortization of Loss on Reacquired Debt, or credited to Account 429.1, Amortization of Gain on Reacquired Debt—Credit, as appropriate.

(4) Under methods in paragraphs (q)(3)(ii)(B) and (C) of this section, the increase or reduction in current income taxes resulting from the reacquisition should be apportioned over the remainder of the original life of the issued retired or over the life of the new issue, as applicable, as directed more specifically in paragraphs (q)(5) and (6) of this section.

(5) When the utility recognizes the loss in the year of reacquisition as a tax deduction, Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, shall be debited and Account 283, Accumulated Deferred Income Taxes—Other, shall be credited with the amount of the related tax effect, such amount to be allocated to the periods affected in accordance with the provisions of Account 283.

(6) When the utility chooses to recognize the gain in the year of reacquisition as a taxable gain, Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, shall be debited with the amount of the related tax effect, such amount to be allocated to the periods affected in accordance with the provisions of Account 190, Accumulated Deferred Income Taxes.

(7) When the utility chooses to use the optional privilege of deferring the tax on the gain attributable to the reacquisition of debt by reducing the depreciable basis of utility property for tax purposes, pursuant to Section 108 of the Internal Revenue Code (26 U.S.C. 108), the related tax effects shall be deferred as the income is recognized for accounting purposes, and the deferred amounts shall be amortized over the life of the associated property on a vintage year basis.

(i) Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, shall be debited, and Account 282, Accumulated Deferred Income Taxes—Other Property, shall be credited with an amount equal to the estimated income tax effect applicable to the portion of the income, attributable to reacquired debt, recognized for accounting purposes during the period.

(ii) Account 282 shall be debited and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, shall be credited with an amount equal to the estimated income tax effects, during the life of the property, attributable to the reduction in the depreciable basis for tax purposes.

(8) The tax effects relating to gain or loss shall be allocated as above to utility operations except in cases where a portion of the debt reacquired is directly applicable to nonutility operations.

(i) In that event, the related portion of the tax effects shall be allocated to nonutility operations.

(ii) Where it can be established that reacquired debt is generally applicable
to both utility and nonutility operations, the tax effects shall be allocated between utility and nonutility operations based on the ratio of net investment in utility plant to net investment in nonutility plant.

(9) Premium, discount, or expense on debt shall not be included as an element in the cost of construction or acquisition of property (tangible or intangible), except under the provisions of Account 432, Allowance for Borrowed Funds Used During Construction—Credit.

(10) Alternate method. Where a regulatory authority or a group of regulatory authorities having prime rate jurisdiction over the utility specifically disallows the rate principle of amortizing gains or losses on reacquisition of long-term debt without refunding, and does not apply the gain or loss to reduce interest charges in computing the allowed rate of return for rate purposes, the following alternate method may be used to account for gains or losses relating to reacquisition of long-term debt, with or without refunding:

(i) The difference between the amount paid upon reacquisition of any long-term debt and the face value, adjusted for unamortized discount, expenses or premium, as the case may be, applicable to the debt redeemed shall be recognized currently in income and recorded in Account 421, Miscellaneous Nonoperating Income, or Account 426.5, Other Deductions.

(ii) When this alternate method of accounting is used, the utility shall include a footnote to each financial statement, prepared for public use, explaining why this method is being used along with the treatment given for ratemaking purposes.

(11) Comprehensive interperiod income tax allocation. (1) Where there are timing differences between the periods in which transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income, the income tax effects of such transactions are to be recognized in the periods in which the differences between book accounting income and taxable income arise and in the periods in which the differences reverse using the deferred tax method.

(2) Comprehensive interperiod tax allocation should be followed whenever transactions enter into the determination of pretax accounting income for the period even though some transactions may affect the determination of taxes payable in a different period.

(3) Utilities are not required to utilize comprehensive interperiod income tax allocation until the deferred income taxes are included as an expense in the rate level by the regulatory authority having rate jurisdiction over the utility.

(4) Where comprehensive interperiod tax allocation accounting is not practiced the utility shall include as a note to each financial statement, prepared for public use, a footnote explanation setting forth the utility’s accounting policies with respect to interperiod tax allocation and describing the treatment for ratemaking purposes of the tax timing differences by regulatory authorities having rate jurisdiction.

(5) Should the utility be subject to more than one agency having rate jurisdiction, its accounts shall appropriately reflect the ratemaking treatment (deferral or flow through) of each jurisdiction.

(6) Once comprehensive interperiod tax allocation has been initiated either in whole or in part it shall be practiced on a consistent basis and shall not be changed or discontinued without prior RUS approval.

(7) Tax effects deferred currently will be recorded as deferred debits or deferred credits in Accounts 190, Accumulated Deferred Income Taxes; 281, Accumulated Deferred Income Taxes—Accelerated Amortization Property; 282, Accumulated Deferred Income Taxes—Other Property, and 283, Accumulated Deferred Taxes—Other, as appropriate.

(8) The resulting amounts recorded in these accounts shall be disposed of as prescribed in this system of accounts or as otherwise authorized by RUS.

(9) Criteria for classifying leases. (1) If, at its inception, a lease meets one or more of the following criteria, the lease shall be classified as a capital lease:

(i) The lease transfers ownership of the property to the lessee by the end of the lease term.
(ii) The lease contains a bargain purchase option.

(iii) The lease term is equal to 75 percent or more of the estimated economic life of the leased property. However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

(iv) The present value at the beginning of the lease term of the minimum lease payments, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, including any profit thereon, equals or exceed 90 percent of the excess of the fair value of the leased property to the lessor at the inception of the lease over any related investment tax credit retained by the lessor and expected to be realized by lessor.

(A) However, if the beginning of the lease term falls within the last 25 percent of the total estimated economic life of the leased property, including earlier years of use, this criterion shall not be used for purposes of classifying the lease.

(B) The lessee utility shall compute the present value of the minimum lease payments using its incremental borrowing rate, unless it is practicable for the utility to learn the implicit rate computed by the lessor, and the implicit rate computed by the lessor is less than the lessee's incremental borrowing rate. If both of those conditions are met, the lessee shall use the implicit rate.

(2) If, at any time, the lessee and lessor agree to change the provisions of the lease, other than by renewing the lease or extending its term, in a manner that would have resulted in a different classification of the lease under the criteria in paragraph (s)(1) of this section had the changed terms been in effect at the inception of the lease, the revised agreement shall be considered as a new agreement over its term, and the criteria in paragraph (s)(1) of this section shall be applied for purposes of the expiration of the existing lease term, such as the exercise of a lease renewal option other than those already included in the lease term, shall be considered as a new agreement and shall be classified according to the above provision. Changes in estimates (for example, changes in estimates of the economic life or of the residual value of the leased property) or changes in circumstances (for example, default by the lessee) shall not give rise to a new classification of a lease for accounting purposes.

(t) Accounting for leases. (1) All leases shall be classified as either capital or operating leases.

(2) The utility shall record a capital lease as an asset in Account 101.1, Property Under Capital Leases, and Account 120.6, Nuclear Fuel Under Capital Leases; as appropriate, and an obligation in Account 227, Obligations Under Capital Leases—Noncurrent, or Account 243, Obligations Under Capital Leases—Current, at an amount equal to the present value at the beginning of the lease term of minimum lease payments during the lease term, excluding that portion of the payments representing executory costs such as insurance, maintenance, and taxes to be paid by the lessor, together with any profit thereon. However, if the amount so determined exceeds the fair value of the leased property at the inception of the lease, the amount recorded as the asset and obligation shall be the fair value.

(3) Rental payments on all leases shall be charged to rent expense, fuel expense, construction work in progress, or other appropriate accounts as they become payable.

(4) For a capital lease, for each period during the lease term, the amounts recorded for the asset and obligation shall be reduced by an amount equal to the portion of each lease payment that would have been allocated to the reduction of the obligation, if the payment had been treated as a payment on an installment obligation (liability) and allocated between interest expense and a reduction of the obligation so as to produce a constant periodic rate of interest on the remaining balance.

airborne pollutants by various entities, including utilities. Utilities owning allowances, other than those acquired for speculative purposes, shall account for such allowances at cost in Account 158.1, Allowance Inventory, or Account 158.2, Allowances Withheld, as appropriate. Allowances acquired for speculative purposes and identified as such in contemporaneous records at the time of purchase shall be accounted for in Account 124, Other Investments.

(2) When purchased, allowances become eligible for use in different years, and the allocation of the purchase cost cannot be determined by fair value, the purchase cost allocated to allowances of each vintage shall be determined through use of a present-value based measurement. The interest rate used in the present-value measurement shall be the utility's incremental borrowing rate, in the month in which the allowances are acquired, for a loan with a term similar to the period that it will hold the allowances and in an amount equal to the purchase price.

(3) The underlying records supporting Account 158.1 and Account 158.2 shall be maintained in sufficient detail so as to provide the number of allowances and the related cost by vintage year.

(4) Issuances from inventory included in Account 158.1 and Account 158.2 shall be accounted for on a vintage basis using a monthly weighted-average method of cost determination. The cost of eligible allowances not used in the current year shall be transferred to the vintage for the immediately following year.

(5) Account 158.1 shall be credited and Account 509, Allowances, debited so that the cost of the allowances to be remitted for the year is charged to expense monthly based on each month's emissions. This may, in certain circumstances, require allocation of the cost of an allowance between months on a fractional basis.

(6) In any period in which actual emissions exceed the amount allowable based on eligible allowances owned, the utility shall estimate the cost to acquire the additional allowances needed and charge Account 158.1 with the estimated cost. This estimated cost of future allowance acquisitions shall be credited to Account 158.1 and charged to Account 509 in the same accounting period as the related charge to Account 158.1. Should the actual cost of these allowances differ from the estimated cost, the differences shall be recognized in the then-current period's inventory issuance cost.

(7) Any penalties assessed by the Environmental Protection Agency for the emission of excess pollutants shall be charged to Account 426.3, Penalties.

(8) Gains on dispositions of allowances, other than allowances held for speculative purposes, shall be accounted for as follows. First, if there is uncertainty as to the regulatory treatment, the gain shall be deferred in Account 254, Other Regulatory Liabilities, pending resolution of the uncertainty. Second, if there is certainty as to the existence of a regulatory liability, the gain will be credited to Account 254, with subsequent recognition in income when reductions in charges to customers occur or the liability is otherwise satisfied. Third, all other gains will be credited to Account 411.8, Gains from Disposition of Allowances. Losses on disposition of allowances, other than allowances held for speculative purposes, shall be accounted for as follows. Losses that qualify as regulatory assets shall be charged directly to Account 182.3, Other Regulatory Assets. All other losses shall be charged to Account 411.9, Losses from Disposition of Allowances. (See the definition of regulatory assets and liabilities.) Gains or losses on disposition of allowances held for speculative purposes shall be recognized in Account 421, Miscellaneous Nonoperating Income, or Account 426.5, Other Deductions, as appropriate.

(9) The costs and benefits of exchange-traded allowance futures contracts used to protect the utility from the risk of unfavorable price changes ("hedging transactions") shall be deferred in Account 186, Miscellaneous Deferred Debits, or Account 253, Other Deferred Credits, as appropriate. Such deferred amounts shall be included in Account 158.1, Allowance Inventory, in the month in which the related allowances are acquired, sold or otherwise disposed of. Where the costs or benefits of hedging transactions are not identifiable with specific allowances, the
amounts shall be included in Account 158.1 when the futures contract is closed. The costs and benefits of exchange-traded allowance futures contracts entered into as a speculating activity shall be charged or credited to Account 421, Miscellaneous Nonoperating Income, or Account 426.5, Other Deductions, as appropriate.

§ 1767.16 Electric plant instructions.

(a) Classification of electric plant at effective date of system of accounts. (1) The electric plant accounts provided herein are the same as those contained in the prior system of accounts except for inclusion of accounts for nuclear production plant and some changes in classification in the general equipment accounts. Except for these changes, the balances in the various plant accounts, as determined under the prior system of accounts, should be carried forward. Any remaining balance of plant which has not yet been classified, pursuant to the requirements of the prior system, shall be classified in accordance with the following instructions.

(2) The cost to the utility of its unclassified plant shall be ascertained by analysis of the utility’s records. Adjustments shall not be made to record in utility plant accounts amounts previously charged to operating expenses or to income deductions in accordance with the USoA in effect at the time or in accordance with the discretion of management as exercised under a USoA, or under accounting practices previously followed.

(3) The detailed electric plant accounts (301 to 399, inclusive) shall be stated on the basis of cost to the utility of plant constructed by it and the original cost, estimated if not known, of plant acquired as an operating unit or system. The difference between the original cost, as above, and the cost to the utility of electric plant after giving effect to any accumulated provision for depreciation or amortization shall be recorded in Account 114, Electric Plant Acquisition Adjustments. The original cost of electric plant shall be determined by analysis of the utility’s records or those of the predecessor or vendor companies with respect to electric plant previously acquired as operating units or systems and the difference between the original cost so determined, less accumulated provisions for depreciation and amortization and the cost to the utility with necessary adjustments for retirements from date of acquisition, shall be entered in Account 114, Electric Plant Acquisition Adjustments. Any difference between the cost of electric plant and its book cost, when not properly includible in other accounts, shall be recorded in Account 116, Other Electric Plant Adjustments.

(b) Electric plant to be recorded at cost.

(1) All amounts included in the accounts for electric plant acquired as an operating unit or system, except as otherwise provided in the texts of the intangible plant accounts, shall be stated at the cost incurred by the person who first devoted the property to utility service. All other electric plant shall be included in the accounts at the cost incurred by the utility except for property acquired by lease which qualifies as capital lease property under §1767.15 (s), Criteria for Classifying Leases, and is recorded in Account 101.1, Property Under Capital Lease, or Account 120.6, Nuclear Fuel Under Capital Leases. Where the term ‘cost’ is used in the detailed plant accounts, it shall have the meaning stated in this paragraph (b).

(2) When the consideration given for property is other than cash, the value of such consideration shall be determined on a cash basis (see, however, the definition of cost in §1767.10). In the entry recording such transition, the actual consideration shall be described with sufficient particularity to identify it. The utility shall be prepared to furnish RUS the particulars of its determination of the cash value of the consideration if other than cash.

(3) When property is purchased under a plan involving deferred payments, no charge shall be made to the electric plant accounts for interest, insurance, or other expenditures occasioned solely by such form of payment.

(4) The electric plant accounts shall not include the cost or other value of electric plant contributed to the company. Contributions in the form of money or its equivalent toward the construction of electric plant shall be credited to accounts charged with the
cost of such construction. Plant constructed from contributions of cash or its equivalent shall be shown as a reduction to gross plant constructed when assembling cost data in work orders for posting to plant ledgers of accounts. The accumulated gross costs of plant accumulated in the work order shall be recorded as a debit in the plant ledger of accounts along with the related amount of contributions concurrently recorded as a credit.

(c) Components of construction cost. The cost of construction properly includible in the electric plant accounts shall include, where applicable, the direct and overhead costs as listed and defined hereunder:

(1) Contract work includes amounts paid for work performed under contract by other companies, firms, or individuals, costs incident to the award of such contracts, and the inspection of such work.

(2) Labor includes the pay and expenses of employees of the utility engaged on construction work, and related workmen's compensation insurance, payroll taxes, and similar items of expense. It does not include the pay and expenses of employees which are distributed to construction through clearing accounts nor the pay and expenses included in other items hereunder.

(3) Materials and supplies includes the purchase price at the point of free delivery plus customs duties, excise taxes, the cost of inspection, loading and transportation, the related stores expenses, and the cost of fabricated materials from the utility's shop. In determining the cost of materials and supplies used for construction, proper allowance shall be made for unused materials and supplies, for materials recovered from temporary structures used in performing the work involved, and for discounts allowed and realized in the purchase of materials and supplies.

Note: The cost of individual items of equipment of small value (for example, $500 or less) or of short life, including small portable tools and implements, shall not be charged to utility plant accounts unless the correctness of the accounting therefor is verified by current inventories. The cost shall be charged to the appropriate operating expense or clearing accounts, according to the use of such items, or, if such items are consumed directly in construction work, the cost shall be included as part of the cost of the construction.

(4) Transportation includes the cost of transporting employees, materials and supplies, tools, purchased equipment, and other work equipment (when not under own power) to and from points of construction. It includes amounts paid to others as well as the cost of operating the utility's own transportation equipment. (See Item in paragraph (c)(5) of this section.)

(5) Special machine service includes the cost of labor (optional), materials and supplies, depreciation, and other expenses incurred in the maintenance, operation and use of special machines, such as steam shovels, pile drivers, derricks, ditchers, scrapers, material unloaders, and other labor saving machines; also expenditures for rental, maintenance and operation of machines of others. It does not include the cost of small tools and other individual items of small value or short life which are included in the cost of materials and supplies. (See Item in paragraph (c)(3) of this section.) When a particular construction job requires the use for an extended period of time of special machines, transportation or other equipment, the net book cost thereof, less the appraised or salvage value at time of release from the job, shall be included in the cost of construction.

(6) Shop service includes the proportion of the expense of the utility's shop department assignable to construction work except that the cost of fabricated materials from the utility's shop shall be included in "materials and supplies."

(7) Protection includes the cost of protecting the utility's property from fire or other casualties and the cost of preventing damages to others, or to the property of others, including payments for discovery or extinguishment of fires, cost of apprehending and prosecuting incendiaries, witness fees in relation thereto, amounts paid to municipalities and others for fire protection, and other analogous items of expenditures in connection with construction work.

(8) Injuries and damages includes expenditures or losses in connection with
construction work on account of injuries to persons and damages to the property of others; also the cost of investigation of and defense against actions for such injuries and damages. Insurance recovered or recoverable on account of compensation paid for injuries to persons incident to construction shall be credited to the account or accounts to which such compensation is charged. Insurance recovered or recoverable on account of property damages incident to construction shall be credited to the account or accounts charged with the cost of the damages.

(9) Privileges and permits includes payments for and expenses incurred in securing temporary privileges, permits or rights in connection with construction work, such as for the use of private or public property, streets, or highways, but it does not include rents, or amounts chargeable as franchises and consents for which see Account 302, Franchises and Consents.

(10) Rents includes amounts paid for the use of construction quarters and office space occupied by construction forces and amounts properly includible in construction costs for such facilities jointly used.

(11) Engineers and supervision includes the portion of the pay and expenses of engineers, surveyors, draftsmen, inspectors, superintendents and their assistants applicable to construction work.

(12) General administration capitalized includes the portion of the pay and expenses of the general officers and administrative and general expenses applicable to construction work.

(13) Engineering services includes amounts paid to other companies, firms, or individuals engaged by the utility to plan, design, prepare estimates, supervise, inspect, or give general advice and assistance in connection with construction work.

(14) Insurance includes premiums paid or amounts provided or reserved as self-insurance for the protection against loss and damages in connection with construction, by fire or other casualty, injuries or deaths of persons other than employees, damages to property of others, defalcation of employees and agents, and the non-performance of contractual obligations of others. It does not include workmen's compensation or similar insurance on employees included as "labor" in Item in paragraph (c)(2) of this section.

(15) Law expenditures includes the general law expenditures incurred in connection with construction and the court and legal costs directly related thereto, other than law expenses included in "Protection," Item in paragraph (c)(7) of this section, and Injuries and damages, Item in paragraph (c)(8) of this section.

(16) Taxes includes taxes on physical property (including land) during the period of construction and other taxes properly includible in construction costs before the facilities become available for service.

(17) Allowance for funds used during construction includes the net cost for the period of construction of borrowed funds used for construction purposes and a reasonable rate on other funds when so used, not to exceed, without prior approval of RUS, allowances computed in accordance with the formula prescribed in Item in paragraph (c)(17)(i) of this section. No allowance for funds used during construction charges shall be included in these accounts upon expenditures for construction projects which have been abandoned.

(i) The formula and elements for the computation of the allowance for funds used during construction shall be:

\[
A_c = \left[ 1 - \frac{S}{W} \right] \left[ P \left( \frac{D}{D+P+C} \right) + C \left( \frac{1}{D+P+C} \right) \right]
\]

\[
A_1 = S \left( \frac{D}{W} + d \left( \frac{D}{D+P+C} \right) \right) \left[ 1 - \frac{S}{W} \right]
\]
§ 1767.16

7 CFR Ch. XVII (1-1-98 Edition)

Where:

\( A_i = \) Gross allowance for borrowed funds used during construction rate.
\( A_c = \) Allowance for other funds used during construction rate.
\( S = \) Average short-term debt.
\( s = \) Short-term debt interest rate.
\( D = \) Long-term debt.
\( d = \) Long-term debt interest rate.
\( P = \) Preferred stock.
\( p = \) Preferred stock cost rate.
\( C = \) Patronage capital assigned.
\( c = \) Entity's incremental borrowing rate.
\( W = \) Average balance in construction work in progress plus nuclear fuel in process of refinement, conversion, enrichment, and fabrication.

(ii) The rate shall be determined annually.

(A) The balance for long-term debt, preferred stock, and patronage capital assigned shall be the actual book balances as of the end of the prior year.

(B) The cost rate for long-term debt and preferred stock shall be the weighted average cost.

(C) The cost rate for patronage capital assigned shall be the entity’s incremental borrowing rate.

(D) The short-term debt balances and related cost and the average balance for construction work in progress plus nuclear fuel in process of refinement, conversion, enrichment, and fabrication shall be estimated for the current year with appropriate adjustments as actual data becomes available.

NOTE: When only a portion of a plant or project is placed in operation or is completed and ready for service but the construction work as a whole is incomplete, that part of the cost of the property placed in operation or ready for service shall be treated as “Electric Plant in Service,” and an allowance for funds used during construction thereon as a charge to construction shall cease. Allowance for funds used during construction on that part of the cost of the plant which is incomplete may continue to be charged to construction until such time as it is placed in operation or is ready for service, except as limited in item in paragraph (c)(17) of this section.

(18) Earnings and expenses during construction. The earnings and expenses during construction shall constitute a component of construction costs.

(i) The earnings shall include revenues received or earned for power produced by generating plants during the construction period and sold or used by the utility.

(A) Where such power is sold to an independent purchaser before intermingling with power generated by other plants, the credit shall consist of the selling price of the energy.

(B) Where the power generated by a plant under construction is delivered to the utility’s electric system for distribution and sale, or is delivered to an associated company, or is delivered to and used by the utility for purposes other than distribution and sale (for manufacturing or industrial use, for example), the credit shall be the fair value of the energy so delivered.

(C) Revenue shall also include rentals for lands, buildings, and other property, and miscellaneous receipts not properly includible in other accounts.

(ii) Expenses shall consist of the cost of operating the power plant, and other costs incident to the production and delivery of the power for which construction is credited under paragraph (c)(18)(i) of this section, including the cost of repairs and other expenses of operating and maintaining lands, buildings, and other property, and other miscellaneous and like expenses not properly includible in other accounts.

(19) Training costs. (i) When it is necessary that employees be trained to operate or maintain plant facilities that are being constructed and such facilities are not conventional in nature, or are new to the company’s operations, these costs may be capitalized as a component of construction cost.

(ii) Once plant is placed in service, the capitalization of training costs shall cease and subsequent training costs shall be expensed. (See § 1767.17 (d).)

(20) Studies. (i) Studies include the costs of studies such as nuclear operational, safety, or seismic studies mandated by regulatory bodies relative to plant under construction.

(ii) Studies relative to facilities in service shall be charged to Account 183, Preliminary Survey and Investigation Charges.

(d) Overhead construction costs. (1) All overhead construction costs, such as engineering, supervision, general office salaries and expenses, construction engineering and supervision performed by
others than the accounting utility, law expenses, insurance, injuries and damages, relief and pensions, taxes and interest, shall be charged to particular jobs or units on the basis of the amounts of such overheads reasonably applicable thereto, to the end that each job or unit shall bear its equitable proportion of such costs and that the entire cost of the unit, both direct and overhead, shall be deducted from the plant accounts as the time the property is retired.

(2) As far as practicable, the determination of payroll charges includible in construction overheads shall be based on time card distributions thereof.

(i) Where this procedure is impractical, special studies shall be made periodically of the time of supervisory employees devoted to construction activities to the end that only such overhead costs as have a definite relation to construction shall be capitalized.

(ii) The addition to direct construction cost of arbitrary percentages or amounts to cover assumed overhead costs is not permitted.

(3) The records supporting the entries for overhead constructions costs shall be so kept as to show:

(i) The total amount of each overhead for each year;

(ii) The nature and amount of each overhead expenditure charged to each construction work order and to each electric plant account; and

(iii) The bases of distribution of such costs.

(e) Electric plant purchased or sold. (1) When electric plant constituting an operating unit or system is acquired by purchase, merger, consolidation, liquidation, or otherwise, after the effective date of this system of accounts, the costs of acquisition, including expenses incidental thereto properly includible in electric plant, shall be charged to Account 102, Electric Plant Purchased or Sold.

(2) The accounting for the purchase shall then be completed as follows:

(i) The original cost of plant, estimated if not known, shall be credited to Account 102, Electric Plant Purchased or Sold, and concurrently charged to the appropriate electric plant in service accounts and to Account 104, Electric Plant Leased to Others; Account 105, Electric Plant Held for Future Use; and Account 107, Construction Work in Progress—Electric, as appropriate.

(ii) The depreciation and amortization applicable to the original cost of the properties purchased shall be charged to Account 102, Electric Plant Purchased or Sold, and concurrently credited to the appropriate account for accumulated provision for depreciation or amortization.

(iii) The cost to the utility of any property includible in Account 121, Nonutility Property, shall be transferred thereto.

(iv) The amount remaining in Account 102, Electric Plant Purchased or Sold, shall then be closed to Account 114, Electric Plant Acquisition Adjustments.

(3) If property acquired in the purchase of an operating unit or system is in such physical condition when acquired that it is necessary to substantially rehabilitate it in order to bring the property up to the standards of the utility, the cost of such work, except replacements, shall be accounted for as a part of the purchase price of the property.

(4) When any property acquired as an operating unit or system includes duplicate or other plant which will be retired by the accounting utility in the reconstruction of the acquired property or its consolidation with previously owned property, the proposed accounting for such property shall be presented to RUS.

(5) In connection with the acquisition of electric plant constituting an operating unit or system, the utility shall procure, if possible, all existing records relating to the property acquired or certified copies thereof, and shall preserve such records in conformity with regulations or practices governing the preservation of records of its own construction.

(6) When electric plant constituting an operating unit or system is sold, conveyed, or transferred to another by sale, merger, consolidation, or otherwise, the book cost of the property sold or transferred to another shall be credited to the appropriate utility plant accounts, including amounts carried in
Account 114, Electric Plant Acquisition Adjustments, and the amounts (estimated if not known) carried with respect thereto in the accounts for accumulated provision for depreciation and amortization and in Account 252, Customer Advances for Construction, shall be charged to such accounts and contra entries made to Account 102, Electric Plant Purchased or Sold. Unless otherwise ordered by RUS, the difference, if any, between:

(i) The net amount of debits and credits, and

(ii) The consideration received for the property (less commissions and other expenses of making the sale) shall be included in Account 421.1, Gain on Disposition of Property, or Account 421.2, Loss on Disposition of Property. (See Account 102, Electric Plant Purchased or Sold.)

NOTE: In cases where existing utilities merge or consolidate because of financial or operating reasons or statutory requirements rather than as a means of transferring title of purchased properties to a new owner, the accounts of the constituent utilities, with the approval of RUS, may be combined. In the event original cost has not been determined, the resulting utility shall proceed to determine such cost as outlined herein.

(f) Expenditures on leased property. (1) The cost of substantial initial improvements (including repairs, rearrangements, additions, and betterments) made in the course of preparing for utility service property leased for a period of more than one year, and the cost of subsequent substantial additions, replacements, or betterments to such property, shall be charged to the electric plant account appropriate for the class of property leased.

(i) If the service life of the improvements is terminable by action of the lease, the cost, less net salvage, of the improvements shall be spread over the life of the lease by charges to Account 404, Amortization of Limited-Term Electric Plant.

(ii) If the service life is not terminated by action of the lease but by depreciation proper, the cost of the improvements, less net salvage, shall be accounted for as depreciable plant. The provisions of (1) are applicable to property leased under either capital leases or operating leases.

(2) If improvements made to property leased for a period of more than one year are of relatively minor cost, or if the lease is for a period of not more than one year, the cost of the improvements shall be charged to the account in which the rent is included, either directly or by amortization thereof.

(g) Land and land rights. (1) The accounts for land and land rights shall include the cost of land owned in fee by the utility and rights, interests, and privileges held by the utility in land owned by others, such as leaseholds, easements, water and water power rights, diversion rights, submersion rights, rights-of-way, and other like interests in land.

(i) Do not include in the accounts for land and land rights and rights-of-way costs incurred in connection with first clearing and grading of land and rights-of-way and the damage costs associated with the construction and installation of plant.

(ii) Such costs shall be included in the appropriate plant accounts directly benefited.

(2) Where special assessments for public improvements provide for deferred payments, the full amount of the assessments shall be charged to the appropriate land account and the unpaid balance shall be carried in an appropriate liability account.

(i) Interest on unpaid balances shall be charged to the appropriate interest account.

(ii) If any part of the cost of public improvements is included in the general tax levy, the amount thereof shall be charged to the appropriate tax account.

(3) The net profit from the sale of timber, cord wood, sand, gravel, other resources or other property acquired with the rights-of-way or other lands shall be credited to the appropriate plant accounts to which related. Where land is held for a considerable period of time and timber and other natural resources on the land at the time of purchase increase in value, the net profit (after giving effect to the cost of the
Rural Utilities Service, USDA § 1767.16

natural resources) from the sale of timber or its products or other natural resources shall be credited to the appropriate utility operating income account when such land has been recorded in Account 105, Electric Plant Held for Future Use, or classified as plant in service, otherwise to Account 421, Miscellaneous Nonoperating Income.

(4) Separate entries shall be made for the acquisition, transfer, or retirement of each parcel of land, and each land right (except rights-of-way for distribution lines), or water right, having a life of more than one year.

(i) A record shall be maintained showing the nature of ownership, full legal description, area, map reference, purpose for which used, city, county, and tax district on which situated, from whom purchased or to whom sold, payment given or received, other costs, contract date and number, date of recording of deed, and book and page of record.

(ii) Entries transferring or retiring land or land rights shall refer to the original entry recording its acquisition.

(5) Any difference between the amount received from the sale of land or land rights, less agents' commissions and other costs incident to the sale, and the book cost of such land or rights, shall be included in Account 411.6, Gains from Disposition of Utility Plant, or 411.7, Losses from Disposition of Utility Plant, when such property has been recorded in Account 105, Electric Plant Held for Future Use, or Account 121, Nonutility Property, as appropriate.

(6) The cost of buildings and other improvements (other than public improvements) shall not be included in the land accounts. If, at the time of acquisition of an interest in land, such interest extends to buildings or other improvements (other than public improvements) which are then devoted to utility operations, the land and improvements shall be separately appraised and a cost allocated to land and buildings or improvements on the basis of the appraisals. If the improvements are removed or wrecked without being used in operations, the cost of removing or wrecking shall be charged and the salvage credited to the account in which the cost of land is recorded.

(7) When the purchase of land for electric operations requires the purchase of more land than needed for such purposes, the charge to the specific land account shall be based upon the cost of the land purchased, less the fair market value of that portion of the land which is not to be used in utility operations. The portion of the cost measured by the fair market value of the land not to be used shall be included in Account 105, Electric Plant Held for Future Use, or Account 121, Nonutility Property, as appropriate.

(8) Provisions shall be made for amortizing amounts carried in the accounts for limited-term interest in land so as to apportion equitably the cost of each interest over the life thereof. (See Account 111, Accumulated Provision for Amortization of Electric Utility Plant, and Account 404, Amortization of Limited-Term Electric Plant.)

(9) The items of cost to be included in the accounts for land and land rights are as follows:

(i) Bulkheads, buried, not requiring maintenance or replacement;

(ii) First cost of acquisition including mortgages and other liens assumed (but not subsequent interest thereon);

(iii) Condemnation proceedings, including court and counsel costs;

(iv) Consents and abutting damages;

(v) Conveyancers' and notaries' fees;

(vi) Fees, commissions, and salaries to brokers, agents, and other in connection with the acquisition of the land or land rights;

(vii) Leases, cost of voiding upon purchase to secure possession of land;

(viii) Removing, relocating, or reconstructing property of others, such as buildings, highways, railroads, bridges, cemeteries, churches, telephone and power lines, etc., in order to acquire quiet possession;

(ix) Retaining walls unless identified with structures;
(x) Special assessments levied by public authorities for public improvements on the basis of benefits for new roads, new bridges, new sewers, new curbing, new pavements, and other public improvements, but not taxes levied to provide for the maintenance of such improvements;

(xii) Surveys in connection with the acquisition, but not amounts paid for topographical surveys and maps where such costs are attributable to structures or plant equipment erected or to be erected or installed on such land;

(xii) Taxes assumed, accrued to date of transfer of title;

(xiii) Title, examining, clearing, insuring, and registering in connection with the acquisition and defending against claims relating to the period prior to the acquisition;

(xiv) Appraisals prior to closing title;

(xv) Cost of dealing with distributees or legatees residing outside of the state or county, such as recording power of attorney, recording will or exemplification of will, recording satisfaction of state tax;

(xvi) Filing satisfaction of mortgage;

(xvii) Documentary stamps;

(xviii) Photographs of property at acquisition;

(xix) Fees and expenses incurred in the acquisition of water rights and grants;

(xx) Cost of fill to extend bulkhead line over land under water, where riparian rights are held, which is not occasioned by the erection of a structure;

(xx) Sidewalks and curbs constructed by the utility on public property; and

(xxii) Labor and expenses in connection with securing rights of way, where performed by company employees and company agents.

(h) Structures and improvements. (1) The accounts for structures and improvements shall include the cost of all buildings and facilities to house, support, or safeguard property or persons, including all fixtures permanently attached to and made a part of buildings and which cannot be removed therefrom without cutting into the walls, ceilings, or floors, or without in some way impairing the buildings, and improvements of a permanent character on or to land.

(2) Also include those costs incurred in connection with the first clearing and grading of land and rights-of-way and the damage costs associated with construction and installation of plant.

(3) The cost of specially provided foundations not intended to outlast the machinery or apparatus for which provided, and the cost of angle irons, and castings installed at the base of an item of equipment, shall be charged to the same account as the cost of the machinery, apparatus, or equipment.

(4) Minor buildings and structures, such as valve towers, patrolmen’s towers, telephone stations, fish and wildlife, and recreation facilities which are used directly in connection with or form a part of a reservoir, dam or waterway shall be considered a part of the facility in connection with which constructed or operated and the cost thereof accounted for accordingly.

(5) Where furnaces and boilers are used primarily for furnishing steam for some particular department and only incidentally for furnishing steam for heating a building and operating the equipment wherein, the entire cost of such furnaces and boilers shall be charged to the appropriate plant account, and no part to the building account.

(6) Where the structure of a dam forms also the foundation of the power plant building, such foundation shall be considered a part of the dam.

(7) The cost of disposing of materials excavated in connection with construction of structures shall be considered as a part of the cost of such work, except when such material is used for filling, the cost of loading, hauling, and dumping shall be equitably apportioned between the work in connection with which the removal occurs and the work in connection with which the material is used; and when such material is sold, the net amount realized from such sales shall be credited to the work in connection with which the removal occurs. If the amount realized from the sale of excavated materials exceeds the removal costs and the costs in connection with the sale, the excess shall be credited to the land account in which the site is carried.

(8) Lighting or other fixtures temporarily attached to building for purposes
§ 1767.16

of display or demonstration shall not be included in the cost of the building but in the appropriate equipment account.

(9) The items of cost to be included in the accounts for structures and improvements are as follows:

(i) Architects' plans and specifications including supervision;

(ii) Ash pits (when located within the building);

(iii) Athletic field structures and improvements;

(iv) Boilers, furnaces, piping, wiring, fixtures, and machinery for heating, lighting, signaling, ventilating, and air conditioning systems, plumbing, vacuum cleaning systems, in elevator and smoke pipe, flues, etc;

(v) Bulkheads, including dredging, riprap fill, pilings, deckings, concrete, fenders, etc., when exposed and subject to maintenance and replacement;

(vi) Chimneys;

(vii) Coal bins and bunkers;

(viii) Commissions and fees to brokers, agents, architects and others;

(ix) Conduit (not to be removed) with its contents;

(x) Damages to abutting property during construction;

(xi) Docks;

(xii) Door checks and stops;

(xiii) Drainage and sewerage systems;

(xiv) Elevators, cranes, hoists, etc., and the machinery for operating them;

(xv) Excavation, including shoring, bracing, bridging, fill and disposal of excess excavated material, cofferdams around foundation, pumping water from cofferdams during construction and test borings;

(xvi) Fences and fence curbs (not including protective fences isolating items of equipment, which shall be charged to the appropriate equipment accounts);

(xvii) Fire protection systems when forming a part of a structure;

(xviii) Flagpole;

(xix) Floor covering (permanently attached);

(xx) Foundations and piers for machinery, constructed as a permanent part of a building or other item listed herein;

(XX) Grading and clearing when directly occasioned by the building of a structure;

(XXI) Intrasis communication system, poles, pole fixtures, wires, and cable;

(XXII) Landscaping, lawns, shrubbery, etc.;

(XXIII) Leases, voiding upon purchase to secure possession of structures;

(XXIV) Leased property, expenditures on;

(XXV) Lighting fixtures and outside lighting system;

(XXVI) Mailchutes when part of a building;

(XXVII) Marquee, permanently attached to the building;

(XXVIII) Painting, first cost;

(XXIX) Permanent paving, concrete, brick, flagstone, asphalt, etc., within the property lines;

(XXX) Partitions, including movable;

(XXXI) Permits and privileges;

(XXXII) Platforms, railings and gratings when constructed as a part of a structure;

(XXXIII) Power boards for services to a building;

(XXXIV) Refrigerating systems for general use;

(XXXV) Scaffolding, retaining walls except when identified with land;

(XXXVI) Roadways, railroads, bridges, and trestles intrasite except railroads provided for in equipment accounts;

(XXXVII) Roofs;

(XXXVIII) Scales, connected to and forming a part of a structure;

(XXXIX) Screens;

(XL) Sewer systems, for general use;

(XLI) Sidewalks, culverts, curbs and streets constructed by the utility on its property;

(XLII) Sprinkling systems;

(XLIII) Sump pumps and pits;

(XLIV) Stacks—brick, steel, or concrete, when set on foundation forming part of general foundation and steelwork of a building;

(XLV) Steel inspection during construction;

(XLVI) Storage facilities constituting a part of a building;

(XLVII) Storm doors and windows;

(XLVIII) Subways, areaways, and tunnels, directly connected to and forming part of a structure;

(L) Tanks, constructed as part of a building or as a distinct structural unit;
(ii) Temporary heating during construction (net cost);
(iii) Temporary water connection during construction (net cost);
(iii) Temporary shanties and other facilities used during construction (net cost);
(iv) Topographical maps;
(v) Tunnels, intake and discharge, when constructed as part of a structure, including sluice gates, and those constructed to house mains;
(vi) Vaults constructed as part of a building;
(vii) Watchmen's sheds and clock systems (net cost when used during construction only);
(viii) Water basins or reservoirs;
(ix) Water front improvements;
(x) Water meters and supply system for a building or for general company purposes;
(xi) Water supply piping, hydrants, and wells;
(xii) Wharves;
(xiii) Window shades and ventilators;
(xiv) Yard drainage system;
(xv) Yard lighting system; and
(xvi) Yard surfacing, gravel, concrete, or oil (First cost only).

NOTE: Structures and improvements accounts shall be credited with the cost of coal bunkers, stacks, foundations, subways, and tunnels, the use of which has terminated with the removal of the equipment with which they are associated even though they have not been physically removed.

(i) Equipment. (1) The cost of equipment chargeable to the electric plant accounts, unless otherwise indicated in the text of an equipment account, includes the net purchase price thereof, sales taxes, investigation and inspection expenses necessary to such purchase, expenses of transportation when borne by the utility, labor employed, materials, and supplies consumed, and expenses incurred by the utility in unloading and placing the equipment in readiness to operate.

(2) Also include those costs incurred in connection with the first clearing and grading of land and rights-of-way and the damage costs associated with construction and installation of plant.

(3) Exclude from equipment accounts hand and other portable tools, which are likely to be lost or stolen or which have relatively small value (for example, $500 or less) or short life, unless the correctness of the accounting therefor as electric plant is verified by current inventories.

(ii) Special tools acquired and included in the purchase price of equipment shall be included in the appropriate plant accounts.

(iii) Portable drills and similar tool equipment when used in connection with the operation and maintenance of a particular plan or department, such as production, transmission, or distribution or in "stores", shall be charged to the plant accounts appropriate for their use.

(iv) The equipment accounts shall include angle irons and similar items which are installed at the base of an item of equipment, but piers and foundations which are designed to be as permanent as the buildings which house the equipment, or which are constructed as a part of the building and which cannot be removed without cutting into the walls, ceilings, or floors or, without in some way impairing the building, shall be included in the building accounts.

(v) The equipment accounts shall include the necessary costs of testing or running a plant or parts thereof during an experimental or test period prior to such plant becoming ready for or placed in service.

(i) The utility shall furnish RUS with full particulars of and justification for any test or experimental run extending beyond a period of 120 days for nuclear plant, and a period of 90 days for all other plant.

(ii) Such particulars shall include a detailed operational and downtime log showing days of production, gross kilowatts generated by hourly increments, types, and periods of outages by hours with explanation thereof, beginning with the first date the equipment was either tested or synchronized on the line to the end of the test period.

(vi) The cost of efficiency or other tests made subsequent to the date equipment becomes available for service shall be charged to the appropriate expense accounts, except that tests to determine whether equipment meets the specifications and requirements as
§ 1767.16

Rural Utilities Service, USDA

(j) Additions and retirements of electric plant.

(1) For the purpose of avoiding undue refinement in accounting for additions to and retirements and replacements of electric plant, all property shall be considered as consisting of retirement units and minor items of property.

(2) The addition and retirement of retirement units shall be accounted for as follows:

(i) When a retirement unit is added to electric plant, the cost thereof shall be added to the appropriate electric plant account, except that when units are acquired in the acquisition of any electric plant constituting an operating system, they shall be accounted for as provided in paragraph (e) of this section.

(ii) When a retirement unit is retired from electric plant, with or without replacement, the book cost thereof shall be credited to the electric plant account in which it is included; and, in the event the minor item is a part of depreciable plant, the account for accumulated provision for depreciation shall be charged with the book cost and cost of removal and credited with the salvage. If, however, the book cost of the minor item retired and not replaced has been or will be accounted for by its inclusion in the retirement unit of which it is a part when such unit is retired, no separate credit to the property account is required when such minor item is retired.

(iii) When a minor item of depreciable property is replaced independently of the retirement unit of which it is a part, the cost of replacement shall be charged to the maintenance account appropriate for the item, except that if the replacement effects a substantial betterment (the primary aim of which is to make the property affected more useful, more efficient, of greater durability, or of greater capacity), the excess cost of the replacement over the estimated cost at current prices of replacing without betterment shall be charged to the appropriate electric plant accounts.

(4) The book cost of electric plant retired shall be the amount at which such property is included in the electric plant accounts, including all components of construction costs. The book cost shall be determined from the utility’s records and if this cannot be done, it shall be estimated. When it is impracticable to determine the book cost of each unit, due to the relatively large number or small cost thereof, an appropriate average book cost of the units with due allowance for any differences in size and character, shall be used as the book cost of the units retired.

(5) The book cost of land retired shall be credited to the appropriate land accounts. If the land is sold, the difference between the book cost (less any accumulated provision for depreciation or amortization therefore which has been authorized and provided) and the sale price of the land (less commissions and other expenses of making the sale) shall be recorded in Account 411.6, Gains from Disposition of Utility Plant, or Account 411.7, Losses from Disposition of Utility Plant, when the
§ 1767.16

7 CFR Ch. XVII (1-1-98 Edition)

property has been recorded in Account 105, Electric Plant Held for Future Use, otherwise to Accounts 421.1, Gain on Disposition of Property, or 421.2, Loss on Disposition of Property, as appropriate. If the land is not used in utility service but is retained by the utility, the book cost shall be charged to Account 105, Electric Plant Held for Future Use, or Account 121, Nonutility Property, as appropriate.

(6) The book cost less net salvage of depreciable electric plant retired shall be charged in its entirety to Account 108, Accumulated Provision for Depreciation of Electric Utility Plant in Service. Any amounts which, by approval or order of RUS, are charged to Account 182.1, Extraordinary Property Losses, shall be credited to Account 108.

(7) The accounting for the retirement of amounts included in Account 302, Franchises and Consents, and Account 303, Miscellaneous Intangible Plant, and the items of limited-term interest in land included in the accounts for land and land rights, shall be as provided for in the text of Account 111, Accumulated Provision for Amortization of Electric Utility Plant in Service; Account 404, Amortization of Limited-Term Electric Plant; and Account 405, Amortization of Other Electric Plant.

(k) Work order and property record system required. (1) Each utility shall record all construction and retirements of electric plant by means of work orders or job orders. Separate work orders may be opened for additions to and retirements of electric plant or the retirements may be included with the construction work order, provided, however, that all items relating to the retirements shall be kept separate from those relating to construction and provided, further, that any maintenance costs involved in the work shall likewise be segregated.

(2) Each utility shall keep its work order system so as to show the nature of each addition to or retirement of electric plant, the total cost thereof, the source or sources of costs, and the electric plant account or accounts to which charged or credited. Work orders covering jobs of short duration may be cleared monthly.

(3) Each utility shall maintain records in which, for each plant account, the amounts of the annual additions and retirements are classified so as to show the number and cost of the various record units or retirement units.

(l) Transfers of property. When property is transferred from one electric plant account to another, from one utility department to another, such as from electric to gas, from one operating division or area to another, to or from Account 101, Electric Plant in Service; Account 104, Electric Plant Leased to Others; Account 105, Electric Plant Held for Future Use, and Account 121, Nonutility Property, the transfer shall be recorded by transferring the original cost thereof from the one account, department, or location to the other. Any related amounts carried in the accounts for accumulated provision for depreciation or amortization shall be transferred in accordance with the segregation of such accounts.

(m) Common utility plant. (1) If the utility is engaged in more than one utility service, such as electric, gas, and water, and any of its utility plant is used in common for several utility services or for other purposes to such an extent and in such manner that it is impracticable to segregate it by utility services currently in the accounts, such property, with the approval of RUS, may be designated and classified as “common utility plant.”

(2) The book amount of utility plant designated as common plant shall be included in Account 118, Other Utility Plant, and if applicable in part to the electric department, shall be segregated and accounted for in sub-accounts as electric plant is accounted for in Accounts 101 to 107, inclusive, and electric plant adjustments in Account 116, Other Electric Plant Adjustments; any amounts classifiable as common plant acquisition adjustments or common plant adjustments shall be subject to disposition as provided in Paragraphs C and B of Accounts 114 and 116, respectively, for amounts classified in those accounts. The original cost of common utility plant in service shall be classified according to the detailed utility plant accounts appropriate for the property.
Rural Utilities Service, USDA § 1767.17

(3) The utility shall be prepared to show, at any time, and to report to RUS annually, or more frequently, if required, and by utility plant accounts (301 to 399) the book cost of common utility plant, the allocation of such cost to the respective departments using the common utility plant, and the basis of the allocation.

(4) The accumulated provision for depreciation and amortization of the utility shall be segregated so as to show the amount applicable to the property classified as common utility plant.

(5) The expenses of operation, maintenance, rents, depreciation and amortization of common utility plant shall be recorded in the accounts prescribed herein, but designated as common expenses, and the allocation of such expenses to the departments using the common utility plant shall be supported in such manner as to reflect readily the basis of allocation used.

(n) Transmission and distribution plant. For the purpose of this system of accounts:

(1) Transmission system is all land, conversion structures, and equipment employed at a primary source of supply (i.e. generating station, or point of receipt in the case of purchased power) to change the voltage or frequency of electricity for the purpose of its more efficient or convenient transmission; all land, structures, lines, switching and conversion stations, high tension apparatus, and their control and protective equipment between a generating or receiving point and the entrance to a distribution center or wholesale point; and all lines and equipment whose primary purpose is to augment, integrate or tie together the sources of power supply.

(2) Distribution system is all land, structures, conversion equipment, lines, line transformers, and other facilities employed between the primary source of supply (i.e. generating station, or point of receipt in the case of purchased power) and of delivery to customers, which are not inculcable in transmission system, as defined in Item in paragraph (n)(1) of this section, whether or not such land, structures, and facilities are operated as part of a transmission system or as part of a distribution system.

NOTE: Stations which change electricity from transmission to distribution voltage shall be classified as distribution stations.

(3) Where poles or towers support both transmission and distribution conductors, the poles, towers, anchors, guys, and rights-of-way shall be classified as transmission system. The conductors, cross-arms, braces, grounds, tiewire, and insulators shall be classified as transmission or distribution facilities, according to the purpose for which used.

(4) Where underground conduit contains both transmission and distribution conductors, the underground conduit and right-of-way shall be classified as distribution system. The conductors shall be classified as transmission or distribution facilities according to the purpose for which used.

(5) Land (other than rights-of-way) and structures used jointly for transmission and distribution purposes shall be classified as transmission or distribution according to the major use thereof.

(o) Hydraulic production plant. For purpose of this system of accounts hydraulic production plant is all land and land rights, structures and improvements used in connection with hydraulic power generation, reservoirs, dams and waterways, water wheels, turbines, generators, accessory electric equipment, roads, railroads, and bridges and structures and improvements used in connection with fish and wildlife, and recreation.

(p) Nuclear fuel records required. Each utility shall keep all the necessary records to support the entries to the various nuclear fuel plant accounts classified under “Assets and Other Debts,” Utility Plant Accounts 120.1 through 120.5, inclusive; Account 518, Nuclear Fuel Expense; and Account 157, Nuclear Materials Held for Sale. These records shall be so kept as to readily furnish the basis of the computation of the net nuclear fuel costs.

§ 1767.17 Operating expense instructions.

(a) Supervision and engineering. The supervision and engineering includible in the operating expense accounts shall consist of the salary, employee pensions and benefits, social security and
§ 1767.17

other payroll taxes, injuries and damages, and other expenses of superintendents, engineers, clerks, other employees, and consultants engaged in supervising and directing the operation and maintenance of each utility function. Whenever allocations are necessary in order to arrive at the amount to be included in any account, the method and basis of allocation shall be reflected by underlying records.

(1) Labor items:
   (i) Special tests to determine efficiency of equipment operation;
   (ii) Preparing or reviewing budgets, estimates, and drawings relating to operation or maintenance for departmental approval;
   (iii) Preparing instructions for operations and maintenance activities;
   (iv) Reviewing and analyzing operating results;
   (v) Establishing organizational setup of departments and executing changes therein;
   (vi) Formulating and reviewing routines of departments and executing changes therein;
   (vii) General training and instruction of employees by supervisors whose pay is chargeable hereto. Specific instructions and training in a particular type of work is chargeable to the appropriate functional account (See paragraph (c)(19) of this section); and
   (viii) Secretarial work for supervisory personnel, but not general clerical and stenographic work chargeable to other accounts.

(2) Expense items:
   (i) Employee pensions and benefits;
   (ii) Social security and other payroll taxes;
   (iii) Injuries and damages;
   (iv) Consultants’ fees and expenses; and
   (v) Meals, traveling, and incidental expenses.

(b) Maintenance. (1) The cost of maintenance chargeable to the various operating expense and clearing accounts includes labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials, overheads, and other expenses incurred in maintenance work. A list of work operations applicable generally to utility plant is included in this paragraph (b). Other work operations applicable to specific classes of plant are listed in functional maintenance expense accounts.

(2) Materials recovered in connection with the maintenance of property shall be credited to the same account to which the maintenance cost was charged.

(3) If the book cost of any property is carried in Account 102, Electric Plant Purchased or Sold, the cost of maintaining such property shall be charged to the accounts for maintenance of property of the same class and use, the book cost of which is carried in other electric plant in service accounts. Maintenance of property leased from others shall be treated as provided in paragraph (c) of this section.

(4) Items:
   (i) Direct field supervision of maintenance;
   (ii) Inspecting, testing, and reporting on condition of plant specifically to determine the need for repairs, replacements, rearrangements, and changes and inspecting and testing the adequacy of repairs which have been made; (iii) Work performed specifically for the purpose of preventing failure, restoring serviceability or maintaining life of plant;
   (iv) Rearranging and changing the location of plant not retired;
   (v) Repairing for reuse materials recovered from plant;
   (vi) Testing for, locating, and clearing trouble;
   (vii) Net cost of installing, maintaining, and removing temporary facilities to prevent interruptions in service; and
   (viii) Replacing or adding minor items of plant which do not constitute a retirement unit.

(c) Rents. (1) The rent expense accounts provided under the several functional groups of expense accounts shall include all rents, including taxes paid by the lessee on leased property, for property used in utility operations, except minor amounts paid for occasional or infrequent use of any property or equipment and all amounts paid for use of equipment that, if owned, would be includible in plant Accounts 391 to 398 inclusive, which shall be treated as an expense item and included in the appropriate function account and rents.
which are chargeable to clearing accounts, and distributed therefrom to the appropriate account.

(2) If rents cover property used for more than one function such as production and transmission, or by more than one department, the rents shall be apportioned to the appropriate rent expense or clearing accounts of each department on an actual, or if necessary, an estimated basis.

(3) When a portion of property or equipment rented from others for use in connection with utility operations is subleased, the revenue derived from such subleasing shall be credited to the rent revenue account in operating revenues; provided, however, that in case the rent was charged to a clearing account, amounts received from subleasing the property shall be credited to such clearing account.

(4) The cost, when incurred by the lessee, of operating and maintaining leased property, shall be charged to the accounts appropriate for the expense if the property were owned.

(5) The cost incurred by the lessee of additions and replacements to electric plant leased from others shall be accounted for as provided in §1767.16(f).

(d) Training costs. (1) When it is necessary that employees be trained to specifically operate or maintain plant facilities that are being constructed, the related costs shall be accounted for as a current operating and maintenance expense.

(2) These expenses shall be charged to the appropriate functional accounts currently as they are incurred.

(3) When the training costs involved relate to facilities which are not conventional in nature, or are new to the company’s operations, see §1767.16(c)(19), for the accounting.

§1767.18 Assets and other debits.

The asset and other debits accounts identified in this section shall be used by all RUS borrowers.

ASSETS AND OTHER DEBITS

Utility Plant

101 Electric Plant in Service

A. This account shall include the original cost of electric plant, included in Accounts 301 to 399, prescribed herein, owned and used by the utility in its electric utility operations, and having an expectation of life in service of more than one year from date of installation, including such property owned by the utility but held by nominees.

B. (See also Account 106 for unclassified construction costs of completed plant actually in service.)

C. The cost of additions to and betterments of property leased from others, which are includible in this account, shall be recorded in subdivisions separate and distinct from those relating to owned property. (See §1767.16 (f).)

101.1 Property Under Capital Leases

A. This account shall include the amount recorded under capital leases
for plant leased from others and used by the utility in its utility operations.

B. The electric property included in this account shall be classified separately according to the detailed accounts (301 to 399) prescribed for electric plant in service.

C. Records shall be maintained with respect to each capital lease reflection: (1) name of lessor, (2) basic details of lease, (3) terminal date, (4) original cost or fair market value of property leased, (5) future minimum lease payments, (6) executory costs, (7) present value of minimum lease payments, (8) the amount representing interest and the interest rate used, and (9) expenses paid.

102 Electric Plant Purchased or Sold

A. This account shall be charged with the cost of electric plant acquired as an operating unit or system by purchase, merger, consolidation liquidation, or otherwise, and shall be credited with the selling price of like property transferred to others pending the distribution to appropriate accounts in accordance with §1767.16(e).

B. Within 6 months from the date of acquisition or sale of property recorded herein, the borrower shall file with RUS the proposed journal entries to clear from this account the amounts recorded herein.

103 Experimental Electric Plant Unclassified

A. This account shall include the cost of electric plant which was constructed as a research, development, and demonstration plant under the provisions of Paragraph C, Account 107, Construction Work in Progress—Electric, and due to the nature of the plant, it is desirable to operate it for a period of time in an experimental status.

B. Amounts in this account shall be transferred to Account 101, Electric Plant in Service, or Account 121, Non-utility Property, as appropriate when the project is no longer considered as experimental.

C. The depreciation on property in this account shall be charged to Account 403, Depreciation Expense, and credited to Account 108, Accumulated Provision for Depreciation of Electric Utility Plant. The amounts herein shall be depreciated over a period which would correspond to the estimated useful life of the relevant project considering the characteristics involved. However, when projects are transferred to Account 101, Electric Plant in Service, a new depreciation rate based upon the remaining service life and undepreciated amounts, will be established.

D. Records shall be maintained with respect to each unit of experiment so that full details may be obtained as to the cost, depreciation, and the experimental status.

E. Should it be determined that experimental plant recorded in this account will fail to satisfactorily perform its function, the costs thereof shall be accounted for as directed or authorized by RUS.

104 Electric Plant Leased to Others

A. This account shall include the original cost of electric plant owned by the utility, but leased to others as operating units or systems, where the lessee has exclusive possession.

B. The property included in this account shall be classified according to the detailed accounts (301 to 399) prescribed for electric plant in service and this account shall be maintained in such detail as though the property were used by the owner in its utility operations.

105 Electric Plant Held for Future Use

A. This account shall include the original cost of electric plant (except land and land rights) owned and held for future use in electric service under a definite plan for such use, to include: (1) Property acquired (except land and land rights) but never used by the utility in service, but held for such service in the future under a definite plan, and (2) property (except land and land rights) previously used by the utility in service but retired from such service and held pending its reuse in the future, under a definite plan, in electric service.

B. This account shall also include the original cost of land and land rights owned and held for future use in electric service under a plan for such use, to include land and land rights: (1) Acquired but never used by the utility in
§ 1767.18

Electric service, but held for such service in the future under a plan, and (2) previously held by the utility in service, but retired from such service and held pending its reuse in the future under a plan, in electric service. (See §1767.16 (g).)

C. In the event that property recorded in this account shall no longer be needed or appropriate for future utility operations, the borrower shall notify RUS of such condition and request approval of journal entries to remove such property from this account.

D. Gains or losses from the sale of land and land rights or other disposition of such property previously recorded in this account and not placed in utility service shall be recorded directly in Accounts 411.6 or 411.7, as appropriate, except when determined to be significant by RUS. Upon such a determination, the amounts shall be transferred to Account 256, Deferred Gains from Disposition of Utility Plant, or Account 187, Deferred Losses from Disposition of Utility Plant, and amortized to Account 411.6, Gains from Disposition of Utility Plant, or Account 411.7, Losses from Disposition of Utility Plant, as appropriate.

E. The property included in this account shall be classified according to the detail accounts (301 to 399) prescribed for electric plant in service and the account shall be maintained in such detail as though the property were in service.

NOTE: Materials and supplies, meters and transformers held in reserve, and normal spare capacity of plant in service shall not be included in this account.

106 Completed Construction not Classified—Electric

At the end of the year or such other date as a balance sheet may be required by RUS, this account shall include the total of the balances of work orders for electric plant which has been completed and placed in service but which work orders have not been classified for transfer to the detailed electric plant accounts.

NOTE: For the purpose of reporting to RUS, the classification of electric plant in service by accounts is required, the utility shall also report the balance in this account tentatively classified as accurately as practicable according to prescribed account classifications. The purpose of this provision is to avoid any significant omissions in reported amounts of electric plant in service.

107 Construction Work in Progress—Electric

A. This account shall include the total of the balances of work orders for electric plant in process of construction.

B. Work orders shall be cleared from this account as soon as practicable, after completion of the job. Further, if a project, such as a hydroelectric project, a steam station, or a transmission line, is designed to consist of two or more units or circuits which may be placed in service at different dates, any expenditures which are common to and which will be used in the operation of the project as a whole shall be included in electric plant in service upon the completion and the readiness for service of the first unit. Any expenditures which are identified exclusively with units of property not yet in service shall be included in this account.

C. Expenditures on research, development, and demonstration projects for construction of utility facilities are to be included in separate subdivision in this account. Records must be maintained to show separately each project along with complete detail of the nature and purpose of the research, development, and demonstration project together with the related costs.

D. Account 107 shall be subaccounted as follows:

107.1 Construction Work in Progress—Contract
107.2 Construction Work in Progress—Force Account
107.3 Construction Work in Progress—Special Equipment

108 Accumulated Provision for Depreciation of Electric Utility Plant

A. This account shall be credited with the following:

1. Amounts charged to Account 403, Depreciation Expense, or to clearing accounts for current depreciation expense for electric plant in service.

2. Amounts charged to Account 421, Miscellaneous Nonoperating Income,
for depreciation expense on property included in Account 105, Electric Plant Held for Future Use. Include, also, the balance of accumulated provision for depreciation on property when transferred to Account 105, Electric Plant Held for Future Use, from other property accounts. Normally, Account 108 will not be used for current depreciation provision because, as provided herein, the service life during which depreciation is computed commences with the date property is includible in electric plant in service; however, if special circumstances indicate the propriety of current accruals for depreciation, such charges shall be made to Account 421, Miscellaneous Nonoperating Income.

3. Amounts charged to Account 413, Expenses of Electric Plant Leased to Others, for electric plant included in Account 104, Electric Plant Leased to Others.

4. Amounts charged to Account 416, Costs and Expenses of Merchandising, Jobbing, and Contract Work, or to clearing accounts for current depreciation expense.

5. Amounts of depreciation applicable to electric properties acquired as operating units or systems. (See §1767.16(e).)

6. Amounts charged to Account 182.1, Extraordinary Property Losses, when authorized by RUS.

7. Amounts of depreciation applicable to electric plant donated to the utility. The utility shall maintain separate subaccounts for depreciation applicable to electric plant in service, electric plant leased to others, and electric plant held for future use.

B. At the time of retirement of depreciable electric utility plant, this account shall be charged with the book cost of the property retired and the cost of removal and shall be credited with the salvage value and any other amounts recovered, such as insurance. When retirement, costs of removal and salvage are entered originally in retirement work orders, the net total of such work orders may be included in a separate subaccount hereunder. Upon completion of the work order, the proper distribution to subdivisions of this account shall be made as provided in the following paragraph.

C. Account 108 shall be subaccounted as follows:

108.1 Accumulated Provision for Depreciation of Steam Production Plant
108.2 Accumulated Provision for Depreciation of Nuclear Production Plant
108.3 Accumulated Provision for Depreciation of Hydraulic Production Plant
108.4 Accumulated Provision for Depreciation of Other Production Plant
108.5 Accumulated Provision for Depreciation of Transmission Plant
108.6 Accumulated Provision for Depreciation of Distribution Plant
108.7 Accumulated Provision for Depreciation of General Plant
108.8 Retirement Work in Progress

These subsidiary records shall reflect the current credits and debits to this account in sufficient detail to show separately for each such functional classification: (1) the amount of accrual for depreciation, (2) the book cost of property retired, (3) cost of removal, (4) salvage, and (5) other items, including recoveries from insurance.

D. When transfers of plant are made from one electric plant account to another, or from or to another utility department, of from or to nonutility property accounts, the accounting for depreciation shall be as provided in §1767.16(i).

E. The utility is restricted in its use of the accumulated provision for depreciation to the purposes set forth above. It shall not transfer any portion of this account to retained earnings or make any other use thereof without authorization by RUS.

109 [Reserved]
110 [Reserved]

111 Accumulated Provision for Amortization of Electric Utility Plant

A. This account shall be credited with the following:

1. Amounts charged to Account 404, Amortization of Limited-Term Electric Plant, for the current amortization of limited-term electric plant investments.

2. Amounts charged to Account 421, Miscellaneous Nonoperating Income, for amortization expense on property included in Account 105, Electric Plant Held for Future Use. Include also the balance of accumulated provision for
amortization on property when transferred to Account 105, Electric Plant Held for Future Use, from other property accounts. See also Paragraph A(2), Account 108, Accumulated Provision for Depreciation of Electric Utility Plant.

3. Amounts charged to Account 405, Amortization of Other Electric Plant.

4. Amounts charged to Account 413, Expenses of Electric Plant Leased to Others, for the current amortization of limited-term or other investments subject to amortization included in Account 104, Electric Plant Leased to Others.

5. Amounts charged to Account 425, Miscellaneous Amortization, for the amortization of intangible or other electric plant which does not have a definite or terminable life and is not subject to charges for depreciation expense, with RUS approval.

(The utility shall maintain subaccounts of this account for the amortization applicable to electric plant in service, electric plant leased to others and electric plant held for future use.)

B. When any property to which this account applies is sold, relinquished, or otherwise retired from service, this account shall be charged with the amount previously credited in respect to such property. The book cost of the property so retired less the amount chargeable to this account and less the net proceeds realized at retirement shall be included in Account 421.1, Gain on Disposition of Property, or Account 421.2, Loss on Disposition of Property, as appropriate.

C. For general ledger and balance sheet purposes, this account shall be regarded and treated as a single composite provision for amortization. For purposes of analysis, however, each utility shall maintain subsidiary records in which this account is segregated according to the following functional classification for electric plant: (1) Steam production, (2) Nuclear production, (3) Hydraulic production, (4) Other production, (5) Transmission, (6) Distribution, and (7) General. These subsidiary records shall reflect the current credits and debits to this account in sufficient detail to show separately for each such functional classification: (1) the amount of accrual for amortization, (2) the book cost of property retired, (3) cost of removal, (4) salvage, and (5) other items, including recoveries from insurance.

D. The utility is restricted in its use of the accumulated provision for amortization to the purposes set forth above. It shall not transfer any portion of this account to retained earnings or make any other use thereof without authorization by RUS.

112 [Reserved]

113 [Reserved]

114 Electric Plant Acquisition Adjustments

A. This account shall include the difference between the cost to the accounting utility of electric plant acquired as an operating unit or system by purchase, merger, consolidation, liquidation, or otherwise, and the original cost, estimated, if not known, of such property, less the amount or amounts credited by the accounting utility at the time of acquisition to accumulated provisions for depreciation and amortization and contributions in aid of construction with respect to such property.

B. With respect to acquisitions after the effective date of this system of accounts, this account shall be subdivided so as to show the amounts included herein for each property acquisition and to electric plant in service, electric plant held for future use, and electric plant leased to others. (See §1767.16(e).)

C. Debit amounts recorded in this account related to plant and land acquisition may be amortized to Account 425, Miscellaneous Amortization, over a period not longer than the estimated remaining life of the properties to which such amounts relate. Amounts related to the acquisition of land only may be amortized to Account 425 over a period of not more than 15 years. Should a utility wish to account for debit amounts in this account in any other manner, it shall petition RUS for authority to do so. Credit amounts recorded in this account shall be accounted for as directed by RUS.
115 Accumulated Provision for Amortization of Electric Plant Acquisition Adjustments

This account shall be credited or debited with amounts which are includible in Account 406, Amortization of Electric Plant Acquisition Adjustments, or Account 425, Miscellaneous Amortization, for the purpose of providing for the extinguishment of amounts in Account 114, Electric Plant Acquisition Adjustments, in instances where the amortization of Account 114 is not being made by direct write-off of the account.

116 Other Electric Plant Adjustments

A. This account shall include the difference between the original cost, estimated if not known, and the book cost of electric plant to the extent that such difference is not properly includible in Account 114, Electric Plant Acquisition Adjustments. (See §1767.16 (a)(3))

B. Amounts included in this account shall be classified in such manner as to show the origin of each amount and shall be disposed of as RUS may approve or direct.

NOTE: The provisions of this account shall not be construed as approving or authorizing the recording of appreciation of electric plant.

118 Other Utility Plant

This account shall include the balances in accounts for utility plant, other than electric plant, such as gas, or railway.

119 Accumulated Provision for Depreciation and Amortization of Other Utility Plant

This account shall include the accumulated provision for depreciation and amortization applicable to utility property other than electric plant.

120.1 Nuclear Fuel in Process of Refinement, Conversion, Enrichment, and Fabrication

A. This account shall include the original cost to the utility of nuclear fuel materials while in process of refinement, conversion, enrichment, and fabrication into nuclear fuel assemblies and components, including processing, fabrication, and necessary shipping costs. This account shall also include the salvage value of nuclear materials which are actually being reprocessed for use and were transferred from Account 120.5, Accumulated Provision for Amortization of Nuclear Fuel Assemblies. (See §1767.10 (a)(27).)

B. This account shall be credited and Account 120.2, Nuclear Fuel Materials and Assemblies—Stock Account, shall be debited for the cost of completed fuel assemblies delivered for use in refueling or to be held as spares. In the case of the initial core loading, the transfer shall be made directly to Account 120.3, Nuclear Fuel Assemblies in Reactor, upon the conclusion of the experimental or test period of the plant prior to its becoming available for service.

Items

1. Cost of natural uranium, uranium ores concentrates or other nuclear fuel sources, such as thorium, plutonium, and U-233.

2. Value of recovered nuclear materials being reprocessed for use.

3. Milling process costs.

4. Sampling and weighing, and assaying costs.

5. Purification and conversion process costs.

6. Costs of enrichment by gaseous diffusion or other methods.

7. Costs of fabrication into fuel forms suitable for insertion in the reactor.

8. All shipping costs of materials and components, including shipping of fabricated fuel assemblies to the reactor site.

9. Use charges on leased nuclear materials while in process of refinement, conversion, enrichment, and fabrication.

120.2 Nuclear Fuel Materials and Assemblies—Stock Account

A. This account shall be debited and Account 120.1, Nuclear Fuel in Process of Refinement, Conversion, Enrichment and Fabrication, shall be credited with the cost of fabricated fuel assemblies delivered for use in refueling or to be carried in stock as spares. It shall also include the original cost of fabricated fuel assemblies purchased in
completed form. This account shall also include the original cost of partially irradiated fuel assemblies being held in stock for reinsertion in a reactor which had been transferred from Account 120.3, Nuclear Fuel Assemblies in Reactor.

B. When fuel assemblies included in this account are inserted in a reactor, this account shall be credited and Account 120.3, Nuclear Fuel Assemblies in Reactor, debited for the cost of such assemblies.

C. This account shall also include the cost of nuclear materials and byproduct materials being held for future use and not actually in process in Account 120.1, Nuclear Fuel in Process of Refinement, Conversion, Enrichment and Fabrication.

120.3 Nuclear Fuel Assemblies in Reactor

A. This account shall include the cost of nuclear fuel assemblies when inserted in a reactor for the production of electricity. The amounts included herein shall be transferred from Account 120.2, Nuclear Fuel Materials and Assemblies—Stock Account, except for the initial core loading which will be transferred directly from Account 120.1, Nuclear Fuel in Process of Refinement, Conversion, Enrichment and Fabrication.

B. Upon removal of fuel assemblies from a reactor, the original cost of the assemblies removed shall be transferred to Account 120.4, Spent Nuclear Fuel, or Account 120.2, Nuclear Fuel Materials and Assemblies—Stock Account, as appropriate.

120.4 Spent Nuclear Fuel

A. This account shall include the original cost of nuclear fuel assemblies, in the process of cooling, transferred from Account 120.3, Nuclear Fuel Assemblies in Reactor, upon removal from a reactor pending reprocessing.

B. This account shall be credited and Account 120.5, Accumulated Provision for Amortization of Nuclear Fuel Assemblies, debited for fuel assemblies, after the cooling period is over, at the cost recorded in this account.

120.5 Accumulated Provision for Amortization of Nuclear Fuel Assemblies

A. This account shall be credited and Account 518, Nuclear Fuel Expense, shall be debited for the amortization of the net cost of nuclear fuel assemblies used in the production of energy. The net cost of nuclear fuel assemblies subject to amortization shall be the original cost of nuclear fuel assemblies, plus or less the expected net salvage value of uranium, plutonium, and other by-products.

B. This account shall be credited with the net salvage value of uranium, plutonium, and other nuclear by-products when such items are sold, transferred or otherwise disposed. Account 120.1, Nuclear Fuel in Process of Refinement, Conversion, Enrichment and Fabrication, shall be debited with the net salvage value of nuclear materials to be reprocessed. Account 157, Nuclear Materials Held for Sale, shall be debited for the net salvage value of nuclear materials not to be reprocessed but to be sold or otherwise disposed of.

C. This account shall be credited and Account 120.4, Spent Nuclear Fuel, shall be debited with the cost of fuel assemblies at the end of the cooling period.

120.6 Nuclear Fuel Under Capital Leases

A. This account shall include the amount recorded under capital leases for nuclear fuel leased from others for use by the utility in its utility operations.

B. Records shall be maintained with respect to each capital lease reflecting: (1) name of lessor, (2) basic details of lease, (3) terminal date, (4) original cost or fair market value of nuclear fuel leased, (5) future minimum lease payments, (6) the amount representing interest and the interest rate used, and (7) expenses paid.
Other Property and Investments

121 Nonutility Property

A. This account shall include the book cost of land, structures, equipment, or other tangible or intangible property owned by the utility, but not used in utility service and not properly includible in Account 105, Electric Plant Held for Future Use.

B. This account shall also include the amount recorded under capital leases for property leased from others and used by the utility in its nonutility operations. Records shall be maintained with respect to each lease reflecting: (1) name of lessor, (2) basic details of lease, (3) terminal date, (4) original cost or fair market value of property leased, (5) future minimum lease payments, (6) executory costs, (7) present value of minimum lessee payments, (8) the amount representing interest and the interest rate used, and (9) expenses paid.

C. This account shall be subdivided so as to show the amount of property used in operations which are nonutility in character but nevertheless constitute a distinct operating activity of the company (such as operation of an ice department where such activity is not classed as a utility) and the amount of miscellaneous property not used in operations. The records in support of each subaccount shall be maintained so as to show an appropriate classification of the property.

NOTE: The gain from the sale or other disposition of property included in this account which had been previously recorded in Account 105, Electric Plant Held for Future Use, shall be accounted for in accordance with Paragraph C of Account 105.

122 Accumulated Provision for Depreciation and Amortization of Nonutility Property

This account shall include the accumulated provision for depreciation and amortization applicable to nonutility property.

123 Investment in Associated Companies

A. This account shall include the book cost of investments in securities issued or assumed by associated companies and investment advances to such companies, including interest accrued thereon when such interest is not subject to current settlement, provided that the investment does not relate to a subsidiary company. (If the investment relates to a subsidiary company, it shall be included in Account 123.11, Investment in Subsidiary Companies.) Include herein the offsetting entry to the recording of amortization of discount or premium on interest bearing investments. (See Account 419, Interest and Dividend Income.)

B. This account shall be maintained in such manner as to show the investment in securities of, and advances to, each associated company together with full particulars regarding any of such investments that are pledged.

NOTE A: Securities and advances of associated companies owned and pledged shall be included in this account, but such securities, if held in special deposits or in special funds, shall be included in the appropriate deposit or fund account. A complete record of securities pledged shall be maintained.

NOTE B: Securities of associated companies held as temporary cash investments are includible in Account 136, Temporary Cash Investments.

NOTE C: Balances in open accounts with associated companies, which are subject to current settlement, are includible in Account 146, Accounts Receivable from Associated Companies.

NOTE D: The utility may write down the cost of any security in recognition of a decline in the value thereof. Securities shall be written off or written down to a nominal value if there is no reasonable prospect of substantial value. Fluctuations in market value shall not be recorded but a permanent impairment in the value of securities shall be recognized in the accounts. When securities are written off or written down, the amount of the adjustment shall be charged to Account 426.5, Other Deductions, or to an appropriate account for accumulated provisions for loss in value established as a separate subdivision of this account.

C. Account 123 shall be subaccounted as follows:

123.1 Patronage Capital from Associated Cooperatives

123.3 Investment in Associated Organizations—Federal Economic Development Loans
§ 1767.18

123.4 Investment in Associated Organizations—Non-Federal Economic Development Loans

123.11 Investment in Subsidiary Companies

123.21 Subscriptions to Capital Term Certificates—Supplemental Financing

123.22 Investment in Capital Term Certificates—Supplemental Financing

123.23 Other Investments in Associated Organizations

123.1 Patronage Capital from Associated Cooperatives

This account shall include patronage capital credits allocated to the accounting borrower by G&T cooperatives. It shall also include capital credits, deferred patronage refunds, or like items from other associated cooperatives. The account shall be maintained so as to reflect separately, the allocations of patronage capital and patronage refunds from each organization that makes such allocations to the borrower.

123.3 Investment in Associated Organizations—Federal Economic Development Loans

This account shall include investment advances of Federal funds received from a Rural Economic Development Grant to associated organizations for authorized rural economic development projects.

123.4 Investment in Associated Organizations—Non-Federal Economic Development Loans

This account shall include investment advances of non-Federal funds from the Rural Economic Development Grant revolving fund to associated organizations for authorized rural economic development projects.

123.11 Investment in Subsidiary Companies

A. This account shall include the cost of investments in securities issued or assumed by subsidiary companies and investment advances to such companies, including interest accrued thereon when such interest is not subject to current settlement, plus the equity in undistributed earnings or losses of such subsidiary companies since acquisition. This account shall be credited with any dividends declared by such subsidiaries.

B. This account shall be maintained in such a manner as to show separately for each subsidiary: the cost of such investments in the securities of the subsidiary at the time of acquisition; the amount of equity in the subsidiary’s undistributed net earnings or net losses since acquisition; advances or loans to such subsidiary; and full particulars regarding any such investments that are pledged.

123.21 Subscriptions to Capital Term Certificates—Supplemental Financing

This account shall include the total subscriptions to capital term certificates of CFC. When subscriptions are paid, this account shall be credited and Account 123.22, Investments in Capital Term Certificates—Supplemental Financing, debited.

123.22 Investments in Capital Term Certificates—Supplemental Financing

This account shall include paid subscriptions in capital term certificates of CFC or other supplemental lenders.

123.23 Other Investments in Associated Organizations

This account shall include investments in capital stock, securities, membership fees, and investment advances to associated organizations other than provided for elsewhere. This account shall be maintained in such a manner as to show the investment in stock and securities of and advances to each associated organization.

Items

1. Investments in capital stock of associated organizations.
2. Investments in securities issued by associated organizations.
3. Membership fees in associated organizations, including NRECA, and Statewide associations of RUS-financed borrowers.
4. Investment advances to associated organizations.

124 Other Investments

A. This account shall include the book cost of investments in securities issued or assumed by nonassociated
companies, investment advances to such companies, and any investments not accounted for elsewhere. Include also the offsetting entry to the recording of amortization of discount or premium on interest bearing investments. (See Account 419, Interest and Dividend Income.)

B. The records shall be maintained in such manner as to show the amount of each investment and the investment advances to each person.

C. Account 124 shall be subaccounted as follows:

124.1 Other Investments—Federal Economic Development Loans
124.2 Other Investments—Non-Federal Economic Development Loans

NOTE A: Securities owned and pledged shall be included in this account, but securities held in special deposits or in special funds shall be included in appropriate deposit or fund accounts. A complete record of securities pledged shall be maintained.

NOTE B: Securities held as temporary cash investments shall not be included in this account.

NOTE C: See Note D of Account 123.

124.1 Other Investments—Federal Economic Development Loans
This account shall include investment advances of Federal funds received from a Rural Economic Development Grant to nonassociated organizations for authorized rural economic development projects.

124.2 Other Investments—Non-Federal Economic Development Loans
This account shall include investment advances of non-Federal funds from the Rural Economic Development Grant revolving fund to nonassociated organizations for authorized rural economic development projects.

125 Sinking Funds
This account shall include the amount of cash and book cost of investments held in sinking funds. A separate account, with appropriate title, shall be kept for each sinking fund. Transfers from this account to special deposit accounts, may be made as necessary for the purpose of paying matured sinking fund obligations, or obligations called for redemption but not presented, or the interest thereon.

126 Depreciation Fund
This account shall include the amount of cash and the book cost of investments which have been segregated in a special fund for the purpose of identifying such assets with the accumulated provisions for depreciation.

128 Other Special Funds
This account shall include the amount of cash and book cost of investments which have been segregated in special funds for insurance, employee pensions, savings, relief, hospital, and other purposes not provided for elsewhere. A separate account, with appropriate title, shall be kept for each fund.

NOTE: Amounts deposited with a trustee under the terms of an irrevocable trust agreement for pensions or other employee benefits shall not be included in this account.

Current and Accrued Assets
Current and accrued assets are cash, those assets which are readily convertible into cash or are held for current use in operations or construction, current claims against others, payment of which is reasonably assured, and amounts accruing to the utility which are subject to current settlement, except such items for which accounts other than those designated as current and accrued assets are provided. There shall not be included in the category of accounts designated as current and accrued assets any item, the amount or collectibility of which is not reasonably assured, unless an adequate provision for possible loss has been made therefor. Items of current character but of doubtful value may be written down, and for record purposes carried in these accounts at nominal value.

131 Cash
A. This account shall include the amount of current cash funds except working funds.
B. Account 131 shall be subaccounted as follows:

131.1 Cash—General
131.2 Cash—Construction Fund—Trustee
§ 1767.18

131.3 Cash—Installation Loan and Collection Fund

131.4 Transfer of Cash

131.12 Cash—General—Economic Development Loan Funds

131.13 Cash—General—Economic Development Grant Funds

131.14 Cash—General—Economic Development Non-Federal Revolving Funds

131.1 Cash—General

This account shall include all cash of the organization not provided for elsewhere. Separate subaccounts may be maintained for each bank account in which general cash is maintained. Funds held by others for current obligations shall be recorded in Account 134, Other Special Deposits.

131.2 Cash—Construction Fund—Trustee

This account shall include the cash received from the Rural Utilities Service, CFC, and any other source of supplemental financing for financing the construction, purchase, and operation of electric facilities. RUS construction loan fund advances shall be charged to this account and credited to Account 224.4, RUS Notes Executed—Construction—Debit. CFC and other supplemental lender construction loan fund advances shall be charged to this account and credited to Account 224.13, Supplemental Financing Notes Executed—Debit.

131.3 Cash—Installation Loan and Collection Fund

A. This account shall include the cash advanced on installation loans made subsequent to September 13, 1957. Such advances shall be debited to this account as received and credited to Account 224.10, RUS Notes Executed—Installation—Debit. This account shall also include interest and principal collections received on consumers' loans financed from RUS loans made subsequent to September 13, 1957.

B. Payments shall be made from this account solely for financing consumers' loans for the purpose of wiring of consumers' premises, and the acquisition and installation of electrical and plumbing appliances and equipment by consumers. The cash in this account is also used for the payment of principal and interest on installation loans made by RUS, subsequent to September 13, 1957, in accordance with the terms of the loan agreement.

131.4 Transfer of Cash

This account shall be used in transferring funds from one bank account to another. This account is charged when the check is drawn for the transfer and entered in the check register, and credited when the amount transferred is entered in the cash receipts book. This account is to be used as a clearing account and should not have a balance at the end of an accounting period.

131.12 Cash—General—Economic Development Funds

This account shall include the cash received from the Rural Utilities Service for Rural Economic Development Loans. Economic development loan advances shall be charged to this account and credited to Account 224.17, RUS Notes Executed—Economic Development—Debit.

131.13 Cash—General—Economic Development Grant Funds

This account shall include cash received from the Rural Utilities Service for Rural Economic Development Grants. Economic development grant funds shall be charged to this account and credited to Account 224.18, Other Long-Term Debt—Grant Funds; Account 208, Donated Capital; or Account 421, Miscellaneous Nonoperating Income, as appropriate. This account shall be credited and either Account 123.3, Investment in Associated Organizations—Federal Economic Development Loans, or Account 124.1, Other Investments—Federal Economic Development Loans, shall be debited, as appropriate, with the amount of an economic development revolving fund loan.

131.14 Cash—General—Economic Development Non-Federal Revolving Funds

This account shall include all non-Federal funds comprising the economic development revolving fund. It shall include all funds supplied by the borrower as well as all cash received from the repayment of loans made from the
economic development revolving fund. This account shall be credited and either Account 123.4, Investment in Associated Organizations—Non-Federal Economic Development Loans, or Account 124.2, Other Investments—Non-Federal Economic Development Loans, shall be debited, as appropriate, with the amount of an economic development revolving fund loan.

132 Interest Special Deposits
This account shall include special deposits with fiscal agents or others for the payment of interest.

133 Dividend Special Deposits
This account shall include special deposits with fiscal agents or others for the payment of dividends.

134 Other Special Deposits
This account shall include deposits with fiscal agents or others for special purposes other than the payment of interest and dividends. Such special deposits may include cash deposited with Federal, state, or municipal authorities as a guaranty for the fulfillment of obligations; cash deposited with trustees to be held until mortgaged property sold, destroyed, or otherwise disposed of is replaced; and cash realized from the sale of the accounting utility's securities and deposited with trustees to be held until invested in property of the utility. Entries to this account shall specify the purpose for which the deposit is made.

NOTE: Assets available for general corporate purposes shall not be included in this account. Further, deposits for more than one year, which are not offset by current liabilities, shall not be charged to this account but to Account 128, Other Special Funds.

135 Working Funds
This account shall include cash advanced to officers, agents, employees, and others as petty cash or working funds.

136 Temporary Cash Investments
A. This account shall include the book cost of investments, such as demand and time loans, bankers' acceptances, United States Treasury certifi-
C. Account 142 shall be subaccounted as follows:

142.1 Customer Accounts Receivable—Electric

This account shall include amounts due from customers for utility service.

142.2 Customer Accounts Receivable—Other

This account shall include amounts due from customers for merchandising, jobbing, and contract work.

143 Other Accounts Receivable

A. This account shall include amounts due the utility upon open accounts, other than amounts due from associated companies and from customers for utility services and merchandising, jobbing and contract work.

B. This account shall be maintained so as to show separately amounts due on subscriptions to capital stock and from officers and employees. The account shall not include amounts advanced to officers or others as working funds. (See Account 135, Working Funds.)

144 Accumulated Provision for Uncollectible Accounts—Credit

A. This account shall include amounts provided for losses on accounts receivable which may become uncollectible, and also with collections on accounts previously charged hereto. Concurrent charges shall be made to Account 904, Uncollectible Accounts, for amounts applicable to utility operations, and to corresponding accounts for other operations. Records shall be maintained so as to show the write-offs of accounts receivable for each utility department.

B. Account 144 shall be subaccounted as follows:

144.1 Accumulated Provision for Uncollectible Customer Accounts—Credit

This account shall be credited with amounts provided for losses on accounts receivable which may become uncollectible and also with collections on accounts previously charged hereto. Concurrent charges shall be made to Account 904, Uncollectible Accounts.

144.2 Accumulated Provision for Uncollectible Merchandising Accounts—Credit

This account shall be credited with amounts provided for losses on merchandising, jobbing, and contract work which may become uncollectible, and also with collections on accounts previously charged hereto. Concurrent charges shall be made to Account 904, Uncollectible Accounts.

144.3 Accumulated Provision for Uncollectible Accounts, Officers and Employees—Credit

This account shall be credited with amounts provided for losses on accounts receivable from officers and employees which may become uncollectible and also with collections on accounts previously charged hereto. Concurrent charges shall be made to Account 904, Uncollectible Accounts.

144.4 Accumulated Provision for Other Uncollectible Accounts—Credit

This account shall be credited with amounts provided for losses on accounts receivable which may become uncollectible and for which the recording of this credit has not been provided for elsewhere. This account shall also be credited with collections on accounts previously charged hereto. Concurrent charges shall be made to Account 904, Uncollectible Accounts, for
amounts applicable to utility operations and to corresponding accounts for other operations.

145 Notes Receivable from Associated Companies

This account shall include notes upon which associated companies are liable, and which mature and are expected to be paid in full not later than one year from the date of issue, together with any interest thereon, and debit balances subject to current settlement in open accounts with associated companies. Items which do not bear a specified due date but which have been carried for more than twelve months and items which are not paid within twelve months from due date shall be transferred to Account 123, Investment in Associated Companies.

NOTE: The face amount of notes receivable discounted, sold or transferred without releasing the utility from liability as endorser thereon, shall be credited to a separate subdivision of this account and appropriate disclosure shall be made in the financial statements of any contingent liability arising from such transactions.

146 Accounts Receivable from Associated Companies

This account shall include drafts upon which associated companies are liable, and which mature and are expected to be paid in full not later than one year from the date of issue, together with any interest thereon, and debit balances subject to current settlement in open accounts with associated companies. Items which do not bear a specified due date but which have been carried for more than twelve months and items which are not paid within twelve months from due date shall be transferred to Account 123, Investment in Associated Companies.

NOTE: On the balance sheet, accounts receivable from an associated company may be offset against accounts payable to the same company.

151 Fuel Stock

This account shall include the book cost of fuel on hand.

152 Fuel Stock Expenses

A. This account may include the cost of labor and of supplies used and expenses incurred in unloading fuel from the shipping medium and in the handling thereof prior to its use, if such expenses are sufficiently significant in amount to warrant being treated as a part of the cost of fuel inventory rather than being charged direct to expense as incurred.

B. Amounts included herein shall be charged to expense as the fuel is used to the end that the balance herein shall not exceed the expenses attributable to the inventory of fuel on hand.

Items

Labor:
1. Procuring and handling of fuel.
2. All routine fuel analyses.
3. Unloading from shipping facility and placing in storage.
4. Moving of fuel in storage and transferring from one station to another.
5. Handling from storage or shipping facility to first bunker, hopper, bucket, tank, or holder of boiler house structure.
6. Operation of mechanical equipment such as locomotives, trucks, cars, boats, barges, and cranes.

Supplies and Expenses:
1. Tools, lubricants and other supplies.
2. Operating supplies for mechanical equipment.
3. Transportation and other expenses in moving fuel.
4. Stores expenses applicable to fuel.

153 Residuals
This account shall include the book cost of any residuals produced in the production or manufacturing processes.

154 Plant Materials and Operating Supplies
A. This account shall include the cost of materials purchased primarily for use in the utility business for construction, operation and maintenance purposes. It shall also include the book cost of materials recovered in connection with construction, maintenance, or the retirement of property, such materials being credited to construction, maintenance, or accumulated depreciation provision, respectively, and included herein as follows:
1. Reusable materials consisting of large individual items shall be included in this account at original cost, estimated if not known. The cost of repairing such items shall be charged to the maintenance account appropriate for the previous use.
2. Reusable materials consisting of relatively small items, the identity of which (from the date of original installation to the final abandonment or sale thereof) cannot be ascertained without undue refinement in accounting, shall be included in this account at current prices new for such items. The cost of repairing such items shall be charged to the appropriate expense account as indicated by previous use.
3. Scrap and nonusable materials included in this account shall be carried at the estimated net amount realizable therefrom. The difference between the amounts realized for scrap and nonusable materials sold and the net amount at which the materials were carried in this account, as far as practicable, shall be adjusted to the accounts credited when the materials were charged to this account.
B. Materials and supplies issued shall be credited hereto and charged to the appropriate construction, operating expense, or other account on the basis of a unit price determined by the use of cumulative average, first-in-first-out, or such other method of inventory accounting as conforms with accepted accounting standards consistently applied.

Items
1. Invoice price of materials less cash or other discounts.
2. Freight, switching, or other transportation charges when practicable to include as part of the cost of particular materials to which they relate.
3. Customs duties and excise taxes.
4. Costs of inspection and special tests prior to acceptance.
5. Insurance and other directly assignable charges.

Note: Where expenses applicable to materials purchased cannot be directly assigned to particular purchases, they shall be charged to Account 163, Stores Expense Undistributed.

155 Merchandise
This account shall include the book cost of materials and supplies and appliances and equipment held primarily for merchandising, jobbing, and contract work. The principles prescribed in accounting for utility materials and supplies shall be observed with respect to items carried in this account.

156 Other Materials and Supplies
This account shall include the book cost of materials and supplies held primarily for nonutility purposes. The principles prescribed in accounting for utility materials and supplies shall be observed with respect to items carried in this account.

157 Nuclear Materials Held for Sale
This account shall include the net salvage value of uranium, plutonium, and other nuclear materials held by the company for sale or other disposition that are not to be reused by the company in its electric utility operations. This account shall be debited and Account 120.5, Accumulated Provision for Amortization of Nuclear Fuel Assemblies, credited for such net salvage value. Any difference between the amount recorded in this account and...
the actual amount realized from the sale of materials shall be debited or credited, as appropriate, to Account 518, Nuclear Fuel Expense, at the time of such sale.

158.1 Allowance Inventory
A. This account shall include the cost of allowances owned by the utility and not withheld by the Environmental Protection Agency. See §1767.15 (u) and Account 158.2, Allowances Withheld.
B. This account shall be credited and Account 509, Allowances, shall be debited concurrent with the monthly emission of sulfur dioxide.
C. Separate subdivisions of this account shall be maintained so as to separately account for those allowances usable in the current year and in each subsequent year. The underlying records of these subdivisions shall be maintained in sufficient detail so as to identify each allowance included; the origin of each allowance; and the acquisition cost, if any, of the allowance.

158.2 Allowances Withheld
A. This account shall include the cost of allowances owned by the utility but withheld by the Environmental Protection Agency. (See §1767.15 (u).)
B. The inventory cost of the allowances released by the Environmental Protection Agency for use by the utility shall be transferred to Account 158.1, Allowance Inventory.
C. The underlying records of this account shall be maintained in sufficient detail so as to identify each allowance included; the origin of each allowance; and the acquisition cost, if any, of the allowances.

163 Stores Expense Undistributed
A. This account shall include the cost of supervision, labor, and expenses incurred in the operation of general storerooms, including purchasing, storage, handling, and distribution of materials and supplies.
B. This account shall be cleared by adding to the cost of materials and supplies issued, a suitable loading charge which will distribute the expense equitably over stores issues. The balance in the account at the close of the year shall not exceed the amount of stores expenses reasonably attributable to the inventory of materials and supplies, exclusive of fuel, as any amount applicable to fuel costs should be included in Account 152, Fuel Stock Expenses Undistributed.

Items
Labor:
1. Inspecting and testing materials and supplies when not assignable to specific items.
2. Unloading from shipping facility and placing in storage.
3. Supervision of purchasing and stores department to extent assignable to materials handled through stores.
4. Getting materials from stock and in readiness to go out.
5. Inventorying stock received or stock on hand by stores employees but not including inventories by general department employees as part of internal or general audits.
6. Purchasing department activities in checking material needs, investigating sources of supply, analyzing prices, preparing and placing orders, and related activities to extent applicable to materials handled through stores. (Optional: Purchasing department expenses may be included in administrative and general expenses.)
7. Maintaining stores equipment.
8. Cleaning and tidying storerooms and stores offices.
9. Keeping stock records, including the recording and posting of material receipts and issues and maintaining inventory records of stock.
10. Collecting and handling scrap materials in stores.

Supplies and Expenses:
1. Adjustments of inventories of materials and supplies but not including large differences which can readily be assigned to important classes of materials and equitably distributed among the accounts to which such classes of materials have been charged since the previous inventory.
2. Cash and other discounts not practically assignable to specific materials.
3. Freight and express charges when not assignable to specific items.
4. Heat, light, and power for storerooms and store offices.
5. Brooms, brushes, sweeping compounds and other supplies used in cleaning and tidying storerooms and stores offices.

6. Injuries and damages.

7. Insurance on materials and supplies and on stores equipment.

8. Losses due to breakage, leakage, evaporation, fire or other causes, less credits for amounts received from insurance, transportation companies, or others in compensation of such losses.

10. Rent of storage space and facilities.

11. Communication service.

12. Excise and other similar taxes not assignable to specific materials.

13. Transportation expense on inward movement of stores and on transfer between storerooms but not including charges on materials recovered from retirements which shall be accounted for as part of the cost of removal.

NOTE: A physical inventory of each class of materials and supplies shall be made at least every two years.

165 Prepayments

A. This account shall include amounts representing prepayments of insurance, rents, taxes, interest, and miscellaneous items, and shall be kept or supported in such manner as to disclose the amount of each class of prepayment.

B. Account 165 shall be subaccounted as follows:

165.1 Prepayments—Insurance
165.2 Other Prepayments

171 Interest and Dividends Receivable

This account shall include the amount of interest on bonds, mortgages, notes, commercial paper, loans, open accounts, and deposits, the payment of which is reasonably assured, and the amount of dividends declared or guaranteed on stock owned.

NOTE A: Interest which is not subject to current settlement shall not be included herein but in the account in which the associated principle is recorded.

NOTE B: Interest and dividends receivable from associated companies shall be included in Account 146, Accounts Receivable from Associated Companies.

172 Rents Receivable

This account shall include rents receivable or accrued on property rented or leased by the utility to others.

NOTE: Rents receivable from associated companies shall be included in Account 146, Accounts Receivable from Associated Companies.

173 Accrued Utility Revenues

At the option of the utility, the estimated amount accrued for service rendered, but not billed at the end of any accounting period, may be included herein. If accrals are made for unbilled revenues, accrals shall also be made for unbilled expenses, such as the purchase of energy.

174 Miscellaneous Current and Accrued Assets

This account shall include the book cost of all other current and accrued assets, appropriately designated and supported so as to show the nature of each asset included herein.

Deferred Debits

181 Unamortized Debt Expense

This account shall include expenses related to the issuance or assumption of debt securities. Amounts recorded in this account shall be amortized over the life of each respective issue under a plan which will distribute the amount equitably over the life of the security. The amortization shall be on a monthly basis, and the amounts thereof shall be charged to Account 428, Amortization of Debt Discount and Expense. Any unamortized amounts outstanding at the time that the related debt is prematurely reacquired shall be accounted for as indicated in §1767.15 (q).

182.1 Extraordinary Property Losses

A. When authorized or directed by RUS, this account shall include extraordinary losses which could not reasonably have been anticipated and which are not covered by insurance or other provisions, such as unforeseen damages to property.
B. Application to RUS for permission to use this account shall be accompanied by a statement giving a complete explanation with respect to the items which it is proposed to include herein, the period over which, and the accounts to which it is proposed to write off the charges, and other pertinent information.

182.2 Unrecovered Plant and Regulatory Study Costs

A. This account shall include: (1) nonrecurring costs of studies and analyses mandated by regulatory bodies related to plants in service, transferred from Account 183, Preliminary Survey and Investigations Charges, and not resulting in construction; and (2) when authorized by RUS, significant unrecovered costs of plant facilities where construction has been cancelled or which have been prematurely retired.

B. This account shall be credited and Account 407, Amortization of Property Losses, Unrecovered Plant and Regulatory Study Costs, shall be debited over the period specified by RUS.

C. Any additional costs incurred, relative to the cancellation or premature retirement, may be included in this account and amortized over the remaining period of the original amortization period. Should any gains or recoveries be realized relative to the cancelled or prematurely retired plant, such amounts shall be used to reduce the unamortized amount of the costs recorded herein.

D. In the event that the recovery of costs included herein is disallowed in the rate proceedings, the disallowed costs shall be charged to Account 426.5, Other Deductions, in the year of such disallowance.

183 Preliminary Survey and Investigation Charges

A. This account shall be charged with all expenditures for preliminary surveys, plans, and investigations made for the purpose of determining the feasibility of utility projects under contemplation. If construction results, this account shall be credited and the appropriate utility plant account charged. If the work is abandoned, the charge shall be made to Account 426.5, Other Deductions, or to the appropriate operating expense account.

B. This account shall also include costs of studies and analyses mandated by regulatory bodies related to plant in service. If construction results from such studies, this account shall be credited and the appropriate utility
§ 1767.18

Plant account charged with an equitable portion of such study costs directly attributable to new construction. The portion of such study costs not attributable to new construction or the entire cost if construction does not result shall be charged to Account 182.2, Unrecovered Plant and Regulatory Study Costs, or the appropriate operating expense account. The costs of such studies relative to plant under construction shall be included directly in Account 107, Construction Work in Progress—Electric.

C. The records supporting the entries to this account shall be so kept that the utility can furnish complete information as to the nature and the purpose of the survey, plans, or investigations, and the nature and amounts of the several charges.

NOTE: The amount of preliminary survey and investigation charges transferred to utility plant shall not exceed the expenditures which may reasonably be determined to contribute directly and immediately and without duplication to utility plant.

184 Clearing Accounts

A. This caption shall include undistributed balances in clearing accounts at the date of the balance sheet. Balances in clearing account shall be substantially cleared not later than the end of the calendar year unless items held therein relate to a future period.

B. Account 184 shall be subaccounted as follows:

184.1 Transportation Expense—Clearing
184.2 Clearing Accounts—Other

185 Temporary Facilities

This account shall include amounts shown by work orders for plant installed for temporary use in utility service for periods of less than one year. Such work orders shall be charged with the cost of temporary facilities and credited with payments received from customers and net salvage realized on removal of the temporary facilities. Any net credit or debit resulting shall be cleared to Account 451, Miscellaneous Service Revenues.

186 Miscellaneous Deferred Debits

This account shall include all debits not elsewhere provided for, such as miscellaneous work in progress, and unusual or extraordinary expenses, not included in other accounts, which are in process of amortization and items the proper final disposition of which is uncertain.

187 Deferred Losses from Disposition of Utility Plant

This account shall include losses from the sale or other disposition of property previously recorded in Account 105, Electric Plant Held for Future Use, under the provisions of Paragraphs B, C, and D thereof, where such losses are significant and are to be amortized over a period of 5 years, unless otherwise authorized by RUS. The amortization of the amounts in this account shall be made by debits to Account 411.7, Losses from Disposition of Utility Plant. (See Account 105, Electric Plant Held for Future Use.)

188 Research, Development, and Demonstration Expenditures

A. This account shall be charged with the cost of all expenditures coming within the meaning of Research, Development, and Demonstration (RD&D) of this USoA (See §1767.10(a)(34)) except those expenditures properly chargeable to Account 107, Construction Work in Progress—Electric.

B. Costs that are minor or of a general or recurring nature shall be transferred from this account to the appropriate operating expense function or if such costs are common to the overall operations or cannot be feasibly allocated to the various operating accounts, such costs shall be recorded in Account 930.2, Miscellaneous General Expenses.

C. In certain instances, a company may incur large and significant research, development, and demonstration expenditures which are non-recurring and which would distort the annual research, development, and demonstration charges for the period. In such a case, the portion of such amounts that cause the distortion may be amortized to the appropriate operating expense account over a period not to exceed 5 years unless otherwise authorized by RUS.

D. The entries in this account must be so maintained as to show separately
each project along with complete detail of the nature and purpose of the research, development, and demonstration project together with the related costs.

189 Unamortized Loss on Reacquired Debt

This account shall include the losses on long-term debt reacquired or redeemed. The amounts in this account shall be amortized in accordance with § 1767.15 (q).

190 Accumulated Deferred Income Taxes

A. This account shall be debited and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision for Deferred Income Taxes—Credit, Other Income and Deductions, as appropriate, shall be credited with an amount equal to that by which income taxes payable for the year are higher because of the inclusion of certain items in income for tax purposes, which items for general accounting purposes will not be fully reflected in the utility's determination of annual net income until subsequent years.

B. This account shall be credited and Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 410.2, Provision for Deferred Income Taxes, Other Income and Deductions, as appropriate, shall be debited with an amount equal to that by which income taxes payable for the year are lower because of prior payment of taxes as provided by Paragraph A above, because of difference in timing for tax purposes of particular items of income or income deductions from that recognized by the utility for general accounting purposes. Such credit to this account and debit to Account 410.1 or Account 410.2 shall, in general, represent the effect on taxes payable in the current year of the smaller amount of book income recognized for tax purposes as compared to the amount recognized in the utility's current accounts with respect to the item or class of items for which deferred tax accounting by the utility was authorized by RUS.

C. Vintage year records with respect to entries to this account, as described above, and the account balance, shall be so maintained as to show the factor of calculation with respect to each annual amount of the item or class of items for which deferred tax accounting by the utility is utilized.

D. The utility is restricted in its use of this account to the purpose set forth above. It shall not make use of the balance in this account or any portion thereof except as provided in the text of this account, without prior approval of RUS. Any remaining deferred tax account balance with respect to an amount for any prior year's tax deferral, the amortization of which or other recognition in the utility's income accounts has been completed, or other disposition made, shall be debited to Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 410.2, Provision for Deferred Income Taxes, Other Income and Deductions, as appropriate, or otherwise disposed of as RUS may authorize or direct. (See § 1767.15 (t).)

§ 1767.19 Liabilities and other credits.

The liabilities and other credit accounts identified in this section shall be used by all RUS borrowers.

LIABILITIES AND OTHER CREDITS

Margins and Equities

200 Memberships

A. This account shall include the total amount of memberships issued and subscribed.
B. Account 200 shall be subaccounted as follows:
   200.1 Memberships Issued
   200.2 Memberships Subscribed But Unissued

200.1 Memberships Issued

A. This account shall include the face value of membership certificates outstanding. A detailed record shall be maintained to show for each member, the name, address, date of payment, amount paid, and certificate number.
B. If membership fees are applied against energy bills, this account shall be debited for the full amount of the membership with the offsetting credit to the appropriate accounts receivable, and to accounts payable for any refundable amounts. Any balances that cannot be refunded, due to inability to locate the member or because of bylaw restrictions, shall be credited to Account 208, Donated Capital. If determination of the ultimate disposition of the fees cannot be made immediately, the amount involved should be transferred to Account 253, Other Deferred Credits, until the determination is made.
C. When a transfer fee is collected, the transaction shall be recorded by debiting Account 131.1, Cash—General, and crediting Account 451, Miscellaneous Service Revenues, with the fee collected.

200.2 Memberships Subscribed But Unissued

This account shall include the face value of memberships subscribed for but not issued. When certificates are issued, the amount of the memberships shall be transferred to Account 200.1, Memberships Issued.

201 Patronage Capital

A. This account shall include the total amount of patronage capital assignable and assigned.

B. Account 201 shall be subaccounted as follows:
   201.1 Patronage Capital Credits
   201.2 Patronage Capital Assignable

201.1 Patronage Capital Credits

A. This account shall include the amounts of patronage capital which have been assigned to individual patrons. A subsidiary record, "patronage capital ledger," shall be maintained, containing an account for each patron who has furnished capital under a capital credits plan.
B. When the return of patrons' capital to individual patrons has been authorized by the board of directors (or trustees), the amounts authorized shall be transferred to Account 238.1, Patronage Capital Payable. (See also Account 217, Retired Capital Credits—Gain.)

201.2 Patronage Capital Assignable

A. This account shall include all amounts transferred from Account 219.1, Operating Margins; Account 219.2, Nonoperating Margins; Account 219.3, Other Margins; and Account 219.4, Other Margins and Equities—Prior Periods, which are assignable to individual patrons' capital accounts.
B. Entries to this account shall be made so as to clearly disclose the nature and source of each transaction. Amounts so assigned shall be transferred to Account 201.1, Patronage Capital Credits.
§ 1767.19

209 [Reserved]

210 [Reserved]

211 Consumers' Contributions for Debt Service

This account shall include the amounts billed to consumers as "amortization charges" for the purpose of servicing long-term debt.

212 [Reserved]

213 [Reserved]

214 [Reserved]

215 Appropriated Margins

This account shall include all amounts appropriated as reserves from margins. The account shall be so maintained as to show the amount of each separate reserve and the nature and amounts of the debits and credits thereto.

215.1 Unrealized Gains and Losses—Debt and Equity Securities

This account shall include the unrealized holding gains and losses for available-for-sale securities.

216 [Reserved]

216.1 Unappropriated Undistributed Subsidiary Earnings

This account shall include the balances, either debit or credit, of undistributed retained earnings of subsidiary companies relating to amounts included in this account, this account shall be debited and Account 219.2, Nonoperating Margins, credited.

217 Retired Capital Credits—Gain

A. This account shall include credits resulting from the retirement of patronage capital through settlement of individual patrons' capital credits at less than 100 percent of the capital assigned to the patron. The portion of patronage capital not returned to the patrons, under such settlements, shall be debited to Account 201.1, Patronage Capital Credits, and credited to this account.

B. This account shall also include amounts representing patronage capital authorized to be retired to patrons who cannot be located. Returned checks issued for retirements of patronage capital, after an appropriate waiting period, shall be credited to this account, and a record maintained adequate to enable the cooperative to make payment to the patron if and when a claim has been established by the consumer.

218 Capital Gains and Losses

No entries shall be made to this account without the prior approval of RUS unless it is to distribute past capital gains and losses as capital credits or to eliminate accumulated capital losses in conformance with the bylaws of the cooperative.

219 Other Margins and Equities

A. This account shall include total amount of margins and equities from all sources.

B. Account 219 shall be subaccounted as follows:

219.1 Operating Margins

219.2 Nonoperating Margins

219.3 Other Margins

219.4 Other Margins and Equities—Prior Periods

219.1 Operating Margins

This account shall be debited or credited with the balances arising from transactions, the details of which have been recorded in Accounts 400, 401, 402, 403, 404, 405, 406, 407, 408, 412, 413, 414, 423, 424, 425, 426, 427, 428, and 431. Accounts 400, 401, and 402 are control accounts and, at the option of the borrower may or may not be used. If they are not used, the detailed revenue and expense accounts shall be closed directly to this account.

219.2 Nonoperating Margins

This account shall be debited or credited with the balances arising from transactions, the details of which have been recorded in Accounts 415, 416, 417, 417.1, 418, 419, 419.1, 421, 421.1, 421.2, 422, 434, and 435.
219.3 Other Margins

No entries shall be made to this account unless it is to distribute or eliminate prior balances in conformance with the bylaws of the cooperative.

219.4 Other Margins and Equities—Prior Periods

A. This account shall include significant nonrecurring transactions relating to prior periods. To be significant, the transaction must be of sufficient magnitude to justify redistribution of patronage capital credits already allocated for such prior periods.

B. All entries to this account must receive RUS prior approval.

C. These transactions are limited to items to (1) correct an error in the financial statements of a prior year, and (2) make adjustments that result from realization of income tax benefits of preacquisition operating loss carryforwards. This account shall also include the related income taxes (state and federal) on items included herein.

D. Amounts in this account shall be transferred at the end of the year to Account 219.1, Operating Margins, or Account 219.2, Nonoperating Margins, as appropriate. Also, at the end of the year, these amounts should be transferred from Account 219.1, or Account 219.2 to Account 201.2, Patronage Capital Assignable, when appropriate.

Long-Term Debt

221 Bonds

This account shall include, in a separate subdivision for each class and series of bonds, the face value of the actually issued and unmatured bonds which have not been retired or canceled, also the face value of such bonds issued by others, the payment of which has been assumed by the utility.

222 Reacquired Bonds

A. This account shall include the face value of bonds actually issued or assumed by the utility and reacquired by it and not retired or canceled. The account for reacquired debt shall not include securities which are held by trustees in sinking or other funds.

B. When bonds are reacquired, the difference between face value, adjusted for unamortized discount, expenses or premium, and the amount paid upon reacquisition, shall be included in Account 189, Unamortized Loss on Reacquired Debt, or Account 257, Unamortized Gain on Reacquired Debt, as appropriate. (See §1767.15(q).)

223 Advances from Associated Companies

A. This account shall include the face value of notes payable to associated companies and the amount of open book accounts representing advances from associated companies. It does not include notes and open accounts representing indebtedness subject to current settlement which are includible in Account 223, Notes Payable to Associated Companies, or Account 224, Accounts Payable to Associated Companies.

B. The records supporting the entries to this account shall be so kept that the utility can furnish complete information concerning each note and open account.

224 Other Long-Term Debt

A. This account shall include, until maturity, all long-term debt not otherwise provided for. This covers such items as receivers’ certificates, real estate mortgages executed or assumed, assessments for public improvements, notes and unsecured certificates of indebtedness not owned by associated companies, receipts outstanding for long-term debt, and other obligations maturing more than one year from the date of issue or assumption.

B. Account 224 shall be subaccounted as follows:

224.1 Long-Term Debt—RUS Construction Loan Contract
224.2 RUS Loan Contract—Construction—Debit
224.3 Long-Term Debt—RUS Construction Notes Executed
224.4 RUS Notes Executed—Construction—Debit
224.5 Interest Accrued—Deferred—RUS Construction
224.6 Advance Payments Unapplied—RUS Long-Term Debt—Debit
224.7 Long-Term Debt—Installation Loan Contract
224.8 RUS Loan Contract—Installation—
§ 1767.19

Debit 224.9 Long-Term Debt—Installation Notes Executed
224.10 RUS Notes Executed—Installation—Debit
224.11 Other Long-Term Debt—Subscriptions
224.12 Other Long-Term Debt—Supplemental Financing
224.13 Supplemental Lender Notes Executed—Debit
224.14 Other Long-Term Debt—Miscellaneous
224.15 Notes Executed—Other—Debit
224.16 Long-Term Debt—RUS Economic Development Notes Executed
224.17 RUS Notes Executed—Economic Development—Debit

224.1 Long-Term Debt—RUS Construction Loan Contract
A. This account shall include the contractual obligation to RUS on construction loans covered by loan contract but not by executed notes.
B. This account is to be used at the option of the borrower.

224.2 RUS Loan Contract—Construction—Debit
A. This account shall include the total loans (for construction purposes) which are covered by loan contract but not by executed notes.
B. This account is to be used at the option of the borrower.

224.3 Long-Term Debt—RUS Construction Notes Executed
This account shall include the contractual liability to RUS on construction notes executed. Records shall be maintained to show separately for each class of obligation all details as to the date of obligation, date of maturity, interest date and rate, and securities for the obligation.

224.4 RUS Notes Executed—Construction—Debit
This account shall include the total amount of the unadvanced RUS loans for construction purposes, which are covered by executed notes. When advances are received from the RUS for construction, this account shall be credited and Account 131.2, Cash—Construction Fund—Trustee, debited with the amount of cash advanced.

224.5 Interest Accrued—Deferred—RUS Construction
This account shall include interest on RUS construction obligations deferred by the terms of mortgage notes or extension agreements.

224.6 Advance Payments Unapplied—RUS Long-Term Debt—Debit
A. This account shall include principal payments on mortgage notes paid in advance of the date due and not applied to a specific note. Also, include in this account interest savings which are accrued and added to the advance payment unapplied.
B. At such time as these payments are applied to a specific note or loan balances, this account shall be credited and the long-term debt account debited with the amount so applied.

224.7 Long-Term Debt—Installation Loan Contract
A. This account shall include the contractual obligation to RUS on installation loans covered by loan contract but not covered by executed notes.
B. This account is to be used at the option of the borrower.

224.8 RUS Loan Contract—Installation—Debit
A. This account shall include the total loans for installation purposes which are covered by loan contract but not covered by executed notes.
B. This account is to be used at the option of the borrower.

224.9 Long-Term Debt—Installation Notes Executed
This account shall include the contractual liability to RUS on installation notes executed.

224.10 RUS Notes Executed—Installation—Debit
This account shall include the total amount of unadvanced loans for installation purposes, which are covered by executed note. When advances are received from RUS, this account shall be credited and Account 131.3, Cash—Installation Loan and Collection Fund,
debited with the amount of cash advanced.

224.11 Other Long-Term Debt—Subscriptions
This account shall include the contractual obligation to purchase CFC Capital Term Certificates and any other similar obligation relating to supplemental financing.

224.12 Other Long-Term Debt—Supplemental Financing
This account shall include the contractual liability to CFC or other supplemental lenders for that portion of funds borrowed which mature in more than one year.

224.13 Supplemental Financing Notes Executed—Debit
This account shall include the total amount of the unadvanced loans for construction purposes, which are covered by executed notes to CFC or other supplemental lenders. This account shall be debited with the face amount of notes executed. When advances are received from a supplemental lender for construction, this account shall be credited and Account 131.2, Cash—Construction Fund—Trustee, debited with the amount of cash advanced.

224.14 Other Long-Term Debt—Miscellaneous
This account shall include the amount of other long-term debt not provided for elsewhere.

224.15 Notes Executed—Other—Debit
This account shall include the total amount of the unadvanced loans for construction purposes, which are covered by executed notes to others not included in the foregoing accounts. When advances are received from such supplemental lender, this account shall be credited and Account 131.2, Cash—Construction Fund—Trustee, debited with the amount of cash so advanced.

224.16 Long-Term Debt—RUS Economic Development Notes Executed
This account shall include the contractual liability to RUS on rural economic development notes executed. Records shall be maintained to show separately for each class of obligation all details as to the date of obligation, date of maturity, interest date and rate, and securities for the obligation.

224.17 RUS Notes Executed—Economic Development—Debit
This account shall include the total amount of the unadvanced RUS loans for rural economic development purposes, which are covered by executed notes. When advances are received from the RUS for rural economic development projects, this account shall be credited and Account 131.12, Cash—General—Economic Development Funds, debited with the amount of cash advanced.

225 Unamortized Premium on Long-Term Debt
A. This account shall include the excess of the cash value of consideration received over the face value upon the issuance or assumption of long-term debt securities.

B. Amounts recorded in this account shall be amortized over the life of each respective issue under a plan which will distribute the amount equitably over the life of the security. The amortization shall be on a monthly basis, with the amounts thereof to be credited to Account 429, Amortization of Premium on Debt—Credit. (See § 1767.15 (q.).)

226 Unamortized Discount on Long-Term Debt—Debit
A. This account shall include the excess of the face value of long-term debt securities over the cash value of consideration received therefor, related to the issue or assumption of all types and classes of debt.

B. Amounts recorded in this account shall be amortized over the life of the respective issues under a plan which will distribute the amount equitably over the life of the securities. The amortization shall be on a monthly basis, with the amounts thereof charged to Account 428, Amortization of Debt Discount and Expense. (See § 1767.15 (q.).)
Other Noncurrent Liabilities

227 Obligations Under Capital Leases—Noncurrent

This account shall include the portion not due within one year, of the obligations recorded for the amounts applicable to leased property recorded as assets in Account 101.1, Property Under Capital Leases; Account 120.6, Nuclear Fuel Under Capital Leases; or Account 121, Nonutility Property.

SPECIAL INSTRUCTIONS

No amounts shall be credited to Accounts 228.1 through 228.4 unless authorized by a regulatory authority or authorities to be collected in the utility's rates.

228.1 Accumulated Provision for Property Insurance

A. This account shall include amounts reserved by the utility for losses through accident, fire, flood, or other hazards to its own property or property leased from others, not covered by insurance. The amounts charged to Account 924, Property Insurance, or other appropriate accounts to cover such risks shall be credited to this account. A schedule of risks covered shall be maintained, giving a description of the property involved, the character of the risks covered and the rates used.

B. Charges shall be made to this account for losses covered, not to exceed the account balance. Details of these charges shall be maintained according to the year the casualty occurred which gave rise to the loss.

228.2 Accumulated Provision for Injuries and Damages

A. This account shall be credited with amounts charged to Account 925, Injuries and Damages, or other appropriate accounts, to meet the probable liability, not covered by insurance, for deaths or injuries to employees and others and for damages to property neither owned nor held under lease by the utility.

B. When liability for any injury or damage is admitted by the utility either voluntarily or because of the decision of a court or other lawful authority, such as a workmen's compensation board, the admitted liability shall be charged to this account and credited to the appropriate current liability account. Details of these charges shall be maintained according to the year the casualty occurred which gave rise to the loss.

NOTE: Recoveries or reimbursements for losses charged to this account shall be credited hereto; the cost of repairs to property of others, if provided for herein, shall be charged to this account.

228.3 Accumulated Provision for Pensions and Benefits

A. This account shall include provisions made by the utility and amounts contributed by employees for pensions, accident and death benefits, savings, relief, hospital, and other provident purposes, where the funds are included in the assets of the utility either in general or in segregated fund accounts.

B. Amounts paid by the utility for the purpose for which this liability is established shall be charged hereto.

C. A separate account shall be kept for each kind of provision included herein.

NOTE: If employee pension or benefit plan funds are not included among the assets of the utility but are held by outside trustees, payments into such funds, or accruals therefor, shall not be included in this account.

228.4 Accumulated Miscellaneous Operating Provisions

A. This account shall include all operating provisions which are not provided for elsewhere.

B. This account shall be maintained in such a manner as to show the amount of each separate provision and the nature and amounts of the debits and credits thereto.

NOTE: This account includes only provisions as may be created for operating purposes and does not include any reservations of income, the credits for which should be recorded in Account 215, Appropriated Margins.

229 Accumulated Provision for Rate Refunds

A. This account shall be credited with amounts charged to Account 449.1, Provision for Rate Refunds, to provide
Rural Utilities Service, USDA

§ 1767.19

for estimated refunds where the utility is collecting amounts in rates subject to refund.

B. When a refund of any amount recorded in this account is ordered by a regulatory authority, such amount shall be charged hereto and credited to Account 242, Miscellaneous Current and Accrued Liabilities.

C. Records supporting the entries to this account shall be kept so as to identify each amount recorded by the respective rate filing docket number.

Current and Accrued Liabilities

Current and accrued liabilities are those obligations which have either matured or which become due within 1 year from the date thereof; except however, bonds, receivers' certificates, and similar obligations which shall be classified as long-term debt until date of maturity; accrued taxes, such as income taxes, which shall be classified as accrued liabilities even though payable more than one year from date; compensation awards, which shall be classified as current liabilities regardless of date due; and minor amounts payable in installments which may be classified as current liabilities. If a liability is due more than 1 year from the date of issuance or assumption by the utility, it shall be credited to a long-term debt account appropriate for the transaction; except however, the current liabilities previously mentioned.

231 Notes Payable

This account shall include the face value of all notes, drafts, acceptances, or other similar evidences of indebtedness, payable on demand or within a time not exceeding 1 year from the date of issue, to other than associated companies.

232 Accounts Payable

A. This account shall include all amounts payable by the utility within 1 year, which are not provided for in other accounts.

B. Account 232 shall be subaccounted as follows:

232.1 Accounts Payable—General

232.2 Accounts Payable—RUS Construction

232.3 Accounts Payable—Other

233 Notes Payable to Associated Companies

This account shall include amounts owing to associated companies on notes, drafts, acceptances, or other similar evidences of indebtedness payable on demand or not more than 1 year from the date of issue or creation.

NOTE: Notes which are includible in Account 223, Advances from Associated Companies, shall be excluded from this account.

234 Accounts Payable to Associated Companies

This account shall include amounts owing to associated companies on open accounts payable on demand.

NOTE: Accounts which are includible in Account 223, Advances from Associated Companies, shall be excluded from this account.

235 Customer Deposits

This account shall include all amounts deposited with the utility by its customers as security for the payment of bills.

236 Taxes Accrued

A. This account shall be credited with the amount of taxes accrued during the accounting period, corresponding debits being made to the appropriate accounts for tax charges. Such credits may be based upon estimates, but from time to time during the year as the facts become known, the amount of the periodic credits shall be adjusted so as to include, as nearly as can be determined in each year, the taxes applicable thereto. Any amount representing a prepayment of taxes applicable to the period subsequent to the date of the balance sheet, shall be shown under Account 165, Prepayments.

B. If accruals for taxes are found to be insufficient or excessive, correction therefor shall be made through current tax accruals.

C. Accruals for taxes shall be based upon the net amounts payable after credit for any discounts, and shall not include any amounts for interest on tax deficiencies or refunds. Interest received on refunds shall be credited to Account 419, Interest and Dividend Income, and interest paid on deficiencies
§ 1767.19

shall be charged to Account 431, Other Interest Expense.

D. Account 236 shall be subaccounted as follows:

236.1 Accrued Property Taxes
236.2 Accrued U.S. Social Security Tax—Unemployment
236.3 Accrued U.S. Social Security Tax—F.I.C.A.
236.4 Accrued State Social Security Tax—Unemployment
236.5 Accrued State Sales Tax—Consumers
236.6 Accrued Gross Revenue or Gross Receipts Tax
236.7 Accrued Taxes—Other

237 Interest Accrued

This account shall include the amount of interest accrued but not matured on all liabilities of the utility not including, however, interest which is added to the principal of the debt on which incurred. Supporting records shall be maintained so as to show the amount of interest accrued on each obligation.

238 Patronage Capital and Patronage Refunds Payable

A. This account shall include the total amount of patronage capital authorized to be returned and paid to patrons.

B. Account 238 shall be subaccounted as follows:

238.1 Patronage Capital Payable
238.2 Patronage Refunds Payable

238.1 Patronage Capital Payable

This account shall include the amount of patronage capital which has been authorized to be returned to the patron.

238.2 Patronage Refunds Payable

This account shall include the amount of patronage refunds which have been authorized to be paid to patrons.

239 Matured Long-Term Debt

This account shall include the amount of long-term debt (including any obligation for premiums) matured and unpaid, without specific agreement for extension of the time of payment and bonds called for redemption but not presented.

7 CFR Ch. XVII (1-1-98 Edition)

240 Matured Interest

This account shall include the amount of matured interest on long-term debt or other obligations of the utility at the date of the balance sheet unless such interest is added to the principal of the debt on which incurred.

241 Tax Collections Payable

This account shall include the amount of taxes collected by the utility through payroll deductions or otherwise, pending transmittal of such taxes to the proper taxing authority.

NOTE: Do not include liabilities for taxes assessed directly against the utility which are accounted for as part of the utility's own tax expense.

242 Miscellaneous Current and Accrued Liabilities

A. This account shall include the amount of all other current and accrued liabilities not provided for elsewhere appropriately designated and supported so as to show the nature of each liability.

B. Account 242 shall be subaccounted as follows:

242.1 Accrued Rentals
242.2 Accrued Payroll
242.3 Accrued Employees' Vacations and Holidays
242.4 Accrued Insurance
242.5 Other Current and Accrued Liabilities

242.1 Accrued Rentals

This account shall include unpaid joint use pole rentals and other rentals. The records supporting the entries to this account shall be maintained so as to show for each class of rental, the amount accrued, the basis for the accrual, the accounts to which charged, and the amount of rentals paid.

242.2 Accrued Payroll

This account shall include the accrued liability for salaries and wages at the end of an accounting period for which the appropriate expense or other accounts have been charged. This account is to be used whether salaries and wages are paid on a weekly, semi-monthly, or monthly basis.
242.3 Accrued Employees' Vacations and Holidays

This account shall include the liability for accrued wages for employees' vacation, holidays, and sick leave.

242.4 Accrued Insurance

A. This account shall most commonly be used in case of workmen's compensation and public liability insurance for recording the excess amounts of earned premium over the advance premiums. Earned premiums are computed each month by applying the insurance rates to the actual payrolls.

B. Until the amount of the advance premiums is exhausted, the earned premium is credited to Account 165, Prepayments. Earned premiums in excess of the advance premiums are credited to this account.

242.5 Other Current and Accrued Liabilities

This account shall include current and accrued liabilities not provided for elsewhere.

243 Obligations Under Capital Leases—Current

This account shall include the portion, due within 1 year, of the obligations recorded for the amounts allocable to leased property recorded as assets in Account 101.1, Property Under Capital Leases; Account 120.6, Nuclear Fuel Under Capital Leases; or Account 121, Nonutility Property.

Deferred Credits

251 [Reserved]

252 Customer Advances for Construction

This account shall include consumer advances for construction which are to be refunded either wholly or in part. When a customer is refunded the entire amount to which he is entitled, according to the agreement or rule under which the advance was made, the balance, if any, remaining in this account shall be credited to the respective plant accounts.

253 Other Deferred Credits

This account shall include advance billings and receipts and other deferred credit items, not provided for elsewhere, including amounts which cannot be entirely cleared or disposed of until additional information has been received.

253.1 Other Deferred Credits—Consumers' Energy Prepayments

This account shall include the amount of advance payments made by consumers in connection with electric service.

254 Other Regulatory Liabilities

A. This account shall include the amounts of regulatory liabilities, not includible in other accounts, imposed on the utility by the ratemaking actions of regulatory agencies.

B. The amounts included in this account are to be established by those credits which would have been included in net income determinations in the current period under the general requirements of the Uniform System of Accounts but for it being probable that: (1) such items will be included in a different period(s) for purposes of developing the rates that the utility is authorized to charge for its utility services; or (2) refunds to customers, not provided for in other accounts, will be required. When specific identification of the particular source of the regulatory liability cannot be made or when the liability arises from revenues collected pursuant to tariffs on file at a regulatory agency, Account 407.3, Regulatory Debits, shall be debited. The amounts recorded in this account generally are to be credited to the same account that would have been credited if included in income when earned except: (1) all regulatory liabilities established through the use of Account 407.3 shall be credited to Account 407.4, Regulatory Credits; and (2) in the case of refunds, a cash account or other appropriate account should be credited when the obligation is satisfied.

C. If it is later determined that the amounts recorded in this account will not be returned to customers through rates or refunds, such amounts shall be credited to Account 421, Miscellaneous
§ 1767.19

Nonoperating Income, or Account 434, Extraordinary Income, as appropriate, in the year such determination is made.

D. The records supporting the entries to this account shall be kept in such a manner that the utility can furnish full information as to the nature and amount of each regulatory liability included in this account, including justification for inclusion of such amounts in this account.

255 Accumulated Deferred Investment Tax Credits

A. This account shall be credited with all investment tax credits deferred by companies which have elected to follow deferral accounting, partial or full, rather than recognizing, in the income statement, the total benefits of the tax credit as realized. After such election, a company may not transfer amounts from this account, except as authorized herein and in Account 411.4, Investment Tax Credit Adjustments, Utility Operations; Account 411.5, Investment Tax Credit Adjustments, Nonutility Operations; and Account 420, Investment Tax Credits, or with approval of RUS.

B. Where the company’s accounting provides that investment tax credits are to be passed on to customers, this account shall be debited and Account 411.4 credited with a proportionate amount determined in relation to the average useful life of electric utility property to which the tax credits relate or such lesser period of time as allowed by a regulatory agency having rate jurisdiction. If, however, the deferral procedure provides that investment tax credits are not to be passed on to customers, the proportionate restorations to income shall be credited to Account 420.

C. Subdivisions of this account, by department, shall be maintained for deferred investment tax credits that are related to nonelectric utility or other operations. Contra entries affecting such account subdivisions shall be appropriately recorded in Account 413, Expenses of Electric Plant Leased to Others; or Account 414, Other Utility Operating Income. Use of deferral or nondeferral accounting procedures adopted for nonelectric utility or other operations are to be followed on a consistent basis.

D. Separate records for electric and nonelectric utility or other operations shall be maintained identifying the properties giving rise to the investment tax credits for each year with the weighted-average service life of such properties and any unused balances of such credits. Such records are not necessary unless the tax credits are deferred.

256 Deferred Gains from Disposition of Utility Plant

This account shall include gains from the sale or other disposition of property previously recorded in Account 105, Electric Plant Held for Future Use, under the provisions of Paragraphs B, C, and D thereof, where such gains are significant and are to be amortized over a period of 5 years, unless otherwise authorized by RUS. The amortization of the amounts in this account shall be made by credits to Account 411.6, Gains from Disposition of Utility Plant. (See Account 105, Electric Plant Held for Future Use.)

257 Unamortized Gain on Reacquired Debt

This account shall include the amounts of discount realized upon reacquisition or redemption of long-term debt. The amounts in this account shall be amortized in accordance with § 1767.15(q).

SPECIAL INSTRUCTIONS

Accumulated Deferred Income Taxes

Before using the deferred tax accounts provided below, refer to § 1767.15(r), Comprehensive Interperiod Income Tax Allocation. The text of these accounts are designed primarily to cover deferrals of Federal income taxes. However, they are also to be used when making deferrals of state and local income taxes. Utilities and licensees which, in addition to an electric utility department, have another utility department, gas or water and nonutility property, and which have deferred taxes on income with respect thereto shall separately classify such deferrals in the accounts provided below so as to
allow ready identification of items relating to each utility deduction.

281 Accumulated Deferred Income Taxes—Accelerated Amortization Property

A. This account shall include tax deferrals resulting from adoption of the principles of comprehensive interperiod tax allocation described in §1767.15 (s) that relate to property for which the utility has availed itself of the use of accelerated (5-year) amortization of (1) certified defense facilities as permitted by Section 168 of the Internal Revenue Code, and (2) certified pollution control facilities as permitted by Section 169 of the Internal Revenue Code.

B. This account shall be credited and Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 410.2, Provision for Deferred Income Taxes, Other Income and Deductions, as appropriate, shall be debited with tax effects related to property described in Paragraph A above where taxable income is lower than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income.

C. This account shall be debited and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision for Deferred Income Taxes—Credit, Other Income and Deductions, as appropriate, shall be credited with taxes related to property described in Paragraph A above where taxable income is higher than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income.

D. The utility is restricted in its use of this account to the purposes set forth above. It shall not transfer the balance in this account or any portion thereof to retained earnings or make any use thereof except as provided in the text of this account without prior approval of RUS. Upon the disposition by sale, exchange, transfer, aban-

282 Accumulated Deferred Income Taxes—Other Property

A. This account shall include the tax deferrals resulting from adoption of the principle of comprehensive interperiod income tax allocation described in §1767.15 (r) which are related to all property other than accelerated amortization property.

B. This account shall be credited and Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 410.2, Provision for Deferred Income Taxes, Other Income and Deductions, as appropriate, shall be debited with tax effects related to property described in Paragraph A above where taxable income is lower than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the
§ 1767.19

periods in which they enter into the determination of pretax accounting income.

C. This account shall be debited and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision for Deferred Income Taxes—Credit, Other Income and Deductions, as appropriate, shall be credited with tax effects related to property described in Paragraph A above where taxable income is higher than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income.

D. The utility is restricted in its use of this account to the purposes set forth above. It shall not transfer the balance in this account or any portion thereof to retained earnings or make any use thereof except as provided in the text of this account without prior approval of RUS. Upon the disposition by sale, exchange, transfer, abandonment, or premature retirement of plant on which there is a related balance herein, this account shall be charged with an amount equal to the related income tax expense, if any, arising from such disposition and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision for Deferred Income Taxes—Credit, Other Income and Deductions, shall be credited. When the remaining balance after consideration of any related tax expenses, is less than $25,000, this account shall be charged and Account 411.1 or Account 411.2, as appropriate, credited with such balance. If after consideration any related income tax expense, there a remaining amount of $25,00 or more, RUS shall authorize or direct how such amount shall be accounted for at the time approval for the disposition of accounting is granted. When plant is disposed of by transfer to a wholly owned subsidiary, the related balance in this account shall also be transferred. When the disposition relates to retirement of an item or items under a group method of depreciation where there is no tax effect in the year of retirement, no entries are required in this account if it can be determined that the related balance would be necessary to be retained to offset future group item tax deficiencies.

283 Accumulated Deferred Income Taxes—Other

A. This account shall include all credit tax deferrals resulting from the adoption of the principles of comprehensive interperiod income tax allocation described in §1767.15 (r) other than those deferrals which are includible in Account 281, Accumulated Deferred Income Taxes—Accelerated Amortization Property, and Account 282, Accumulated Deferred Income Taxes—Other Property.

B. This account shall be credited and Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 410.2, Provision for Deferred Income Taxes, Other Income and Deductions, as appropriate, shall be debited with tax effects related to items described in Paragraph A above where taxable income is lower than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income.

C. This account shall be debited and Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision for Deferred Income Taxes—Credit, Other Income and Deductions, as appropriate, shall be credited with tax effects related to items described in Paragraph A above where taxable income is higher than pretax accounting income due to differences between the periods in which revenue and expense transactions affect taxable income and the periods in which they enter into the determination of pretax accounting income.

D. Records with respect to entries to this account, as described above, and the account balance, shall be maintained as to show the factors of calculation with respect to each annual amount of the item or class of items.

E. The utility is restricted in its use of this account to the purposes set forth above. It shall not transfer the balance in the account or any portion thereof to retained earnings or make any use thereof except as provided in the text of this account without prior approval of RUS.
§ 1767.20 Plant accounts.

The plant accounts identified in this section shall be used by all RUS borrowers.

Rural Utilities Service, USDA § 1767.20

thereof to retained earnings or to any other account or make any use thereof except as provided in the text of this account, without prior approval of RUS. Upon the disposition by sale, exchange, transfer, abandonment, or premature retirement of items on which there is a related balance herein, this account shall be charged with an amount equal to the related income tax effect, if any, arising from such disposition and Account 411.1, Provision For Deferred Income Taxes—Credit, Utility Operating Income, or Account 411.2, Provision For Deferred Income Taxes-Credit, Other Income and Deductions, as appropriate, shall be credited. When the remaining balance, after consideration of any related tax expenses, is less than $25,000, this account shall be charged and Account 411.1 or Account 411.2, as appropriate, credited with such balance. If after consideration of any related income tax expense, there is a remaining amount of $25,000 or more, RUS shall authorize or direct how such amount shall be accounted for at the time approval for the disposition of accounting is granted.

When plant is disposed of by transfer to a wholly owned subsidiary, the related balance in this account shall also be transferred. When the disposition relates to retirement of an item or items under a group method of depreciation where there is no tax effect in the year of retirement, no entries are required in this account if it can be determined that the related balance would be necessary to be retained to offset future group item tax deficiencies.

§ 1767.20

INTANGIBLE PLANT

301 Organization

This account shall include all fees paid to Federal or state governments for the privilege of incorporation and expenditures incident to organizing the corporation, partnership, or other enterprise and putting it into readiness to do business.

Items

1. Cost of obtaining certificates authorizing an enterprise to engage in the public-utility business.
2. Fees and expenses for incorporation.
3. Fees and expenses for mergers or consolidations.
4. Office expenses incident to organizing the utility.
5. Stock and minute books and corporate seal.

NOTE A: This account shall not include any discounts upon securities issued or assumed; nor shall it include any costs incident to negotiating loans, selling bonds or other evidences of debt or expenses in connection with the authorization, issuance, or sale of capital stock.

NOTE B: Exclude from this account and include in the appropriate expense account the cost of preparing and filing papers in connection with the extension of the term of incorporation unless the first organization costs have been written off. When charges are made to this account for expenses incurred in mergers, consolidations, or reorganizations, amounts previously included herein or in similar accounts in the books of the companies concerned shall be excluded from this account.

302 Franchises and Consents

A. This account shall include amounts paid to the Federal Government, to a state or to a political subdivision thereof in consideration for franchises, consents, water power licenses, or certificates of permission and approval, including expenses of organizing and merging separate corporations, where statutes require, solely for the purpose of acquiring franchises.

B. If a franchise, consent, water power license, or certificate is acquired by assignment, the charge to this account in respect thereof shall not exceed the amount paid therefor by the utility to the assignor, nor shall it exceed the amount paid by the original grantee, plus the expense of acquisition to such grantee. Any excess of the amount actually paid by the utility over the amount above specified shall be charged to Account 426.5, Other Deductions.

C. When any franchise has expired, the book cost thereof shall be credited hereto and charged to Account 426.5, Other Deductions, or to Account 111, Accumulated Provision for Amortization of Electric Utility Plant, as appropriate.

D. Records supporting this account shall be kept so as to show separately the book cost of each franchise or consent.

NOTE: Annual or other periodic payments under franchises shall not be included herein but in the appropriate operating expense account.

303 Miscellaneous Intangible Plant

A. This account shall include the cost of patent rights, licenses, privileges, and other intangible property necessary or valuable in the conduct of utility operations and not specifically chargeable to any other account.

B. When any item included in this account is retired or expires, the book cost thereof shall be credited hereto and charged to Account 426.5, Other Deductions, or to Account 111, Accumulated Provision for Amortization of Electric Utility Plant, as appropriate.

C. This account shall be maintained in such a manner that the utility can furnish full information with respect to the amounts included herein.
PRODUCTION PLANT

Steam Production

310 Land and Land Rights

This account shall include the cost of land and land rights used in connection with steam-power generation. (See §1767.16 (g).)

311 Structures and Improvements

This account shall include the cost, in place, of structures and improvements used in connection with steam-power generation. (See §1767.16 (h).)

NOTE: Include steam production roads and railroads in this account.

312 Boiler Plant Equipment

This account shall include the cost installed of furnaces, boilers, coal and ash handling and coal preparing equipment, boiler apparatus, and accessories used in the production of steam, mercury, or other vapor, to be used primarily for generating electricity.

Items

1. Ash handling equipment, including hoppers, gates, cars, conveyors, hoists, sluicing equipment, including pumps and motors, sluicing water pipe and fittings, sluicing trenches and accessories, except sluices which are a part of a building.

2. Boiler feed system, including feed water heaters, evaporator condensers, heater drain pumps, heater drainers, deaerators, and vent condensers, boiler feed pumps, surge tanks, feed water regulators, feed water measuring equipment, and all associated drives.

4. Boilers and equipment, including boilers and baffles, economizers, superheaters, soot blowers, foundations and settings, water walls, arches, grates, insulation, blowdown system, drying out of new boilers, also associated motors or other power equipment.

5. Breeching and accessories, including breeching, dampers, soot spouts, hoppers and gates, cinder eliminators, breeching insulation, soot blowers and associated motors.

6. Coal handling and storage equipment, including coal towers, coal lorries, coal cars, locomotives and tracks when devoted principally to the transportation of coal, hoppers, downtakes, unloading and hoisting equipment, skip hoists and conveyors, weighing equipment, magnetic separators, cable ways, and housings and supports for coal handling equipment.

7. Draft equipment, including air preheaters and accessories, induced and forced draft fans, air ducts, combustion control mechanisms, and associated motors or other power equipment.

8. Gas-burning equipment, including holders, burner equipment and piping, and control equipment.

9. Instruments and devices, including all measuring, indicating, and recording equipment for boiler plant service together with mountings and supports.

10. Lighting systems.

11. Oil-burning equipment, including tanks, heaters, pumps with drive, burner equipment and piping, and control equipment.

12. Pulverized fuel equipment, including pulverizers, accessory motors, primary air fans, cyclones and ducts, dryers, pulverized fuel bins, pulverized fuel conveyors and equipment, burners, burner piping, priming equipment, air compressors, and motors.

13. Stacks, including foundations and supports, stack steel and ladders, stack brickwork, stack concrete, stack lining, stack painting (first), when set on separate foundations, independent of substructures or superstructures of building.

14. Station piping, including pipe, valves, fittings, separators, traps, desuperheaters, hangers, excavation, and covering for station piping system, including all steam, condensate, boiler feed and water supply piping, but not condensing water, plumbing, building heating, oil, gas, air piping or piping specifically provided for in Account 313.

15. Stoker or equivalent feeding equipment, including stokers and accessory motors, clinker grinders, fans and motors.

16. Ventilating equipment.
§ 1767.20  
17. Water purification equipment, including softeners and accessories, evaporators and accessories, heat exchanges, filters, tanks for filtered or softened water, pumps, and motors.
18. Water-supply systems, including pumps, motors, strainers, raw-water storage tanks, boiler wash pumps, intake and discharge pipes, and tunnels not a part of a building.
19. Wood fuel equipment, including hoppers, fuel hogs and accessories, elevators and conveyors, bins and gates, spouts, measuring equipment and associated drives.

NOTE: When the system for supplying boiler or condenser water is elaborate, and when it includes a dam, reservoir, canal, pipeline, cooling ponds, or where gas or oil is used as a fuel for producing steam and is supplied through a pipeline system owned by the utility, the cost of such special facilities shall be charged to a subdivision of Account 311, Structures and Improvements.

313 Engines and Engine Driven Generators

This account shall include the cost installed of steam engines, reciprocating or rotary, and their associated auxiliaries; and engine-driven main generators, except turbogenerator units.

Items
1. Air cleaning and cooling apparatus, including blowers, drive equipment, air ducts, not a part of building, louvers, pumps, and hoods.
2. Belting, shafting, pulleys, and reduction gearing.
3. Circulating pumps, including connections between condensers and intake and discharge tunnels.
4. Cooling system, including towers, pumps, tank, and piping.
5. Condensers, including condensate pumps, air and vacuum pumps, ejector unloading valves and vacuum breakers, expansion devices, and screens.
6. Cranes and hoists, including items wholly identified with items listed herein.
7. Engines, reciprocating or rotary.
8. Fire-extinguishing systems.
9. Foundations and settings, especially constructed for and not expected to outlast the apparatus for which provided.
10. Generators-Main, a.c. or d.c., including field rheostats and connections for self-excited units, and excitation systems when identified with the generating unit.
12. Lighting systems.
13. Lubricating systems, including gauges, filters, tanks, pumps, piping, and motors.
14. Mechanical meters, including gauges, recording instruments, sampling and testing equipment.
15. Piping-main exhaust, including connections between generator and condenser and between condenser and hotwell.
16. Piping-main stream, including connections from main throttle valve to turbine inlet.
17. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
18. Pressure oil system, including accumulators, pumps, piping, and motors.
19. Throttle and inlet valve.
20. Tunnels, intake and discharge, for condenser system, when not a part of a structure.

314 Turbogenerator Units

This account shall include the cost installed of main turbine-driven units and accessory equipment used in generating electricity by steam.

Items
1. Air cleaning and cooling apparatus, including blowers, drive equipment, air ducts not a part of building, louvers, pumps, and hoods.
2. Circulating pumps, including connections between condensers and intake and discharge tunnels.
3. Condensers, including condensate pumps, air and vacuum pumps, ejector unloading valves and vacuum breakers, expansion devices, and screens.
4. Generator hydrogen, gas piping, and detrainment equipment.
5. Cooling system, including towers, pumps, tank, and piping.
6. Cranes and hoists, including items wholly identified with items listed herein.
7. Excitation system, when identified with main generating units.
8. Fire-extinguishing systems.
9. Foundations and settings, especially constructed for and not expected to outlast the apparatus for which provided.
10. Governors.
11. Lighting systems.
12. Lubricating systems, including gauges, filters, water separators, tanks, pumps, piping, and motors.
13. Mechanical meters, including gauges, recording instruments, sampling, and testing equipment.
14. Piping-main exhaust, including connections between turbogenerator and condenser and between condenser and hotwell.
15. Piping-main steam, including connections from main throttle valve to turbine inlet.
16. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
17. Pressure oil systems, including accumulators, pumps, and piping motors.
18. Steelwork, specially constructed for apparatus listed herein.
19. Throttle and inlet valve.
20. Tunnels, intake and discharge, for condenser system, when not a part of structure, and water screens.
21. Turbogenerators-main, including turbine and generator, field rheostats and electric connections for self-excited units.
22. Water screens and motors.
23. Moisture separator for turbine steam.
24. Turbine lubricating oil (initial charge).

315 Accessory Electric Equipment

This account shall include the cost installed of auxiliary generating apparatus, conversion equipment, and equipment used primarily in connection with the control and switching of electric energy produced by steam power, and the protection of electric circuits and equipment, except electric motors used to drive equipment included in other accounts. Such motors shall be included in the account in which the equipment with which they are associated is included.

1. Auxiliary generators, including boards, compartments, switching equipment, control equipment, and connections to auxiliary power bus.
2. Excitation system, including motor, turbine and dual-drive exciter sets and rheostats, storage batteries and charging equipment, circuit breakers, panels and accessories, knife switches and accessories, surge arresters, instrument shunts, conductors and conduit, special supports for conduit, generator field and exciter switch panels, exciter bus tie panels, generator and exciter rheostats and special housing and protective screens.
3. Generator main connections, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, current transformers, potential transformers, protective relays, isolated panels and equipment, conductors and conduit, special supports for generator main leads, grounding switch, and special housings and protective screens.
4. Station buses including main, auxiliary, transfer, synchronizing and fault ground buses, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, reactors and accessories, voltage regulators and accessories, compensators, resistors, starting transformers, current transformers, potential transformers, protective relays, storage batteries and charging equipment, isolated panels and equipment, conductors and conduit, special supports, special housings, concrete pads, general station grounding system, special fire-extinguishing system, and test equipment.
5. Station control system, including station switchboards with panel wiring, panels with instruments and control equipment only, panels with switching equipment mounted or mechanically connected, truck-type boards complete, cubicles, station supervisory control boards, generator and exciter signal stands, temperature recording devices, frequency-control equipment, master clocks, watt-hour meters and synchronoscope in the turbine room, station totalizing wattmeter, boiler-room load indicator.
§ 1767.20

equipment, storage batteries, panels and charging sets, instrument transformers for supervisory metering, conductors and conduit, special supports for conduit, switchboards, batteries, special housing for batteries, protective screens, and doors.

NOTE A: Do not include in this account transformers and other equipment used for changing the voltage or frequency of electricity for the purposes of transmission or distribution.

NOTE B: When any item of equipment listed herein is used wholly to furnish power to equipment included in another account, its cost shall be included in such other account.

316 Miscellaneous Power Plant Equipment

This account shall include the cost installed of miscellaneous equipment in and about the steam generating plant devoted to general station use, and which is not properly includible in any of the foregoing steam-power production accounts.

Items

1. Compressed air and vacuum cleaning systems, including tanks, compressors, exhausters, air filters, and piping.
2. Cranes and hoisting equipment, including cranes, cars, crane rails, monorails, and hoists with electric and mechanical connections.
3. Fire-extinguishing equipment for general station use.
4. Foundations and settings specially constructed for and not expected to outlast the apparatus for which provided.
5. Locomotive cranes not includible elsewhere.
7. Marine equipment, including boats and barges.
8. Miscellaneous belts, pulleys, and countershafts.
9. Miscellaneous equipment, including atmospheric and weather indicating devices, intrasite communication equipment, laboratory equipment, signal systems, callophones, emergency whistles and sirens, fire alarms, insect-control equipment, and other similar equipment.
10. Railway cars not includible elsewhere.
11. Refrigerating systems, including compressors, pumps, and cooling coils.
12. Station maintenance equipment, including lathes, shapers, planers, drill presses, hydraulic presses, and grinders with motors, shafting, hangers, and pulleys.
13. Ventilating equipment, including items wholly identified with apparatus listed herein.

NOTE: When any item of equipment listed herein is wholly used in connection with equipment included in another account, its cost shall be included in such other account.

Nuclear Production

320 Land and Land Rights

This account shall include the cost of land and land rights used in connection with nuclear power generation. (See §1767.16(g).)

321 Structures and Improvements

This account shall include the cost, in place, of structures and improvements used and useful in connection with nuclear power generation. (See §1767.16 (h).)

NOTE: Include vapor containers and nuclear production roads and railroads in this account.

322 Reactor Plant Equipment

This account shall include the installed cost of reactors, reactor fuel handling and storage equipment, pressurizing equipment, coolant charging equipment, purification and discharging equipment, radioactive waste treatment and disposal equipment, boilers, steam and feed water piping, reactor and boiler apparatus and accessories and other reactor plant equipment used in the production of steam to be used primarily for generating electricity, including auxiliary superheat boilers and associated equipment in systems which change temperatures or pressure of steam from the reactor system.
Items

1. Auxiliary superheat boilers and associated fuel storage handling preparation and burning equipment. (See Account 312, Boiler Plant Equipment, for items, but exclude water supply, water flow lines, and steam lines, as well as other equipment not strictly within the superheat function.)

2. Boiler feed system, including feed water heaters, evaporator condensers, heater drain pumps, heater drainers, deaerators, and vent condensers, boiler feed pumps, surge tanks, feed water regulators, feed water measuring equipment, and all associated drivers.

4. Instruments and devices, including all measuring, indicating, and recording equipment for reactor and boiler plant service together with mountings and supports.

5. Lighting systems.

6. Moderators, such as heavy water, and graphite, initial charge.

7. Reactor coolant; primary and secondary systems, initial charge.

8. Radioactive waste treatment and disposal equipment, including tanks, ion exchangers, incinerators, condensers, chimneys, and diluting fans and pumps.

9. Foundations and settings, especially constructed for and not expected to outlast the apparatus for which provided.

10. Reactor including shielding, control rods and mechanisms.

11. Reactor fuel handling equipment, including manipulating and extraction tools, underwater viewing equipment, seal cutting and welding equipment, fuel transfer equipment, and fuel disassembly machinery.

12. Reactor fuel element failure detection system.

13. Reactor emergency poison container and injection system.

14. Reactor pressuring and pressure relief equipment, including pressurizing tanks and immersion heaters.

15. Reactor coolant or moderator circulation charging, purification, and discharging equipment, including tanks, pumps, heat exchangers, demineralizers, and storage.

16. Station piping, including pipes, valves, fittings, separators, traps, desuperheaters, hangers, excavation, and covering for station piping system, including all-reactor coolant, steam, condensate, boiler feed and water supply piping, but not condensing water, plumbing, building heating, oil, gas, or air piping.

17. Ventilating equipment.

18. Water purification equipment, including softeners, demineralizers and accessories, evaporators and accessories, heat exchangers, filters, tanks for filtered or softened water, pumps, and motors.

19. Water supply systems, including pumps, motors, strainers, raw-water storage tanks, boiler wash pumps, intake and discharge pipes and tunnels not a part of a building.

20. Reactor plant cranes and hoists, and associated drives.

NOTE: When the system for supplying boiler or condenser water is elaborate, as when it includes a dam, reservoir, canal, pipe lines, or cooling ponds, the cost of such special facilities shall be charged to a subdivision of Account 321, Structures and Improvements.

323 Turbogenerator Units

This account shall include the cost installed of main turbine-driven units and accessory equipment used in generating electricity by steam.

Items

1. Air cleaning and cooling apparatus, including blowers, drive equipment, air ducts, not a part of building, louvers, pumps, and hoods.

2. Circulating pumps, including connections between condensers, and intake and discharge tunnels.

3. Condensers, including condensate pumps, air and vacuum pumps, ejectors, unloading valves and vacuum breakers, expansion devices, and screens.

4. Generator hydrogen gas piping system and hydrogen detrainment equipment, and bulk hydrogen gas storage equipment.

5. Cooling system, including towers, pumps, tanks, and piping.

6. Cranes and hoists, including items wholly identified with items listed herein.

7. Excitation system, when identified with main generating units.

8. Fire extinguishing systems.
9. Foundations and settings, especially constructed for and not expected to outlast the apparatus for which provided.
10. Governors.
11. Lighting systems.
12. Lubricating systems, including gauges, filters, water separators, tanks, pumps, piping, and motors.
13. Mechanical meters, including gauges, recording instruments, sampling and testing equipment.
14. Piping-main steam, including connections between turbogenerator and condenser and between condenser and hotwell.
15. Piping-main steam, including connections from main throttle valve to turbine inlet.
16. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
17. Pressure oil systems, including accumulators, pumps, piping, and motors.
18. Steelwork, specially constructed for apparatus listed herein.
19. Throttle and inlet valve.
20. Tunnels, intake and discharge, for condenser system, when not a part of structure, and water screens.
21. Turbogenerators-main, including turbine and generator, field rheostats and electric connections for self-excited units.
22. Water screens and motors.
23. Moisture separators for turbine steam.
24. Turbine lubricating oil, initial charge.

324 Accessory Electric Equipment

This account shall include the cost installed of auxiliary generating apparatus, conversion equipment, and equipment used primarily in connection with the control and switching of electric energy produced by nuclear power, and the protection of electric circuits and equipment, except electric motors used to drive equipment included in other accounts. Such motors shall be included in the account in which the equipment with which they are associated is included.

NOTE: Do not include in this account transformers and other equipment used for changing the voltage or frequency of electric energy for the purpose of transmission or distribution.

1. Auxiliary generators, including boards, compartments, switching equipment, control equipment, and connections to auxiliary power bus.
2. Excitation system, including motor, turbine and dual-drive exciter sets and rheostats, storage batteries, and charging equipment, circuit breakers, panels and accessories, knife switches and accessories, surge arresters, instrument shunts, conductors and conduit, special supports for conduit, generator field and exciter switch panels, exciter bus tie panels, generator and exciter rheostats and special housing and protective screens.
3. Generator main connections, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, current transformers, potential transformers, protective relays, isolated panels and equipment, conductors and conduit, special supports for generator main leads, grounding switch, special housings and protective screens.
4. Station buses, including main, auxiliary, transfer, synchronizing and fault ground buses, including oil circuit breakers and accessories, operating mechanisms and interlocks, reactors and accessories, voltage regulators and accessories, compensators, resistors, starting transformers, current transformers, potential transformers, protective relays, storage batteries and charging equipment, isolated panels and equipment, conductors and conduit, special supports, special housings, concrete pads, general station grounding system, fire-extinguishing system, and test equipment.
5. Station control system, including station switchboards with panel wiring, panels with instruments and control equipment only, panels with switching equipment mounted or mechanically connected, truck-type boards complete, cubicles, station supervisory control boards, generator and exciter signal stands, temperature recording devices, frequency-control equipment, master clocks, watt-hour
meters and synchronoscope in the turbine room, station totalizing wattmeter, boiler-room load indicator equipment, storage batteries, panels and charging sets, instrument transformers for supervisory metering, conductors and conduit, special supports for conduit, switchboards, batteries, special housing for batteries, protective screens, and doors.

**NOTE:** When any item of equipment listed herein is used wholly to furnish power to equipment included in another account, its cost shall be included in such other account.

### 325 Miscellaneous Power Plant Equipment

This account shall include the cost installed of miscellaneous equipment in and about the nuclear generating plant devoted to general station use, which is not properly includible in any of the foregoing nuclear-power production accounts.

**Items**

1. Compressed air and vacuum cleaning systems, including tanks, compressors, exhaustors, air filters, and piping.
2. Cranes and hoisting equipment, including cranes, cars, crane rails, monorails, and hoists with electric and mechanical connections.
3. Fire-extinguishing equipment for general station and site use.
4. Foundations and settings specially constructed for and not expected to outlast the apparatus for which provided.
5. Locomotive cranes not includible elsewhere.
6. Locomotives not included elsewhere.
7. Marine equipment, including boats and barges.
8. Miscellaneous belts, pulleys, and countershafts.
9. Miscellaneous equipment, including atmospheric and weather recording devices, intrasite communication equipment, laboratory equipment, signal systems, calophones, emergency whistles and sirens, fire alarms, insect-control equipment, and other similar equipment.
10. Railway cars or special shipping containers not includible elsewhere.
11. Refrigerating systems, including compressors, pumps, and cooling coils.
12. Station maintenance equipment, including lathes, shapers, planers, drill presses, hydraulic presses, and grinders with motors, shafting, hangers, and pulleys.
13. Ventilating equipment, including items wholly identified with apparatus listed herein.
14. Station and area radiation monitoring equipment.

**NOTE:** When any item of equipment listed herein is wholly used in connection with equipment included in another account, its cost shall be included in such other account.

### Hydraulic Production

#### 330 Land and Land Rights

This account shall include the cost of land and land rights used in connection with hydraulic power generation. (See §1767.16 (g).) It shall also include the cost of land and land rights used in connection with (1) the conservation of fish and wildlife, and (2) recreation. Separate subaccounts shall be maintained for each of the above.

#### 331 Structures and Improvements

This account shall include the cost, in place, of structures and improvements used in connection with hydraulic power generation. (See §1767.16 (h).) It shall also include the cost, in place, of structures and improvements used in connection with (1) the conservation of fish and wildlife, and (2) recreation. Separate subaccounts shall be maintained for each of the above.

#### 332 Reservoirs, Dams, and Waterways

This account shall include the cost in place of facilities used for impounding, collecting, storage, diversion, regulation, and delivery of water used primarily for generating electricity. It shall also include the cost in place of facilities used in connection with (1) the conservation of fish and wildlife, and (2) recreation. Separate subaccounts shall be maintained for each of the above. (See §1767.16 (h)(3).)

**Items**

1. Bridges and culverts, when not a part of roads or railroads.
§ 1767.20

2. Clearing and preparing land.
3. Dams, including wasteways, spillways, flash boards, spillway gates with operating and control mechanisms, tunnels, gate houses, and fish ladders.
4. Dikes and embankments.
5. Electric system, including conductors, control system, transformers, and lighting fixtures.
6. Excavation, including shoring, bracing, bridging, refill, and disposal of excess excavated material.
7. Foundations and settings specially constructed for and not expected to outlast the apparatus for which provided.
8. Intakes, including trash racks, rack cleaners, control gates and valves with operating mechanisms, and intake house when not a part of station structure.
9. Platforms, railings, steps, and gratings appurtenant to structures listed herein.
10. Power line wholly identified with items included herein.
11. Retaining walls.
12. Water conductors and accessories, including canals, tunnels, flumes, penstocks, pipe conductors, forebays, tailraces, navigation locks and operating mechanisms, water-hammer and surge tanks, and supporting trestles and structures.
13. Water storage reservoirs, including dams, flashboards, spillway gates and operating mechanisms, inlet and outlet tunnels, regulating valves and valve towers, silt and mud sluicing tunnels with valve or gate towers, and all other structures wholly identified with any of the foregoing items.

333 Water Wheels, Turbines and Generators

This account shall include the cost installed of water wheels and hydraulic turbines (from connection with penstock or flume to tailrace) and generators driven thereby devoted to the production of electricity by water power or for the production of power for industrial or other purposes, if the equipment used for such purposes is a part of the hydraulic power plant works.

1. Exciter water wheels and turbines, including runners, gates, governors, pressure regulators, oil pumps, operating mechanisms, scroll cases, draft tubes, and draft-tube supports.
2. Fire-extinguishing equipment.
3. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.
4. Generator cooling system, including air cooling and washing apparatus, air fans and accessories, and air ducts.
5. Generators-main, a.c. or d.c., including field rheostats and connections for self-excited units and excitation system when identified with the generating unit.
6. Lighting systems.
7. Lubricating systems, including gauges, filters, tanks, pumps, and piping.
8. Main penstock valves and appurtenances, including main valves, control equipment, bypass valves and fittings, and other accessories.
9. Main turbines and water wheels, including runners, gates, governors, pressure regulators, oil pumps, operating mechanisms, scroll cases, draft tubes, and draft-tube supports.
10. Mechanical meters and recording instruments.
11. Miscellaneous water-wheel equipment, including gauges, thermometers, meters, and other instruments.
12. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
13. Scroll case filling and drain system, including gates, pipe, valves, and fittings.
14. Water-actuated pressure-regulator system, including tanks and housings, pipes, valves, fittings and insulators, piers and anchorage, and excavation and backfill.

334 Accessory Electric Equipment

This account shall include the cost installed of auxiliary generating apparatus, conversion equipment, and equipment used primarily in connection with the control and switching of electric energy produced by hydraulic power and the protection of electric circuits and equipment, except electric
motors used to drive equipment included in other accounts, such motors being included in the account in which the equipment with which they are associated is included.

**Items**

1. Auxiliary generators, including boards, compartments, switching equipment, control equipment, and connections to auxiliary power bus.

2. Excitation system, including motor, turbine, and dual-drive exciter sets and rheostats, storage batteries and charging equipment, circuit breakers, panels and accessories, knife switches and accessories, surge arresters, instrument shunts, conductors and conduit, special supports for conduit, generator field and exciter switch panels, exciter bus tie panels, generator and exciter rheostats and special housings and protective screens.

3. Generator main connections, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, current transformers, potential transformers, protective relays, isolated panels and equipment, conductors and conduit, special supports for generator main leads, grounding switch, and special housings and protective screens.

4. Station buses, including main, auxiliary, transfer, synchronizing, and fault ground buses, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, reactors and accessories, voltage regulators and accessories, compensators, resistors starting transformers, current transformers, potential transformers, protective relays, storage batteries, and charging equipment, isolated panels and equipment, conductors and conduit, special supports, special fire-extinguishing system, and test equipment.

5. Station control system, including station switchboards with panel wiring, panels with instruments and control equipment only, panels with switching equipment mounted for mechanically connected, truck-type boards complete, cubicles, station supervisory control devices, frequency control equipment, master clocks, watt-hour meter, station totalizing watt-meter, storage batteries, panels and charging sets, instrument transformers for supervisory metering, conductors and conduit, special supports for conduit, switchboards, batteries, special housings for batteries, protective screens, and doors.

**NOTE A:** Do not include in this account transformers and other equipment used for changing the voltage or frequency of electricity for the purpose of transmission or distribution.

**NOTE B:** When any item of equipment listed herein is used wholly to furnish power to equipment, it shall be included in such equipment account.

### 335 Miscellaneous Power Plant Equipment

This account shall include the cost installed of miscellaneous equipment in and about the hydroelectric generating plant which is devoted to general station use and is not properly includable in other hydraulic production accounts. It shall also include the cost of equipment used in connection with (1) the conservation of fish and wildlife, and (2) recreation. Separate sub-accounts shall be maintained for each of the above.

**Items**

1. Compressed air and vacuum cleaning systems, including tanks, compressors, exhausters, air filters, and piping.

2. Cranes and hoisting equipment, including cranes, cars, crane rails, monorails, and hoists with electric and mechanical connections.

3. Fire-extinguishing equipment for general station use.

4. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.

5. Locomotive cranes not includable elsewhere.

7. Marine equipment, including boats and barges.

8. Miscellaneous belts, pulleys, and countershafts.

9. Miscellaneous equipment, including atmospheric and weather indicating devices. Intrasis communication
§ 1767.20

equipment, laboratory equipment, insect control equipment, signal systems, callophones, emergency whistles and sirens, fire alarms, and other similar equipment.

10. Railway cars, not includible elsewhere.

11. Refrigerating system, including compressors, pumps, and cooling coils.

12. Station maintenance equipment, including lathes, shapers, planers, drill presses, hydraulic presses, and grinders with motors, shafting, hangers, and pulleys.

13. Ventilating equipment, including items wholly identified with apparatus listed herein.

NOTE: When any item of equipment, listed herein, is used wholly in connection with equipment included in another account, its cost shall be included in such other account.

336 Roads, Railroads, and Bridges

This account shall include the cost of roads, railroads, trails, bridges, and trestles used primarily as production facilities. It also includes those roads necessary to connect the plant with highway transportation systems, except when such roads are dedicated to public use and maintained by public authorities.

Items

1. Bridges, including foundations, piers, girders, trusses, and flooring.
2. Clearing land.
3. Railroads, including grading, ballast, ties, rails, culverts, and hoists.
4. Roads, including grading, surfacing, and culverts.
5. Structures, constructed and maintained in connection with items listed herein.
6. Trails, including grading, surfacing, and culverts.
7. Trestles, including foundations, piers, girders, trusses, and flooring.

NOTE A: Roads intended primarily for connecting employees' houses with the power plant, and roads used primarily in connection with fish and wildlife, and recreation activities, shall not be included herein but in Account 331, Structures and Improvements.

NOTE B: The cost of temporary roads and bridges necessary during the period of construction but abandoned or dedicated to public use upon completion of the plant, shall not be included herein but shall be charged to the accounts appropriate for the construction.

Other Production

340 Land and Land Rights

This account shall include the cost of land and land rights used in connection with other power generation. (See §1767.16 (g).)

341 Structures and Improvements

This account shall include the cost in place of structures and improvements used in connection with other power generation. (See §1767.16 (h).)

342 Fuel Holders, Producers, and Accessories

This account shall include the cost installed of fuel handling and storage equipment used between the point of fuel delivery to the station and the intake pipe through which fuel is directly drawn to the engine, also the cost of gas producers and accessories devoted to the production of gas for use in prime movers driving main electric generators.

Items

1. Blower and fans.
2. Boilers and pumps.
3. Economizers.
4. Exhauster outfits.
5. Flues and piping.
6. Pipe system.
7. Producers.
8. Regenerators.
10. Steam injectors.
11. Tanks for storage of oil and gasoline.
12. Vaporizers.

343 Prime Movers

This account shall include the cost installed of Diesel or other prime movers devoted to the generation of electric energy, together with their auxiliaries.

Items

1. Air-filtering system.
2. Belting, shafting, pulleys, and reduction gearing.
3. Cooling system, including towers, pumps, tanks, and piping.
4. Cranes and hoists, including items wholly identified with apparatus listed herein.
5. Engines, Diesel, gasoline, gas, or other internal combustion.
6. Foundations and settings specially constructed for and not expected to outlast the apparatus for which provided.
7. Governors.
8. Ignition system.
9. Inlet valve.
10. Lighting systems.
11. Lubricating systems, including filters, tanks, pumps, and piping.
12. Mechanical meters, including gauges, recording instruments, sampling, and testing equipment.
15. Starting systems, compressed air, or other, including compressors and drives, tanks, piping, motors, boards and connections, and storage tanks.
16. Steelwork, specially constructed for apparatus listed herein.
17. Waste heat boilers and antifluctuators.

344 Generators

This account shall include the cost installed of Diesel or other power driven main generators.

Items
1. Cranes and hoists, including items wholly identified with such apparatus.
2. Fire-extinguishing equipment.
3. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.
4. Generator cooling system, including air cooling and washing apparatus, air fans and accessories, and air ducts.
5. Generators-main, a.c. or d.c., including field rheostats and connections for self-excited units and excitation system when identified with the generating unit.
6. Lighting systems.
7. Lubricating system, including tanks, filters, strainers, pumps, piping, and coolers.
8. Mechanical meters and recording instruments.
boards complete, cubicles, station supervisory control boards, generator and exciter signal stands, temperature-recording devices, frequency control equipment, master clocks, watt-hour meter, station totalizing wattmeter, storage batteries, panels and charging sets, instrument transformers for supervisory metering, conductors and conduit, special supports for conduit, switchboards, batteries, special housing for batteries, protective screens, and doors.

5. Station buses, including main, auxiliary, transfer, synchronizing and fault ground buses, including oil circuit breakers and accessories, disconnecting switches and accessories, operating mechanisms and interlocks, reactors and accessories, voltage regulators and accessories, compensators, resistors, starting transformers, current transformers, potential transformers, protective relays, storage batteries and charging equipment, isolated panels and equipment, conductors and conduit, special supports, special housings, concrete pads, general station ground system, special fire-extinguishing system, and test equipment.

NOTE A: Do not include in this account transformers and other equipment used for changing the voltage or frequency of electric energy for the purpose of transmission or distribution.

NOTE B: When any item of equipment listed herein is used wholly to furnish power to equipment included in another account, its cost shall be included in such other account.

3. Fire-extinguishing equipment for general station use.
4. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.
5. Miscellaneous equipment, including atmospheric and weather indicating devices, intrasite communication equipment, laboratory equipment, signal systems, callophones, emergency whistles and sirens, fire alarms, and other similar equipment.
6. Miscellaneous belts, pulleys, and countershafts.
7. Refrigerating systems including compressors, pumps, and cooling coils.
8. Station maintenance equipment, including lathes, shapers, planters, drill presses, hydraulic presses, and grinders with motors, shafting, hangers, or pulleys.
9. Ventilating equipment, including items wholly identified with apparatus listed herein.

NOTE: When any item of equipment, listed herein is used wholly in connection with equipment included in another account, its cost shall be included in such other account.

TRANSMISSION PLANT

350 Land and Land Rights
This account shall include the cost of land and land rights used in connection with transmission operations. (See §1767.16 (g).)

351 [Reserved]

352 Structures and Improvements
This account shall include the cost, in place, of structures and improvements used in connection with transmission operations. (See §1767.16 (h).)

353 Station Equipment
This account shall include the cost installed of transforming, conversion, and switching equipment used for the purpose of changing the characteristics of electricity in connection with its transmission or for controlling transmission circuits.
Rural Utilities Service, USDA  § 1767.20

Items
1. Bus compartments, concrete, brick, and sectional steel, including items permanently attached thereto.
2. Conduit, including concrete and iron duct runs not a part of a building.
3. Control equipment, including batteries, battery charging equipment, transformers, remote relay boards, and connections.
4. Conversion equipment, including transformers, indoor and outdoor, frequency changers, motor generator sets, rectifiers, synchronous converters, motors, cooling equipment, and associated connections.
5. Fences.
6. Fixed and synchronous condensers, including transformers, switching equipment, blowers, motors and connections.
7. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.
8. General station equipment, including air compressors, motors, hoists, cranes, test equipment, and ventilating equipment.
9. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
10. Primary and secondary voltage connections, including bus runs and supports, insulators, pothead, lightning arresters, cable and wire runs from and to outdoor connections or to manholes and the associated regulators, reactors, resistors, surge arresters, and accessory equipment.
11. Switchboards, including meters, relays, and control wiring.
12. Switching equipment, indoor and outdoor, including oil circuit breakers and operating mechanisms, truck switches, and disconnect switches.

354 Towers and Fixtures
This account shall include the cost installed of towers and appurtenant fixtures used for supporting overhead transmission conductors.

Items
1. Anchors, guys, and braces.
2. Brackets.
3. Crossarms, including braces.
4. Excavation, backfill, and disposal of excess excavated material.
5. Foundations.
7. Insulator pins and suspension bolts.
8. Ladder and steps.
9. Railings.
10. Towers.

355 Poles and Fixtures
This account shall include the cost installed of transmission line poles, wood, steel, concrete, or other material, together with appurtenant fixtures used for supporting overhead transmission conductors.

Items
1. Anchors, head arm and other guys, including guy guards, guy clamps, strain insulators, and pole plates.
2. Brackets.
3. Crossarms and braces.
4. Excavation and backfill, including disposal of excess excavated material.
5. Extension arms.
6. Gaining, roofing, stenciling, and tagging.
7. Insulator pins and suspension bolts.
8. Paving.
9. Pole steps.
10. Poles, wood, steel, concrete, or other material.
11. Racks complete with insulators.
12. Reinforcing and stubbing.

356 Overhead Conductors and Devices
This account shall include the cost installed of overhead conductors and devices used for transmission purposes.

Items
1. Circuit breakers.
2. Conductors, including insulated and bare wires and cables.
3. Ground wires and ground clamps.
4. Insulators, including pin, suspension, and other types.
5. Lightning arresters.
7. Other line devices.
§ 1767.20

357 Underground Conduit

This account shall include the cost installed of underground conduit and tunnels used for housing transmission cables or wires. (See § 1767.16(n).)

Items
1. Conduit, concrete, brick or tile, including iron pipe, fiber pipe, Murray duct, and standpipe on pole or tower.
2. Excavation, including shoring, bracing, bridging, backfill, and disposal of excess excavated material.
3. Foundations and settings specially constructed for and not expected to outlast the apparatus for which provided.
4. Lighting systems.
5. Manholes, concrete or brick, including iron or steel, frames and covers, hatchways, gratings, ladders, cable racks and hangers, permanently attached to manholes.
6. Municipal inspection.
7. Pavement disturbed, including cutting and replacing pavement, pavement base and sidewalks.
8. Permits.
10. Removal and relocation of subsurface obstructions.
11. Sewer connections, including drains, traps, tide valves, and check valves.
12. Sumps, including pumps.
13. Ventilating equipment.

358 Underground Conductors and Devices

This account shall include the cost installed of underground conductors and devices used for transmission purposes.

Items
1. Armored conductors, buried, including insulators, insulating materials, splices, potheads, and trenching.
2. Armored conductors, submarine, including insulators, insulating materials, splices in terminal chambers, and potheads.
3. Cables in standpipe, including pothead and connection from terminal chamber of manhole to insulators on pole.
5. Fireproofing, in connection with any items listed herein.
6. Hollow-core oil-filled cable, including straight or stop joints, pressure tanks, auxiliary air tanks, feeding tanks, terminals, potheads and connections, and ventilating equipment.
7. Lead and fabric covered conductors, including insulators, compound filled, oil filled, or vacuum splices, and potheads.
8. Lightning arresters.
9. Municipal inspection.
11. Protection of street openings.
12. Racking of cables.
14. Other line devices.

359 Roads and Trails

This account shall include the cost of roads, trails, and bridges used primarily as transmission facilities.

Items
1. Bridges, including foundation piers, girders, trusses, and flooring.
2. Clearing land.
3. Roads, including grading, surfacing, and culverts.
4. Structures, constructed and maintained in connection with items included herein.
5. Trails, including grading, surfacing, and culverts.

NOTE: The cost of temporary roads, and bridges necessary during the period of construction but abandoned or dedicated to public use upon completion of the plant, shall be charged to the accounts appropriate for the construction.

DISTRIBUTION PLANT

360 Land and Land Rights

This account shall include the cost of land and land rights used in connection with distribution operations. (See § 1767.16(g).)

NOTE: Do not include the cost of permits to erect poles, or towers or to trim trees in this account. (See Account 364, Poles, Towers and Fixtures, and Account 365, Overhead Conductors and Devices.)
§ 1767.20

361 Structures and Improvements

This account shall include the cost, in place, of structures and improvements used in connection with distribution operations. (See § 1767.16 (h).)

362 Station Equipment

This account shall include the cost installed of station equipment, including transformer banks, which are used for the purpose of changing the characteristics of electricity in connection with its distribution.

Items

1. Bus compartments, concrete, brick and sectional steel, including items permanently attached thereto.
2. Conduit, including concrete and iron duct runs not part of building.
3. Control equipment, including batteries, battery charging equipment, transformers, remote relay boards, and connections.
4. Conversion equipment, indoor and outdoor, frequency changers, motor generator sets, rectifiers, synchronous converters, motors, cooling equipment, and associated connections.
5. Fences.
6. Fixed and synchronous condensers, including transformers, switching equipment, blowers, motors, and connections.
7. Foundations and settings, specially constructed for and not expected to outlast the apparatus for which provided.
8. General station equipment, including air compressors, motors, hoists, cranes, test equipment, and ventilating equipment.
9. Platforms, railings, steps, and gratings appurtenant to apparatus listed herein.
10. Primary and secondary voltage connections, including bus runs and supports, insulators, potheads, lightning arresters, cable and wire runs from and to outdoor connections or to manholes and the associated regulators, reactors, resistors, surge arresters, and accessory equipment.
11. Switchboards, including meters, relays, and control wiring.
12. Switching equipment, indoor and outdoor, including oil circuit breakers and operating mechanisms, truck switches, disconnect switches.

Note: The cost of rectifiers, series transformers, and other special station equipment devoted exclusively to street lighting service shall not be included in this account, but in Account 373, Street Lighting and Signal Systems.

363 Storage Battery Equipment

This account shall include the cost installed of storage battery equipment used for the purpose of supplying electricity to meet emergency or peak demands.

Items

1. Batteries, including elements, tanks, and tank insulators.
2. Battery room connections, including cable or bus runs and connections.
3. Battery room flooring, when specially laid for supporting batteries.
4. Charging equipment, including motor generator sets and other charging equipment and connections, and cable runs from generator or station bus to battery room connections.
5. Miscellaneous equipment, including instruments, and water stills.
6. Switching equipment, including endcell switches and connections, boards and panels, used exclusively for battery control, not part of general station switchboard.
7. Ventilating equipment, including fans and motors, louvers, and ducts not part of building.

Note: Storage batteries used for control and general station purposes shall not be included in this account but in the account appropriate for their use.

364 Poles, Towers and Fixtures

This account shall include the cost installed of poles, towers, and appurtenant fixtures used for supporting overhead distribution conductors and service wires.

Items

1. Anchors, head arm, and other guys, including guy guards, guy clamps, strain insulators, and pole plates.
2. Brackets.
3. Crossarms and braces.
4. Excavation and backfill, including disposal of excess excavated material.
5. Extension arms.
§ 1767.20

7. Guards.
8. Insulator pins and suspension bolts.
9. Paving.
11. Pole steps and ladders.
12. Poles, wood, steel, concrete, or other material.
13. Racks complete with insulators.
15. Reinforcing and stubbing.
17. Shaving, painting, gaining, roofing, stenciling, and tagging.
18. Towers.
19. Transformer racks and platforms.

365 Overhead Conductors and Devices
This account shall include the cost installed of overhead conductors and devices used for distribution purposes.

Items

1. Circuit breakers.
2. Conductors, including insulated and bare wires and cables.
3. Ground wires and clamps.
4. Insulators, including pin, suspension, and other types, and tie wire or clamps.
5. Lightning arresters.
6. Railroad and highway crossing guards.
7. Splices.
8. Switches.
9. Tree trimming, initial cost including the cost of permits therefor.
10. Other line devices.
11. Oil circuit reclosers (OCR).
12. Sectionalizers.
13. Labor costs for installation of OCRs and Sectionalizers, first only.

NOTE: The cost of conductors used solely for street lighting or signal systems shall be included in Account 373, Street Lighting and Signal Systems.

366 Underground Conduit
This account shall include the cost installed of underground conduit and tunnels used for housing distribution cables or wires.

7 CFR Ch. XVII (1-1-98 Edition)

Items

1. Conduit, concrete, brick and tile, including iron pipe, fiber pipe, Murray duct, and standpipe on pole or tower.
2. Excavation, including shoring, bracing, bridging, backfill, and disposal of excess excavated material.
3. Foundations and settings specially constructed for and not expected to outlast the apparatus for which constructed.
4. Lighting systems.
5. Manholes, concrete or brick, including iron or steel frames and covers, hatchways, gratings, ladders, cable racks, and hangers permanently attached to manholes.
6. Municipal inspection.
7. Pavement disturbed, including cutting and replacing pavement, pavement base, and sidewalks.
8. Permits.
10. Removal and relocation of subsurface obstructions.
11. Sewer connections, including drains, traps, tide valves, and check valves.
12. Sumps, including pumps.
13. Ventilating equipment.

NOTE: The cost of underground conduit used solely for street lighting or signal systems shall be included in Account 373, Street Lighting and Signal Systems.

367 Underground Conductors and Devices
This account shall include the cost installed of underground conductors and devices used for distribution purposes.

Items

1. Armored conductors, buried, including insulators, insulating materials, splices, potheads, and trenching.
2. Armored conductors, submarine, including insulators, insulating materials, splices in terminal chamber, and potheads.
3. Cables in standpipe, including pothead and connection from terminal chamber or manhole to insulators on pole.
5. Fireproofing, in connection with any items listed herein.
§ 1767.20

6. Hollow-core oil-filled cable, including straight or stop joints, pressure tanks, auxiliary air tanks, feeding tanks, terminals, potheads and connections.

7. Lead and fabric covered conductors, including insulators, compound-filled, oil-filled or vacuum splices, and potheads.

8. Lightning arresters.

9. Municipal inspection.

11. Protection of street openings.

12. Racking of cables.

14. Other line devices.

NOTE: The cost of underground conductors and devices used solely for street lighting or signal systems shall be included in Account 373, Street Lighting and Signal Systems.

368 Line Transformers

A. This account shall include the cost installed of overhead and underground distribution line transformers and pole-type and underground voltage regulators owned by the utility, for use in transforming electricity to the voltage at which it is to be used by the customer, whether actually in service or held in reserve.

B. When a transformer is permanently retired from service, the original installed cost thereof shall be credited to this account.

C. The records covering line transformers shall be so kept that the utility can furnish the number of transformers of various capacities in service and those in reserve, and the location and the use of each transfer.

Items

1. Installation, labor of (first installation only).

2. Transformer cut-out boxes.

3. Transformer lightning arresters.

4. Transformers, line and network.

5. Capacitors.

7. Voltage regulators.

NOTE: The cost of removing and resetting line transformers shall not be charged to this account but to Account 583, Overhead Line Expenses, or Account 584, Underground Line Expenses, as appropriate. The cost of line transformers used solely for street lighting or signal systems shall be included in Account 373, Street Lighting and Signal Systems.

369 Services

This account shall include the cost installed of overhead and underground conductors leading from a point where wires leave the last pole of the overhead system or the distribution box or manhole, or the top of the pole of the distribution line, to the point of connection with the customer's outlet or wiring. Conduit used for underground service conductors shall be included herein.

Items

1. Brackets.

2. Cables and wires.

3. Conduit.

4. Insulators.

5. Municipal inspection.

6. Overhead to underground, including conduit or standpipe and conductor from last splice on pole to connection with customer's wiring.

7. Pavement disturbed, including cutting and replacing pavement, pavement base, and sidewalks.

8. Permits.

10. Service switch.

11. Suspension wire.

370 Meters

A. This account shall include the cost installed of meters or devices and appurtenances thereto, for use in measuring the electricity delivered to its users, whether actually in service or held in reserve.

B. When a meter is permanently retired from service, the installed cost included herein shall be credited to this account.

C. The records covering meters shall be so kept that the utility can furnish information as to the number of meters of various capacities in service and in reserve as well as the location of each meter owned.

Items

1. Alternate current, watt-hour meters.

2. Current limiting devices.

3. Demand indicators.

4. Demand meters.
§ 1767.20

5. Direct current watt-hour meters.
6. Graphic demand meters.
7. Installation, labor of (first installation only).
8. Instrument transformers.
10. Meter badges and their attachments.
11. Meter boards and boxes.
12. Meter fittings, connections, and shelves (first set).
13. Meter switches and cut-outs.
15. Protective devices.

Note A: This account shall not include meters for recording output of a generating station, or substation meters. It includes only those meters used to record energy delivered to customers.

Note B: The cost of removing and resetting meters shall be charged to Account 586, Meter Expenses.

371 Installations on Customers’ Premises

This account shall include the cost installed of equipment on the customer’s side of a meter when the utility incurs such cost and when the utility retains title to and assumes full responsibility for maintenance and replacement of such property. This account shall not include leased equipment. (See Account 372, Leased Property on Customers’ Premises.)

Items

1. Cable vaults.
2. Commercial lamp equipment.
3. Foundations and settings specially provided for equipment included herein.
4. Frequency changer sets.
5. Motor generator sets.
6. Motors.
7. Switchboard panels, high or low tension.
8. Wire and cable connections to incoming cables.

Note: Do not include in this account any costs incurred in connection with merchandising, jobbing, or contract work activities.

372 Leased Property on Customers’ Premises

This account shall include the cost of electric motors, transformers, and other equipment on customers’ premises (including municipal corporations), leased or loaned to customers, but not including property held for sale.

Note A: The cost of setting and connecting such appliances or equipment on the premises of customers and the cost of resetting or removal shall not be charged to this account but to operating expenses, Account 587, Customer Installations Expenses.

Note B: Do not include in this account any costs incurred in connection with merchandising, jobbing, or contract work activities.

373 Street Lighting and Signal Systems

This account shall include the cost installed of equipment used wholly for public street and highway lighting or traffic, fire alarm, police, and other signal systems.

Items

1. Armored conductors, buried or submarine, including insulators, insulating materials, splices, and trenching.
2. Automatic control equipment.
3. Conductors, overhead or underground, including lead or fabric covered, parkway cables, including splices, and insulators.
4. Lamps, arc, incandescent, or other types, including glassware, suspension fixtures, and brackets.
5. Municipal inspection.
6. Ornamental lamp posts.
7. Pavement disturbed, including cutting and replacing pavement, pavement base, and sidewalks.
8. Permits.
11. Relays or time clocks.
12. Series contactors.
14. Transformers, pole or underground.
393 Stores Equipment
This account shall include the cost of equipment used for the receiving, shipping, handling, and storage of materials and supplies.

Items
1. Chain falls.
2. Counters.
4. Elevating and stacking equipment (portable).
5. Hoists.
7. Scales.
8. Shelving.
10. Trucks, hand and power driven.
11. Wheelbarrows.

394 Tools, Shop and Garage Equipment
This account shall include the cost of tools, implements, and equipment used in construction, repair work, general shops and garages and not specifically provided for or includible in other accounts.

Items
1. Air compressors.
2. Anvils.
3. Automobile repair shop equipment.
4. Battery charging equipment.
5. Belts, shafts and countershafts.
7. Cable pulling equipment.
8. Concrete mixers.
10. Derricks.
11. Electric equipment.
12. Engines.
13. Forges.
14. Furnaces.
15. Foundations and settings specially constructed for and not expected to outlast the equipment for which provided.
17. Gasoline pumps, oil pumps, and storage tanks.
18. Greasing tools and equipment.
20. Ladders.
21. Lathes.
23. Motor-driven tools.
24. Motors.
§ 1767.20

25. Pipe threading and cutting tools.
26. Pneumatic tools.
27. Pumps.
28. Riveters.
29. Smithing equipment.
30. Tool racks.
31. Vises.
32. Welding apparatus.
33. Work benches.

395 Laboratory Equipment
This account shall include the cost installed of laboratory equipment used for general laboratory purposes and not specifically provided for or includible in other departmental or functional plant accounts.

Items
1. Ammeters.
2. Current batteries.
3. Frequency changers.
5. Inductometers.
6. Laboratory standard millivolt meters.
7. Laboratory standard volt meters.
8. Meter-testing equipment.
10. Motor generator sets.
11. Panels.
13. Portable graphic ammeters, voltmeters, and wattmeters.
15. Potential batteries.
17. Rotating standards.
20. Synchronous timers.
22. Testing resistors.
23. Transformers.
24. Voltmeters.
25. Other testing, laboratory, or research equipment not provided for elsewhere.

396 Power Operated Equipment
This account shall include the cost of power operated equipment used in construction or repair work exclusive of equipment includible in other accounts. Include, also, the tools and accessories acquired for use with such equipment and the vehicle on which such equipment is mounted.

Items
1. Air compressors, including driving unit and vehicle.
2. Back filling machines.
5. Cranes and hoists.
6. Diggers.
7. Engines.
8. Pile drivers.
10. Pipe coating or wrapping machines.
11. Tractors-Crawler type.
12. Trenchers.
13. Other power operated equipment.

NOTE: It is intended that this account include only such large units as are generally self-propelled or mounted on movable equipment.

397 Communication Equipment
This account shall include the cost installed of telephone, telegraph, and wireless equipment for general use in connection with utility operations.

Items
1. Antennae.
2. Booths.
3. Cables.
4. Distributing boards.
5. Extension cords.
8. Insulators.
9. Intercommunicating sets.
10. Loading coils.
11. Operators' desks.
12. Poles and fixtures used wholly for telephone or telegraph wire.
13. Radio transmitting and receiving sets.
15. Sending keys.
16. Storage batteries.
17. Switchboards.
18. Telautograph circuit connections.
19. Telegraph receiving sets.
20. Telephone and telegraph circuits.
22. Towers.
23. Underground conduit used wholly for telephone or telegraph wires and cable wires.
§ 1767.21 Operating income.

The operating income accounts identified in this section shall be used by all RUS borrowers.

Utility operating income

400 Operating Revenues
401 Operation Expense
402 Maintenance Expense
403 Depreciation Expense
403.1 Depreciation Expense—Steam Production Plant

414 Other Utility Operating Income
§ 1767.21

403 Depreciation Expense
A. This account shall include the amount of depreciation expense for all classes of depreciable electric plant in service except such depreciation expense as is chargeable to clearing accounts or to Account 416, Costs and Expenses of Merchandising, Jobbing and Contract Work.
B. The utility shall keep such records of property and property retirements as will reflect the service life of property which has been retired and aid in estimating probable service life by mortality, turnover, or other appropriate methods; and also such records as will reflect the percentage of salvage and costs of removal for property retired from each account, or subdivision thereof, for depreciable electric plant.

NOTE A: Depreciation expense applicable to property included in Account 104, Electric Plant Leased to Others, shall be charged to Account 413, Expenses of Electric Plant Leased to Others.

NOTE B: Depreciation expenses applicable to transportation equipment, shop equipment, tools, work equipment, power operated equipment, and other general equipment may be charged to clearing accounts as necessary in order to obtain a proper distribution of expenses between construction and operation.

NOTE C: Depreciation expense applicable to transportation equipment used for transportation of fuel from the point of acquisition to the unloading point shall be charged to Account 151, Fuel Stock.

C. Account 403 shall be subaccounted as follows:
403.1 Depreciation Expense—Steam Production Plant
403.2 Depreciation Expense—Nuclear Production Plant
403.3 Depreciation Expense—Hydraulic Production Plant
403.4 Depreciation Expense—Other Production Plant
403.5 Depreciation Expense—Transmission Plant
403.6 Depreciation Expense—Distribution Plant
403.7 Depreciation Expense—General Plant

404 Amortization of Limited-Term Electric Plant
This account shall include amortization charges applicable to amounts included in the electric plant accounts for limited-term franchises, licenses, patent rights, limited-term interests in land, and expenditures on leased property where the service life of the improvements is terminable by action of the lease. The charges to this account shall be such as to distribute the book cost of each investment as evenly as may be over the period of its benefit to the utility. (See Account 111, Accumulated Provision for Amortization of Electric Utility Plant.)

405 Amortization of Other Electric Plant
A. When authorized by RUS, this account shall include charges for amortization of intangible or other electric utility plant which does not have a definite or terminable life and which is not subject to charges for depreciation expense.
B. This account shall be supported in such detail as to show the amortization applicable to each investment being amortized, together with the book cost of the investment and the period over which it is being written off.

406 Amortization of Electric Plant Acquisition Adjustments
This account shall be debited or credited, as appropriate, with amounts includible in operating expenses, pursuant to approval or order of RUS, for the purpose of providing for the extinguishment of the amount in Account 114, Electric Plant Acquisition Adjustments.

407 Amortization of Property Losses, Unrecovered Plant and Recovery Study Costs
This account shall be charged with amounts credited to Account 182.1, Extraordinary Property Losses, when RUS has authorized the amount in the latter account to be amortized by charges to electric operations.

407.3 Regulatory Debts
This account shall be debited, when appropriate, with the amounts credited to Account 254, Other Regulatory Liabilities, to record regulatory liabilities imposed on the utility by the ratemaking actions of regulatory agencies. This account shall also be debited,
when appropriate, with the amounts credited to Account 182.3, Other Regulatory Assets, concurrent with the recovery of such amounts in rates.

407.4 Regulatory Credits

This account shall be credited, when appropriate, with the amounts debited to Account 182.3, Other Regulatory Assets, to establish regulatory assets. This account shall also be credited, when appropriate, with the amounts debited to Account 254, Other Regulatory Liabilities, concurrent with the return of such amounts to customers through rates.

408 Taxes Other Than Income Taxes

A. This account shall include the amounts of ad valorem, gross revenue, or gross receipts taxes, state unemployment insurance, franchise taxes, Federal excise taxes, social security taxes, and all other taxes assessed by Federal, state, county, municipal, or other local governmental authorities, except income taxes.

B. These accounts shall be charged in each accounting period with the amounts of taxes which are applicable thereto, with concurrent credits to Account 236, Taxes Accrued, or Account 165, Prepayments, as appropriate. When it is not possible to determine the exact amounts of taxes, the amounts shall be estimated and adjustments made in current accruals as the actual tax levies become known.

C. The charges to these accounts shall be made or supported so as to show the amount of each tax and the basis upon which each charge is made. In the case of a utility rendering more than one utility service, taxes of the kind includible in these accounts shall be assigned directly to the utility department the operation of which gave rise to the tax, in so far as practicable. Where the tax is not attributable to a specific utility department, it shall be distributed among the utility departments or nonutility operations on an equitable basis after appropriate study to determine such basis.

NOTE A: Special assessments for street and similar improvements shall be included in the appropriate utility plant or nonutility property account.

D. Account 408 shall be subaccounted as follows:

- 408.1 Taxes—Property
- 408.2 Taxes—U.S. Social Security—Unemployment
- 408.3 Taxes—U.S. Social Security—F.I.C.A.
- 408.4 Taxes—State Social Security—Unemployment
- 408.5 Taxes—State Sales—Consumers
- 408.6 Taxes—Gross Revenue or Gross Receipts Tax
- 408.7 Taxes—Other

409 [Reserved]
or Other Income and Deductions, the income from which gave rise to the tax. The tax effects relating to interest charges shall be allocated between utility and nonutility operations. The basis for this allocation shall be the ratio of net investment in utility plant to net investment in nonutility plant.

NOTE A: Taxes assumed by the utility on interest shall be charged to Account 431, Other Interest Expense.

NOTE B: Interest on tax refunds or deficiencies shall not be included in these accounts but in Account 419, Interest and Dividend Income, or Account 431, Other Interest Expense, as appropriate.

409.1 Income Taxes, Utility Operating Income

This account shall include the amount of those local, state, and Federal income taxes which relate to utility operating income. This account shall be maintained so as to allow ready identification of tax effects (both positive and negative) relating to Utility Operating Income (by department), Utility Plant Leased to Others, and Other Utility Operating Income.

409.2 Income Taxes, Other Income and Deductions

This account shall include the amount of those local, state, and Federal income taxes (both positive and negative), which relate to Other Income and Deductions.

409.3 Income Taxes, Extraordinary Items

This account shall include the amount of those local, state, and Federal income taxes (both positive and negative), which relate to Extraordinary Items.

410 [Reserved]

SPECIAL INSTRUCTIONS

Accounts 410.1, 410.2, 411.1, and 411.2

A. Accounts 410.1 and 410.2 shall be debited, and Accumulated Deferred Income Taxes, shall be credited, with amounts equal to any current deferrals of taxes on income or any allocations of deferred taxes originating in prior periods, as provided by the texts of Accounts 190, 281, 282, and 283. There shall not be netted against entries required to be made to these accounts any credit amounts appropriately includible in Account 411.1 or Account 411.2.

B. Accounts 411.1 or 411.2 shall be credited, and Accumulated Deferred Income Taxes, shall be debited, with amounts equal to any allocations of deferred taxes originating in prior periods or any current deferrals of taxes on income, as provided by the texts of Accounts 190, 281, 282, and 283. There shall not be netted against entries required to be made to these accounts any debit amounts appropriately includible in Account 410.1 or Account 410.2.

410.1 Provision for Deferred Income Taxes, Utility Operating Income

This account shall include the amounts of those deferrals of taxes and allocations of deferred taxes which relate to Utility Operating Income (by department).

410.2 Provision for Deferred Income Taxes, Other Income and Deductions

This account shall include the amounts of those deferrals of taxes and allocations of deferred taxes which relate to Other Income and Deductions.

411 [Reserved]

411.1 Provision for Deferred Income Taxes—Credit, Utility Operating Income

This account shall include the amounts of those allocations of deferred taxes and deferrals of taxes, credit, which relate to Utility Operating Income (by department).

411.2 Provision for Deferred Income Taxes—Credit, Other Income and Deductions

This account shall include the amounts of those allocations of deferred taxes and deferrals of taxes, credit, which relate to Other Income and Deductions.
411.3 [Reserved]

SPECIAL INSTRUCTIONS

Accounts 411.4 and 411.5

A. Account 411.4 shall be debited with the amounts of investment tax credits related to electric utility property that are credited to Account 255, Accumulated Deferred Investment Tax Credits, by companies which do not apply the entire amount of the benefits of the investment credit as a reduction of the overall income tax expense in the year in which such credit is realized. (See Account 255).

B. Account 411.4 shall be credited with the amounts debited to Account 255 for proportionate amounts of tax credit deferrals allocated over the average useful life of electric utility property to which the tax credits relate or such lesser period of time as may be adopted and consistently followed by the company.

C. Account 411.5 shall be debited and credited as directed in paragraphs A and B, for investment tax credits related to nonutility property.

411.4 Investment Tax Credit Adjustments, Utility Operations

This account shall include the amount of those investment tax credit adjustments related to property used in Utility Operations (by department).

411.5 Investment Tax Credit Adjustments, Nonutility Operations

This account shall include the amount of those investment tax credit adjustments related to property used in Nonutility Operations.

411.6 Gains from Disposition of Utility Plant

This account shall include, as approved by RUS, amounts relating to gains from the disposition of future use utility plant including amounts which were previously recorded in and transferred from Account 105, Electric Plant Held for Future Use, under the provisions of Paragraphs B, C, and D thereof. Income taxes relating to losses recorded in this account shall be recorded in Account 409.1, Income Taxes, Utility Operating Income.

411.7 Losses from Disposition of Utility Plant

This account shall include, as approved by RUS, amounts relating to losses from the disposition of future use utility plant including amounts which were previously recorded in and transferred from Account 105, Electric Plant Held for Future Use, under the provisions of Paragraphs B, C, and D thereof. Income taxes relating to losses recorded in this account shall be recorded in Account 409.1, Income Taxes, Utility Operating Income.

411.8 Gains from Disposition of Allowances

This account shall be credited with the gain on the sale, exchange, or other disposition of allowances in accordance with §1767.15(u)(8). Income taxes relating to gains recorded in this account shall be recorded in Account 409.1, Income Taxes, Utility Operating Income.

411.9 Losses from Disposition of Allowances

This account shall be debited with the loss on the sale, exchange, or other disposition of allowances in accordance with §1767.15(u)(8). Income taxes relating to losses recorded in this account shall be recorded in Account 409.1, Income Taxes, Utility Operating Income.

412 Revenues from Electric Plant Leased to Others

This account shall include revenues from electric property constituting a distinct operating unit or system leased by the utility to others, and which property is properly includible in Account 104, Electric Plant Leased to Others.

NOTE: Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.1, Income Taxes, Utility Operating Income, as appropriate.

413 Expenses of Electric Plant Leased to Others

A. This account shall include expenses from electric property constituting a distinct operating unit or system leased by the utility to others,
§ 1767.22 Other income and deductions.

The other income and deductions accounts identified in this section shall be used by all RUS borrowers.

**Other Income and Deductions**

415 Revenues from Merchandising, Jobbing, and Contract Work

416 Costs and Expenses of Merchandising, Jobbing, and Contract Work

417 Revenues from Nonutility Operations

417.1 Expenses of Nonutility Operations

418 Nonoperating Rental Income

418.1 Equity in Earnings of Subsidiary Companies

419 Interest and Dividend Income

419.1 Allowance for Funds Used During Construction

420 Investment Tax Credits

421 Miscellaneous Nonoperating Income

421.1 Gain on Disposition of Property

422.2 Loss on Disposition of Property

422 Nonoperating Taxes

423 Generation and Transmission Cooperative Capital Credits

424 Other Capital Credits and Patronage

7 CFR Ch. XVII (1-1-98 Edition)

Capital Allocations

425 Miscellaneous Amortization

426 [Reserved]

426.1 Donations

426.2 Life Insurance

426.3 Penalties

426.4 Expenditures for Certain Civic, Political, and Related Activities

426.5 Other Deductions

**Other Income and Deductions**

415 Revenues from Merchandising, Jobbing, and Contract Work

A. This account shall include all revenues derived from the sale of merchandise and jobbing or contract work, including any profit or commission accruing to the utility on jobbing work performed by it as agent under contracts whereby it does jobbing work for another for a stipulated profit or commission. Interest related income from installment sales shall be recorded in Account 419, Interest and Dividend Income.

B. Records in support of this account shall be so kept as to permit ready summarization of revenues by such major items as are feasible.

NOTE: The classification of revenues of merchandising, jobbing, and contract work as nonoperating, and thus included in this account, is for accounting purposes. It does not preclude consideration of justification to the contrary for ratemaking or other purposes.

**Items**

1. Revenues from sale of merchandise and from jobbing and contract work.

2. Discounts and allowances made in settlement of bills for merchandise and jobbing work.

416 Costs and Expenses of Merchandising, Jobbing, and Contract Work

A. This account shall include all expenses derived from the sale of merchandise and jobbing or contract work.

B. Records in support of this account shall be so kept as to permit ready summarization of costs and expenses by such major items as are feasible.

NOTE: The classification of costs and expenses of merchandising, jobbing, and contract work as nonoperating, and thus included in this account, is for accounting purposes. It does not preclude consideration of
§ 1767.22

Rural Utilities Service, USDA

justification to the contrary for ratemaking or other purposes.

Items

Labor:

1. Canvassing and demonstrating appliances in homes and other places for the purpose of selling appliances.
2. Demonstrating and selling activities in sales rooms.
3. Installing appliances on customer premises where such work is done only for purchasers of appliances from the utility.
4. Installing wire, piping, or other property work, on a jobbing or contract basis.
5. Preparing advertising materials for appliance sales purposes.
6. Receiving and handling customer orders for merchandise or for jobbing services.
7. Cleaning and tidying sales rooms.
8. Maintaining display counters and other equipment used in merchandising.
9. Arranging merchandise in sales rooms and decorating display windows.
11. Bookkeeping and other clerical work in connection with merchandise and jobbing activities.
12. Supervising merchandise and jobbing operations.
14. Cost of merchandise sold and of materials used in jobbing work.
15. Stores expenses on merchandise and jobbing stocks.
16. Fees and expenses of advertising and commercial artists' agencies.
17. Printing booklets, dodgers, and other advertising data.
18. Premiums given as inducement to buy appliances.
19. Light, heat, and power.
20. Depreciation on equipment used primarily for merchandise and jobbing operations.
21. Rent of sales rooms or of equipment.
22. Transportation expense in delivery and pick-up of appliances by utility's facilities or by others.
23. Stationery and office supplies and expenses.

24. Losses from uncollectible merchandise and jobbing accounts.

417 Revenues from Nonutility Operations

This account shall include revenues applicable to operations which are nonutility in character but nevertheless constitute a distinct operating activity of the enterprise as a whole, such as the operation of an ice department where applicable statutes do not define such operation as a utility, or the operation of a servicing organization for furnishing supervision, management, engineering, and similar services to others.

NOTE: Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.2, Income Taxes, Other Income and Deductions, as appropriate.

417.1 Expenses of Nonutility Operations

A. This account shall include expenses applicable to operations which are nonutility in character but nevertheless constitute a distinct operating activity of the enterprise as a whole, such as the operation of an ice department where applicable statutes do not define such operation as a utility, or the operation of a servicing organization for furnishing supervision, management, engineering, and similar services to others.

B. The expenses shall include all elements of costs incurred in such operations, and the accounts shall be maintained so as to permit ready summarization as follows:

1. Operation.
3. Rents.
4. Depreciation.
5. Amortization.

NOTE: Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.2, Income Taxes, Other Income and Deductions, as appropriate.

418 Nonoperating Rental Income

A. This account shall include all rent revenues and related expenses of land, buildings, or other property included in Account 121, Nonutility Property,
§ 1767.22

which is not used in operations covered by Account 417 or Account 417.1.

B. The expenses shall include all elements of costs incurred in the ownership and rental of property and the accounts shall be maintained so as to permit ready summarization as follows:

1. Operation.
3. Rents.
4. Depreciation.
5. Amortization.

NOTE: Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.2, Income Taxes, Other Income and Deductions, as appropriate.

418.1 Equity in Earnings of Subsidiary Companies

This account shall include the utility's equity in the earnings or losses of subsidiary companies for the year.

419 Interest and Dividend Income

This account shall include interest revenues on securities, loans, notes, advances, special deposits, tax refunds, and all other interest-bearing assets, and dividends on stocks of other companies, whether the securities on which the interest and dividends are received are carried as investments or included in sinking or other special fund accounts.

NOTE A: Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.2, Income Taxes, Other Income and Deductions, as appropriate.

NOTE B: Interest accrued, the payment of which is not reasonably assured, dividends receivable which have not been declared or guaranteed, and interest or dividends upon reacquired securities issued or assumed by the utility shall not be credited to this account.

419.1 Allowance for Funds Used During Construction

This account shall include current credits for allowance for funds other than borrowed funds used for construction purposes during the period of construction, based upon a reasonable rate. (See §1767.16(c)(17).)

420 Investment Tax Credits

This account shall be credited as follows with investment tax credit amounts not passed on to customers:

1. By amounts equal to debits to Account 411.4, Investment Tax Credit Adjustments, Utility Operations, and Account 411.5, Investment Tax Credit Adjustments, Nonutility Operations, for investment tax credits used in calculating income taxes for the year when the company's accounting provides for non-deferral of all or a portion of such credits.

2. By amounts equal to debits to Account 255, Accumulated Deferred Investment Tax Credits, for proportionate amounts of tax credit deferrals allocated over the average useful life of the property to which the tax credits relate, or such lesser period of time as may be adopted and consistently used by the company.

421 Miscellaneous Nonoperating Income

This account shall include all revenue and expense items, except taxes properly includible in the income account, not provided for elsewhere. Related taxes shall be recorded in Account 408, Taxes Other Than Income Taxes, or Account 409.2, Income Taxes, Other Income and Deductions, as appropriate.

Items

1. Profit on sale of timber. (See §1767.16(g)(3).)
2. Profits from operations of others realized by the utility under contracts.
3. Gains on disposition of investments. Also, gains on reacquisition and resale or retirement of the utility's debt securities when the gain is not amortized or used by a jurisdictional regulatory agency to reduce embedded debt cost in establishing rates. (See §1767.15(q).)

421.1 Gain on Disposition of Property

This account shall be credited with the gain on the sale, conveyance, exchange, or transfer of utility or other property to another. Amounts relating to gains on land and land rights held for future use recorded in Account 105, Electric Plant Held for Future Use,
Rural Utilities Service, USDA

§ 1767.22

will be accounted for as prescribed in Paragraphs B, C, and D thereof. (See §1767.16 (e)(6), (g)(5), and (j)(5).) Income taxes on gains recorded in this account shall be recorded in Account 409.2, Income Taxes, Other Income and Deductions.

421.2 Loss on Disposition of Property

This account shall be charged with the loss on the sale, conveyance, exchange, or transfer of utility or other property to another. Amounts relating to losses on land and land rights held for future use recorded in Account 105, Electric Plant Held for Future Use, will be accounted for as prescribed in Paragraphs B, C, and D thereof. (See §1767.16 (e)(6), (g)(5), and (j)(5).) The reduction in income taxes relating to losses recorded in this account shall be recorded in Account 409.2, Income Taxes, Other Income and Deductions.

422 Nonoperating Taxes

This account shall be charged with taxes relating to nonoperating income.

423 Generation and Transmission Cooperative Capital Credits

This account shall be credited with the annual capital furnished the power supply cooperative through payment of power bills. The amount of capital furnished the power supply cooperative should be recorded in the applicable year even though, in most cases, the power supplier’s notice of the allocation will not have been received until after the close of the year to which it relates.

424 Other Capital Credits and Patronage Capital Allocations

This account shall be credited with the capital furnished in connection with patronage of cooperative or mutual-type service organization such as CFC and other financing cooperatives, and insurance, oil product, telephone, and data processing cooperatives. This account should be credited in the year in which the notice of the capital credit or patronage capital allocation is received.

425 Miscellaneous Amortization

This account shall include amortization charges not includable in other accounts which are properly deductible in determining the income of the utility before interest charges. Charges includible herein, if significant in amount, must be in accordance with an orderly and systematic amortization program.

Items

1. Amortization of utility plant acquisition adjustments, or of intangibles included in utility plant in service when not authorized to be included in utility operating expenses by RUS.

2. Other miscellaneous amortization charges allowed to be included in this account by RUS.

426 [Reserved]

SPECIAL INSTRUCTIONS

Accounts 426.1, 426.2, 426.3, 426.4, and 426.5

These accounts shall include miscellaneous expense items which are nonoperating in nature but which are properly deductible before determining total income before interest charges.

Notes: The classification of expenses as nonoperating and their inclusion in these accounts is for accounting purposes. It does not preclude RUS consideration of proof to the contrary for ratemaking or other purposes.

426.1 Donations

This account shall include all payments or donations for charitable, social, or community welfare purposes.

426.2 Life Insurance

This account shall include all payments for life insurance of officers and employees where the company is the beneficiary (net premiums less the increase in the cash surrender value of policies.)

426.3 Penalties

This account shall include payments by the company for penalties or fines for violation of any regulatory statutes by the company or its officials.
§ 1767.23

426.4 Expenditures for Certain Civic, Political, and Related Activities

This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials, but shall not include such expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility’s existing or proposed operations.

426.5 Other Deductions

This account shall include other miscellaneous expenses which are non-operating in nature, but which are properly deductible before determining total income before interest charges.

Items

1. Loss relating to investments in securities written-off or written-down.
2. Loss on sale of investments.
3. Loss on reacquisition, resale, or retirement of the utility’s debt securities, when the loss is not amortized and used by a jurisdictional regulatory agency to increase embedded debt cost in establishing rates. (See §1767.15 (q).)
4. Preliminary survey and investigation expenses related to abandoned projects, when not written-off to the appropriate operating expense account.
5. Costs of preliminary abandonment costs recorded in Account 182.1, Extraordinary Property Losses, and Account 182.2, Unrecovered Plant and Regulatory Study Costs, not allowed to be amortized to Account 407, Amortization of Property Losses, Unrecovered Plant and Regulatory Study Costs.

§ 1767.23 Interest charges.

The interest charges accounts identified in this section shall be used by all RUS borrowers.

INTEREST CHARGES

427 Interest on Long-Term Debt

427.3 Interest Charged to Construction—Credit
428 Amortization of Debt Discount and Expense
428.1 Amortization of Loss on Reacquired Debt
429 Amortization of Premium on Debt—Credit
429.1 Amortization of Gain on Reacquired Debt—Credit
430 Interest on Debt to Associated Companies
431 Other Interest Expense
432 Allowance for Borrowed Funds Used During Construction—Credit

INTEREST CHARGES

427 Interest on Long-Term Debt

A. This account shall include the amount of interest on outstanding long-term debt issued or assumed by the utility, the liability for which included in Account 221, Bonds, or Account 224, Other Long-Term Debt.
B. This account shall be so kept or supported as to show the interest accruals on each class and series of long-term debt.

NOTE: This account shall not include interest on nominally issued or nominally outstanding long-term debt, including securities assumed.

427.3 Interest Charged to Construction—Credit

This account shall include concurrent credits for interest charged to construction based upon the net cost for the period of construction of borrowed funds used for construction purposes.

428 Amortization of Debt Discount and Expense

A. This account shall include the amortization of unamortized debt discount and expense on outstanding long-term debt. Amounts charged to this account shall be credited concurrently to Account 181, Unamortized Debt Expense, and Account 226, Unamortized Discount on Long-Term Debt—Debit.
B. This account shall be so kept or supported as to show the debt discount and expense on each class and series of long-term debt.
Rural Utilities Service, USDA

§ 1767.24

428.1 Amortization of Loss on Reacquired Debt

A. This account shall include the amortization of the losses on reacquisition of debt. Amounts charged to this account shall be credited concurrently to Account 189, Unamortized Loss on Reacquired Debt.

B. This account shall be maintained so as to allow ready identification of the loss amortized applicable to each class and series of long-term debt reacquired. (See § 1767.15 (q).)

429 Amortization of Premium on Debt—Credit

A. This account shall include the amortization of unamortized net premium on outstanding long-term debt. Amounts credited to this account shall be charged concurrently to Account 225, Unamortized Premium on Long-Term Debt.

B. This account shall be so kept or supported as to show the premium on each class and series of long-term debt.

429.1 Amortization of Gain on Reacquired Debt—Credit

A. This account shall include the amortization of the gains realized from reacquisition of debt. Amounts credited to this account shall be charged concurrently to Account 257, Unamortized Gain on Reacquired Debt.

B. This account shall be maintained so as to allow ready identification of the amortized gains applicable to each class and series of long-term debt reacquired. (See § 1767.15 (q).)

430 Interest on Debt to Associated Companies

A. This account shall include the interest accrued on amounts included in Account 223, Advances from Associated Companies, and on all other obligations to associated companies.

B. The records supporting the entries to this account shall be so kept as to show to whom the interest is to be paid, the period covered by the accrual, the rate of interest, and the principal amount of the advances or other obligations on which the interest is accrued.

431 Other Interest Expense

This account shall include all interest charges not provided for elsewhere.

432 Allowance for Borrowed Funds Used During Construction—Credit

This account shall include concurrent credits for allowance for borrowed funds used during construction, not to exceed amounts computed in accordance with the formula prescribed in § 1767.16 (c)(17).

§ 1767.24 Extraordinary items.

The extraordinary items accounts identified in this section shall be used by all RUS borrowers.

EXTRAORDINARY ITEMS

434 Extraordinary Income

435 Extraordinary Deductions

435.1 Cumulative Effect on Prior Years of a Change in Accounting Principle

EXTRAORDINARY ITEMS

434 Extraordinary Income

This account shall be credited with nontypical, noncustomary, infrequently recurring gains which would significantly distort the current year's income computed before extraordinary items, if reported other than as extraordinary items. Income tax relating to the amounts recorded in this account shall be recorded in Account 409.3, Income Taxes, Extraordinary Items. (See § 1767.15 (g).)

435 Extraordinary Deductions

This account shall be debited with nontypical, noncustomary, infrequently recurring losses which would significantly distort the current year's income computed before extraordinary items, if reported other than as extraordinary items.
§ 1767.25 Retained earnings.

The retained earnings accounts identified in this section shall be used by all RUS borrowers.

452 Sales of Water and Water Power
454 Rent from Electric Property
455 Interdepartmental rents
456 Other Electric Revenues

Operating revenue

Sales of Electricity

440 Residential Sales

A. This account shall include the net billing for electricity supplied for residential or domestic purposes.

Note: When electricity supplied through a single meter is used for both residential and commercial purposes, the total revenue shall be included in this account, or Account 442, Commercial and Industrial Sales, according to the rate schedule that is applied. If the same rate schedules apply to residential and commercial and industrial service, classification shall be made according to principal use.

B. Account 440 shall be subaccounted as follows:

440.1 Residential Sales—Excluding Seasonal
440.2 Residential Sales—Seasonal

440.1 Residential Sales—Excluding Seasonal

A. This account shall include the net billing for electricity supplied for residential or domestic purposes.

B. This account shall also include net billings for single phase service to schools, churches, lodges, and other public buildings.

C. Records shall be maintained so that the quantity of electricity sold and the revenue received under each rate schedule shall be readily available.

Note: Net billings for multiphase service to schools, churches, lodges, and other public buildings shall be included in the appropriate subaccount of Account 442, Commercial and Industrial Sales.
440.2 Residential Sales—Seasonal
This account shall include the net billings for electricity supplied for residential and domestic purposes to seasonal consumers.

441 Irrigation Sales
This account shall include the net billings for electricity supplied for irrigation pumping. It need not be used unless such service is provided under a special irrigation rate.

442 Commercial and Industrial Sales
A. This account shall include the net billing for electricity supplied to customers for commercial and industrial purposes.

NOTE A: If the utility classifies large commercial and industrial customers and related revenues on a lesser basis than 1000 kilowatts of demand, or segregates industrial customers and related revenues according to a recognized definition of an industrial customer, such classifications are acceptable in lieu of those otherwise required by the text of this account on the basis of 1000 kilowatts of demand.

NOTE B: When electricity supplied through a single meter is used for both commercial and residential purposes, the total revenue shall be included in this account or in Account 440, Residential Sales, based upon primary use.

442.1 Commercial and Industrial Sales—1000 kVA or Less

442.2 Commercial and Industrial Sales—Over 1000 kVA

A. This account shall include the net billing for electricity supplied to consumers for commercial and industrial purposes requiring transformer capacity of 1000 kVA or less.

B. Records shall be maintained so that the quantity of electricity sold and the revenue received under each rate schedule shall be readily available.

444 Public Street and Highway Lighting
A. This account shall include the net billing for electricity supplied and services rendered for the purposes of lighting streets, highways, parks, and other public places or for traffic or signal system service, for municipalities or other divisions or agencies of state or Federal Governments.

B. Records shall be maintained so that the quantity of electricity sold and the revenue received from each customer shall be readily available. In addition, the records shall be maintained so as to show the revenues from (1) contracts which include both electricity and services, and (2) contracts which include sales of electricity only.

445 Other Sales to Public Authorities
A. This account shall include the net billing for electricity supplied to municipalities or divisions or agencies of Federal or state governments, under special contracts or agreements or service classifications applicable only to public authorities, except such revenues as are includible in Account 444 and Account 447.

B. Records shall be maintained so as to show the quantity of electricity sold and the revenues received from each customer.
§ 1767.26  

446 Sales to Railroads and Railways

A. This account shall include the net billing for electricity supplied to railroads and interurban and street railways, for general railroad use, including the propulsion of cars or locomotives, where such electricity is supplied under separate and distinct rate schedules.

B. Records shall be maintained so that the quantity of electricity sold and the revenue received from each customer shall be readily available.

NOTE: Revenues from incidental use of electricity furnished under a contract for propulsion of cars or locomotives shall be included herein.

447 Sales for Resale

A. This account shall include the net billing for electricity supplied to other electric utilities or to public authorities for resale purposes.

NOTE: Revenues from electricity supplied to other utilities for use by them and not for distribution, shall be included in Account 442, Commercial and Industrial Sales, unless supplied under the same contract as and not readily separable from revenues includible in this account.

B. Account 447 shall be subaccounted as follows:

447.1 Sales for Resale—RUS Borrowers

447.2 Sales for Resale—Other

447.1 Sales for Resale—RUS Borrowers

A. This account shall include the net billing for electricity supplied to RUS borrowers for resale.

B. Records shall be maintained so as to show the quantity of electricity sold and the revenue received from each customer.

NOTE: Revenues from electricity supplied to other utilities for use by them and not for distribution, shall be included in Account 442, Commercial and Industrial Sales, unless supplied under the same contract as and not readily separable from revenues includible in this account.

447.2 Sales for Resale—Other

A. This account shall include the net billing for electricity supplied for resale to utilities not financed by RUS.

B. Records shall be maintained so as to show the quantity of electricity sold and the revenue received from each customer.

NOTE: Revenues from electricity supplied to other utilities for use by them and not for distribution, shall be included in Account 442, Commercial and Industrial Sales, unless supplied under the same contract as and not readily separable from revenues includible in this account.

448 Interdepartmental Sales

A. This account shall include amounts charged by the electric department at tariff or other specified rates for electricity supplied by it to other utility departments.

B. Records shall be maintained so that the quantity of electricity supplied each other department and the charges therefor shall be readily available.

449.1 Provision for Rate Refunds

A. This account shall be charged with provisions for the estimated pretax effects on net income of the portions of amounts being collected subject to refund which are estimated to be required to be refunded. Such provisions shall be credited to Account 229, Accumulated Provision for Rate Refunds.

B. This account shall also be charged with amounts refunded when such amounts had not been previously accrued.

C. Income tax effects relating to the amounts recorded in this account shall be recorded in Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, or Account 411.1, Provision for Deferred Income Taxes—Credit, Utility Operating Income, as appropriate.

Other Operating Revenues

450 Forfeited Discounts

This account shall include the amount of discounts forfeited or additional charges imposed because of the failure of customers to pay their electric bills on or before a specified date.

451 Miscellaneous Service Revenues

This account shall include revenues for all miscellaneous services and charges billed to customers which are
not specifically provided for in other accounts.

Items

1. Fees for changing, connecting, or disconnecting service.
2. Profit on maintenance of appliances, wiring, piping, or other installations on customers' premises.
3. Net credit or debit (cost less net salvage and less payment from customers) on closing of work orders for plant installed for temporary service of less than one year. (See Account 185, Temporary Facilities.)
4. Recovery of expenses in connection with current diversion cases (billing for the electricity consumed shall be included in the appropriate electric revenue account).

453 Sales of Water and Water Power
A. This account shall include revenues derived from the sale of water for irrigation, domestic, industrial, or other uses or for the development by others of water power or for headwater benefits; also, revenues derived from furnishing water power for mechanical purposes when the investment in the property used in supplying such water or water power is carried as electric plant in service.
B. The records for this account shall be kept in such manner as to permit an analysis of the rates charged and the purposes for which the water was used.

454 Rent from Electric Property
A. This account shall include rents received for the use by others of land, buildings, and other property devoted to electric operations by the utility.
B. When property owned by the utility is operated jointly with others under a definite arrangement for apportioning the actual expenses among the parties to the arrangement, any amount received by the utility for interest or return or in reimbursement of taxes or depreciation on the property shall be credited to this account.

Note: Do not include in this account rents from property constituting an operating unit or system. (See Account 412, Revenues from Electric Plant Leased to Others.)

455 Interdepartmental Rents
This account shall include rents credited to the electric department on account of rental charges made against other departments (gas, water, etc.) of the utility. In the case of property operated under a definite arrangement to allocate the costs among the departments using the property, any reimbursement to the electric department for interest or return and depreciation and taxes shall be credited to this account.

456 Other Electric Revenues
This account shall include revenues derived from electric operations not includible in any of the foregoing accounts. It shall also include, in a separate subaccount, revenues received from operation of fish and wildlife and recreation facilities whether operated by the company or by contract concessionaires, such as revenues from leases or rentals of land for cottages, homes, or campsites.

Items

1. Commission on sale or distribution of electricity of others when sold under rates filed by such others.
2. Compensation for minor or incidental services provided for others such as customer billing, and engineering.
3. Profit or loss on the sale of material and supplies not ordinarily purchased for resale and not handled through merchandising and jobbing accounts.
4. Sale of steam, but not including sales made by a steamheating department or transfers of steam under joint facility operations.
5. Revenues from transmission of electricity of others over transmission facilities of the utility.
6. Include in a separate subaccount, revenues in payment for rights and/or benefits received from others which are realized through research, development, and demonstration ventures. In the event the amounts received are so large as to distort revenues for the year in which received (5 percent of net income before application of the benefit), the amounts shall be credited to Account 253, Other Deferred Credits.
§ 1767.27

and amortized by credits to this account over a period not to exceed 5 years.

§ 1767.27 Operation and maintenance expenses.

The operation and maintenance expense accounts identified in this section shall be used by all RUS borrowers.

§ 1767.27

OPERATION AND MAINTENANCE EXPENSE ACCOUNTS

POWER PRODUCTION EXPENSES

Steam Power Generation

(Operation)

500 Operation Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the operation of steam power generating stations. Direct supervision of specific activities, such as fuel handling, boiler-room operations, and generator operations shall be charged to the appropriate account. (See §1767.17(a).)

501 Fuel

A. This account shall include the cost of fuel used in the production of steam for the generation of electricity, including expenses in unloading fuel from the shipping media and handling thereof up to the point where the fuel enters the first boiler plant bunker, hopper, bucket, tank, or holder of the boiler-house structure. Records shall be maintained to show the quantity, B.t.u. content and cost of each type of fuel used.

B. The cost of fuel shall be charged initially to Account 151, Fuel Stock, and cleared to this account on the basis of the fuel used. Fuel handling expenses may be charged to this account as incurred or charged initially to Account 152, Fuel Stock Expenses Undistributed. In the latter event, they shall be cleared to this account on the basis of the fuel used. Respective amounts of fuel stock and fuel stock expenses shall be readily available.

Items

Labor:
1. Supervising, purchasing, and handling of fuel.
2. All routine fuel analyses.
3. Unloading from shipping facility and placing in storage.
4. Moving of fuel in storage and transferring fuel from one station to another.
5. Handling from storage or shipping facility to first bunker, hopper, bucket, tank, or holder of boiler-house structure.
6. Operation of mechanical equipment, such as locomotives, trucks, cars, boats, barges, and cranes.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
§ 1767.27

5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Operating, maintenance, and depreciation expenses and ad valorem taxes on utility-owned transportation equipment used to transport fuel from the point of acquisition to the unloading point.
2. Lease or rental costs of transportation equipment used to transport fuel from the point of acquisition to the unloading point.
3. Cost of fuel including freight, switching, demurrage, and other transportation charges.
4. Excise taxes, insurance, purchasing commissions, and similar items.
5. Stores expenses to extent applicable to fuel.
6. Transportation and other expenses in moving fuel in storage.
7. Tools, lubricants, and other supplies.
8. Operating supplies for mechanical equipment.
9. Residual disposal expenses less any proceeds from sale of residuals.

NOTE: Abnormal fuel handling expenses occasioned by emergency conditions shall be charged to expense as incurred.

502 Steam Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in production of steam for electric generation. This includes all expenses of handling and preparing fuel beginning at the point where the fuel enters the first boiler plant bunker, hopper, tank, or holder of the boiler-house structure.

Labor:
1. Supervising steam production.
2. Operating fuel conveying, storage, weighing, and processing equipment within boiler plant.
3. Operating boiler and boiler auxiliary equipment.
4. Operating boiler feed water purification and treatment equipment.
5. Operating ash-collecting and disposal equipment located inside the plant.
6. Operating boiler plant electrical equipment.
7. Keeping boiler plant log and records and preparing reports on boiler plant operations.
8. Testing boiler water.
9. Testing, checking, and adjusting meters, gauges, and other instruments and equipment in boiler plant.
10. Cleaning boiler plant equipment when not incidental to maintenance work.
11. Repacking glands and replacing gauge glasses where the work involved is of a minor nature and is performed by regular operating crews. Where the work is of a major character, such as that performed on high-pressure boilers, the item should be considered as maintenance.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Chemicals and boiler inspection fees.
2. Lubricants.
3. Boiler feed water purchased and pumping supplies.

503 Steam from Other Sources
This account shall include the cost of steam purchased or transferred from another department of the utility or from others under a joint facility operating arrangement for use in prime movers devoted to the production of electricity.

Note: The records shall be so kept as to show separately for each company from which steam is purchased, the point of delivery, the quantity, the price, and the total charge. When steam is transferred from another department or from others under a joint operating arrangement, the utility shall be prepared to show full details of the cost of producing such steam, the basis of
§ 1767.27

the charge to electric generation, and the extent and manner of use by each department or party involved.

504 Steam Transferred—Credit

A. This account shall include credits for expenses of producing steam which are charged to others or to other utility departments under a joint operating arrangement. Include also credits for steam expenses chargeable to other electric accounts outside of the steam generation group. Full details of the basis of determination of the cost of steam transferred shall be maintained.

B. If the charges to others or to other departments of the utility include an amount for depreciation, taxes, and return on the joint steam facilities, such portion of the charge shall be credited, in the case of others, to Account 454, Rent from Electric Property, and in the case of other departments of the utility, to Account 455, Interdepartmental Rents.

505 Electric Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, and materials used, and expenses incurred in operating prime movers, generators, and other electric equipment to the points where electricity leaves for conversion for transmission or distribution.

Items

Labor:

1. Supervising electric production.
2. Operating turbines, engines, generators, and exciters.
3. Operating condensers, circulating water systems, and other auxiliary apparatus.
4. Operating generator cooling system.
5. Operating lubrication and oil control system, including oil purification.
6. Operating switchboards, switch gear and electric control, and protective equipment.
7. Keeping electric plant log and records and preparing reports on electric plant operations.
8. Testing, checking, and adjusting meters, gauges, and other instruments, relays, controls, and other equipment in the electric plant.
9. Cleaning electric plant equipment when not incidental to maintenance work.
10. Repacking glands and replacing gauge glasses.

Taxes:

1. Federal and state unemployment.
2. F.I.C.A.
3. Taxes.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
§ 1767.27

6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

8. Fees and expenses of claim investigators.

9. Payment of awards to claimants for court costs and attorneys' services.

10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

12. Compensation paid while incapacitated as the result of occupational injuries.

13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Lubricants and control system oils.

2. Generator cooling gases.

3. Circulating water purification supplies.

5. Motor and generator brushes.

506 Miscellaneous Steam Power Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and materials used and expenses incurred which are not specifically provided for or not readily assignable to other steam generation operation expense accounts.

Items

Labor:

1. General clerical and stenographic work.

2. Guarding and patrolling plant and yard.

3. Building service.

4. Care of grounds including snow removal, and grass cutting.

5. Miscellaneous labor.

Taxes:

1. Federal and state unemployment.

2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.

2. Group and life insurance premiums (credit dividends received).

3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.

4. Payments for accident, sickness, hospital, and death benefits or insurance.

5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys' services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. General operating supplies, such as tools, gaskets, packing waste, gauge glasses, hose, indicating lamps, record and report forms.
2. First-aid supplies and safety equipment.
3. Employees' service facilities expenses.
4. Building service supplies.
5. Communication service.
7. Transportation expenses.
8. Meals, traveling, and incidental expenses.
9. Research, development, and demonstration expenses.

507 Rents
This account shall include all rents of property of others used, occupied or operated in connection with steam power generation. (See §1767.17 (c).)

509 Allowances
This account shall include the cost of allowances expensed concurrent with the monthly emission of sulfur dioxide. (See §1767.15 (u).)

(Maintenance)

510 Maintenance Supervision and Engineering
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of maintenance of steam generation facilities. Direct field supervision of specific jobs shall be charged to the appropriate maintenance account. (See §1767.17(a).)

511 Maintenance of Structures
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and materials used and expenses incurred in the maintenance of steam structures, the book cost of which is includible in Account 311, Structures and Improvements. (See §1767.17(b).)

512 Maintenance of Boiler Plant
A. This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and materials used and expenses incurred in the maintenance of steam plant, the book cost of which is includible in Account 312, Boiler Plant Equipment. (See §1767.17(b).)
B. For the purpose of making charges hereto and to Account 513, Maintenance of Electric Plant, the point at which steam plant is distinguished from electric plant is defined as follows:
1. Inlet flange of throttle valve on prime mover.
2. Flange of all steam extraction lines on prime mover.
3. Hotwell pump outlet on condensate lines.
4. Inlet flange of all turbine-room auxiliaries.
5. Connection to line side of motor starter for all boiler-plant equipment.

513 Maintenance of Electric Plant
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and materials used and expenses incurred in the maintenance of electric plant, the book cost of which is includible in Account 313, Engines and Engine-Driven Generators; Account 314, Turbogenerator Units; and Account 315, Accessory Electric Equipment. (See §1767.17(b) and Paragraph B of Account 512.)

514 Maintenance of Miscellaneous Steam Plant
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and materials used and expenses incurred in maintenance of miscellaneous steam generation plant, the book cost of which is includible in Account 316, Miscellaneous Steam Plant.
Power Plant Equipment. (See §1767.17(b).)

Nuclear Power Generation

517 Operation Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the operation of nuclear power generating stations. Direct supervision of specific activities, such as fuel handling, reactor operations, and generator operations shall be charged to the appropriate account. (See §1767.17(a).)

518 Nuclear Fuel Expense

A. This account shall be debited and Account 120.5, Accumulated Provision for Amortization of Nuclear Fuel Assemblies, credited for the amortization of the net cost of nuclear fuel assemblies used in the production of energy. The net cost of nuclear fuel assemblies subject to amortization shall be the cost of nuclear fuel assemblies plus or less the expected net salvage of uranium, plutonium, and other byproducts and unburned fuel. The utility shall adopt the necessary procedures to assure that charges to this account are distributed according to the thermal energy produced in such periods.

B. This account shall also include the costs involved when fuel is leased.

C. This account shall also include the cost of other fuels, used for ancillary steam facilities, including superheat.

D. This account shall be debited or credited as appropriate for significant changes in the amounts estimated as the net salvage value of uranium, plutonium, and other byproducts contained in Account 157, Nuclear Materials Held for Sale, and the amount realized upon the final disposition of the materials. Significant declines in the estimated realizable value of items carried in Account 157 may be recognized at the time of market price declines by charging this account and crediting Account 157. When the declining change occurs while the fuel is recorded in Account 120.3, Nuclear Fuel Assemblies in Reactor, the effect shall be amortized over the remaining life of the fuel.

519 Coolants and Water

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, and materials used and expenses incurred for heat transfer materials and water used for steam and cooling purposes.

Items

Labor:
1. Operation of water supply facilities.
2. Handling of coolants and heat transfer materials.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Taxes.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
§ 1767.27

520 Steam Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, and materials used and expenses incurred in production of steam through nuclear processes, and similar expenses for operation of any auxiliary superheat facilities.

**Items**

**Labor:**
1. Supervising steam production.
2. Fuel handling including removal, insertion, disassembly, and preparation for cooling operations and shipment.
3. Testing instruments and gauges.
4. Health, safety, monitoring, and decontamination activities.
5. Waste disposal.
6. Operating steam boilers and auxiliary steam, superheat facilities.

**Taxes:**
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

**Employee Pensions and Benefits:** The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

**Materials and Expenses:**
1. Chemicals.
2. Additions to or refining of fluids used in reactor systems.
3. Lubricants.
4. Pumping supplies and expenses.
5. Miscellaneous supplies and expenses.
6. Purchased water.

**Note:** Do not include in this account water for general station use or the initial charge for coolants, heat transfer, or moderator fluids, chemicals, or other supplies capitalized.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Chemical supplies.
2. Charts and logs.
3. Health, safety, monitoring, and decontamination supplies.
4. Boiler inspection fees.
5. Lubricants.

521 Steam from Other Sources

This account shall include the cost of steam purchased or transferred from another department of the utility or from others under a joint facility operating arrangement for use in prime movers devoted to the production of electricity.

Note: The records shall be so kept as to show separately for each company from which steam is purchased, the point of delivery, the quantity, the price, and the total charge. When steam is transferred from another operating department, the utility shall be prepared to show full details of the cost of producing such steam, the basis of the charges to electric generation, and the extent and manner of use by each department involved.

522 Steam Transferred—Credit

A. This account shall include credits for expenses of producing steam which are charged to others or to other utility departments under a joint operating arrangement. Include also credits for steam expenses chargeable to other electric accounts outside of the steam generation group. Full details of the basis of determination of the cost of steam transferred shall be maintained.

B. If the charges to others or to other departments of the utility include an amount for depreciation, taxes, and return on the joint steam facilities, such portion of the charge shall be credited in the case of others, to Account 454, Rent from Electric Property, and in the case of other departments of the utility, to Account 455, Interdepartmental Rents.

523 Electric Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in operating turbogenerators, steam turbines and their auxiliary apparatus, switch gear, and other electric equipment to the points where electricity leaves for conversion for transmission or distribution.

Items

Labor:

1. Supervising electric production.
2. Operating turbines, engines, generators, and exciters.
3. Operating condensers, circulating water systems, and other auxiliary apparatus.
4. Operating generator cooling system.
5. Operating lubrication and oil control system, including oil purification.
6. Operating switchboards, switchgear, and electric control and protective equipment.
7. Keeping plant log and records and preparing reports on electric plant operations.
8. Testing, checking and adjusting meters, gauges, and other instruments, relays, controls, and other equipment in the electric plant.
9. Cleaning electric plant equipment when not incidental to maintenance.
10. Repacking glands and replacing gauge glasses.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Lubricants and control system oils.
2. Generator cooling gases.
3. Log sheets and charts.
4. Motor and generator brushes.

Miscellaneous Nuclear Power Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred which are not specifically provided for or are not readily assignable to other nuclear generation operation accounts.

980
1. General clerical and stenographic work.
2. Plant security.
3. Building service.
4. Care of grounds, including snow removal, and grass cutting
5. Miscellaneous labor.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. General operating supplies, such as tools, gaskets, hose, indicating lamps, records and reports forms.
2. First-aid supplies and safety equipment.
3. Employees' service facilities expenses.
4. Building service supplies.
5. Communication service.
6. Miscellaneous office supplies and expenses, printing and stationery.
7. Transportation expenses.
8. Meals, traveling, and incidental expenses.
9. Research, development, and demonstration expenses.

525 Rents

This account shall include all rents of property of others used, occupied, or operated in connection with nuclear generation. (See §1767.17(c).)

(Maintenance)

528 Maintenance Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of maintenance of nuclear generation facilities. Direct field supervision of specific jobs shall be charged to the appropriate maintenance account. (See §1767.17(a).)

529 Maintenance of Structures

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used,
§ 1767.27

and expenses incurred in the maintenance of structures, the book cost of which is includible in Account 321, Structures and Improvements. (See §1767.17(b).)

530 Maintenance of Reactor Plant Equipment
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the maintenance of reactor plant, the book cost of which is includible in Account 322, Reactor Plant Equipment. (See §1767.17(b).)

531 Maintenance of Electric Plant
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the maintenance of electric plant, the book cost of which is includible in Account 323, Turbogenerator Units, and Account 324, Accessory Electric Equipment. (See §1767.17(b).)

532 Maintenance of Miscellaneous Nuclear Plant
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of miscellaneous nuclear generating plant, the book cost of which is includible in Account 325, Miscellaneous Power Plant Equipment. (See §1767.17(b).)

Hydraulic Power Generation (Operation)

535 Operation Supervision and Engineering
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the operation of hydraulic power generating stations. Direct supervision of specific activities, such as hydraulic operation, and generator operation shall be charged to the appropriate account. (See §1767.17(a).)

536 Water for Power
This account shall include the cost of water used for hydraulic power generation.

Items
1. Cost of water purchased from others, including water tolls paid reservoir companies.
2. Periodic payments for licenses or permits from any governmental agency for water rights, or payments based on the use of the water.
3. Periodic payments for riparian rights.
4. Periodic payments for headwater benefits or for detriments to others.
5. Cloud seeding.

537 Hydraulic Expenses
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in operating hydraulic works including reservoirs, dams, and waterways, and in activities directly relating to the hydroelectric development outside the generating station. It shall also include the cost of labor, materials used, and other expenses incurred in connection with the operation of (1) fish and wildlife, and (2) recreation facilities. Separate subaccounts shall be maintained for each of the above.

Items
Labor:
1. Supervising hydraulic operation.
2. Removing debris and ice from trash racks, reservoirs, and waterways.
3. Patrolling reservoirs and waterways.
4. Operating intakes, spillways, sluiceways, and outlet works.
5. Operating bubbler, heater, or other deicing systems.
6. Ice and log jam work.
7. Operating navigation facilities.
8. Operations relating to conservation of game, fish, and forests.
9. Insect control activities.
Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims, from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Insect control materials.
2. Lubricants, packing, and other supplies used in the operation of hydraulic equipment.
3. Transportation expense.

538 Electric Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in operating prime movers, generators, and their auxiliary apparatus, switchgear, and other electric equipment, to the point where electricity leaves for conversion for transmission or distribution.

Items

Labor:

1. Supervising electric production.
2. Operating prime movers, generators, and auxiliary equipment.
3. Operating generator cooling system.
4. Operating lubrication and oil control systems, including oil purification.
5. Operating switchboards, switchgear, and electric control and protection equipment.
6. Keeping plant log and records and preparing reports on plant operations.
7. Testing, checking and adjusting meters, gauges, and other instruments, relays, controls, and other equipment in the plant.
8. Cleaning plant equipment when not incidental to maintenance work.
§ 1767.27

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Lubricants and control system oils.
2. Motor and generator brushes.

539 Miscellaneous Hydraulic Power Generation Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred which are not specifically provided for or are not readily assignable to other hydraulic generation operation expense accounts.

Items

Labor:
1. General clerical and stenographic work.
2. Guarding and patrolling plant and yard.
3. Building service.
4. Care of grounds including snow removal, and grass cutting.
5. Snow removal from roads and bridges.
6. Miscellaneous labor.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the
Rural Utilities Service, USDA § 1767.27

more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys’ services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
6. Compensation payments under workmen’s compensation laws.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. General operating supplies, such as tools, gaskets, packing, waste, hose, indicating lamps, record and report forms.
2. First-aid supplies and safety equipment.
3. Employees’ service facilities expenses.
4. Building service supplies.
5. Communication service.
6. Office supplies, printing and stationery.
7. Transportation expenses.
9. Meals, traveling, and incidental expenses.
10. Research, development, and demonstration expenses.

540 Rents

This account shall include all rents of property of others used, occupied, or operated in connection with hydraulic power generation, including amounts payable to the United States for the occupancy of public lands and reservations for reservoirs, dams, flumes, forebays, penstocks, and power houses but not including transmission right-of-way. (See §1767.17(c).)

(Maintenance)

541 Maintenance Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the maintenance of hydraulic power generating stations. Direct field supervision of specific jobs shall be charged to the appropriate maintenance account. (See §1767.17(a).)

542 Maintenance of Structures

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of hydraulic structures, the book cost of which is includible in Account 331, Structures and Improvements. (See §1767.17(b).) However, the cost of labor, materials used, and expenses incurred in the maintenance of fish and wildlife and recreation facilities, the book cost of which is includible in Account 331, Structures and Improvements, shall be
charged to Account 545, Maintenance of Miscellaneous Hydraulic Plant.

543 Maintenance of Reservoirs, Dams, and Waterways

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant includible in Account 332, Reservoirs, Dams, and Waterways. (See §1767.17(b).) However, the cost of labor, materials used, and expenses incurred in the maintenance of fish and wildlife and recreation facilities, the book cost of which is includible in Account 332, Reservoirs, Dams, and Waterways, shall be charged to Account 545, Maintenance of Miscellaneous Hydraulic Plant.

544 Maintenance of Electric Plant

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant includible in Account 333, Water Wheels, Turbines and Generators, and Account 334, Accessory Electric Equipment, (See §1767.17(b).)

545 Maintenance of Miscellaneous Hydraulic Plant

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant, the book cost of which is includible in Account 335, Miscellaneous Power Plant Equipment, and Account 336, Roads Railroads and Bridges. (See §1767.17(b).) It shall also include the cost of labor, materials used, and other expenses incurred in the maintenance of (1) fish and wildlife, and (2) recreation facilities. Separate subaccounts shall be maintained for each of the above.

546 Operation Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the operation of other power generating stations. Direct supervision of specific activities, such as fuel handling and engine and generator operation shall be charged to the appropriate account. (See §1767.17(a).)

547 Fuel

This account shall include the cost delivered at the station (See Account 151, Fuel Stock) of all fuel, such as gas, oil, kerosene, and gasoline used in other power generation.

548 Generation Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in operating prime movers, generators, and electric equipment in other power generating stations, to the point where electricity leaves for conversion for transmission or distribution.

Items

Labor:
1. Supervising other power generation operation.
2. Operating prime movers, generators, and auxiliary apparatus and switching and other electric equipment.
3. Keeping plant log and records and preparing reports on plant operations.
4. Testing, checking, cleaning, oiling, and adjusting equipment.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Dynamo, motor, and generator brushes.
2. Lubricants and control system oils.
3. Water for cooling engines and generators.
4. Dynamo, motor, and generator brushes.
5. Lubricants and control system oils.

549 Miscellaneous Other Power Generation Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the operation of other power generating stations which are not specifically provided for or are not readily assignable to other generation expense accounts.

Items

Labor:

1. General clerical and stenographic work.
2. Guarding and patrolling plant and yard.
3. Building service.
4. Care of grounds, including snow removal, and grass cutting.
5. Miscellaneous labor.

Taxes:

1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct
§ 1767.27

labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Building service supplies.
2. First-aid supplies and safety equipment.
3. Communication service.
4. Employees' service facilities expenses.
5. Office supplies, printing and stationery.
6. Transportation expense.
7. Meals, traveling, and incidental expenses.
9. Water for fire protection or general use.
10. Miscellaneous supplies, such as hand tools, drills, saw blades, and files.
11. Research, development, and demonstration expenses.

550 Rents

This account shall include all rents of property of others used, occupied, or operated in connection with other power generation. (See §1767.17(c).)

(Maintenance)

551 Maintenance Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of facilities used and expenses incurred in maintenance of facilities used in other power generation, the book cost of which is includible in Account 341, Structures and Improvements, and Account 342, Fuel Holders, Producers and Accessories. (See §1767.17(b).)

552 Maintenance of Structures

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of facilities used and expenses incurred in maintenance of facilities used in other power generation, the book cost of which is includible in Account 341, Structures and Improvements, and Account 342, Fuel Holders, Producers and Accessories. (See §1767.17(b).)

553 Maintenance of Generating and Electric Equipment

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance
554 Maintenance of Miscellaneous Other Power Generation Plant
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of other power generation plant, the book cost of which is includible in Account 346, Miscellaneous Power Plant Equipment. (See §1767.17(b).)

555 Purchased Power
A. This account shall include the cost at point of receipt by the utility of electricity purchased for resale. It shall also include, net settlements for exchange of electricity or power, such as economy energy, off-peak energy for on-peak energy, and spinning reserve capacity. In addition, the account shall include the net settlements for transactions under pooling or interconnection agreements wherein there is a balancing of debits and credits for energy, or capacity. Distinct purchases and sales shall not be recorded as exchanges and net amounts only recorded merely because debit and credit amounts are combined in the voucher settlement.
B. The records supporting this account shall show, by months, the demands and demand charges, kilowatt-hours and prices thereof under each purchase contract and the charges and credits under each exchange or power pooling contract.

556 System Control and Load Dispatching
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, and expenses incurred in load dispatching activities for system control. Utilities having an interconnected electric system or operating under a central authority which controls the production and dispatching of electricity may apportion these costs to this account and Account 561, Load Dispatching, and Account 581, Load Dispatching.

Items
Labor:
1. Allocating loads to plants and interconnections with others.
2. Directing switching.
3. Arranging and controlling clearances for construction, maintenance, test, and emergency purposes.
4. Controlling system voltages.
5. Recording loadings, and water conditions.
6. Preparing operating reports and data for billing and budget purposes.
7. Obtaining reports on the weather and special events.
Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.
Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.
Insurance:
§ 1767.27

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Expenses:
1. Communication service provided for system control purposes.
2. System record and report forms.
3. Meals, traveling, and incidental expenses.
4. Obtaining weather and special events reports.

557 Other Expenses
A. This account shall be charged with any production expenses including expenses incurred directly in connection with the purchase of electricity, which are not specifically provided for in other production expense accounts. Charges to this account shall be supported so that a description of each type of charge will be readily available.

B. Recoveries from insurance companies, under use and occupancy provisions of policies, of amounts in reimbursement of excessive or added productions costs for which the insurance company is liable under the terms of the policy shall be credited to this account.

TRANSMISSION EXPENSES
(Operation)

560 Operation Supervision and Engineering
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general operation and direction of the operation of the transmission system as a whole. Direct supervision of specific activities, such as station operation and line operation, shall be charged to the appropriate account. (See §1767.17(a).)

561 Load Dispatching
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in load dispatching operations pertaining to the transmission of electricity.

Items

Labor:
1. Direct switching.
2. Arranging and controlling clearances for construction, maintenance, test, and emergency purposes.
3. Controlling system voltages.
4. Obtaining reports on the weather and special events.
5. Preparing operating reports and data for billing and budget purposes.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or,
in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
3. Payments for accident, sickness, hospital, and death benefits or insurance.
4. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
5. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Expenses:
1. Communication service provided for system control purposes.
2. System record and report forms.
3. Meals, traveling, and incidental expenses.
4. Obtaining weather and special events reports.

562 Station Expenses
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in operating transmission substations and switching stations. If transmission station equipment is located in or adjacent to a generating station, the expenses applicable to transmission station operations shall nevertheless be charged to this account.

Items

Labor:
1. Supervising station operation.
2. Adjusting station equipment where such adjustment primarily affects performance, such as regulating the flow of cooling water, adjusting current in fields of a machine or changing voltage of regulators, changing station transformer taps.
3. Inspecting, testing, and calibrating station equipment for the purpose of checking its performance.
4. Keeping station log and records and preparing records on station operation.
5. Operating switching and other station equipment.
6. Standing watch, guarding, and patrolling station and station yard.
7. Sweeping, mopping, and tidying station.
8. Care of grounds, including snow removal, and grass cutting.
Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Building service expenses.
2. Operating supplies, such as lubricants, commutator brushes, water, and rubber goods.
3. Station meter and instrument supplies, such as ink and charts.
4. Station record and report forms.
5. Tool expense.
6. Transportation expenses.
7. Meals, traveling, and incidental expenses.

Overhead Line Expenses

Underground Line Expenses

A. These accounts shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in the operation of transmission lines.
B. If the expenses are not substantial for both overhead and underground lines, these accounts may be combined.

Items

Labor:
1. Supervising line operation.
2. Inspecting and testing lightning arresters, circuit breakers, switches, and grounds.
3. Load tests of circuits.
4. Routine line patrolling.
5. Routine voltage surveys made to determine the condition or efficiency of transmission system.
6. Transferring loads, switching and reconnecting circuits and equipment.
for operating purposes. (Switching for construction or maintenance purposes is not includible in this account.)

7. Routine inspection and cleaning of manholes, conduit, network, and transformer vaults.
8. Electrolysis surveys.
9. Inspecting and adjusting line-testing equipment, such as voltmeters, ammeters, and wattmeters.
10. Regulation and addition of oil or gas in high-voltage cable systems.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
5. Expenses in connection with educational and recreational activities for the benefit of employees.

6. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
7. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Transportation expenses.
2. Meals, traveling, and incidental expenses.
3. Tool expenses.
4. Operating supplies, such as instrument charts, and rubber goods.

565 Transmission of Electricity by Others

This account shall include amounts payable to others for the transmission of the utility's electricity over transmission facilities owned by others.

566 Miscellaneous Transmission Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damage, materials used, and expenses incurred in transmission map and record work, transmission office expenses, and other transmission expenses not provided for elsewhere.
Labor:
1. General records of physical characteristics of lines and stations, such as capacities.
2. Ground resistance records.
3. Janitor work at transmission office buildings, including care of grounds, snow removal, and grass cutting.
4. Joint pole maps and records.
5. Line load and voltage records.
6. Preparing maps and prints.
7. General clerical and stenographic work.
8. Miscellaneous labor.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2. Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys’ services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
6. Compensation payments under workmen’s compensation laws.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Communication service.
2. Building service supplies.
3. Map and record supplies.
4. Transmission office supplies and expenses, printing and stationery.
5. First-aid supplies.
6. Research, development, and demonstration expenses.

567 Rents
This account shall include rents of property of others used, occupied, or operated in connection with the transmission system, including payments to the United States and others for use of public or private lands and reservations for transmission line rights-of-way. (See §1767.17(c).)

(Maintenance)

568 Maintenance Supervision and Engineering
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of maintenance of the transmission system. Direct field supervision of specific jobs shall be charged to the appropriate maintenance account. (See §1767.17(a).)
§ 1767.27

569 Maintenance of Structures

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the maintenance of structures, the book cost of which is includible in Account 352, Structures and Improvements. (See §1767.17(b).)

570 Maintenance of Station Equipment

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of station equipment, the book cost of which is includible in Account 353, Station Equipment. (See §1767.17(b).)

571 Maintenance of Overhead Lines

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of transmission plant, the book cost of which is includible in Accounts 354, Towers and Fixtures; 355, Poles and Fixtures; 356, Overhead Conductors and Devices; and 359, Roads and Trails. (See §1767.17(b).)

Items

1. Work of the following character on poles, towers, and fixtures:
   a. Installing or removing additional clamps or strain insulators on guys in place.
   b. Moving line or guy pole in relocation of the same pole or section of line.
   c. Painting poles, towers, crossarms, or pole extensions.
   d. Readjusting and changing position of guys or braces.
   e. Realigning and straightening poles, crossarms braces, and other pole fixtures.
   f. Reconditioning reclaimed pole fixtures.
   g. Relocating crossarms, racks, brackets, and other fixtures on poles.
   h. Repairing or realigning pins, racks, or brackets.
   i. Repairing pole supported platform.
   j. Repairs by others to jointly owned poles.
   k. Shaving, cutting rot, or testing poles or crossarms in use or salvaged for reuse.
   l. Stubbing poles already in service.
   m. Supporting fixtures and conductors and transferring them to new poles during pole replacements.
   n. Maintenance of pole signs, stencils, and tags.

2. Work of the following character on overhead conductors and devices:
   a. Overhauling and repairing line cutouts, line switches, and line breakers.
   b. Cleaning insulators and bushings.
   c. Refusing cutouts.
   d. Repairing line oil circuit breakers and associated relays and control wiring.
   e. Repairing grounds.
   f. Resagging, retyping, or rearranging position or spacing of conductors.
   g. Standing by phones, going to calls, cutting faulty lines clear, or similar activities at times of emergencies.
   h. Sampling, testing, changing, purifying, and replenishing insulating oil.
   i. Repairing line testing equipment.
   j. Transferring loads, switching and reconnecting circuits and equipment for maintenance purposes.
   k. Trimming trees and clearing brush.
   l. Chemical treatment of right of way areas when occurring subsequent to construction of line.

3. Work of the following character on roads and trails:
   a. Repairing roadways and bridges.
   b. Trimming trees and brush to maintain previous roadway clearance.
   c. Snow removal from roads and trails.
   d. Maintenance work on publicly owned roads and trails when done by utility at its expense.

Taxes:

1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct
labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital services and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

572 Maintenance of Underground Lines

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of transmission plant, the book cost of which is includible in Accounts 357, Underground Conduit, and Account 358, Underground Conductors and Devices. (See §1767.17(b).)

Items

1. Work of the following character on underground conduit:
   a. Cleaning ducts, manholes, and sewer connections.
   b. Minor alterations of handholes, manholes, or vaults.
   c. Refastening, repairing, or moving racks, ladders, hangers in manholes, or vaults.
   d. Plugging and shelving or replugging ducts.
   e. Repairs to sewers and drains, walls and floors, rings and covers.
2. Work of the following character on underground conductors and devices:
   a. Repairing oil circuit breakers, switches, cutouts, and control wiring.
   b. Repairing grounds.
   c. Refiring and reconnecting cables in manholes, including transfer of cables from one duct to another.
   d. Repairing conductors and splices.
   e. Repairing or moving junction boxes and potheads.
   f. Refireproofing of cables and repairing supports.
   g. Repairing electrolysis preventive devices for cables.
   h. Repairing cable bonding systems.
   i. Sampling, testing, changing, purifying, and replenishing insulating oil.
   j. Transferring loads, switching and reconnecting circuits, and equipment for maintenance purposes.
   k. Repairing line testing equipment.
   l. Repairs to oil or gas equipment in high-voltage cable system and replacement of oil or gas.

Taxes:

1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct
labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

573 Maintenance of Miscellaneous Transmission Plant

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of owned or leased plant which is assignable to transmission operations and is not provided for elsewhere. (See §1767.17(b).)

**DISTRIBUTION EXPENSES**

**Operation**

580 Operation Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of the operation of the distribution system. Direct supervision of specific activities, such as station operation, line operation, and meter department operation shall be charged to the appropriate account. (See §1767.17(a).)

581 Load Dispatching

This account (the keeping of which is optional with the utility) shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in load dispatching operations pertaining to the distribution of electricity.

**Items**

**Labor:**
1. Direct switching.
2. Arranging and controlling clearances for construction, maintenance, test, and emergency purposes.
3. Controlling system voltages.
4. Preparing operating reports.
5. Obtaining reports on the weather and special events.

**Taxes:**
1. Federal and state unemployment.
2. F.I.C.A.
3. Property

**Employee Pensions and Benefits:** The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct
§ 1767.27

labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Expenses:
1. Communication service provided for system control purposes.
2. System record and report forms.
3. Meals, traveling, and incidental expenses.

582 Station Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in the operation of distribution substations.

Items

Labor:
1. Supervising station operation.
2. Adjusting station equipment where such adjustment primarily affects performance, such as regulating the flow of cooling water, adjusting current in fields of a machine, changing voltage of regulators, or changing station transformer taps.
3. Keeping station log and records and preparing reports on station operation.
4. Inspecting, testing, and calibrating station equipment for the purpose of checking its performance.
5. Operating switching and other station equipment.
6. Standing watch, guarding, and patrolling station and station yard.
7. Sweeping, mopping, and tidying station.
8. Care of grounds, including snow removal, and grass cutting.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct
labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Building service expenses.
2. Operating, supplies, such as lubricants, commutator brushes, water, and rubber goods.
3. Station meter and instrument supplies, such as ink and charts.
4. Station record and report forms.
5. Tool expense.
6. Transportation expense.
7. Meals, traveling, and incidental expenses.

NOTE: If the utility owns storage battery equipment used for supplying electricity to customers in periods of emergency, the cost of operating labor and of supplies, such as acid, gloves, hydrometers, thermometers, soda, automatic cell fillers, and acid proof shoes shall be included in this account. If significant in amount, a separate subdivision shall be maintained for such expenses.

583 Overhead Line Expenses

584 Underground Line Expenses

These accounts shall include, respectively, the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in the operation of overhead and underground distribution lines.

Items

Labor:
1. Supervising line operation.
2. Changing line transformer taps.
3. Inspecting and testing lightning arresters, line circuit breakers, switches, and grounds.
4. Inspecting and testing line transformers for the purpose of determining load, temperature, or operation performance.
5. Patrolling lines.
6. Load tests and voltage surveys of feeders, circuits, and line transformers.
7. Removing line transformers and voltage regulators with or without replacement.
§ 1767.27

8. Installing line transformers or voltage regulators with or without change in capacity provided that the cost of first installation of these items is included in Account 368, Line Transformers.

9. Voltage surveys, either routine or upon request of customers, including voltage tests at customer’s main switch.

10. Transferring loads, switching and reconnecting circuits and equipment for operation purpose.

11. Electrolysis surveys.

12. Inspecting and adjusting line testing equipment.

Taxes:

1. Federal and State unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lighting, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Tool expense.
2. Transportation expense.
3. Meals, traveling, and incidental expenses.
4. Operating supplies, such as instrument charts, and rubber goods.

585 Street Lighting and Signal System Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in: (1) The operation of street lighting and signal system plant which is owned or leased by the utility; and (2) the operation and maintenance of such plant owned by customers where such work is done.
regularly as a part of the street lighting and signal system service.

**Labor:**
1. Supervising street lighting and signal systems operation.
2. Replacing lamps and incidental cleaning of glassware and fixtures in connection therewith.
3. Routine patrolling for lamp outages, extraneous nuisances, or encroachments.
4. Testing lines and equipment including voltage and current measurement.
5. Winding and inspection of time switch and other controls.

**Taxes:**
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

**Employee Pensions and Benefits:** The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

**Insurance:**
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.

2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

**Materials and Expenses:**
1. Street lamp renewals.
2. Transportation and tool expense.
3. Meals, traveling, and incidental expenses.

**586 Meter Expenses**
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in the operation of customer meters and associated equipment.

**Labor:**
1. Supervising meter operation.
2. Clerical work on meter history and associated equipment record cards, test cards, and reports.
3. Disconnecting and reconnecting, removing and reinstalling, sealing and unsealing meters and other metering equipment in connection with initiating or terminating services including the cost of obtaining meter readings, if incidental to such operation.
4. Consolidating meter installations due to elimination of separate meters for different rates of service.
5. Changing or relocating meters, instrument transformers, time switches, and other metering equipment.
6. Resetting time controls, checking operation of demand meters and other metering equipment, when done as an independent operation.
7. Inspecting and adjusting meter testing equipment.
8. Inspecting and testing meters, instrument transformers, time switches, and other metering equipment on premises or in shops excluding inspecting and testing incidental to maintenance.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses
1. Meter seals and miscellaneous meter supplies.
2. Transportation expenses.
3. Meals, traveling, and incidental expenses.
4. Tool expenses.

Note: The cost of the first setting and testing of a meter is chargeable to utility plant, Account 370, Meters.
Customer Installations Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in work on customer installations in inspecting premises and in rendering services to customers of the nature of those indicated by the list of items hereunder.

**Items**

**Labor:**
1. Supervising customer installations work.
2. Inspecting premises, including the check of wiring for code compliance.
3. Investigating, locating, and clearing grounds on customers' wiring.
4. Investigating service complaints, including load tests of motors and lighting and power circuits on customers' premises; field investigations of complaints on bills or of voltage.
5. Installing, removing, renewing, and changing lamps and fuses.
6. Radio, television, and similar interference work including erection of new aerials on customers' premises and patrolling of lines, testing of lightning arresters, inspection of pole hardware, and examination on or off premises of customers' appliances, wiring, or equipment to locate cause of interference.
7. Installing, connecting, reinstalling, or removing leased property on customers' premises.
8. Testing, adjusting, and repairing customers' fixtures and appliances in the shop or on premises.
9. Cost of changing customers' equipment due to changes in service characteristics.
10. Investigation of current diversion including setting and removal of check meters and securing special readings thereon; special calls by employees in connection with discovery and settlement of current diversion; changes in customer wiring; and any other labor cost identifiable as caused by current diversion.

**Taxes:**
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

**Insurance:**
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Lamp and fuse renewals.
2. Materials used in servicing customers’ fixtures, appliances, and equipment.
3. Power, light, heat, telephone, and other expenses of the appliance repair department.
4. Tool expense.
5. Transportation expense, including pickup and delivery charges.
6. Meals, traveling, and incidental expenses.
7. Rewards paid for discovery of current diversion.

NOTE A: Amounts billed customers for any work, the cost of which is charged to this account, shall be credited to this account. Any excess over costs resulting therefrom, shall be transferred to Account 451, Miscellaneous Service Revenues.

NOTE B: Do not include in this account expenses incurred in connection with merchandising, jobbing, and contract work.

588 Miscellaneous Distribution Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in distribution system operation not provided for elsewhere.

Items

Labor:
1. General records of physical characteristics of lines and substations, such as capacities.
2. Ground resistance records.
3. Joint pole maps and records.
4. Distribution system voltage and load records.
5. Preparing maps and prints.
6. Service interruption and trouble records.
7. General clerical and stenographic work except that chargeable to Account 586, Meter Expenses.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys’ services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

6. Compensation payments under workmen’s compensation laws.

7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)

8. Cost of safety, accident prevention, and similar educational activities.

Expenses:

1. Operating records covering poles, transformers, manholes, cables, and other distribution facilities. Exclude meter records chargeable to Account 586, Meter Expenses, and station records chargeable to Account 582, Station Expenses, and stores records chargeable to Account 163, Stores Expense Undistributed.

2. Janitor work at distribution office buildings including snow removal and grass cutting.

3. Communication service.

4. Building service expenses.

5. Miscellaneous office supplies and expenses, printing and stationery, maps and records, and first-aid supplies.

6. Research, development, and demonstration expenses.

589 Rents

This account shall include rents of property of others used, occupied, or operated in connection with the distribution system, including payments to the United States and others for the use and occupancy of public lands and reservations for distribution line rights of way. (See §1767.17(c).)

(Maintenance)

590 Maintenance Supervision and Engineering

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general supervision and direction of maintenance of the distribution system. Direct field supervision of specific jobs shall be charged to the appropriate maintenance account. (See §1767.17(a).)

591 Maintenance of Structures

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of structures, the book cost of which is includible in Account 361, Structures and Improvements. (See §1767.17(b).)

592 Maintenance of Station Equipment

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant, the book cost of which is includible in Account 362, Station Equipment, and Account 363, Storage Battery Equipment. (See §1767.17(b).)

593 Maintenance of Overhead Lines

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of overhead distribution line facilities, the book cost of which is includible in Account 364, Poles, Towers and Fixtures; Account 365, Overhead Conductors and Devices; and Account 369, Services. (See §1767.17(b).)

Items

1. Work of the following character on poles, towers, and fixtures:
   a. Installing additional clamps or removing clamps or strain insulators on guys in place.
   b. Moving line or guy pole in relocation of pole or section of line.
   c. Painting poles, towers, crossarms, or pole extensions.
   d. Readjusting and changing position of guys or braces.
   e. Realigning and straightening poles, crossarms, braces, pins, racks, brackets, and other pole fixtures.
   f. Reconditioning reclaimed pole fixtures.
   g. Relocating crossarms, racks, brackets, and other fixtures on poles.
   h. Repairing pole supported platform.
§ 1767.27

i. Repairs by others to jointly owned poles.

j. Shaving, cutting rot, or treating poles or crossarms in use or salvaged for reuse.

k. Stubbing poles already in service.

l. Supporting conductors, transformers, and other fixtures and transferring them to new poles during pole replacements.

m. Maintaining pole signs, stencils, and tags.

2. Work of the following character on overhead conductors and devices:
   a. Overhauling and repairing line cutouts, line switches, line breakers, and capacitor installations.
   b. Cleaning insulators and bushings.
   c. Refusing line cutouts.
   d. Repairing line oil circuit breakers and associated relays and control wiring.
   e. Repairing grounds.
   f. Resagging, retrying, or rearranging position or spacing of conductors.
   g. Standing by phones, going to calls, cutting faulty lines clear, or similar activities at times of emergency.
   h. Sampling, testing, changing, purifying, and replenishing insulating oil.
   i. Transferring loads, switching, and reconnecting circuits and equipment for maintenance purposes.
   j. Repairing line testing equipment.
   k. Trimming trees and clearing brush.

l. Chemical treatment of right-of-way area when occurring subsequent to construction of line.

3. Work of the following character on overhead services:
   a. Moving position of service either on pole or on customers' premises.
   b. Pulling slack in service wire.
   c. Retying service wire.
   d. Refastening or tightening service bracket.

Taxes:

1. Federal and state unemployment.

2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.

2. Group and life insurance premiums (credit dividends received).

3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.

4. Payments for accident, sickness, hospital, and death benefits or insurance.

5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damage, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys' services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)

8. Cost of safety, accident prevention, and similar educational activities.

594 Maintenance of Underground Lines

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used,
and expenses incurred in the maintenance of underground distribution line facilities, the book cost of which is includible in Account 366, Underground Conduit; Account 367, Underground Conductors and Devices; and Account 369, Services. (See §1767.17(b).)

Items

1. Work of the following character on underground conduit:
   a. Cleaning ducts, manholes, and sewer connections.
   b. Moving or changing position of conduit or pipe.
   c. Minor alterations of handholes, manholes, or vaults.
   d. Refastening, repairing, or moving racks, ladders, or hangers in manholes or vaults.
   e. Plugging and shelving ducts.
   f. Repairs to sewers, drains, walls, and floors, rings, and covers.
2. Work of the following character on underground conductors and devices:
   a. Repairing circuit breakers, switches, cutouts, network protectors, and associated relays and control wiring.
   b. Repairing grounds.
   c. Retraining and reconnecting cables in manholes including transfer of cables from one duct to another.
   d. Repairing conductors and splices.
   e. Repairing or moving junction boxes and potheads.
   f. Refireproofing cables and repairing supports.
   g. Repairing electrolysis preventive devices for cables.
   h. Repairing cable bonding systems.
   i. Sampling, testing, changing, purifying, and replenishing insulating oil.
   j. Transferring loads, switching and reconnecting circuits and equipment for maintenance purposes.
   k. Repairing line testing equipment.
   l. Repairing oil or gas equipment in high voltage cable systems and replacement of oil or gas.
3. Work of the following character on underground services:
   a. Cleaning ducts.
   b. Repairing any underground service plant.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.
§ 1767.27

Maintenance of Line Transformers

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of distribution line transformers, the book cost of which is includible in Account 368, Line Transformers. (See §1767.17(b).)

Maintenance of Street Lighting and Signal Systems

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant, the book cost of which is includible in Account 373, Street Lighting and Signal Systems. (See §1767.17(b).)

Maintenance of Meters

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the maintenance of meters and meter testing equipment, the book cost of which is includible in Account 370, Meters, and Account 395, Laboratory Equipment, respectively. (See §1767.17(b).)

Maintenance of Miscellaneous Distribution Plant

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in maintenance of plant, the book cost of which is includible in Accounts 371, Installations on Customers' Premises, and Account 372, Leased Property on Customers' Premises, and any other plant the maintenance of which is assignable to the distribution function and is not provided for elsewhere. (See §1767.17(b).)

Items

1. Work of similar nature to that listed in other distribution maintenance accounts.

2. Maintenance of office furniture and equipment used by distribution system department.

Taxes:

1. Federal and state unemployment.

2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.

2. Group and life insurance premiums (credit dividends received).

3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.

4. Payments for accident, sickness, hospital, and death benefits or insurance.

5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys' services.

5. Medical and hospital service and expenses for employees as the result of
occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

§ 1767.28 Customer accounts expenses.

The customer accounts expense accounts identified in this section shall be used by all RUS borrowers.

CUSTOMER ACCOUNTS EXPENSES

(Operations)
901 Supervision
902 Meter Reading Expenses
903 Customer Records and Collection Expenses
904 Uncollectible Accounts
905 Miscellaneous Customer Accounts Expenses

CUSTOMER ACCOUNTS EXPENSES

(Operation)
901 Supervision

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the general direction and supervision of customer accounting and collecting activities. Direct supervision of a specific activity shall be charged to Account 902, Meter Reading Expenses, or Account 903, Customer Records and Collection Expenses, as applicable. (See §1767.17(a).)

902 Meter Reading Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in reading customer meters, and determining consumption when performed by employees engaged in reading meters.

Items
Labor:
1. Addressing forms for obtaining meter readings by mail.
2. Changing and collecting meter charts used for billing purposes.
3. Inspecting time clocks and checking seals when performed by meter readers and the work represents a minor activity incidental to regular meter reading routine.
4. Reading meters, including demand meters, and obtaining load information for billing purposes. Exclude and charge to Account 586, Meter Expenses, or to Account 903, Customer Records and Collection Expenses, as applicable, the cost of obtaining meter readings, first and final, if incidental to the operation of removing or resetting, sealing or locking, and disconnecting or reconnecting meters.
5. Computing consumption from meter reader's book or from reports by mail when done by employees engaged in reading meters.
6. Collecting from prepayment meters when incidental to meter reading.
7. Maintaining record of customers' keys.
8. Computing estimated or average consumption when performed by employees engaged in reading meters.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when
§ 1767.28

not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys' services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)

8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Badges, lamps, and uniforms.

2. Demand charts, meter books and binders and forms for recording readings, but not the cost of preparation.

3. Postage and supplies used in obtaining meter readings by mail.

4. Transportation, meals, and incidental expenses.

903 Customer Records and Collection Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Items

Labor:

1. Receiving, preparing, recording, and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.

2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.

3. Receiving, refunding, or applying customer deposit and maintaining customer deposit, line extension, and other miscellaneous records.

4. Checking consumption shown by meter reader's reports where incidental to preparation of billing date.

5. Preparing address plates and addressing bills and delinquent notices.

6. Preparing billing data.

7. Preparing bills for delivery and mailing or delivering bills.

8. Verifying billing records with contracts or rate schedules.

9. Preparing bills for delivery and mailing or delivering bills.

10. Collecting revenues, including collection from prepayment meters, unless incidental to meter-reading operations.

11. Balancing collections, preparing collections for deposit, and preparing cash reports.

12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.

14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.

15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.

16. Disconnecting and reconnecting service because of nonpayment bills.

17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.

18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for
sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.

19. Preparing and periodically rewriting meter reading sheets.

20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Address plates and supplies.
2. Cash overages and shortages.
3. Commissions or fees to others for collecting.
4. Payments to credit organizations for investigations and reports.
5. Postage.
6. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedures.
7. Transportation, meals expenses, and incidental expenses.
8. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
9. Forms for recording orders for services, or removals.
10. Rent of mechanical equipment.

NOTE: The cost of work on meter history and meter location records in chargeable to Account 586, Meter Expenses.

904 Uncollectible Accounts
This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used,
§ 1767.29 Customer service and informational expenses.

The customer service and informational expense accounts identified in this section shall be used by all RUS borrowers.

CUSTOMER SERVICE AND INFORMATIONAL EXPENSES
(Operation)

907 Supervision
908 Customer Assistance Expenses
909 Informational and Instructional Advertising Expenses
910 Miscellaneous Customer Service and Informational Expenses

and expenses incurred not provided for in other accounts.

4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Communication service.
2. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in Account 902 and Account 903.

CUSTOMER SERVICE AND INFORMATIONAL EXPENSES

(Operation)

907 Supervision

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general direction and supervision of customer service activities, the object of which is to encourage safe, efficient, and economical use of the utility’s service. Direct supervision of a specific activity within customer service and informational expense classification shall be charged to the account wherein the costs of such activity are included. (See §1767.17(a).)

908 Customer Assistance Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in providing instructions or assistance to customers, the object of which is to encourage safe, efficient, and economical use of the utility’s service.

Items

Labor:
1. Direct supervision of department.
2. Processing customer inquiries relating to the proper use of electric equipment, the replacement of such equipment, and information related to such equipment.
3. Advice directed to customers as to how they may achieve the most efficient and safest use of electric equipment.
4. Demonstrations, exhibits, lectures, and other programs designed to instruct customers in the safe, economical, or efficient use of electric service, and/or oriented toward conservation of energy.
5. Engineering and technical advice to customers, the object of which is to promote safe, efficient, and economical use of the utility’s service.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys’ services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
6. Compensation payments under workmen’s compensation laws.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Supplies and expenses pertaining to demonstrations, exhibits, lectures, and other programs.
2. Loss in value on equipment and appliances used for customer assistance programs.
3. Office supplies and expenses.
4. Transportation, meals, and incidental expenses.

Note: Do not include in this account expenses that are provided for elsewhere, such as Accounts 416, Costs and Expenses of Merchandising, Jobbing, and Contract Work; 587, Customer Installations Expenses; and 912, Demonstrating and Selling Expenses.

909 Informational and Instructional Advertising Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in activities which primarily convey information as to what the utility urges or suggests customers should do in utilizing electric service to protect health and safety, to encourage environmental protection, to utilize their electric equipment safely and economically, or to conserve electric energy.

Items

Labor:
1. Direct supervision of information activities.
2. Preparing informational materials for newspapers, periodicals, and billboards and preparing and conducting informational motion pictures, radio and television programs.
3. Preparing informational booklets and bulletins used in direct mailings.
4. Preparing informational window and other displays.
5. Employing agencies, selecting media, and conducting negotiations in connection with the placement and subject matter of information programs.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Use of newspapers, periodicals, billboards, and radio for informational purposes.
2. Postage on direct mailings to customers exclusive of postage related to billings.
3. Printing of informational booklets, dodgers, and bulletins.
4. Supplies and expenses in preparing informational materials by the utility.
5. Office supplies and expenses.

NOTE A: Exclude from this account and charge to Account 930.2, Miscellaneous General Expenses, the cost of publication of stockholder reports, dividend notices, bond redemption notices, financial statements, and other notices of a general corporate character. Also exclude all expenses of a promotional, institutional, goodwill, or political nature, which are includible in such accounts as 913, Advertising Expenses; 930.1, General Advertising Expenses; and 426.4, Expenditures for Certain Civic, Political and Related Activities.

NOTE B: Entries relating to informational advertising included in this account shall contain or refer to supporting documents which identify the specific advertising message. If references are used, copies of the advertising message shall be readily available.

910 Miscellaneous Customer Service and Informational Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in connection with customer service and informational activities which are not includible in other customer information expense accounts.

Items

Labor:
1. General clerical and stenographic work not assigned to specific customer service and informational programs.
2. Miscellaneous labor.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys’ services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
11. Compensation payments under workmen’s compensation laws.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Communication service.
2. Printing, postage, and office supplies expenses.

§ 1767.30 Sales expenses.

The sales expense accounts identified in this section shall be used by all RUS borrowers.

SALES EXPENSES
(Operation)

911 Supervision
912 Demonstrating and Selling Expenses
913 Advertising Expenses
916 Miscellaneous Sales Expenses

SALES EXPENSES
(Operations)

911 Supervision

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and expenses incurred in the general direction and supervision of sales activities, except merchandising. Direct supervision of a specific activity, such as demonstrating, selling, or advertising shall be charged to the account wherein the costs of such activity are included. (See §1767.17(a).)

912 Demonstrating and Selling Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in promotional, demonstrating, and selling activities, except by merchandising, the object of which is to promote or retain the use of utility services by present and prospective customers.

Items

Labor:
1. Demonstrating uses of utility services.
2. Conducting cooking schools, preparing recipes, and related home service activities.
3. Exhibitions, displays, lectures, and other programs designed to promote use of utility services.
4. Experimental and development work in connection with new and improved appliances and equipment, prior to general public acceptance.
5. Solicitation of new customers or of additional business from old customers, including commissions paid employees.
6. Engineering and technical advice to present or prospective customers in connection with promoting or retaining the use of utility services.
7. Special customer canvasses when their primary purpose is the retention of business or the promotion of new business.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.

6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys’ services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

6. Compensation payments under workmen’s compensation laws.

7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)

8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Supplies and expenses pertaining to demonstration, experimental, and development activities.

2. Booth and temporary space rental.

3. Loss in value on equipment and appliances used for demonstration purposes.

4. Transportation, meals, and incidental expenses.

913 Advertising Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in advertising designed to promote or retain the use of utility service, except advertising the sale of merchandise by the utility.
credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.

2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.

3. Fees and expenses of claim investigators.

4. Payment of awards to claimants for court costs and attorneys’ services.

5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.

6. Compensation payments under workmen’s compensation laws.

7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)

8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Advertising in newspapers, periodicals, billboards, and radio for sales promotion purposes, but not including institutional or goodwill advertising includable in Account 930.1, General Advertising Expenses.

2. Materials and services given as prizes or otherwise in connection with civic lighting contests, canning, or cooking contests, and bazaars in order to publicize and promote the use of utility services.

3. Fees and expenses of advertising agencies and commercial artists.

5. Postage on direct mail advertising.

6. Premiums distributed generally, such as recipe books when not offered as inducement to purchase appliances.

7. Printing booklets, dodgers, and bulletins.

8. Supplies and expenses in preparing advertising material.

9. Office supplies and expenses.

NOTE A: The cost of advertisements which set forth the value or advantages of utility service without reference to specific appliances, or, if reference is made to appliances, invites the reader to purchase appliances from his dealer or refer to appliances not carried for sale by the utility, shall be considered sales promotion advertising and charged to this account. However, advertisements which are limited to specific makes of appliances sold by the utility and price and terms, thereof, without referring to the value or advantages of utility service, shall be considered merchandise advertising and the cost shall be charged to Costs and Expenses of Merchandising, Jobbing and Contract Work, Account 416.

NOTE B: Advertisements which substantially mention or refer to the value or advantages of utility service, together with specific reference to makes of appliance sold by the utility and the price, and terms, thereof, and designed for the joint purpose of increasing the use of utility service and the sales of appliances, shall be considered as a combination advertisement and the costs shall be distributed between this account and Account 416 on the basis of space, time, or other proportional factors.

NOTE C: Exclude from this account and charge to Account 930.2, Miscellaneous General Expenses, the cost of publication of stockholder reports, dividend notices, bond redemption notices, financial statements, and other notices of a general corporate character. Also exclude all institutional or goodwill advertising. (See Account 930.1, General Advertising Expenses.)

916 Miscellaneous Sales Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, materials used, and expenses incurred in connection with sales activities, except merchandising, which are not includible in other sales expense accounts.

Items

Labor:

1. General clerical and stenographic work not assigned to specific functions.

2. Special analysis of customer accounts and other statistical work for sales purposes not a part of the regular customer accounting and billing routine.

3. Miscellaneous labor.

Taxes:

1. Federal and state unemployment.

2. F.I.C.A.

3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees’ labor costs charged herein or, in the absence of specific employee identification, the portion of employees’ pensions and benefits, allocated on the
Rural Utilities Service, USDA

ADMINISTRATIVE AND GENERAL

(Operation)

920 Administrative and General Salaries

A. This account shall include the compensation (salaries, bonuses, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and other consideration for services, but not including directors' fees) of officers, executives, and other employees of the utility properly chargeable to utility operations and

more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:

1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:

1. Communication service.
2. Printing, postage, office supplies, and expenses applicable to sales activities, except those chargeable to Account 913, Advertising Expenses.

§ 1767.31

not chargeable directly to a particular operating function.

B. This account may be subdivided in accordance with a classification appropriate to the departmental or other functional organization of the utility.

921 Office Supplies and Expenses

A. This account shall include office supplies and expenses incurred in connection with the general administration of the utility's operations which are assignable to specific administrative or general departments and are not specifically provided for in other accounts. This includes the expenses of the various administrative and general departments, the salaries and wages of which are includible in Account 920.

B. This account may be subdivided in accordance with a classification appropriate to the departmental or other functional organization of the utility.

NOTE: Office expenses which are clearly applicable to any category of operating expenses other than the administrative and general category shall be included in the appropriate account in such category. Further, general expenses which apply to the utility as a whole rather than to a particular administrative function, shall be included in Account 930.2, Miscellaneous General Expenses.

Items

1. Automobile service, including charges through clearing account.
2. Bank messenger and service charges.
3. Books, periodicals, bulletins, and subscriptions to newspapers, newsletters, and tax services.
4. Building service expenses for customer accounts, sales, and administrative and general purposes.
5. Communication service expenses.
6. Cost of individual items of office equipment used by general departments which are of small value or short life.
7. Membership fees and dues in trade, technical, and professional associations paid by a utility for employees. (Company memberships are includible in Account 930.2.)
8. Office supplies and expenses.
9. Payment of court costs, witness fees, and other expenses of legal department.
11. Meals, traveling, and incidental expenses.

922 Administrative Expenses Transferred—Credit

This account shall be credited with administrative expenses recorded in Account 920 and Account 921 which are transferred to construction costs or to nonutility accounts. (See §1767.16 (d).)

923 Outside Services Employed

A. This account shall include the fees and expenses of professional consultants and others for general services which are not applicable to a particular operating function or other accounts. It shall include also the pay and expenses of persons engaged for a special or temporary administrative or general purpose in circumstances where the person so engaged is not considered as an employee of the utility.

B. This account shall be so maintained as to permit ready summarization according to the nature of service and the person furnishing the same.

Items

1. Fees, pay, and expenses of accountants and auditors, actuaries, appraisers, attorneys, engineering consultants, management consultants, negotiators, public relations counsel, and tax consultants.
2. Supervision fees and expenses paid under contracts for general management services.

NOTE: Do not include inspection and brokerage fees and commissions chargeable to other accounts or fees and expenses in connection with security issues which are includible in the expenses of issuing securities.

924 Property Insurance

A. This account shall include the cost of insurance or reserve accruals to protect the utility against losses and damages to owned or leased property used in its utility operations. It shall also include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and the related supplies and expenses incurred in property insurance activities.
B. Recoveries from insurance companies or others for property damages shall be credited to the account charged with the cost of the damage. If the damaged property has been retired, the credit shall be to the appropriate account for accumulated provision for depreciation.

C. Records shall be kept so as to show the amount of coverage for each class of insurance carried, the property covered, and the applicable premiums. Any dividends distributed by mutual insurance companies shall be credited to the accounts to which the insurance premiums were charged.

Items

1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.

NOTE A: The cost of insurance or reserve accruals capitalized, shall be charged to construction and retirement either directly or by transfers to construction and retirement work orders from this account.

NOTE B: The cost of insurance or reserve accruals for the following classes of property shall be charged as indicated:
   1. Materials, supplies, and stores equipment to Account 163, Stores Expense Undistributed, or appropriate materials account.
   2. Transportation and other general equipment to appropriate clearing accounts that may be maintained.
   3. Electric plant leased to others to Account 413, Expenses of Electric Plant Leased to Others.
   4. Nonutility property to the appropriate nonutility income account.
   5. Merchandise and jobbing property to Account 415, Costs and Expenses of Merchandising, Jobbing and Contract Work.

NOTE C: The cost of labor, employee pensions and benefits, social security and other payroll taxes, and the related supplies and expenses of administrative and general employees who are only incidentally engaged in property insurance work may be included in Account 920 and Account 921, as appropriate.

NOTE D: The cost of insurance or reserve accruals applicable to the various utility functions shall be charged to the specific functional operations and the appropriate miscellaneous administrative expense accounts either directly or by transfers from this account.

925 Injuries and Damages

A. This account shall include the cost of insurance or reserve accruals to protect the utility against injuries and damages claims of employees or others, losses of such character not covered by insurance, and expenses incurred in settlement of injuries and damages claims. It shall also include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, related supplies, and expenses incurred in injuries and damages activities.

B. Reimbursements from insurance companies or others for expenses charged hereto on account of injuries, damages, and insurance dividends or refunds shall be credited to this account.

Items

1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys’ services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
6. Compensation payments under workmen’s compensation laws.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Note A.)
8. Cost of safety, accident prevention, and similar educational activities.
§ 1767.31

NOTE A: Payments to or in behalf of employees for accident or death benefits, hospital expenses, medical expenses, or for salaries while incapacitated for service or on leave of absence beyond periods normally allowed, when not the result of occupational injuries, shall be charged to Account 926, Employee Pensions and Benefits. (See also Note B of Account 926.)

NOTE B: The cost of injuries and damages or reserve accruals capitalized shall be charged to construction and retirement activities either directly or by transfers from this account to the applicable construction and retirement work orders.

NOTE C: The cost of insurance or reserve accruals applicable to the various utility functions shall be charged to the specific functional operations and the appropriate miscellaneous administrative expense accounts either directly or by transfers from this account.

NOTE D: Exclude herefrom the time and expenses of employees (except those engaged in injuries and damages activities) spent in attendance at safety and accident prevention educational meetings, if occurring during the regular work period.

NOTE E: The cost of labor, employee pensions and benefits, social security and other payroll taxes, and the related supplies and expenses of administrative and general employees who are only incidentally engaged in injuries and damages activities, may be included in Account 920 and Account 921, as appropriate.

926 Employee Pensions and Benefits

A. This account shall include pensions paid to or on behalf of retired employees or accruals to provide for pensions or payments for the purchase of annuities for this purpose, when the utility has definitely, by contract, committed itself to a pension plan under which the pension funds are irrevocably devoted to pension purposes and payments for employee accident, sickness, hospital, and death benefits, or insurance therefor. Include, also, expenses incurred in medical, educational, or recreational activities for the benefit of employees and administrative expenses in connection with employee pensions and benefits.

B. The utility shall maintain a complete record of accruals or payments for pensions and be prepared to furnish full information to RUS of the plan under which it has created or proposes to create a pension fund and a copy of the declaration of trust or resolution under which the pension plan is established.

C. There shall be credited to this account, the portion of pensions and benefits expenses which is applicable to nonutility operations, the specific functional operations, maintenance, and administrative expense accounts, and to construction and retirement activities unless such amounts are distributed directly to the accounts involved and are not included herein in the first instance.

D. Records in support of this account shall be so kept that the total pensions expense, the total benefits expense, the administrative expenses included herein, and the amounts of pensions and benefits expenses transferred to the operations, maintenance, administrative, construction or retirement accounts will be readily available.

Items

1. Payment of pensions to retirees on a nonaccrual basis.
2. Accruals for or payments to pension funds or to insurance companies for pension purposes.
3. Group and life insurance premiums (credit dividends received).
4. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
5. Payments for accident, sickness, hospital, and death benefits or insurance.
6. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
7. Expenses in connection with educational and recreational activities for the benefit of employees.

NOTE A: The cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, and the related supplies and expenses of administrative and general employees who are only incidentally engaged in employee pension and benefit activities may be included in Account 920 and Account 921, as appropriate.

NOTE B: Salaries paid to employees during periods of nonoccupational sickness may be
charged to the appropriate labor account rather than to employee benefits.

927 Franchise Requirements

A. This account shall include payments to municipal or other governmental authorities and the cost of materials, supplies, and services furnished such authorities without reimbursement in compliance with franchise, ordinance, or similar requirements; provided, however, that the utility may charge to this account at regular tariff rates, instead of cost, utility service furnished without charge under provisions of franchises.

B. When no direct outlay is involved, concurrent credit for such charges shall be made to Account 929, Duplicate Charges—Credit.

C. The account shall be maintained so as to readily reflect the amounts of cash outlays, utility service supplied without charge, and other items furnished without charge.

NOTE A: Franchise taxes shall not be charged to this account, but to Account 408.1, Taxes Other Than Income Taxes, Utility Operating Income.

NOTE B: Any amount paid as initial consideration for a franchise running for more than one year shall be charged to Account 302, Franchises and Consents.

928 Regulatory Commission Expenses

A. This account shall include all expense (except pay of regular employees only incidentally engaged in such work) properly includible in utility operating expenses, incurred by the utility in connection with formal cases before regulatory commissions or other regulatory bodies or cases in which such a body is a party, including payments made to a regulatory commission for fees assessed against the utility for pay and expenses of such commission, its officers, agents, and employees, and also including payments made to the United States for the administration of the Federal Power Act.

B. Amounts of regulatory commission expenses which, by approval or direction of RUS, are to be spread over future periods shall be charged to Account 182.3, Other Regulatory Assets, and amortized by charges to this account.

C. The utility shall be prepared to show the cost of each formal case.

Items

1. Salaries, fees, retainers, and expenses of counsel, solicitors, attorneys, accountants, engineers, clerks, attendants, witnesses, and others engaged in the prosecution of or defence against petitions or complaints presented to regulatory bodies or in the valuation of property owned or used by the utility in connection with such cases.

2. Office supplies and expenses, payments to public service or other regulatory commissions, stationery and printing, traveling expenses, and other expenses incurred directly in connection with formal cases before regulatory commissions.

NOTE A: Exclude from this account and include in other appropriate operating expense accounts, expenses incurred in the improvement of service, additional inspection, or rendering reports which are made necessary by the rules and regulations, or orders, of regulatory bodies.

NOTE B: Do not include in this account amounts includible in Account 302, Franchises and Consents; Account 181, Unamortized Debt Expense; or Account 214, Capital Stock Expense.

929 Duplicate Charges—Credit

This account shall include concurrent credits for charges which may be made to operating expenses or to other accounts for the use of utility service from its own supply. Include, also, offsetting credits for any other charges made to operating expenses for which there is no direct money outlay.

930.1 General Advertising Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in advertising and related activities, the cost of which by their content and purpose are not provided for elsewhere.

Items

Labor:
1. Supervision.
2. Preparing advertising material for newspapers, periodicals, and billboards and preparing or conducting motion pictures, radio, and television programs.
3. Preparing booklets and bulletins used in direct mail advertising.
4. Preparing window and other displays.
5. Clerical and stenographic work.
6. Investigating and employing advertising agencies, selecting media, and conducting negotiations in connection with the placement and subject matter of advertising.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
2. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
3. Fees and expenses of claim investigators.
4. Payment of awards to claimants for court costs and attorneys' services.
5. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
7. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
8. Cost of safety, accident prevention, and similar educational activities.

Materials and Expenses:
1. Advertising in newspapers, periodicals, billboards, and radios.
2. Advertising matter such as posters, bulletins, booklets, and related items.
3. Fees and expenses of advertising agencies and commercial artists.
4. Postage and direct mail advertising.
5. Printing of booklets, dodgers, and bulletins.
6. Supplies and expenses in preparing advertising materials.

NOTE A: Properly includible in this account is the cost of advertising activities on a local or national basis of a goodwill or institutional nature, which is primarily designed to improve the image of the utility or the industry, including advertisements which inform the public concerning matters affecting the company's operations, such as, the cost of providing service, the company's efforts to improve the quality of service, and the company's efforts to improve and protect the environment. Entries relating to advertising included in this account shall contain or refer to supporting documents which identify the specific advertising message. If references are used, copies of the advertising message shall be readily available.

NOTE B: Exclude from this account and include in Account 426.4, Expenditures for Certain Civic, Political and Related Activities, expenses for advertising activities, which are designed to solicit public support or the support of public officials in matters of a political nature.
§ 1767.31 Miscellaneous General Expenses

This account shall include the cost of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, property insurance, property taxes, and expenses incurred in connection with the general management of the utility not provided for elsewhere.

Items

Labor:
1. Miscellaneous labor not elsewhere provided for.

Taxes:
1. Federal and state unemployment.
2. F.I.C.A.
3. Property.

Employee Pensions and Benefits: The portion of employee pensions and benefits specifically identifiable with employees' labor costs charged herein or, in the absence of specific employee identification, the portion of employee pensions and benefits, allocated on the more equitable basis of either direct labor dollars or direct labor hours, applicable to the labor items detailed above, including:
1. Accruals for or payments to pension funds or to insurance companies for pension purposes.
2. Group and life insurance premiums (credit dividends received).
3. Payments for medical and hospital services and expenses of employees when not the result of occupational injuries.
4. Payments for accident, sickness, hospital, and death benefits or insurance.
5. Payments to employees incapacitated for service or on leave of absence beyond periods normally allowed when not the result of occupational injuries or in excess of statutory awards.
6. Expenses in connection with educational and recreational activities for the benefit of employees.

Insurance:
1. Premiums payable to insurance companies for fire, storm, burglary, boiler explosion, lightning, fidelity, riot, and similar insurance.
2. Amounts credited to Account 228.1, Accumulated Provision for Property Insurance, for similar protection.
3. Special costs incurred in procuring insurance.
4. Insurance inspection service.
5. Insurance counsel, brokerage fees, and expenses.
6. Premiums payable to insurance companies for protection against claims from injuries and damages by employees or others, such as public liability, property damages, casualty, employee liability, etc., and amounts credited to Account 228.2, Accumulated Provision for Injuries and Damage, for similar protection.
7. Losses not covered by insurance or reserve accruals on account of injuries or deaths to employees or others and damages to the property of others.
8. Fees and expenses of claim investigators.
9. Payment of awards to claimants for court costs and attorneys' services.
10. Medical and hospital service and expenses for employees as the result of occupational injuries or resulting from claims of others.
12. Compensation paid while incapacitated as the result of occupational injuries. (See Account 924, Note A.)
13. Cost of safety, accident prevention, and similar educational activities.

Expenses:
1. Industry association dues for company memberships.
2. Contributions for conventions and meetings of the industry.
3. Research, development, and demonstration expenses not charged to other operation and maintenance expense accounts on a functional basis.
4. Communication service not chargeable to other accounts.
5. Trustee, registrar, and transfer agent fees and expenses.
6. Stockholders meeting expenses.
7. Dividend and other financial notices.
8. Printing and mailing dividend checks.
9. Directors' fees and expenses.
10. Publishing and distributing annual reports to stockholders.
11. Public notices of financial, operating, and other data required by regulatory statutes, not including, however, notices required in connection
with security issues or acquisitions of property.

931 Rents

This account shall include rents properly includible in utility operating expenses for the property of others used, occupied, or operated in connection with the customer accounts, customer service and informational, sales, general, and administrative functions of the utility. (See §1767.17 (c).)

(Maintenance)

935 Maintenance of General Plant

A. This account shall include the cost assignable to customer accounts, sales, administrative, and general functions of labor, employee pensions and benefits, social security and other payroll taxes, injuries and damages, materials used, and expenses incurred in the maintenance of property, the book cost of which is includible in Account 390, Structures and Improvements; Account 391, Office Furniture and Equipment; Account 397, Communication Equipment; and Account 398, Miscellaneous Equipment. (See §1767.17(b).)

B. Maintenance expenses on office furniture and equipment used elsewhere than in general, commercial, and sales offices shall be charged to the following accounts:

4. Other Power Generation, Account 554.
5. Transmission, Account 573.
6. Distribution, Account 598.
7. Merchandise and Jobbing, Account 416.
8. Garages, Shops, etc., Appropriate clearing account, if used.

NOTE: Maintenance of plant included in other general equipment accounts shall be included herein unless charged to clearing accounts or to the particular functional maintenance expense account indicated by the use of the equipment.

101 Work Order Procedures

When a minor item of property is removed from service and not replaced, a retirement work order is not required except in the case of a conductor. The cost of the minor item shall remain in the appropriate plant account until the retirement unit, of which it is a part, is retired. However, as conductor is recorded in feet and is not part of any specific retirement unit, conductor shall be retired even though the amount taken down and not replaced is less than a retirement unit (two spans).

When minor items of plant are removed and not replaced, material salvaged shall be recorded on a material salvage ticket. Items of material recorded on this ticket shall be charged to the materials and supplies account and credited in the miscellaneous columns of the Materials Register to the Accumulated Provision for Depreciation. In this example, it is assumed that the cost of removal is nil. If, however, costs are incurred during the removal of minor items of plant, these costs shall reduce the credit to the Accumulated Provision for Depreciation.

When a staking sheet supporting a single work order reflects a combination of new construction and replacements, or system improvements, the predominant cost shall be the governing factor in determining the amount of cost RUS will finance. To illustrate, assume that a service is to be run to a new home near the end of an existing line. On inspection, the pole from which the service is to be run is found to be in very poor physical condition and must be replaced. In addition, a single span of wire and a service are presently connected to this pole which serve no purpose. The home originally served has been demolished and the existing span, pole, and service were retired. In other words, what started out to be simply the installation of a new service now includes the retirement of a span of wire, a pole, and a service; the replacement of a pole; and the running of a new service. Assuming the replacement of the pole is the costliest part of this project, the construction and retirement activity shall be classified as an ordinary replacement even though the work includes new construction and retirements without replacement.

102 Line Conversion

If it is necessary to move a conductor from one location to another on a pole assembly during the conversion of a line from one phase to another phase, the cost of moving the conductor is capitalizable as a system improvement.

103 Sacrificial Anodes and the Replacement of a Neutral

Many utilities conduct studies to determine whether sacrificial anodes are needed to protect underground cable against corrosion. The following procedures shall be followed to account for sacrificial anodes and the replacement of a neutral:

1. If the study results in the installation of sacrificial anodes, the cost of the study shall be capitalized to Account 367, Underground Conductors and Devices. If the study does not result in the installation of anodes, the cost shall be charged to Account 594, Maintenance of Underground Lines.

2. Costs incurred in the first installation are capitalizable even though anodes are considered minor items of property. However, only the first costs of installation shall be capitalized. All subsequent replacements of anodes shall be expensed.
3. Sacrificial anodes do not constitute a record unit; therefore, the cost of anodes shall be added to the cost of the underground cable unit.

4. Because a neutral is part of an underground cable record unit, and is not, in and of itself, a record unit, the cost to replace a corroded neutral shall be charged to Account 594, Maintenance of Underground Lines.

104 Terminal Facilities

Borrowers are sometimes required to construct terminal facilities in the transmission line of another utility in order to receive power from their power supplier. The document executed between the borrower and the utility is normally referred to as a “License Agreement”. The license agreement may stipulate that certain items of the terminal facilities are to be transferred to, and become the property of, the other utility upon completion of the construction. The accounting for this type of transaction shall be as follows:

1. All construction costs incurred shall be charged to a work order. Upon completion of the construction and accumulation of all costs, the cost of the facilities that become the property of another utility shall be transferred from construction work-in-progress to Account 303, Miscellaneous Intangible Plant. The cost of the plant for which the borrower retains title shall be charged to the appropriate plant accounts.

2. The cost of the facilities recorded in Account 303 shall be amortized to Account 405, Amortization of Other Electric Plant, over the contract term or the estimated useful service life of the plant, whichever is shorter. If the related contract or contracts for this power supply are terminated, the unamortized balance shall be expensed, in the current period, in Account 557.

105 Pole Top Disconnect Switch

The installation of pole top service disconnect switches, where title is retained by the utility, shall be capitalized in Account 371, Installations on Customers’ Premises. If a switch cabinet is purchased with a current transformer included as an integral part of the cabinet, the entire cost of the switch shall be charged to Account 371.

If the current transformer is installed outside of the switch cabinet, the transformer, meter, and meter base, together with the first installation costs, shall be capitalized, upon purchase, in Account 370, Meters.

Payments received from the customer toward construction costs shall be credited to Account 371, Installations on Customers’ Premises. Such payments, together with any amount not financed by RUS, shall be entered in column 9 of the RUS Form 219, Inventory of Work Orders. The associated maintenance costs shall be charged to Account 587, Customer Installations Expenses, or to Account 597, Maintenance of Meters, as appropriate.

When pole top disconnect switches are installed and title is held by the customer, the cost of the material shall be charged to Account 456, Other Electric Revenues and the receipts from the sale of line material shall be credited to Account 456. The portion of the receipts for resale material as well as that for installation shall be credited to Account 415, Revenues from Merchandising, Jobbing, and Contract Work. The cost of resale material sold and the cost of installation shall be charged to Account 416, Costs and Expenses of Merchandising, Jobbing and Contract Work.

Future maintenance costs incurred by the cooperative that are not billed to the customer shall be charged to Account 587, Customer Installations Expenses.

106 Steel Pole Reinforcers

The cost associated with the purchase and installation of steel pole reinforcers shall be charged to Account 593, Maintenance of Overhead Lines.

107 Mobile Substations

Mobile substations shall be accounted for in a manner similar to that for a spare and are, therefore, included as part of transmission or distribution station equipment, depending upon the use of the mobile substation. The mobile substation, together with the trailer on which it is permanently mounted, shall be capitalized upon purchase. A general purpose truck or tractor used to relocate a mobile substation and
§ 1767.41

trailer shall be classified as transportation equipment. The composite depreciation rate used for transmission plant or distribution plant, as appropriate, shall be applied to the mobile substation.

108 Security Lights

Where a pole supports both a secondary wire and a security light, the cost of the pole shall be charged to Account 364, Poles, Towers, and Fixtures, even though the plant investment in security lights is recorded in Account 371, Installations on Customers' Premises.

109 Joint Use

There are many cases in which an electric utility and a communications utility enter into an agreement that provides for joint use of poles. Under the terms of these agreements, either utility may occupy the poles of the other upon payment of a stipulated annual rental. If such joint occupancy necessitates the use of a higher than standard pole, the new pole shall be provided at the expense of the utility having the need for the higher pole.

When an electric utility replaces, at its own expense, a standard pole belonging to the communications utility with a higher pole, the cost of the higher pole, less net salvage (if any) of the pole replaced, shall be charged to the account in which the pole rental is included.

Contributions made to an electric utility by a communications utility for the costs incurred in stubbing joint use electric poles shall be credited to Account 593, Maintenance of Overhead Lines. The cost of pole stubbing on electric plant distribution facilities shall be charged to Account 593.

An investment in outside plant that is held in joint ownership shall be recorded in the appropriate plant accounts at its cost to the utility. For continuing property record purposes, jointly owned property units shall be priced at their cost to the utility and shall be appropriately segregated in the CPRs to indicate joint ownership.

110 First Clearing and Grading of Land and Rights of Way

Utility accounting practice requires the costs associated with the first clearing and grading of land and rights of way and any resulting damage thereof, to be included in the accounts for structures and improvements or equipment to which such costs relate. Since the first clearing, as well as clearing which is “directly occasioned by the building of a structure,” is done, not for the purpose of enhancing the value of the land or the rights of way, but for the purpose of constructing plant, these costs are more directly related to the construction of plant than to the purchase of land or rights of way. The accounts shall be charged as follows:

1. For overhead transmission pole lines, Account 356, Overhead Conductors and Devices;
2. For overhead distribution lines, Account 365, Overhead Conductors and Devices; and
3. For underground distribution lines, Account 366, Underground Conductors and Devices, or Account 367, Underground Conductors and Devices, for a direct burial installation.

111 Engineering Contracts for System Planning

Engineering costs for long-range system plans shall be charged to Account 183, Preliminary Survey and Investigation Charges, as incurred. The cost of engineering services incurred in preparing a long-range system plan represents a legitimate component of the total cost of construction of all system improvements detailed in the plan. The amount of engineering costs to be associated with any specific system improvement is the annual costs incurred up to the time of the allocation (not previously allocated), plus that portion of the initial cost which relates to the particular construction in question. If any major system improvement included in the engineering plan is not constructed, or if the study is superseded by another complete study, the cost of that portion of the original study not resulting in construction
shall be charged to Account 182.2, Unrecovered Plant and Regulatory Study Costs, if the costs are to be recovered through future rates. Costs recorded in Account 182.2 shall be amortized to Account 407, Amortization of Property Losses, Unrecovered Plant and Regulatory Study Costs, as the costs are recovered through the rates. Any costs included in Account 182.2 that are disallowed for rate-making purposes shall be charged to Account 426.5, Other Deductions.

The allocation of engineering services to the various construction projects requires the exercise of judgment. In some cases, system improvements are continuous over a period of months or years, thus permitting the engineering cost to be spread monthly as overhead in relation to the direct costs incurred in construction. (If a substantial amount of retirement work is performed in connection with system improvements, a proportionate share of the engineering cost shall be allocated on the basis of direct retirement labor.) If the system improvements detailed in the plan are not performed in a continuous manner, the engineering cost shall be allocated on the basis of the estimated costs of the various larger system improvement projects which result from the long-range plan.

If construction is performed by contract, the engineering cost applicable thereto shall be transferred from Account 183 to Account 107, Construction Work-in-Progress—Electric, and thereby spread to the appropriate plant accounts on the basis of contract costs.

In the case of system improvement construction performed on the basis of work orders, engineering costs shall be transferred to Account 107, Construction Work-in-Progress—Electric, and included in total work order costs as either overhead or special services. If engineering services are not readily identifiable with individual work orders, they shall be capitalized as overhead. If engineering costs for each work order are readily separable from the engineering costs for all other work orders, they shall be capitalized as special services.

In summarizing system improvement work orders, on the RUS Form 219, Inventory of Work Orders, the amount of engineering costs previously approved for advance on the long range plan, if any, shall be deducted to determine the balance of loan funds subject to advance by RUS.

112 Determination of Availability of Service

Costs relating to the determination of availability of service, rates, and similar items for individual applicants shall be charged to Account 912, Demonstrating and Selling Expenses. If it is expected that construction will result, the costs incurred to provide service, including staking, shall be charged to Account 107, Construction Work-in-Progress—Electric. If construction does not result, Account 107 shall be credited and Account 426.5, Other Deductions, shall be charged.

113 Temporary Facilities (Services)

Plant installed for temporary use, a period of less than 1 year, shall be recorded in Account 185, Temporary Facilities, net of any payments received from customers. Upon retirement, the net cost plus cost of removal, less any salvage value, shall be cleared to Account 451, Miscellaneous Service Revenues.

When a temporary service is installed at the site of a building under construction, the location of the permanent service entrance and the load and its characteristics are usually known. The temporary service is of the proper capacity and is so located or has sufficient slack, that it can be relocated to serve the new building as a permanent service. Under these conditions, the service shall be charged to Account 399, Services, when first installed. The cost of moving and attaching the service to the permanent service entrance shall be charged to Account 593, Maintenance of Overhead Lines or Account 594, Maintenance of Underground Lines, as appropriate.

114 Construction Work-in-Progress Damaged or Destroyed by Storm

When installed plant, not yet completed or completed but not yet placed in service, has been damaged or destroyed by storm, the cost of the repair and restoration shall be added to the
cost of construction and capitalized if the plant was constructed under force account or work order construction, and the utility paid for the cost of the repairs. If the plant was constructed under contract, the contractor is required to deliver the plant in new condition. Therefore, any repairs required prior to the completion of construction and acceptance by the utility, are ordinarily borne by the contractor.

115 Liquidated Damages

Liquidated damages are amounts paid by or assessed against contractors for the completion of construction after an agreed upon date. Liquidated damages shall be credited to Account 107, Construction Work-in-Progress—Electric. Since these damages accrue during the construction period, they become one of the components of construction cost. Even though a portion of these damages may compensate the utility for costs which are not “identifiable,” no portion of the damages shall be credited to revenue or expense.

When a contractor has been paid in full from loan funds or from funds to be reimbursed by loan funds without a deduction for liquidated damages, the amount of liquidated damages received shall be deposited in the Construction Fund. This amount shall be reflected by a decrease in column 5, “Total Expenditures to Date,” of the RUS Form 595, Financial Requirement and Expenditure Statement, and as an increase in column 6, “Cash Balance.” If liquidated damages are obtained by withholding an equivalent amount from the contractor’s payment, the net result will be the same.

116 Nonrefundable Payments for Construction

Nonrefundable payments (contributions) from customers and developers for underground construction shall first be credited to Account 107.2, Construction Work-in-Progress—Force Account. When the constructed plant is unitized and distributed to the individual plant accounts, the contributions shall be credited to those plant accounts which gave rise to the contribution.

When a customer or developer furnishes a trench or other service in connection with buried plant, the cooperative shall debit Account 107.2 with the actual or estimated cost of the service performed, and account for the credit as set forth above.

117 Refunds of Overpayments for Materials and Equipment

Refunds of overpayments for materials and equipment previously purchased are occasionally received as the result of legal action brought against electrical suppliers for price fixing in violation of antitrust laws. Such refunds shall be accounted for as follows:

1. The refund shall first be applied to any litigation costs that were incurred.
2. Refunds for special equipment items shall be accounted for, in detail, on the Summary of Special Equipment Costs and credited against the appropriate plant accounts.
3. Other material or equipment items that were installed through work orders or a materials furnished contract shall be adjusted on an amended work order. The amended work order shall include full details of the refund.
4. Continuing property records shall be adjusted to reflect the above transactions.
5. Amounts approved for advance on the RUS Form 595, Financial Requirement and Expenditure Statement, and on the loan budget records, shall be adjusted. For special equipment items, the adjustment shall be requested in a letter to RUS. For materials installed by work order or contract, the adjustments shall be made through credits shown on the RUS Form 219, Inventory of Work Orders.
6. Refunds for material currently in stock shall be credited to Account 154, Plant Materials and Operating Supplies.
7. If the material was used in maintenance activities or operations, the refund shall be credited to the appropriate maintenance or operations expense account.
8. Refunds for materials or equipment financed from loan funds shall be deposited in the Construction Fund—Trustee Account or remitted to RUS as a special payment on a note. Other refunds shall be deposited in the general funds.
118 Load Control Equipment

The primary purpose of a Load Management System is to optimize load dispatch and to reduce or minimize system peaks in order to reduce purchases of power or to delay or eliminate the need for construction of new plant. A Load Management System may be used on integrated systems, on generation, transmission, or distribution systems separately. The telemetry equipment used for data acquisition and interpretation may be included at various points on a system, such as generation, transmission, or distribution substation, switchyards or on consumers' premises.

An effective load control program should be coordinated with the G&T and requires full participation of all member distribution systems. The G&T monitors the power load of the total member distribution system to predict the time of the system's peak load. An optimal load control strategy is developed by the G&T and is passed on from the G&T computer system to the load control computer systems of the member distribution cooperatives.

The equipment at the member distribution system level is the type actually being used by an integrated power system to operate a load control program. The equipment used may vary from one integrated power system to another. The selection of equipment used is determined by the information needs of the integrated power system, and the method selected to operate the load control system.

Some equipment performs only SCADA-type functions. This equipment is included with the equipment that performs only load control functions because SCADA-type equipment is an integral part of a load control program. An effective load control strategy requires current information on loads so that member distribution systems can determine the actual loads to be shed and the duration of the load control.

The function and location of the load control equipment are the primary factors in determining the account in which the equipment shall be recorded. The following example depicts a common load control system and the associated accounting. Equipment type may vary, thereby necessitating the use of accounts not prescribed below. In all instances, however, the function and location of the equipment shall dictate the appropriate account classification.

G&T Borrower

1. Coordinating System Equipment

Coordinating System Equipment is the data acquisition, processing and control hardware and software used to coordinate the load control efforts of the member distribution system. Generally, this equipment is dedicated to load control use and is not shared with other utility activities.

The purpose of the G&T load control computer system is to reduce or minimize the peak power requirements of the entire member distribution system. This involves load dispatching to control transmission circuits and breakers. The computer system for load control shall, therefore, be recorded in Account 353, Station Equipment, with the associated operating expenses recorded in Account 561, Load Dispatching, and maintenance expenses recorded in Account 570, Maintenance of Station Equipment.

2. Coordinating System Communications Link

The G&T load control computer system is usually linked to the load control computer system for each member distribution system by a radio or telephone link that is dedicated to that purpose and is not shared with other communication activities. Under such circumstances, communications equipment shall be classified in Account 353, Station Equipment. If the communications equipment is shared with general use or voice communications equipment, however, the equipment shall be classified in Account 397, Communication Equipment.

3. Depreciation

Load control equipment shall be recorded in separate subaccounts of the primary plant accounts detailed above and shall be depreciated based upon the owner's estimate of the equipment's useful service life.

Distribution Borrower

1. Member System Equipment
Member system equipment is the data acquisition, processing and control hardware and software used as a subset to the overall load control efforts by the integrated power system.

The member system computer for each distribution member system accepts the control strategy from the G&T coordinating system and develops the tables that determine the control loads that are to be shed and the duration of the load control. The member system computer for each distribution system monitors the usage at each of its delivery points. This usage data is then transmitted to the G&T coordinating system for use in developing load projects and evaluating control strategies for the integrated power system. The member system computer is generally dedicated to load control use and is not shared with other electric utility operations.

The member computer system shall be recorded in Account 362, Station Equipment. The associated operating expenses shall be recorded in Account 581, Load Dispatching, and maintenance expenses shall be recorded in Account 592, Maintenance of Station Equipment.

2. Substation Remote Controllers

Substation Remote Controllers are located at the distribution substation. They accept control signals from the member system computer and couple the signal to the portion of the distribution system to which it is connected. Substation Remote Controllers also serve as a receiver of inbound signals from transponders located in the distribution system. They also send data back to the member system computer.

Substation Remote Controllers shall be recorded in Account 362, Station Equipment. The associated operating expenses shall be recorded in Account 582, Station Expenses, and maintenance expenses shall be recorded in Account 592, Maintenance of Station Equipment.

3. Substation Injection Units

Substation Injection Units are used only in power line based systems and are located in distribution substations. A major function of the Substation Injection Unit is to receive load control signals from the member system computer and inject them into the power line based system to be transmitted to the Load Control Receivers. Substation Injection Units can also perform control and SCADA functions similar to those performed by Substation Remote Controllers.

Substation Injection Units shall be recorded in Account 362, Station Equipment. The associated operating expenses shall be recorded in Account 582, Station Expenses, and maintenance expenses shall be recorded in Account 592, Maintenance of Station Equipment.

4. Remote Terminal Units

Remote Terminal Units perform electric utility SCADA functions in a distribution substation or delivery point. These functions include monitoring equipment for abnormal operating conditions, monitoring analog quantities such as conductor voltage or substation load, and controlling of certain equipment within the substation.

Remote Terminal Units shall be recorded in Account 362, Station Equipment. The associated operating expenses shall be recorded in Account 582, Station Expenses, and maintenance expenses shall be recorded in Account 592, Maintenance of Station Equipment.

5. Line Device Transponder

A Line Device Transponder directly controls a piece of distribution apparatus, such as a voltage regulator or a power factor correction capacitor, located on a distribution feeder and not accessible to a Remote Terminal Unit. The Line Device Transponder actuates the control functions and reports back to the member system computer upon completion of the requested action. This transponder is located at the site of the distribution apparatus being controlled.

Line Device Transponders shall be recorded in Account 368, Line Transformers. The associated operating expense shall be recorded in Account 583, Overhead Line Expenses, or Account 584, Underground Line Expenses, as appropriate, and maintenance expenses shall be recorded in Account 595, Maintenance of Line Transformers.

6. Communications Verification Transponders
Communication Verification Transponders are used to respond to inquiries from Substation Remote Controllers. In power line based systems, these transponders are used to verify the performance of the communications system. They are also used during adverse system operations to isolate sections of the distribution system that are experiencing an outage.

Communication Verification Transponders shall be recorded in Account 582, Station Expenses, and maintenance expenses shall be recorded in Account 592, Maintenance of Station Equipment.

7. Load Control Receivers

The Load Control Receiver, also known as a load control switch, is located at the site of the consumer’s load. These receivers directly control the electric supply to an end-use appliance, such as an electric water heater, central air conditioning compressor, or irrigation pump. The amount of time that an appliance will be turned off by the load control receiver is preset. When the member system computer determines that load shedding is necessary, it sends a signal to the communication link which then sends signals directly to the Load Control Receivers. In a power line based system, the signal from the communications link is sent by radio or telephone line to the Substation Injection Units, which then signals the Load Control Receivers to shut down the appliances for the present time. In nonpower line based systems, the signal from the communications link is sent by radio directly to the Load Control Receivers.

Load Control Receivers are located on the consumer’s side of the meter. When the member distribution system retains title to the Load Control Receivers and assumes full responsibility for maintenance and replacement of the equipment, it shall be classified in Account 371, Installations on Customer’s Premises. Load Control Receivers that are donated or given to consumers shall be charged to Account 587, Customer Installations Expenses, and Account 598, Maintenance of Miscellaneous Distribution Plant, respectively. Expenses applicable to Load Control Receivers donated or given to consumers shall be recorded in Account 908, Customer Assistance Expenses.

Load Control Receivers may be moved on a continual basis from one customer location to another and are, therefore, considered to be special equipment items. When ownership is maintained by the member distribution cooperative, Load Control Receivers shall be accounted for in accordance with the special equipment procedures outlined in Accounting Interpretation No. 119 of this section.

8. Communication Links

The communication link in the member distribution systems between the Member System Computer, the Substation Remote Controllers or Substation Injection Units, Remote Terminal Units, Line Device Transponders, Communication Verification Transponders, and Load Control Receivers is usually accomplished by radio, telephone line, or power line based system. The communication links are normally dedicated to the SCADA and load control functions being served. Under such circumstances, communications equipment shall be recorded in Account 362, Station Equipment. If, however, the communication equipment used is shared with general use or voice communications equipment, the equipment shall be charged to Account 397, Communication Equipment.

9. Depreciation

Load control equipment shall be recorded in separate subaccounts of the primary plant accounts detailed above and shall be depreciated based upon the manufacturer’s estimate of the equipment’s useful service life.

119 Special Equipment

Special Equipment items are classified as such because they are continually being moved from one location to another due to load changes and maintenance practices. The USoA provides accounting that differs from that used for other types of materials. The cost, new, of special equipment items shall
be capitalized at the time of purchase; it shall not be charged to Account 154 as is the case with other materials. The first installation cost, as well as all incidental costs necessary to prepare the equipment for use, shall be capitalized with the material upon purchase. All subsequent costs of removing, resetting, changing, renewing oil, and repairing constitute operations and maintenance expenses. The capitalized cost of special equipment items, including the first installation, shall be removed from the electric plant accounts only when the items are abandoned or retired from the system.

Meters, line-type transformers, oil circuit reclosers, sectionalizers, current and potential transformers, meter sockets, and other metering equipment listed in Account 370, Meters, as well as pole-type and underground voltage regulators in Account 368, Line Transformers, are considered to be special equipment items. Similarly, load control receivers (load control switches) recorded in Account 371, Installations on Customers' Premises, are considered to be items of special equipment. (See Interpretation No. 118.) Transformers, voltage regulators, metering equipment, and current and potential transformers for substations are not.

Special equipment items which are classified as nonusable shall be segregated in the warehouse and retired from service. The Summary of Special Equipment Costs shall be retitled Summary of Special Equipment Costs Retired and used for this purpose. A journal entry reflecting this information shall be prepared and posted to the books. Since loan funds for special equipment, including first installation costs, are approved for advance by RUS upon receipt of the borrower's written estimate of funds required, and not on the basis of an Inventory of Work Orders, it is improper to take a credit for any salvage involved in the retirement of special equipment on the Inventory of Work Orders.

120 Meter Sockets and Meters

When a utility furnishes meter sockets, ownership by the utility of the meter socket or base, as well as the meter itself, is established by virtue of them being furnished without cost to the consumer by the cooperative. While no agreement as to ownership between the cooperative and the property owner exists, cooperative ownership is implied by long standing practice and tradition in the electric utility industry.

121 Minimum—Maximum Voltmeters

A minimum—maximum voltmeter is used to record the minimum and maximum voltages at a specific line location over a period of time. It is normally installed on a pole in connection with a 1½ kVA transformer, a meter base and connecting wires, and other small items of materials. Meter bases are ordinarily set for these voltmeters throughout the system, and a lesser number of voltmeters are rotated among them periodically to obtain voltage readings. An average system may have one voltmeter to two installations, with a maximum of 20 or 25 voltmeters for the whole system.

Minimum—maximum voltmeters shall be recorded, through work orders, in Account 370, Meters, when installed. The cost of the transformers shall remain in Account 368, Line Transformers, with the cost of the meter bases remaining in Account 370, Meters. The miscellaneous material used in installing the transformer and the meter base shall be charged to Account 370, Meters.

Maintenance expense shall be charged to either Account 595, Maintenance of Line Transformers, or Account 597, Maintenance of Meters, as appropriate. Costs associated with reading the voltmeters shall be charged to Account 583, Overhead Line Expenses, and the cost of relocating or changing the complete installation or any part thereof, other than retirement of the meter base, shall be charged to Account 583, Overhead Line Expenses, or Account 586, Meter Expenses.

122 Retrofitting Demand Meters

A demand meter measures the amount of electricity used over a period of time in kilowatt-hours (kWh) and indicates the maximum kilowatts (kW) required at any one time by means of a pointer. Electronic or solid state demand meters have a direct readout which reads
kilowatt demand to two decimal places. The use of a direct readout demand meter may result in increased revenues as pointer readings tend to register lower than actual usages.

The process of retrofitting a demand meter replaces the pointer with a direct readout. The cost of such a replacement is usually expensed as a minor item of property; however, since the use of a direct readout results in a substantial betterment, the excess cost of the replacement over the estimated cost, at current prices, of replacing the pointer without the betterment is capitalized.

123 Transformer Conversions
The conversion of an overhead transformer to an underground transformer constitutes a betterment and shall, therefore, be capitalized.

124 Transclosures
Transclosures are enclosures or cabinets in which line transformers are mounted. The cost of transclosures that are purchased separately from the transformer shall be charged to Account 154, Plant Materials and Operating Supplies, when received, and capitalized, upon installation, to Account 368, Line Transformers, as a separate unit of property. If the case and the transformer are inseparable, the unit is considered a transformer and shall be capitalized upon purchase.

125 Retirement Units
Services
A retirement unit shall consist of a complete service rather than the individual wires comprising that service. If each separate wire of a service were treated as a retirement unit, the retirement unit would represent a comparatively small cost. Such a small unit of property would substantially increase the number of retirement work orders. The complete service shall, therefore, be considered a retirement unit.

Minor Items
When minor items of property are added separately from complete retirement units, the costs of these items shall be included in work orders, and by unitizing all costs of completed construction for a month, these minor items shall be spread to the retirement units of which they normally form a part. For example, to convert a two-phase line to a three-phase line requires the addition of a conductor, an insulator and a pole-top pin. A pole-top pin is typically capitalized as a component of the cost of the pole to which it is attached. Assuming this is the only work order for the month, the cost of this pin shall be charged to the conductor, so that its cost is included in the total cost of the project. In actual practice, however, this does not happen as it is normal to have a number of work orders for a given month, which include the setting of poles. In allocating the cost of all construction projects for the month, part of the cost of pole-top pins shall be allocated to poles even though the work orders on which they were capitalized did not include poles.

The retirement and replacement of isolated single retirement units cannot be charged to maintenance; a retirement and construction work order shall be used.

126 Establishment of Continuing Property Records
The costs of installing a system of continuing property records shall be charged to Account 930.2, Miscellaneous General Expenses, and may include:
1. Labor and expenses incurred in developing an inventory of property;
2. Labor and material costs incurred in connection with developing pole records including map preparation and pole cards; and
3. Labor and material costs (ledger sheets, etc.) incurred in connection with the installation of the record system.

127 Continuing Property Records for Buildings
When establishing continuing property records for a building where there is no detailed breakdown of contract costs, it is necessary to estimate the cost of the each component part. It should be noted that the establishment
of continuing property records is not required for buildings; however, if CPRs are not maintained, all repairs including the replacement of major component parts shall be expensed in the period incurred.

128 Sale of Property

All proceeds deposited in the Construction Fund account from the sale of property, regardless of materiality, shall be reflected on the RUS Form 595, Financial Requirement and Expenditure Statement. Proceeds from the sale of property shall be reported on the Form 595, by budget purpose, as a reduction in total expenditures to date, column 5; and an increase in the cash balance, column 6.

Proceeds from the sale of property shall not be used to maintain an “Employee Fund.” A utility may, pursuant to board policy, use general funds for employee welfare equivalent in amount to proceeds received from the sale of scrap property. If general funds, in an amount equivalent to proceeds received from the sale of scrap property, are used for employee welfare, Account 926, Employee Pensions and Benefits, shall be charged.

129 Gain or Loss on the Sale of an Office Building

A gain on the sale of an office building shall be recorded in Account 421.1, Gain on the Disposition of Property, with a loss recorded in Account 421.2, Loss on the Disposition of Property. If the gain or loss will materially distort current year’s net margins, such gain or loss is reportable as an extraordinary item in Account 434, Extraordinary Income, or Account 435, Extraordinary Deductions.

130 Salvage and Obsolete Material

The value of material salvaged from the retirement of units of property reduces the loss on the retirement and shall be so applied. The value assigned to salvage shall be credited to Account 108.8, Retirement Work-in-Progress, which results in reducing net charges to the provision for depreciation when the work order is completed and cleared.

If salvage is sold, any difference between the realized value and the estimated value of the salvaged material shall be charged or credited to the appropriate provision for depreciation. Salvage resulting from maintenance where no retirement units are involved shall be debited to the materials and supplies account, and credited to the appropriate maintenance account.

Occasionally a utility will have a loss due to obsolescence of materials on hand. If the loss is due to obsolescence of new material, the loss shall be charged to Account 426.5, Other Deductions. If the loss is due to obsolescence of used material, the loss shall be charged to the appropriate subaccount of Account 108, Accumulated Provision for Depreciation.

131 Plant Acquisition Adjustments

Plant acquisition adjustments shall be amortized to the operating expense accounts. These adjustments are recorded in Account 114, Electric Plant Acquisition Adjustments, and amortized to Account 406, Amortization of Electric Plant Acquisition Adjustments, or Account 425, Miscellaneous Amortization, as required by the regulatory commission having jurisdiction. Accounts 406 and 425 shall be closed to operating margins.

132 General Plant

When the unit method of depreciation is used for general plant items, gains and losses on sales, trades or disposals of equipment shall be recorded as such. If the composite method of depreciation is used, gains or losses on the disposal of general plant items shall be recorded in the appropriate depreciation reserve account.

A truck which is used only for transporting power operated equipment mounted thereon shall be charged, together with the installed equipment, to Account 396, Power Operated Equipment. If the same type of truck is used for transporting materials and supplies, tools and work equipment, personnel, or other items, the cost of the truck shall be charged to Account 392, Transportation Equipment.

Depreciation and other expenses relating to power operated equipment shall be accumulated in a subaccount
of Account 184, Clearing Accounts, and distributed monthly on an equitable basis to the accounts properly chargeable.

Depreciation expense on vehicles and other work equipment, furniture and office equipment, and other such plant used in the construction of utility plant, is a proper component of construction cost. To avoid a duplicate advance of funds, however, the amount of depreciation on such items that has previously been financed from loan funds shall be deducted from Inventories of Work Orders submitted to RUS. This amount shall be specifically identified, and shown either monthly or annually as a single item in column 9 on the RUS Form 219, Inventory of Work Orders.

133 Plant Abandonments and Disallowances of Plant Costs

In December 1986, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 90, Regulated Enterprises—Accounting for Abandonments (Statement No. 90) and Disallowances of Plant Costs. This section provides an overview of the requirements outlined in Statement No. 90 together with the specific accounts that shall be used to record a plant abandonment or a disallowance of plant costs.

Plant Abandonments

When an abandonment becomes probable, the cost of the abandoned asset shall be removed from Construction Work-in-Progress or Plant-in-Service, as applicable. Before making this transfer, however, a determination must be made as to whether recovery of the allowed cost is likely to be provided with a full return on the investment during the period from the time the abandonment becomes probable, to the time when recovery is completed, or with a partial or no return on the investment. This determination shall be made based upon the facts and circumstances of the specific abandonment, and past practices and current policies of regulatory jurisdiction.

If a full return on the investment is likely to be provided, any disallowance of all or part of the cost of abandoned plant that is both probable and reasonably estimated shall be recognized as a loss in the current year with the carrying basis of the asset reduced by an equal amount. The remaining cost of abandoned plant shall be recorded as a separate new asset.

If partial or no return on the investment is likely to be provided, any disallowance of abandoned plant costs that is both probable and reasonably estimated shall be recognized as a loss. The present value of the future revenues expected to be provided to recover the allowable cost of the abandoned plant and return on the investment, if any, shall be reported as a separate new asset. The discount rate used to compute the present value shall be the borrower's incremental borrowing rate, which is the rate that the borrower would have to pay to borrow an equivalent amount for a period equal to the expected recovery period. In determining the value of expected future revenues, the borrower shall consider the probable time period before the recovery is expected to begin and the probable time period over which recovery is expected to be provided.

The amount of the new asset shall be adjusted from time to time, as necessary, if new information indicates that the estimates used to record the new asset have changed. The carrying value of the new asset, however, shall not be adjusted for changes in the incremental borrowing rate. The amount of any adjustments shall be recorded as a gain or loss.

During the period between the date on which a new asset is recognized and the date on which recovery begins, the carrying amount shall be increased by accruing a carrying charge. The rate used to accrue the carrying charge shall be:

1. If a full return on the investment is likely, a rate equal to the allowed overall cost of capital in the jurisdiction in which recovery is expected to be provided shall be used.

2. If partial or no return is likely, the asset shall be amortized in a manner that will produce a constant return on the unamortized investment in the new asset equal to the rate at which the expected revenues were discounted.

Due to the nonprofit environment in which electric cooperatives operate,
full recovery of interest expense on plant related long-term debt equates to full recovery of the rate of return for an investor-owned utility. Therefore, if a cooperative is permitted full recovery of the interest expense incurred on the long-term debt borrowed to finance construction of an abandoned plant, no discounting of the asset is required nor is accrual of the carrying charge permitted.

If, at the time the provisions of Statement No. 90 are first applied, the borrower elects to restate the financial statements, the financial statements for all periods presented shall be restated and the financial statements shall disclose the nature of the restatement and its effect on margins before extraordinary items, net margins, and patronage capital at the beginning of the earliest period presented. If the borrower elects not to restate the financial statements, the effect of applying Statement No. 90 shall be recorded in Account 407, Amortization of Property Losses, Unrecovered Plant and Regulatory Study Costs.

6. As the recoverable amount recorded in Account 182.2 is recovered through rates, the borrower shall accrue income by charges to Account 182.2 and credits to Account 421, Miscellaneous Nonoperating Income. Accruals shall be computed by applying the same rate used to derive the present value of the asset established in Account 182.2, to the unamortized balance in that account. Accrued amounts charged to Account 182.2 shall be treated as reductions to the credit subaccount within Account 182.2.

Prior to implementing the accounting prescribed above, the borrower shall submit the details of each plant abandonment to RUS for approval.

Disallowances of Costs of Recently Completed Plant

When it becomes probable that a portion of the cost of recently completed plant will be disallowed for rate making purposes and a reasonable estimate of the amount of the disallowance can be made, the estimated amount of the probable disallowance shall be deducted from the reported cost of the plant and recognized as a loss. If a portion of the costs is explicitly, but indirectly disallowed, the equivalent amount of the cost shall be deducted from the reported cost of the plant and recognized as a loss.

The specific accounts that shall be used to record transactions involving the disallowance of plant costs are as follows:
1. Estimated disallowed plant costs which the borrower records as a credit to Account 101, Electric Plant-in-Service, shall be charged to Account 426.5, Other Deductions.

2. If the loss qualifies as an extraordinary item under the criteria set forth in General Instruction No. 7 of the USoA, the borrower shall record the loss in Account 435, Extraordinary Deductions. To be considered extraordinary, an item shall be more than five percent of income computed before extraordinary items. If a borrower believes that a loss of less than five percent should be treated as an extraordinary item; the borrower shall, with commission approval, record the loss in Account 435 and report the loss as an extraordinary item. If the borrower is not subject to state commission jurisdiction, RUS approval is required.

134 Utility Plant Phase-in Plans

In August 1987, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 92, Regulated Enterprises—Accounting for Phase-in Plans (Statement No. 92). This section provides an overview of the requirements outlined in Statement No. 92.

The term phase-in plan is used to refer to any method of recognition of allowable costs in rates that meets all of the following criteria:

1. The method was adopted by the regulator in connection with a major, newly completed plant of the regulated enterprise or one of its suppliers or a major plant scheduled for completion in the near future.

2. The method defers the rates intended to recover allowable costs beyond the period in which those allowable costs would be charged to expense under generally accepted accounting principles applicable to enterprises in general.

3. The method defers the rates intended to recover allowable costs beyond the period in which those rates would have been ordered under the rate-making methods routinely used prior to 1982 by that regulator for similar allowable costs of that regulated enterprise.

If a phase-in plan is ordered by a regulator in connection with a plant on which no substantial physical construction had been performed before January 1, 1988, none of the allowable costs that are deferred for future recovery by the regulator under the plan for rate-making purposes, shall be capitalized for general-purpose financial reporting purposes (financial reporting).

If a phase-in plan is ordered by a regulator in connection with a plant completed before January 1, 1988, or a plant on which substantial physical construction had been performed before January 1, 1988, the criteria specified below shall be applied to that plan. If the phase-in plan meets all of those criteria, all allowable costs that are deferred for future recovery by the regulator under the plan shall be capitalized for financial reporting purposes as a separate asset (a deferred charge). If any one of those criteria is not met, none of the allowable costs that are deferred for future recovery by the regulator under the plan shall be capitalized for financial reporting. The criteria for determining whether capitalization is appropriate are:

1. The allowable costs in question are deferred pursuant to a formal plan that has been agreed to by the regulator;

2. The plan specifies the timing of recovery of all allowable costs that will be deferred under the plan;

3. All allowable costs deferred under the plan are scheduled for recovery within 10 years of the date when the deferral began; and

4. The percentage increase in rates scheduled under the plan for each future year is no greater than the percentage increase in rates scheduled under the plan for each immediately preceding year. That is, the scheduled percentage increase in year two is no greater than the percentage increase granted in year one, the scheduled percentage increase in year three is no greater than the percentage increase in year two, etc.

By definition, a phase-in plan approved prior to 1982 that contains provisions contrary to those detailed above is not subject to the provisions of Statement No. 92. This exemption,
however, only relates to a specific utility and a specific regulator. For example, a utility cannot use a phase-in plan approved by its regulator for a different utility as justification for its phase-in plan exceeding the 10-year limit imposed by Statement No. 92. A phase-in plan is a method of rate making intended to moderate a sudden increase in rates while providing the regulated enterprise with recovery of its investment and a return on that investment during the recovery period. A disallowance is a rate-making action that prevents the regulated enterprise from recovering either some amount of its investment or some amount of return on its investment. Statement No. 90 specifies the accounting for disallowances of plant costs (see item 133 of this regulation). If a method of rate making that meets the criteria for a phase-in plan includes an indirect disallowance of plant costs, that disallowance shall be accounted for in accordance with Statement No. 90. Cumulative amounts capitalized under phase-in plans shall be reported as a separate asset in the balance sheet. The net amount capitalized in each period or the net amount of previously capitalized allowable costs recovered during each period shall be reported as a separate item of other income or expense in the income statement. Allowable costs capitalized shall not be reported as reductions of other expenses. The terms of any phase-in plan in effect during the year or ordered for future years shall be disclosed in the financial statements. Statement No. 92 does not permit capitalization for financial reporting of allowable costs deferred for future recovery by the regulator pursuant to a phase-in plan that does not meet the criteria or a phase-in plan related to plant on which substantial physical construction was not completed before January 1, 1988. Nevertheless, the financial statements shall include disclosures of the net amount deferred at the balance sheet date for rate-making purposes, and the net change in deferrals for rate-making purposes during the year for those plans. If the provisions of Statement No. 92 are applied retroactively, the financial statements of all periods presented shall be restated. In addition, the restated financial statements shall, in the year that Statement No. 92 is first applied, disclose the nature of any restatement and its effect on margins before extraordinary items, net margins, and on patronage capital at the beginning of the earliest period presented. If the financial statements for prior years are not restated, the effects of applying Statement No. 92 to existing phase-in plans shall be reported as a change in accounting principle and the financial statements shall disclose the effect of adopting Statement No. 92 on margins before extraordinary items and net margins.

The application of Statement No. 92 to an existing phase-in plan shall be delayed if both of the following conditions are met:

1. The enterprise has filed a rate application to have the plan amended to meet the criteria of Statement No. 92 or intends to do so as soon as practicable; and
2. It is reasonably possible that the regulator will change the terms of the phase-in plan so that it will meet the criteria of Statement No. 92.

If the above conditions are met, the provisions of Statement No. 92 shall be applied to the existing phase-in plan on the earlier of the date when one of the conditions ceases to be met or the date when the final rate order is received, amending or refusing to amend the phase-in plan. However, if the enterprise delays filing its application for the amendment or the regulator does not process the application in the normal period of time, the application of Statement No. 92 shall not be further delayed.

In applying the criteria of Statement No. 92 to a plan that was in existence prior to the first fiscal year beginning after December 15, 1987, and that was revised to meet that criteria, the 10-year criterion and the requirement concerning the percentage increase shall be measured from the date of the amendment rather than from the date of the first scheduled deferrals under the original plan. All phase-in plans must receive RUS approval prior to implementation.
§ 1767.41

Accounting for Removal or Relocation of Electric Facilities Resulting from the Action of Others

Under arrangements with another party, a borrower agrees, or is obliged, to remove, relocate, rearrange, or otherwise make changes in utility property, other than for the purpose of rendering utility service to the other party, for which the utility is reimbursed for all or a portion of the costs incurred.

**Plant Accounting**

The relocation of the line shall be accounted for as follows:

1. If all of the assemblies in the line are retired or completely removed and later reinstalled or if the line is constructed in a new location before the old line is removed, construction and retirement work orders shall be prepared except for the costs relating to special equipment items (transformers, oil circuit reclosers, etc.) which shall be charged to operations expense.

2. If a line is moved in its entirety to a new location except for isolated retirement units (such as at the end of the line) or poles not suitable for resetting, the cost of moving the portion of line that is moved intact shall be charged to maintenance expense while the cost related to the change in isolated retirement units or the replacement of poles not suitable for resetting shall be accounted for through use of construction and retirement work orders.

3. If a line is moved intact without any change in assemblies, the cost shall be charged to maintenance expense.

**Reimbursement**

If the borrower receives reimbursement for the costs related to the relocation of the line, the reimbursement shall be accounted for by crediting operation and maintenance expenses to the extent of actual expenses occasioned by the plant changes and crediting the remainder to the accumulated provision for depreciation, unless contractual terms definitely characterize residual or specific amounts as applicable to the cost of replacement. In the latter event, appropriate credits shall be entered in the plant accounts.

Reimbursement received from a telephone company for adding a pole or replacing a present pole with a taller pole under joint use contracts falls within this latter category. In this instance, appropriate credits are charged against the plant accounts.

**Financing**

The total reimbursement, less any portion for operations and maintenance costs, shall be entered in the "Contributions in Aid of Construction" section at the bottom of the Construction Work Order. When the Inventory of Work Orders (RUS Form 219) is prepared, enter only enough of the contribution in column 9 to reduce to zero the amount in column 10, "Loan Funds Subject to Advance by RUS." This entry is made although none of the reimbursement received is recorded in the accounting records as a contribution in aid of construction.

**Storm Damage**

As a result of recent hurricane, flood, and ice storm damage, the Rural Utilities Service (RUS) has received several inquiries concerning the proper accounting for storm damage costs and the associated funds received from the Federal Emergency Management Administration (FEMA).

Storm damage costs should be accounted for under the work order procedure. Units of property destroyed or otherwise removed from service must be reflected on retirement work orders and units of property installed must be shown on construction work orders. To ensure that the accounting for construction and retirement costs is as accurate as possible, an effort should be made to accurately accumulate material, labor, and overhead costs. Even when extreme care has been exercised, however, it may still be necessary to use estimates to develop the appropriate cost figures.

When a storm occurs, a utility typically incurs a large retirement loss, all or a part of which should be charged to the accumulated provision for depreciation. Storm damage costs over and above construction and retirement costs represent maintenance expense.
Maintenance costs include the costs of resagging lines, straightening poles, and replacing minor items of property. When extensive damage has occurred, the need to restore the property to an operating condition without delay usually results in excessive costs being incurred. Standard property unit costs may be used as a guide in determining the amount to be capitalized. It should be noted, however, that when standard property unit costs are used, all excess costs are charged to maintenance expense.

Because of the storm's destruction, property is retired prematurely and as a result, extraordinary retirement losses occur. When such extraordinary losses occur, they should be recorded in the year in which the losses are incurred. If the recording of such losses will materially distort the income statement, such losses may be charged to Account 435, Extraordinary Deductions. These costs may be deferred and amortized to future periods only if the provisions of Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulation (Statement No. 71), are applied. Under the provisions of Statement No. 71, a utility may defer certain costs, provided such costs are included in the utility's rate base and recovered through future rates. If an RUS borrower elects to apply the provisions of Statement No. 71, RUS approval is required. To obtain RUS approval, a borrower must submit:

a. A detailed description of the plan including the nature of the expense item, the amount of the deferral, the specific time period for rate recovery, and justifying support for the time period selected;

b. The accounting journal entries being used by the cooperative to record the expense deferral and amortization of the deferred costs;

c. A copy of the state Commission order authorizing recovery of the deferred costs through future rates, or in the absence of commission jurisdiction, a resolution from the cooperative's board of directors authorizing such recovery; and

d. A statement from the borrower's certified public accountant (CPA) or CPA firm indicating that the deferral and amortization of these costs is in accordance with generally accepted accounting principles.

To assist in the restoration of the damaged facilities, the Federal government often provides assistance through FEMA. Under current FEMA procedures, FEMA provides funds for the restoration of facilities based upon the cost estimates submitted by the entity requesting assistance. If the FEMA grant is for less than 100 percent of the cost estimates, FEMA does not specify which costs are to be reimbursed. When the funds are received, therefore, they should be accounted for by crediting construction, retirement, maintenance expense, and administrative expense in direct proportion to the total costs incurred. For example, if total storm damage costs are $1,000,000 with $450,000 incurred for maintenance, $300,000 for retirement, $200,000 for construction, and $50,000 for administrative costs, the FEMA reimbursement should be accounted for by applying 45 percent of the funds received as a credit to maintenance expense, 30 percent as a credit to retirement costs, 20 percent as a credit to construction, and 5 percent as a credit to administrative and general costs.

ACCOUNTING JOURNAL ENTRIES

Dr. 108.8X, Retirement Work in Progress—Storm Damage $1,015.17
Cr. 107.4, Construction Work in Progress—Storm Damage $1,015.17
To transfer the removal costs recorded in Column 11 of Retirement Work Order #4401X to Account 108.8X.

Dr. 107.4, Construction Work in Progress—Storm Damage $4,141.55
Cr. 108.8X, Retirement Work in Progress—Storm Damage $4,141.55
To remove material salvaged in the rebuild from Account 107.4. The original entry debited Account 154, Plant Materials and Operating Supplies, and credited Account 107.4. (See Column 12 of Retirement Work Order #4401X.)
Dr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $312,230.41
Cr. 364, Poles, Towers and Fixtures .................................................................................. $133,377.55
Cr. 365, Overhead Conductors and Devices ................................................................... 59,683.08
Cr. 368, Lines Transformers .............................................................................................. 19,704.60
Cr. 369, Services .................................................................................................................. 97,651.23
Cr. 373, Street Lighting and Signal Systems ...................................................................... 1,813.95

To remove the original cost of property destroyed and retired from the classified plant accounts. This retirement is recorded, in detail, on Retirement Work Order #4401X. It is understood that this retirement covers all distribution property retired or destroyed in the area exclusive of substations and special equipment items (meters, meter sockets, current and potential transformers, transformers, voltage regulators, oil circuit reclosers (OCR), and sectionalizers).

Dr. 108.6, Accumulated Provision for Depreciation of Distribution Plant ........................................ $309,104.03
Cr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $309,104.03

To record the net loss due to the retirement of distribution lines in the area. (See Retirement Work Order #4401X.)

Dr. 364, Poles, Towers and Fixtures .................................................................................. $99,075.40
Dr. 365, Overhead Conductors and Devices ................................................................... 104,142.22
Dr. 368, Lines Transformers .............................................................................................. 25,036.07
Dr. 369, Services .................................................................................................................. 28,865.08
Dr. 373, Street Lighting and Signal Systems ...................................................................... 2,101.60
Cr. 107.4, Construction Work in Progress—Storm Damage ........................................ $259,220.37

To record, in the proper classified plant accounts, Construction Work Order #4401 covering the rebuild.

This entry includes:

Material Issued ........................................................................................................ $150,336.49
Less: Materials Returned ......................................................................................... 15,631.39
Net Material Used ........................................................................................................ 134,705.10
Labor and overhead estimated by using standard record unit costs ............................................... 124,515.27

Total ................................................................................................................................. 259,220.37

Dr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $1,939.74
Cr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $1,939.74

To remove material salvaged from transmission lines ($1,545.74) and substations ($394.00) from Account 107.4. The original entry debited Account 154 and credited Account 107.4. (See Column 12 of Retirement Work Order #4400X.)

Dr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $162,172.06
Cr. 355, Poles and Fixtures .............................................................................................. $47,738.45
Cr. 356, Overhead Conductors & Devices .................................................................... 90,349.11
Cr. 362, Station Equipment ............................................................................................ 34,129.50

To remove the original cost of transmission lines and substations destroyed and retired from the classified plant accounts. (See Retirement Work Order #4400X.) (New substations were built and separately accounted for on Work Order #4406.)

Dr. 108.5, Accumulated Provision for Depreciation of Transmission Plant ......................... $128,462.82
Dr. 108.6, Accumulated Provision for Depreciation of Distribution Plant ........................ $34,153.50
Cr. 108.8X, Retirement Work in Progress—Storm Damage ........................................ $162,616.32

To record the net loss due to the retirement of transmission lines ($128,462.82) and substations ($34,153.50). (See Retirement Work Order #4400X).

Dr. 920, Administrative and General Salaries .............................................. $32,000.00
Dr. 921, Office Supplies and Expenses .......................................................... 4,421.69
Cr. 108.5, Accumulated Provision for Depreciation of Transmission Plant ...................... $35,000.00
Cr. 108.6, Accumulated Provision for Depreciation of Distribution Plant ....................... 240,000.00

To charge the administrative costs incurred to obtain the FEMA grant to the appropriate expense accounts. Administrative costs were originally charged to Account 107.4.

Dr. 426.5, Other Deductions ............................................................................... $275,000.00
Dr. 435, Extraordinary Deductions
Dr. 182.1, Extraordinary Property Losses
Cr. 108.5, Accumulated Provision for Depreciation of Transmission Plant ...................... $35,000.00
Cr. 108.6, Accumulated Provision for Depreciation of Distribution Plant ....................... 240,000.00

To allocate expenses remaining in Account 107.4 to distribution and transmission maintenance expense. It was estimated that only 10 percent is applicable to transmission.

Dr. 425, Other Deductions ............................................................................... $275,000.00
Dr. 920, Administrative and General Salaries .............................................. $32,000.00
Dr. 921, Office Supplies and Expenses .......................................................... 4,421.69
Cr. 108.5, Accumulated Provision for Depreciation of Transmission Plant ...................... $35,000.00
Cr. 108.6, Accumulated Provision for Depreciation of Distribution Plant ....................... 240,000.00

To restore the accumulated provisions for depreciation to their appropriate levels based upon a study of plant currently in service.

NOTE: Account 426.5, Other Deductions, should be used to record the retirement loss as a current period expense. Account 425, Extraordinary Deductions, may be used when the loss will materially distort the income statement. Account 182.1, Extraordinary Property Losses, should be used when such costs are being deferred under the provisions of Statement No. 71. Costs recorded in this account should be amortized to Account 407, Amortization of Property Losses, as the costs are recovered through rates.

Dr. 131.1, Cash—General .................................................................................. $1,000,000.00
Cr. 253, Other Deferred Credits ..................................................................... $1,000,000.00

To record the receipt of funds from the Federal Emergency Management Administration (FEMA).

1049
Summary of Costs

### Maintenance

- Account 571, Maintenance of Overhead Lines: $3,675.60
- Account 593, Maintenance of Overhead Lines: $33,687.24
- Account 595, Maintenance of Line Transformers: $19,365.86
- Account 597, Maintenance of Meters: $6,595.56

Total Maintenance Costs: $63,324.26

### Retirement Loss

- Account 108.5, Accumulated Provision for Depreciation of Transmission Plant: $93,462.82
- Account 108.6, Accumulated Provision for Depreciation of Distribution Plant: $240,599.35
- Account 426.5, Other Deductions: $275,000.00

Total Retirement Loss: $609,062.17

### Construction

- Account 186, Miscellaneous Deferred Debits: $1,319.85
- Account 355, Poles and Fixtures: $161,784.05
- Account 356, Overhead Conductors and Devices: $124,704.77
- Account 364, Poles, Towers and Fixtures: $93,075.40
- Account 365, Overhead Conductor and Devices: $104,142.22
- Account 368, Line Transformers: $25,036.07
- Account 369, Services: $20,965.08
- Account 373, Street Lighting and Signal Systems: $2,101.60

Total Construction Cost: $547,029.04

### Administrative

- Account 920, Administrative and General Salaries: $32,000.00
- Account 921, Office Supplies and Expenses: $4,421.69

Total Administrative Cost: $36,421.69

Total Costs: $1,255,837.16

### Distribution of FEMA Funds

- Maintenance: 63,324.26 × 5.0% = $3,166.21
- Retirement: 609,062.17 × 48.5% = $294,981.47
- Construction: 547,029.04 × 43.6% = $239,921.20
- Administrative: 36,421.69 × 2.9% = $1,066.24

Total FEMA Funds: $314,971.02

### Distribution of FEMA Funds—Maintenance

- Account 571: 3,675.60 × 5.0% = $183.80
- Account 593: 33,687.24 × 5.0% = $1,684.36
- Account 595: 19,365.86 × 5.0% = $968.29

Total Maintenance: $3,036.45

- Account 597: 6,595.56 × 5.0% = $329.78

Total Maintenance: $3,366.23

- Account 108.5: 93,462.82 × 48.5% = $45,386.18
- Account 108.6: 240,599.35 × 48.5% = $119,430.36
- Account 426.5: 275,000.00 × 48.5% = $133,475.00

Total Retirement Loss: $387,291.54

- Account 363: 20,965.08 × 48.5% = $10,092.70

Total Construction: $250,221.94

- Account 920: 32,000.00 × 48.5% = $15,520.00
- Account 921: 4,421.69 × 48.5% = $2,157.25

Total Administrative: $17,677.25

Total: $1,000,000.00
Rural Utilities Service, USDA § 1767.41

Account 597: 6,595.56 ÷ 63,324.26 = .1041 = 10.4%
Account 571: $50,000.00 × 5.8% = $2,900.00
Account 593: $50,000.00 × 53.2% = $26,600.00
Account 595: $50,000.00 × 30.6% = $15,300.00
Account 597: $50,000.00 × 10.4% = $5,200.00
Total .......................................................................................................... 50,000.00

Distribution of FEMA Funds—Retirement Loss
Account 108.5: 93,462.82 ÷ 609,062.17 = .1535 = 15.3%
Account 108.6: 240,599.35 ÷ 609,062.17 = .3950 = 39.5%
Account 426.5: 275,000.00 ÷ 609,062.17 = .4515 = 45.2%
Account 108.5: $485,000.00 × 15.3% = $74,205.00
Account 108.6: $485,000.00 × 39.5% = $191,575.00
Account 426.5: $485,000.00 × 45.2% = $219,220.00
Total .......................................................................................................... 485,000.00

Distribution of FEMA Funds—Construction
Account 186: 1,319.85 ÷ 547,029.04 = .0024 = .2%
Account 355: 161,784.05 ÷ 547,029.04 = .2958 = 29.6%
Account 356: 124,704.77 ÷ 547,029.04 = .2280 = 22.8%
Account 364: 99,075.40 ÷ 547,029.04 = .1811 = 18.1%
Account 365: 104,142.22 ÷ 547,029.04 = .1904 = 19.0%
Account 368: 25,036.07 ÷ 547,029.04 = .0457 = 4.6%
Account 369: 28,865.08 ÷ 547,029.04 = .0528 = 5.3%
Account 373: 2,101.67 ÷ 547,029.04 = .0038 = .4%
Account 186: $436,000.00 × .2% = $872.00
Account 355: $436,000.00 × 29.6% = $129,056.00
Account 356: $436,000.00 × 22.8% = $99,408.00
Account 364: $436,000.00 × 18.1% = $78,916.00
Account 365: $436,000.00 × 19.0% = $82,840.00
Account 368: $436,000.00 × 4.6% = $20,056.00
Account 369: $436,000.00 × 5.3% = $23,108.00
Account 373: $436,000.00 × .4% = $1,744.00
Total .......................................................................................................... 436,000.00

Distribution of FEMA Funds—Administrative
Account 920: 32,000.00 ÷ 36,421.69 = .8786 = 87.9%
Account 921: 4,421.69 ÷ 36,421.69 = .1213 = 12.1%
Account 920: $29,000.00 × 87.9% = $25,493.00
Account 921: $29,000.00 × 12.1% = $3,509.00
Total .......................................................................................................... 29,000.00

137 Impairment of Long-Lived Assets
Statement of Financial Accounting Standards No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of (Statement No. 121), requires reporting entities to review all long-lived assets and certain identifiable intangibles that are to be held, used, or disposed of by that entity for impairment whenever events and changes in circumstances indicate that the carrying amount of the asset may not be recoverable. If the sum of the expected future cash flows (undiscounted and without interest charges) is less than the carrying value of the asset, the entity must recognize an impairment loss. The impairment loss is measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset. The impairment loss is reported as a component of income from continuing operations before income taxes for entities presenting an income statement and in the statement.
of activities of not-for-profit organizations. Statement No. 121 does not apply to assets included in the scope of Statement of Financial Accounting Standards No. 90, Regulated Enterprises—Accounting for Abandonments and Disallowances of Plant Costs.

**Assets To Be Held or Used**

Entities are required to review long-lived assets and certain identifiable intangibles whenever events or changes in circumstances indicate that the carrying value of the asset may not be recoverable. For example:
1. A significant decrease in the market value of an asset;
2. A significant change in the extent or manner in which an asset is used;
3. A significant physical change in the asset;
4. A significant adverse change in legal factors or in the business climate that could affect the value of an asset;
5. An adverse action or assessment by a regulator;
6. An accumulation of costs significantly in excess of the amount originally expected to acquire or construct an asset; and
7. A current period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continued losses associated with an asset used for the purpose of producing revenue.

The impairment of the asset is measured by estimating the future cash flows expected to result from the use of the asset and its disposition. Assets are grouped at the lowest level for which there are identifiable cash flows that are largely independent of the cash flows of other groups of assets. Future cash flows are those cash inflows that are expected to be generated by the asset less the cash outflows expected to be necessary to maintain those inflows. If the future cash flows (undiscounted and without interest charges) are less than the carrying value of the asset, an impairment loss must be recognized. If the expected future cash flows are greater than the carrying value of the asset, no impairment loss exists.

The impairment loss is the amount by which the carrying amount (acquisition cost less accumulated depreciation) of the asset exceeds the fair value of the asset. The fair value of the asset is the amount for which the asset could be bought or sold in an arms-length transaction between willing parties. A quoted market price is the best evidence of fair value. If this information is not available, the fair value should be based upon the best information available. Consideration should be given to the price of similar assets and valuation techniques such as the present value of the expected future cash flows discounted at a rate representative of the risk involved, option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analysis. All available information should be considered when using the above pricing techniques.

If an impairment is recognized, the carrying value of the asset is reduced to the lower of its fair value or its carrying value and, if depreciable, depreciated over the remaining useful life. Previously recognized impairment losses cannot be restored. If the asset was acquired in a business combination and there is goodwill resulting from the transaction, the goodwill is included in the asset grouping and reduced or eliminated before any adjustment is made to the carrying value of the asset.

The following financial statement disclosures are required in the period in which the impairment is recognized:
1. A description of the impaired assets and the facts and circumstances surrounding the impairment;
2. The amount of the impairment and how fair value was determined;
3. The caption in the income statement or the statement of activities in which the impairment loss is aggregated if that loss has not been presented as a separate caption or reported parenthetically on the face of the statement; and
4. If applicable, the business segment(s) affected.

**Assets To Be Disposed**

Statement No. 121 also applies to all long-lived assets and certain identifiable intangibles for which management, having the authority to approve the action, has committed to a plan of disposal except those assets covered by
Rural Utilities Service, USDA

§ 1767.41

APB No. 30, Reporting the Results of Operations—Reporting the Effects of Disposal of a Segment of a Business, and Extraordinary, Unusual and Infrequently Occurring Events and Transactions. An asset to be disposed of is carried at the lower of its carrying amount (acquisition cost less accumulated depreciation) or its fair value less cost to sell.

The fair value of the asset to be disposed of is computed in the same manner as that for an asset to be held or used by the entity. Selling costs include the incremental direct cost to transact the sale—broker commissions, legal fees, title transfer, and other closing costs that must be incurred before legal title can be transferred. Costs such as insurance, security service, and utilities are generally excluded unless these costs are part of a contractual agreement that obligates the entity to incur such costs in the future. If the asset’s fair value is based upon current market price or the current selling price for a similar asset, the fair value is considered a current amount and is not discounted. If, however, the fair value is based upon discounted expected future cash flows and if the sale is to occur beyond one year, the cost to sell must also be discounted. Assets covered by this statement are not depreciated (amortized) while being held for disposal.

Subsequent revisions in estimates of fair value less cost to sell are reported as adjustments to the carrying amount of the asset to be disposed of as long as the carrying amount of the asset does not exceed the original carrying amount.

The following financial statement disclosures are required in the period in which the impairment is recognized:

1. A description of the assets to be disposed of including the facts and circumstances leading to the expected disposal, the expected disposal date, and the carrying amount of those assets;
2. If applicable, the business segment(s) in which the assets to be disposed of are held;
3. The amount, if any, of the impairment loss resulting from the adoption of this statement;
4. The gain or loss, if any, resulting from subsequent revisions in the estimates of fair value less cost to sell;
5. The caption in the income statement or statement of activities in which the gains or losses are aggregated if those gains or losses have not been presented as a separate caption or reported parenthetically on the face of the statement; and
6. The results of operations for assets to be disposed of to the extent that those results are included in the entity’s results of operations for the period and can be identified.

Accounting Requirements

All borrowers must adopt the accounting prescribed by Statement No. 121.

Effective Date and Implementation

Statement No. 121 is effective for financial statements for fiscal years beginning after December 15, 1995. Impairment losses resulting from the application of this statement to assets that are held or used by the entity must be reported in the period in which the recognition criteria are first applied and met. Impairment losses attributable to assets to be disposed of must be reported as the cumulative effect of a change in accounting principle as prescribed in Accounting Principles Board Opinion No. 20, Accounting Changes.

Accounting Journal Entries—Implementation Date

If a borrower has impaired assets that are held or used at the implementation date, the following entry should be recorded:

Dr. 426.5, Other Deductions
Cr. 300 Series of Accounts, Plant Accounts
To record the adoption of Statement No. 121 for the impairment of assets that are held or used.

If a borrower has impaired assets to be disposed of at the implementation date, the following entry should be recorded:

Dr. 435.1, Cumulative Effect on Prior Years of a Change in Accounting Principle
Cr. 300 Series—Plant Accounts
To record the adoption of Statement No. 121 for assets that are to be disposed.

1053
Accounting Journal Entries—Subsequent to Implementation Date

If an asset that is either held, used or to be disposed of becomes impaired, the following entry should be recorded:

Dr. 426.5, Other Deductions
Cr. 300 Series—Plant Accounts
To record the impairment of a plant asset.

If a borrower makes a subsequent revision in the estimate of the fair value less the cost to sell of an asset to be disposed of, the following entry should be recorded:

Dr. 300 Series—Plant Accounts
Cr. 421, Miscellaneous Nonoperating Income
To revise the fair value of an asset to be disposed.

138 Automatic Meter Reading Systems—Turtles

Automatic meter reading systems were developed from technology called power line carrier communication systems. One such system, developed by Hunt Technologies, Inc., is called by its brand name, the Turtle system. In addition to its function as an automated reading device, the Turtle can provide outage detection, power failure counts, and other potential applications. The current Turtle system does not have the capability for applications such as collection of load survey or interval data. A Turtle system consists of:

1. A meter reader mounted (retrofitted) inside the meter;
2. A receiver located in each substation; and
3. Monitoring and programming equipment (software and personal computer) usually located in the headquarters building.

The system transmits continuous information one way from the meter to a receiver located in the substation. The receiver constantly monitors every Turtle meter served by the substation. The substation receiver can be sized to monitor up to 3,000 Turtle meter readers at the same time. The data is then transmitted to the headquarters monitoring equipment via telephone line or an equivalent communication system.

The technical literature and other information provided by the manufacturer indicates that this system can only be used for remote meter reading, outage detection, power failure counts, and phase identification. At this time, there is no indication that the system supports other functions such as home security. Therefore, the accounting prescribed for the Turtle meter reading devices and support equipment relates only to electric utility operations.

Accounting Requirements

The function of the equipment is the primary factor in determining the account in which the equipment shall be recorded. The components of the Turtle automatic meter reading system shall be recorded in Account 370, Meters. The cost of the meter reader encoding device and retrofitting the meter with the meter reader unit shall be capitalized to the cost of the existing meter. Any associated operating expenses shall be charged to Account 396, Meter Expenses, with maintenance expenses charged to Account 397, Maintenance of Meters.

Separate continuing property records shall be established for the meters, either fitted or retrofitted with the device; the receiver; the personal computer; and the system software. The meters, receivers, and personal computer shall be depreciated over the manufacturer's estimated useful service life. The system software shall be depreciated over the estimated useful service life of the program not to exceed 5 years.

139 Global Positioning Systems

The Global Positioning System (GPS) is a worldwide radio-navigation system formed from a network of 24 satellites and their ground stations. Utilities are using this advanced technology geographic data collection system to update and modernize their system maps. GPS uses a system of satellites orbiting the earth to establish plant locations with pinpoint accuracy. By triangulating from three satellites and using radio signals to measure distances and locate items, system-wide maps can be created of the utility's service area. A field inventory is then taken of the utility's plant and plotted onto the map. The GPS consists of base station equipment, remote station equipment, the GPS program, and mapping conversion software.
All equipment associated with GPS is dedicated to the mapping effort. The base station is installed at a fixed location and ties satellite measurements into a solid local reference. The remote station is a portable receiver that is taken into the field to determine locations and is moved from site to site. The GPS program is the application software that operates the station equipment and is used by layout technicians to gather information of existing and new facilities in the field. The conversion software is used for converting the GPS and inventory information gathered in the field into a form usable by the mapping program.

Accounting Requirements

The function and location of the equipment are the primary factors in determining the account in which the equipment shall be recorded. The components of the GPS shall be accounted for as follows:

1. Remote and Base Station Equipment. The cost of the equipment, both remote and fixed, shall be capitalized in a subaccount of Account 391, Office Furniture and Equipment.
2. GPS Program and Conversion Software for Mapping. The cost of GPS program and conversion software shall be capitalized in a subaccount of Account 391, Office Furniture and Equipment.
3. GPS/GIS Field Inventory of System. The cost of performing a GPS/GIS survey and field inventory of the existing system, by either a consultant or the utility's own forces, shall be charged to Account 588, Miscellaneous Distribution Expenses.

140 Radio-Based Automatic Meter Reading Systems

Radio-based automatic meter reading technology allows meters equipped with a low-power radio device called an ERT (Encoder, Receiver, Transmitter) to be read remotely. The ERT device can either be retrofitted to an existing meter or purchased and installed in a new meter. The ERT device "encodes" energy consumption and transmits this information to a radio transceiver equipped handheld computer. The data collected and stored in the handheld computer is then uploaded to a billing computer using specialized software for that purpose.

Accounting Requirements

The function of the equipment is the primary factor in determining the account in which the equipment shall be recorded. The components of the radio-based automatic meter reading system shall be recorded in Account 370, Meters. The cost of the meter reader encoding device and retrofitting the meter with the meter reader unit shall be capitalized to the cost of the existing meter. Any associated operating expenses shall be charged to Account 586, Meter Expenses, with maintenance expenses charged to Account 597, Maintenance of Meters.

Separate continuing property records shall be established for the meters, either fitted or retrofitted with the device; the handheld computer; and the upload software. The meters and handheld computer shall be depreciated over the manufacturer's estimated useful service life. The upload software shall be depreciated over the estimated useful service life of the program not to exceed 5 years.

201 Supplemental Financing

Many borrowers secure additional financing from sources other than RUS. CFC was established to provide a source of supplemental financing. Although the accounting provided in this section refers to CFC, it is applicable to other sources of supplemental financing as well.

1. Membership Fees

When a membership fee is paid to CFC, the payment shall be recorded as a debit to Account 123.23, Other Investments in Associated Organizations.

2. Subscriptions

The subscription agreement to purchase Capital Term Certificates (CTCs) is a binding obligation to pay an initial subscription in equal annual payments over the first three years and an additional annual subscription payable in the fourth through fifteenth years.

The annual subscriptions to CFC for the fourth through fifteenth years is 2.0 percent of total operating revenues after deducting the cost of power.
Using the best data available, each borrower shall estimate the amount of CTCs that are required to be purchased. Estimates are not expected to be precise and adjustments shall be made when future projections indicate a change is needed. When the agreement to purchase CTCs is made, an entry shall be recorded debiting Account 123.21, Subscriptions to Capital Term Certificates—Supplemental Financing, and crediting Account 224.11, Other Long-Term Debt—Subscriptions. When the CTCs are actually purchased, the following entries shall be recorded:

Dr. 224.11, Other Long-Term Debt—Subscriptions
Cr. 131.1, Cash—General
Dr. 123.22, Investments in Capital Term Certificates—Supplemental Financing
Cr. 123.21, Subscriptions to Capital Term Certificates—Supplemental Financing

3. Interest Receipts
Interest accrues monthly to the holder of CTCs at a rate in accordance with the terms of the CFC Invitation to Subscribe. The accrual of interest and the receipt of interest proceeds shall be recorded as follows:

Dr. 171, Interest and Dividends Receivable
Cr. 419, Interest and Dividend Income
To record the monthly accrual of interest.
Dr. 131.1, Cash—General
Cr. 171, Interest and Dividends Receivable
To record the receipt of interest proceeds from the investment in CTCs.

NOTE: Any amounts received in excess of the previous accruals shall be credited to Account 419.

Interest penalties may be charged by CFC for late payments on any subscription from the date that the payment was due to the date that the payment was actually received. Such charges shall be expensed to Account 431, Other Interest Expense.

4. Notes
If a note is due more than one year after the date of the note, the appropriate subaccount of Account 224, Other Long-Term Debt, shall be credited. If the note is due less than one year from the date of the note, Account 231, Notes Payable, shall be credited.

When a loan from CFC has been consummated and a note is executed, Account 224.13, Supplemental Financing Notes Executed—Debit, shall be debited; and Account 224.12, Other Long-Term Debt—Supplemental Financing, credited. When a loan from another source has been consummated, Account 224.15, Notes Executed—Other—Debit, shall be debited; and Account 224.14, Other Long-Term Debt—Miscellaneous, credited.

5. Loan Proceeds
Cash proceeds from unsecured short-term loans shall be deposited into the General Fund Account. Cash proceeds from all secured loans shall be deposited into the Construction Fund Trustee Account.

From two to seven percent, depending upon the class of borrower and its debt-equity ratio, of each CFC loan is applied to the purchase of Capital Term Certificates. At the time of a borrower's first requisition under the CFC loan, the following entry shall be recorded:

Dr. 224.11, Other Long-Term Debt—Subscriptions
Cr. 131.1, Cash—General
Dr. 123.22, Investments in Capital Term Certificates—Supplemental Financing
Cr. 123.21, Subscriptions to Capital Term Certificates—Supplemental Financing

6. Capital Credits
As a result of borrowing from CFC or other lenders organized on a cooperative basis, a borrower may receive capital credit allocations. These allocations are usually based upon the borrower's participation in the lending program with participation measured by the amount of interest expense and conversion costs incurred.

To account for patronage capital allocations from cooperative lenders, the following journal entries shall be recorded:

Dr. 123.1, Patronage Capital from Associated Cooperatives
Cr. 424, Other Capital Credits and Patronage Capital Allocations
To record the allocation of capital credits from a cooperative lender.

NOTE: If any portion of the interest expense was capitalized as a component of construction cost, a similar portion of the capital credit allocation shall be credited to construction rather than to Account 424. The portion credited to construction shall be determined by applying the percentage of interest expense charged to construction for that particular lender to the interest expense incurred for that lender.
Dr. 131.1 Cash—General
Cr. 123.1 Patronage Capital from Associated Cooperatives
To record the cash receipt of patronage capital credits from cooperative lenders.

301 Forfeited Customers' Deposits

Customers may be required to make deposits to guarantee payment of amounts billed for electric service. When a customer discontinues service, the customer's deposit shall first be applied to unpaid energy bills, with the balance remitted by check to the customer. If the check is returned, it shall be voided and the original entry that was made when the check was issued shall be reversed.

Unclaimed balances of customer deposits shall remain in Account 235, Customer Deposits, until the legal liability of the cooperative to make such a refund has elapsed. When there is no further legal liability to refund the deposit and if it does not escheat to the state, it shall be transferred to Account 144, Accumulated Provision for Uncollectible Customer Accounts—Credit, retaining full information of all particulars.

401 Computer Software Costs

Computer software consists of programs and routines (sets of computer instructions) which direct the operation of the computer. Software may refer to generalized routines useful in computer operations or to programs for specific applications such as payroll.

The distinction between generalized software and application software is important. Generalized software provides operating support for individual applications. This would include programs for such tasks as making printouts of machine-readable records, sorting records, organizing and maintaining files, translating programs written in a symbolic language into machine-language instructions, and scheduling jobs through the computer. These programs are generally furnished by the manufacturer.

Application software consists of a set of instructions for performing a particular data processing task. Application programs are generally written by the user installation, but are frequently obtained as prewritten packages from software vendors. Application software includes programs such as payroll, billing, general ledger, as well as engineering or managerial applications.

Costs incurred with the purchase or development of computer software shall be accounted for as follows:

1. Capitalize in a subaccount of Account 391, Office Furniture and Equipment, all costs for generalized software. Depreciate the cost over the service life (or remaining life) of the main hardware (i.e., containing central processor). If the purchase invoice does not break out or assign a cost to the "generalized software," it is appropriate to include the full amount in hardware costs. Capitalize in a separate subaccount of Account 391, all costs for applications software determined to have a service life of over one year. Depreciate the cost over the estimated useful service life of the program. This depreciation period shall not exceed five (5) years. RUS realizes, however, that there may be circumstances that justify a useful life longer than 5 years. When this is the case and it is management's intent to utilize these programs over an extended period, written justification shall be submitted to RUS for approval.

2. Expense in Account 921, Office Supplies and Expenses, in the period incurred, all costs associated with the maintenance, updating, and conversion of files or revision of all software, and all costs for software with a useful life of less than 1 year. Also expense in Account 921, the unamortized cost of all software determined, during the year, to be no longer used by or useful to the cooperative. Such costs that are clearly applicable to any category of operating expenses other than the administrative and general category, however, shall be included in the appropriate account in such category. In accordance with the USoA, no portion of such costs shall be capitalized to construction or retirement activities.

In determining the total cost of purchased or internally developed software, the following items shall be included:
§ 1767.41

a. Costs incurred for feasibility studies if they result in the purchase or development of software;

b. All costs related to the actual purchase or development of the software. These costs must be specifically identifiable with the software and properly supported by time cards, invoices, or other documents; and

c. All costs incurred in “testing and debugging” the software.

Computer software costs are properly chargeable to Account 107, Construction Work in Progress, provided that the following criteria are met:

1. The computer program is specifically dedicated to performing a construction related activity, and

2. The cost of the software is itemized separate and apart from other hardware and software costs.

The cost of software programs meeting the above requirements and having an estimated useful service life in excess of 1 year shall be recorded in Account 186, Miscellaneous Deferred Debits, and amortized to Account 107, Construction Work in Progress, over the estimated service life of the program not to exceed 5 years.

All costs related to training personnel in the use of software shall be expensed as incurred.

The accounting in this section is not intended to apply to immaterial amounts. When it is deemed that the costs of the recordkeeping necessary to amortize these costs outweigh the benefits to the members, software costs shall be expensed in the year incurred. For computer costs relating to load control equipment, refer to Item 118 of this section.

402 Legal Expenses

Utilities may incur legal expenses which pertain to construction activities, loan activities, or general services. The proper accounting treatment for legal expenses is as follows:

1. Legal fees incurred in connection with a construction project, including the court costs directly related thereto, which can be identified and supported as such, shall be capitalized in Account 107, Construction Work-in-Progress, as a cost of construction.

2. Legal fees specifically identified and properly supported as resulting from activities designed to obtain long-term debt, shall be deferred in Account 181, Unamortized Debt Expense.

3. Legal fees for all other services and fees which cannot be properly identified will require expensing to either Account 417.1, Expenses of Nonutility Operations, or Account 923, Outside Services Employed, as appropriate.

To properly support the capitalization or deferral of legal fees, the attorney shall provide an itemization of services performed and the corresponding costs. Only those costs specifically identified by the attorney as being related to construction or loan activities shall be capitalized or deferred as described above.

403 Leases

Lease transactions shall be accounted for as either a capital lease or an operating lease depending upon whether or not the lease meets the criteria for classification as a capital lease. The definitions for capital and operating leases and the criteria used to determine which method shall be used are as follows:

Definitions

1. Capital Lease: A lease that transfers substantially all of the benefits and risks inherent in the ownership of the property to the lessee, who accounts for the lease as an acquisition of an asset and the incurrence of a liability.

2. Operating Lease: An operating lease is a simple rental agreement which does not meet the criteria for a capital lease. Under the terms of an operating lease, the lessee records the rental payments due over the term of the lease as rent expense.

Criteria

A lease agreement shall be classified as a capital lease if one or more of the following criteria is met:

1. Ownership of the property is transferred to the lessee by the end of the lease term;

2. The lease contains a bargain purchase option;

3. The lease term is equal to 75 percent or more of the estimated useful life of the leased property; or
4. The present value of the lease payments at the inception of the lease equals or exceeds 90 percent of the fair market value of the leased property.

A lease agreement qualifying as a capital lease shall be recorded in either Account 101.1, Property Under Capital Leases; Account 120.6, Nuclear Fuel Under Capital Leases; or Account 121, Nonutility Property, as appropriate, at the present value (at the beginning of the lease term) of the minimum lease payments. If, however, this amount exceeds the fair value of the leased property at the inception of the lease, the asset shall be recorded at its fair market value. An offsetting credit shall be recorded in Account 227, Obligations Under Capital Leases—Noncurrent, with the current portion recorded in Account 243, Obligations Under Capital Leases—Current. Assets recorded in Account 101.1 shall be classified separately according to the detailed accounts (301–399) provided for electric plant in service.

Monthly payments made under the lease obligation shall be charged to rent expense, fuel expense, or construction work-in-progress as they become payable. Similarly, the leased asset and the associated obligation shall be reduced by the current amount due. The following journal entries shall be used by the lessee to record capital lease transactions:

Dr. 101.1, Property Under Capital Leases
Cr. 243, Obligations Under Capital Leases—Current
Cr. 227, Obligations Under Capital Leases—Noncurrent
To record the capital lease agreement.

Dr. 550, Rents
Cr. 232, Accounts Payable
Cr. 243, Obligations Under Capital Leases—Current
To record the monthly rental payment due.

Dr. 101.1, Property Under Capital Leases
Dr. 232, Accounts Payable
Cr. 131.1, Cash—General
To record the monthly lease payment.

Operating leases which are simple rental agreements do not require the recording of an asset or a liability. The entries that are required to record an operating lease by the lessee are as follows:

Dr. 550, Rents
Cr. 232, Accounts Payable
To record the monthly rental payment due.

Cr. 131.1, Cash—General
To record the monthly lease payment.

For purposes of illustration, the journal entries presented in this interpretation debit Account 550, Rents. However, Account 507, Rents (steam power generation); Account 525, Rents (nuclear power generation); Account 540, Rents (hydraulic power generation); Account 550, Rents (other power production); Account 567, Rents (transmission expense); Account 599, Rents (distribution expense); and Account 931, Rents (general and administrative), should be charged, as appropriate, depending upon the function of the equipment being leased.

404 Consolidated Financial Statements

In October 1987, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 94, Consolidation of All Majority-Owned Subsidiaries (Statement No. 94). For purposes of reporting to RUS, Statement No. 94 shall be applied as follows:

1. An RUS borrower that is a subsidiary of another entity shall prepare and submit to RUS separate financial statements even though this financial information is presented in the parent's consolidated statements.
2. In those cases in which an RUS borrower has a majority-ownership in a subsidiary, the borrower must prepare consolidated financial statements in accordance with the requirements of Statement No. 94. These consolidated statements must also include supplementary schedules presenting a Balance Sheet and Income Statement for each majority-owned subsidiary included in the consolidated statements.

Although Statement No. 94 requires the consolidation of majority-owned subsidiaries, RUS Forms 7 and 12 must be prepared on an unconsolidated basis.

501 Patronage Capital Assignments

Accounting for patronage capital and margins may vary depending upon the individual cooperative's bylaws. The comments contained in this section relate to the application of the standard bylaw provisions.
The entries required, at year’s end, to record patronage capital transactions where there is no major merchandising program are as follows:

- Dr. 219.1, Operating Margins
- Dr. 219.2, Nonoperating margins
- Cr. 201.2, Patronage Capital Assignable
  - To record the amount of patronage capital assignable.
- Dr. 201.2, Patronage Capital Assignable
  - Cr. 201.1, Patronage Capital Credits
  - To record the allocation of patronage capital to the patrons’ accounts.

The procedure for determining the amount of patronage capital assignable to the individual patron on a total dollar basis is as follows:

1. Determine the total amount to be assigned for the year (Account 201.2).
2. Determine patronage from electric service, the total of consumers’ billings (Accounts 440-447).
3. Determine the percentage factor to be used in calculating patronage capital to be credited to each consumer account. Divide “1” by “2”.
4. Determine the amount of capital to be credited to each consumer. Multiply the individual consumer’s billings for the year by the percentage factor obtained in “3” above.

The procedure for determining the amount of patronage capital assignable to the individual patron on a dollar basis, less the cost of power, is as follows:

1. Determine the total amount to be assigned for the year.
2. Determine the total amount of revenue received from each classification of customers.
3. Determine the total cost of power for each classification of customers. (For example, use cost per kWh sold).
4. For each classification of customers subtract the amount obtained in “3” from the amount obtained in “2,” to obtain the total amount received, less cost of power, by classification of customers.
5. Add the amounts obtained in “4” to obtain the total amount of revenue, less cost of power.
6. Divide the total amount received, less cost of power for each classification of customers (amounts obtained in “4”), by the total amount received, less cost of power for all customers (amount obtained in “5”) to obtain the prorata percentage for each classification of customers.
7. Multiply the total amount to be allocated (amount obtained in “1”) by the prorata percentage for each classification of customers (obtained in “6”) to obtain the amount to be assigned each classification of customers.
8. Divide the amount to be assigned each classification of customers (amount obtained in “7”) by the total amount received from the classification of customers (amount obtain in “2”) to obtain the percentage factor for each classification of customers.
9. Determine the total amount received from each individual customer.
10. Multiply the total amount received from each individual customer (amount obtained in “9”) by the percentage factor for his classification (amount obtained in “8”) to obtain the amount of capital to be assigned each individual customer.

After calculating the patronage capital to be credited to each customer, there is usually a small balance remaining. This small balance shall remain in Account 201.2, Patronage Capital Assignable, and shall be added to the amount to be assigned in the following year.

Proper records shall be maintained to support all capital credit transactions. As a minimum, these records shall show, for each patron, the amount of capital credited for each year as well as the amount and date retired for each year.

The process of transferring capital credits from the Patronage Capital Assignable accounts to the Patrons’ Capital Credits Assigned accounts or to the Patrons’ Capital Credits accounts and the making of entries to individual patron’s records constitutes an assignment of capital credits. This holds true for recordkeeping purposes as well as from a legal point of view. This assignment shall be followed by formal notification to patrons within a reasonable period of time.

In the event that a distribution cooperative incurs a net loss, that loss shall not be allocated to its members (patrons). The loss shall be accumulated and offset by future nonoperating margins.
502 Patronage Capital Retirements

As the board of directors has the responsibility for determining whether the financial condition of the cooperative will permit retirement of capital credits and whether the proposed retirement complies with mortgage and bylaw provisions, the authorization for the retirement shall be set forth in the board minutes. The entries to record the general retirement of capital credits shall be as follows:

Dr. 201.1, Patronage Capital Credits
Cr. 238.1, Patronage Capital Payable
To record the board of directors' authorization to make payments of capital credits.

Dr. 238.1, Patronage Capital Payable
Cr. 131.1, Cash—General.
To record actual cash payments of capital credits.

NOTE: To provide better control over the payment of patronage capital credits, a special checking account should be established in an amount equal to the authorized general retirement. Special prenumbered checks shall be used for each general retirement of patronage capital.

To strengthen internal control and to facilitate the settlement of estates, the board should adopt a policy specifying exactly how payments of capital credits shall be made to the estates of deceased patrons. Payments made to estates shall be recorded as follows:

Dr. 201.1, Patronage Capital Credits
Cr. 131.1, Cash—General
To record the payment of capital credits when an estate is settled by refunding 100 cents on the dollar.

Dr. 201.1, Patronage Capital Credits
Cr. 131.1, Cash—General
Cr. 217, Retired Capital Credits—Gain
To record the payment of capital credits when an estate is settled for less than the full amount of capital credited to the deceased customer's account.

Dr. 217, Retired Capital Credits—Gain
Cr. 201.2, Patronage Capital Assignable
To record the reallocation to current patrons of the amount of the discount, if provided for in the bylaws.

If a capital credit check is returned due to an inability to locate the patron, it shall be held pending a recheck of available records to ascertain the correct address of the patron. If it is determined that the patron cannot be located, the check shall be cancelled and the amount of the check debited to Account 131.1, Cash—General, and credited to Account 217, Retired Capital Credits—Gain. If the state, however, has unclaimed property laws to which the amount is subject, the amount shall be credited to Account 253, Other Deferred Credits, until final disposition has been made. A notation shall be made in the records of the former patron to facilitate payment if his or her whereabouts is subsequently determined.

If the records show that a number of former patrons have moved and left no forwarding address, it is not necessary to prepare a capital credit retirement check for these patrons when a general retirement of capital credits is made. When setting funds aside to make a general retirement, however, appropriate amounts shall be included to cover payments due these patrons. The cooperative shall then make a reasonable effort to locate these patrons through publication of their names in the newsletter or local newspaper. If the patrons are not located, the amounts set aside and the credits to their accounts shall be handled in a manner similar to those for whom payment checks are returned.

Under the standard bylaw provisions recommended by RUS, it is not proper to use capital credits that were assigned to former patrons to liquidate their delinquent bills. When the standard bylaws are in effect and collection efforts have failed, the balance of an uncollectible bill, after application of customers deposits and membership fees, shall be charged against the accumulated provision for uncollectible accounts. If the patron has capital credits assigned to him or her, these remain untouched except for a notation to indicate the amount of the unpaid bill. When a general retirement of capital credits is made at some future date, amounts which would otherwise be due the patron may be applied to satisfy the unpaid bill with the balance refunded to him or her.

503 Operating and Nonoperating Margins

Occasionally questions arise concerning the accounting for the balances in Accounts 218, Capital Gains and Losses; 219.3, Other Margins; 219.4, Other Margins and Equities-Prior Periods; 434,
§ 1767.41

Extraordinary Income; and 435, Extraordinary Deductions. The balance in these accounts shall be accounted for as follows:

1. The balance in Account 219.4, Other Margins and Equities—Prior Periods, shall be transferred, at year’s end, to Account 219.1 or 219.2, as appropriate. Accounts 219.1 and 219.2 are then closed to Account 201.2, Patronage Capital Assignable, unless otherwise provided for in the bylaws.

2. The balances in Account 434, Extraordinary Income, and Account 435, Extraordinary Deductions, shall be cleared to Account 219.2 at year’s end.

3. The balances in Account 219.3, Other Margins, and Account 218, Capital Gains and Losses, shall remain in these accounts unless they are allocated to patrons or used to absorb future losses as provided for in the bylaws of the cooperative.

When a cooperative is engaged in a major merchandising activity, all costs properly chargeable to the merchandising activity shall be allocated as such to offset the associated revenue. Nonoperating margins generated from this source shall be prorated annually on a patronage basis and credited to those patrons accounts from whom such amounts were obtained. Merchandising activities of this nature may require a bylaw provision allowing for the allocation of margins generated by a major merchandising activity separate from other operating or nonoperating margins.

If, at the time of the adoption of the bylaw provisions for the allocation of nonoperating margins, there are prior years’ losses resulting in debit balances in Accounts 218, Capital Gains and Losses; 219.1, Operating Margins; 219.2, Nonoperating Margins; or 219.3, Other Margins; the credit balances in Accounts 218, 219.2, or 219.3 resulting from prior years’ operations shall be transferred, to the extent necessary, to offset such deficits. Remaining credit balances allocable to patrons shall be transferred to Account 1.2.

504 Patronage Capital from G&T Cooperatives

When a cooperative receives capital credits from a G&T cooperative, the transaction shall be recorded by a debit to Account 123.1, Patronage Capital from Associated Cooperatives, and a credit to Account 423, Generation and Transmission Cooperative Credits. This entry shall be made prior to the closing of the cooperative’s books even though, in most cases, the notice of the G&T allocation is not received until after the close of the year to which it relates. If precise information cannot be obtained from the G&T within a reasonable time, capital credits shall be recorded on an estimated basis. The difference between the estimated amount and the actual shall be recognized in the following year unless the difference is material.

A distribution cooperative shall not recognize its proportionate share of losses incurred by the G&T. G&T losses shall be accumulated and offset as provided for in the bylaws. Unlike distribution cooperatives, a G&T has the option to offset accumulated losses with future operating and/or nonoperating margins.

505 Patronage Capital Furnished by Other Cooperative Service Organizations

Utilities may obtain long-term and short-term loans, telephone or data processing services, or may purchase oil, gasoline, materials, insurance, and various items from cooperative or mutual enterprises. These enterprises often make patronage refunds or provide evidence that an amount equal to such a refund has been credited to the utility as an investment of capital. The refund may be in the form of cash at the year following the purchase or it may be deducted from the next invoice. The notice of patronage credited to the borrower’s account may indicate that such capital may be retired at some future date upon certain conditions having been met. The following provides...
the accounting journal entries for these types of transactions:

1. Insurance policy refunds from mutual companies, in cash or as credits against subsequent purchases, shall be credited to the appropriate expense account. If sufficient information is not available to credit the refunds to the appropriate expense accounts, they shall be credited to Account 165, Prepayments, and reduce premiums for the current year.

2. Patronage capital allocations from cooperatives, other than mutual insurance companies, shall be credited, in the year that the allocation notice is received, to Account 424, Other Capital Credits and Patronage Allocations, or to construction work-in-progress, as appropriate. The allocation of patronage capital credits between Account 424 and construction work-in-progress shall be made on an equitable basis. For example, patronage capital allocations received from a cooperative money lender are allocated between Account 424 and construction work-in-progress based upon the ratio of interest charged to construction for that particular lender to total interest expense incurred for that lender. Patronage capital allocations received from a material supplier are allocated based upon the ratio of materials charged to construction to total materials purchased.

3. The face amount of patronage capital certificates received by the cooperative from the purchase of goods or services from cooperative money lenders (CFC), oil dealers, material suppliers, pole treating plants, communications services, and others shall be charged to either Account 123.1, Patronage Capital from Associated Cooperatives, or Account 124, Other Investments, as appropriate. Account 123.1 shall include investments in only those cooperatives, or enterprises, that are directly related to the electric utility industry and controlled by the electric cooperatives. These include statewide cooperatives, power cooperatives, and NRECA. Other investments in oil cooperatives and insurance companies shall be charged to Account 124.

506 Forfeited Membership Fees

The bylaws of each cooperative prescribe certain rules and regulations concerning membership in the cooperative. Among these are provisions for forfeiture of membership fees. Some bylaws provide for application of membership fees against any unpaid accounts at the time of termination of service. Any remaining balance may be refunded to the member. Balances that cannot be refunded to the member due to an inability to locate the member or due to bylaw restriction, shall be credited to Account 208, Donated Capital, provided they do not escheat to the state. If disposition of the fees cannot be determined immediately, the amount involved shall be transferred to Account 253, Other Deferred Credits, until the determination is made.

601 Employee Benefits

The costs of employees' fringe benefits (hospitalization, retirement, holiday, sick and vacation pay, etc.) shall be accumulated in an appropriate clearing account and allocated monthly on the basis of payroll. Vacation costs shall be accrued monthly by appropriate credits to an accrual account. These monthly accruals shall be allocated on the basis of direct payroll costs to construction, retirement, and the applicable operations, maintenance, and administrative expense accounts.

Sick leave costs are not normally accrued unless the employee is entitled to be paid for accumulated sick leave at the termination of employment. Salary payments and the associated employee pensions and benefits and social security and other payroll taxes for an employee who is actually sick shall be charged to the same account or accounts to which his or her salary is normally charged.

602 Compensated Absences

Statement of Financial Accounting Standards No. 43, Accounting for Compensated Absences (Statement No. 43), requires employers to accrue a liability as an employee earns the right to be paid for future absences. Four criteria were established for this accrual:
1. The employer's obligation for payment for future absences is attributable to employees' services already performed.

2. The obligation relates to employee rights which vest or accumulate. Vested rights are considered those for which the employer is obligated to make payment even if the employee terminates. Rights which accumulate are those earned but unused rights to compensated absences which may be carried forward to one or more periods, subsequent to the period in which they are earned.

3. Payment of the compensation is probable.

4. The amount can be reasonably estimated.

A company's liability shall be estimated based upon payments it expects to make as a result of employees' work already performed. If a reasonable estimate cannot be made, the company shall disclose that fact in the financial statements.

Statement No. 43 does not apply to severance or termination pay, post-retirement benefits, deferred compensation, stock or stock options, group insurance, or other long-term fringe benefits.

The entries required to account for the accrual of compensated absences are as follows:

Dr. 435.1, Cumulative Effect on Prior Years of a Change in Accounting Principle
Cr. 242.3, Accrued Employees' Vacation and Holidays
To record the liability for benefits earned in prior years.

Dr. 107, Construction Work in Progress
Dr. 118.1, Retirement Work in Progress
Dr. 242.3, Accrued Employees' Vacation and Holidays
Cr. 242.3, Accrued Employees' Vacation and Holidays
To record the liability for benefits earned in the current period.

603 Employee Retirement and Group Insurance

Some borrowers have group insurance or retirement plans or both for their employees. As a general rule the cost of these programs is borne partially by the cooperative and partially by its employees. The cooperative may pay the full cost in advance and recover the employee's share through payroll deductions. The accounting for these transactions is as follows:

1. The cooperative's advanced payment of premiums on insurance and retirement agreements shall be charged to Account 105, Prepayments, for the employer's portion, and Account 143, Other Accounts Receivable, for the employee's portion.

2. The cost of the employer's portion of a retirement and group insurance program shall be charged to construction and retirement activities and the applicable operations, maintenance, and administrative expense accounts based upon a specific identification with employees' labor costs charged therein or, in the absence of specific employee identification, based upon direct labor dollars or direct labor hours depending upon which allocation technique provides the most equitable distribution of costs.

604 Deferred Compensation

Many utilities participate in the NRECA Deferred Compensation Program. Based upon the provisions of the program, the following accounting entries shall be made:

Dr. 186.XX, Miscellaneous Deferred Debits—Deferred Compensation
Cr. 228.3, Accumulated Provision for Pensions and Benefits
To increase the deferred compensation provision by the amount of the annual deposit to NRECA's Deferred Compensation Fund.

Dr. 128, Other Special Funds—Deferred Compensation
Cr. 131.1, Cash—General
To record the annual deposit to NRECA's Deferred Compensation Fund.

Dr. Construction Work in Progress, Retirement Work in Progress, or the Various Operations, Maintenance, and Administrative Expense Accounts
Cr. 186.XX, Miscellaneous Deferred Debits—Deferred Compensation
To record monthly accrual of deferred compensation.

NOTE: If an employee joins the deferred compensation program during the year, use entry #1 to record the additional deposit to the NRECA Deferred Compensation Fund and increase the monthly accrual in entry #2 to reflect this deposit.

NRECA provides borrowers that participate in the deferred compensation program...
program with an annual account statement disclosing the activity for each Homestead Fund investment including the number of shares owned, interest income, dividend income, capital gains/losses, and the value of the shares owned at statement date. Funds may be invested in the Short-term Bond Fund, the Value Fund, the Short-term Government Securities Fund, and the Daily Income Fund. Depending upon the Homestead Fund selected, invested funds may earn interest and dividend income and may experience unrealized holding gains or losses. Based upon the information provided on the annual statement, the following journal entries shall be recorded to recognize the increase or decrease in the fund assets:

Dr. 128, Other Special Funds—Deferred Compensation
Cr. 419, Interest and Dividend Income
Cr. 421, Miscellaneous Nonoperating Income
To record an increase in the fund value as of December 31, 19xx, resulting from interest and dividend income and from unrecognized holding gains on trading securities.

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Cr. 228.3, Accumulated Provision for Pensions and Benefits
To record an increase in the liability to the employee resulting from an increase in the investment account.

Dr. 426.5, Other Deductions
Cr. 128, Other Special Funds—Deferred Compensation
To record a decrease in fund value as of December 31, 19xx, resulting from unrecognized holding losses on trading securities.

Dr. 228.3, Accumulated Provision for Pensions and Benefits
Cr. Various Operations, Maintenance, and Administrative Expense Accounts
To record a decrease in the liability to the employee resulting from a decrease in the investment account.

Payments made to participating employees because of retirement or separation for other reasons shall be recorded using the following entries:

Dr. 131.1, Cash—General
Cr. 128, Other Special Funds—Deferred Compensation
To record the receipt of funds from NRECA.

Dr. 228.3, Accumulated Provision for Pensions and Benefits
Cr. 131.1, Cash—General
To record payment to employee for deferred compensation.

If the borrower has elected to bear the market risk of the funds which guarantee that the amount of money an employee receives will not be less than the amount of salary deferred, the following entry shall be recorded if total payment(s) from NRECA are less than the amount of salary deferred:

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Cr. 131.1, Cash—General
To record payment to employee for deferred compensation. Payment was made because amount returned did not equal salary deferred.

Appropriate disclosure of the terms of the program shall be made in the notes to the financial statements.

605 Life Insurance Premium on Life of a Borrower Employee

Some borrowers insure the life of the manager and/or key employees with the borrower being named as the beneficiary. Such arrangements shall be accounted for as follows:

1. Charge Account 426.2, Life Insurance, for the net amount of the premium paid each year on the insurance policy.

2. At the anniversary date of the policy each year, charge Account 124, Other Investments, and credit Account 426.2, Life Insurance, with the amount of the annual increase in the cash surrender value of the policy; provided such increase is less than the net premium paid for that year. If the annual increase in the surrender value exceeds the net premium paid for the same year, only that portion of the surrender value increase equal to the net premium paid shall be credited to Account 426.2. The remainder is to be credited to Account 419, Interest and Dividend Income.

3. Upon retirement of the insured employee and surrender of the insurance policy, charge Account 131.1, Cash—General, and credit Account 124, Other Investments, for the amount received from the insurance company. If it is decided to grant to the retiring insured employee all, or any portion, of the cash received upon surrender of the policy, Account 926, Employee Pensions and Benefits, shall be charged.
and Account 131.1 credited for the amount paid to the retiring employee.

4. If the insured employee dies within his term of service, charge Account 131.1, Cash—General, for the face amount of the policy paid by the insurance company. Credit Account 124, Other Investments, for the cash surrender value previously charged thereto, and credit the remainder to Account 421, Miscellaneous Nonoperating Income.

606 Pension Costs

With the issuance of Statement of Financial Accounting Standards No. 87, Employers’ Accounting for Pensions (Statement No. 87), there have been significant changes in the accounting and reporting requirements relating to pension costs. This section will highlight the accounting and reporting requirements for the major types of pension plans. It should be noted, however, that the definitions and accounting procedures outlined in this section relate to financial accounting and they may differ from those used for tax accounting.

Defined Benefit Pension Plans

A defined benefit pension plan is a plan that defines an amount of pension benefit to be provided, usually as a function of one or more factors such as age, years of service, or compensation. In a defined benefit plan, the employer promises to provide, in addition to current wages, retirement income payments in future years after the employee retires or terminates service. Generally, the amount of benefit to be paid depends upon a number of future events that are incorporated into the plan’s benefit formula, after including how long the employee and any survivors live, how many years of service the employee renders, and the employee’s compensation in the years immediately before retirement or termination.

Under a defined benefit plan, the determination of pension costs, assets, liabilities, and the disclosures in the financial statements require many calculations and assumptions to be made. This section provides a general overview of the accounting and reporting requirements associated with a defined benefit pension plan. Consult Statement No. 87 for guidance in making the necessary calculations and assumption.

The accounting and reporting requirements related to a defined benefit pension plan are as follows:

1. The following components shall be included in the periodic recognition of net pension cost by an employer sponsoring a defined benefit pension plan:
   a. The service cost component recognized in a period shall be determined as the actuarial present value of benefits attributed by the pension plan formula to employee service during that period. The measurement of the service cost component requires use of an attribution method and assumptions.
   b. The interest cost component recognized in a period shall be determined as the increase in the projected benefit obligation due to the passage of time. Measuring the projected benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.
   c. For a funded plan, the actual return on plan assets, if any, shall be determined based upon the fair value of plan assets at the beginning and the end of the period, adjusted for contributions and benefit payments.
   d. Plan amendments (including initiation of a plan) often include provisions that grant increased benefits based upon services rendered in prior periods. Because plan amendments are granted with the expectation that the employer will realize economic benefits in future periods, Statement No. 87 does not require the cost of providing such retroactive benefits (prior service cost) to be included in net periodic pension cost entirely in the year of the amendment but provides for recognition during the future service periods of those employees active at the date of the amendment who are expected to receive benefits under the plan.

The cost of retroactive benefits (including benefits that are granted to retirees) is the increase in the projected benefit obligation at the date of the amendment. Except as noted below, prior service cost shall be amortized by assigning an equal amount to each future period of service of each employee active at the date of the amendment who is expected to receive benefits
under the plan. If all or almost all of the plan's participants are inactive, the cost of retroactive plan amendments affecting benefits of inactive participants shall be amortized based upon the remaining life expectancy of those participants rather than the remaining service period.

To reduce the complexity and detail of the computations required, consistent use of an alternative amortization approach that more rapidly reduces the unrecognized cost of retroactive amendments is acceptable. For example, a straight-line amortization of the cost over the average remaining service period of employees expected to receive benefits under the plan is acceptable. The alternative method used shall be disclosed.

In some situations, a history of regular plan amendments and other evidence may indicate that the period during which the employee expects to realize economic benefits from an amendment granting retroactive benefits is shorter than the entire remaining service period of the active employees. Identification of such situations requires an assessment of the individual circumstances and the substance of the particular plan situation. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

A plan amendment can reduce rather than increase the projected benefit obligation. Such a reduction shall be used to reduce an existing unrecognized prior service cost, and the excess, if any, shall be amortized on the same basis as the cost of benefit increases.

e. Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and changes in assumptions. Gains and losses include amounts that have been realized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values, and because some gains in one period may be offset by losses in another or vice versa, the recognition of gains and losses as components of net pension cost of the period in which they arise is not required.

The expected return on plan assets shall be determined based upon the expected long-term rate of return on plan assets and the market-related value of plan assets. The market-related value of plan assets shall be either fair value or a calculated value that recognizes changes in fair value in a systematic and rational manner over not more than 5 years. Different ways of calculating market-related value may be used for different classes of assets but the manner of determining market-related value shall be applied consistently from year to year for each asset class.

Asset gains and losses are the differences between the actual return on assets during a period and the expected return on assets for that period. Assets gains and losses include both changes reflected in the market-related value of assets and changes not yet reflected in the market-related value (that is, the difference between the fair value of assets and the market-related value). Asset gains and losses not yet reflected in market-related values are not required to be amortized.

As a minimum, amortization of an unrecognized gain or loss (excluding asset gains and losses not yet reflected in market-related value) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the market-related value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service life.

Any systematic method of amortization of gains and losses may be used in lieu of the minimum specified in the previous paragraph provided that the minimum is used in any period in which the minimum is greater (i.e., reduces the net balance by more), the method is applied consistently, the
method is applied similarly to both gains and losses, and the method is disclosed.

The gain or loss component of net periodic pension cost shall consist of the difference between the actual return on plan assets and the expected return on plan assets and amortization of the unrecognized net gain or loss from previous periods.

2. A liability (unfunded accrued pension cost) shall be recognized if the net periodic pension cost recognized pursuant to Statement No. 87 exceeds amounts the employer has contributed to the plan. An asset (prepaid pension cost) shall be recognized if the net periodic pension cost is less than the amounts the employer has contributed to the plan.

If the accumulated benefit obligation exceeds the fair value of plan assets, the employer shall recognize a liability (including unfunded accrued pension cost) that is at least equal to the unfunded accumulated benefit obligation. Recognition of an additional minimum liability is required if an unfunded accumulated benefit obligation exists and an asset has been recognized as a prepaid pension cost, the liability already recognized as unfunded accrued pension cost is less than the unfunded accumulated benefit obligation, or no accrued or prepaid pension cost has been recognized.

If an additional minimum liability is recognized, an equal amount shall be recognized as an intangible asset, provided that the asset does not exceed the amount of unrecognized prior service cost. If an additional liability required to be recognized exceeds unrecognized prior service cost, the excess (which represents a net loss not yet recognized as a net periodic pension cost) shall be reported as a separate component (reduction) of equity.

When a new determination of the amount of additional liability is made to prepare a balance sheet, the related intangible asset and separate component of equity shall be eliminated or adjusted, as necessary.

3. An employer sponsoring a defined benefit pension plan shall disclose the following information:

a. A description of the plan including employee groups covered, type of benefit formula, funding policy, types of assets held and significant nonbenefit liabilities, if any, and the nature and effect of significant matters affecting comparability of information for all periods presented.

b. The amount of net periodic pension cost for the period showing separately the service cost component, the interest cost component, the actual return on assets for the period, and the net total of other components.

c. A schedule reconciling the funded status of the plan with amounts reported in the employer’s balance sheet, showing separately, the fair value of plan assets, the projected benefit obligation identifying the accumulated benefit obligation and the vested benefit obligation, the amount of unrecognized prior service cost, the amount of unrecognized net gain or loss including asset gains and losses not yet reflected in market-related value), the amount of any remaining unrecognized net obligation or net asset existing at the date of initial application of Statement No. 87, the amount of any additional liability recognized, and the amount of net pension asset or liability recognized in the balance sheet (which is the net result of combining the previous six items).

d. The weighted-average assumed discount rate and rate of compensation increase (if applicable) used to measure the projected benefit obligation and the weighted-average expected long-term rate of return on plan assets.

e. If applicable, the amount and type of securities of the employer and related parties included in plan assets, and the approximate amount of annual benefits of employees and retirees covered by annuity contracts issued by the employer and related parties. Also, if applicable, the alternative amortization periods used.

f. An employer that sponsors two or more separate defined benefit pension plans shall determine net periodic pension cost, liabilities, and assets by separately applying the provisions of Statement No. 87 to each plan. In particular, unless an employer clearly has a right to use the assets of one plan to pay benefits of another, a liability required to be recognized for one plan
shall not be reduced or eliminated because another plan has assets in excess of its accumulated benefit obligation or because the employer has prepaid pension cost related to another plan.

The required disclosures may be aggregated for all of an employer's single-employer defined benefit plans, or plans may be disaggregated into groups so as to provide the most useful information. Plans with assets in excess of the accumulated benefit obligation, however, shall not be aggregated with plans that have accumulated benefit obligations that exceed plan assets.

**Annuity Contracts**

An annuity contract is a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. An annuity contract is irrevocable and involves the transfer of significant risk from the employer to the insurance company. Some annuity contracts (participating annuity contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under these contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. The purchase price of a participating annuity contract ordinarily is higher than the price of an equivalent contract without participation rights. The cost of the participation right shall be recognized, at the date of purchase, as an asset. In subsequent periods, the participation right shall be measured at its fair value if the contract is such that the fair value is reasonably estimable. Otherwise, the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

**Other Contracts with Insurance Companies**

Insurance contracts that are, in substance, equivalent to the purchase of annuities shall be accounted for as such. Other contracts with insurance companies shall be accounted for as investments and measured at fair value. For some contracts, the best available evidence of fair value may be contract value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value.

**Defined Contribution Plans**

A defined contribution pension plan is a plan that provides pension benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's accounts are to be determined rather than the amount of pension benefits the individual is to receive. Under a defined contribution plan, the pension...
benefits a participant will receive depend only upon the amount contributed to the participant's account, the returns earned on investments of those contributions, and forfeitures of other participants' benefits that may be allocated to the participant's account.

To the extent that a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net pension cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

An employer that sponsors one or more defined contribution plans shall disclose the following separately from its defined benefit plan disclosures:

1. A description of the plan(s) including employee groups covered, the basis for determining contributions, and the nature and effect of significant matters affecting comparability of information for all periods presented.
2. The amount of cost recognized during the period.

A pension plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting and disclosure requirements shall be determined in accordance with the provisions applicable to a defined benefit plan.

Multiemployer Plans

A multiemployer plan is a pension plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

An employer participating in a multiemployer plan shall recognize as net pension cost, the required contribution for the period and shall recognize as a liability, any contributions due and unpaid. The required contribution includes both current costs and prior service costs. If an employer elects to fund prior service cost in full at the inception of the plan, the total payment becomes the employer's required contribution, and accordingly, its pension cost for the period.

The following provisions are applicable to RUS borrowers participating in a multiemployer pension plan:

1. An electric utility participating in a multiemployer plan may defer current period pension expenses if the provisions of Statement of Financial Accounting Standards No. 71 (Statement No. 71), Accounting for the Effects of Certain Types of Regulation, are applied.

Under the provisions of Statement No. 71, pension costs may be deferred provided such costs are recovered through future rates.

2. An electric utility instituting an amendment to the NRECA Retirement and Security plan enters into a contractual agreement to pay the costs incurred (prior service pension costs) for the amendment. In such cases, the agreement is noncancelable and payable regardless of continued participation in the plan.

Since the utility is unconditionally committed to making these payments and such payments are not contingent upon the utility's continued participation in the plan, the recognition of that liability is appropriate. The costs associated with this liability shall be expensed, in their entirety, when the liability is recognized.

The accounting journal entries required to record the transactions associated with a multiemployer pension plan are as follows:

Sample 1—Current Pension Expense

The journal entry required to record the normal costs associated with the NRECA Retirement and Security Program is as follows:

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Dr. 107, Construction Work-in-Progress
Dr. 108.8, Retirement Work-in-Progress
Cr. 131.1, Cash—General
§ 1767.41

To record the payment of pension costs to NRECA.

**NOTE:** This entry shall not be recorded during the moratorium.

Sample 2—Prior Service Pension Expense

The journal entries required to record the prior service costs associated with the NRECA Retirement and Security Program are as follows:

1. If the RUS borrower elects to pay the prior service pension costs in full, and there is no deferral of costs under the provision of Statement No. 71, the following entry shall be recorded:
   
   Dr. Various Operations, Maintenance, and Administrative Expense Accounts
   Dr. 107, Construction Work-in-Progress
   Dr. 108.8, Retirement Work-in-Progress
   Cr. 131.1, Cash—General
   
   To record the payment of prior service pension costs to NRECA.

2. If the RUS borrower elects to finance prior service pension costs over a period of years and there is no deferral of costs under the provisions of Statement No. 71, the following entries shall be recorded:
   
   Dr. Various Operations, Maintenance, and Administrative Expense Accounts
   Dr. 107, Construction Work-in-Progress
   Dr. 108.8, Retirement Work-in-Progress
   Cr. 224, Other Long-Term Debt
   
   To record the liability to NRECA for prior service pension costs.

   Dr. 224, Other Long-Term Debt
   Dr. 427, Interest on Long-Term Debt
   Cr. 131.1, Cash—General
   
   To record the annual payment to NRECA for prior service pension costs.

3. If the RUS borrower elects to finance prior service pension costs over a period of years and such costs are being deferred and amortized in accordance with the provisions of Statement No. 71, the following entries shall be recorded:
   
   Dr. 182.3, Other Regulatory Assets
   Cr. 224, Other Long-Term Debt
   
   To record the payment to NRECA for prior service pension costs.

   Dr. Various Operations, Maintenance, and Administrative Expense Accounts
   Dr. 107, Construction Work-in-Progress
   Dr. 108.8, Retirement Work-in-Progress
   Cr. 182.3, Other Regulatory Assets
   
   To record the amortization of deferred prior service pension costs.

   Dr. 224, Other Long-Term Debt
   Dr. 427, Interest on Long-Term Debt
   Cr. 131.1, Cash—General
   
   To record the annual payment to NRECA for prior service pension costs.

It should be noted that although the above entries relate specifically to the NRECA Retirement and Security Program, they are applicable to all multi-employer pension plans.

An employer that participates in one or more multi-employer plans shall disclose the following separately from disclosures for a single-employer plan:

1. A description of the multiemployer plan(s) including the employee groups covered, the type of benefits provided (defined benefit or defined contribution), and the nature and effect of significant matters affecting comparability of information for all periods presented.

2. The amount of cost recognized during the period.

**Multiple-Employer Plans**

A multiple-employer plan is, in substance, aggregations of single-employer plans combined to pool their assets for investment purposes to reduce the cost of plan administration. Under a multiple-employer plan, assets are segregated and specifically identified to an employer. In addition, such plans may have features that allow participating employers to have different benefit formulas. Such plans shall be considered single-employer plans for financial accounting purposes and each employer's accounting shall be based upon its respective interest in the plan.
607 Unproductive Time

Lost time relating to construction, operations and maintenance shall be allocated on the basis of direct payroll costs to the appropriate construction, operations or maintenance accounts in the month incurred. Lost time is defined as time on duty during which productive work is not performed due to inclement weather conditions, material shortages, machine repairs, or other reasons.

If lost time attributable to construction has a material effect on the construction accounts in any one month, these costs shall be deferred and distributed over a reasonable period of time by means of a predetermined percentage based upon direct labor.

608 Training Costs, Attendance at Meetings, Etc.

Utilities engage in many types of training programs. Seminars are conducted for directors, managers, office managers, attorneys, engineers, and others. Bookkeepers and office managers attend accountants’ meetings. Safety engineers attend safety schools and subsequently conduct regular safety meetings at the cooperative. Costs incurred for the various types of training activities shall be accounted for as follows:

1. Managers' and directors' expenses to attend the NRECA national and state conventions shall be charged to Account 930.2, Miscellaneous General Expenses.
2. Management or engineering seminar fees, salary time attending such seminars including the associated pensions and benefits expense and payroll taxes, and the related per diem and expenses shall be charged to the functional expense accounts. Salaries paid to employees shall also be charged to the appropriate functional expense account. Fees and expenses for directors' attendance shall be charged to Account 930.2, Miscellaneous General Expenses.
3. When the office manager, bookkeeper, or work order clerk attends a state or regional accounting meeting, their salary time and the associated employee pensions and benefits and social security and other payroll taxes shall be charged to the account to which the employees' time is ordinarily charged.
4. Employees' salary time employee and the associated pensions and benefits and social security and other payroll taxes spent attending regular safety meetings conducted by the cooperative shall be charged to the account to which the employees' time is ordinarily charged.
5. A safety engineer’s salary time and the associated employee pensions and benefits and social security and other payroll taxes spent attending a state-wide safety school shall be charged to Account 925, Injuries and Damages.
6. The salary time and the associated employee pensions and benefits and social security and other payroll taxes spent by a manager or line foreman conducting weekly safety meetings shall be charged to the appropriate functional expense accounts including Account 590, Maintenance, Supervision and Engineering, and Account 920, Administrative and General Services.

609 Maintenance and Operations

“Operations” is the general term used to describe activities involved in the delivery of electric service, by means of a distribution system, to the end user. It pertains to the use of the utility's electric plant facilities and does not include activities intended to prevent or remedy an impending or actual breakdown of those facilities. These activities are classified as maintenance.

“Maintenance” is the general term used to describe the activities involved in the upkeep and repair, but not the enlargement or improvement, of property owned or leased and operated by the company. It does not include the replacement of retirement units.

610 Financial Forecast

Costs incurred and salaries paid to perform a 10-year financial forecast shall be charged to Account 920, Administrative and General Salaries. Related office supplies and expenses shall be charged to Account 921, Office Supplies and Expenses. When a forecast is performed by an outside consultant, the cost shall be charged to Account 923, Outside Services Employed.
§ 1767.41

611 Advertising Expense

The cost of advertising and the cost of informing the public about the electric cooperative's activities shall be charged to Account 930.2, Miscellaneous General Expenses.

Most of a cooperative's advertising is instructional in nature and relates the cooperative's history and current activities. This type of advertising activity should not be confused with that directed towards the enactment of a specific law or laws directed toward obtaining a specific decision from a regulatory body. Political advertising of the type defined above shall be charged to Account 426.4, Expenditures for Certain Civic, Political, and Related Activities.

612 Special Power Cost Study

A special power cost study is defined as a study to determine whether sufficient power will be available in the future. If additional power or power sources are needed, the study determines whether generation or purchase will supply the lesser cost. The study also indicates when additional power will be needed. As costs are incurred, they shall be charged to a subaccount of Account 186, Miscellaneous Deferred Debits. Upon completion of the study, the costs shall be charged to Account 557, Other Expenses, or amortized to Account 557 over a period of time not to exceed 5 years.

613 Mapping Costs

The purpose of posting completed work orders to system maps is to improve the operation of the system. These costs shall, therefore, be charged to Account 588, Miscellaneous Distribution Expenses. However, the cost of system mapping in the planning stage of construction is not an acceptable overhead cost of the resulting construction.

614 Member Relations Costs

Many electric cooperatives hire employees whose duties concern a mixture of power use and member relations activities. The salaries for these employees shall be charged to Account 930.2, Miscellaneous General Expenses, except as provided below:

1. Account 912, Demonstrating and Selling Expenses, shall be charged with all labor, material, advertising, and other expenses incurred in promotional, demonstrating, and selling activities; the objective of which is to promote or retain the use of utility services by present or prospective customers.

2. Account 930.1, General Advertising Expenses, shall be charged with labor, material, and other expenses incurred in advertising and related activities, the cost of which by their content and purpose, are not provided for elsewhere.

3. Account 416, Costs and Expenses of Merchandising, Jobbing, and Contract Work, shall be charged with all costs specifically related to merchandising activities when the utility is engaged in a major merchandising program.

4. Account 426.4, Expenditures for Certain Civic, Political, and Related Activities, shall be charged with expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances); or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials. Account 426.4 shall not include expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the borrower's existing or proposed operations.

615 Statewide Fees

Additional fees collected by a statewide association from its members for construction of a statewide building shall be charged to Account 930.2, Miscellaneous General Expenses. Any amounts that are to be repaid by the state association shall be charged to Account 143, Other Accounts Receivable, or Account 123.23, Other Investments in Associated Organizations, depending upon the terms of the repayment.
616 Power Supply/Distribution Cooperative Borrowings

When a power supply cooperative borrows money from a distribution cooperative as the result of a long-term loan agreement, the money shall be recorded on the books of the power supply cooperative as general funds unless restricted to a specific purpose. If restricted, the funds shall be recorded in Account 128, Other Special Funds. The resulting liability shall be recorded in Account 224, Other Long-Term Debt.

The transaction shall be charged to Account 123.23, Other Investments in Associated Organizations, on the books of the distribution cooperative.

617 Rate Discount Allowed by the Power Cooperative to Distribution Cooperatives Owning Connecting Transmission Lines

A distribution cooperative purchases power from a power cooperative. The distribution cooperative owns and operates the transmission line between the power cooperative's facilities and the distribution facilities. Because of this, power is sold at the standard rate at which the power cooperative sells to other distribution cooperatives who do not own their transmission lines, less a discount. The discount or reduction in rate is based upon the distribution cooperative's expense in operating and maintaining its transmission facilities. The contract between the power cooperative and the distribution cooperative must specifically state that the member shall receive a reduced rate or discount from the seller's rate to other member cooperatives.

Under this type of arrangement, the distribution cooperative shall record the cost of purchased power by charging the net amount to Account 555, Purchased Power.

618 Theft Losses not Covered by Insurance

Utilities may suffer losses as a result of thefts of cash, materials and supplies, equipment, or electric plant-in-service that is not covered by insurance. The charges for nominal uninsured losses shall be recorded in the following accounts:

1. Cash—Account 924, Property Insurance, shall be charged.
2. Plant materials and operating supplies—Account 163, Stores Expense Undistributed, shall be charged.
3. Equipment—Account 163, Stores Expense Undistributed, shall be charged for stores equipment; and Account 184, Transportation Expense—Clearing, for transportation and garage equipment. The appropriate miscellaneous operating or administrative expense account (Account 506, 524, 539, 549, 566, 588, 905, 910, 916, or 930.2, as appropriate) shall be charged for all other equipment.
4. Electric Plant-in-Service—A retirement work order shall be prepared for electric plant constituting a unit of property. The loss due to retirement shall be charged to Account 108.6, Accumulated Provision for Depreciation of Distribution Plant. If the plant does not constitute a retirement unit, the loss shall be charged to the appropriate maintenance expense account.

619 Self Billing

To maintain the books of accounts on an accrual basis, bills for customers who self bill and have not sent in a reading or remittance, shall be estimated. A journal entry shall be made to record the estimated revenue and kWh sold by debiting accounts receivable and crediting the appropriate revenue accounts. The estimated bill shall be posted to the customer's account and identified by an appropriate symbol indicating that it is an estimate. Reconciliation with the general ledger control is made in the usual manner.

620 Purchase Rebates

Some vendors from which electric cooperatives purchase plant materials and supplies and merchandise for resale are making purchase rebates based upon the quantity or dollar volume of purchases. These “quantity discounts” may be in the form of cash or credit memoranda, in the form of prepaid package travel arrangements, or a combination of such methods. The rebate shall be accounted for as a reduction in the cost of the material or appliances upon which it was based.

In some instances, the rebate may be for material or appliances that are no
longer in stock or cannot be identified. If the rebate is based upon the purchase of plant materials and operating supplies that are normally charged to Account 154, Plant Materials and Operating Supplies, a credit shall be made to Account 163, Stores Expense Undistributed. If the rebate is based upon appliances and equipment held for merchandising or contract work, the credit shall be spread over the items in Account 155, Merchandise. To avoid materially distorting the cost of the remaining appliances, if a portion of the items upon which the rebate was based are no longer in stock, a portion of the credit shall be prorated to Account 416, Cost and Expenses of Merchandising, Jobbing, and Contract Work, on the basis of the number of items sold to the quantity remaining in stock.

If the rebate is in the form of a travel package or travel arrangements, the value of the rebate shall be estimated and recorded as a reduction of the cost of the material or appliances upon which it was based in a manner similar to that of the cash rebates discussed above. The beneficiary of the travel or travel allowance shall be designated by or in accordance with policy established by the board of directors. The contra charge to the reduction in cost shall be to an appropriate account depending upon the relationship of the recipient to the cooperative. For employees, this shall be Account 926, Employee Pensions and Benefits; for directors or patrons, Account 930.2, Miscellaneous General Expenses.

621 Integrity Fund

The CFC Integrity Fund was established to assist borrowers in their attempts to stop takeover bids by investor-owned utilities. A borrower makes a contribution to the Integrity Fund in the form of cash or patronage capital refunds. CFC retains the contribution for a 5-year period during which time the borrower earns interest on the balance in its account. Each year, the borrower receives a statement indicating (both for the total fund and the individual borrower’s share) the amount contributed, interest earned, disbursements made, and the ending balance. The disbursements from the fund are allocated to each contributing borrower’s account based upon their individual account balances. At the end of the 5-year period, the balance in the account, if any, is refunded to the contributing borrower.

Since the contributing borrower will receive a refund only if its funds are not totally disbursed, the contribution shall be charged to expense in Account 426.1, Donations. If any part of the contribution is returned at the end of the 5-year period, the refund shall be credited to Account 421, Miscellaneous Nonoperating Income.

622 In-Substance Defeasance

An in-substance defeasance has been defined as the process whereby a debtor irrevocably places cash or other assets in a trust to be used solely for the purpose of satisfying scheduled payments of both principal and interest related to a specific debt obligation. Under the structural arrangements of an in-substance defeasance, the probability that the debtor will be required to make additional future debt payments is remote. In these specific circumstances, debt has been determined to be extinguished even though the debtor has not been legally released from his obligations under the debt instrument.

The trust established in a defeasance transaction is restricted as to the nature of the assets held. The trust must be funded with monetary assets that are essentially risk free as to the amount, timing, and collection of interest and principal. For debt denominated in United States dollars, “risk free” assets are limited to:
1. Direct obligations of the United States government;
2. Obligations guaranteed by the United States government; and
3. Securities that are backed by United States government obligations as collateral under an arrangement by which the interest and principal payments on the collateral, flow immediately through to the holder of the security.

The monetary assets of the trust must provide cash flows sufficient to coincide with the scheduled interest and principal payments on the defeased debt. If the trust is expected to pay the costs associated with the defeasance,
such as trustee fees, these costs must be considered in determining the amount of funds required by the trust.

The principles of in-substance defeasance apply only to debt with specific maturities and fixed payment schedules and, as such, do not apply to debt with variable terms in which advance determination of debt service requirements is not possible.

Generally accepted accounting principles (GAAP) address the extinguishment of debt in Accounting Principles Board Opinion No. 26, and Statement of Financial Accounting Standard No. 76, Extinguishment of Debt. In accordance with these two statements, debt which has been defeased remains recorded in the regulated books of account as do the assets placed in the irrevocable trust. They are not, however, recognized as an asset and liability for financial reporting purposes. The transaction, including the total amount of debt outstanding and the total amount of debt that is considered extinguished at the end of the period, must be disclosed in the footnotes to the financial statements as long as the debt remains outstanding.

Debt is frequently extinguished before its scheduled maturity. Debt may be extinguished by the use of the borrower’s general funds, or by the reacquisition of another debt issue at a different interest rate or varying terms. As these assets are expected to be revenue producing during those years, both the assets and the revenue they generate may be utilized to meet maturing debt payments. Therefore, in most instances, the dollar value of the assets initially placed in the trust do not equal the dollar value of the outstanding principal balance. The difference represents an “economic” gain or loss to the borrower.

To provide consistency in reporting among all RUS borrowers, any gain or loss that is recognized for financial statement purposes should be reported in accordance with the provisions of General Instruction No. 17 of this part. Therefore, the gain or loss should be amortized (for reporting purposes) in equal monthly amounts over the remaining life of the original debt issue or the remaining life of the new issue. The gain or loss may be reported in the current period only in those instances in which it is immaterial to the financial statements.

The RUS Form 7, Financial and Statistical Report, and the RUS Form 12, Operating Report—Financial, must, however, reflect the actual amounts recorded in the books and records of the borrower.

623 Satellite or Cable Television Services

Many electric borrowers have become involved in either providing satellite or cable television services or obtaining satellite or cable television services for their own use. This section outlines the accounting to be followed when recording transactions involving satellite or cable television services.

1. Separate Subsidiary

If a borrower provides satellite or cable television services through a separate subsidiary, the investment in the subsidiary shall be recorded in Account 123.11, Investment in Subsidiary Companies. The net income or loss of the subsidiary shall be debited or credited to Account 123.11, as appropriate, with an offsetting entry to Account 418.1, Equity in Earnings of Subsidiary Companies.

2. Segment of Current Operations

If a borrower provides satellite or cable television services as part of its normal operations, the investment in satellite or cable television equipment shall be recorded in Account 121, Nonutility Property. All income associated with these services shall be recorded in Account 417, Revenues from Nonutility Operations, and the associated expenses shall be charged to Account 417.1, Expenses of Nonutility Operations.

3. Sale and Installation of Satellite or Cable Television Equipment

If a borrower sells or installs satellite or cable television equipment, the equipment purchased for resale shall be recorded in Account 156, Other Materials and Supplies, until sold. The revenues generated from such sales or installations shall be recorded in Account 415, Revenues from Merchandising, Jobbing, and Contract Work, and the associated expenses shall be
Rural Utilities Service, USDA

§ 1767.41

charged to Account 416, Costs and Expenses of Merchandising, Jobbing, and Contract Work.

4. Equipment Purchased for Own Use

If a borrower purchases satellite or cable television equipment for its own use, the investment in the equipment shall be recorded in Account 397, Communication Equipment.

624 Pollution Control Bonds

The construction and installation of pollution control facilities are often financed by issuing tax exempt municipal securities. The funds generated from the sale of these securities are deposited into an account that is controlled by a designated trustee. The funds under the control of the trustee are usually invested, earning interest, until they are needed.

Interest expense accrued on the pollution control bonds during the construction period shall be recorded in Account 107, Construction Work-in-Progress. After construction is complete, all subsequent accruals of interest expense shall be charged to Account 427, Interest on Long-Term Debt.

Interest income earned during the construction period shall be recorded as a debit to Account 171, Interest and Dividends Receivable, and a credit to Account 107, Construction Work-in-Progress. Upon notification of receipt of the interest in the trustee account, Account 171, Interest and Dividends Receivable shall be credited. Upon completion of construction, Account 419, Interest and Dividend Income shall be credited for the amount of interest income earned during the period.

The entries required to account for the transactions associated with the issuance of pollution control bonds are as follows:

Dr. 221.XX, Long-Term Debt—Pollution Control Bonds—Trustee
Cr. Account 221XX, Long-Term Debt—Pollution Control Bonds
To record the sale of pollution control bonds.

Dr. 107, Construction Work-in-Progress
Cr. 232, Accounts Payable
To record costs incurred in construction of pollution control facilities.

Dr. 131.1, Cash—General Funds
Cr. 221.XX, Long-Term Debt—Pollution Control Bonds—Trustee
To record the transfer of funds from the trustee.

Dr. 107, Construction Work-in-Progress
Cr. 221.XX, Long-Term Debt—Pollution Control Bonds—Trustee
To record interest expense on pollution control bonds.

Dr. 171, Interest and Dividends Receivable
Cr. 107, Construction Work-in-Progress
To record earnings from investments made by the trustee.

Dr. 221.XX, Long-Term Debt—Pollution Control Bonds—Trustee
Cr. 171, Interest and Dividends Receivable
To record receipt of interest income by the trustee account.

Dr. XXX, Various Plant Accounts
Cr. 107, Construction Work-in-Progress
To close completed construction to the primary plant accounts.

625 Prepayment of Debt

Many RUS borrowers have decided to redeem (prepay) their issues of long-term debt. As a result of this redemption, the borrower may incur a gain (discount) or a loss (penalty) on the early extinguishment of debt. The accounting for this gain or loss is highlighted in this section.

If debt is redeemed without refunding (paid with general funds), the gain or loss incurred shall be recorded in Account 189, Unamortized Loss on Reacquired Debt, or Account 257, Unamortized Gain on Reacquired Debt, as appropriate. The borrower may elect to account for the deferrals as follows:

1. Write them off immediately when the amounts are insignificant;
2. Amortize them by equal monthly amounts over the remaining life of the old debt issue; or
3. Amortize them by equal monthly amounts over the life of the new debt issue.
Once an election has been made, it shall be applied on a consistent basis. Regardless of the option selected, the amortization shall be charged to either Account 428.1 or 429.1, as appropriate.

Where a regulatory authority having jurisdiction over the borrower specifically disallows the rate principle of amortizing gains or losses on the redemption of long-term debt without refunding, and does not apply the gain or loss to interest charges in computing the borrower’s rates, the alternative method may be used to account for gains or losses relating to the redemption of long-term debt with or without refunding. The alternative method requires that gains or losses be recorded in Account 421, Miscellaneous Nonoperating Income, or Account 426.5, Other Deductions, as incurred. When the alternative method is used, the borrower shall include a footnote to the financial statements stating the reason for using this method and its treatment for rate making purposes.

626 Rural Economic Development Loan and Grant Program

On December 21, 1987, Section 313, Cushion of Credits Payments Program, was added to the Rural Electrification Act. Section 313 establishes a Rural Economic Development Subaccount and authorizes the Administrator of the Rural Utilities Service to provide zero interest loans or grants to RE Act borrowers for the purpose of promoting rural economic development and job creation projects.

Subpart B, Rural Economic Development Loan and Grant Program, 7 CFR Part 1703, sets forth the policies and procedures relating to the zero interest loan program and for approving and administering grants.

The accounting journal entries required to record the transactions associated with a rural economic development loan are as follows:

Dr. 224.17, RUS Notes Executed—Economic Development—Debit
Cr. 224.16, Long-Term Debt—RUS Economic Development Notes Executed

To record the contractual obligation to RUS for the Economic Development Notes.

Dr. 131.12, Cash—General—Economic Development Funds
Cr. 224.17, RUS Notes Executed—Economic Development—Debit

To record the receipt of the economic development loan funds.

Dr. 123, Investment in Associated Organizations or Dr. 124, Other Investments
Cr. 131.12, Cash—General—Economic Development Funds

To record the disbursement of Economic development loan funds to the project.

Dr. 131.1, Cash—General Funds
Cr. 421, Miscellaneous Nonoperating Income

To record payment received from the project for loan servicing charges.

Dr. 171, Interest and Dividends Receivable
Cr. 419, Interest and Dividend Income

To record the interest earned on the investment of rural economic development loan funds.

Dr. 426.1, Donations or Dr. 426.5, Other Deductions
Cr. 131.1, Cash—General Funds

To record the payment of interest earned in excess of $500.00 on the investment of rural economic development loan funds.

NOTE: Interest earned in excess of $500.00 must be used for the rural economic development project for which the loan funds were received or returned to RUS.

Dr. 131.12, Cash—General—Economic Development Funds
Cr. 123, Investment in Associated Organizations or Cr. 124, Other Investments

To record receipt of the repayment, by the project, of economic development loan funds.

Dr. 224.16, Long-Term Debt—RUS Economic Development Notes Executed
Cr. 131.12, Cash—General—Economic Development Funds

To record the repayment, to RUS, of the economic development loan funds.

The accounting journal entries required to record the transactions associated with a rural economic development grant are as follows:
§ 1767.41  

Rural Utilities Service, USDA                                    

Dr. 131.13, Cash—General—Economic Development Grant Funds  
Cr. 224.18, Other Long-Term Debt—Grant Funds;  
Cr. 208, Donated Capital; or  
Cr. 421, Miscellaneous Nonoperating Income  
To record grant funds disbursed by RUS. If the grant agreement requires repayment of the funds upon termination of the revolving loan program, Account 224.18 should be credited. If the grant agreement states that there is absolutely no obligation for repayment upon termination of the revolving loan program, the funds should be accounted for as a permanent infusion of capital by crediting Account 208. If, however, the grant agreement is silent as to the final disposition of the grant funds, Account 421 should be credited.  

Dr. 123.3, Investment in Associated Organizations—Federal Economic Development Loans  
Cr. 131.13, Cash—General—Economic Development Grant Funds  
To record advances of Federal funds to associated organizations for authorized rural economic development projects.  

Dr. 124.1, Other Investments—Federal Economic Development Loans  
Cr. 131.13, Cash—General—Economic Development Grant Funds  
To record advances of Federal funds to nonassociated organizations for authorized rural economic development projects.  

Dr. 171, Interest and Dividends Receivable  
Cr. 419, Interest and Dividend Income  
To record the accrual of interest on loans made to associated and nonassociated organizations with Federal funds for authorized rural economic development projects.  

Dr. 131.14, Cash—General—Economic Development Non-Federal Revolving Funds  
Cr. 123.3, Investment in Associated Organizations—Federal Economic Development Loans or  
Cr. 124.1, Other Investments—Federal Economic Development Loans  
To record repayment of loans made with Federal funds.  

Dr. 123.4, Investment in Associated Organizations—Non-Federal Economic Development Loans  
Cr. 131.14, Cash—General—Economic Development Non-Federal Revolving Funds  
To record advances of non-Federal funds to associated organizations for authorized rural economic development projects.  

Dr. 124.2, Other Investments—Non-Federal Economic Development Loans  
Cr. 131.14, Cash—General—Economic Development Non-Federal Revolving Funds  
To record advances of non-Federal funds to nonassociated organizations for authorized rural economic development projects.  

Dr. 171, Interest and Dividends Receivable  
Cr. 419, Interest and Dividend Income  
To record the accrual of interest on loans made to associated and nonassociated organizations with non-Federal funds for authorized rural economic development projects.  

Dr. 131.14, Cash—General—Economic Development Non-Federal Revolving Funds  
Cr. 123.4, Investment in Associated Organizations—Non-Federal Economic Development Loans or  
Cr. 124.2, Other Investments—Non-Federal Economic Development Loans  
To record repayment of loans made with non-Federal funds.  

627 Postretirement Benefits  
Statement of Financial Accounting Standards No. 106, Employers’ Accounting for Postretirement Benefits Other than Pensions (Statement No. 106), requires reporting entities to accrue the expected cost of postretirement benefits during the years the employee provides service to the entity. For purposes of applying the provisions of Statement No. 106, members of the board of directors are considered to be employees of the cooperative. Prior to the issuance of Statement No. 106, most reporting entities accounted for postretirement benefit costs on a “pay-as-you-go” basis; that is, costs were recognized when paid, not when the
employee provided service to the entity in exchange for the benefits. As defined in Statement No. 106, a postretirement benefit plan is a deferred compensation arrangement in which an employer promises to exchange future benefits for an employee’s current services. Postretirement benefit plans may be funded or unfunded. Postretirement benefits include, but are not limited to, health care, life insurance, tuition assistance, day care, legal services, and housing subsidies provided outside of a pension plan.

This statement applies to both written plans and to plans whose existence is implied from a practice of paying postretirement benefits. An employer’s practice of providing postretirement benefits to selected employees under individual contracts with specified terms determined on an employee-by-employee basis does not, however, constitute a postretirement benefit plan under the provisions of this statement.

Postretirement benefit plans generally fall into three categories: single-employer defined benefit plans, multiemployer plans, and multiple-employer plans.

The accounting requirements set forth in this interpretation focus on single- and multiple-employer plans. The accounting requirements set forth in Statement No. 106 for multiemployer plans or defined contribution plans shall be adopted for borrowers electing those types of plans.

Under the provisions of Statement No. 106, there are two components of the postretirement benefit cost: the current period cost and the transition obligation. The transition obligation is a one-time accrual of the costs resulting from services already provided. Statement No. 106 allows the transition obligation to be deferred and amortized on a straight-line basis over the average remaining service period of the active employees. If the average remaining service life of the employees is less than 20 years, a 20-year amortization period may be used.

Accounting Requirements

All RUS borrowers must adopt the accrual accounting provisions and reporting requirements set forth in Statement No. 106. The transition obligation and accrual of the current period cost must be based upon an actuarial study. This study must be updated to allow the borrower to comply with the measurement date requirements of Statement No. 106; however, the study must, at a minimum, be updated every five years. RUS will not allow electric borrowers to account for postretirement benefits on a “pay-as-you-go” basis.

The deferral and amortization of the transition obligation does not require RUS approval provided that it complies with the provisions of Statement No. 106. If, however, a borrower elects to expense the transition obligation in the current period and subsequently defer this expense in accordance with Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulation, the deferral must be approved by RUS. In those states in which the commission will not allow the recovery of the transition obligation through future rates, the transition obligation must be expensed, in its entirety, in the year in which Statement No. 106 is adopted. A portion of the transition obligation may be charged to construction and retirement activities provided such charges are properly supported.

Effective Date and Implementation

For plans outside the United States and for defined benefit plans of employers that (a) are nonpublic enterprises and (b) sponsor defined benefit postretirement plans with no more than 500 plan participants in the aggregate, Statement No. 106 is effective for fiscal years beginning after December 15, 1994. For all other plans, Statement No. 106 is effective for fiscal years beginning after December 15, 1992.

RUS borrowers must comply with the implementation dates set forth in Statement No. 106. At the time of the adoption of Statement No. 106, rates must be in place sufficient to recover the current period expense and any amortization of the transition obligation. A copy of a board resolution or commission order, as appropriate, indicating that the transition obligation and...
current period expense have been included in the borrower's rates must be submitted to RUS.

Accounting Journal Entries—Transition Obligation

The journal entries required to record the transition obligation are as follows:

1. If the borrower elects to expense the transition obligation in the current period and there is no deferral of costs, the following entry shall be recorded:

   Dr. 435.1, Cumulative Effect on Prior Years of a Change in Accounting Principle
   Dr. 926, Employee Pensions and Benefits
   Dr. 107, Construction Work-in-Progress
   Dr. 108.8, Retirement Work-in-Progress
   Cr. 228.3, Accumulated Provision for Pensions and Benefits

   To record the current period recognition of the transition obligation for postretirement benefits. Note: A portion of the transition obligation may be charged to construction and retirement activities provided such charges are properly supported.

2. If the borrower elects to defer and amortize the transition obligation in accordance with the provisions of Statement No. 71, the following entry shall be recorded:

   Dr. 182.3, Other Regulatory Assets
   Cr. 228.3, Accumulated Provision for Pensions and Benefits

   To record the deferral of the transition obligation under the provisions of Statement No. 71.

   Dr. Various Operations, Maintenance, and Administrative Expense Accounts
   Dr. 107, Construction Work-in-Progress
   Dr. 108.8, Retirement Work-in-Progress
   Cr. 182.3, Other Regulatory Assets

   To record the amortization of postretirement benefits expenses as they are recovered through rates in accordance with Statement No. 71.

3. The deferral and amortization of the transition obligation under the provisions of Statement No. 106 is considered to be an off balance sheet item. If, therefore, the borrower elects to defer and amortize the transition obligation on a straight-line basis over the average remaining service period of the active employees or 20 years in accordance with Statement No. 106, no entry is required. Instead, the transition obligation is recognized as a component of postretirement benefit cost as it is amortized. It should be noted, however, that the amount of the unamortized transition obligation must be disclosed in the notes to the financial statements.

Accounting Journal Entries—Current Period Expense

The current period postretirement expense should be recorded by the following entry:

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Dr. 107, Construction Work-in-Progress
Dr. 108.8, Retirement Work-in-Progress
Cr. 228.3, Accumulated Provision for Pensions and Benefits
Cr. 228.3X, Accumulated Provision for Pensions and Benefits—Funded
Cr. 131.1, Cash—General

To record the funding of postretirement benefits expense into an external, irrevocable trust.

If a borrower elects to voluntarily fund its postretirement benefits obligation in an investment vehicle other than an external, irrevocable trust, the following entry shall be recorded:

Dr. 128, Other Special Funds
Cr. 131.1, Cash—General

To record the funding of postretirement benefits expense into an investment vehicle other than an external, irrevocable trust.

Statement of Financial Accounting Standards No. 112, Employers’ Accounting for Postemployment Benefits (Statement No. 112) establishes the standards of financial accounting and reporting for employers who provide benefits to former or inactive employees after employment but before retirement. Inactive employees are those who are not currently rendering service to the employer but who have not
been terminated, including employees who are on disability leave, regardless of whether they are expected to return to active service. For purposes of applying the provisions of Statement No. 112, former members of the board of directors are considered to be employees of the cooperative.

Postemployment benefits include benefits provided to former or inactive employees, their beneficiaries, and covered dependents. They include, but are not limited to, salary continuation, supplemental benefits (including workmen's compensation), health care, job training and counseling, and life insurance coverage. Benefits may be provided in cash or in kind and may be paid upon cessation of active employment or over a specified period of time.

The cost of providing postemployment benefits is considered to be a part of the compensation provided to an employee in exchange for current service and should, therefore, be accrued as the employee earns the right to be paid for future postemployment benefits. Applying the criteria set forth in Statement of Financial Accounting Standards No. 43, Accounting for Compensated Absences, a postemployment benefit obligation is accrued when all of the following conditions are met:

1. The employer’s obligation for payment for future absences is attributable to employees’ services already performed;  
2. The obligation relates to employee rights that vest or accumulate. Vested rights are considered those rights for which the employer is obligated to make payment even if the employee terminates. Rights that accumulate are those earned, but unused rights to compensated absences that may be carried forward to one or more periods subsequent to the period in which they are earned;  
3. Payment of the compensation is probable; and  
4. The amount can be reasonably estimated.

If all of these conditions are not met, the employer must account for its postemployment benefit obligation in accordance with Statement of Financial Accounting Standards No. 5, Accounting for Contingencies (Statement No. 5) when it becomes probable that a liability has been incurred and the amount of that liability can be reasonably estimated.

If an obligation for postemployment benefits is not accrued in accordance with the provisions of Statement No. 5 or Statement No. 43 only because the amount cannot be reasonably estimated, the financial statements should disclose that fact.

Accounting Requirements

All RUS borrowers must adopt the accrual accounting provisions and reporting requirements set forth in Statement No. 112 as of the statement’s implementation date. A portion of the cumulative effect may be charged to construction and retirement activities provided such charges are properly supported. If a borrower elects to defer the cumulative effect of implementing Statement No. 112 in accordance with the provisions of Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulation, the deferral must be approved by RUS.

Effective Date and Implementation

Statement No. 112 is effective for fiscal years beginning after December 15, 1993. Previously issued financial statements should not be restated. RUS borrowers must comply with the implementation date set forth in Statement No. 112. At the time of the adoption of Statement No. 112, rates must be in place sufficient to recover the current period expense.

Accounting Journal Entries

The journal entries required to account for postemployment benefits are as follows:

Dr. 435.1, Cumulative Effect on Prior Years of a Change in Accounting Principle  
Dr. 307, Construction Work in Progress  
Dr. 108.8, Retirement Work in Progress  
Cr. 228.3, Accumulated Provision for Pensions and Benefits

To record the cumulative effect of implementing Statement No. 112.

NOTE: A portion of the cumulative effect may be charged to construction and retirement activities provided such charges are
properly supported. Account 435.1 is closed to Account 219.2, Nonoperating Margins.

If the borrower elects to defer and amortize the cumulative effect in accordance with the provisions of Statement No. 71, the following entry shall be recorded:

Dr. 182.3, Other Regulatory Assets
Cr. 228.3, Accumulated Provision for Pensions and Benefits
To record the deferral of the cumulative effect of implementing Statement No. 112 in accordance with the provisions of Statement No. 71.

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Dr. 108.8, Retirement Work in Progress
Cr. 182.3, Other Regulatory Assets
To record the deferral of the cumulative effect of implementing Statement No. 112 as it is recovered through rates in accordance with Statement No. 71.

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Dr. 108.8, Retirement Work in Progress
Cr. 228.3, Accumulated Provision for Pensions and Benefits
To record current period postemployment benefit expense.

NOTE: If postemployment benefits are accrued under the criteria set forth in Statement No. 43, this journal entry is made on a monthly basis. If, however, the accrual is based upon the provisions of Statement No. 5, this is a one-time entry unless the liability is reevaluated and subsequently adjusted.

629 Investments in Debt and Equity Securities

Statement of Financial Accounting Standards No. 115, Accounting for Certain Investments in Debt and Equity Securities (Statement No. 115), establishes the standards of financial accounting and reporting for investments in debt securities and for investments in equity securities that have readily determinable fair values. Statement No. 115 does not apply to investments in equity securities accounted for under the equity method nor to investments in consolidated subsidiaries.

At the time of acquisition, an entity must classify debt and equity securities into one of three categories: held-to-maturity, available-for-sale, or trading. At the balance sheet date, the appropriateness of the classifications must be reassessed.

Investments in debt securities are classified as held-to-maturity and are measured at amortized cost in the balance sheet only if the reporting entity has the positive intent and ability to hold these securities to maturity. Debt securities are not classified as held-to-maturity if the entity has the intent to hold the security only for an indefinite period; for example, if the security would become available for sale in response to changes in market interest rates and related changes in the security's prepayment risk, needs for liquidity, changes in the availability of and the yield on alternative investments, changes in funding sources and terms, and changes in foreign currency risk.

Investments in debt securities that are not classified as held-to-maturity and equity securities that have readily determinable fair values are classified as either trading securities or available-for-sale securities and are measured at fair value in the balance sheet. Trading securities are those securities that are bought and held principally for the purpose of selling them in the near future. Trading generally reflects active and frequent buying and selling and trading securities are generally used with the objective of generating profits on short-term differences in prices. Available-for-sale securities are those investments not classified as either trading securities or held-to-maturity securities.

Statement No. 115 requires unrealized holding gains and losses for trading securities to be included in earnings in the current period. Unrealized holding gains and losses for available-for-sale securities are excluded from earnings; however, they are reported as a net amount in a separate component of shareholders' equity until realized.

For individual securities classified as either available-for-sale or held-to-maturity, an entity must determine whether a decline in the security's fair value below the amortized cost is other than temporary. If the decline in fair value is determined to be permanent, that is, it is probable that the entity will not be able to collect all amounts due under the contractual terms of the
security, the realized loss is accounted for in earnings of the current period. The new cost basis is not adjusted upward for subsequent recoveries in the fair value. Subsequent increases in the fair value of available-for-sale securities are included in the separate component of equity. Subsequent decreases are also included in the separate component of equity.

All trading securities are reported as current assets in the balance sheet and individual held-to-maturity and available-for-sale securities are classified as either current or noncurrent, as appropriate. Cash flows from the purchase, sale, or maturity of available-for-sale securities and held-to-maturity securities are classified in the statement of cash flows as cash flows from investing activities and reported gross for each security classification.

Accounting Requirements

All RUS borrowers must adopt the accounting, reporting, and disclosure requirements set forth in Statement No. 115 as of the statement’s implementation date. Unrealized holding gains or losses for trading securities shall be recorded in either Account 421, Miscellaneous Nonoperating Income, or Account 426.5, Other Deductions, as appropriate. Unrealized holding gains or losses for available-for-sale securities held by the corporate entity are recognized as a component of stockholder’s equity in Account 215.1, Unrealized Gains and Losses—Debt and Equity Securities. A contra account of the investment account shall be debited or credited accordingly. Unrealized gains and losses for available-for-sale securities held in a decommissioning fund shall increase or decrease, as appropriate, the reported value of the fund.

Effective Date and Implementation

Statement No. 115 is effective for fiscal years beginning after December 15, 1993. At the beginning of the entity’s fiscal year, the entity must classify its debt and equity securities on the basis of the entity’s current intent. This statement may not be applied retroactively to prior years’ financial statements. For fiscal years beginning prior to December 16, 1993, reporting entities are permitted to apply Statement No. 115 as of the end of a fiscal year for which annual financial statements have not previously been issued.

630 Split Dollar Life Insurance

The National Rural Electric Cooperative Association Split Dollar Life Insurance provides life insurance benefits to cooperative employees. The benefits provided under this policy consist of two components, the face value of the insurance policy and the accumulated cash surrender value. While the employee is the owner of the policy, the employee must sign a collateral assignment giving the cooperative absolute right to the cash surrender value. While the employee is the owner of the policy, the employee must sign a collateral assignment giving the cooperative absolute right to the cash surrender value of the policy. Under the terms of this collateral assignment, the employee must reimburse the cooperative for the premiums paid upon the employee’s termination of employment or attainment of the age of 62 if the employee wishes to maintain the insurance coverage. If death occurs prior to either of these events, the premiums paid to date by the cooperative are deducted from the death benefits payable to the policy beneficiary.

Accounting Requirements

Financial Accounting Standards Board Technical Bulletin 85-4, Accounting for Purchase of Life Insurance (Bulletin 85-4), states that the amount that could be realized under an insurance contract as of the date of the financial statements should be reported as an asset. The change in the cash surrender or contract value of that asset during the period should be reported as an adjustment to the premiums paid in determining the expense or income to be recognized for the period. The cooperative shall, therefore, record the cash surrender value of the policy as an asset because of its absolute right to receive that value based upon the employee’s collateral assignment. Any receivable that may occur as a result of the employee reimbursement for the premiums paid is contingent upon the employee electing to maintain the insurance coverage after termination of employment or reaching the age of 62 and is not recorded as an asset on the cooperative’s records.
Accounting Journal Entries

The journal entries required to account for the NRECA Split Dollar Life Insurance Program are as follows:

Dr. 124, Other Investments  
Cr. Various Operations, Maintenance, and Administrative Expense Accounts
To record an increase in the cash surrender value of the insurance contract.

or

Dr. Various Operations, Maintenance, and Administrative Expense Accounts  
Cr. 124, Other Investments
To record a decrease in the cash surrender value of the insurance contract.

Dr. Various Operations, Maintenance, and Administrative Expense Accounts  
Dr. 107, Construction Work-in-Progress  
Dr. 108.8, Retirement Work-in-Progress  
Cr. 131.1, Cash—General
To record the premium cost of the insurance contract.

631 Special Early Retirement Plan

The Special Early Retirement Plan (SERP) being offered through the National Rural Electric Cooperative Association (NRECA) constitutes an amendment to its Retirement and Security (R&S) program. The SERP is often chosen as a vehicle through which the cooperative may reduce the size of its workforce or replace more highly paid employees with lower paid entry level employees. If an employee covered by an NRECA retirement plan chose to retire before his/her normal retirement date, that employee would receive an actuarially reduced benefit. However, when a cooperative elects to offer a SERP, no such reduction is required. The cooperative selects the criteria under which an employee will be eligible to participate such as age, years of service, or a combination of age and benefit service requirements. As with other amendments to the R&S program, NRECA calculates the cost of the plan based upon the criteria selected by the cooperative and allows the cooperative to pay the cost immediately or on an installment basis.

Under this plan, the employee receives full retirement benefits in the form of either an immediate lump-sum settlement or annuity payments. It is not unusual for the cooperative to add an incentive to encourage participation such as medical or life insurance, either in whole or in part, until age 65. The actuarial analysis provided by NRECA includes the cost of the SERP and the estimated reduction and/or increase in costs associated with Statement of Financial Accounting Standards No. 106, Employer’s Accounting for Postretirement Benefits Other Than Pensions (Statement No. 106).

Statement of Financial Accounting Standards No. 106, Employer’s Accounting for Pensions (Statement No. 87)

In accordance with the provisions of Statement No. 87, the costs associated with an amendment to a multiemployer plan are recognized when they become due and payable. Since NRECA calculates the amount due and payable at the time of the amendment, the entire amount due, whether paid immediately or financed through NRECA or any other institution, must be recognized as an expense at that time. This cost may, however, be deferred in accordance with the provisions of Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulation (Statement No. 71).

Accounting Journal Entries

The journal entry required to record the additional pension costs associated with the SERP is as follows:

Dr. Various Operations, Maintenance, and Administrative Expense Accounts  
Dr. 107, Construction Work-in-Progress  
Dr. 108.8, Retirement Work-in-Progress  
Cr. 131.1, Cash—General  
or  
Cr. 224, Other Long-Term Debt
To record the prior service pension costs incurred as a result of adopting the SERP.

If the borrower elects to defer and amortize the cost in accordance with Statement No. 71, the following entries shall be recorded:

Dr. 182.3, Other Regulatory Assets  
Cr. 131.1, Cash—General  
or  
Cr. 224, Other Long-Term Debt
To record, under the provisions of Statement No. 71, the deferral of the prior service pension costs incurred as a result of adopting the SERP.

Dr. Various Operations, Maintenance, and Administrative Expense Accounts
Dr. 107, Construction Work-in-Progress
Dr. 108.8, Retirement Work-in-Progress
Cr. 182.3, Other Regulatory Assets

To record the amortization of deferred prior service pension costs as they are recovered through rates in accordance with Statement No. 7L.

Statement No. 106

In the event that net reductions in postretirement benefits result from this plan amendment, the reductions are recognized as follows:
1. The amount of the reduction shall first reduce any existing unrecognized prior service cost;
2. Any remaining reductions shall next reduce any unrecognized transition obligation; and
3. Any remaining reduction shall be recognized in a manner consistent with the accounting for prior service post-retirement benefit costs.

In accordance with Statement No. 106, prior service post-retirement benefit costs are recognized in equal amounts in each remaining year of service for active plan participants. Because it is an off-balance sheet item, only a memorandum entry is required to reduce the amount of unrecognized prior service cost.

At adoption, Statement No. 106 permitted the recognition of the transition obligation in one of two ways. The transition obligation was recognized over the longer of the average remaining service period of current plan participants or 20 years, or it may have been recognized immediately. If the delayed recognition option was chosen under Statement No. 106, this, too, was an off-balance sheet item that requires only a memorandum entry to reduce the amount of unrecognized transition obligation. However, if the immediate recognition option was chosen, the cooperative either recorded the expense in that year or, with RUS approval, deferred the expense under the provisions of Statement No. 7L. If the expense were recorded, in total, in the year of adoption, no unrecognized transition obligation remains to reduce. If, however, the transition obligation was deferred in accordance with Statement No. 7L, the journal entry required to effect the reduction in Statement No. 106 expense is as follows:

Dr. 228.3, Accumulated Provision for Pensions and Benefits
Cr. 182.3, Other Regulatory Assets

To record a reduction in the deferred Statement No. 106 transition obligation resulting from the adoption of the SERP.

NOTE: The dollar value of this entry must not exceed the deferral shown on the balance sheet.

If, after the two previous reductions have been made, any net credit remains, it shall be recognized in a manner consistent with prior service costs; that is, as an off balance sheet item that is amortized over the remaining service lives (to full eligibility) of the active plan participants. The annual amortization reduces amounts normally charged to the various operations, maintenance, and administrative expense accounts and Account 228.3 as postretirement benefit expenses.

§§ 1767.42—1767.45 [Reserved]

Subpart C—Depreciation Rates and Procedures [Reserved]

§§ 1767.46—1767.65 [Reserved]

Subpart D—Preservation of Records [Reserved]

§§ 1767.66—1767.85 [Reserved]

PART 1770—ACCOUNTING REQUIREMENTS FOR RUS TELEPHONE BORROWERS

Subpart A—General Provisions

Sec. 1770.1—1770.9 [Reserved]

Subpart B—Uniform System of Accounts

1770.10 General.
1770.11 Accounting system requirements.
1770.12 Supplementary accounts.
1770.13 Accounting requirements.
1770.14 Continuing property records.
1770.15 Supplementary accounts required of all borrowers.
1770.16 Supplementary accounts required of nonprofit organizations.
Rural Utilities Service, USDA

§ 1770.13 Accounting requirements.
(a) Each borrower shall maintain its books of accounts on the accrual basis of accounting. All transactions shall be recorded in the period in which they occur and reconciled monthly. The books of accounts shall be closed at the end of each fiscal year and financial statements shall be prepared for the period and audited in accordance with the provisions of 7 CFR part 1773, RUS Policy on Audits of Electric and Telephone Borrowers.

(b) All books of accounts, records, and memoranda shall be maintained in such a manner as to fully support the journal entries to which they relate. The books and records referred to here-in shall include records of a nontechnical nature such as minute books, stock and membership records, reports, correspondence, and memoranda.
§ 1770.14

(c) Interpretations of Federal or State requirements shall be referred to the applicable commission exercising jurisdiction over the borrower.

(d) Interpretations of RUS accounting requirements shall be referred to the appropriate Telephone Area office of RUS.

§ 1770.14 Continuing property records.

Each borrower shall maintain continuing property records which detail the date of placement, location, description of property, and the original cost of the property record units. The continuing property record and other underlying records of construction costs shall be maintained so that upon retirement of one or more retirement units or of minor items without replacement when not included in the costs of retirement units, the actual cost of the plant retired can be determined.

§ 1770.15 Supplementary accounts required of all borrowers.

Accounts prescribed in the Stockholders’ Equity and Patronage Capital section shall be maintained by stock companies and cooperatives as appropriate.

<tr>
<td></td>
<td>This account shall include the cost of materials and supplies held in stock including plant supplies, motor vehicles supplies, tools, fuel, other supplies and material and articles of the company in process of manufacture for supply stock. Transportation charges and sales and use taxes, as far as practicable, shall be included as a part of the cost of the particular material to which they relate. Transportation and sales and use taxes which are not included as part of the cost of particular material shall be equitably apportioned among the accounts to which material is charged. As far as practicable, cash and other discounts on material shall be deducted in determining cost of the particular material to which they relate or credited to the account to which the material is charged. When such deduction is not practicable, discounts shall be equitably apportioned among the accounts to which material is charged. Material recovered in connection with construction, maintenance or retirement of property shall be charged to this account as follows:—Reusable items that, when installed or in service, were retirement units shall be included in this account at the original cost. —Reusable minor items that, when installed or in service, were not retirement units shall be included in this account at current prices new. —The cost of repairing reusable material shall be charged to the appropriate Plant Specific Operations Expense accounts. —Scrap and nonusable material included in this account shall be carried at the estimated amount which will be received therefor. The difference between the amounts realized for scrap and nonusable material sold, and the amounts at which it is carried in this account shall be adjusted in the accounts credited when the material was taken up in this account. Interest paid on material bills, the payments of which are delayed, shall be charged to Account 7540, Other Interest Deductions. Inventories of materials and supplies shall be taken during each calendar year and the adjustments to this account shall be charged or credited to Account 6512, Provisioning Expense. This account shall include amounts which are credits arising from capital recorded upon the reorganization or recapitalization of the company and temporary declines in the value of marketable securities held for investment purposes.

This account shall include the face amount of memberships subscribed but not issued. This account shall be credited at the time the subscription is received and Account 4540.21, Memberships Issued, debited. This account shall include the face amount of memberships subscribed but not issued. This account shall be credited at the time the subscription is received and Account 4510, Capital Stock, credited with the par value of capital stock when the total subscription is received and the stock certificates are issued. Any difference between the purchase price of the subscription and the par value of the stock shall be credited to Account 4520, Additional Paid-In Capital. A subsidiary ledger shall be maintained to record for each subscriber, the amount subscribed, payments made, and the balance due. The balance in this account shall be reconciled monthly with the subscription ledger.

This account shall include the face amount of members' equity certificates issued, credited when a subscriber has paid the subscription in full and the memberships are issued. A subsidiary ledger shall be maintained to record for each subscriber, the amount subscribed, payments made, and the balance due. The balance in this account shall be reconciled monthly with the subscription ledger.

This account shall include the amount of installments paid on capital stock on a partial or installment payment plan by subscribers against whom there is no legally enforceable subscription contract, and who are entitled to be reimbursed the principal amount of their payments, with or without interest, in the event they fail to complete payment for the stock and receive certificates therefore. This account shall be credited at the time the subscription is received and Account 4510, Capital Stock, credited with the par value of capital stock when the total subscription is received and the stock certificates are issued. Any difference between the purchase price of the subscription and the par value of the stock shall be credited to Account 4520, Additional Paid-In Capital. A subsidiary ledger shall be maintained to record for each subscriber, the amount subscribed, payments made, and the balance due. The balance in this account shall be reconciled monthly with the subscription ledger.

This account shall include the amount of installments paid by prospective members on membership subscriptions against whom there is no legally enforceable subscription contract, and who are entitled to be reimbursed for the principal amount of their payments, with or without interest, in the event they fail to complete payment for the membership and receive certificates therefor. A subsidiary ledger shall be maintained to record for each subscriber, the amount subscribed, payments made, and the balance due. The balance in this account shall be reconciled monthly with the subscription ledger.

This account shall include the amount of installments paid by prospective members on membership subscriptions against whom there is no legally enforceable subscription contract, and who are entitled to be reimbursed the principal amount of their payments, with or without interest, in the event they fail to complete payment for the membership and receive certificates therefor. A subsidiary ledger shall be maintained to record for each subscriber, the amount subscribed, payments made, and the balance due. The balance in this account shall be reconciled monthly with the subscription ledger.

</tbody>
</table>

This account shall include amounts received or receivable from the furnishing of telecommunications service in excess of costs incurred in the furnishing of such service. If costs exceed revenues, the excess cost of furnishing telecommunications service shall be recorded as a debit to this account.

This account shall include margins arising from transactions or activities not related to the furnishing of telecommunications service. Included in this account are receipts from investments, income from investments, income from nonoperating plant, and revenues derived from services performed for others incident to the company's regulated telecommunications operations.

This account shall include patronage capital credits assigned to the cooperative by other nonprofit organizations prior to January 1, 1970, which were not credited directly to an operating expense account as a reduction in the cost of furnishing telecommunications service. No entries shall be made to this account unless it is to distribute or eliminate prior balances in conformance with the bylaws of the cooperative.

This account shall include all amounts transferred from operating margins, nonoperating margins, and other margin accounts which are assignable to individual patrons.

This account shall include the amounts of patronage capital which have been credited to individual patrons. A subsidiary patronage capital ledger shall be maintained so as to reflect the amount of capital furnished by each patron and the amount of such capital returned to the patron.

This account shall include credits resulting from the retirement of patronage capital through settlement of individual patrons' accounts at less than 100 percent of the capital assigned to the patron. The portion of patronage capital not returned to patrons under such settlements shall be debited to Account 4550.5, Patrons' Capital Credits Assigned, and credited to this account.

This account shall also include amounts representing patronage capital authorized to be retired to patrons who cannot be located. Returned checks issued for retirements of patronage capital, after an appropriate waiting period, shall be credited to this account and a record shall be maintained adequate to enable the cooperative to make payment to the patron if and when a claim has been established by the patron.

This account shall include expenses associated with analog electronic switching.

This account shall include expenses associated with digital electronic switching.

This account shall include expenses associated with electro-mechanical switching.

This account shall include expenses associated with radio systems.

This account shall include expenses associated with circuit equipment.

This account shall include the depreciation expense associated with telecommunications plant in service (Accounts 2112 through 2441) and property held for future telecommunications use (Account 2002).

This account shall include the amortization expense associated with capital leases and leasehold improvements (Accounts 2681 and 2682), intangibles (Account 2690), and telecommunications plant adjustments (Account 2005).

This account shall be charged and Account 4320, Unamortized Operating Investment Tax Credits—Net, shall be credited with investment tax credits generated from qualified expenditures related to regulated operations which the company defers rather than recognizes currently in income.

This account shall be credited and Account 4320 shall be charged ratably with the amortization of each year's investment tax credits included in Account 4320 for investment services for ratemaking purposes. Such amortization shall be determined in relation to the period of time used for computing book depreciation on the property with respect to which the tax credits relate.

This account shall be charged and Account 4070.1, Income Taxes Accrued—Federal, shall be credited for the amount of Federal income tax expense incurred in the current operating period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes should be accrued each month on an estimated basis and adjustments made as later data becomes available.

7200.3 Operating State and Local Income Taxes

This account shall be charged and Account 4070.2, Income Taxes Accrued—State and Local, shall be credited for the amount of state and local income tax expense incurred in the current operating period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes should be accrued each month on an estimated basis and adjustments made as later data becomes available.

7204.1 Operating Taxes—Property

This account shall be charged and Account 4080.1, Other Taxes Accrued—Property, shall be credited for the amount of property tax expense incurred in the current operating period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes should be accrued each month on an estimated basis and adjustments made as later data becomes available.

7204.2 Operating Taxes—Miscellaneous

This account shall be charged and Account 4080.5, Other Taxes Accrued—Miscellaneous, shall be credited for the amount of all other taxes accrued during the current operating period and not provided for elsewhere such as gross receipts, franchise, and capital stock tax expense incurred in the current operating period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes should be accrued each month on an estimated basis and adjustments made as later data becomes available.

7205.1 Provision for Deferred Operating Income Taxes—Net

This account shall be charged or credited, as appropriate, with contra entries recorded in either Account 4100, Net Current Deferred Operating Income Taxes, or Account 4340, Net Noncurrent Deferred Operating Income Taxes, as appropriate, for income tax expense that has been deferred.

Subsidiary record categories shall be maintained to distinguish between property and nonproperty related deferrals and so that the company may separately report the amounts contained herein that relate to Federal, state, and local income taxes.

7300.1 Dividend Income

This account shall include dividends on investments in common and preferred stock, which is the property of the company, whether such stock is owned by the company and held in its treasury, or deposited in trust, or otherwise controlled.

This account shall not include dividends or other returns on securities issued or assumed by the company and held by or for it, whether pledged as collateral, or held in its treasury, in special deposits, or in sinking or other funds.

Dividends on stocks of other companies held in sinking or other funds shall be credited to Account 7300.3, Income from Sinking and Other Funds.

Dividends received and receivable from affiliated companies accounted for on the equity method shall be included in Account 1401, Investments in Affiliated Companies, as a reduction of the carrying value of the investments.

7300.2 Interest Income

This account shall include interest on securities, including notes and other evidences of indebtedness which are the property of the company, whether such securities are owned by the company and held in its treasury, or deposited in trust (except in sinking or other funds) or otherwise controlled. It shall also include interest on bank balances, certificates of deposits, open accounts, and other analogous items. There shall be included in this account for each month the applicable amount requisite to extinguish, during the interval between the date of acquisition and the date of maturity, the difference between the purchase price and the par value of securities owned, the income from which is includable in this account. Amounts thus credited or charged shall be concurrently included in the accounts in which the securities are carried. Any such difference remaining unextinguished at the sale or upon the maturity and satisfaction of such securities shall be cleared to Account 7300.6, Other Nonoperating Income and Expense.

7300.3 Income from Sinking and Other Funds

This account shall include the income accrued on cash, securities issued by other companies, and other assets (not including securities issued or assumed by the company) held in sinking and other funds.

Any such differences remaining unextinguished upon the maturity and satisfaction of such securities shall be cleared to Account 7300.6, Other Nonoperating Income and Expense.

7300.4 Allowance for Funds Used During Construction

This account shall be credited with such amounts as are charged to the telecommunications plant accounts for the purpose or recording an allowance for funds used for construction purposes.

7300.5 Gains or Losses from the Disposition of Certain Property

This account shall include gains or losses resulting from the disposition of land or artworks; plant with traffic, and nonoperating telecommunications plant not previously used in the provision of telecommunications services.

7300.6 Other Nonoperating Income and Expense

This account shall include all other items of income and gains or losses from activities not specifically provided for elsewhere such as gains or losses realized on the sale of temporary cash investments or marketable equity securities; fees collected in connection with the exchange of coupon bonds for registered bonds; uncollectible amounts previously credited to Accounts 7300.1, 7300.2, 7300.3, 7306.4, 7300.5, and 7300.6, gains or losses from the extinguishment of debt made to satisfy sinking fund requirements; gains or losses of a nonoperating nature arising from the exchange or translation of foreign currency; net unrealized losses on investments in current marketable equity securities; write-downs or write-offs of the book costs of investments in equity securities due to permanent impairment; amortization of goodwill; the company’s share of earnings or losses of affiliated companies accounted for on the equity method; and the net balance of the revenue from and the expenses of property, plant, and equipment, the cost of which is includable in Account 2006, Nonoperating Plant.

4110, Net Current Deferred Nonoperating Income Taxes—Net, shall be credited with the amortization of each year’s investment tax credits included in such accounts relating to amortization of previously deferred investment tax credits of other property or regulated property, the amortization of which does not serve to reduce costs of service (but the unamortized balance does reduce rate base) for ratemaking purposes. Such amortization shall be determined with reference to the period of time used for computing book depreciation on the property with respect to which the tax credits relate.

7400.1 Net, shall be credited with nonoperating investment tax credits generated from qualified expenditures related to operations which the company has elected to defer rather than recognize currently in income.

This account shall be credited and Account 4330, Unamortized Nonoperating Investment Tax Credits—Net, shall be charged with the amortization of each year’s investment tax credits included in such accounts relating to amortization of previously deferred investment tax credits of other property or regulated property, the amortization of which does not serve to reduce costs of service (but the unamortized balance does reduce rate base) for ratemaking purposes. Such amortization shall be determined with reference to the period of time used for computing book depreciation on the property with respect to which the tax credits relate.

7400.2 Nonoperating Federal Income Taxes

This account shall be charged and Account 4070.1, Income Taxes Accrued—Federal, shall be credited for the amount of nonoperating Federal income taxes for the current period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes shall be accrued each month on an estimated basis and adjustments made as later data becomes available. Companies that adopt the flowthrough method of accounting for investment tax credits shall reduce the calculated provision in this account by the entire amount of the credit realized during the year. Tax credits, if normalized, shall be recorded consistent with the accounting for investment tax credits.

No entries shall be made to this account to reflect interperiod tax allocation.

7400.3 Nonoperating State and Local Income Taxes

This account shall be charged and Account 4070.2, Income Taxes Accrued—State and Local, shall be credited for the amount of nonoperating state and local income taxes for the current period. This account shall also reflect subsequent adjustments to amounts previously charged.

Taxes shall be accrued each month on an estimated basis and adjustments made as later data becomes available.

No entries shall be made to this account to reflect interperiod tax allocation.

7400.4 Nonoperating Other Taxes

This account shall be charged and Account 4080.5, Other Taxes Accrued—Miscellaneous, shall be credited for all nonoperating taxes, other than Federal, state, and local income taxes, and payroll related taxes for the current period. Among the items includable in this account are property, gross receipts, franchise and capital stock taxes. This account shall also reflect subsequent adjustments to amounts previously charged.

7400.5 Provision for Deferred Nonoperating Income Taxes—Net

This account shall be charged or credited, as appropriate, with contra entries recorded in either Account 4110, Net Current Deferred Nonoperating Income Taxes, or Account 4350, Net Noncurrent Deferred Nonoperating Income Taxes, as appropriate, for nonoperating tax expenses that have been deferred.
### § 1770.16 Supplementary accounts required of nonprofit organizations.

§§ 1770.17—1770.25  [Reserved]

Subpart C—Accounting Interpretations

Source: 61 FR 39847, July 31, 1996, unless otherwise noted.

§ 1770.26  General.

(a) The standard provisions of the security instruments utilized by the Rural Utilities Service (RUS) and the Rural Telephone Bank (RTB) for all telecommunications borrowers require borrowers to at all times keep and safely preserve, proper books, records, and accounts in which full and true entries will be made of all of the dealings, business, and affairs of the borrower in accordance with the methods and principles of accounting prescribed by the state regulatory body having jurisdiction over the borrower and by the Federal Communications Commission (FCC) in its Uniform System of Accounts for telecommunications companies (47 CFR part 32), as those methods and principles of accounting are supplemented from time to time by RUS.

(b) This subpart implements those standard provisions of the RUS and RTB security instruments by prescribing accounting principles, methodologies, and procedures applicable to all telecommunications borrowers for particular situations.

§ 1770.27  Definitions.

As used in this part:

Borrower is an RUS telecommunications borrower.

Cushion of Credit Account is a 5 percent interest bearing account established by RUS in which all voluntary payments or overpayments on Rural Electric and Telephone Revolving Funds after October 1, 1987, are deposited.
§ 1770.28—1770.45 [Reserved]

APPENDIX TO SUBPART C TO PART 1770—
ACCOUNTING METHODS AND PROCEDURES REQUIRED OF ALL BORROWERS

All borrowers shall maintain and keep their books of accounts and all other books and records which support the entries in such books of accounts in accordance with the accounting principles prescribed in this appendix.

</table>

A. Statement of Financial Accounting Standards No. 106, Employers’ Accounting for Postretirement Benefits Other than Pensions (Statement No. 106), requires reporting entities to accrue the expected cost of postretirement benefits during the years an employee provides service to the entity. For purposes of applying the provisions of Statement No. 106, members of the board of directors are considered to be employees of the cooperative. Prior to the issuance of Statement No. 106, most reporting entities accounted for postretirement benefit costs on a ‘pay-as-you-go’ basis; that is, costs were recognized when paid, not when the employee provided service to the entity in exchange for the benefits. (Statement 106 is available from the Financial Accounting Standards Board, 401 Merritt 7, P.O. Box 5116, Norwalk, CT. 06856-5116.)

B. As defined in Statement No. 106, a postretirement benefit plan is a deferred compensation arrangement in which an employer promises to exchange future benefits for an employee’s current services. Postretirement benefit plans may be funded or unfunded. Postretirement benefits include, but are not limited to, health care, life insurance, tuition assistance, day care, legal services, and housing subsidies provided outside of a pension plan.

C. Statement No. 106 applies to both written plans and to plans whose existence is implied from a practice of paying postretirement benefits. An employer’s practice of providing postretirement benefits to selected employees under individual contracts with specific terms determined on a employee-by-employee basis does not, however, constitute a postretirement benefit plan under the provisions of this statement.

D. Postretirement benefit plans generally fall into three categories: single-employer defined benefit plans, multiemployer plans, and multiple-employer plans.

E. A single-employer plan is a postretirement benefit plan that is maintained by one employer. The term may also be applied to a plan that is maintained by related parties, such as a parent and its subsidiaries. A multiemployer plan is a postretirement benefit plan in which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. One characteristic of a multiemployer plan is that each participating employer contributes a share of the total cost of the plan, based on factors such as wages and health care costs.
that the assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

F. A multiple-employer plan is a postretirement benefit plan that is maintained by more than one employer but is not a multiemployer plan. A multiple-employer plan is generally not collectively bargained and is intended to allow participating employers to pool their plan assets for investment purposes and reduce the cost of plan administration. A multiple-employer plan maintains separate accounts for each employer so that contributions provide benefits only for employees of the contributing employer.

G. The accounting requirements set forth in this interpretation focus on single- and multiple-employer plans. The accounting requirements set forth in Statement No. 106 for multiemployer plans or defined contribution plans shall be adopted for borrowers electing those types of plans.

H. Under the provisions of Statement No. 106, there are two components of the postretirement benefit cost: the current period cost and the transition obligation. The transition obligation is a one-time accrual of the costs resulting from services already provided. Statement No. 106 allows the transition obligation to be deferred and amortized on a straight-line basis over the average remaining service period of the active employees. If the average remaining service period of the active employees is less than 20 years, a 20-year amortization period may be used.

I. Accounting Requirements

A. All borrowers shall adopt the accrual accounting provisions and reporting requirements as set forth in Statement No. 106. The transition obligation and accrual of the current period cost must be based upon an actuarial study. This study must be updated to allow the borrower to comply with the measurement date requirements of Statement No. 106; however, the study must, at a minimum, be updated every five years. Borrowers may not account for postretirement benefits on a "pay-as-you-go" basis.

B. Under the provisions of Statement No. 106, an entity may recognize the transition obligation, in its entirety, when Statement No. 106 is first adopted or the entity may elect to delay the recognition of the transition obligation. On December 26, 1991, however, the FCC issued 6 FCC Rcd 7560, which requires telecommunications carriers to recognize the transition obligation on a delayed basis. RUS reviewed this issuance and has determined that borrowers must comply with this ruling and recognize the transition obligation on a delayed basis.

C. The deferral and amortization of the transition obligation on a delayed basis is considered to be an off balance sheet item. As a result, an accounting entry is not required at the time of adoption of Statement No. 106. Instead, the transition obligation is recognized as a component of postretirement benefit cost as it is amortized. The amount of the unamortized transition obligation must be disclosed in the notes to the financial statements.

D. In accordance with the provisions of Responsible Accounting Officer (RAO) Letter 20, released by the FCC on April 24, 1992, Account 4310, Other Long-Term Liabilities, shall be used to record the liability accrued for postretirement benefits. (RAO Letter 20 is available from the Federal Communications Commission, 1919 M Street, NW., Washington, DC 20554.) Borrowers shall credit this account for the net periodic cost of postretirement benefits for the current year and shall debit this account for any fund payments made during the current year.

E. Net periodic postretirement benefit cost includes current period service cost, interest cost, return on plan assets, amortization of prior service cost, gains and losses, and amortization of the transition obligation. If fund payments create a debit balance in the postretirement benefits portion of Account 4310, the debit balance applicable to postretirement benefits shall be reported in Account 1410, Other Noncurrent Assets. Account 1410 shall also be used to record any prepaid postretirement benefit cost.

F. The benefits portion of the expense matrix for the appropriate Part 32 expense accounts shall be used to record the current period service cost component of the current year’s net periodic postretirement benefit cost. The interest cost component, return on plan assets, amortization of prior service cost, gains and losses, and amortization of the transition obligation shall be charged to the benefits portion of the expense matrix of Account 6728, Other General and Administrative.

II. Effective Date and Implementation

A. For plans outside the United States and for defined benefit plans of employers that (a) are nonpublic enterprises and (b) sponsor defined benefit postretirement plans with no more than 500 plan participants in the aggregate, Statement No. 106 is effective for fiscal years beginning after December 15, 1994. For all other plans, Statement No. 106 is effective for fiscal years beginning after December 15, 1992.

102 Rural Telephone Bank Stock

A. Capital stock issued by the Rural Telephone Bank consists of Class A, Class B, and Class C stock. Class A stock is issued only to the Administrator of RUS on behalf of the
A. The following journal entries shall be used by RUS borrowers to record the transactions associated with cushion of credit payment:

1. Dr. 4210.18, RUS Notes—Advance Payments. Dr. Cr. 7310.11, Cash—General Fund. To record the cushion of credit payment.
2. Dr. 4210.18, RUS Notes—Advance Payments. Dr. Cr. 7320.2, Interest Income. To record interest earned on cushion of credit deposits.
3. Dr. 4210.18, RUS Notes, Cr. 4210.18, RUS Notes—Advance Payments. Dr. To apply cushion of credit payments (and interest) to the RUS note.

104 Rural Economic Development Loan and Grant Program

A. On December 21, 1987, Section 313, Cushion of Credit Payments Program (7 U.S.C. 901 et seq.), was added to the RE Act. Section 313 establishes a Rural Economic Development Subaccount and authorizes the Administrator of the RUS to provide zero interest loans or grants to RE Act borrowers for the purpose of promoting rural economic development and job creation projects. Effective December 5, 1994, this authority was assigned to the Administrator, Rural Business and Cooperative Development Service.

B. 7 CFR part 1703, Subpart B, Rural Economic Development Loan and Grant Program, sets forth the policies and procedures relating to the zero interest loan program and for approving and administering grants.

Accounting Requirements

A. The accounting journal entries required to record the transactions associated with a Rural Economic Development grant are as follows:

1. Dr. 1130.4, Other Investments in Affiliated Companies—Class B RTB Stock. Cash dividends received on Class C RTB stock shall be debited to Account 1402.1, Investments in Nonaffiliated Companies—Class B RTB Stock—Cr.
2. Dr. 1130.4, Other Investments in Affiliated Companies—Class C RTB Stock. Cash dividends received on Class C RTB stock shall be debited to Account 7310.11, Dividend Income.
3. Dr. 7360/7300.6, Other Capital—Miscellaneous; or Cr. 4540.41, Other Capital—Miscellaneous. To record proceeds of capital by crediting Account 4540.41. If, however, the grant agreement is silent as to the final disposition of the grant funds, Account 7360/7300.6 shall be credited. If the grant agreement states that there is absolutely no obligation for repayment upon termination of the revolving loan program, Account 4210.25 shall be credited.
4. Dr. 4210.25, RUS Notes—Advance Payments, Dr. Cr. 7360/7300.6, Other Nonoperating Income. To record grant funds disbursed by RUS. If the grant agreement requires repayment of the funds upon termination of the revolving loan program, Account 4210.25 shall be credited. If the grant agreement states that there is absolutely no obligation for repayment upon termination of the revolving loan program, the funds shall be accounted for as a permanent infusion of capital by crediting Account 4540.41. If, however, the grant agreement is silent as to the final disposition of the grant funds, Account 7360/7300.6 shall be credited.

3. Dr. 1130.1/1120.11, Cash—General Fund. Cr. 7360/7300.6, Other Nonoperating Income. To record payment of loan servicing fees charged to the economic development project.

4. Dr. 1130.6/1120.16, Cash—General Fund—Economic Development Non-Federal Revolving Funds. Cr. 1401.1, Other Investments in Affiliated Companies—Federal Economic Development Grant Loans or Cr. 1402.4, Other Investments in Nonaffiliated Companies—Federal Economic Development Grant Loans. To record the repayment, by the project, of the Federal revolving loan.

5. Dr. 1401.2, Other Investments in Affiliated Companies—Non-Federal Economic Development Grant Loans or Dr. 1402.5, Other Investments in Nonaffiliated Companies—Non-Federal Economic Development Grant Loans. Cr. 1130.5/1120.15, Cash—General Fund—Economic Development Non-Federal Revolving Funds. To record a Non-Federal revolving loan to an economic development project.

6. Dr. 1210, Interest and Dividends Receivable Cr. 7320/7300.2, Interest Income. To record the interest earned on a Non-Federal revolving loan to an economic development project.

7. Dr. 1130.5/1120.15, Cash—General Fund—Economic Development Non-Federal Revolving Funds. Cr. 1401.2, Other Investments in Affiliated Companies—Non-Federal Economic Development Grant Loans or Cr. 1402.5, Other Investments in Nonaffiliated Companies—Non-Federal Economic Development Grant Loans. To record the repayment, by the project, of the Non-Federal revolving loan.

B. The accounting journal entries required to record the transactions associated with a Rural Economic Development loan are as follows:

1. Dr. 4210.26, Economic Development Notes—Unadvanced, Fr. Cr. 4210.25, Economic Development Notes. To record the contractual obligation to RUS for the Economic Development Notes.

2. Dr. 1130.6/1120.16, Cash—General Fund—Economic Development Loan Funds Cr. 4210.26, Economic Development Notes—Unadvanced, Dr. To record the receipt of the economic development loan funds.

3. Dr. 1401.3, Other Investments in Affiliated Companies—Federal Economic Development Loans or Dr. 1402.6, Other Investments in Nonaffiliated Companies—Federal Economic Development Loans. Cr. 1130.6/1120.16, Cash—General Fund—Economic Development Loan Funds. To record the disbursement of economic development loan funds to the project.

4. Dr. 1130.1/1120.11, Cash—General Fund. Cr. 7360/7300.6, Other Nonoperating Income. To record payment of loan servicing fees charged to the economic development project.

5. Dr. 1210, Interest and Dividends Receivable Cr. 7320/7300.2, Interest Income. To record the interest earned on the investment of rural economic development loan funds.

6. Dr. 7370, Special Charges. Cr. 1130.1, Cash—General Fund. To record the payment of interest earned in excess of $500 on the investment of rural economic development loan funds. NOTE: Interest earned in excess of $500 must be used for the rural economic development project for which the loan funds were received or returned to RUS.

7. Dr. 1130.6/1120.16, Cash—General Fund—Economic Development Loan Funds. Cr. 1401.3, Other Investments in Affiliated Companies—Federal Economic Development Grant Loans or Cr. 1402.6, Other Investments in Nonaffiliated Companies—Federal Economic Development Loans. To record repayment, by the project, of the economic development loan.

8. Dr. 4210.25, Economic Development Notes. Cr. 1130.6/1120.16, Cash—General Fund—Economic Development Loan Funds. To record the repayment to RUS, of the economic development loan funds.

105 Satellite and Cable Television Services

A. Many RUS borrowers have become involved in providing either satellite or cable television services to their members and others through subsidiaries, joint ventures, or as segments of their current operations.

Accounting Requirements

A. This section outlines the accounting to be followed when recording transactions involving satellite or cable television services.

1. Separate Subsidiary. If a borrower provides satellite or cable television services through a separate subsidiary, the investment in the subsidiary shall be debited to Account 1403, Investments in Affiliated Companies. The net income or loss of the subsidiary shall be debited or credited to Account 1401, as appropriate, with an offsetting entry to Account 7360, Other Nonoperating Income.

2. Joint Venture. If a borrower provides satellite or cable television services through a joint venture, the borrower’s ownership interest dictates the accounting methodology. If the borrower has less than a 20 percent ownership interest in the joint venture, the investment is accounted for under the cost method of accounting in Account 1402, Investments in Nonaffiliated Companies. Under the cost method, the joint venture’s net income or loss is not recorded in the borrower’s records. Income is recognized only to the extent of any dividends declared by the joint venture. When a dividend is declared,
the borrower shall debit Account 1220, Interest and Dividends Receivable, and credit Account 7310, Dividend Income. When the dividend is received in cash, the borrower shall debit Account 1330.1, Cash—General Fund, and credit Account 1220.

ii. If a borrower has a 20-percent or more ownership interest in the joint venture, the investment is accounted for under the equity method in Account 1401, Investments in Affiliated Companies. The borrower’s proportionate share of the joint venture’s net income or loss shall be debited or credited to Account 1401, as appropriate, with an offsetting entry to Account 7900, Other Nonoperating Income.

3. Segment of Current Operations. i. If a borrower provides satellite or cable television service as a segment of its current operations and there are no shared assets between this activity and the regulated telecommunications activities of the borrower, the investment shall be debited to Account 1406.1, Nonregulated Investments—Permanent Investment. The net income or loss from providing such service shall be debited or credited, as appropriate, to Account 1406.3, Nonregulated Investments—Current Net Income, with an offsetting entry to Account 7900, Nonregulated Net Income.

ii. If a borrower provides satellite or cable television service as a segment of current operations and shares assets between this activity and the regulated telecommunications activities of the borrower, the franchise and application fees shall be debited to a subaccount of Account 2690, Intangibles. The cost of the satellite or cable television equipment shall be debited to a subaccount of Account 2231, Radio Systems. Revenues earned from providing satellite or cable service shall be credited to Account 5280, Nonregulated Operating Revenue, while the associated expenses shall be recorded in a subaccount of the applicable regulated expense accounts.

4. Sale and Installation of Satellite or Cable Television Equipment. i. If a borrower sells or installs satellite or cable television equipment as a segment of its current operations and there are no shared assets between this activity and the regulated telecommunications activities of the borrower, the purchase of the equipment shall be debited to Account 1220.2, Property Held for Sale or Lease. Revenues received for the sale or installation of the equipment shall be credited to Account 5280, Nonregulated Operating Revenue, while the associated expenses shall be debited to a subaccount of the applicable regulated expense accounts.

106 Consolidated Financial Statements

A. In October 1987, FASB issued Statement of Financial Accounting Standards No. 94, Consolidation of All Majority-Owned Subsidiaries (Statement No. 94). (Statement 94 is available from the Financial Accounting Standards Board, 401 Merritt 7, P.O. Box 5116, Norwalk, CT 06856-5116.) For purposes of reporting to RUS, Statement No. 94 shall be applied as follows:

1. A borrower that is a subsidiary of another entity shall prepare and submit to RUS separate financial statements even though this financial information is presented in the parent’s consolidated statements.

2. In those cases in which a borrower has a majority-ownership in a subsidiary, the borrower shall prepare consolidated financial statements in accordance with the requirements of Statement No. 94. These consolidated statements must also include supplementary schedules presenting a Balance Sheet and Income Statement for each majority-owned subsidiary included in the consolidated statements.

B. Although Statement No. 94 requires the consolidation of majority-owned subsidiaries, the RUS Form 479, Financial and Statistical Report for Telecommunications Borrowers, shall be prepared on an unconsolidated basis by all borrowers.
§ 1773.1

Subpart A—General Provisions

§ 1773.1 General.

(a) This part implements those standard provisions of the security instrument utilized by the Rural Utilities Service (RUS) for both electric and telephone borrowers and by the Rural Telephone Bank (RTB) for its telephone borrowers. The provisions require borrowers to prepare and furnish to RUS, at least once during each 12-month period, a full and complete report of its financial condition, operations, and cash flows, in form and substance satisfactory to RUS, audited and certified by an independent certified public accountant (CPA), satisfactory to RUS, and accompanied by a report of such audit, in form and substance satisfactory to RUS.

(b) This part 1773 applies to both RUS and RTB borrowers. For the purposes of RTB borrowers, as used in this part 1773, RUS means RTB and Administrator means Governor unless the text indicates otherwise.

(c) This part complies with the 1994 revision of Government Auditing Standards, issued by the Comptroller General of the United States, United States General Accounting Office.

(d) An auditor’s report, report on compliance, report on internal controls, and management letter are required to meet the reporting provisions of the RUS security instrument.

(1) The auditor’s report must state that the audit was conducted in accordance with generally accepted government auditing standards (GAGAS).

(2) The management letter must state that the audit was conducted in accordance with this part.

(3) A report of the audit, in form and substance satisfactory to RUS, cannot be issued unless and until an audit has been performed in accordance with GAGAS and this part.

(4) A borrower is in violation of provisions of its security instrument with RUS if the borrower fails to provide an audit performed in compliance with GAGAS and this part.

(5) A report prepared in connection with a review or compilation of financial statements, as defined in Statement of Standards for Accounting and Review Services No. 1, Compilation and Review of Financial Statements, does not satisfy the requirements of the RUS security instrument.

(6) A report, as described in Statement on Auditing Standards (SAS) No. 62, entitled “Special Reports”, or in SAS No. 35, entitled “Special Reports—Applying Agreed-upon Procedures to
Specified Elements, Accounts, or Items of a Financial Statement', does not satisfy the RUS loan security instrument requirements.

(7) An annual report containing audited financial statements does not satisfy the RUS security instrument requirements.

(e) This part further implements those provisions of the standard RUS security instrument by setting forth the criteria for CPAs to be deemed satisfactory to RUS and the audit procedures and documentation standards that must be performed before a report of the audit satisfactory to RUS can be prepared and issued.

§ 1773.2 Definitions.

As used in this part:

Administrator means the Administrator of RUS and, as provided in § 1773.2 (b), Governor.

AICPA means the American Institute of Certified Public Accountants.

Audit means an examination of financial statements by an independent CPA for the purpose of expressing an opinion on the fairness with which those statements present financial position, results of operations, and changes in cash flows in conformity with generally accepted accounting principles (GAAP) and for determining whether the borrower has complied with applicable laws, regulations, and contracts for those transactions and events reflected in the financial statements.

BAD means the Borrower Accounting Division of RUS.

CPA means certified public accountant. The terms CPA and CPA firm are used interchangeably.

FFB means the Federal Financing Bank, an instrumentality and wholly owned corporation of the United States.

GAAP means generally accepted accounting principles.

GAGAS means generally accepted government auditing standards as set forth in Government Auditing Standards, Standards for Audit of Governmental Organizations, Programs, Activities, and Functions, issued by the Comptroller General of the United States.

GAO means the General Accounting Office.

Governor means the Governor of the RTB.

Illegal act has the meaning prescribed in SAS No. 54, entitled "Illegal Acts by Clients".

Irregularity has the meaning prescribed in SAS No. 53, entitled "The Auditor's Responsibility to Detect and Report Errors and Irregularities".

OIG means the Office of Inspector General, United States Department of Agriculture.

OMB means the Office of Management and Budget.

PCPS means the Private Companies Practice Section of the AICPA.

REA means the Rural Electrification Administration formerly an agency of the United States Department of Agriculture and predecessor agency to RUS with respect to administering certain electric and telephone loan programs.

Regulatory asset means an asset resulting from an action of a regulator as prescribed in Statement of Financial Accounting Standards (SFAS) No. 71, entitled "Accounting for the Effects of Certain Types of Regulation".

Regulatory liability means a liability imposed on a regulated enterprise by an action of a regulator as prescribed in SFAS No. 71, entitled "Accounting for the Effects of Certain Types of Regulation".

Related party has the meaning prescribed in SFAS No. 57, entitled "Related Party Disclosures".

Related party transaction has the meaning prescribed in SFAS No. 57, entitled "Related Party Disclosures".

Reportable condition has the meaning prescribed in SAS No. 60, entitled "Communication of Internal Control Structure Related Matters Noted in an Audit".

RTB means the Rural Telephone Bank.

§ 1773.3

SAS means Statement on Auditing Standards as prescribed by the AICPA.
SEC Practice Section means the Securities and Exchange Commission Practice Section of the AICPA.
State means any state or territory of the United States, or the District of Columbia.
Uniform System of Accounts means, for telephone borrowers, the Uniform System of Accounts for Telecommunications Companies, prescribed by the Federal Communications Commission and set forth at 47 CFR part 32, as supplemented by RUS pursuant to 7 CFR part 1770, Accounting Requirements for RUS Telephone Borrowers, subpart B, Uniform System of Accounts, and, for electric borrowers, the Uniform System of Accounts Prescribed for Electric Borrowers of the RUS.

Subpart B—RUS Audit Requirements

§ 1773.3 Annual audit.

(a) Each borrower must have its financial statements audited annually by a CPA selected by the borrower and approved by RUS as set forth in §1773.4.
(b) Each borrower must establish an annual as of audit date within twelve months of the date of receipt of the first advance of RUS or FFB loan funds and must prepare financial statements as of the date established.
(c) Until all loans made or guaranteed by RUS have been repaid, the borrower must furnish three copies of the auditor’s report, report on compliance, report on internal controls, and management letter to RUS within 120 days of the as of audit date.
(d) A borrower that qualifies as a unit of state or local government or Indian tribe as such terms are defined in the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.) and OMB Circular A-128, Audits of State and Local Governments, must comply with this part as follows:

(1) A borrower that receives total Federal financial assistance equal to or in excess of $100,000 during the fiscal year, must have an audit performed and submit an auditor’s report meeting the requirements of the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.).
(2) A borrower that receives total Federal financial assistance of between $25,000 and $100,000 during the fiscal year must have an audit performed in accordance with either the requirements of the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.) or this part.
(3) A borrower that receives less than $25,000 in total Federal financial assistance during the fiscal year must have an audit performed in accordance with the requirements of this part.
(4) A borrower must notify RUS, in writing, within 30 days of the as of audit date, of the total Federal financial assistance received during the audit year and must state whether it will have an audit performed in accordance with the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.) or this part.

(i) A borrower that elects to comply with this part must select a CPA that meets the qualifications set forth in §1773.5.
(ii) If an audit is performed in accordance with the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.), an auditor’s report that meets the requirements of the Single Audit Act of 1984 (31 U.S.C. 7501 et seq.) will be sufficient to satisfy that borrower’s obligations under this part.
(e) OMB Circular A–133, Audits of Institutions of Higher Education and Other Nonprofit Organizations, does not apply to audits of RUS borrowers.

§ 1773.4 Borrower responsibilities.

(a) Selection of a qualified CPA. The borrower’s board of directors is responsible for the selection of a qualified CPA that meets the requirements set forth in §1773.5. When selecting a CPA, the borrower should consider, among other matters:

(1) The qualifications of CPAs available to do the work;
(2) The CPA’s experience in performing audits of utilities; and
§ 1773.5 Qualifications of CPA.

For purposes of the RUS standard security instrument, any CPA that meets the qualifications criteria of this section and enters into an audit agreement with the borrower that complies with §1773.6, will be considered satisfactory to RUS.

(a) Certification. The accountant that audits the financial statements of an RUS borrower must be a CPA in good standing of some state. The CPA does not have to be licensed by the state in which the borrower is located; however, the CPA must abide by the rules and regulations of professional conduct promulgated by the accountancy board of the state in which the borrower is located.

(b) Independence. The CPA must be independent. A CPA will be considered independent if the CPA:

(1) Meets the standards for independence contained in the AICPA Code of Professional Conduct in effect at the time the CPA’s independence is under review;

(2) The CPA’s ability to complete the audit and submit the reports and management letter within 90 days of the as of audit date.

(b) Board approval of selection. The board’s approval of a CPA must be recorded by a board resolution that states:

(1) The CPA meets RUS’s qualifications to perform an audit; and

(2) The borrower and CPA will enter into an audit agreement in accordance with §1773.6.

(c) Notification of selection. When the initial selection or subsequent change of a CPA by a borrower has been made, the borrower must notify RUS, in writing, at least 90 days prior to the as of audit date.

(1) RUS will notify the borrower, in writing, within 30 days of the date of receipt of such notice, if the selection or change in CPA is not satisfactory.

(2)Notification to RUS that the same CPA has been selected for succeeding audits of the borrower’s financial statements is not required; however, the procedures outlined in this part must be followed for each new CPA selected, even though such CPA may previously have been approved by RUS to audit records of other RUS borrowers. Changes in the name of a CPA firm are considered to be a change in the CPA.

(d) Audit agreement. The borrower must enter into an audit agreement with the CPA that complies with §1773.6.

(e) Debarment certification. The borrower is responsible for the receipt, from the selected CPA, of a lower tier covered transaction certification, as required under the provisions of Executive Orders 12549 and 12629, Debarment and Suspension, and any rules or regulations issued thereunder.

(f) Submission of auditor’s report. The borrower must submit to RUS the required auditor’s report, report on compliance, report on internal controls, and management letter as set forth in §1773.21.

(1) An annual auditor’s report, report on compliance, report on internal controls, and management letter that fail to meet the requirements detailed in this part will be returned to the borrower with a written explanation of noncompliance.

(2) The borrower must, within 60 days of the date of the letter detailing the noncompliance, submit corrected reports to RUS.

(3) If corrected reports are not received within 60 days of the date of the letter detailing the noncompliance, RUS may notify the borrower that a default has occurred under its security instrument or take other appropriate action. The default notice will set forth the period of time during which the default will be remedied.

(g) Submission of plan of corrective action. The borrower must submit written comments to RUS on the findings and recommendations in the auditor’s report, report on compliance, report on internal controls, and management letter. The borrower must also submit to RUS:

(1) A written plan for corrective action taken or planned; and

(2) Comments on the status of corrective action taken on previously reported findings and recommendations.

If corrective action is not necessary, a written statement describing the reason it is not should accompany the auditor’s report.
(2) Does not have and has not had any direct financial interest or any material indirect financial interest in the borrower during the period covered by the audit; and

(3) Is not and was not, during the period under audit, connected with the borrower as a promoter, underwriter, trustee, director, officer, or employee.

(c) Peer review requirement. The CPA must belong to and participate in a peer review program, and must have undergone a satisfactory peer review of the accounting and audit practice conducted by an approved peer review program under paragraph (c)(4) of this section, unless a waiver is granted under paragraph (c)(7) of this section. The reviewing organization must not be affiliated with or have had its most recent peer review conducted by the organization currently being reviewed (reciprocal reviews). After the initial peer review has been performed, the CPA must undergo a peer review of the accounting and audit practice within 42 months of the previous “as of” peer review date or at such additional times as designated by the peer review executive committee.

(1) A CPA that receives an unqualified peer review report will be satisfactory to RUS provided that the CPA meets the other criteria set forth in this section.

(2) If a CPA receives a qualified or adverse peer review report, the CPA must undergo a second peer review within 38 months of the date of the qualified or adverse report. A CPA that receives an unqualified second peer review report will be satisfactory to RUS provided that the CPA meets the other criteria set forth in this section.

(3) A CPA that receives a second qualified or adverse peer review report will not be satisfactory to RUS.

(4) Approved peer review programs. The following peer review programs are approved by RUS:

(i) The peer review programs conducted by the AICPA;

(ii) The peer review program conducted by the regulated audit program group of the National Conference of CPA Practitioners; and

(iii) An independent peer review program that, in RUS’s determination, requires its members to:

(A) Ensure that the CPA can legally engage in the practice of certified public accounting;

(B) Adhere to the quality control standards established by the AICPA;

(C) Submit to peer reviews of the CPA’s accounting and audit practice every 42 months or at such additional times as designated by its own executive committee; and

(D) Ensure that all professionals in the firm, including CPAs and nonCPAs, take part in the qualifying continuing professional education requirements of GAGAS, as set forth in paragraphs (c)(4)(iii)(D)(1) and (c)(4)(iii)(D)(2). A qualified continuing professional education course is one which meets the standards of the AICPA.

(1) An auditor responsible for planning, directing, conducting, or reporting on government audits must complete, every two years, at least eighty hours of continuing education and training which contributes to the auditor’s professional proficiency. At least twenty hours must be completed in any one year of the two-year period; and

(2) An individual responsible for planning, directing, and conducting substantial portions of the field work, or reporting on the government audit must complete at least 24 of the 80 hours of continuing education and training in subjects directly related to government environment and to government auditing. If the audited entity operates in a specific or unique environment, auditors must receive training that is related to that environment.

(5) Notification. The CPA must notify the Director, BAD, in writing, of participation in a peer review program. RUS will notify the CPA within 60 days of receipt of this notice if the selected peer review program is acceptable.

(6) Submission of reports. The CPA must submit to the Director, BAD, a copy of any peer review report and accompanying letter of comment, if any, within 60 days of the date such report and letter of comment are released by the peer review group.

(i) If the peer review report indicates that a follow-up review will be made, the CPA must submit subsequent reports to the Director, BAD, within 60
days of the date such reports are released by the peer review group.

(ii) A peer review report must be submitted to the Director, BAD, at least once every 42 months, or more frequently, if required by the peer review program.

(iii) A copy of the peer review report, accompanying letter of comment, and the partners’ inspections must be made available to OGC, upon request.

(7) Waiver of the peer review requirement.
   (i) A CPA may request that the Administrator, RUS, waive the peer review requirement. To be eligible for a waiver, the following criteria must be met:
      (A) The firm has been in existence for less than 1 year from the date of the request and has not been previously organized under a different name;
      (B) One of the partners organizing the firm has previously, within 18 months preceding the request, worked for a firm that has been peer reviewed and the partner was partner-in-charge of audits of RUS borrowers in the previous firm;
      (C) The firm has enrolled in an approved peer review program; and
      (D) The firm agrees to have the peer review conducted within 18 months of the date of the RUS waiver.
   (ii) Waiver requests must address each of the criteria in paragraph (c)(7)(i) of this section and should be submitted to the Director, Borrower Accounting Division.
   (d) Audit agreement. The CPA must enter into an audit agreement with the borrower that complies with §1773.6.

§ 1773.6 Audit agreement.

(a) An audit agreement must be entered into between the CPA and the borrower. The audit agreement must set forth the auditor’s responsibilities in a financial statement audit, including the responsibilities for testing and reporting on internal controls and compliance with laws and regulations and the nature of any additional testing of internal controls and compliance required by laws and regulations. These responsibilities should be contrasted with the additional procedures that could be performed that would result in additional assurances or opinions on the internal control structure and compliance with laws and regulations. The audit agreement must also include the following:

   (1) The borrower and the CPA acknowledge that the audit is being performed and the auditor’s report, report on compliance, report on internal controls, and management letter is being issued in order to enable the borrower to comply with the provisions of RUS’s security instrument;
   (2) The borrower and CPA acknowledge that RUS will consider the borrower to be in violation of its security instrument with RUS if the borrower fails to have an audit performed and documented in compliance with GAGAS and this part;
   (3) The CPA represents that he/she meets the requirements under this part to be satisfactory to RUS;
   (4) The CPA will perform the audit and will prepare the auditor’s report, report on compliance, report on internal controls, and management letter in accordance with the requirements of this part;
   (5) The CPA will document the audit work performed in accordance with GAGAS, the professional standards of the AICPA, and the requirements of this part;
   (6) The CPA will make all audit-related documents, including auditor’s reports, workpapers, and management letters available to RUS or its representatives (OGC and GAO), upon request, and will permit the photocopying of all audit-related documents; and
   (7) The CPA will follow the requirements of reporting irregularities and illegal acts as outlined in §1773.9.

(b) The audit agreement may include such additional terms and conditions as the CPA and borrower deem appropriate, including, but not limited to:
   (1) The CPA will report all audit findings to the board of directors as required in §1773.20(b); and
   (2) The auditor’s report, report on compliance, report on internal controls, and management letter with copies for transmittal to RUS, and supplemental lenders, if applicable, will be submitted to the borrower’s board of
directors within 90 days of the as of audit date;

(c) A copy of the audit agreement must be available at the borrower's office for inspection by RUS personnel. One copy of the current audit agreement must be maintained in the CPA's workpapers or permanent file.

§ 1773.7 Audit standards.

(a) The audit must be performed in accordance with GAGAS and this part. The audit must be performed in accordance with GAGAS in effect at the audit date unless the borrower is directed otherwise, in writing, by RUS.

(b) The audit must include such tests of the accounting records and such other auditing procedures that are sufficient to enable the CPA to express an opinion on the financial statements and to issue the required reports on compliance and internal controls and the management letter.

(c) Audit scope limitation. (1) The borrower will not limit the scope of the audit to the extent that the CPA is unable to meet RUS's audit requirements or to provide an unqualified opinion that the financial statements are presented fairly in conformity with GAAP.

(2) The security instrument provision requiring the submission of a report of the audit is not satisfied if the CPA must qualify the opinion in the auditor's report due to limitations placed on the scope of the audit by the borrower.

(3) If the CPA determines during the audit that an unqualified opinion cannot be issued due to a scope limitation imposed by the borrower, the CPA should use professional judgment to determine what levels of the borrower's management should be informed.

(4) After informing the borrower's management, if the scope limitation is not adequately resolved, the CPA should immediately contact the Director, BAD, RUS, U.S. Department of Agriculture, Washington, DC 20250-1500. The Director, BAD, will endeavor to resolve the matter with the borrower.

§ 1773.8 Audit date.

(a) The annual audit must be performed as of the end of the same calendar month each year unless prior approval to change the as of audit date is obtained, in writing, from RUS.

(1) A borrower may request a change in the as of audit date by writing to the appropriate RUS regional office at least 60 days prior to the newly requested as of audit date.

(2) The time period between the prior as of audit date and the newly requested as of audit date must be no longer than twenty-four months. For example, a borrower that wishes to change its as of audit date from December 31, 19X1, to June 30, must make the change effective no later than June 30, 19X3.

(b) Comparative financial statements must be prepared and audited for the twelve months ending as of the new audit date and for the twelve months immediately preceding that period.

(c) A borrower that changes its as of audit date from December 31, 19X1, to June 30, must have the CPA report on statements in the following manner:

<table>
<thead>
<tr>
<th>Previously issued statements</th>
<th>Statements prepared as of new audit date</th>
</tr>
</thead>
<tbody>
<tr>
<td>12/31/X1; 12/31/X0 (Statements need not be re-issued)</td>
<td>6/30/X3; 6/30/X2</td>
</tr>
</tbody>
</table>

§ 1773.9 Disclosure of irregularities and illegal acts.

(a) In accordance with GAGAS, the CPA must design audit steps and procedures to provide reasonable assurance of detecting errors, irregularities, illegal acts, and noncompliance with the provisions of contracts or grant agreements that could have a direct and material effect on financial statement amounts.

(b) If there is an indication that an irregularity may have occurred or evidence concerning the existence of a possible instance of noncompliance with the provisions of contracts or grant agreements that could have a material direct or indirect effect on the financial statements, the CPA must extend audit steps and procedures to obtain sufficient, competent evidential matter to determine whether, in
§ 1773.20 CPA's submission of the auditor's report, report on compliance, report on internal controls, and management letter.

(a) Time limit. As soon as possible after completion of the audit, but within 90 days of the as of audit date, the CPA should deliver the auditor's report, report on compliance, report on internal controls, and management letter to the president of the borrower's board of directors. As a minimum, copies should be provided for each member of the board of directors and the manager. Further, three copies must be provided to the borrower for transmittal to RUS.

(b) Communication with the board of directors. In addition to providing sufficient copies of the auditor's report, report on compliance, report on internal controls, and management letter for each member of the borrower's board of directors, RUS requires that the CPA report all audit findings to the borrower's board of directors. RUS recommends that audit findings be communicated orally; however, the communication may be oral or written, at the borrower's discretion. If the information is communicated orally, the
CPA must document the communication by appropriate memoranda or notations in the workpapers. If the CPA communicates in writing, a copy of the written communication must be included in the CPA's audit workpapers or permanent file.

(c) Matters to be communicated. Matters communicated to the board of directors must include, but are not limited to the matters to be communicated to the audit committee as prescribed in SAS No. 61, entitled "Communication with Audit Committee":

1. The initial selection of and changes in significant accounting policies;
2. The methods used to account for significant or unusual transactions and the effects of significant accounting policies in controversial or emerging areas;
3. The process utilized by management to formulate significant accounting estimates and the basis for the CPA's conclusions regarding the reasonableness of these estimates;
4. Audit findings and recommendations, including audit adjustments that either individually or in the aggregate have a significant effect on the borrower's financial statements;
5. The CPA's responsibility for other information presented with the audited financial statements, any audit procedures performed, and the results thereof;
6. Any disagreements with management, whether or not satisfactorily resolved, concerning matters that individually or in the aggregate may be significant to the borrower's financial statements or the auditor's report, report on compliance, report on internal controls, or management letter;
7. Significant matters that were the subject of consultations with other accountants;
8. Significant issues discussed with management with regard to the initial or recurring retention of the CPA; and
9. Any serious difficulties encountered in dealing with management during the performance of the audit.

§ 1773.21 Borrower's review and submission of the auditor's report, report on compliance, report on internal controls, and management letter.

(a) The borrower's board of directors should note and record receipt of the auditor's report, report on compliance, report on internal controls, and management letter and any action taken in response to the reports or management letter in the minutes of the board meeting at which such reports and management letter are presented.

(b) The borrower must furnish RUS with three copies of the auditor's report, report on compliance, report on internal controls, and management letter within 120 days of the as of audit date. Any provision in RUS's security instrument that requires such documents to be furnished to RUS in a shorter period of time may be disregarded.

(c) The borrower must furnish RUS with three copies of its plan for corrective action, if any, within 180 days of the as of audit date.

(d) The borrower must furnish RUS, within 120 days of the as of audit date, with a copy of each special report, summary of recommendations or similar communications, if any, received from the CPA as a result of the audit.

§§ 1773.22Ð1773.29 [Reserved]

Subpart D—RUS Reporting Requirements

§ 1773.30 General.

(a) The CPA must prepare the following:

1. An auditor's report, examples of which are set forth in appendices A, exhibit 1 (Electric), and B, exhibit 1 (Telephone) of this part 1773;
2. A report on compliance, examples of which are set forth in appendices A, exhibits 2 through 4 (Electric) and B, exhibits 2 through 4 (Telephone) of this part 1773;
3. A report on internal controls, examples of which are set forth in appendices A, exhibits 5 and 6 (Electric) and B, exhibits 5 and 6 (Telephone) of this part 1773; and
§ 1773.34 Management letter.

The CPA must prepare a management letter that includes, at a minimum, comments on:

(a) Audit procedures. State whether the audit has been performed in accordance with this part;
§ 1773.34

(b) Special reports. State whether any special reports, summaries of recommendations, or similar communications were furnished to the borrower’s management during the course of the audit or during interim audit work, and provide a description of the information furnished;

(c) Accounting and records. Comment on the adequacy and effectiveness of the borrower’s accounting procedures, discuss the general condition of the records, and outline any recommendation for improvement. Comment on the adequacy and fairness of the methods used in accumulating and recording labor, material, and overhead costs, and the distribution of these costs to construction, retirement, and maintenance or other expense accounts, and where appropriate, include:

(1) Whether subsidiary plant records agree with the controlling general ledger plant accounts;

(2) Whether construction clearing accounts are cleared promptly of costs of completed construction to the proper classified plant accounts and whether depreciation was accrued on such completed construction from the date the plant was placed in service;

(3) Whether retirements of plant are currently and systematically recorded and properly priced;

(4) Whether all costs associated with retirements of plant are properly accounted for in the accumulated provision for depreciation accounts and comment on any unusual charges or credits to such accounts; and

(5) Whether RUS approval was obtained for a sale requiring such approval, and whether receipts from sales of plant, material or scrap were not handled in conformance with RUS requirements.

(d) Materials control. Comment on the adequacy of the control over materials and supplies.

(e) Compliance with RUS loan and security instrument provisions. State whether the following provisions of RUS’s loan and security instruments have been complied with:

(1) For electric borrowers, provisions relating to:

(i) The requirement for funds to be deposited in banks or other depositories designated in the loan documents or approved by RUS. For purposes of this part 1773, funds shall be defined as cash on deposit in demand and time accounts, and certificates of deposit;

(ii) The requirement for a borrower to obtain written approval of mortgagees to enter into any contract for the operation or maintenance of all or any substantial part of its property, or for the use by others of its property. For purposes of this part 1773, the following contracts shall be deemed as requiring RUS approval:

(A) Management contracts in which the borrower has contracted to have another borrower or other entity manage its affairs;

(B) Management contracts in which the borrower has contracted to manage another borrower or another utility system;

(C) Operations and maintenance contracts in which the borrower has contracted to have another borrower or other entity operate and/or maintain all or a substantial part (45% or more) of the physical plant facilities of the borrower;

(D) Operations and maintenance contracts in which the borrower has contracted to operate and maintain the physical plant facilities of another borrower or other utility system; and

(E) Contracts between the borrower and its manager; and

(iii) The requirement for a borrower to prepare and furnish mortgagees annual financial and statistical reports on the borrower’s financial condition and operations. The CPA must state whether the information represented by the borrower as having been submitted to RUS in its most recent December 31 RUS Form 7 or Form 12 is in agreement with the borrower’s audited records, and must comment on any exceptions noted. If the borrower represents that an amended report has been filed as of December 31, the comments must relate to the amended report.

(2) For telephone borrowers, provisions relating to:

(i) The requirement for a borrower to obtain written approval of the mortgagees to enter into any contract for the operation or maintenance of property and for the use of mortgaged property
Rural Utilities Service, USDA

§ 1773.39

by others, or for services pertaining to
toll traffic, operator assistance, or
switching. For purposes of this part
1773, the following contracts shall be
deemed as requiring RUS approval:
(A) Any contract, agreement or lease
between the borrower and an affiliate
other than as allowed under 7 CFR part
1744, subpart E;
(B) Any lease of a building or land;
and
(C) Any other contract as defined in
§ 1773.34(e)(2)(i) except:

(1) Industry standard traffic settle-
ment agreements involving inter-
exchange and long distance carriers
which, in form and substance, conform
with contracts in general use in the
telecommunications industry;
(2) Billing and collecting agreements;
(3) Toll pooling arrangements involv-
ing National Exchange Carrier Associa-
tion and state associations;
(4) Directory services agreements;
and
(5) Joint use agreements;
(iii) The requirement for funds to be
deposited in banks or other deposi-
tories designated in the loan docu-
ments or approved by RUS. For pur-
poses of this part 1773, funds shall be
defined as cash on deposit in demand
and time accounts, and certificates of
deposit; and

(iii) The requirement for a borrower
to prepare and furnish mortgagees an-
nual financial and statistical reports
on the borrower's financial condition
and operations. The CPA must state
whether the information represented
by the borrower as having been submit-
ted to RUS in its most recent Decem-
ber 31 RUS Form 479 is in agreement
with the borrower's audited records,
and must comment on any exceptions
noted. If the borrower represents that
an amended report has been filed as of
December 31, the comments must re-
late to the amended report;

(f) Related party transactions. State
whether all material related party
transactions have been disclosed in the
notes to the financial statements in ac-
cordance with SFAS No. 57, entitled
"Related Party Disclosures". If the
audit did not disclose any related party
transactions considered to be material,
either individually or in the aggregate,
so state;

(g) Depreciation rates. For electric
borrowers, comment when the depre-
ciation rates used in computing month-
ly accruals are not in compliance with
RUS requirements (See RUS Bulletin
183-1, Depreciation Rates and Proce-
dures), which require the use of depre-
ciation rates that are within the rang-
es established by RUS for each pri-
mary plant account, or with the re-
quirements of the State regulatory
body having jurisdiction over the bor-
rower's depreciation rates; and

(h) Deferred debits and deferred credits.
For electric borrowers, provide a de-
tailed analysis of the totals reported as
deferred debits and deferred credits, in-
cluding, but not limited to, margin sta-
bilization plans, revenue deferral plans,
and expense deferrals. The CPA must
state whether RUS has approved, in
writing, each regulatory asset and li-
ability.

§§ 1773.35–1773.37 [Reserved]

Subpart E—RUS Required Audit
Procedures and Documentation

§ 1773.38 Scope of engagement.

(a) RUS requires that the audit pro-
cedures set forth in §§1773.39 through
1773.45 be performed annually by the
CPA during the audit of the RUS bor-
rowers' financial statements, which
audit procedures may be in addition to
the conduct of a GAGAS audit.

(b) The CPA must exercise profes-
sional judgment in determining wheth-
er any auditing procedures in addition
to those mandated by GAGAS or this
part should be performed in order to af-
ford a reasonable basis for rendering
the auditor's report, report on compli-
cance, report on internal controls, and
management letter.

§ 1773.39 Utility plant and accumu-
lated depreciation.

(a) General. The audit of these ac-
counts must include tests of additions,
replacements, retirements, and
changes. Based upon the CPA's deter-
mination of materiality, an appro-
priate sample of transactions must be
selected for testing. The CPA's
workpapers must document that he/she:

1. Examined direct labor and material transactions to determine whether the borrower’s accounting records reflect a complete accumulation of costs;
2. Examined indirect costs and overhead charges to determine if they conform to the Uniform System of Accounts;
3. Reviewed the costs of completed construction and retirement projects to determine if they were cleared promptly from the work in progress accounts and the related depreciation reserves;
4. Examined direct purchases of special equipment and general plant;
5. Determined the degree of accuracy and control of costing retirements, including tests of salvage and removal costs;
6. Reviewed the borrower’s work order procedures; and
7. Reviewed depreciation rates for adequate support, compared them to RUS guidelines, and determined if they are in compliance.

(b) Construction work in progress. (1) The workpapers must include a summary of open work orders reconciled to the general ledger. The CPA must note on the summary any unusual or non-typical projects.
(2) Based upon the CPA’s determination of materiality, an appropriate sample of work orders must be selected for testing. The CPA’s workpapers must document that he/she:
   (i) Reviewed equipment purchases charged to work orders, including payments and receiving reports;
   (ii) Reviewed contracts showing the scope of the work, the nature of the contract, the contract amount, and scheduled payments and reviewed supporting documents to determine that all services contracted for were in fact rendered;
   (iii) Reviewed time cards and pay rates for several employees who allocate their time to work orders;
   (iv) Reviewed the nature of material and supplies issued to the project, traced amounts and quantities to supporting documents, and reviewed the reasonableness of clearing rates for assignment of stores expense to the work order;
   (v) Reviewed the accuracy of the computation of overheads applied to the work order; and
   (vi) Reviewed other costs charged to the work order for support and propriety.
(3) Based upon the CPA’s determination of materiality, an appropriate sample of completed contracts must be selected for testing. The CPA’s workpapers must document that he/she:
   (i) Scheduled payments to contractors and traced to verify payments and supporting invoices;
   (ii) Traced contract costs to final closeout documents, to the general ledger, and to the continuing property records; and
   (iii) Verified the costs of owner furnished materials, if applicable.
(4) The CPA must review the borrower’s procedures for unitization and classification of work order and contract costs. Based upon the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:
   (i) Scheduled payments to contractors and traced to verify payments and supporting invoices;
   (ii) Traced contract costs to final closeout documents, to the general ledger, and to the continuing property records; and
   (iii) Verified the costs of owner furnished materials, if applicable.
(5) The CPA must review the borrower’s procedures for unitization and classification of work order and contract costs. Based upon the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:
   (i) Scheduled payments to contractors and traced to verify payments and supporting invoices;
   (ii) Traced contract costs to final closeout documents, to the general ledger, and to the continuing property records; and
   (iii) Verified the costs of owner furnished materials, if applicable.
(c) Continuing property records. Based upon the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:
   (1) Determined whether the subsidiary plant records agree with the controlling general ledger plant accounts;
§ 1773.42 Clearing accounts.

The CPA’s workpapers must contain an analysis of all clearing accounts. Based upon the CPA’s determination of materiality, an appropriate sample of transactions should be selected for testing. The CPA’s workpapers must document that appropriate tests of transactions were performed.

(g) Narrative. The CPA must prepare and include in the workpapers a comprehensive narrative on the scope of work performed, observations made, and conclusions reached. Specific matters covered in this narrative must include:

(1) The nature of construction and other additions;
(2) The control over, and the accuracy of pricing retirements;
(3) The accuracy of distributing costs to classified utility plant accounts;
(4) An evaluation of the method of:
   (i) Capitalizing the direct loadings on labor and material costs;
   (ii) Distributing transportation costs and other expense clearing accounts; and
   (iii) Capitalizing overhead costs;
(5) The tests of depreciation;
(6) A review of agreements such as those relating to acquisitions, property sales, and leases which affect the plant accounts; and
(7) Notations, if applicable, of RUS approval of property sales and the propriety of the disposition of the proceeds.

§ 1773.40 Regulatory assets.

The CPA’s workpapers must document whether all regulatory assets comply with the requirements of SFAS No. 71. For electric borrowers only, the CPA’s workpapers must document whether all regulatory assets have received RUS approval.

[59 FR 660, Jan. 6, 1994]

§ 1773.41 Extraordinary retirement losses.

The CPA’s workpapers must contain an analysis of retirement losses, including any required approval by a regulatory commission with jurisdiction in the matter, or RUS, in the absence of commission jurisdiction.

§ 1773.42 Clearing accounts.

The CPA’s workpapers must contain an analysis of all clearing accounts. Based upon the CPA’s determination of materiality, an appropriate sample of transactions should be selected for testing.
§ 1773.43 Capital and equity accounts.

(a) Capital stock. For privately owned companies, the workpapers must include analyses of all stock transactions during the audit period. Based on the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:

(1) Reviewed the subsidiary records and reconciled them to the general ledger control account;
(2) Reviewed authorizations and issuances or redemptions of capital stock for proper approvals by the board of directors, stockholders, and regulatory commissions;
(3) Determined that transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, and RUS loan documents; and
(4) Determined that transactions were recorded in accordance with the Uniform System of Accounts.

(b) Memberships. For cooperative organizations, the workpapers must include an analysis of the membership transactions during the audit period. Based on the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:

(1) Reviewed the subsidiary records and reconciled them to the general ledger control account; and
(2) Determined that transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, and RUS loan documents.

(c) Patronage capital, retained earnings, margins, and other equities. The workpapers must include an analysis of the patronage capital, retained earnings, margins and other equities, and any related reserve accounts. Based on the CPA’s determination of materiality, an appropriate sample of transactions must be selected for testing. The CPA’s workpapers must document that he/she:

(1) Determined that the transactions were made in accordance with the appropriate provisions of the articles of incorporation, bylaws, RUS loan documents, Uniform System of Accounts, or orders of regulatory commissions;
(2) Traced payments to underlying support; and
(3) Determined whether, under the terms of the RUS security instrument, restrictions of retained earnings or margins are required and, if so, whether they have been properly recorded.

§ 1773.44 Long-term debt.

The CPA’s workpapers must document that he/she:

(a) Confirmed RUS, FFB, and RTB debt to the appropriate confirmation schedule (RUS Form 690, Confirmation Schedule Obligation to the FFB as of; or Form 691, Confirmation Schedule—Long-Term Obligation to RUS as of; or RTB Form 12, Confirmation Schedule);
(b) Confirmed other long-term debt directly with the lender;
(c) Examined notes executed or canceled during the audit period; and
(d) Tested accrued interest computations.

§ 1773.45 Regulatory liabilities.

The CPA’s workpapers must document whether all regulatory liabilities comply with the requirements of SFAS No. 71. For electric borrowers only, the CPA’s workpapers must document whether all regulatory liabilities have received RUS approval.

[59 FR 660, Jan. 6, 1994]

§§ 1773.46—1773.49 [Reserved]

Appendix A to Part 1773—Sample Auditor’s Report for an Electric Cooperative

Appendix A includes an example of an auditor’s report, report on compliance, report on internal controls, financial statements and accompanying notes for an electric distribution cooperative. The sample auditor’s report is intended as a guide only and, while it is recommended that the format be followed, each auditor’s report should be prepared to adequately cover the circumstances. To the extent possible, it should be used as a guide in preparing auditors’ reports for other types of electric borrowers.
For power supply borrowers and for distribution borrowers with production or transmission plant, the same general format should be followed. However, the statement of Revenue and Patronage Capital must be expanded to show separate totals for operations expenses and maintenance expenses for each class of production plant and for transmission plant.

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative:

INDEPENDENT AUDITOR’S REPORT

We have audited the accompanying balance sheets of Center County Electric Cooperative as of December 31, 19X9 and 19X8, and the related statements of revenue and patronage capital, and cash flows for the years then ended. These financial statements are the responsibility of Center County Electric Cooperative’s management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Center County Electric Cooperative as of December 31, 19X9 and 19X8, and the results of its operations and its cash flows for the years then ended in conformity with generally accepted accounting principles.

In accordance with Government Auditing Standards, we have also issued a report dated March 2, 19X0, on our consideration of Center County Electric Cooperative’s internal control structure and a report dated March 2, 19X0, on its compliance with laws and regulations.

CERTIFIED PUBLIC ACCOUNTANTS

Exhibit 2—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Concluded It Was Not Necessary to Perform Tests of Compliance With Laws and Regulations

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative:

We have audited the financial statements of Center County Electric Cooperative as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and the Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center County Electric Cooperative is the responsibility of Center County Electric Cooperative’s management. As part of our audit, we assessed the risk that noncompliance with certain provisions of laws, regulations, contracts, and grants could cause the financial statements to be materially misstated. We concluded that the risk of such material misstatement was sufficiently low that it was not necessary to perform tests of Center County Electric Cooperative’s compliance with such provisions of laws, regulations, contracts, and grants.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Exhibit 3—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Performed Compliance Testing and Found No Reportable Instances of Noncompliance

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative:

We have audited the financial statements of Center County Electric Cooperative as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center County Electric Cooperative is the responsibility of Center County Electric Cooperative’s management. As part of our audit, we assessed the risk that noncompliance with certain provisions of laws, regulations, contracts, and grants could cause the financial statements to be materially misstated. We concluded that the risk of such material misstatement was sufficiently low that it was not necessary to perform tests of Center County Electric Cooperative’s compliance with such provisions of laws, regulations, contracts, and grants.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

CERTIFIED PUBLIC ACCOUNTANTS

States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center County Electric Cooperative is the responsibility of Center County Electric Cooperative's management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center County Electric Cooperative's compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed no instances of noncompliance that are required to be reported herein under Government Auditing Standards.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Exhibit 4—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Performed Compliance Testing and Found Reportable Instances of Noncompliance

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative.

We have audited the financial statements of Center County Electric Cooperative as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center County Electric Cooperative is the responsibility of Center County Electric Cooperative's management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center County Electric Cooperative's compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed instances of noncompliance that are required to be reported herein under Government Auditing Standards for which the ultimate resolution cannot presently be determined. Accordingly, no provision for any liability that may result has been recognized in Center County Electric Cooperative's 19X9 and 19X8 financial statements.

[Include paragraphs describing the instances of noncompliance noted.]

We considered these instances of noncompliance in forming our opinion on whether Center County Electric Cooperative's 19X9 and 19X8 financial statements are presented fairly, in all material respects, in conformity with generally accepted accounting principles, and this report does not effect our report dated March 2, 19X0, on those financial statements.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Exhibit 5—Sample Report on Internal Controls When Reportable Conditions Were Found

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative.

We have audited the financial statements of Center County Electric Cooperative as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

The management of Center County Electric Cooperative is responsible for establishing and maintaining an internal control structure. In fulfilling this responsibility, estimates and judgements by management are required to assess the expected benefits and related costs of internal control structure policies and procedures. The objectives of an internal control structure are to provide management with reasonable, but not absolute, assurance that the assets are safeguarded against loss from unauthorized use or disposition, and that transactions are executed in accordance with management's authorization and recorded properly to permit
the preparation of financial statements in accordance with generally accepted accounting principles. Because of inherent limitations in any internal control structure, errors or irregularities may nevertheless occur and not be detected. Also, projection of any evaluation of the structure to future periods is subject to the risk that procedures may become inadequate because of changes in conditions or that the effectiveness of the design and operation of policies and procedures may deteriorate.

In planning and performing our audit of the financial statements of Center County Electric Cooperative for the years ended December 31, 19X9 and 19X8, we obtained an understanding of the internal control structure. With respect to the internal control structure, we obtained an understanding of the design of relevant policies and procedures and whether they have been placed in operation, and we assessed control risk in order to determine our auditing procedures for the purpose of expressing our opinion on the financial statements and not to provide an opinion on the internal control structure. Accordingly, we do not express such an opinion.

We noted certain matters involving the internal control structure and its operation that we consider to be reportable conditions under standards established by the American Institute of Certified Public Accountants. Reportable conditions involve matters coming to our attention relating to significant deficiencies in the design or operation of the internal control structure that, in our judgment, could adversely affect the entity’s ability to record, process, summarize, and report financial data consistent with the assertions of management in the financial statements.

[Include paragraphs to describe the reportable conditions noted.]

A material weakness is a reportable condition in which the design or operation of one or more of the specific internal control structure elements does not reduce to a relatively low level the risk that errors or irregularities in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.

Our consideration of the internal control structure would not necessarily disclose all matters in the internal control structure that might be reportable conditions and, accordingly, would not necessarily disclose all reportable conditions that are also considered to be material weaknesses as defined above. However, we believe none of the reportable conditions described above is a material weakness.

We also noted other matters involving the internal control structure and its operation that we have reported to the management of Center County Electric Cooperative in a separate letter dated March 2, 19X0.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record, and its distribution is not limited.

March 2, 19X0

Exhibit 6—Sample Report on Internal Controls When No Reportable Conditions Were Found

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center County Electric Cooperative:

We have audited the financial statements of Center County Electric Cooperative, as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

The management of Center County Electric Cooperative is responsible for establishing and maintaining an internal control structure. In fulfilling this responsibility, estimates and judgements by management are required to assess the expected benefits and related costs of internal control structure policies and procedures. The objectives of an internal control structure are to provide management with reasonable, but not absolute, assurance that assets are safeguarded against loss from unauthorized use or disposition.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record, and its distribution is not limited.

Certified Public Accountants
March 2, 19X0
structure, we obtained an understanding of the design of relevant policies and procedures and whether they have been placed in operation, and we assessed control risk in order to determine our auditing procedures for the purpose of expressing our opinion on the financial statements and not to provide an opinion on the internal control structure. Accordingly, we do not express such an opinion.

Our consideration of the internal control structure would not necessarily disclose all matters in the internal control structure that might be material weaknesses under standards established by the American Institute of Certified Public Accountants. A material weakness is a condition in which the design or operation of one or more of the specific internal control structure elements does not reduce to a relatively low level the risk that errors or irregularities in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions. We noted no matters involving the internal control structure and its operations that we consider to be material weaknesses as defined above.

However, we noted other matters involving the internal control structure and its operation that we have reported to the management of Center County Electric Cooperative in a separate letter dated March 2, 19X0.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record, and its distribution is not limited.

The accompanying notes are an integral part of these statements.
CENTER COUNTY ELECTRIC COOPERATIVE
NOTES TO FINANCIAL STATEMENTS
DECEMBER 31, 19X9 AND DECEMBER 31, 19X8

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

Include a brief description of the reporting entity's significant accounting policies in accordance with Accounting Principles Board Opinion No. 22, Disclosure of Accounting Policies.

Disclosure of accounting policies should identify and describe the accounting principles followed by the borrower and the methods of applying those principles that materially affect the determination of financial position, cash flow, and results of operations.

Disclosures of accounting policies do not have to be duplicated in this section if presented elsewhere as an integral part of the financial statements.

2. ASSETS PLEDGED:

Substantially all assets are pledged as security for long-term debt to REA.

3. ELECTRIC PLANT AND DEPRECIATION RATES AND PROCEDURES:

Listed below are the major classes of the electric plant as of December 31, 19X9, and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intangible Plant</td>
<td>$ 2,194</td>
<td>$ 2,194</td>
</tr>
<tr>
<td>Distribution Plant</td>
<td>9,011,036</td>
<td>8,873,957</td>
</tr>
<tr>
<td>General Plant</td>
<td>211,416</td>
<td>482,113</td>
</tr>
<tr>
<td>Electric Plant in Service</td>
<td>9,524,646</td>
<td>9,365,264</td>
</tr>
<tr>
<td>Construction Work in Progress</td>
<td>407,943</td>
<td>317,106</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$9,332,589</strong></td>
<td><strong>$9,682,420</strong></td>
</tr>
</tbody>
</table>

Provision has been made for depreciation of distribution plant at a straight-line composite rate of 2.86 percent per annum.

General Plant depreciation rates have been applied on a straight-line basis as follows:

- Structures and Improvement: 2.5%
- Office Furniture: 6.0%
- Transportation Equipment: 14.0%
- Power Operated Equipment: 12.0%
- Other General-Plant: 4.0%
- Communications Equipment: 6.0%
4. INVESTMENTS IN ASSOCIATED ORGANIZATIONS:

Investments in associated organizations consisted of the following at December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capital Term Certificates of the National Rural Utilities Cooperative Finance Corporation (NRUCFC)</td>
<td>$385,193</td>
<td>$288,261</td>
</tr>
<tr>
<td>NRUCFC Patronage Capital Credits</td>
<td>5,065</td>
<td>3,537</td>
</tr>
<tr>
<td>Other</td>
<td>$1,000</td>
<td>$1,000</td>
</tr>
<tr>
<td></td>
<td>$391,258</td>
<td>$292,798</td>
</tr>
</tbody>
</table>

5. DEFERRED CHARGES:

Following is a summary of amounts recorded as deferred charges as of December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preliminary Surveys 19X0 - X1 Work Plan</td>
<td>$5,666</td>
<td>$1,762</td>
</tr>
</tbody>
</table>

6. PATRONAGE CAPITAL:

At December 31, 19X9 and 19X8, patronage capital consisted of:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assignable</td>
<td>$255,250</td>
<td>$83,523</td>
</tr>
<tr>
<td>Assigned to Date</td>
<td>1,952,448</td>
<td>1,869,128</td>
</tr>
<tr>
<td>Less: Retirements to Date</td>
<td>425,900</td>
<td>425,615</td>
</tr>
<tr>
<td></td>
<td>$1,761,798</td>
<td>$1,525,933</td>
</tr>
</tbody>
</table>

Under the provisions of the Mortgage Agreement, until the equities and margins equal or exceed forty percent of the total assets of the cooperative, the return to patrons of contributed capital is generally limited to twenty-five percent of the patronage capital or margins received by the cooperative in the prior calendar year. The equities and margins of the cooperative represent 25.3 percent of the total assets at balance sheet date. Capital credit retirements in the amount of $20,285 were paid in 19X9.

7. OTHER EQUITIES:

At December 31, 19X9 and 19X8, other equities consisted of:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retired Capital Credits - Gain</td>
<td>$36,190</td>
<td>$34,990</td>
</tr>
<tr>
<td>Donated Capital</td>
<td>17,457</td>
<td>910</td>
</tr>
<tr>
<td></td>
<td>$53,647</td>
<td>$35,900</td>
</tr>
</tbody>
</table>
8. **MORTGAGE NOTES - REA:**

Long-term debt is represented by mortgage notes payable to the United States of America. Following is a summary of outstanding long-term debt as of December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th>Notes</th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>2% Notes due March 31, 19X5</td>
<td>$1,057,155</td>
<td>$1,098,700</td>
</tr>
<tr>
<td>2% Notes due December 31, 19X6</td>
<td>2,485,927</td>
<td>2,502,370</td>
</tr>
<tr>
<td>5% Notes due December 31, 19X6</td>
<td>1,851,033</td>
<td>1,935,315</td>
</tr>
<tr>
<td>Less: Current Maturities</td>
<td>-145,000</td>
<td>-140,000</td>
</tr>
<tr>
<td></td>
<td><strong>$5,249,115</strong></td>
<td><strong>$5,396,382</strong></td>
</tr>
</tbody>
</table>

Unadvanced loan funds of $285,600 are available to the cooperative on loan commitments from REA.

Principal and interest installments on the above notes are due quarterly in equal amounts of $99,600. As of December 31, 19X9, annual maturities of long-term debt outstanding for the next five years are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>19X0</td>
<td>$145,000</td>
</tr>
<tr>
<td>19X1</td>
<td>$150,000</td>
</tr>
<tr>
<td>19X2</td>
<td>$151,500</td>
</tr>
<tr>
<td>19X3</td>
<td>$154,000</td>
</tr>
<tr>
<td>19X4</td>
<td>$155,000</td>
</tr>
</tbody>
</table>

Advance payments of $252,300 may be applied to the installments.

9. **PENSION PLAN:**

Substantially all of the employees of the Cooperative are covered by the ABC Retirement and Security Program, a multiemployer plan. Pension expense for the years ended 19X9 and 19X8 was $22,400.00 and $20,400.00, respectively.

10. **DEFERRED CREDITS:**

Following is a summary of the amounts recorded as deferred credits as of December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customer Energy Payments</td>
<td>$6,694</td>
<td>$3,065</td>
</tr>
<tr>
<td>Inventory Adjustment</td>
<td>5,210</td>
<td>7,500</td>
</tr>
<tr>
<td></td>
<td><strong>$11,904</strong></td>
<td><strong>$10,565</strong></td>
</tr>
</tbody>
</table>

11. **LITIGATION:**

The cooperative is a defendant in an action in which the plaintiff claims damages totaling $200,000 for personal injuries sustained. The action has been dismissed by the District Court, but is on appeal before the State Supreme Court. Management is of the opinion that no liability will be incurred by the cooperative as a result of this action.

12. **COMMITMENTS:**

Under its wholesale power agreement, the cooperative is committed to purchase its electric power and energy requirements from Central Power Cooperative, Inc., until December 31, 19XX. The rates paid for such purchases are subject to review annually.
APPENDIX B TO PART 1773—SAMPLE AUDITOR’S REPORT FOR A CLASS A OR B COMMERCIAL TELEPHONE COMPANY

Appendix B includes an example of a short-form auditor’s report, report on compliance, report on internal controls, financial statements and accompanying notes for a commercial telephone company. The sample auditor’s report is intended as a guide only and, while it is recommended that the format be followed, each auditor’s report should be prepared to adequately cover the circumstances. To the extent possible, it should be used as a guide in preparing auditors’ reports for other types of telephone borrowers.

Exhibit 1—Sample Auditor’s Report
Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company:

INDEPENDENT AUDITOR’S REPORT

We have audited the financial statements of Center Telephone Company as of December 31, 19X9 and 19X8, and the related statements of revenue and patronage capital, and cash flows for the years then ended. These financial statements are the responsibility of Center Telephone Company’s management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Center Telephone Company as of December 31, 19X9 and 19X8, and the results of its operations and its cash flows for the years then ended in conformity with generally accepted accounting principles.

We have audited the financial statements of Center Telephone Company’s internal control structure and a report dated March 2, 19X0, on its compliance with laws and regulations.

Certified Public Accountants
March 2, 19X0

Exhibit 2—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Concluded It Was Not Necessary to Perform Tests of Compliance With Laws and Regulations
Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company

We have audited and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and the Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center Telephone Company is the responsibility of Center Telephone Company’s management. As part of our audit, we assessed the risk that noncompliance with certain provisions of laws, regulations, contracts, and grants could cause the financial statements to be materially misstated. We concluded that the risk of such material misstatement was sufficiently low that it was not necessary to perform tests of Center Telephone Company’s compliance with such provisions of laws, regulations, contracts, and grants.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Certified Public Accountants
March 2, 19X0

Exhibit 3—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Performed Compliance Testing and Found No Reportable Instances of Noncompliance
Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company

We have audited the financial statements of Center Telephone Company as of and for
the years ended December 31, 19X9 and 19X8, and have issued our report dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center Telephone Company is the responsibility of Center Telephone Company’s management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center Telephone Company’s compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed instances of noncompliance that are required to be reported herein under Government Auditing Standards. This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

March 2, 19X0

Exhibit 5—Sample Report on Internal Controls When Reportable Conditions Were Found

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company:

We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center Telephone Company is the responsibility of Center Telephone Company’s management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center Telephone Company’s compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed instances of noncompliance that are required to be reported herein under Government Auditing Standards. Accordingly, no provision for any liability that may result has been recognized in Center Telephone Company’s 19X9 and 19X8 financial statements.

[Include paragraphs describing the instances of noncompliance noted.]

We considered these instances of noncompliance in forming our opinion on Center Telephone Company’s 19X9 and 19X8 financial statements. We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report dated March 2, 19X0, on those financial statements.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Exhibit 4—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Performed Compliance Testing and Found Reportable Instances of Noncompliance

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company:

We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center Telephone Company is the responsibility of Center Telephone Company’s management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center Telephone Company’s compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed instances of noncompliance that are required to be reported herein under Government Auditing Standards. Accordingly, no provision for any liability that may result has been recognized in Center Telephone Company’s 19X9 and 19X8 financial statements.

[Include paragraphs describing the instances of noncompliance noted.]

We considered these instances of noncompliance in forming our opinion on Center Telephone Company’s 19X9 and 19X8 financial statements. We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report dated March 2, 19X0, on those financial statements.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Certified Public Accountants
March 2, 19X0

Exhibit 4—Sample Report on Compliance When, Based on Assessments of Materiality and Audit Risk, the CPA Performed Compliance Testing and Found Reportable Instances of Noncompliance

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company:

We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audits in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

Compliance with laws, regulations, contracts, and grants applicable to Center Telephone Company is the responsibility of Center Telephone Company’s management. As part of obtaining reasonable assurance about whether the financial statements are free of material misstatement, we performed tests of Center Telephone Company’s compliance with certain provisions of laws, regulations, contracts, and grants. However, the objective of our audit of the financial statements was not to provide an opinion on overall compliance with such provisions. Accordingly, we do not express such an opinion.

The results of our tests disclosed instances of noncompliance that are required to be reported herein under Government Auditing Standards. Accordingly, no provision for any liability that may result has been recognized in Center Telephone Company’s 19X9 and 19X8 financial statements.

[Include paragraphs describing the instances of noncompliance noted.]

We considered these instances of noncompliance in forming our opinion on Center Telephone Company’s 19X9 and 19X8 financial statements. We have audited the financial statements of Center Telephone Company as of and for the years ended December 31, 19X9 and 19X8, and have issued our report dated March 2, 19X0, on those financial statements.

This report is intended for the information of the audit committee, management, the Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

Certified Public Accountants
March 2, 19X0
that the assets are safeguarded against loss from unauthorized use or disposition, and that transactions are executed in accordance with management’s authorization and recorded properly to permit the preparation of financial statements in accordance with generally accepted accounting principles. Because of inherent limitations in any internal control structure, errors or irregularities may nevertheless occur and not be detected.

Also, projection of any evaluation of the structure to future periods is subject to the risk that procedures may become inadequate because of changes in conditions or that the effectiveness of the design and operation of policies and procedures may deteriorate.

In planning and performing our audit of the financial statements of Center Telephone Company for the years ended December 31, 19X9 and 19X8, we obtained an understanding of the internal control structure. With respect to the internal control structure, we obtained an understanding of the design of relevant policies and procedures and whether they have been placed in operation, and we assessed control risk in order to determine our auditing procedures for the purpose of expressing our opinion on the financial statements and not to provide an opinion on the internal control structure. Accordingly, we do not express such an opinion.

We noted certain matters involving the internal control structure and its operation that we consider to be reportable conditions under standards established by the American Institute of Certified Public Accountants. Reportable conditions involve matters coming to our attention relating to significant deficiencies in the design or operation of the internal control structure that, in our judgment, could adversely affect the entity’s ability to record, process, summarize, and report financial data consistent with the assertions of management in the financial statements.

[Include paragraphs to describe the reportable conditions noted.]

A material weakness is a reportable condition in which the design or operation of one or more of the specific internal control structure elements does not reduce to a relatively low level the risk that errors or irregularities in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.

Our consideration of the internal control structure would not necessarily disclose all matters in the internal control structure that might be reportable conditions and, accordingly, would not necessarily disclose all reportable conditions that are also considered to be material weaknesses as defined above. However, we believe none of the reportable conditions described above is a material weakness.

We also noted other matters involving the internal control structure and its operation that we have reported to the management of Center Telephone Company in a separate letter dated March 2, 19X0.

This report is intended for the information of the audit committee, management, and Rural Utilities Service, and supplemental lenders. However, this report is a matter of public record, and its distribution is not limited.

Exhibit 6—Sample Report on Internal Controls
When No Reportable Conditions Were Found

Certified Public Accountants, 1600 Main Street, City, State 24105, The Board of Directors, Center Telephone Company:

We have audited the financial statements of Center Telephone Company, as of and for the years ended December 31, 19X9 and 19X8, and have issued our report thereon dated March 2, 19X0.

We conducted our audit in accordance with generally accepted auditing standards and Government Auditing Standards, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

The management of Center Telephone Company is responsible for establishing and maintaining an internal control structure. In fulfilling this responsibility, estimates and judgments by management are required to assess the expected benefits and related costs of internal control structure policies and procedures. The objectives of an internal control structure are to provide management with reasonable, but not absolute, assurance that assets are safeguarded against loss from unauthorized use or disposition, and that transactions are executed in accordance with management’s authorization and recorded properly to permit the preparation of financial statements in accordance with generally accepted accounting principles. Because of inherent limitations in any internal control structure, errors or irregularities may nevertheless occur and not be detected. Also, projection of any evaluation of the structure to future periods is subject to the risk that procedures may become inadequate because of changes in conditions or that the effectiveness of the design and operation of policies and procedures may deteriorate.

In planning and performing our audit of the financial statements of Center Telephone Company for the years ended December 31, 19X9 and 19X8, we obtained an understanding...
of the internal control structure. With respect to the internal control structure, we
obtained an understanding of the design of relevant policies and procedures and whether
they have been placed in operation, and we assessed control risk in order to determine
our auditing procedures for the purpose of expressing our opinion on the financial
statements and not to provide an opinion on the internal control structure. Accordingly,
we do not express such an opinion.

Our consideration of the internal control
structure would not necessarily disclose all
matters in the internal control structure
that might be material weaknesses under
standards established by the American Insti-
tute of Certified Public Accountants. A ma-
terial weakness is a condition in which the
design or operation of one or more of the spe-
cific internal control structure elements
does not reduce to a relatively low level the
risk that errors or irregularities in amounts
that would be material in relation to the fi-
nancial statements being audited may occur
and not be detected within a timely period
by employees in the normal course of per-
forming their assigned functions. We noted
no matters involving the internal control
structure and its operations that we consider
to be material weaknesses as defined above.
However, we noted other matters involving
the internal control structure and its oper-
ation that we have reported to the manage-
ment of Center Telephone Company in a sep-
ate letter dated March 2, 19X0.

This report is intended for the information
of the audit committee, management, the
Rural Utilities Service, and supplemental
lenders. However, this report is a matter of
public record, and its distribution is not lim-
ited.

Net Cash Provided by Operating Activities | $315,925 | $311,849 |

The accompanying notes are an integral part of these statements.
1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

Include a brief description of the reporting entity's significant accounting policies in accordance with Accounting Principles Board Opinion No. 22, Disclosure of Accounting Policies.

Disclosure of accounting policies should identify and describe the accounting principles followed by the borrower and the methods of applying those principles that materially affect the determination of financial position, cash flows, and results of operations.

Disclosures of accounting policies do not have to be duplicated in this section if presented elsewhere as an integral part of the financial statements.

2. ASSETS PLEDGED:

Substantially all assets are pledged as security for the long-term debt to FIA.

3. PREPAID EXPENSES:

Following is a summary of the amounts recorded as prepaid items as of December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td><strong>Net CATV Plant</strong></td>
<td><strong>$413,511</strong></td>
<td><strong>$407,086</strong></td>
</tr>
</tbody>
</table>

CATV plant in service and under construction is stated at cost. The company provides for depreciation on a straight-line basis at annual
rates which will amortize the depreciable property over its estimated useful life.

The offering of CATV services does not involve the joint or shared use of assets in the provision of regulated and nonregulated services.

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nonregulated Customer Premises Equipment - Leased</td>
<td>$109,699</td>

<td>- 0 -</td>
</tr>
<tr>
<td></td>
<td>$103,618</td>
<td>$ 0</td>
</tr>
</tbody>
</table>

Nonregulated CPE is stated at cost. The company provides for depreciation on a straight-line basis at an annual rate of depreciation which will amortize the cost of the equipment over its estimated useful life. The leasing of nonregulated customer premises equipment does not involve the joint or shared use of assets in the provision of regulated and nonregulated services.

Following is a summary of net income from nonregulated investments for the year ending December 31, 19X9:

<table>
<thead>
<tr>
<th></th>
<th>Deregulated CATV</th>
<th>Deregulated CPE</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Income from Operations</td>
<td>$32,425</td>

<td>$41,576</td>
</tr>
<tr>
<td>Expenses</td>
<td>18,834</td>
<td>2,840</td>
<td>21,674</td>
</tr>
<tr>
<td></td>
<td>$13,591</td>
<td>$6,311</td>
<td>$19,902</td>
</tr>
</tbody>
</table>

Income tax expense totaled $3,556, of which $2,883 was applicable to CATV operations and $673 was applicable to CPE leasing activities.

DEFERRED CHARGES:

The balance consists of the unamortized portion of the unprovided for loss in service value of plant retired.

<table>
<thead>
<tr>

<td>45,000</td>
</tr>
</tbody>
</table>

The Public Utilities Commission granted the company permission to amortize this loss over a ten-year period net of income tax savings of $10,542.
6. INVESTMENT IN TELEPHONE PLANT:

Telephone plant in service and under construction is stated at cost. Listed below are the major classes of the telecommunications plant as of December 31, 19X9 and 19X8:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Land</td>

<tr>
<td>Central Office Equipment</td>
<td>3,171,162</td>
<td>2,746,871</td>
</tr>
<tr>
<td>Customer Premises Wiring</td>
<td>64,231</td>
<td>73,915</td>
</tr>
<tr>
<td>Poles, Cables, and Wire</td>
<td>2,458,699</td>
<td>2,700,411</td>
</tr>
<tr>
<td><strong>Telecommunications Plant in Service - Unclassified</strong></td>
<td>811,550</td>
<td>704,705</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td>$7,403,300</td>
<td>$6,650,657</td>
</tr>
</tbody>
</table>

The company provides for depreciation on a straight-line basis at annual rates which will amortize the depreciable property over its estimated useful life. Such provision as a percentage of the average balance of telephone plant in service was 7.2 percent in 19X9 and 7.1 percent in 19X8.

Individual plant depreciable rates are as follows:

- Motor Vehicles: 26%
- Special Purpose Vehicles: 13%
- Other Work Equipment: 16%
- Buildings: 4%
- Furniture and Office Equipment: 4%
- Central Office Equipment: 10%
- Customer Premises Wiring: 10%
- Outside Plant - Aerial and Buried Cable: 5%
- Outside Plant - Pole Lines and Aerial Wire: 20%

7. TELEPHONE PLANT ADJUSTMENT:

This adjustment represents the difference between the amount paid for the telephone plant plus associated expenses and the original cost of the plant less the associated depreciation. The company is amortizing the adjustment over a 19 1/2 year period in accordance with an order from the Public Utility Commission.

Annual amortization equals $9,000.
8. MORTGAGE NOTES:

Long-term debt is represented by mortgage notes payable to the United States of America. Following is a summary of outstanding long-term debt:

<table>
<thead>
<tr>
<th></th>
<th>19X9</th>
<th>19X8</th>
</tr>
</thead>
<tbody>
<tr>
<td>5% Notes due December 31, 19X6</td>
<td>$4,739,304</td>
<td>$4,274,104</td>
</tr>
<tr>
<td>Less: Current Maturities</td>
<td>146,646</td>
<td>145,930</td>
</tr>
<tr>
<td></td>
<td>$4,592,658</td>
<td>$4,128,106</td>
</tr>
</tbody>
</table>

As of December 31, 19X9, there were no unadvanced funds.

Principal and interest installments on the above notes are due quarterly in equal amounts of $63,200. The maturities of long-term debt for each of the five years succeeding the balance sheet date is as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>19X0</td>
<td>$146,649</td>
</tr>
<tr>
<td>19X1</td>
<td>$153,839</td>
</tr>
<tr>
<td>19X2</td>
<td>$155,743</td>
</tr>
<tr>
<td>19X3</td>
<td>$143,000</td>
</tr>
<tr>
<td>19X4</td>
<td>$139,976</td>
</tr>
</tbody>
</table>

The long-term debt agreements contain restrictions on the payment of dividends or redemption of capital stock. The terms of the Mortgage Agreement require the maintenance of defined amounts of member's equity and working capital after payment of dividends. Under these provisions approximately $293,688 of retained earnings was available for payment of dividends at December 31, 19X9.

9. PENSION PLAN:

Substantially all employees of the company are covered by the XYZ Retirement and Security plan, a multiemployer plan. Pension expense for the years ended 19X9 and 19X8 was $12,000.00 and $11,500.00, respectively.

10 INCOME TAXES AND DEFERRED INCOME TAXES:

The company uses a different method of depreciation on plant additions for income tax purposes. As provided by the Economic Recovery Tax Act of 1981, the company has elected to use the Accelerated Cost Recovery System (ACRS) method of depreciation for plant additions after 1980. In addition to the different depreciation practices for book and tax purposes, the company does not capitalize extraordinary maintenance and retirements and cost of removal charges for tax purposes. Provision is made in the statements of income and retained earnings for the taxes deferred as a result of
APPENDIX C TO PART 1773—
ILLUSTRATIVE INDEPENDENT AUDITOR’S MANAGEMENT LETTER

RUS requires that CPAs auditing RUS borrowers provide a management letter in accordance with §1773.34. This letter must be signed by the CPA, bear the same date as the auditor’s report, and be addressed to the borrower’s board of directors.

Illustrative Independent Auditor’s Management Letter

March 15, 19X6
Board of Directors, [Name of Borrower], [City, State].

We have audited the financial statements of [Name of Borrower] for the year ended December 31, 19X5, and have issued our report thereon dated March 15, 19X6. We conducted our audit in accordance with generally accepted auditing standards, Government Auditing Standards issued by the Comptroller General of the United States, and 7 CFR part 1773, Policy on Audits of Rural Utilities Service (RUS) Borrowers. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

In planning and performing our audit of the financial statements of [Name of Borrower] for the year ended December 31, 19X5, we considered its internal control structure in order to determine our auditing procedures for the purpose of expressing an opinion on the financial statements and not to provide assurance on the internal control structure.

A description of the responsibility of management for establishing and maintaining the internal control structure and the objectives of and inherent limitations in such a structure is set forth in our independent auditors’ report on the internal control structure dated March 15, 19X6, and should be read in conjunction with this report.

Our consideration of the internal control structure would not necessarily disclose all matters in the internal control structure that might be material weaknesses under standards established by the American Institute of Certified Public Accountants.

A material weakness is a condition in which the design or operation of the specific internal control structure elements does not reduce to a relatively low level the risk that errors or irregularities in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions. However, we noted no matters involving the internal control structure and its operation that we consider to be a material weakness as defined above. [If a material weakness was noted, refer the reader to the independent auditors’ report on internal control structure.]

7 CFR 1773.34 requires comments on specific aspects of the internal control structure, compliance with specific RUS loan and security instrument provisions, and additional matters. We have grouped our comments accordingly. In addition to obtaining reasonable assurance about whether the financial statements are free from material misstatements, at your request, we performed tests of specific aspects of the internal control structure, of compliance with specific RUS loan and security instrument provisions, and of additional matters. The specific aspects of the internal control structure, compliance with specific RUS loan and security instrument provisions, and additional matters tested include, among other
things, the accounting procedures and records, materials control, compliance with specific RUS loan and security instrument provisions set forth in 7 CFR 1773.34 (e)(1), (e)(2), related party transactions, and depreciation rates. [For electric borrowers:] The additional matters tested also include a schedule of deferred debits and credits, upon which we express an opinion. In addition, our audit of the financial statements also included the procedures specified in 7 CFR 1773.36–45. Our objective was not to provide an opinion on these specific aspects of the internal control structure, compliance with specific RUS loan and security instrument provisions, or other additional matters, and accordingly, we express no opinion thereon.

No reports (other than our independent auditors' report, our independent auditors' compliance report, and our independent auditors' report on the internal control structure, all dated March 15, 19X6) or summary of recommendations related to our audit have been furnished to management.

Our comments on specific aspects of the internal control structure, compliance with specific RUS loan and security instrument provisions, and other additional matters as required by 7 CFR 1773.34 are presented below.

Comments on Certain Specific Aspects of the Internal Control Structure

We noted no matters regarding [Name of Borrower]'s internal control structure and its operation that we consider to be a material weakness as previously defined with respect to:

—The accounting procedures and records [list other comments];
—The process for accumulating and recording labor, material, and overhead costs, and the distribution of these costs to construction, retirement, and maintenance or other expense accounts [list other comments]; and
—The materials control [list other comments].

Comments on Compliance With Specific RUS Loan and Security Instrument Provisions

Management's responsibility for compliance with laws, regulations, contracts, and grants is set forth in our independent auditors' report on compliance dated March 15, 19X6, and should be read in conjunction with this report. At your request, we have performed the procedures enumerated below with respect to compliance with certain provisions of laws, regulations, and contracts. The procedures we performed are summarized as follows:

—Procedure performed with respect to the requirement to maintain all funds in institutions whose accounts are insured by an Agency of the Federal government:

1. Obtained information from financial institutions with which [Name of Borrower] maintains funds that indicated that the institutions are insured by an Agency of the Federal government.

—Procedures performed with respect to the requirement for a borrower to obtain written approval of the mortgagee to enter into any contract for the operation or maintenance of property, or for the use of mortgaged property by others [see 1773.34 (e)(2)(i) for additional telephone borrower requirements in accordance with 7 CFR 1773.34 (e)] for the year ended December 31, 19X5 of [Name of Borrower]:

1. Obtained and read a borrower prepared schedule of new written contracts entered into during the year for the operation or maintenance of its property, or for the use of its property by others as defined in §1773.34 (e)(3)(ii) [§1773.34 (e)(2)(i) for telephone borrowers]

2. Reviewed Board of Director minutes to ascertain whether board-approved written contracts are included in the borrower-prepared schedule.

3. Noted the existence of written RUS [and other mortgagee] approval of each contract listed by the borrower.

—Procedure performed with respect to the requirement to submit RUS Form 7 or Form 12 [Form 479 for telephone borrowers] to the RUS:

1. Agreed amounts reported in Form 7 or Form 12 [Form 479 for telephone borrowers] to [Name of Borrower]’s records.

The results of our tests indicate that, with respect to the items tested, [Name of Borrower] complied, except as noted below, in all material respects, with the specific RUS loan and security instrument provisions referred to below. With respect to items not tested, nothing came to our attention that caused us to believe that [Name of Borrower] had not complied, in all material respects, with those provisions. The specific provisions tested, as well as any exceptions noted, include the requirements that:

—The borrower maintains all funds in institutions whose accounts are insured by an Agency of the Federal government [list all exceptions];
—The borrower has obtained written approval of the RUS [and other mortgagees] to enter into any contract for the operation or maintenance of property, or for the use of mortgaged property by others as defined in §1773.34 (e)(3)(ii) [§1773.34 (e)(2)(i) for telephone borrowers] [list all exceptions]; and
—The borrower has submitted its Form 7 or Form 12 [Form 479 for telephone borrowers] to the RUS and the Form 7 or Form 12
[Form 470 for telephone borrowers]. Financial and Statistical Report, as of December 31, 19X5, represented by the borrower as having been submitted to RUS is in agreement with the [Name of Borrower]'s audited records in all material respects [list all exceptions].

Comments on Other Additional Matters

In connection with our audit of the financial statements of [Name of Borrower], nothing came to our attention that caused us to believe that [Name of Borrower] failed to comply with respect to:

—The reconciliation of subsidiary plant records to the controlling general ledger plant accounts addressed at 7 CFR 1773.34 (c)(1) [list all exceptions];
—The clearing of the construction accounts and the accrual of depreciation on completed construction addressed at 7 CFR 1773.34 (c)(2) [list all exceptions];
—The retirement of plant addressed at 7 CFR 1773.34 (c)(3) and (4) [list all exceptions];
—Sales of plant material, or scrap addressed at 7 CFR 1773.34 (c)(5) [list all exceptions];
—The disclosure of material related party transactions, in accordance with Statement of Financial Accounting Standards No. 57, Related Party Transactions, for the year ended December 31, 19X5, in the financial statements referenced in the first paragraph of this report addressed at 7 CFR 1773.34 (f) [list all exceptions]; and
—For electric borrowers only: depreciation rates addressed at 7 CFR 1773.34 (g) [list all exceptions].

For Electric Borrowers Only: Detailed Schedule of Deferred Debits and Deferred Credits

Our audit was made for the purpose of forming an opinion on the basic financial statements taken as a whole. The detailed schedule of deferred debits and deferred credits required by 7 CFR 1773.34 (h) and provided below is presented for purposes of additional analysis and is not a required part of the basic financial statements. This information has been subjected to the auditing procedures applied in our audit of the basic financial statements and, in our opinion, is fairly stated in all material respects in relation to the basic financial statements taken as a whole.

(The detailed schedule of deferred debits and deferred credits would be included here. The total amount of deferred debits and deferred credits as reported in the schedule must agree with the totals reported on the Balance Sheet under the specific captions of “Deferred Debits” and “Deferred Credits”. Those items that have been approved, in writing, by RUS should be clearly indicated.)

This report is intended solely for the information and use of the board of directors, management, and the RUS and supplemental lenders. However, this report is a matter of public record and its distribution is not limited.

§ 1775.1 General.

This part sets forth the policies and procedures for making Technical Assistance grants. Grants for technical assistance and training for water and waste disposal facilities are authorized under section 306(a)(16)(A) of the Consolidated Farm and Rural Development Act, (CONACT), (7 U.S.C. 1926(a)), as amended. Grants for solid waste management are authorized under Section 310B of the CONACT, (7 U.S.C. 1926(a)), as amended. Any processing or servicing activity conducted pursuant to this part involving authorized assistance to
Agency employees, members of their families, known close relatives, or business or close personal associates, is subject to the provisions of subpart D of part 1900 of this title. Applicants for this assistance are required to identify any known relationship or association with an Agency employee.

§ 1775.2 [Reserved]

§ 1775.3 Objectives.

(a) The objectives of the Technical Assistance and Training Grant Program are to:

(1) Identify and evaluate solutions to water and waste disposal problems in rural areas.

(2) Assist applicants in preparing applications for water and waste grants made in accordance with part 1780 of this chapter.

(3) Improve operation and maintenance of existing water and waste disposal facilities in rural areas.

(b) The objectives of the Solid Waste Management Grant Program are to:

(1) Reduce or eliminate pollution of water resources.

(2) Improve planning and management of solid waste sites.

§ 1775.4 Definitions.

Association. An entity, including a small city or town, that is eligible for Rural Utilities Service (RUS) water and waste financial assistance in accordance with § 1780.7 of this chapter.

Grantee. An entity with whom the Agency has entered into a grant agreement under this program to provide technical assistance and/or training to associations as defined in this section.

Low income. Median household income below the poverty line for a family of four as defined in Section 673(2) of the Community Services Block Grant Act (42 U.S.C. 9902(2)), or below 80 percent of the Statewide nonmetropolitan median household income.

Regional. For purposes of the Solid Waste Management grant program, as implemented through this part, regional is defined as any multi-jurisdictional area including multi-State or any multi-jurisdictional area within a State.

“Rural area” will not include any area in a city or town with population in excess of 10,000 inhabitants according to the latest decennial census of the United States.

State. Any of the fifty States, the Commonwealth of Puerto Rico, the Western Pacific Territories, Marshall Islands, Federated States of Micronesia, Republic of Palau, and the U.S. Virgin Islands.

§ 1775.5 Source of funds.

Technical Assistance and Training grants awarded will be made from not less than one (1) percent or, at the discretion of the Agency Administrator, not more than three (3) percent of any appropriations for grants under Section 306(a)(2) of the CONACT, (7 U.S.C. 1926(a)). Technical Assistance and Training grant funds not obligated by September 1 of each fiscal year will be used for water and waste grants made in accordance with part 1780 of this chapter. This section does not apply to Solid Waste Management grants.

§ 1775.6 Allocation of funds.

Control of Technical Assistance and Training grant and Solid Waste Management grant funds will be retained in the National office and allocated on a project case basis. These funds are not available for obligation by States.

§ 1775.7 Eligibility.

(a) Entities eligible for Technical Assistance and Training (TAT) grants are private nonprofit organizations that have been granted tax exempt status by the Internal Revenue Service (IRS) of the United States.

(b) Entities eligible for Solid Waste Management (SWM) grants are nonprofit organizations, including:

(1) Private nonprofit organizations that have been granted tax exempt status by the IRS;

(2) Public bodies including local governmental-based multi-jurisdictional organizations.

(c) Applicants for either TAT or SWM grants must also have the proven ability, background, experience, legal authority, and actual capacity to provide technical assistance and/or training on a regional basis to associations as provided in § 1775.3.
§ 1775.8 Purpose.

(a) Technical Assistance and/or Training Grants may be used to:

(1) Identify and evaluate solutions to water problems of associations in rural areas relating to:
   (i) Source.
   (ii) Storage.
   (iii) Treatment.
   (iv) Distribution.

(2) Identify and evaluate solutions to waste problems of associations in rural areas relating to:
   (i) Collection.
   (ii) Treatment.
   (iii) Disposal.

(3) Assist associations that have filed a preapplication with the Agency in the preparation of water and/or waste loan and/or grant applications.

(4) Provide training to association personnel that will improve the management, operation and maintenance of water and waste disposal facilities.

(5) To pay the expenses associated with providing the technical assistance and/or training authorized in paragraphs (a) (1) through (4) of this section.

(b) Solid Waste Management grants may be used to:

(1) Evaluate current landfill conditions to determine threats to water resources.

(2) Provide technical assistance and/or training to enhance operator skills in the maintenance and operation of active landfills.

(3) Provide technical assistance and/or training to help communities reduce the solid waste stream.

(4) Provide technical assistance and/or training for operators of landfills which are closed or will be closed in the near future with the development/implementation of closure plans, future land use plans, safety and maintenance planning, and closure scheduling within permit requirements.

§ 1775.9 [Reserved]

§ 1775.10 Limitations.

Grant funds may not be used to:

(a) Recruit applications for the Agency’s water and waste loan and/or any loan and/or grant program.

(b) Duplicate current services, replacement or substitution of support previously provided such as those performed by an association’s consultant in developing a project.

(c) Fund political activities.

(d) Pay for capital assets, the purchase of real estate or vehicles, improve and renovate office space, or repair and maintain privately-owned property.

(e) Pay for construction or operation and maintenance costs.

(f) Pay costs incurred prior to the effective date of grants made under this part.

(g) Pay for technical assistance as defined in this part which duplicates assistance provided to implement an action plan funded by Forest Service (FS) under the National Forest-Dependent Rural Communities Economic Diversification Act (7 U.S.C. 6601 note) for 5 continuous years from the date of grant approval by the FS. To avoid duplicate assistance, the grantee shall coordinate with the FS and RUS to ascertain if a grant has been made in a substantially similar geographical or defined local area in a State for technical assistance under the above program. The grantee will provide documentation to FS and RUS regarding the contact with each agency. Under its program, the FS assists rural communities dependent upon national forest resources by establishing rural forestry and economic diversification action teams which prepare action plans. Action plans are intended to provide opportunities to promote economic diversification and enhance local economies dependent upon national forest resources.

§ 1775.11 Equal opportunity requirements.

The policies and regulations contained in subpart E of part 1901 of this title apply to grants made under this part.

§ 1775.12 Environmental requirements.

The policies and regulations contained in subpart G of part 1940 of this title apply to grants made for the purposes in § 1775.8.

§ 1775.13 Preapplications.

(a) Applicants will file an original and one copy of SF-424.1, “Application
for Federal Assistance (For Non-construction)," with the appropriate Agency office between October 1 and December 31 each fiscal year. This form is available in all Agency offices. Applicants proposing to provide technical assistance and/or training in only one State will apply through the appropriate State Office. The State Office will review and forward preapplications, with their recommendations, within seven working days to the National Office, Attention: Water and Waste Disposal. Applicants providing technical assistance and/or training in more than one State will forward the preapplication to the Assistant Administrator, Water and Waste, Rural Utilities Service, Washington, DC 20250. 

Preapplications for Solid Waste Management grants that cannot be funded in the fiscal year received will not be retained for consideration for funding in the following fiscal year and will be handled as outlined in paragraph (g) of this section.

(b) All preapplications shall be accompanied by:

(1) Evidence of applicant's legal existence and authority in the form of certified copies of organizational documents and a certified list of directors and officers with their respective terms.

(2) Evidence tax exempt status from the Internal Revenue Service.

(3) Brief written narrative which includes items such as:
   (i) The proposed service(s) to be provided, including the benefits of the technical assistance and/or training.
   (ii) Area to be served.
   (iii) Name of association(s) or type of association(s) that will be served.
   (iv) Median household income of the population to be served by each association(s).
   (v) Grantee's experience, including experience of key staff members and person(s) providing the technical assistance and/or training.
   (vi) The number of months duration of the project or service and the estimated time it will take from grant approval to beginning of service.
   (vii) Method used to select the association(s) that will receive the service.
   (viii) Brief description of how the service will be provided, such as, through currently employed personnel or some other method.
   (ix) Method to be used for delivery of the service, including personnel to be utilized and tasks to be contracted, if any.

(4) Latest financial information to show the organization's financial capacity to carry out the proposed work. As a minimum, the information should include a balance sheet and an income statement. A current audit report is preferred.

(5) Estimated breakdown of costs including those to be funded by grantee as well as other sources.

(6) Budget and accounting system in place or proposed.

(7) Evaluation method to determine if objective(s) of the proposed activity is being accomplished.

(c) Upon receipt of a preapplication, the National Office will:

(1) Review and evaluate the preapplication and accompanying documents;

(2) Request from the Office of General Counsel (OGC), a legal determination of applicant's legal existence and authority to provide technical assistance and/or training. The legal opinion will be obtained from the Regional Attorney servicing the area where the applicant's headquarters is located; and

(3) Normally, respond to the applicant within 45 days after December 31 of each year using Form AD–622, "Notice of Preapplication Review Action," indicating the action taken on the preapplication.

(d) Applicants whose preapplications are found to be ineligible will be given notice by use of Form AD–622 and advised of their appeal rights under subpart B of part 1900 of this title.

(e) Applicants who are eligible, but do not have the priority necessary for further consideration will be notified with Form AD–622, which includes the following statements:

   "Your proposal cannot be funded within the available funds."

   "You are advised against incurring obligations which cannot be fulfilled without Agency funds."

(f) Applicants that are eligible for funding within the available funds will be provided forms and instructions for
§ 1775.14 Priority.

(a) The preapplication and supporting information will be used to determine the applicant’s priority for available funds for the Technical Assistance and Training Grant program. The following specific criteria will be considered in the competitive selection of Technical Assistance and Training Grant recipients:

1. Applicant’s demonstrated capability and past performance in providing technical assistance and/or training to rural associations.
2. The extent to which the population of the associations served have low income.
3. Applicant’s financial and if applicable, in-kind resource that will maximize use of technical assistance and/or training funds for direct staffing of activities that are delivered to the associations.
4. The extent to which the project will be cost effective, including but not limited to the ratio of proposed personnel to the cost of the project, the cost per associations served by the project, and the expected benefits from the project.
5. How well the proposal coincides with the objectives of the Agency’s Water and Waste Disposal program authorized in part 1780 of this chapter.
6. Applicants proposing to serve multi-state, regional, or nationwide areas.
7. Applicants whose timeframe for completion of the technical assistance and/or training grant project is 12 months or less.

(b) Preapplications received from local governmental-based, multi-jurisdictional organizations for the SWM grant program will be given priority within the available funds.

§ 1775.15 [Reserved]

§ 1775.16 Application processing.

(a) Upon notification on Form AD–622 that the applicant is eligible for funding, the following will be submitted to the National Office by the applicant:

1. SF–424.
2. Proposed scope of work detailing the training and/or technical assistance to be accomplished and timeframes for completion of each task.
4. Other requested information needed by the Agency to make a grant award determination.

(b) The following forms and documents will be part of the grant docket:

1. Form RD 400–1, “Equal Opportunity Agreement.”
2. Form RD 400–4, “Assurance Agreement.”
3. Grant Agreement signed by the applicant.
4. Scope of work prepared by the applicant.
5. Form RD 1940–1, “Request for Obligation of Funds.”

(c) If the applicant fails to submit the application and related material by the date shown on Form AD–622 (normally 30 days from the date of Form AD–622), the Agency may discontinue consideration of the application.

§ 1775.17 [Reserved]

§ 1775.18 Grant approval and obligation of funds.

(a) The National Office will review the application and other documents to determine whether the proposal complies with this part.

(b) All grants made under this part will be approved and obligated by the Agency Administrator or designee.

(c) The obligation of funds will be handled in accordance with part 1780 of this chapter.

(d) An executed copy of the Grant Agreement and scope of work will be sent to the applicant on the obligation date, along with a copy of Form RD
§ 1775.24 Reporting.

Standard Form (SF) 269, “Financial Status Report,” SF 272, “Federal Cash Transactions Report,” and a project performance activity report will be required of all grantees on a quarterly basis. A final project performance report will be required with the last SF 269. The final report may serve as the last quarterly report. Grantees shall constantly monitor performance to ensure that time schedules are being met, projected work by time periods is being accomplished, and other performance objectives are being achieved. All multi-state, regional, and nationwide grantees are to submit an original of each report to the National Office. Grantees serving only one State are to submit an original of each report to the State Program Official. The State Program Official will review and forward to the National Office the report with comments. The project performance reports shall include, but not be limited to, the following:

(a) A comparison of actual accomplishments to the objectives established for that period;
(b) Reasons why established objectives were not met;
(c) Problems, delays, or adverse conditions which will affect attainment of overall project objectives, prevent meeting time schedules or objectives,
or preclude the attainment of particular project work elements during established time periods. This disclosure shall be accompanied by a statement of the action taken or planned to resolve the situation; and

(d) Objectives and timetable established for the next reporting period.

§ 1775.25 Audit.

The grantee will provide an audit report prepared in accordance with §1780.47 of this chapter within 90 days after project completion.

§ 1775.26 Grant Agreement.

RUS Bulletin 1775-1 is a Grant Agreement which sets forth the procedures for making and servicing grants made under this part. Bulletins, instructions and forms referenced are for use in administering grants made under this part and are available from any USDA/Rural Development office or the Rural Utilities Service, United States Department of Agriculture, Washington, D.C. 20250-1500.

§ 1775.27 Grant servicing.

Grants will be serviced in accordance with the grant agreement and subpart E of part 1951 of this title will be followed when grants are terminated for cause.

§ 1775.28 Delegation of authority.

The authority under this part is re-delegated to the Assistant Administrator, Water and Waste, except for the discretionary authority contained in §1775.5. The Assistant Administrator, Water and Waste may redelegate the authority in this section.

§§ 1775.29–1775.99 [Reserved]

§ 1775.100 OMB control number.

The collection of information requirements contained in this part have been approved by the Office of Management and Budget and have been assigned OMB control number 0575-0123. Public reporting for this collection of information is estimated to vary from 15 minutes to 4 hours per response, with an average of 2 hours per response including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Department of Agriculture, Clearance Officer, OIRM, Room 404-W, Washington, DC 20250. and to the Office of Management and Budget, Paperwork Reduction Project (OMB 0575-0123), Washington, DC 20503.

§ 1777.1 General.

(a) This part outlines Rural Utilities Service (RUS) policies and procedures for making Water and Waste Disposal (WWD) loans and grants authorized under section 306C of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926(c)), as amended.

(b) Agency officials will maintain liaison with officials of other Federal, State, regional, and local development agencies to coordinate related programs to achieve rural development objectives.

(c) Agency officials shall cooperate with appropriate State agencies in making loans and/or grants that support State strategies for rural area development.
(d) Funds allocated in accordance with this part will be considered for use by Indian tribes within the State regardless of whether State development strategies include Indian reservations within the State’s boundaries. Indians residing on such reservations must have an equal opportunity to participate in this program.

(e) Federal statutes provide for extending the Agency’s financial programs without regard to race, color, religion, sex, national origin, marital status, age, or physical/mental handicap (provided the participant possesses the capacity to enter into legal contracts).

§ 1777.2 [Reserved]

§ 1777.3 Objective.

The objective of the Section 306C WWD Loans and Grants program is to provide water and waste disposal facilities and services to low-income rural communities whose residents face significant health risks.

§ 1777.4 Definitions.

Applicant. Entity that receives the Agency loan or grant under this part. The entities can be public bodies such as municipalities, counties, districts, authorities, or other political subdivisions of a State, and organizations operated on a not-for-profit basis such as associations, cooperatives, private corporations, or Indian tribes on Federal and State reservations, and other Federally recognized Indian tribes.

Colonia. Any identifiable community designated in writing by the State or county in which it is located; determined to be a colony on the basis of objective criteria including lack of potable water supply, lack of adequate sewage systems, and lack of decent, safe, and sanitary housing, inadequate roads and drainage; and existed and was generally recognized as a colony before October 1, 1989.

Cooperative. A cooperative formed specifically for the purpose of the installation, expansion, improvement, or operation of water supply or waste disposal facilities or systems.

Individual. Recipient of a loan or grant through the applicant to facilitate use of the applicant’s water and/or waste disposal system.

Rural areas. Includes unincorporated areas and any city or town with a population not in excess of 10,000 inhabitants according to the most recent decennial census of the United States. They can be located in any of the 50 States, the Commonwealth of Puerto Rico, the Western Pacific Territories, Marshall Islands, Federated States of Micronesia, Republic of Palau, and the U.S. Virgin Islands.

§§ 1777.5—1777.10 [Reserved]

§ 1777.11 Making, processing, and servicing loans and grants.

Unless specifically modified by this part, loans and/or grants will be made, processed, and serviced in accordance with part 1780 of this chapter.

§ 1777.12 Eligibility.

(a) The provisions of paragraphs (a) (1) and (2) of this section do not apply to a rural area recognized as a colony. Otherwise, the facility financed under this part must provide water and/or waste disposal services to rural areas of a county where, on the date preapplication is received by the Agency, the:

(1) Per capita income of the residents is not more than 70 percent of the most recent national average per capita income, as determined by the Department of Commerce; and

(2) Unemployment rate of the residents is not less than 125 percent of the most recent national average unemployment rate, as determined by the Bureau of Labor Statistics.

(b) Residents of the rural area to be served must face significant health risks due to the fact that a significant proportion of the community’s residents do not have access to, or are not served by, adequate, affordable, water and/or waste disposal systems. The file should contain documentation to support this determination.

§ 1777.13 Project priority.

Paragraphs (a) through (d) of this section indicate items and conditions which must be considered in selecting preapplications for further development. When ranking eligible
1 preapplications for consideration for limited funds, Agency officials must consider the priority items met by each preapplication and the degree to which those priorities are met.

(a) Preapplications. The preapplication and supporting information submitted with it will be used to determine applicant eligibility and the proposed project’s priority for available funds. Applicants determined ineligible will be advised of their appeal rights in accordance with 7 CFR part 11.

(b) State Office review. All preapplications will be reviewed and scored for funding priority at each State Office using RUS Bulletin 1777-2. Funds will be requested from the National Office, Attention: Water and Waste Processing, using RUS Bulletin 1777-3. Eligible applicants that cannot be funded should be advised that funds are not available and advised of their appeal rights as set forth in 7 CFR part 11.

(c) National Office. The National Office will allocate funds on a project-by-project basis as requests are received. If the amount of funds requested exceeds the amount of funds available, the total project score will be used to select projects for funding. The RUS Administrator may assign up to 35 additional points that will be considered in the total points for items such as geographic distribution of funds, severity of health risks, etc.

(d) Selection priorities. The priorities described below will be used to rate preapplications and in selecting projects for funding. Points will be distributed as indicated in paragraphs (d)(1) through (d)(5) of this section and will be used in selecting projects for funding. A copy of RUS Bulletin 1777-2, used to rate applications, should be placed in the case file for future reference.

(1) Population. The proposed project will serve an area with a rural population:
   (i) Not in excess of 1,500—30 points.
   (ii) More than 1,500 and not in excess of 3,000—20 points.
   (iii) More than 3,000 and not in excess of 5,500—10 points.
   (iv) More than 5,500—5 points.

(2) Income. The median household income of population to be served by the proposed project is:
   (i) Not in excess of 50 percent of the statewide nonmetropolitan median household income—40 points.
   (ii) More than 50 percent and not in excess of 60 percent of the statewide nonmetropolitan median household income—20 points.
   (iii) More than 60 percent and not in excess of 70 percent of the statewide nonmetropolitan median household income—10 points.

(3) Joint financing. The amount of joint financing committed to the proposed project is:
   (i) Twenty percent or more private, local, or State funds except Federal funds channeled through a State agency—10 points.
   (ii) Five to 19 percent private, local, or State funds except Federal funds channeled through a State agency—5 points.

(4) Colonia. (See definition in §1777.4). The proposed project will provide water and/or waste disposal services to the residents of a colonia—50 points.

(5) Discretionary. In certain cases, the State Program Official may assign up to 15 points for items such as natural disaster, to improve compatibility/coordination between the Agency’s and other agencies’ selection systems, to assist those projects that are the most cost effective, high unemployment rate, severity of health risks, etc. A written justification must be prepared and attached to RUS Bulletin 1777-2 each time these points are assigned.

§§ 1777.14—1777.20 [Reserved]

§ 1777.21 Use of funds.

(a) Applicant. Funds may be used to:

(1) Construct, enlarge, extend, or otherwise improve community water and/or waste disposal systems. Otherwise improve would include extending service lines to and/or connecting residence’s plumbing to the system.

(2) Make loans and grants to individuals for extending service lines to and/or connecting residences to the applicant’s system. The approval official must determine that this is a practical and economical method of connecting individuals to the community water
§ 1777.43 Bulletins.

(a) The amount of loan and grant funds approved by the Agency will be based on the need shown in the application and an implementation plan submitted by the applicant. The implementation plan will include such things as: purpose, how funds will be used, proposed application process, construction requirements, control and disbursement of funds, etc. The implementation plan will be attached to RUS Bulletin 1777-1.

(b) RUS Bulletin 1777-1 is a Memorandum of Agreement which sets forth the procedures and regulations for making and servicing loans and grants made by applicants to individuals. The State Program Official is authorized to enter into a Memorandum of Agreement with any applicant providing loans and/or grants to individuals. The Memorandum of Agreement can be amended to comply with State law and recommendations by the Office of General Counsel. It may also be amended to eliminate references to loans and/or grants if no loan and/or grant is involved. The State Program Official is responsible for:

1. Ensuring that all provisions of the Agreement are understood.
2. Determining that the applicant has the ability to make and service loans and/or grants in the manner outlined in the Agreement.

(c) Agency funds remaining after providing individual loans and/or grants will be returned to the Agency. The funds should be disbursed to individuals within 1 year from the date water and/or waste disposal service is available to the individuals. The State Program Official can make an exception to this 1 year requirement if written justification is provided by the applicant.

§ 1777.42 Delegation of authority.

The State Program Official is responsible for the overall implementation of the authorities contained in this part and may delegate any such authority to appropriate Agency employees.

§ 1777.43 Bulletins.

RUS Bulletin 1780-12 referenced in part 1780 of this chapter and RUS Bulletin 1777-1, 1777-2 and 1777-3 are for use in administering loans and/or grants made under this part. Bulletins, instructions and forms are available from any USDA/Rural Development office or the Rural Utilities Service, United States Department of Agriculture, Washington, DC 20250-1500.
PART 1778—EMERGENCY COMMUNITY WATER ASSISTANCE GRANTS

Sec. 1778.1 General.
1778.2 [Reserved]
1778.3 Objective.
1778.4 Definitions.
1778.5 [Reserved]
1778.6 Eligibility.
1778.7 Project priority.
1778.8 [Reserved]
1778.9 Uses.
1778.10 Restrictions.
1778.11 Maximum grants.
1778.12 [Reserved]
1778.13 Set-aside.
1778.14 Other considerations.
1778.15—1778.20 [Reserved]
1778.21 Application processing.
1778.22 Planning development and procurement.
1778.23 Grant closing and disbursement of funds.
1778.24—1778.30 [Reserved]
1778.31 Performing development.
1778.32 Grant cancellation.
1778.33 [Reserved]
1778.34 Grant servicing.
1778.35 Subsequent grants.
1778.36 [Reserved]
§ 1778.2 [Reserved]

§ 1778.3 Objective.

The objective of the Emergency Community Water Assistance Grant Program is to assist the residents of rural areas that have experienced a significant decline in quantity or quality of water to obtain adequate quantities of water that meet the standards set by the Safe Drinking Water Act (42 U.S.C. 300f et seq.) (SDWA).

§ 1778.4 Definitions.

Emergency, Occurrence of an incident such as, but not limited to, a drought, earthquake, flood, hurricane, disease outbreak, or chemical spill.

Rural areas. Includes any area in any city or town with a population not in excess of 10,000 inhabitants according to the most recent decennial census of the United States, located in any of the fifty States, the Commonwealth of Puerto Rico, the Western Pacific Territories, Marshall Islands, Federated States of Micronesia, Republic of Palau, and the U.S. Virgin Islands.

Significant decline in quality. A significant decline in quality of potable water is where the present community source or delivery system does not meet, as a result of an emergency, the current SDWA requirements. For a private source or delivery system a significant decline in quality is where the water is no longer potable as a result of an emergency.

Significant decline in quantity. A significant decline in the quantity is caused by a disruption of the potable water supply by an emergency. The disruption in quantity of water prevents the present source or delivery system from supplying potable water needs to rural residents. This would not include a decline in excess water capacity.

§ 1778.5 [Reserved]

§ 1778.6 Eligibility.

(a) Grants may be made to public bodies and private nonprofit corporations serving rural areas. Public bodies include counties, cities, townships, incorporated towns and villages, boroughs, authorities, districts, and other political subdivisions of a State. Public bodies also includes Indian tribes on Federal and State reservations and other Federally recognized Indian Tribal groups in rural areas.

(b) In the case of grants made to alleviate a significant decline in quantity or quality of water available from the water supplies of rural residents, the applicant must demonstrate that the decline occurred within two years of the date the application was filed with the Agency. This would not apply to grants made for repairs, partial replacement, or significant maintenance on an established water system.

§ 1778.7 Project priority.

Paragraphs (a) through (d) of this section indicate items and conditions which must be considered in selecting applications for further development. When ranking eligible applications for consideration for limited funds, Agency officials must consider the priority items met by each application and the degree to which those priorities are met.

(a) Applications. The application and supporting information submitted with it will be used to determine the proposed project’s priority for available funds.

(b) State Office review. All applications will be reviewed and scored for funding priority using RUS Bulletin 1778-1. The State Program Official will request funds from the National Office, Attention: Assistant Administrator, Water and Waste, using RUS Bulletins 1778-1 and 1778-2. If an application cannot be funded, the State Program Official will be notified. Eligible applicants that cannot be funded should be advised that funds are not available.

(c) National Office review. Each year all funding requests will be reviewed by the National Office starting November 1 and will continue as long as funds are available except for the first year in which funds are made available for this grant program. A review of funding requests the first year will start 30 days after funds are made available. Projects selected for funding will be considered based on the priority criteria and available funds. Projects must compete on a national basis for available funds, and the National Office will allocate funds to State offices on a project by project basis.
§ 1778.8 Selection priorities. The priorities described below will be used by the State Program Official to rate applications and by the Assistant Administrator of Water and Waste to select projects for funding. Points will be distributed as indicated in paragraphs (d)(1) through (d)(5) of this section and will be considered in selecting projects for funding. A copy of RUS Bulletins 1778-1 and 1778-2 used to rate applications, should be placed in the case file for future reference.

(1) Population. The proposed project will serve an area with a rural population:
   (i) Not in excess of 1,500—30 points.
   (ii) More than 1,500 and not in excess of 3,000—20 points.
   (iii) More than 3,000 and not in excess of 5,000—15 points.

(2) Income. The median household income of population to be served by the proposed project is:
   (i) Not in excess of 70% of the statewide nonmetropolitan median household income—30 points.
   (ii) More than 70% and not in excess of 80% of the statewide nonmetropolitan median household income—20 points.
   (iii) More than 80% and not in excess of 90% of the statewide nonmetropolitan median household income—10 points.
   (iv) Over 90% of the statewide nonmetropolitan median household income—0 points.

(3) Significant decline. Points will only be assigned for one of the following paragraphs when the primary purpose of the proposed project is to correct a significant decline in the:
   (i) Quantity of water available from private individually owned wells or other individual sources of water—30 points; or
   (ii) Quantity of water available from an established system’s source of water—20 points; or
   (iii) Quality of water available from private individually owned wells or other individual sources of water—30 points; or
   (iv) Quality of water available from an established system’s source of water—20 points.

(4) Acute shortage. Grants made in accordance with §1778.11(b) to assist an established water system remedy an acute shortage of quality water or correct a significant decline in the quantity or quality of water that is available—10 points.

(5) Discretionary. In certain cases the Administrator may assign up to 30 points for items such as geographic distribution of funds, rural residents hauling water, severe contamination levels, etc.

§ 1778.9 Uses.

Grant funds may be used for the following purposes:

(a) Waterline extensions from existing systems.
(b) Construction of new waterlines.
(c) Repairs to an existing system.
(d) Significant maintenance to an existing system.
(e) Construction of new wells, reservoirs, transmission lines, treatment plants, and other sources of water.
(f) Equipment replacement.
(g) Connection and/or tap fees.
(h) Pay costs that were incurred within six months of the date an application was filed with the Agency to correct an emergency situation that would have been eligible for funding under this part.
(i) Any other appropriate purpose such as legal fees, engineering fees, recording costs, environmental impact analyses, archaeological surveys, possible salvage or other mitigation measures, planning, establishing or acquiring rights associated with developing sources of, treating, storing, or distributing water.

(j) Assist rural water systems to comply with the requirements of the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.) (FWPCA) or the SDWA when such failure to comply is directly related to a recent decline in quality of potable water. This would not apply to changes in the requirements of FWPCA or SDWA.

§ 1778.10 Restrictions.

(a) Grant funds may not be used to:
(1) Assist any city or town with a population in excess of 10,000 inhabitants according to the most recent decennial census of the United States.
(2) Assist a rural area that has a median household income in excess of the statewide nonmetropolitan median household income according to the most recent decennial census of the United States.

(3) Finance facilities which are not modest in size, design, cost, and are not directly related to correcting the potable water quantity or quality problem.

(4) Pay loan or grant finder’s fees.

(5) Pay any annual recurring costs that are considered to be operational expenses.

(6) Pay rental for the use of equipment or machinery owned by the rural community.

(7) Purchase existing systems.

(8) Refinance existing indebtedness, except for short-term debt incurred in accordance with §1778.9(h).

(9) Make reimbursement for projects developed with other grant funds.

(10) Finance facilities that are not for public use.

(b) Nothing in paragraph (a)(1) of this section shall preclude rural areas from submitting joint proposals for assistance under this part. Each entity applying for financial assistance under this part to fund their share of a joint project will be considered individually.

§ 1778.11 Maximum grants.

(a) Grants made to alleviate a significant decline in quantity or quality of water available from the water supplies in rural areas that occurred within two years of filing an application with the Agency cannot exceed $500,000.

(b) Grants made for repairs, partial replacement, or significant maintenance on an established system to remedy an acute shortage or significant decline in the quality or quantity of potable water cannot exceed $75,000.

(c) Grants under this part, subject to paragraphs (a) and (b) of this section, shall be made for 100 percent of eligible project costs.

§ 1778.12 [Reserved]

§ 1778.13 Set-aside.

(a) At least 70 percent of all grants made under these grant programs shall be for projects funded in accordance with §1778.11(a).

(b) At least 50 percent of the funds appropriated for this grant program shall be allocated to rural areas with populations not in excess of 3,000 inhabitants according to the most recent decennial census of the United States.

§ 1778.14 Other considerations.

(a) Civil rights compliance requirements. All grants made under this part are subject to Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d et seq.), as outlined in subpart E of part 1901 of this title.

(b) Environmental requirements. All projects must have appropriate environmental reviews in accordance with RUS requirements.

(c) Uniform Relocation and Real Property Acquisition Policies Act (42 U.S.C. 4601 et seq.) All projects must comply with the requirements set forth in 7 CFR part 21.

(d) Flood and mudslide hazard area precautions. If the project is located in a flood or mudslide area, then flood or mudslide insurance must be provided as required in subpart A of part 1806 of this title (RD Instruction 426.2).

(e) Governmentwide debarment and suspension (nonprocurement) and requirements for drug-free work place. All projects must comply with the requirements set forth in the U.S. Department of Agriculture regulations 7 CFR part 3017 and RD Instruction 1940-M.

(f) Intergovernmental review. All projects funded under this part are subject to Executive Order 12372 (3 CFR, 1983 Comp., p. 197), which requires intergovernmental consultation with State and local officials. These requirements are set forth in U.S. Department of Agriculture regulations 7 CFR part 3015, subpart V, and RD Instruction 1940-J.

§§ 1778.15–1778.20 [Reserved]

§ 1778.21 Application processing.

(a) To the extent possible, an application under this part will be approved or disapproved within 60 days of the date that a complete application and all related material is submitted to the Agency.

(b) The material submitted with the application should include the Preliminary Engineer Report, population and
§ 1778.22 Planning development and procurement.

Planning development and procurement for grants made under this part will be in accordance with subpart C of part 1780 of this chapter. A certification should be obtained from the State agency or the Environmental Protection Agency if the State does not have primacy, stating that the proposed improvements will be in compliance with requirements of the SDWA.

§ 1778.23 Grant closing and disbursement of funds.

(a) Grants will be closed in accordance with §1780.45 of this chapter.

(b) RUS Bulletin 1780-12, “Water or Waste Grant Agreement,” will be executed by all applicants. State Program Officials are authorized to execute the agreement on behalf of the Agency.

(c) The grant will be considered closed on the date RUS Bulletin 1780-12 is signed by the Agency. The Finance Office will be notified of the grant closing date. The Agency will retain the original of the Grant Agreement.

(d) The Agency’s policy is not to disburse grant funds from the Treasury until they are actually needed by the applicant. Grant funds will be disbursed by using multiple advances.

§§ 1778.24–1778.30 [Reserved]

§ 1778.31 Performing development.

(a) Applicable provisions of subpart C of part 1780 of this chapter will be followed in performing development for grants made under this part.

(b) After filing an application in accordance with §1778.21 and when immediate action is necessary, the State Program Official may concur in an applicant’s request to proceed with construction before funds are obligated provided the RUS environmental requirements are complied with. The applicant must be advised in writing that:

(1) Any authorization to proceed or any concurrence in bid awards, contract concurrence, or other project development activity, is not a commitment by the Agency to provide grant funds under this part.

(2) The Agency is not liable for any debt incurred by the applicant in the median household income of the area to be served, description of project, and nature of emergency that caused the problem(s) being addressed by the project. The documentation must clearly show that the applicant has had a significant decline in the quantity and/or quality of potable water or an acute shortage of potable water and the proposed project will eliminate the problem. For projects to be funded in accordance with §1778.11(a), evidence must be furnished that a significant decline in quantity or quality occurred within two years of filing the application with the Agency.

(c) The processing office should assist the applicant in application assembly and processing.

(d) Appropriate application review and approval procedures outlined in subpart B of part 1780 of this chapter.

(e) Each application for assistance will be carefully reviewed in accordance with the priorities established in §1778.7. A priority rating will be assigned to each application by the State Program Official.

(f) When the National Office has allocated funds to the State for a project, applicable provisions outlined in subpart B of part 1780 of this chapter will be followed in preparation of the grant docket. This would include development of an operating budget showing that the applicant can meet all its obligations and provide the intended services.

(g) When favorable action will not be taken on an application, the applicant will be notified in writing by the State Program Official of the reasons why the request was not favorably considered. Notification to the applicant will state that a review of this decision by the Agency may be requested by the applicant in accordance with 7 CFR part 11.

(h) State Program Officials are authorized to approve grants made in accordance with this part and RUS Staff Instruction 1780-1.

(i) Funds will be obligated and approval announcement made in accordance with the provisions of subpart B of part 1780 of this chapter.
event that funds are not provided under this part.

§ 1778.32 Grant cancellation.

The State Program Official may prepare and execute Form RD 1940-10, "Cancellation of U.S. Treasury Check and/or Obligation," in accordance with the Forms Manual Insert. If the docket has been forwarded to OGC, that office should receive a copy of Form RD 1940-10. The applicant’s attorney and engineer may be provided a copy of Form RD 1940-10. A copy should also be sent to the National Office, Attention: Water and Waste Processing.

§ 1778.33 [Reserved]

§ 1778.34 Grant servicing.

(a) Grants will be serviced in accordance with §1951.215 of subpart E of part 1951 of this title and subpart O of part 1951 of this title.

(b) The grantee will provide an audit report in accordance with §1780.47 of this chapter.

§ 1778.35 Subsequent grants.

Subsequent grants will be processed in accordance with the requirements set forth in this part. The initial and subsequent grants made to complete a previously approved project must comply with the maximum grant requirements set forth in §1778.11.

§ 1778.36 [Reserved]

§ 1778.37 Forms, Instructions and Bulletins.

Bulletins, instructions and forms referenced are for use in administering grants made under this part and are available from any USDA/Rural Development office or the Rural Utilities Service, United States Department of Agriculture, Washington, DC 20250-1500.

§§ 1778.38—1778.99 [Reserved]

§ 1778.100 OMB control number.

The reporting and recordkeeping requirements contained in this part have been approved by the Office of Management and Budget and assigned OMB control number 0575-0074. Public reporting burden for this collection of information is estimated to average two hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Department of Agriculture, Clearance Officer, OIRM, Room 404-W, Washington, DC 20250; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

PART 1780—WATER AND WASTE LOANS AND GRANTS

Subpart A—General Policies and Requirements

Sec. 1780.1 General.
1780.2 Purpose.
1780.3 Definitions and grammatical rules of construction.
1780.4 Availability of forms and regulations.
1780.5 [Reserved]
1780.6 Application information.
1780.7 Eligibility.
1780.8 [Reserved]
1780.9 Eligible loan and grant purposes.
1780.10 Limitations.
1780.11 Service area requirements.
1780.12 [Reserved]
1780.13 Rates and terms.
1780.14 Security.
1780.15 Other Federal, State, and local requirements.
1780.16 [Reserved]
1780.17 Selection priorities and process.
1780.18 Allocation of program funds.
1780.19 Public information.
1780.20—1780.23 [Reserved]
1780.24 Approval authorities.
1780.25 Exception authority.

Subpart B—Loan and Grant Application Processing

1780.31 General.
1780.32 Timeframes for application processing.
1780.33 Application requirements.
1780.34 [Reserved]
1780.35 Processing office review.
1780.36 Approving official review.
1780.37 Applications determined ineligible.
1780.38 [Reserved]
1780.39 Application processing.
1780.40 [Reserved]
1780.41 Loan or grant approval.
§ 1780.1 General.

(a) This part outlines the policies and procedures for making and processing direct loans and grants for water and waste projects. The Rural Utilities Service (RUS) shall cooperate fully with State and local agencies in making loans and grants to assure maximum support to the State strategy for rural development. Agency officials and their staffs shall maintain coordination and liaison with State agency and substate planning districts.

(b) The income data used in this part to determine median household income must be that which most accurately reflects the income of the service area. The median household income of the service area and the nonmetropolitan median household income of the State will be determined from income data from the most recent decennial census of the United States. If there is reason to believe that the census data is not an accurate representation of the median household income within the area to be served, the reasons will be documented and the applicant may furnish, or the Agency may obtain, additional information regarding such median household income. Information will consist of reliable data from local, regional, State or Federal sources or from a survey conducted by a reliable impartial source. The nonmetropolitan median household income of the State may only be updated on a national basis by the RUS National Office. This will be done only when median household income data for the same year for all Bureau of the Census areas is available from the Bureau of the Census or other reliable sources. Bureau of the Census areas would include areas such as: Counties, County Subdivisions, Cities, Towns, Townships, Boroughs, and other places.

(c) RUS debt instruments will require an agreement that if at any time it shall appear to the Government that the borrower is able to refinance the amount of the indebtedness to the Government then outstanding, in whole or
in part, by obtaining a loan for such purposes from responsible cooperative or private credit sources, at reasonable rates and terms for loans for similar purposes and periods of time, the borrower will, upon request of the Government, apply for and accept such loan in sufficient amount to repay the Government and will take all such actions as may be required in connection with such loan.

(d) Funds allocated for use under this part are also for the use of Indian tribes within the State, regardless of whether State development strategies include Indian reservations within the State’s boundaries. Native Americans residing on such reservations must have equal opportunity to participate in the benefits of these programs as compared with other residents of the State. Such tribes might not be subject to State and local laws or jurisdiction. However, any requirements of this part that affect applicant eligibility, the adequacy of RUS’s security, or the adequacy of service to users of the facility and all other requirements of this part must be met.

(e) RUS financial programs must be extended without regard to race, color, religion, sex, national origin, marital status, age, or physical or mental handicap.

(f) Any processing or servicing activity conducted pursuant to this part involving authorized assistance to Agency employees, members of their families, known close relatives, or business or close personal associates, is subject to the provisions of subpart D of part 1900 of this title. Applicants for assistance are required to identify any known relationship or association with a RUS employee.

(g) Water and waste facilities will be designed, installed, and operated in accordance with applicable laws which include but are not limited to the Safe Drinking Water Act, Clean Water Act and the Resource Conservation and Recovery Act.

(h) RUS financed facilities will be consistent with any current development plans of State, multi-jurisdictional areas, counties, or municipalities in which the proposed project is located.

(i) Each RUS financed facility will be in compliance with appropriate State or Federal agency regulations which have control of the appropriation, diversion, storage and use of water and disposal of excess water.

(j) Water and waste applicants must demonstrate that they possess the financial, technical, and managerial capability necessary to consistently comply with pertinent Federal and State laws and requirements. In developing water and waste systems, applicants must consider alternatives of ownership, system design, and the sharing of services.

(k) Applicants should be aware of and comply with other Federal statute requirements including but not limited to:

(1) Section 504 of the Rehabilitation Act of 1973. Under section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794 et seq.), no handicapped individual in the United States shall, solely by reason of their handicap, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving RUS financial assistance;

(2) Civil Rights Act of 1964. All borrowers are subject to, and facilities must be operated in accordance with, title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d et seq.) and subpart 1901 of this title, particularly as it relates to conducting and reporting of compliance reviews. Instruments of conveyance for loans and/or grants subject to the Act must contain the covenant required by §1901.202(e) of this title;

(3) The Americans with Disabilities Act (ADA) of 1990. This Act (42 U.S.C. 12101 et seq.) prohibits discrimination on the basis of disability in employment, State and local government services, public transportation, public accommodations, facilities, and telecommunications. Title II of the Act applies to facilities operated by State and local public entities which provides services, programs and activities. Title III of the Act applies to facilities owned, leased, or operated by private entities which accommodate the public; and
§ 1780.2 Purpose.

Provide loan and grant funds for water and waste projects serving the most financially needy communities. Financial assistance should result in reasonable user costs for rural residents, rural businesses, and other rural users.

§ 1780.3 Definitions and grammatical rules of construction.

(a) Definitions. For the purposes of this part:

Agency means the Rural Utilities Service and any United States Department of Agriculture (USDA) employee acting on behalf of the Rural Utilities Service in accordance with appropriate delegations of authority.

Agency identified target areas means an identified area in the State strategic plan or other plans developed by the Rural Development State Director.

Approval official means the USDA official at the State level who has been delegated the authority to approve loans or grants.

Equivalent Dwelling Unit (EDU) means the level of service provided to a typical rural residential dwelling.

Parity bonds means bonds which have equal standing with other bonds of the same Issuer.

Poverty line means the level of income for a family of four, as defined in section 673(2) of the Community Services Block Grant Act (42 U.S.C. 9902(2)).

Processing office means the office designated by the State program official to accept and process applications for water and waste disposal assistance.

Project means all activity that an applicant is currently undertaking to be financed in whole or part with RUS assistance.

Protective advances are payments made by a lender for items such as insurance or taxes in order to preserve and protect the security or the lien or priority of the lien securing the loan.

Rural and rural areas means any area not in a city or town with a population in excess of 10,000 inhabitants, according to the latest decennial census of the United States.

Rural Development means the mission area of the Under Secretary for Rural Development. Rural Development State and local offices will administer this water and waste program on behalf of the Rural Utilities Service.

Service area means the area reasonably expected to be served by the project.

Servicing office means the office designated by the State program official to service water and waste disposal loans and grants.

Similar system cost means the average annual EDU user cost of a system within a community having similar economic conditions and being served by the same type of established system. Similar system cost shall include all charges, taxes, and assessments attributable to the system including debt service, reserves and operation and maintenance costs.

State program official means the USDA official at the State level who has been delegated the responsibility of administering the water and waste disposal programs under this regulation for a particular State or States.

Statewide nonmetropolitan median household income means the median household income of all rural areas of a state.

(b) Rules of grammatical construction. Unless the context otherwise indicates, “includes” and “including” are not limiting, and “or” is not exclusive. The terms defined in paragraph (a) of this section include the plural as well as the singular, and the singular as well as the plural.
§ 1780.4 Availability of forms and regulations.

Information about the availability of forms, instructions, regulations, bulletins, OMB Circulars, Treasury Circulars, standards, documents and publications cited in this part is available from any USDA/Rural Development office or the Rural Utilities Service, United States Department of Agriculture, Washington, DC 20250-1500.

§ 1780.5 [Reserved]

§ 1780.6 Application information.

(a) The Rural Development State Director in each State will determine the office and staff that will be responsible for delivery of the program (processing office) and designate an approving office. Applications will be accepted by the processing office.

(b) The applicant’s governing body should designate one person to act as contact person with the Agency during loan and grant processing. Agency personnel should make every effort to involve the applicant’s contact person when meeting with the applicant’s professional consultants or agents.

§ 1780.7 Eligibility.

Facilities financed by water and waste disposal loans or grants must serve rural areas.

(a) Eligible applicant. An applicant must be:

(1) A public body, such as a municipality, county, district, authority, or other political subdivision of a state, territory or commonwealth;

(2) An organization operated on a not-for-profit basis, such as an association, cooperative, or private corporation. The organization must be an association controlled by a local public body or bodies, or have a broadly based ownership by or membership of people of the local community; or

(3) Indian tribes on Federal and State reservations and other Federally recognized Indian tribes.

(b) Eligible facilities. Facilities financed by RUS may be located in non-rural areas. However, loan and grant funds may be used to finance only that portion of the facility serving rural areas, regardless of facility location.

(c) Eligible projects. (1) Projects must serve a rural area which, if such project is completed, is not likely to decline in population below that for which the project was designed.

(2) Projects must be designed and constructed so that adequate capacity will or can be made available to serve the present population of the area to the extent feasible and to serve the reasonably foreseeable growth needs of the area to the extent practicable.

(3) Projects must be necessary for orderly community development and consistent with a current comprehensive community water, waste disposal, or other current development plan for the rural area.

(d) Credit elsewhere. Applicants must certify in writing and the Agency shall determine and document that the applicant is unable to finance the proposed project from their own resources or through commercial credit at reasonable rates and terms.

(e) Legal authority and responsibility. Each applicant must have or will obtain the legal authority necessary for owning, constructing, operating, and maintaining the proposed facility or service and for obtaining, giving security for, and repaying the proposed loan. The applicant shall be responsible for operating, maintaining, and managing the facility, and providing for its continued availability and use at reasonable user rates and charges. This responsibility shall be exercised by the applicant even though the facility may be operated, maintained, or managed by a third party under contract or management agreement. Guidance for preparing a management agreement is available from the Agency. Such contracts, management agreements, or leases must not contain options or other provisions for transfer of ownership.

(f) Economic feasibility. All projects financed under the provisions of this section must be based on taxes, assessments, income, fees, or other satisfactory sources of revenues in an amount sufficient to provide for facility operation and maintenance, reasonable reserves, and debt payment. If the primary use of the facility is by business and the success or failure of the facility is dependent on the business, then
§ 1780.8

the economic viability of that business must be assessed.

(g) Federal Debt Collection Act of 1990 (28 U.S.C. 3001 et seq.). An outstanding judgment obtained by the United States in a Federal Court (other than in the United States Tax Court), which has been recorded, shall cause the applicant to be ineligible to receive a loan or grant until the judgment is paid in full or otherwise satisfied.

(h) Expanded eligibility for timber-dependent communities in Pacific Northwest. In the Pacific Northwest, defined as an area containing national forest covered by the Federal document entitled, “Forest Plan for a Sustainable Economy and a Sustainable Environment,” dated July 1, 1993, the population limits contained in §1780.3(a) are expanded to include communities with not more than 25,000 inhabitants until September 30, 1998, if:

(1) Part or all of the community lies within 100 miles of the boundary of a national forest covered by the Federal document entitled, “Forest Plan for a Sustainable Economy and a Sustainable Environment,” dated July 1, 1993; and

(2) The community is located in a county in which at least 15 percent of the total primary and secondary labor and proprietor income is derived from forestry, wood products, or forest-related industries such as recreation and tourism.

§ 1780.9 [Reserved]

§ 1780.9 Eligible loan and grant purposes.

Loan and grant funds may be used only for the following purposes:

(a) To construct, enlarge, extend, or otherwise improve rural water, sanitary sewage, solid waste disposal, and storm wastewater disposal facilities.

(b) To construct or relocate public buildings, roads, bridges, fences, or utilities, and to make other public improvements necessary for the successful operation or protection of facilities authorized in paragraph (a) of this section.

(c) To relocate private buildings, roads, bridges, fences, or utilities, and other private improvements necessary for the successful operation or protection of facilities authorized in paragraph (a) of this section.

(d) For payment of other utility connection charges as provided in service contracts between utility systems.

(e) When a necessary part of the project relates to those facilities authorized in paragraphs (a), (b), (c) or (d) of this section the following may be considered:

(1) Loan or grant funds may be used for:

(i) Reasonable fees and costs such as: legal, engineering, administrative services, fiscal advisory, recording, environmental analyses and surveys, possible salvage or other mitigation measures, planning, establishing or acquiring rights;

(ii) Costs of acquiring interest in land; rights, such as water rights, leases, permits, rights-of-way; and other evidence of land or water control or protection necessary for development of the facility;

(iii) Purchasing or renting equipment necessary to install, operate, maintain, extend, or protect facilities;

(iv) Cost of additional applicant labor and other expenses necessary to install and extend service; and

(v) In unusual cases, the cost for connecting the user to the main service line.

(2) Only loan funds may be used for:

(i) Interest incurred during construction in conjunction with multiple advances or interest on interim financing;

(ii) Initial operating expenses, including interest, for a period ordinarily not exceeding one year when the applicant is unable to pay such expenses;

(iii) The purchase of existing facilities when it is necessary either to improve service or prevent the loss of service;

(iv) Refinancing debts incurred by, or on behalf of, an applicant when all of the following conditions exist:

(A) The debts being refinanced are a secondary part of the total loan;

(B) The debts were incurred for the facility or service being financed or any part thereof; and

(C) Arrangements cannot be made with the creditors to extend or modify the terms of the debts so that a sound basis will exist for making a loan; and
§ 1780.10 Limitations.

(a) Loan and grant funds may not be used to finance:

(1) Facilities which are not modest in size, design, and cost;

(2) Loan or grant finder’s fees;

(3) The construction of any new combined storm and sanitary sewer facilities;

(4) Any portion of the cost of a facility which does not serve a rural area;

(5) That portion of project costs normally provided by a business or industrial user, such as wastewater pretreatment, etc.;

(6) Rental for the use of equipment or machinery owned by the applicant;

(7) For other purposes not directly related to operating and maintenance of the facility being installed or improved; and

(8) A judgment which would disqualify an applicant for a loan or grant as provided for in §1780.7(b).

(b) Grant funds may not be used to:

(1) Reduce EDU costs to a level less than similar system cost;

(2) Pay any costs of a project when the median household income of the

(v) Prepayment of costs for which RUS grant funds were obligated.

(3) Grant funds may be used to re-store loan funds used to prepay grant obligated costs.

(f) Construction incurred before loan or grant approval.

(1) Funds may be used to pay obligations for eligible project costs incurred before loan or grant approval if such requests are made in writing by the applicant and the Agency determines that:

(i) Compelling reasons exist for in-curing obligations before loan or grant approval;

(ii) The obligations will be incurred for authorized loan or grant purposes; and

(iii) The Agency’s authorization to pay such obligations is on the condition that it is not committed to make the loan or grant; it assumes no re-sponsibility for any obligations in-curred by the applicant; and the appli-cant must subsequently meet all loan or grant approval requirements, includ-ing environmental and contracting re-quirements.

(2) If construction is started without Agency approval, post-approval in ac-cordance with this section may be con-sidered, provided the construction meets applicable requirements includ-ing those regarding approval and envi-ronmental matters.

(g) Water or sewer service may be provided through individual installa-tions or small clusters of users within an applicant’s service area. The ap-proval official should consider items such as: quantity and quality of the in-dividual installations that may be de-veloped; cost effectiveness of the indi-vidual facility compared with the ini-tial and long term user cost on a cen-tral system; health and pollution prob-lems attributable to individual facili-ties; operational or management prob-lems peculiar to individual installa-tions; and permit and regulatory agen-cy requirements.

(1) Applicants providing service through individual facilities must meet the eligibility requirements in §1780.7.

(2) The Agency must approve the form of agreement between the appli-cant and individual users for the in-stallation, operation, maintenance and payment for individual facilities.

(3) If taxes or assessments are not pledged as security, applicants provid-ing service through individual facili-ties must obtain security necessary to assure collection of any sum the indi-vidual user is obligated to pay the appli-cant.

(4) Notes representing indebtedness owed the applicant by a user for an indi-vidual facility will be scheduled for payment over a period not to exceed the useful life of the individual facility or the RUS loan, whichever is shorter. The interest rate will not exceed the interest rate charged the applicant on the RUS indebtedness.

(5) Applicants providing service through individual or cluster facilities must obtain:

(i) Easements for the installation and ingress to and egress from the facility if determined necessary by RUS; and

(ii) An adequate method for denying service in the event of nonpayment of user fees.
§ 1780.11 Service area requirements.

(a) All facilities financed under the provisions of this part shall be for public use. The facilities will be installed so as to serve any potential user within the service area who desires service and can be feasibly and legally served. This does not preclude:

(1) Financing or constructing projects in phases when it is not practical to finance or construct the entire project at one time; and

(2) Financing or constructing facilities where it is not economically feasible to serve the entire area, provided economic feasibility is determined on the basis of the entire system and not by considering the cost of separate extensions to or parts thereof; the applicant publicly announces a plan for extending service to areas not initially receiving service from the system; and potential users located in the areas not to be initially served receive written notice from the applicant that service will not be provided until such time as it is economically feasible to do so.

(b) Should the Agency determine that inequities exist within the applicants service area for the same type service proposed (i.e., water or waste disposal) such inequities will be remedied by the applicant prior to loan or grant approval or included as part of the project. Inequities are defined as unjustified variations in availability, adequacy or quality of service. User rate schedules for portions of existing systems that were developed under different financing, rates, terms or conditions do not necessarily constitute inequities.

(c) Developers are normally expected to provide utility-type facilities in new or developing areas in compliance with appropriate State statutes. RUS financing will be considered to an eligible applicant only in such cases when failure to complete development would result in an adverse economic condition for the rural area (not the community being developed); the proposal is necessary to the success of a current area development plan; and loan repayment can be assured by:

(1) The applicant already having sufficient assured revenues to repay the loan; or

(2) Developers providing a bond or escrowed security deposit as a guaranty sufficient to meet expenses attributable to the area in question until a sufficient number of the building sites are occupied and connected to the facility to provide enough revenues to meet operating, maintenance, debt service, and reserve requirements. Such guarantees from developers will meet the requirements in §1780.39(c)(4)(ii); or

(3) Developers paying cash for the increased capital cost and any increased operating expenses until the developing area will support the increased costs; or

(4) The full faith and credit of a public body where the debt is evidenced by general obligation bonds; or

(3) Pay project costs when other loan funding for the project is not at reasonable rates and terms; and

(4) Pay project costs when other funding is a guaranteed loan obtained in accordance with subpart I of part 1980 of this title.

(c) Grants may not be made in excess of the following percentages of the RUS eligible project development costs. Facilities previously installed will not be considered in determining the development costs.

(1) 75 percent when the median household income of the service area is below the higher of the poverty line or 80% of the state nonmetropolitan median income and the project is necessary to alleviate a health or sanitary problem.

(2) 45 percent when the median household income of the service area exceeds the 80 percent requirements described in paragraph (c)(1) of this section but is not more than 100 percent of the statewide nonmetropolitan median household income.

(3) Applicants are advised that the percentages contained in paragraphs (c)(1) and (c)(2) of this section are maximum amounts and may be further limited due to availability of funds or the grant determination procedures contained in §1780.35(b).
§ 1780.13 Rates and terms.

(a) General. (1) Each loan will bear interest at the rate prescribed in RD Instruction 440.1, exhibit B. The interest rates will be set by the Agency for each quarter of the fiscal year. All rates will be adjusted to the nearest one-eighth of one per centum. The rate will be the lower of the rate in effect at the time of loan approval or the rate in effect at the time of loan closing unless the applicant otherwise chooses.

(2) If the interest rate is to be that in effect at loan closing on a loan involving multiple advances of RUS funds using temporary debt instruments, the interest rate charged shall be that in effect on the date when the first temporary debt instrument is issued.

(b) Poverty rate. The poverty interest rate will not exceed 5 per centum per annum. All poverty rate loans must comply with the following conditions:

(1) The primary purpose of the loan is to upgrade existing facilities or construct new facilities required to meet applicable health or sanitary standards; and

(2) The median household income of the service area is below the higher of the poverty line, or 80 percent of the Statewide nonmetropolitan median household income.

(c) Intermediate rate. The intermediate interest rate will be set at the poverty rate plus one-half of the difference between the poverty rate and the market rate, not to exceed 7 percent per annum. It will apply to loans that do not meet the requirements for the poverty rate and for which the median household income of the service area is not more than 100 percent of the nonmetropolitan median household income of the State.

(d) Market rate. The market interest rate will be set using as guidance the average of the Bond Buyer (11-GO Bond) Index for the four weeks prior to the first Friday of the last month before the beginning of the quarter. The market rate will apply to all loans that do not qualify for a different rate under paragraph (b) or (c) of this section.

(e) Repayment terms. The loan repayment period shall not exceed the useful life of the facility, State statute or 40 years from the date of the note or bond, whichever is less. Where RUS grant funds are used in connection with an RUS loan, the loan will be for the maximum term permitted by this part, State statute, or the useful life of the facility, whichever is less, unless there is an exceptional case where circumstances justify making an RUS loan for less than the maximum term permitted. In such cases, the reasons must be fully documented.

(1) Principal payments may be deferred in whole or in part for a period not to exceed 36 months following the date the first interest installment is due. If for any reason it appears necessary to permit a longer period of deferment, the Agency may authorize such deferment. Deferments of principal will not be used to:

(i) Postpone the levying of taxes or assessments;

(ii) Delay collection of the full rates which the borrower has agreed to charge users for its services as soon as those services become available;

(iii) Create reserves for normal operation and maintenance;

(iv) Make any capital improvements except those approved by the Agency which are determined to be essential to the repayment of the loan or to maintain adequate security; and

(v) Make payment on other debt.

(2) Payment date. Loan payments will be scheduled to coincide with income availability and be in accordance with State law. If State law only permits principal plus interest (P&I) type bonds, annual or semiannual payments will be used. Insofar as practical, monthly payments will be scheduled one full month following the date of loan closing; or semiannual or annual payments will be scheduled six or twelve full months, respectively, following the date of loan closing or any deferment period. Due dates falling on
§ 1780.14

the 29th, 30th or 31st day of the month will be avoided.

(3) In all cases, including those in which RUS is jointly financing with another lender, the RUS payments of principal and interest should approximate amortized installments.

§ 1780.14 Security.

Loans will be secured by the best security position practicable in a manner which will adequately protect the interest of RUS during the repayment period of the loan. Specific security requirements for each loan will be included in a letter of conditions.

(a) Public bodies. Loans to such borrowers, including Federally recognized Indian tribes as appropriate, will be evidenced by notes, bonds, warrants, or other contractual obligations as may be authorized by relevant laws and by borrower's documents, resolutions, and ordinances. Security, in the following order of preference, will consist of:

(1) The full faith and credit of the borrower when the debt is evidenced by general obligation bonds; and/or
(2) Pledges of taxes or assessments; and/or
(3) Pledges of facility revenue and, when it is the customary financial practice in the State, liens will be taken on the interest of the applicant in all land, easements, rights-of-way, water rights, water purchase contracts, water sales contracts, sewage treatment contracts, and similar property rights, including leasehold interests, used or to be used in connection with the facility whether owned at the time the loan is approved or acquired with loan funds.

(b) Other-than-public bodies. Loans to other-than-public body applicants and Federally recognized Indian tribes, as appropriate, will be secured in the following order of preference:

(1) Assignments of borrower income will be taken and perfected by filing, if legally permissible; and
(2) A lien will be taken on the interest of the applicant in all land, easements, rights-of-way, water rights, water purchase contracts, water sales contracts, sewage treatment contracts and similar property rights, including leasehold interest, used, or to be used in connection with the facility whether owned at the time the loan is approved or acquired with loan funds. In unusual circumstances where it is not legally permissible or feasible to obtain a lien on such land (such as land rights obtained from Federal or local government agencies, and from railroads) and the approval official determines that the interest of RUS is otherwise adequately secured, the lien requirement may be omitted as to such land rights. For existing borrowers where the Agency already has a security position on real property, the approval official may determine that the interest of the Government is adequately secured and not require additional liens on such land rights. When the subsequent loan is approved or the acquisition of real property is subject to an outstanding lien indebtedness, the next highest priority lien obtainable will be taken if the approval official determines that the loan is adequately secured.

(c) Joint financing security. For projects utilizing joint financing, when adequate security of more than one type is available, the other lender may take one type of security with RUS taking another type. For projects utilizing joint financing with the same security to be shared by RUS and another lender, RUS will obtain at least a parity position with the other lender. A parity position is to ensure that with joint security, in the event of default, each lender will be affected on a proportionate basis. A parity position will conform with the following unless an exception is granted by the approval official:

(1) It is not necessary for loans to have the same repayment terms. Loans made by other lenders involved in joint financing with RUS should be scheduled for repayment on terms similar to those customarily used in the State for financing such facilities.

(2) The use of a trustee or other similar paying agent by the other lender in a joint financing arrangement is acceptable to RUS. A trustee or other similar paying agent will not normally be used for the RUS portion of the funding unless required to comply with
State law. The responsibilities and authorities of any trustee or other similar paying agent on projects that include RUS funds must be clearly specified by written agreement and approved by the State program official and the Office of the General Counsel (OGC). RUS must be able to deal directly with the borrower to enforce the provisions of loan and grant agreements and perform necessary servicing actions.

(3) In the event adequate funds are not available to meet regular installments on parity loans, the funds available will be apportioned to the lenders based on the respective current installments of principal and interest due.

(4) Funds obtained from the sale or liquidation of secured property or fixed assets will be apportioned to the lenders on the basis of the pro rata amount outstanding; provided, however, funds obtained from such sale or liquidation for a project that included RUS grant funds will be apportioned as required by the grant agreement.

(5) Protective advances must be charged to the borrower’s account and be secured by a lien on the security property. To the extent consistent with State law and customary lending practices in the area, repayment of protective advances made by either lender, for the mutual protection of both lenders, should receive first priority in apportionment of funds between the lenders. To ensure agreement between lenders, efforts should be made to obtain the concurrence of both lenders before one lender makes a protective advance.

§ 1780.15 Other Federal, State, and local requirements.

Proposals for facilities financed in whole or in part with RUS funds will be coordinated with appropriate Federal, State and local agencies. If there are conflicts between this part and State or local laws or regulatory commission regulations, the provisions of this part will control. Applicants will be required to comply with Federal, State, and local laws and any regulatory commission rules and regulations pertaining to:

(a) Organization of the applicant and its authority to own, construct, operate, and maintain the proposed facilities;
(b) Borrowing money, giving security therefore, and raising revenues for the repayment thereof;
(c) Land use zoning; and
(d) Health and sanitation standards and design and installation standards unless an exception is granted by RUS.

§ 1780.16 [Reserved]

§ 1780.17 Selection priorities and process.

When ranking eligible applications for consideration for limited funds, Agency officials must consider the priority items met by each application and the degree to which those priorities are met. Points will be awarded as follows:

(a) Population priorities. (1) The proposed project will primarily serve a rural area having a population not in excess of 1,000—25 points;
(2) The proposed project primarily serves a rural area having a population between 1,001 and 2,500—15 points;
(3) The proposed project primarily serves a rural area having a population between 2,501 and 5,500—5 points.

(b) Health priorities. The proposed project is:
(1) Needed to alleviate an emergency situation, correct unanticipated diminution or deterioration of a water supply, or to meet Safe Drinking Water Act requirements which pertain to a water system—25 points;
(2) Required to correct inadequacies of a wastewater disposal system, or to meet health standards which pertain to a wastewater disposal system—25 points;
(3) Required to meet administrative orders issued to correct local, State, or Federal solid waste violations—15 points.

(c) Median household income priorities. The median household income of the population to be served by the proposed project is:
(1) Less than the poverty line if the poverty line is less than 80% of the statewide nonmetropolitan median household income—30 points;
(2) Less than 80 percent of the statewide nonmetropolitan median household income—20 points;
§ 1780.18 Allocation of program funds.

(a) General. (1) The purpose of this part is to set forth the methodology and formulas by which the Administrator of the RUS allocates program funds to the States. (The term "State" means any of the States of the United States, the Commonwealth of Puerto Rico, any territory or possession of the United States, or the Western Pacific Areas.)

(2) The formulas in this part are used to allocate program loan and grant funds to Rural Development State offices so that the overall mission of the Agency can be carried out. Considerations used when developing the formulas include enabling legislation, congressional direction, and administration policies. Allocation formulas ensure that program resources are available on an equal basis to all eligible individuals and organizations.

(3) The actual amounts of funds, as computed by the methodology and formulas contained herein, allocated to a State for a funding period, are distributed to each State office. The allocated amounts are available for review in any Rural Development State office.

(b) Definitions—(1) Amount available for allocations. Funds appropriated or otherwise made available to the Agency for use in authorized programs.

(g) National office priorities. In selecting projects for funding at the National Office level State program official points may or may not be considered. The Administrator may assign up to 15 additional points to account for items such as geographic distribution of funds, the highest priority projects within a state, and emergency conditions caused by economic problems or natural disasters. The Administrator may delegate the authority to assign the 15 points to appropriate National Office staff.

§ 1780.18 Allocation of program funds.

(a) General. (1) The purpose of this part is to set forth the methodology and formulas by which the Administrator of the RUS allocates program funds to the States. (The term "State" means any of the States of the United States, the Commonwealth of Puerto Rico, any territory or possession of the United States, or the Western Pacific Areas.)

(2) The formulas in this part are used to allocate program loan and grant funds to Rural Development State offices so that the overall mission of the Agency can be carried out. Considerations used when developing the formulas include enabling legislation, congressional direction, and administration policies. Allocation formulas ensure that program resources are available on an equal basis to all eligible individuals and organizations.

(3) The actual amounts of funds, as computed by the methodology and formulas contained herein, allocated to a State for a funding period, are distributed to each State office. The allocated amounts are available for review in any Rural Development State office.

(b) Definitions—(1) Amount available for allocations. Funds appropriated or otherwise made available to the Agency for use in authorized programs.

(g) National office priorities. In selecting projects for funding at the National Office level State program official points may or may not be considered. The Administrator may assign up to 15 additional points to account for items such as geographic distribution of funds, the highest priority projects within a state, and emergency conditions caused by economic problems or natural disasters. The Administrator may delegate the authority to assign the 15 points to appropriate National Office staff.
to the States. The formulas take a number of criteria that reflect the funding needs for a particular program and through a normalization and weighting process for each of the criteria calculate the basic State factor (SF). The data sources used for each criteria are believed to be the most current and reliable information that adequately quantifies the criterion. The weight, expressed as a percentage, gives a relative value to the importance of each of the criteria.

(3) Basic formula allocation. The result of multiplying the amount available for allocation less the total of any amounts held in reserve or distributed by base or administrative allocation times the basic State factor for each State. The basic formula allocation (BFA) for an individual State is equal to:

\[
BFA = (\text{Amount available for allocation} - \text{NO reserve} - \text{total base and administrative allocations}) \times SF.
\]

(4) Transition formula. (i) A formula based on a proportional amount of previous year allocation used to maintain program continuity by preventing large fluctuations in individual State allocations. The transition formula limits allocation shifts to any particular State in the event of changes from year to year of the basic formula, the basic criteria, or the weights given the criteria. The transition formula first checks whether the current year's basic formula allocation is within the transition range (plus or minus 20 percentage points of the proportional amount of the previous year's BFA). The formula follows:

\[
\text{Transition Range} = 1.0 + \frac{\text{maximum 20\%}}{100} \times \frac{\left(\text{Amount available for allocation this year} \times \text{State previous year BFA}\right)}{\left(\text{Amount available for allocation previous year}\right)}
\]

(ii) If the current year's State BFA is not within the transition range in paragraph (b)(4)(i) of this section, the State formula allocation is changed to the amount of the transition range limit closest to the BFA amount. After having performed this transition adjustment for each State, the sum of the funds allocated to all States will differ from the amount of funds available for BFA. This difference, whether a positive or negative amount, is distributed to all States receiving a formula allocation by multiplying the difference by the SF. The end result is the transition formula allocation. The transition range will not exceed 40% (plus or minus 20%), but when a smaller range is used it will be stated in the individual program section.

(5) Base allocation. An amount that may be allocated to each State dependent upon the particular program to provide the opportunity for funding at least one typical loan or grant in each Rural Development State office. The amount of the base allocation may be determined by criteria other than that used in the basic formula allocation such as Agency historic data.

(6) Administrative allocations. Allocations made by the Administrator in cases where basic formula criteria information is not available. This form of allocation may be used when the Administrator determines the program objectives cannot be adequately met with a formula allocation.

(7) Reserve. An amount retained under the National Office control for each loan and grant program to provide flexibility in meeting situations of unexpected or justifiable need occurring during the fiscal year. The Administrator may make distributions from this reserve to any State when it is determined necessary to meet a program need or Agency objective. The Administrator may retain additional amounts to fund authorized demonstration programs.

(8) Pooling of funds. A technique used to ensure that available funds are used in an effective, timely and efficient manner. At the time of pooling those funds within a State's allocation for the fiscal year or portion of the fiscal year, depending on the type of pooling, that have not been obligated by the State are placed in the National Office
reserve. The Administrator will establish the pooling dates for each affected program.

(i) Mid-year: Mid-year pooling occurs near the midpoint of the fiscal year.

(ii) Year-end: Year-end pooling usually occurs near the first of August.

(iii) Emergency: The Administrator may pool funds at any time that it is determined the conditions upon the initial allocation was based have changed to such a degree that it is necessary to pool funds in order to efficiently carry out the Agency mission.

(9) Availability of the allocation. Program funds are made available to the Agency on a quarterly basis.

(10) Suballocation by the Rural Development State Director. The State Director may be directed or given the option of suballocating the State allocation to processing offices. When suballocating the State Director may retain a portion of the funds in a State office reserve to provide flexibility in situations of unexpected or justified need. When performing a suballocation the State Director will use the same formula, criteria and weights as used by the National Office.

(c) Water and waste disposal loans and grants—(1) Amount available for allocations. See paragraph (b)(1) of this section.

(2) Basic formula criteria, data source and weight. See paragraph (b)(2) of this section.

(i) The criteria used in the basic formula are:

(A) State's percentage of national rural population will be 50 percent.

(B) State's percentage of national rural population with incomes below the poverty level will be 25 percent.

(C) State's percentage of national nonmetropolitan unemployment will be 25 percent.

(ii) Data source for each of these criteria is based on the latest census data available. Each criterion is assigned a specific weight according to its relevance in determining need. The percentage representing each criterion is multiplied by the weight factor and summed to arrive at a State factor (SF). The SF cannot exceed .05, as follows:

\[ SF = \text{criterion in paragraph (b)(1)(ii) of this section} \times 25 \text{ percent} + \text{criterion in paragraph (b)(1)(iii) of this section} \times 25 \text{ percent} \]

(3) Basic formula allocation. See paragraph (b)(3) of this section. States receiving administrative allocations do not receive formula allocations.

(4) Transition formula. See paragraph (b)(4) of this section. The percentage range for the transition formula equals 30 percent (plus or minus 15%).

(5) Base allocation. See paragraph (b)(5) of this section. States receiving administrative allocations do not receive base allocations.

(6) Administrative allocation. See paragraph (b)(6) of this section. States participating in the formula and base allocation procedures do not receive administrative allocations.

(7) Reserve. See paragraph (b)(7) of this section. Any State may request reserve funds by forwarding a request to the National Office. Generally, a request for additional funds will not be honored unless the State has insufficient funds to obligate the loan requested.

(8) Pooling of funds. See paragraph (b)(8) of this section. Funds are generally pooled at mid-year and year-end. Pooled funds will be placed in the National Office reserve and will be made available administratively.

(9) Availability of the allocation. See paragraph (b)(9) of this section. The allocation of funds is made available for States to obligate on an annual basis although the Office of Management and Budget apportions it to the Agency on a quarterly basis.

(10) Suballocation by the State Director. See paragraph (b)(10) of this section. The State Director has the option to suballocate funds to processing offices.

§ 1780.19 Public information.

(a) Public notice of intent to file an application with the Agency. Within 60 days of filing an application with the Agency the applicant must publish a notice of intent to apply for a RUS loan or grant. The notice of intent must be published in a newspaper of general circulation in the proposed area to be served.
§ 1780.31 General.

(b) General public meeting. Applicants should inform the general public regarding the development of any proposed project. Any applicant not required to obtain authorization by vote of its membership or by public referendum, to incur the obligations of the proposed loan or grant, must hold at least one public information meeting. The public meeting must be held not later than loan or grant approval. The meeting must give the citizenry an opportunity to become acquainted with the proposed project and to comment on such items as economic and environmental impacts, service area, alternatives to the project, or any other issue identified by Agency. To the extent possible, this meeting should cover items necessary to satisfy all public information meeting requirements for the proposed project. To minimize duplication of public notices and public involvement, the applicant shall, where possible, coordinate and integrate the public involvement activities of the environmental review process into this requirement. The applicant will be required, at least 10 days prior to the meeting, to publish a notice of the meeting in a newspaper of general circulation in the service area, to post a public notice at the applicant's principal office, and to notify the Agency. The applicant will provide the Agency a copy of the published notice and minutes of the public meeting. A public meeting is not normally required for subsequent loans or grants which are needed to complete the financing of a project.

§§ 1780.20—1780.23 [Reserved]

§ 1780.24 Approval authorities.

Appropriate reviews, concurrence, and authorization must be obtained for all loans or grants in excess of the amounts indicated in RUS Staff Instruction 1780-1.

(a) Redlegation of authority by State Directors. Unless restricted by memorandum from the RUS Administrator, State Directors can redelegate their approval authorities to State employees by memorandum.

(b) Restriction of approval authority by the RUS Administrator. The RUS Administrator can make written restrictions or revocations of the authority given to any approval official.

§ 1780.25 Exception authority.

The Administrator may, in individual cases, make an exception to any requirement or provision of this part which is not inconsistent with the authorizing statute or other applicable law and is determined to be in the Government's interest.

§§ 1780.26—1780.30 [Reserved]

Subpart B—Loan and Grant Application Processing

§ 1780.31 General.

(a) Applicants are encouraged to contact the Agency processing office early in the planning stages of their project. Agency personnel are available to provide general advice and assistance regarding RUS programs, other funding sources, and types of systems or improvements appropriate for the applicants needs. The Agency can also provide access to technical assistance and other information resources for other project development issues such as public information, income surveys, developing rate schedules, system operation and maintenance, and environmental compliance requirements. Throughout the planning, application processing and construction of the project, Agency personnel will work closely and cooperatively with the applicant and their representatives, other State and Federal agencies and technical assistance providers.

(b) The processing office will handle initial inquiries and provide basic information about the program. They are to provide the application, SF 424-2, “Application for Federal Assistance (For Construction),” assist applicants as needed in completing SF 424-2, and in filing a request for intergovernmental review. The processing office will explain eligibility requirements and meet with the applicant whenever necessary to discuss application processing.

(c) Applicants can make a written request for an eligibility determination in lieu of filing an SF 424-2 along with
§ 1780.32 Timeframes for application processing.

(a) The processing office will determine if the application is properly assembled. If not, the applicant will be notified within fifteen federal working days as to what additional submittal items are needed.

(b) The processing and approval offices will coordinate their reviews to ensure that the applicant is advised about eligibility and anticipated fund availability within 45 days of the receipt of a completed application.

§ 1780.33 Application requirements.

An initial application consists of the following:

(a) One copy of a completed SF 424.2;

(b) A copy of the State intergovernmental comments or one copy of the filed application for State intergovernmental review; and

(c) Two copies of the preliminary engineering report (PER) for the project.

(1) The PER may be submitted to the processing office prior to the rest of the application material if the applicant desires a preliminary review.

(2) The processing office will forward one copy of the PER with comments and recommendations to the State staff engineer for review upon receipt from the applicant.

(3) The State staff will consult with the applicant’s engineer as appropriate to resolve any questions concerning the PER and any environmental concerns. Written comments will be provided by the State staff engineer and State Environmental Coordinator to the processing office to meet eligibility determination timelines.

(d) Written certification that other credit is not available.

(e) Supporting documentation necessary to make an eligibility determination such as financial statements, audits, organizational documents, or existing debt instruments. The processing office will advise applicants regarding the required documents. Applicants that are indebted to RUS will not need to submit documents already on file with the processing office.

(f) Form RD 1940-20, “Request for Environmental Information” or comparable information. The applicant should consult with the processing office to determine what information should be included with this form.

(g) The applicants Internal Revenue Service Taxpayer Identification Number (TIN). The TIN will be used by the Agency to assign a case number which will be the applicant’s or transferee’s TIN preceded by State and County Code numbers. Only one case number will be assigned to each applicant regardless of the number of loans or grants or number of separate facilities, unless an exception is authorized by the National Office.

(h) Other Forms and certifications. Applicants will be required to submit the following items to the processing office, upon notification from the processing office to proceed with further development of the full application:
§ 1780.34 [Reserved]

§ 1780.35 Processing office review.

Review of the application will usually include the following:

(a) Nondiscrimination. Boundaries for the proposed service area must not be chosen in such a way that any user or area will be excluded because of race, color, religion, sex, marital status, age, handicap, or national origin. This does not preclude construction of the project in phases as noted in §1780.11 as long as it is not done in a discriminatory manner.

(b) Grant determination. Grants will be determined by the processing office in accordance with the following provisions and will not result in EDU costs below similar system user cost.

(1) Maximum grant. Grants may not exceed the percentages in §1780.10(c) of the eligible RUS project development costs listed in §1780.9.

(2) Debt service. Applicants will be considered for grant assistance when the debt service portion of the average annual EDU cost, for users in the applicant’s service area, exceeds the following percentages of median household income:

(i) 0.5 percent when the median household income of the service area is equal to or below 80% of the statewide nonmetropolitan median income.

(ii) 1.0 percent when the median household income of the service area exceeds the 0.5 percent requirement but is not more than 100 percent the statewide nonmetropolitan household income.

(3) Similar system cost. If the grant determined in paragraph (b)(2) of this section results in an annual EDU cost that is not comparable with similar systems, the Agency will determine a grant amount based on achieving EDU costs that are not below similar system user costs.

(4) Wholesale service. When an applicant provides wholesale sales or services on a contract basis to another system or entity, similar wholesale system cost will be used in determining the amount of grant needed to achieve a reasonable wholesale user cost.

(5) Subsidized cost. When annual cost to the applicant for delivery of service is subsidized by either the state, commonwealth, or territory, and uniform flat user charges regardless of usage are imposed for similar classes of service throughout the service area, the Agency may proceed with a grant in an amount necessary to reduce delivery cost to a reasonable level.

(c) User charges. The user charges should be reasonable and produce enough revenue to provide for all costs of the facility after the project is complete. The planned revenue should be sufficient to provide for all debt service, debt reserve, operation and maintenance and, if appropriate, additional revenue for facility replacement of short-lived assets without building a substantial surplus. Ordinarily, the total debt reserve will be equal to one average annual loan installment which will accumulate at the rate of one-tenth of the total each year.

§ 1780.36 Approving official review.

Projects may be obligated as their applications are completed and approved.
§ 1780.37 Selection of applications for further processing.

(a) The application and supporting information submitted will be used to determine the applications selected for further development and funding. After completing the review, the approval official will normally select those eligible applications with the highest priority scores for further processing. When authorizing the development of an application for funding, the following will be considered:

(1) Funds available in State allocation;

(2) Anticipated allocation of funds for the next fiscal year; and

(3) Time necessary for applicant to complete the application.

(b) Lower scoring projects. (1) In cases where preliminary cost estimates indicate that an eligible, high scoring application is unfeasible or would require an amount of funding from RUS that exceeds either 25 percent of a State’s current annual allocation or an amount greater than that remaining in the State’s allocation, the approval official may instead select the next lower scoring application for further processing provided the high scoring applicant is notified of this action and given an opportunity to revise the proposal and resubmit it.

(2) If it is found that there is no effective way to reduce costs or no other funding sources, the approval official, after consultation with applicant, may submit a request for an additional allocation of funds for the proposed project to the National Office. The request should be submitted during the fiscal year in which obligation is anticipated. Such request will be considered along with all others on hand. A written justification must be prepared and placed in the project file.

§ 1780.38 Applications determined ineligible.

If at any time an application is determined ineligible, the processing office will notify the applicant in writing of the reasons. The notification to the applicant will state that an appeal of this decision may be made by the applicant under 7 CFR part 11.

§ 1780.39 Application processing.

(a) Processing conference. Before starting to assemble the full application, the applicant should arrange through the processing office an application conference to provide a basis for orderly application assembly. The processing office will explain program requirements, public information requirements and provide guidance on preparation of items necessary for approval.

(b) Professional services and contracts related to the facility. Fees provided for in contracts or agreements shall be reasonable. The Agency shall consider fees to be reasonable if they are not in excess of those ordinarily charged by the profession as a whole for similar work when RUS financing is not involved. Applicants will be responsible for providing the services necessary to plan projects including design of facilities, preparation of cost and income estimates, development of proposals for organization and financing, and overall operation and maintenance of the facility. Applicants should negotiate for procurement of professional services, whereby competitors’ qualifications are evaluated and the most qualified competitor is selected, subject to negotiations of fair and reasonable compensation. Contracts or other forms of agreement between the applicant and its professional and technical representatives are required and are subject to RUS concurrence.

(i) Engineering and architectural services. (i) Applicants shall publicly announce all requirements for engineering and architectural services, and negotiate contracts for engineering and architectural services on the basis of demonstrated competence and qualifications for the type of professional services required and at a fair and reasonable price.

(ii) When project design services are procured separately, the selection of the engineer or architect shall be done by requesting qualification-based proposals and in accordance with this section.

(iii) Applicants may procure engineering and architectural services in
accordance with applicable State statutes or local requirements provided the State Director determines that such procurement meets the intent of this section.

(2) Other professional services. Professional services of the following may be necessary: Attorney, bond counsel, accountant, auditor, appraiser, environmental professionals, and financial advisory or fiscal agent (if desired by applicant). Guidance on entering into an agreement for legal services is available from the Agency.

(3) Bond counsel. Unless otherwise provided by subpart D of this part, public bodies are required to obtain the service of recognized bond counsel in the preparation of evidence of indebtedness.

(4) Contracts for other services. Contracts or other forms of agreements for other services including management, operation, and maintenance will be developed by the applicant and presented to the Agency for review and concurrence. Guidance on entering into a management agreement is available from the Agency.

(c) User estimates. Applicants dependent on users fees for debt payment or operation and maintenance expenses shall base their income and expense forecast on realistic user estimates. For users presently not receiving service, consideration must be given to the following:

(1) An estimated number of maximum users should not be used when setting user fees and rates since it may be several years before all residents will need service by the system. In establishing rates a realistic number of users should be employed.

(2) New user cash contributions. The amount of cash contributions required will be set by the applicant and concurred in by the approval official. Contributions should be an amount high enough to indicate sincere interest on the part of the potential user, but not so high as to preclude service to low income families. Contributions ordinarily should be an amount approximating one year’s minimum user fee, and shall be paid in full before loan closing or commencement of construction, whichever occurs first. Once economic feasibility is ascertained based on a demonstration of potential user cash contributions, the contribution, membership fee or other fees that may be imposed are not a loan requirement under this section. A new user cash contribution is not required when:

(i) The Agency determines that the potential users as a whole in the applicant’s service area cannot make cash contributions; or

(ii) State statutes or local ordinances require mandatory use of the system and the applicant or legal entity having such authority agrees in writing to enforce such statutes, or ordinances.

(3) An enforceable user agreement with a penalty clause is required (RUS Bulletin 1780-9 can be used) except:

(i) For users presently receiving service; or

(ii) Where mandatory use of the system is required.

(4) Individual vacant property owners will not be considered when determining project feasibility unless:

(i) The owner has plans to develop the property in a reasonable period of time and become a user of the facility; and

(ii) The owner agrees in writing to make a monthly payment at least equal to the proportionate share of debt service attributable to the vacant property until the property is developed and the facility is utilized on a regular basis. A bond or escrowed security deposit must be provided to guarantee this monthly payment and to guarantee an amount at least equal to the owner’s proportionate share of construction costs. If a bond is provided, it must be executed by a surety company that appears on the Treasury Department’s most current list (Circular 570, as amended) and be authorized to transact business in the State where the project is located. The guarantee shall be payable jointly to the borrower and the United States of America.

(5) Applicants must provide a positive program to encourage connection by all users as soon as service is available. The program will be available for review and concurrence by the processing office before loan closing or commencement of construction, whichever occurs first. Such a program shall include:
(i) An aggressive information program to be carried out during the construction period. The applicant should send written notification to all signed users in advance of the date service will be available, stating the date users will be expected to have their connections completed, and the date user charges will begin;

(ii) Positive steps to assure that installation services will be available. These may be provided by the contractor installing the system, local plumbing companies, or local contractors;

(iii) Aggressive action to see that all signed users can finance their connections.

(d) Interim financing. For all loans exceeding $500,000, where funds can be borrowed at reasonable interest rates on an interim basis from commercial sources for the construction period, such interim financing may be obtained so as to preclude the necessity for multiple advances of RUS loan funds. However, the approval official may make an exception when interim financing is cost prohibitive or unavailable. Guidance on informing the private lender of RUS’s commitment is available from the Agency. When interim commercial financing is used, the application will be processed, including obtaining construction bids, to the stage where the RUS loan would normally be closed, that is immediately prior to the start of construction. The RUS loan should be closed as soon as possible after the disbursement of all interim funds.

(e) Reserve requirements. Provision for the accumulation of necessary reserves over a reasonable period of time will be included in the loan documents.

(1) General obligation or special assessment bonds. Ordinarily, the requirements for reserves will be considered to have been met if general obligation or other bonds which pledge the full faith and credit of the political subdivision are used, or special assessment bonds are used, and if such bonds provide for the annual collection of sufficient taxes or assessments to cover debt service.

(2) Other than general obligation or special assessment bonds. Each borrower will be required to establish and maintain reserves sufficient to assure that loan installments will be paid on time, for emergency maintenance, for extensions to facilities, and for replacement of short-lived assets which have a useful life significantly less than the repayment period of the loan. Borrowers issuing bonds or other evidences of debt pledging facility revenues as security will plan their reserve to provide for at least an annual reserve equal to one-tenth of an average annual loan installment each year for the life of the loan unless prohibited by state law.

(f) Membership authorization. For organizations other than public bodies, the membership will authorize the project and its financing. Form RD 1942-8, “Resolution of Members or Stockholders” may be used for this authorization. The approval official may, with the concurrence of OGC, accept Form RD 1942-9, “Loan Resolution (Security Agreement)” without such membership authorization when State statutes and the organization’s charter and bylaws do not require such authorization; and:

(1) The organization is well established and is operating with a sound financial base; or

(2) The members of the organization have all signed an enforceable user agreement with a penalty clause and have made the required meaningful user cash contribution.

(g) Insurance. The purpose of RUS’s insurance requirements is to protect the government’s financial interest based on the facility financed with loan funds. It is the responsibility of the applicant and not that of RUS to assure that adequate insurance and fidelity or employee dishonesty bond coverage is maintained. The requirements below apply to all types of coverage determined necessary. The approval official may grant exceptions to normal requirements when appropriate justification is provided establishing that it is in the best interest of the applicant and will not adversely affect the government’s interest.

(1) Insurance requirements proposed by the applicant will be accepted if the processing office determines that proposed coverage is adequate to protect the government’s financial interest. Applicants are encouraged to have their attorney, consulting engineer,
and/or insurance provider(s) review proposed types and amounts of coverage, including any deductible provisions.

(2) The use of deductibles may be allowed by RUS providing the applicant has financial resources which would likely be adequate to cover potential claims requiring payment of the deductible.

(3) Fidelity or employee dishonesty bonds. Applicants will provide coverage for all persons who have access to funds, including persons working under a contract or management agreement. Coverage may be provided either for all individual positions or persons, or through “blanket” coverage providing protection for all appropriate employees. An exception may be granted by the approval official when funds relating to the facility financed are handled by another entity and it is determined that the entity has adequate coverage or the government’s interest would otherwise be adequately protected. The amount of coverage required by RUS will normally approximate the total annual debt service requirements for the RUS loans.

(4) Property insurance. Fire and extended coverage will normally be maintained on all structures except as noted below. Ordinarily, RUS should be listed as mortgagee on the policy when RUS has a lien on the property. Normally, major items of equipment or machinery located in the insured structures must also be covered. Exceptions:

- Reservoirs, pipelines and other structures if such structures are not normally insured;
- Subsurface lift stations except for the value of electrical and pumping equipment therein.
- General liability insurance, including vehicular coverage.
- Flood insurance required for facilities located in special flood-and mudslide-prone areas.
- Worker’s compensation. The borrower will carry worker’s compensation insurance for employees in accordance with State laws.

(h) The processing office will conduct appropriate environmental reviews in accordance with RUS requirements.

(i) Verification of users and other funds. In connection with a project listed in RUS Bulletin 1780-6 are complete. Letters of conditions will not be issued unless funds are available.

§ 1780.40 [Reserved]

§ 1780.41 Loan or grant approval.

(a) The processing office will submit the following to the approval official:

1. Form RD 1942-45, “Project Summary”;
2. Form RD 442-7, “Operating Budget”;
3. Form RD 442-3, “Balance Sheet” or a financial statement or audit that includes a balance sheet;
4. Form RD 442-14, “Association Project Fund Analysis”;
5. “Letter of Conditions”;
7. Form RD 1940-1, “Request for Obligation of Funds”;
8. Completed environmental review documents including copies of required publication evidence; and
9. Grant determination, if applicable.

(b) Approval and applicant notification will be accomplished by mailing to the applicant on the obligation date a copy of Form RD 1940-1. The date the applicant is notified is also the date the interest rate at loan approval is established.

§ 1780.42 Transfer of obligations.

An obligation of funds established for an applicant may be transferred to a different (substituted) applicant provided:

(a) The substituted applicant is eligible and has the authority to receive the assistance approved for the original applicant; and
(b) The need, purpose(s) and scope of the project for which RUS funds will be used remain substantially unchanged.

§ 1780.43 [Reserved]

§ 1780.44 Actions prior to loan or grant closing or start of construction, whichever occurs first.

(a) Applicants must provide evidence of adequate insurance and fidelity or employee dishonesty bond coverage.

(b) Verification of users and other funds. In connection with a project...
§ 1780.44  7 CFR Ch. XVII (1-1-98 Edition)

that involves new users and will be secured by a pledge of user fees or revenues, the processing office will authenticate the number of users. Ordinarily each signed user agreement will be reviewed and checked for evidence of cash contributions. If during the review any indication is received that all signed users may not connect to the system, there will be such additional investigation made as deemed necessary to determine the number of users who will connect to the system.

(c) Initial compliance review. An initial compliance review should be completed under subpart E of part 1901 of this title.

(d) Applicant contribution. An applicant contributing funds toward the project cost shall deposit these funds in its project account before start of construction. Project costs paid with applicant funds prior to the required deposit time shall be appropriately accounted for.

(e) Excess RUS loan and grant funds. If there is a significant reduction in project cost, the applicant’s funding needs will be reassessed. Decreases in RUS funds will be based on revised project costs and current number of users, however, other factors including RUS regulations used at the time of loan or grant approval will remain the same. Obligated loan or grant funds not needed to complete the proposed project will be deobligated. Any reduction will be applied to grant funds first. In such cases, applicable forms, the letter of conditions, and other items will be revised.

(f) Evidence of and disbursement of other funds. Applicants expecting funds from other sources for use in completing projects being partially financed with RUS funds will present evidence of the commitment of these funds from such other sources. An agreement should be reached with all funding sources on how funds are to be disbursed before the start of construction. RUS funds will not be used to pre-finance funds committed to the project from other sources.

(g) Acquisition of land, easements, water rights, and existing facilities. Applicants are responsible for acquisition of all property rights necessary for the project and will determine that prices paid are reasonable and fair. RUS may require an appraisal by an independent appraiser or Agency employee.

(1) Rights-of-way and easements. Applicants will obtain valid, continuous and adequate rights-of-way and easements needed for the construction, operation, and maintenance of the facility.

(i) The applicant must provide a legal opinion relative to the title to rights-of-way and easements. Form RD 442-22, “Opinion of Counsel Relative to Rights-of-Way,” may be used. When a site is for major structures such as a reservoir or pumping station and the applicant is able to obtain only a right-of-way or easement on such a site rather than a fee simple title, the applicant will furnish a title report thereon by the applicant’s attorney showing ownership of the land and all mortgages or other lien defects, restrictions, or encumbrances, if any.

(ii) For user connections funded by RUS, applicants will obtain adequate rights to construct and maintain the connection line or other facilities located on the user’s property. This right may be obtained through formal easement or user agreements.

(2) Title for land or existing facilities. Title to land essential to the successful operation of facilities or title to facilities being purchased, must not contain any restrictions that will adversely affect the suitability, successful operation, security value, or transferability of the facility. Preliminary and final title opinions must be provided by the applicant’s attorney. The opinions must be in sufficient detail to assess marketability of the property. Form RD 1927-9, “Preliminary Title Opinion,” and Form RD 1927-10, “Final Title Opinion,” may be used to provide the required title opinions.

(i) In lieu of receiving title opinions from the applicant’s attorney, the applicant may use a title insurance company. If a title insurance company is used, the applicant must provide the Agency a title insurance binder, disclosing all title defects or restrictions, and include a commitment to issue a title insurance policy. The policy should be in an amount at least equal to the market value of the property as improved. The title insurance binder and commitment should be provided to
the Agency prior to requesting closing instructions. The Agency will be provided a title insurance policy which will insure RUS's interest in the property without any title defects or restrictions which have not been waived by the Agency.

(ii) The approval official may waive title defects or restrictions, such as utility easements, that do not adversely affect the suitability, successful operation, security value, or transferability of the facility.

(3) Water rights. The following will be furnished as applicable:
(i) A statement by the applicant's attorney regarding the nature of the water rights owned or to be acquired by the applicant (such as conveyance of title, appropriation and decree, application and permit, public notice and appropriation and use).
(ii) A copy of a contract with another company or municipality to supply water; or stock certificates in another company which represents the right to receive water.

(4) Lease agreements. Where the right of use or control of real property not owned by the applicant is essential to the successful operation of the facility during the life of the loan, such right will be evidenced by written agreements or contracts between the owner of the property and the applicant. Lease agreements shall not contain provisions for restricted use of the site of facility, forfeiture or summary cancellation clauses. Lease agreements shall provide for the right to transfer, encumber, assign and sub-lease without restriction. Lease agreements will ordinarily be written for a term at least equal to the term of the loan. Such lease contracts or agreements will be approved by the approval official with the advice and counsel of OGC, as necessary.

(h) Obtaining loan closing instructions. The information required by OGC will be transmitted to OGC with request for closing instructions. Upon receipt of closing instructions, the processing office will discuss with the applicant and its engineer, attorney, and other appropriate representatives, the requirements contained therein and any actions necessary to proceed with closing. State program officials have the option to work with OGC to obtain waivers for closing instructions in certain cases. Closing instructions are not required for grants.

§ 1780.45 Loan and grant closing and delivery of funds.

(a) Loan closing. Notes and bonds will be completed on the date of loan closing except for the entry of subsequent RUS multiple advances where applicable. The amount of each note will be in multiples of not less than $100. The amount of each bond will ordinarily be in multiples of not less than $1,000.

(1) Form RD 440-22, “Promissory Note (Association or Organization),” will ordinarily be used for loans to non-public bodies.

(2) Forms RD 1942-47, “Loan Resolution (Public Bodies),” or RD 1942-9, “Loan Resolution (Security Agreement)” will be adopted by public and other-than-public bodies. These resolutions supplement other provisions in this part.

(b) Loan disbursement. (1) Multiple advances. Multiple advances will be used only for loans in excess of $100,000. Advances will be made only as needed to cover disbursements required by the borrower over a 30-day period.

(i) Subpart D of this part contains instructions for making multiple advances to public bodies.

(ii) Advances will be requested by the borrower in writing. The request should be in sufficient amounts to pay cost of construction, rights-of-way and land, legal, engineering, interest, and other expenses as needed. The borrower may use Form RD 440-11, “Estimate of Funds Needed for 30 Day Period Commencing XXX,” to show the amount of funds needed during the 30-day period.

(2) RUS loan funds obligated for a specific purpose, such as the paying of interest, but not needed at the time of loan closing will remain in the Finance Office until needed unless State statutes require all funds to be delivered to the borrower at the time of closing. Loan funds may be advanced to prepay costs under §1780.9(e)(2)(iv). If all funds must be delivered to the borrower at
§ 1780.45  7 CFR Ch. Xvii (1-1-98 Edition)

the time of closing to comply with State statutes, funds not needed at loan closing will be handled as follows:

(i) Deposited in an appropriate borrower account, such as debt service or construction accounts; or

(ii) Deposited in a joint bank account under paragraph (e)(3) of this section.

(c) Grant closing. RUS Bulletin 1780-12 “Water or Waste System Grant Agreement” of this part will be completed and executed in accordance with the requirements of grant approval. The grant will be considered closed when RUS Bulletin 1780-12 has been properly executed. Processing or approval officials are authorized to sign the grant agreement on behalf of RUS. For grants that supplement RUS loan funds, the grant should be closed simultaneously with the closing of the loan. However, when grant funds will be disbursed before loan closing, as provided in paragraph (d)(1) of this section, the grant will be closed not later than the delivery date of the first advance of grant funds.

(d) Grant disbursements. RUS policy is not to disburse grant funds from the Treasury until they are actually needed by the applicant. Applicant funds will be disbursed before the disbursement of any RUS grant funds. RUS loan funds will be disbursed before the disbursement of any RUS grant funds except when:

(1) Interim financing of the total estimated amount of loan funds needed during construction is arranged; and

(2) All interim funds have been disbursed; and

(3) RUS grant funds are needed before the RUS loan can be closed.

(e) Use and accountability of funds. (1) Arrangements will be agreed upon for the prior concurrence by the Agency of the bills or vouchers upon which warrants will be drawn. Form RD 402-2, “Statement of Deposits and Withdrawals,” or similar form will be used by the Agency to monitor funds. Periodic reviews of these accounts shall be made by the Agency.

(2) Pledge of collateral for grants to nonprofit organizations. Grant funds must be deposited in a bank with Federal Deposit Insurance Corporation (FDIC) insurance coverage. Also, if the balance in the account containing grant funds exceeds the FDIC insurance coverage, the excess amount must be collaterally secured. The pledge of collateral for the excess will be in accordance with Treasury Circular 176.

(3) Joint RUS/borrower bank account. RUS funds and any funds furnished by the borrower including contributions to purchase major items of equipment, machinery, and furnishings will be deposited in a joint RUS/borrower bank account if determined necessary by the approval official. When RUS has a Memorandum of Understanding with another agency that provides for the use of joint RUS/borrower accounts, or when RUS is the primary source of funds for a project and has determined that the use of a joint RUS/borrower bank account is necessary, project funds from other sources may also be deposited in the joint bank account. RUS shall not be accountable to the source of the other funds nor shall RUS undertake responsibility to administer the funding program of the other entity. Joint RUS/borrower bank accounts should not be used for funds advanced by an interim lender. When funds exceeds the FDIC insurance coverage, the excess must have a pledge of collateral in accordance with Treasury Circular 176.

(4) Payment for project costs. Project costs will be monitored by the RUS processing office. Invoices will be approved by the borrower and their engineer, as appropriate, and submitted to the processing office for concurrence. The review and acceptance of project costs, including construction pay estimates, by RUS does not attest to the correctness of the amounts, the quantities shown or that the work has been performed under the terms of the agreements or contracts.

(f) Use of remaining funds. Funds remaining after all costs incident to the basic project have been paid or provided for will not include applicant contributions. Funds remaining, may be considered in direct proportion to the amounts obtained from each source. Remaining funds will be handled as follows:

(1) Remaining funds may be used for eligible loan or grant purposes, provided the use will not result in major
changes to the facility(s) and the purpose of the loan and grant remains the same;

(2) RUS loan funds that are not needed will be applied as an extra payment on the RUS indebtedness unless other disposition is required by the bond ordinance, resolution, or State statute; and

(3) Grant funds not expended under paragraph (f)(1) of this section will be canceled. Prior to the actual cancellation, the borrower, its attorney and its engineer will be notified of RUS’s intent to cancel the remaining funds. The applicant will be given appropriate appeal rights.

(g) Post review of loan closing. In order to determine that the loan has been properly closed the loan docket will be reviewed by OGC. The State program official has the option to consult with OGC to obtain waivers of this review.

§ 1780.46 [Reserved]

§ 1780.47 Borrower accounting methods, management reporting and audits.

(a) Borrowers are required to provide RUS an annual audit or financial statements.

(b) Method of accounting and preparation of financial statements. Annual organization-wide financial statements must be prepared on the accrual basis of accounting, in accordance with generally accepted accounting principles (GAAP), unless State statutes or regulatory agencies provide otherwise, or an exception is granted by the Agency. An organization may maintain its accounting records on a basis other than accrual accounting, and make the necessary adjustments so that annual financial statements are presented on the accrual basis.

(c) Record retention. Each borrower shall retain all records, books, and supporting material for 3 years after the issuance of the audit or management reports. Upon request, this material will be made available to RUS, Office of the Inspector General (OIG), United States Department of Agriculture (USDA), the Comptroller General, or to their assignees.

(d) Audits. All audits are to be performed in accordance with the latest revision of the generally accepted government auditing standards (GAGAS), developed by the Comptroller General of the United States. In addition, the audits are also to be performed in accordance with various Office of Management and Budget (OMB) Circulars. The type of audit each borrower is required to submit will be designated by RUS. Further guidance on preparing an acceptable audit can be obtained from RUS. It is not intended that audits required by this part be separate and apart from audits performed in accordance with State and local laws. To the extent feasible, the audit work should be done in conjunction with those audits. Audits shall be annual unless otherwise prohibited and supplied to the processing office as soon as possible but in no event later than 150 days following the period covered by the audit. OMB Circulars are available in any USDA/RUS office.

(e) Borrowers exempt from audits. All borrowers who are exempt from audits, will, within 60 days following the end of each fiscal year, furnish the RUS with annual financial statements, consisting of a verification of the organization’s balance sheet and statement of income and expense by an appropriate official of the organization. Forms RD 442-2, “Statement of Budget, Income and Equity,” and 442-3 may be used.

(f) Management reports. These reports will furnish management with a means of evaluating prior decisions and serve as a basis for planning future operations and financial strategies. In those cases where revenues from multiple sources are pledged as security for an RUS loan, two reports will be required; one for the project being financed by RUS and one combining the entire operation of the borrower. In those cases where RUS loans are secured by general obligation bonds or assessments and the borrower combines revenues from all sources, one management report combining all such revenues is acceptable. The following management data will be submitted by the borrower to the processing office. These reports at a minimum will include a balance sheet and income and expense statement.

(1) Quarterly reports. A quarterly management report will be required for the first year for new borrowers and for
§ 1780.48 Regional commission grants.

Grants are sometimes made by regional commissions for projects eligible for RUS assistance. RUS has agreed to administer such funds in a manner similar to administering RUS assistance.

(a) When RUS has funds in the project, no charge will be made for administering regional commission funds.

(b) When RUS has no loan or grant funds in the project, an administrative charge will be made pursuant to the Economy Act of 1932, as amended (31 U.S.C. 1535). A fee of 5 percent of the first $50,000 of a regional commission grant and 1 percent of any amount over $50,000 will be paid RUS by the commission.

(1) Appalachian Regional Commission (ARC). RUS Bulletin 1780-23 will be followed in determining the responsibilities of RUS. The ARC Federal Chairman and the State program official will provide each other with the necessary notification and certification.

(2) Other regional commissions. Title V of the Public Works and Economic Development Act of 1965 (42 U.S.C. 3121 et seq.) authorizes other commissions similar to ARC. RUS Bulletin 1780-23 will be used to develop a separate project management agreement between RUS and the commission for each project. The agreement should be prepared by the State program official as soon as notification is received that a commission grant will be made and the amount is confirmed.

(c) Regional commission grants should be obligated as soon as possible in accordance with §1780.41, except that the announcement procedure referred to in RUS Staff Instruction 1780-2 is not applicable. Regional commission grants will be disbursed from the Finance Office in the same manner as RUS funds.

§ 1780.49 Rural or Native Alaskan villages.

(a) General. (1) This section contains regulations for providing grants to remedy the dire sanitation conditions in rural Alaskan villages using funds specifically made available for this purpose.

(2) Unless specifically modified by this section, grants will be made, processed, and serviced in accordance with this subpart.

(b) Definitions—(1) Dire sanitation condition. For the purpose of this section a dire sanitation condition exists where:

(i) Recurring instances of a waterborne communicable disease have been documented; or

(ii) No community-wide water and sewer system exists and individual residents must haul water to or human waste from their homes and/or use pit privies.

(2) Rural or Native Alaskan village. A rural or Native Alaskan community which meets the definition of a village under State statutes and does not have a population in excess of 10,000 inhabitants, according to the latest decennial Census of the United States.

(c) Eligibility. (1) The applicant must be a rural or Native Alaskan village.
(2) The median household income of the village cannot exceed 110 percent of the statewide nonmetropolitan household income.

(3) A dire sanitation condition must exist in the village.

(4) The applicant must obtain 50 percent of project development costs from State or local contributions. The local contribution can be from loan funds authorized under this part.

(d) Grant amount. Grants will be made for up to 50 percent of the project development costs.

(e) Use of funds. Grant funds can be used to pay reasonable costs associated with providing potable water or waste disposal services to residents of rural or Native Alaskan villages.

(f) Construction. (1) If the State of Alaska is contributing to the project costs, the project does not have to meet the construction requirements of this subpart.

(2) If a loan is made in accordance with this part for part of the local contribution, all of the requirements of this part apply.

§§ 1780.50—1780.52 [Reserved]

Subpart C—Planning, Designing, Bidding, Contracting, Constructing and Inspections

§ 1780.53 General.

This subpart is specifically designed for use by owners including the professional or technical consultants or agents who provide assistance and services such as engineering, environmental, inspection, financial, legal or other services related to planning, designing, bidding, contracting, and constructing water and waste disposal facilities. These procedures do not relieve the owner of the contractual obligations that arise from the procurement of these services. For this subpart, an owner is defined as an applicant, borrower, or grantee.

§ 1780.54 Technical services.

Owners are responsible for providing the engineering, architect and environmental services necessary for planning, designing, bidding, contracting, inspecting, and constructing their facilities. Services may be provided by the owner’s “in house” engineer or architect or through contract, subject to Agency concurrence. Engineers and architects must be licensed in the State where the facility is to be constructed.

§ 1780.55 Preliminary engineering reports.

Preliminary engineering reports (PERs) must conform with customary professional standards. PER guidelines for water, sanitary sewer, solid waste, and storm sewer are available from the Agency.

§ 1780.56 [Reserved]

§ 1780.57 Design policies.

Facilities financed by the Agency will be designed and constructed in accordance with sound engineering practices, and must meet the requirements of Federal, State and local agencies.

(a) Environmental review. Facilities financed by the Agency must undergo an environmental impact analysis in accordance with RUS requirements. Facility planning and design must not only be responsive to the owner’s needs but must consider the environmental impacts of the proposed project. Facility designs shall incorporate and integrate, where practicable, mitigation measures that avoid or minimize adverse environmental impacts. Environmental reviews serve as a means of assessing environmental impacts of project proposals, rather than justifying decisions already made. Applicants may not take any action on a project proposal that will have an adverse environmental impact or limit the choice of reasonable project alternatives being reviewed prior to the completion of the Agency’s environmental review.

(b) Architectural barriers. All facilities intended for or accessible to the public or in which physically handicapped persons may be employed must be developed in compliance with the Architectural Barriers Act of 1968 (42 U.S.C. 4151 et seq.) as implemented by 41 CFR 101-19.6, section 504 of the Rehabilitation Act of 1973 (42 U.S.C. 1474 et seq.) as implemented by 7 CFR parts 15 and 15b, and Titles II and III of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.).
(c) Energy/environment. Facility design should consider cost effective energy-efficient and environmentally-sound products and services.

(d) Fire protection. Water facilities should have sufficient capacity to provide reasonable fire protection to the extent practicable.

(e) Growth capacity. Facilities should have sufficient capacity to provide for reasonable growth to the extent practicable.

(f) Water conservation. Owners are encouraged, when economically feasible, to incorporate water conservation practices into a facility's design. For existing water systems, evidence must be provided showing that the distribution system water losses do not exceed reasonable levels.

(g) Conformity with State drinking water standards. No funds shall be made available under this part for a water system unless the Agency determines that the water system will make significant progress toward meeting the standards established under title XIV of the Public Health Service Act (commonly known as the `Safe Drinking Water Act') (42 U.S.C. 300f et seq.).

(h) Conformity with Federal and State water pollution control standards. No funds shall be made available under this part for a water treatment discharge or waste disposal system unless the Agency determines that the effluent from the system conforms with applicable Federal and State water pollution control standards.

(i) Combined sewers. New combined sanitary and storm water sewer facilities will not be financed by the Agency. Extensions to existing combined systems can only be financed when separate systems are impractical.

(j) Dam safety. Projects involving any artificial barrier which impounds or diverts water, or the rehabilitation or improvement of such a barrier, must comply with the provisions for dam safety as set forth in the Federal Guidelines for Dam Safety (Government Printing Office stock No. 041-001-00087-5, Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250-7954) as prepared by the Federal Coordinating Council for Science, Engineering and Technology.

(k) Pipe. All pipe used shall meet current American Society for Testing Materials (ASTM) or American Water Works Association (AWWA) standards.

(l) Water system testing. For new water systems or extensions to existing water systems, leakage shall not exceed limits set by either ASTM or AWWA whichever is the more stringent.

(m) Metering devices. Water facilities financed by the Agency will have metering devices for each connection. An exception to this requirement may be granted by the State program official when the owner demonstrates that installation of metering devices would be a significant economic detriment and that environmental considerations would not be adversely affected by not installing such devices. Sanitary sewer projects should incorporate water system metering devices whenever practicable.

(n) Economical service. The facility's design must provide the most economical service practicable.
responsible for concurring in construction contracts with the legal advice and guidance of the OGC when necessary.

§ 1780.62 Utility purchase contracts.

Applicants proposing to purchase water or other utility service from private or public sources shall have written contracts for supply or service which are reviewed and concurred in by the Agency. To the extent practical, the Agency review and concurrence of such contracts should take place prior to their execution by the owner. OGC advice and guidance may be requested. Form RD 442±30, “Water Purchase Contract,” may be used when appropriate. If the Agency loan will be repaid from system revenues, the contract will be pledged to the Agency as part of the security for the loan. Such contracts will:

(a) Include a commitment by the supplier to furnish, at a specified point, an adequate quantity of water or other service and provide that, in case of shortages, all of the supplier's users will proportionately share shortages.

(b) Set out the ownership and maintenance responsibilities of the respective parties including the master meter if a meter is installed at the point of delivery.

(c) Specify the initial rates and provide a type of escalator clause which will permit rates for the association to be raised or lowered proportionately as certain specified rates for the supplier's regular customers are raised or lowered. Provisions may be made for altering rates in accordance with the decisions of the appropriate State agency which may have regulatory authority.

(d) Cover period of time which is at least equal to the repayment period of the loan. State program officials may approve contracts for shorter periods of time if the supplier cannot legally contract for such period, or if the owner and supplier find it impossible or impractical to negotiate a contract for the maximum period permissible under State law, provided:

(1) The supplier is subject to regulations of the Federal Energy Regulatory Commission or other Federal or State agency whose jurisdiction can be expected to prevent unwarranted curtailment of supply; or

(2) The contract contains adequate provisions for renewal; or

(3) A determination is made that in the event the contract is terminated, there are or will be other adequate sources available to the owner that can feasibly be developed or purchased.

(e) Set out in detail the amount of connection or demand charges, if any, to be made by the supplier as a condition to making the service available to the owner. However, the payment of such charges from loan funds shall not be approved unless the Agency determines that it is more feasible and economical for the owner to pay such a connection charge than it is for the owner to provide the necessary supply by other means.

(f) Provide for a pledge of the contract to the Agency as part of the security for the loan.

(g) Not contain provisions for:

(1) Construction of facilities which will be owned by the supplier. This does not preclude the use of money paid as a connection charge for construction to be done by the supplier.

(2) Options for the future sale or transfer. This does not preclude an agreement recognizing that the supplier and owner may at some future date agree to a sale of all or a portion of the facility.

(h) If it is impossible to obtain a firm commitment for either an adequate quantity or sharing shortages proportionately, a contract may be executed and concurred in provided adequate evidence is furnished to enable the Agency to make a determination that the supplier has adequate supply and/or treatment facilities to furnish its other users and the applicant for the foreseeable future; and:

(1) The supplier is subject to regulations of the Federal Energy Regulatory Commission or other Federal or State agency whose jurisdiction can be expected to prevent unwarranted curtailment of supply; or

(2) A suitable alternative supply could be arranged within the repayment ability of the borrower if it should become necessary; or
§ 1780.63

(3) Concurrence in the proposed contract is obtained from the National Office.

§ 1780.63 Sewage treatment and bulk water sales contracts.

Owners entering into agreements with private or public parties to treat sewage or supply bulk water shall have written contracts for such service and all such contracts shall be subject to the Agency concurrence. Section 1780.62 should be used as a guide to prepare such contracts.

§§ 1780.64–1780.66 [Reserved]

§ 1780.67 Performing construction.

Owners are encouraged to accomplish construction through contracts with qualified contractors. Owners may accomplish construction by using their own personnel and equipment provided the owners possess the necessary skills, abilities and resources to perform the work and provided a licensed engineer prepares design drawings and specifications and inspects construction and furnishes inspection reports as required by §1780.76. Inspection services may be provided by individuals as approved by the State staff engineer. Payments for construction will be handled under §1780.76(e).

§ 1780.68 Owner’s contractual responsibility.

This part does not relieve the owner of any responsibilities under its contract. The owner is responsible for the settlement of all contractual and administrative issues arising out of procurement entered into in support of a loan or grant. These include, but are not limited to: source evaluation, protests, disputes, and claims. Matters concerning violation of laws are to be referred to the applicable local, State, or Federal authority.

§ 1780.69 [Reserved]

§ 1780.70 Owner’s procurement regulations.

Owner’s procurement requirements must comply with the following standards:

(a) Code of conduct. Owners shall maintain a written code or standards of conduct which shall govern the performance of their officers, employees or agents engaged in the award and administration of contracts supported by Agency funds. No employee, officer or agent of the owner shall participate in the selection, award, or administration of a contract supported by Agency funds if a conflict of interest, real or apparent, would be involved. Examples of such conflicts would arise when: the employee, officer or agent; any member of their immediate family; their partner; or an organization which employs, or is about to employ, any of the above; has a financial or other interest in the firm selected for the award.

(1) The owner’s officers, employees or agents shall neither solicit nor accept gratuities, favors or anything of monetary value from contractors, potential contractors, or parties to subagreements.

(2) To the extent permitted by State or local law or regulations, the owner’s standards of conduct shall provide for penalties, sanctions, or other disciplinary actions for violations of such standards by the owner’s officers, employees, agents, or by contractors or their agents.

(b) Maximum open and free competition. All procurement transactions, regardless of whether by sealed bids or by negotiation and without regard to dollar value, shall be conducted in a manner that provides maximum open and free competition. Procurement procedures shall not restrict or eliminate competition. Examples of what are considered to be restrictive of competition include, but are not limited to: placing unreasonable requirements on firms in order for them to qualify to do business; noncompetitive practices between firms; organizational conflicts of interest; and unnecessary experience and bonding requirements. In specifying materials, the owner and its consultant will consider all materials normally suitable for the project commensurate with sound engineering practices and project requirements. The Agency shall consider fully any recommendation made by the owner concerning the technical design and choice of materials to be used for a facility. If the Agency determines that a design or material, other than those that were recommended should be considered by
including them in the procurement process as an acceptable design or material in the water or waste disposal facility, the Agency shall provide such owner with a comprehensive justification for such a determination. The justification will be documented in writing.

(c) Owner’s review. Proposed procurement actions shall be reviewed by the owner’s officials to avoid the purchase of unnecessary or duplicate items. Consideration should be given to consolidation or separation of procurement items to obtain a more economical purchase. Where appropriate, an analysis shall be made of lease versus purchase alternatives, and any other appropriate analysis to determine which approach would be the most economical. To foster greater economy and efficiency, owners are encouraged to enter into State and local intergovernmental agreements for procurement or use of common goods and services.

(d) Solicitation of offers, whether by competitive sealed bid or competitive negotiation, shall:

1. Incorporate a clear and accurate description of the technical requirements for the material, product or service to be procured. When it is impractical or uneconomical to make a clear and accurate description of the technical requirements, a “brand name or equal” description may be used to define the performance or other salient requirements of a procurement. The specific feature of the name brands which must be met by the offeror shall be clearly stated; and

2. Clearly specify all requirements which offerors must fulfill and all other factors to be used in evaluating bids or proposals.

(e) Affirmative steps should be taken to assure that small, minority, and women businesses are utilized when possible as sources of supplies, equipment, construction and services.

(f) Contract pricing. Cost plus a percentage of cost method of contracting shall not be used.

(g) Unacceptable bidders. The following will not be allowed to bid on, or negotiate for, a contract or subcontract related to the construction of the project:

1. An engineer as an individual or firm who has prepared plans and specifications or who will be responsible for monitoring the construction;

2. Any firm or corporation in which the owner’s engineer is an officer, employee, or holds or controls a substantial interest;

3. The governing body’s officers, employees, or agents;

4. Any member of the immediate family or partners in the entities referred to in paragraphs (g)(1), (g)(2) or (g)(3) of this section; or

5. An organization which employs, or is about to employ, any person in the entities referred to in paragraphs (g)(1), (g)(2), (g)(3) or (g)(4) of this section.

(h) Contract award. Contracts shall be made only with responsible parties possessing the potential ability to perform successfully under the terms and conditions of a proposed procurement. Consideration shall include but not be limited to matters such as integrity, record of past performance, financial and technical resources, and accessibility to other necessary resources. Contracts shall not be made with parties who are suspended or debarred by any Agency of the United States Government.

§ 1780.71 [Reserved]

§ 1780.72 Procurement methods.

Procurement shall be made by one of the following methods: Small purchase procedures; competitive sealed bids (formal advertising); competitive negotiation; or noncompetitive negotiation. Competitive sealed bids (formal advertising) is the preferred procurement method for construction contracts.

(a) Small purchase procedures. Small purchase procedures are those relatively simple and informal procurement methods that are sound and appropriate for a procurement of services, supplies or other property, costing in the aggregate not more than $100,000. If small purchase procedures are used for a procurement, written price or rate quotations shall be requested from at least three qualified sources.

(b) Competitive sealed bids (formal advertising), an invitation for sealed bids is publicly
advertised and a firm-fixed-price contract (lump sum or unit price) is awarded to the responsible bidder whose bid, conforming with all the material terms and conditions of the invitation for bids, is lowest, price and other factors considered. When using this method the following shall apply:

(1) The invitation for bids shall be publicly advertised at a sufficient time prior to the date set for opening of bids. The invitation shall comply with the requirements in §1780.70(d). Bids shall be solicited from an adequate number of qualified sources;

(2) All bids shall be opened publicly at the time and place stated in the invitation for bids;

(3) A firm-fixed-price contract award shall be made by written notice to that responsible bidder whose bid, conforming to the invitation for bids, is lowest. When specified in the bidding documents, factors such as discounts and transportation costs shall be considered in determining which bid is lowest; and

(4) Any or all bids may be rejected by the owner when it is in its best interest.

(c) Competitive negotiation. In competitive negotiations, proposals are requested from a number of sources and the Request for Proposal is publicized. Negotiations are normally conducted with more than one of the sources submitting offers. Competitive negotiation may be used if conditions are not appropriate for the use of formal advertising and where discussions and bargaining with a view to reaching agreement on the technical quality, price, other terms of the proposed contract and specifications may be necessary. If competitive negotiation is used for a procurement, the following requirements shall apply:

(1) Proposals shall be solicited from an adequate number of qualified sources to permit reasonable competition consistent with the nature and requirements of the Procurement. The Request for Proposal shall be publicized and reasonable requests by other sources to compete shall be honored to the maximum extent practicable;

(2) The Request for Proposal shall identify all significant evaluation factors and their relative importance;

(3) The owner shall provide mechanisms for technical evaluation of the proposals received, determination of responsible offerors for the purpose of written or oral discussions, and selection for contract award; and

(4) Award may be made to the responsible offeror whose proposal will be most advantageous to the owner. Unsuccessful offerors should be promptly notified.

(d) Noncompetitive negotiation. Noncompetitive negotiation is procurement through solicitation of a proposal from only one source, or after solicitation of a number of sources, competition is determined inadequate. Noncompetitive negotiation may be used when the award of a contract is not feasible under small purchase or competitive sealed bids. Circumstances under which a contract may be awarded by noncompetitive negotiations are limited to the following:

(1) The item is available only from a single source; or

(2) There exists a public exigency or emergency and the urgency for the requirement will not permit a delay incident to competitive solicitation; or

(3) After solicitation of a number of sources, competition is determined inadequate; or

(4) No acceptable bids have been received after formal advertising; or

(5) The procurement is for professional services; or

(6) The aggregate amount does not exceed $100,000.

§1780.73 [Reserved]

§1780.74 Contracts awarded prior to applications.

Owners awarding construction or other procurement contracts prior to filing an application, must provide evidence that is satisfactory to the Agency that the contract was entered into without intent to circumvent the requirements of Agency regulations.

(a) Modifications. The contract shall be modified to conform with the provisions of this part. Where this is not possible, modifications will be made to the extent practicable and, as a minimum, the contract must comply with
§ 1780.75 Contract provisions.

In addition to provisions required for a valid and legally binding contract, any recipient of Agency funds shall include the following contract provisions in all contracts.

(a) Remedies. Contracts other than small purchases shall contain provisions or conditions which will allow for administrative, contractual, or legal remedies in instances where contractors violate or breach contract terms, and provide for such sanctions and penalties as may be appropriate. A realistic liquidated damage provision should be included in all contracts for construction.

(b) Termination. All contracts exceeding $10,000 shall contain suitable provisions for termination by the owner including the manner by which it will be effected and the basis for settlement. In addition, such contracts shall describe conditions under which the contract may be terminated for default as well as conditions where the contract may be terminated because of circumstances beyond the control of the contractor.

(c) Surety. In all contracts for construction or facility improvements exceeding $100,000, the owner shall require bonds or cash deposit in escrow assuring performance and payment each in the amount of 100 percent of the contract cost. The surety will be in the form of performance bonds and payment bonds. For contracts of lesser amounts, the owner may require surety. When a surety is not provided, contractors will furnish evidence of payment in full for all materials, labor, and any other items procured under the contract. Form RD 1924-10, “Release by Claimants,” and Form RD 1924-9, “Certificate of Contractor’s Release,” may be used for this purpose. Companies providing performance bonds and payment bonds must hold a certificate of authority as an acceptable surety on Federal bonds as listed in Treasury Circular 570 as amended and the surety must be listed as having a license to do business in the State where the facility is located.

(d) Equal employment opportunity. All contracts awarded in excess of $10,000 by owners shall contain a provision requiring compliance with Executive Order 11246 (3 CFR, 1966 Comp., p.339), entitled, “Equal Employment Opportunity,” as amended by Executive Order 11375 (3 CFR, 1968 Comp., p. 321), and as supplemented by Department of Labor regulations 41 CFR chapter 60.

(e) Anti-kickback. All contracts for construction shall include a provision for compliance with the Copeland “Anti-Kickback” Act (18 U.S.C. 874). This Act provides that each contractor shall be prohibited from inducing, by any means, any person employed in the construction, completion, or repair of public work, to give up any part of the compensation to which they are otherwise entitled. The owner shall report suspected or reported violations to the Agency.

(f) Records. All negotiated contracts (except those of $10,000 or less) awarded by owners shall contain a provision requiring the owner, the Agency, the Comptroller General of the United States, or any of their duly authorized representatives, shall have access to any books, documents, papers, and records of the contractor which are directly pertinent to a specific Federal loan or grant program for the purpose of making audits, examinations, excerpts, and transcriptions. Owners shall require contractors to maintain all required records for 3 years after making final payment and all other pending matters are closed.

(g) State energy conservation plan. Contracts shall incorporate mandatory
§ 1780.76 Contract administration.

Owners shall be responsible for maintaining a contract administration system to monitor the contractors' performance and compliance with the terms, conditions, and specifications of the contracts.

(a) Preconstruction conference. Prior to beginning construction, the owner will schedule a preconstruction conference where the consulting engineer will review the planned development with the Agency, owner, resident inspector, attorney, contractor, and other interested parties. The conference will thoroughly cover applicable items included in Form RD 1924-16, "Record of Pre-construction Conference," and the discussions and agreements will be documented.

(b) Monitoring reports. The owner is required to monitor construction and provide a report to the Agency giving a full explanation under the following circumstances:

(1) Reasons why approved construction schedules were not met;
(2) Analysis and explanation of cost overruns and how payment is to be made for the same; and
(3) If events occur which have a significant impact upon the project.

(c) Inspection. Full-time resident inspection is required for all construction unless a written exception is made by the Agency upon written request of the owner. Unless otherwise agreed, the resident inspector will be provided by the consulting engineer. Prior to the preconstruction conference, the consulting engineer will submit a resume of qualifications of the resident inspector to the owner and to the Agency for acceptance in writing. If the owner provides the resident inspector, it must submit a resume of the inspector's qualifications to the project engineer for comments and the Agency for acceptance in writing prior to the preconstruction conference. The resident inspector will work under the technical supervision of the project engineer and the role and responsibilities will be defined in writing.

(d) Inspector's daily diary. The resident inspector will maintain a record of the daily construction progress in the form of a daily diary and daily inspection reports. The daily entries shall be made available to the Agency personnel and will be reviewed during project inspections. The original complete set will be furnished to the owner.
upon completion of construction. RUS Bulletin 1780-18 is available from the Agency for preparing daily inspection reports or the reports can be provided in other formats approved by the State staff engineer.

(e) Payment for Construction. Form RD 1924-18, “Partial Payment Estimate,” or other similar form may be used for construction payments. If Form 1924-18 is not used, prior concurrence by the State staff engineer must be obtained.

(1) Payment of contract retainage will not be made until such retainage is due and payable under the terms of the contract.

(2) Invoices for the payment of construction costs must be approved by the owner, project engineer and concurred in by the Agency.

(3) The review and acceptance of project costs, including construction payment estimates by the Agency shall not attest to the correctness of the amounts, the quantities shown, or that the work has been performed under the terms of agreements or contracts.

(f) Prefinal inspections. A prefinal inspection will be made by the owner, resident inspector, project engineer, contractor, representatives of other agencies involved, and Agency representative (preferably the State staff engineer or designee). The inspection results will be recorded by the project engineer and a copy provided to all interested parties.

(g) Final inspection. A final inspection will be made by the Agency before final payment is made.

(h) Changes in development plans. (1) Changes in development plans shall be reviewed and approved by the Agency provided:

(i) Funds are available to cover any additional costs; and

(ii) The change is for an authorized loan or grant purpose; and

(iii) It will not adversely affect the soundness of the facility operation or the Agency’s security; and

(iv) The change is within the scope of the contract.

(2) Changes will be recorded on Form RD 1924-7, “Contract Change Order,” or other similar form if approved by the State program official or designee. Regardless of the form, change orders must be approved by the State program official or designee.

(3) Changes should be accomplished only after Agency approval and shall be authorized only by means of contract change order. The change order will include items such as:

(i) Any changes in labor and material;

(ii) Changes in facility design;

(iii) Any decrease or increase in quantities based on final measurements that are different from those shown in the bidding schedule; and

(iv) Any increase or decrease in the time to complete the project.

(4) All changes shall be recorded on chronologically numbered contract change orders as they occur. Change orders will not be included in payment estimates until approved by all parties.

§ 1780.81 Policies related to use of bond counsel.

The applicant is responsible for preparation of bonds and bond transcript documents. The applicant will obtain the services and opinion of recognized bond counsel experienced in municipal financing with respect to the validity of a bond issue, except for issues of $100,000 or less. With prior approval of the approval official, the applicant may elect not to use bond counsel. Such issues will be closed in accordance with the following:

(a) The applicant must recognize and accept the fact that application processing may require additional legal and administrative time;
§ 1780.82 

(b) It must be established that not using bond counsel will produce significant savings in total legal costs;
(c) The local attorney must be able and experienced in handling this type of legal work;
(d) The applicant must understand that it will likely have to obtain an opinion from bond counsel at its expense should the Agency require refinancing of the debt;
(e) Bonds will be prepared in accordance with this regulation and conform as closely as possible to the preferred methods of preparation stated in §1780.94; and
(f) Closing instructions must be issued by OGC.

§ 1780.82 [Reserved]

§ 1780.83 Bond transcript documents.

Any questions relating to Agency requirements should be discussed with Agency representatives. Bond counsel or local counsel, as appropriate, must furnish at least two complete sets of the following to the applicant, who will furnish one complete set to the Agency:

(a) Copies of all organizational documents;
(b) Copies of general incumbency certificate;
(c) Certified copies of minutes or excerpts from all meetings of the governing body at which action was taken in connection with the authorizing and issuing of the bonds;
(d) Certified copies of documents evidencing that the applicant has complied fully with all statutory requirements incident to calling and holding a favorable bond election, if one is necessary;
(e) Certified copies of the resolutions, ordinances, or other documents such as the bond authorizing resolutions or ordinances and any resolution establishing rates and regulating use of facility, if such documents are not included in the minutes furnished;
(f) Copies of the official Notice of Sale and the affidavit of publication of the Notice of Sale when State statute requires a public sale;
(g) Specimen bond, with any attached coupons;
(h) Attorney’s no-litigation certificate;
(i) Certified copies of resolutions or other documents pertaining to the bond award;
(j) Any additional or supporting documents required by bond counsel;
(k) For loans involving multiple advances of Agency loan funds, a preliminary approving opinion of bond counsel (or local counsel if no bond counsel is involved) if a final unqualified opinion cannot be obtained until all funds are advanced. The preliminary opinion for the entire issue shall be delivered at or before the time of the first advance of funds. It will state that the applicant has the legal authority to issue the bonds, construct, operate and maintain the facility, and repay the loan, subject only to changes occurring during the advance of funds, such as litigation resulting from the failure to advance loan funds, and receipt of closing certificates;
(l) Final unqualified approving opinion of bond counsel, (and preliminary approving opinion, if required) or local counsel if no bond counsel is involved, including an opinion as to whether interest on bonds will be exempt from Federal and State income taxes. With approval of the State program official, a final opinion may be qualified to the extent that litigation is pending relating to Indian claims that may affect title to land or validity of the obligation. It is permissible for such opinion to contain language referring to the last sentence of section 306 (a)(1) or to section 309A (h) of the Consolidated Farm and Rural Development Act (7 U.S.C. 1926 (a)(1) or 1929a (h)).

§§ 1780.84—1780.86 [Reserved]

§ 1780.87 Permanent instruments for Agency loans.

Agency loans will be evidenced by an instrument determined legally sufficient and in accordance with the following order of preference:

(a) First preference—Form RD 440-22, "Promissory Note". Refer to paragraph (b) of this section for methods of various frequency payment calculations.
(b) Second preference—single instruments with amortized installments. A single instrument providing for amortized
installments which follows Form RD 440-22 as closely as possible. The full amount of the loan must show on the face of the instrument, and there must be provisions for entering the date and amount of each advance on the reverse or any attachment. When principal payments are deferred, the instrument will show that “interest only” is due on interest-only installment dates, rather than specific dollar amounts. The payment period including the “interest only” installment cannot exceed 40 years, the useful life of the facility, or State statute limitations, whichever occurs first. The amortized installment, computed as follows, will be shown as due on installment dates thereafter.

(1) **Monthly payments.** Multiply by twelve the number of years between the due date of the last interest-only installment and the final installment to determine the number of monthly payments. When there are no interest-only installments, multiply by twelve the number of years over which the loan is amortized. Then multiply the loan amount by the amortization factor and round to the next higher dollar.

(2) **Semiannual payments.** Multiply by two the number of years between the due date of the last interest-only installment and the due date of the final installment to determine the correct number of semiannual periods. When there are no interest-only installments, multiply by two the number of years over which the loan is amortized. Then multiply the loan amount by the applicable amortization factor.

(3) **Annual payments.** Subtract the due date of the last interest-only installment from the due date of the final installment to determine the number of annual payments. When there are no interest-only installments, divide the number of years over which the loan is amortized. Then multiply the loan amount by the applicable amortization factor and round to the next higher dollar.

(c) **Third preference—single instruments with installments of principal plus interest.** If a single instrument with amortized installments is not legally permissible, use a single instrument providing for installments of principal plus interest accrued on the principal balance. For bonds with semiannual interest and annual principal, the interest is calculated by multiplying the principal balance times the interest rate and dividing this figure by two. Principal installments are to be scheduled so that total combined interest and principal payments closely approximate amortized payments.

(1) The repayment terms concerning interest only installments described in paragraph (b) of this section apply.

(2) The instrument shall contain in substance provisions indicating:

(i) Principal maturities and due dates;

(ii) Regular payments shall be applied first to interest due through the next principal and interest installment due date and then to principal due in chronological order stipulated in the bond; and

(iii) Payments on delinquent accounts will be applied in the following sequence:

(A) Billed delinquent interest;
(B) Past due interest installments;
(C) Past due principal installments;
(D) Interest installment due; and
(E) Principal installment due.

(d) **Fourth preference—serial bonds with installments of principal plus interest.** If instruments described under the first, second, and third preferences are not legally permissible, use serial bonds with a bond or bonds delivered in the amount of each advance. Bonds will be numbered consecutively and delivered in chronological order. Such bonds will conform to the minimum requirements of §1780.94. Provisions for application of payments will be the same as those set forth in paragraph (c)(2)(ii) of this section.

(e) **Coupon bonds.** Coupon bonds will not be used unless required by State statute. Such bonds will conform to the minimum requirements of §1780.94.

§ 1780.88 [Reserved]

§ 1780.89 Multiple advances of Agency funds using permanent instruments.

Where interim financing from commercial sources is not used, Agency loan proceeds will be disbursed on an “as needed by borrower” basis in
§ 1780.90 Multiple advances of Agency funds using temporary debt instruments.

When none of the instruments described in §1780.87 are legally permissible or practical, a bond anticipation note or similar temporary debt instrument may be used. The debt instrument will provide for multiple advances of Agency funds and will be for the full amount of the Agency loan. The instrument will be prepared by bond counsel, or local counsel if bond counsel is not involved, and approved by the State program official and OGC. At the same time the Agency delivers the last advance, the borrower will deliver the permanent bond instrument and the canceled temporary instrument will be returned to the borrower. The approved debt instrument will show at least the following:

(a) The date from which each advance will bear interest;
(b) The interest rate as determined by §1780.13;
(c) A payment schedule providing for interest on outstanding principal at least annually; and
(d) A maturity date which shall be no earlier than the anticipated issuance date of the permanent instruments and no longer than the 40-year statutory limit.

§§ 1780.91–1780.93 [Reserved]

§ 1780.94 Minimum bond specifications.

The provisions of this section are minimum specifications only and must be followed to the extent legally permissible.

(a) Type and denominations. Bond resolutions or ordinances will provide that the instruments be either a bond representing the total amount of the indebtedness or serial bonds in denominations customarily accepted in municipal financing (ordinarily in multiples of not less than $1,000). Single bonds may provide for repayment of principal plus interest or amortized installments. Amortized installments are preferred by the Agency.

(b) Bond registration. Bonds will contain provisions permitting registration for both principal and interest. Bonds purchased by the Agency will be registered in the name of “United States of America” and will remain so registered at all times while the bonds are held or insured by the Government. The Agency address for registration purposes will be that of the Finance Office.

(c) Size and quality. Size of bonds and coupons should conform to standard practice. Paper must be of sufficient quality to prevent deterioration through ordinary handling over the life of the loan.

(d) Date of bond. Bonds will normally be dated as of the day of delivery. However, the borrower may use another date if approved by the Agency. Loan closing is the date of delivery of the bonds or the date of delivery of the first bond when utilizing serial bonds, regardless of the date of delivery of the funds. The date of delivery will be stated in the bond if different from the date of the bond. In all cases, interest will accrue from the date of delivery of the funds.

(e) Payment date. Loan payments will be scheduled to coincide with income availability and be in accordance with State law.

(1) If income is available monthly, monthly payments are recommended unless precluded by State law. If income is available quarterly or otherwise more frequently than annually, payments must be scheduled on such basis. However, if State law only permits principal plus interest (P&I) type bonds, annual or semiannual payments will be used.

(2) The payment schedule will be enumerated in the evidence of debt, or if that is not feasible, in a supplemental agreement.

(3) If feasible, the first payment will be scheduled one full month, or other period, as appropriate, from the date of loan closing or any deferment period. Due dates falling on the 29th, 30th, and 31st day of the month will be avoided. When principal payments are deferred, interest-only payments will be scheduled at least annually.

(f) Extra payments. Extra payments are derived from the sale of basic chattel or real estate security, refund of unused loan funds, cash proceeds of
property insurance and similar actions which reduce the value of basic security. At the option of the borrower, regular facility revenue may also be used as extra payments when regular payments are current. Unless otherwise established in the note or bond, extra payments will be applied as follows:

(1) For loans with amortized debt instruments, extra payments will be applied first to interest accrued to the date of receipt of the payment and second to principal.

(2) For loans with debt instruments with P&I installments, the extra payment will be applied to the final unpaid principal installment.

(3) For borrowers with more than one loan, the extra payment will be applied to the account secured by the lowest priority of lien on the property from which the extra payments was obtained. Any balance will be applied to other Agency loans secured by the property from which the extra payment was obtained.

(4) For assessment bonds, see paragraph (k) of this section.

(g) The place of payments on bonds purchased by the Agency will be determined by the Agency.

(h) Redemptions. Bonds will normally contain customary redemption provisions. However, no premium will be charged for early redemption on any bonds held by the Government.

(i) Additional revenue bonds. Parity bonds may be issued to complete the project. Otherwise, parity bonds may not be issued unless acceptable documentation is provided establishing that net revenues for the fiscal year following the year in which such bonds are to be issued will be at least 120 percent of the average annual debt service requirements on all bonds outstanding, including the newly-issued bonds. For purposes of this section, net revenues are, unless otherwise defined by State statute, gross revenues less essential operation and maintenance expenses. This limitation may be waived or modified by the written consent of bondholders representing 75 percent of the then-outstanding principal indebtedness. Junior and subordinate bonds may be issued in accordance with the loan resolution.

(j) Precautions. The following types of provisions in debt instruments should be avoided:

(1) Provisions for the holder to manually post each payment to the instrument.

(2) Provisions for returning the permanent or temporary debt instrument to the borrower in order that it, rather than the Agency, may post the date and amount of each advance or repayment on the instrument.

(3) Provisions that amend covenants contained in Forms RD 1942-47 or RD 1942-9.

(4) Defeasance provisions in loan or bond resolutions. When a bond issue is defeased, a new issue is sold which supersedes the contractual provisions of the prior issue, including the refinancing requirement and any lien on revenues. Since defeasance in effect precludes the Agency from requiring refinancing before the final maturity date, it represents a violation of the statutory refinancing requirement; therefore, it is disallowed. No loan documents shall include a provision of defeasance.

(k) Assessment bonds. When security includes special assessment to be collected over the life of the loan, the instrument should address the method of applying any payments made before they are due. It may be desirable for such payments to be distributed over remaining payments due, rather than to be applied in accordance with normal procedures governing extra payments, so that the account does not become delinquent.

(l) Multiple debt instruments. The following will be adhered to when preparing debt instruments:

(1) When more than one loan type is used in financing a project, each type of loan will be evidenced by a separate debt instrument or series of debt instruments;

(2) Loans obligated in different fiscal years and those obligated with different terms in the same fiscal year will be evidenced by separate debt instruments;

(3) Loans obligated for the same loan type in the same fiscal year with the same term may be combined in the same debt instrument;
§ 1780.95 Loans obligated in the same fiscal year with different interest rates that will be closed at the same interest rate may be combined in the same debt instrument.

§ 1780.95 Public bidding on bonds.

Bonds offered for public sale shall be offered in accordance with State law and in such a manner to encourage public bidding. The Agency will not submit a bid at the advertised sale unless required by State law, nor will reference to Agency’s rates and terms be included. If no acceptable bid is received, the Agency will negotiate the purchase of the bonds.

SOURCE: 62 FR 33500, June 19, 1997, unless otherwise noted.

§ 1781.1 Purpose.

This part prescribes the policies and procedures for making:
(a) Watershed (WS) loans and Watershed (WS) advances for works of improvement in a watershed project; and
(b) Resource Conservation and Development (RCD) loans for measures or projects needed to implement the RCD watershed plan to achieve objectives in an RCD area.

§ 1781.2 Policy.

(a) Rural Utilities Service (RUS), is an agency of the United States Department of Agriculture established pursuant to section 232 of the Department of Agriculture Reorganization Act of 1994 (Pub. L. 103–354, 108 Stat. 3178), successor to the Farmers' Home Administration. Natural Resources Conservation Service (NRCS), is an agency of the United States Department of Agriculture established pursuant to section 232 of the Department of Agriculture Reorganization Act of 1994 (Pub. L. 103–354, 108 Stat. 3178), successor to the Soil Conservation Service. RUS will make WS and RCD loans available to sponsoring local public bodies, agencies, and nonprofit organizations to assist them in obtaining the local cost of WS works of improvement and RCD measures. Any processing or servicing activity conducted pursuant to this part involving authorized assistance to RUS employees, members of their families, known close relatives, or business or close personal associates, is subject to the provisions of subpart D of Part 1900 of this title. Applicants for this assistance are required to identify any known relationship or association with an RUS employee. RUS will assist the local sponsors and the NRCS in making loans from NRCS construction funds as WS advances when needed for the development of future water supplies or for site preservation.

(b) Rural Development State and local offices will administer these programs on behalf of RUS and will coordinate application processing with
the NRCS and other appropriate State and Federal agencies.

§ 1781.4 Definitions.

(a) Watershed (WS) project. An authorized area in which watershed assistance from NRCS and other U.S. Department of Agriculture (USDA) agencies including WS loans and advances may be provided. Watershed assistance is provided in two types of watershed projects identified by the Public Law under which they are authorized.

(2) Public Law-566 Watershed. A small watershed of not more than 250,000 acres authorized in accordance with the Watershed Protection and Flood Prevention Act, August 4, 1954, Public Law 83-566 as amended.

(b) Resource Conservation and Development (RCD) area. An area in which RCD program assistance from NRCS and other USDA agencies has been authorized. It usually includes all or part of more than one county and may be co-terminous with substate planning and
development areas. RCD loans are authorized under Section 32 of Title III of the Bankhead-Jones Farm Tenant Act (7 U.S.C. 1011).

(c) Watershed plan. A plan agreed upon by sponsoring local organizations and the NRCS for developing, operating, and maintaining watershed works of improvement.

(d) RC&D measure plan. A plan document for a land area, directly controlled or under the jurisdiction of the sponsoring public bodies or public non-profit organization. It involves one of the measure purposes eligible for RC&D cost sharing assistance. The document sets forth what will be done, how, when and by whom, and involves RC&D technical and/or financial assistance.

(e) RC&D area plan. A plan prepared by sponsoring local organizations with assistance from NRCS and other agencies for the development of the RC&D area which has been endorsed by the Governor or his designated agency and accepted by the Secretary of Agriculture or his delegate. It includes objectives, planned courses of action, and RC&D measures to be developed. It is amended as necessary to include continuing activities and needs in the RC&D area.

(f) Watershed works of improvement. Structural, nonstructural, and land treatment measures included in a watershed plan which are to be installed in a watershed project.

(g) RC&D measure or project. An activity or development indicated in the RC&D area plan as being needed to achieve RC&D area goals and objectives.

(h) Cost sharing. The WS and RC&D legislative authorities provide for sharing certain costs of installing WS works of improvement or RC&D measures by the Federal Government and by sponsoring local organizations. Federal cost sharing from WS and RC&D funds is provided by NRCS for certain WS works of improvement and RC&D measures. Information on amounts, purposes, and procedures for cost sharing is available from the NRCS.

(i) Local cost. The part of the cost of a WS work of improvement or a RC&D measure or project that is to be paid by a sponsoring local organization.

(j) Public agency or public body. A State agency or department or instrumentality, county, municipality or other political subdivision or instrumentality of a State or agencies or districts created by or pursuant to State law for making improvements of a public nature or providing public services such as soil and water conservation districts, irrigation districts, drainage districts, flood prevention and control districts, school districts, other special purpose districts, municipal corporations or similar governmental units.

(k) Non-profit corporation. Mutual and other irrigation, water users, water supply, drainage, or waste disposal companies or associations, ditch companies, grazing, recreation and forestry associations and similar associations and organizations generally designated as private corporations operating on a non-profit basis. They may be organized and chartered under special law, general nonprofit corporation law, or general profit corporation law, if operated on a nonprofit basis under adequate charter, bylaw, mortgage or supplementary agreement provisions which will assure continued operation in that manner.

(l) Sponsoring local organization. A local public agency or body or a local nonprofit corporation having authority under State law to plan, develop, maintain and operate WS works of improvement or RC&D measures or projects included in a WS or RC&D area plan. The name of the sponsoring local organization must be included in the plan and sponsorship must be evidenced by execution of the plan.

(m) Watershed loan. A loan made by RUS from watershed funds to a sponsoring local organization to develop a WS work of improvement.

(n) RC&D loan. A loan made by RUS from RC&D funds to a local sponsoring organization to develop a RC&D measure or project. RC&D loans are made from RC&D funds to enable sponsoring local organizations to provide a part or all of the local share of cost for an RC&D measure.

(o) Watershed advance. A loan made from NRCS watershed construction funds to develop a future water supply or for the preservation of a site for a work of improvement authorized in a watershed plan.
§ 1781.6 Loan purposes.

(a) WS and RCD loans. WS and RCD loans may be used for:

1. Water development, storage, treatment and conveyance to farms for irrigation and other farm use, including farmstead, livestock, orchard, and crop spraying.

2. Drainage systems and facilities in farm areas to sustain agricultural production or protect farmers and rural residents from water damage.

3. Agricultural water management practices for annual streamflow stabilization, recharging ground water reservoirs, and conserving water supplies by management and control of vegetation along waterways and in drainage basins.

4. Soil conservation and water control facilities such as dikes, terraces, detention reservoirs, stream channels, ditches, and other special land treatment and stabilization measures needed to protect farms and rural residents from water damage, provided such facilities cannot be installed or improved
§ 1781.6 — Soil and Water Conservation Credit Policy

under, or will not conflict with, other public programs such as those administered by the Corps of Engineers.

(5) Special treatment measures or equipment primarily, though not exclusively, for flood prevention and control:

(i) Facilities and equipment for fire prevention and control.

(ii) Tree planting and establishment of other vegetative cover for stabilizing critical runoff and sediment-producing areas.

(iii) Structural and vegetative measures to stabilize stream channels and gullies.

(iv) Basic farm conservation practices to control runoff, erosion, and sedimentation.

(6) Installing, repairing, and improving water storage facilities, including outlets for immediate and future domestic, municipal and industrial water supply and water quality management, and conveying water to treatment facilities or distribution systems. When payment of loans for such facilities are primarily dependent upon revenues from use of water stored the loan approval official must determine the adequacy of facility for use of the water before a loan is closed.

(7) Public water based recreation and fish and wildlife developer loans will only be made to public bodies for the local share of cost for such developments for which NRCS is providing technical or financial assistance from WS or RCD funds. Loans will not be made for developments larger or more elaborate than that which is included in the WS or RCD plan. Loans may include funds for:

(i) Construction of necessary water resource improvements such as storage capacity in multipurpose and single purpose reservoirs, water level control structures in reservoirs and streams, and stream channel improvements necessary for the development of the facilities. This may include practices for improvement of fish and wildlife habitat and environment and related areas and facilities for proper protection and management of the development.

(ii) Essential developments, improvements, equipment and facilities for access, public health and safety, and efficient operation management and maintenance; such as energy utilities, water supply and waste disposal systems, maintenance buildings, fences, cattle guards, roads and trails, parking, picnic area, camping, beaches, playgrounds, and related shelters and equipment.

(iii) Special areas and structures such as forest and other vegetative cover, marshes, pits, shelters and fish ladders to provide protected natural spawning, breeding, nesting, and feeding for fish and wildlife.

(8) Soil and water management for agriculture-related pollutant control. Measures to reduce agriculture-related pollutants that adversely affect the community and the general public. Measures may include, but are not limited to, holding ponds, debris basins, diversions, terraces, and community distribution systems.

(9) Acquiring fee simple title to lands or perpetual easements, or rights-of-way for sites for works of improvement or project measures and related costs for removal, relocation, or replacement of existing improvements including relocation payments for displaced persons, business enterprises and facilities, and other related purposes. Funds for land acquisition will be limited to costs necessary for WS works of improvement or RCD measures. Final construction plans will indicate minimum essential lands and rights-of-way to be acquired. In some cases, sponsoring local organizations may need to acquire lands in excess of actual needs when it is expedient for planned development. If the Rural Development State Director determines that the acquisition of excess land is necessary or expedient for the orderly development of a WS works of improvement, or RCD measure, he may authorize the action subject to the following conditions:

(i) The applicant must agree to sell excess land as soon as practicable and apply the proceeds, together with any income from excess land, on the debt to RUS.

(ii) The applicant must furnish legal evidence of authority to acquire additional land and dispose of it as agreed.

(iii) Evidence must be provided to justify acquisition of additional land.

(iv) Easements for land or water resource protection structures must be perpetual and must not include clauses...
that terminate the easement with the dissolution or abandonment of the applicant organization. Loan funds will not be used for an easement that deviates in any way from that provided in the standard NRCS form unless modifications of it are approved by both NRCS and RUS.

(10) Acquisition of water supply or water right by purchase or by appropriation under local, State, and Federal laws. The loan may include funds for the purchase of land on which the water supply or water right is presently being used when:

(i) The water supply or water right cannot be purchased without the land; and

(ii) The value of the land is not the major portion of the cost; and

(iii) Any excess land thus acquired will be sold as soon as possible and the proceeds applied on the loan.

(11) Purchase of equipment and machinery necessary for development and operation of planned WS works of improvement or RCD measures or projects including:

(i) Special-purpose equipment. Purchase or rent special-purpose equipment to install or maintain any community facility in categories in paragraph (a)(11) of this section or to establish on farms soil and water conservation measures such as terraces, ponds, land leveling for irrigation or drainage, subsoiling, seeding, tree planting, and removal of brush, scattered trees, and stumps, provided:

(A) Such equipment is not otherwise available when needed.

(B) There is sufficient need and local demand to justify ownership or rental.

(C) Rates to be charged include, among other things, an allowance for depreciation, obsolescence, replacement, operation, and cost of supplies.

(D) Will more efficiently serve the group through cooperative effort.

(12) Refinancing debt obligations of the sponsoring local organization that were incurred before application for a WS or RCD loan when that is not the primary purpose of the loan and:

(i) The debt being refinanced was for works of improvement or measures for which loan funds could be used; and

(ii) The debt is a valid obligation of the sponsor; and

(iii) Creditors will not modify payment terms on existing debts, and the organization cannot pay existing debts and a loan from RUS over the same period of time; and

(iv) Long-term debts will not be refinanced unless necessary to provide a sound basis for the loan or WS advance and concurrence is obtained from the National Office.

(13) If repayment is based on revenues, loan funds (not WS advances) can be used for payment of interest installments until the facility is generating
enough revenue to make accrued interest payments. Loan funds for interest payments will not exceed the estimated amount that will accrue to the end of the third full calendar year after loan closing without prior approval from the National Office.

(14) Relocation payment to displaced persons, businesses, and farm operations and for relocation assistance advisory services in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Public Law 91–646, 84 Stat. 1894), the Regulations issued by the Secretary of Agriculture under the Act (7 CFR part 21), and the Memorandum of Understanding Between NRCS and RUS.

(15) Services of engineers, architects, attorneys, auditors, construction foremen, managers, clerks, and others for organizing, planning, surveying, supervising, analyzing, developing, operating, managing, and accounting for activities related to loan processing and closing and development for which the loan is made.

(16) Buildings, fences, roads, utilities, facilities, and relocation:

(i) To construct buildings of modest design essential for the operation and maintenance of the works of improvement or measure.

(ii) To provide support facilities and utilities such as gas, electricity, water, sewer, and waste disposal.

(iii) To build or relocate roads, bridges, utilities, fences, and other improvements when necessary to acquire rights-of-ways or to construct or operate the facility.

(17) Services and fees. To pay costs for services for any purposes listed under this section such as:

(i) Fees or other legal expenses for establishing a water right through appropriation, agreement, permit, or court decree.

(ii) Purchase of water stock or membership in an incorporated water users’ association to acquire a water supply.

(iii) Costs of labor, technical or professional services, and fees to be incurred in obtaining the loan and in planning and completing the facilities or services to be financed with loan funds.

(iv) Services such as those listed in paragraph (a)(16) of this section.

(b) RCD loans. Purposes for which RCD loans may be made in addition to those included in paragraph (a) of this section are:

(1) Solid waste management. Lands, equipment and facilities to collect, transport, and dispose of solid waste in sanitary landfills for which NRCS is providing technical assistance.

(2) Shifts-in-land use. Lands for uses such as grazing, forestry, wildlife, natural areas and parks, greenbelts, and other open spaces.

(3) Purchase existing facilities. Purchase existing facilities for shift-in-land use, soil and water development, conservation, control and use when it is determined that purchase is necessary to provide efficient service through a facility owned and operated by a public agency (or a nonprofit corporation in a rural area), or the owner is either unwilling or unable to make improvements, enlargement, or extensions needed to provide significant additional or improved service for present users or for a new group of users at reasonable rates.

(c) NRCS watershed advances. NRCS watershed advances are loans that may be made from NRCS construction funds for the following purposes included in a watershed work plan agreement:

(1) To pay construction costs including cost of engineering and related services for increasing reservoir capacity (including intake and outlet structures) for a future water supply for municipal, domestic, industrial, or agricultural uses.

(2) To preserve sites for authorized watershed works of improvement by acquiring land, easements, and rights-of-ways or other property rights.

§1781.7 Loan and advance limitations and obligations incurred before loan closing.

(a) WS and RCD loan limitations. (1) Loans will not be used for:

(i) Land treatment measures on individual farms except as provided in §1781.8(a)(5)(iv).

(ii) Buildings and facilities to be used for lodging, dining or entertainment purposes.
(iii) Building industrial parks or constructing facilities in them, or establishing private industrial or commercial enterprises, or purchasing land to be used primarily for industrial purposes.

(iv) Paying costs allocated to structural measures for flood prevention.

(v) Facilities for the production and harvesting of fish and wildlife such as hatcheries, rearing ponds, and related facilities other than those under natural conditions.

(vi) Facilities primary for treatment and distribution of water or for sewage, collection and treatment for domestic or industrial use or for municipal or community systems.

(vii) Electric generating, transmission, and distribution facilities, except when provided as part of the minimum basic facilities for recreation and fish and wildlife developments authorized in §1781.6(a)(7).

(viii) Storm and sanitary sewers and solid waste disposal facilities other than authorized in §1781.6(b)(1).

(ix) Payment for a tract of land, easements, or rights-of-ways on which NRCS will share the cost if the amount to be paid with loan funds exceeds the difference between the NRCS share and the value on which the NRCS share is based.

(x) Purchasing tracts of land primarily for later resale to private developers or individuals for agricultural or nonagricultural use.

(xi) Buildings for residential, commercial, or industrial use.

(xii) Developments on private property primarily for the benefit of the individual property owner.

(xiv) Payment of that part of the cost of facilities, improvements, and practices that could be earned by participation in agricultural conservation programs unless such cost cannot be covered by purchase orders or assignments to material suppliers or contractors. If a loan is made for such purposes for which practice or cost share payments exceed $500, RUS will obtain an assignment on such payments to be paid on the loan.

(xv) Primarily for water and sewage treatment plants and distribution systems.

(xvii) Any single RCD measure that requires a loan of more than $500,000.

(xviii) The total amount of principal outstanding for all WS loans made for one or more watershed works of improvement in a single watershed project, whether made to one or more sponsoring organizations, will not exceed $10,000,000.

(b) Watershed advance limitations. (1) A WS advance for future water supply will not be used for acquiring property rights including lands, easements, and rights-of-way; water rights; administration of contracts; storage capacity for immediate municipal use; pipelines from the reservoir to place of use; or for other uses such as irrigation, fish and wildlife, and recreation.

(2) A WS advance for increasing reservoir capacity for future water supply will not exceed 30 percent of the total installation cost of one structure.

(3) A WS advance for site preservation will not exceed that determined necessary by NRCS except to purchase land in excess of actual needs in accordance with the provisions of §1781.6(a)(7).

(4) Before a project agreement is entered into, there must be satisfactory evidence that the borrower will develop the site to be acquired or will use the future water supply and that revenue will be sufficient to meet all scheduled installments.

(c) Obligations incurred before loan closing. (1) WS loans, WS advances, and RCD loans may be used for payment of obligations incurred before loan closing when the Rural Development State Director determines that:

(i) The obligations incurred are necessary for planned developments; and

(ii) The obligations are incurred for authorized loan purposes; and

(iii) Contracts and construction plans meet RUS and NRCS standards; and

(iv) The applicant has legal authority to incur the obligations at the time proposed; and

(v) The Rural Development State Director authorizes such action in a letter to the applicant.

(2) The Rural Development State Director’s letter will specifically state that the permission is granted on the
condition that RUS is not committed to make a loan and assumes no responsibility for any obligation incurred by the applicant because of the permission granted and that the loan will be closed subject to compliance with agency regulations including closing instructions of the Regional Attorney Office of the General Counsel.

§ 1781.8 Rates and terms—WS loans and WS advances and RCD loans.

(a) Interest rates. The interest rate for WS loans, WS advances and RCD loans will be at a rate not to exceed the current market yield for outstanding municipal obligations with remaining periods to maturity comparable to the average maturity for the loan, adjusted to the nearest 1/8 of 1 percent.

(1) For loans, unless otherwise required by State law, interest will accrue from date of check delivery where Form RD 440-22, “Promissory Note (Association Organization),” is used. Where bonds are used interest will accrue from the applicable dates recorded on the bonds. Where multiple loan disbursements are used interest will accrue from date of check.

(2) Interest on an advance for future water supply will begin as required by State law, when water is first used from the future water storage capacity installed with advance, or ten years from the scheduled date of the completion of the facility, whichever is the earlier.

(3) Interest on an advance for preservation of sites will begin on the date the advance is closed.

(b) Length of repayment period. The repayment period on loans may not exceed the shortest of the following periods:

(1) The statutory limitation on the sponsoring local organization’s borrowing authority.

(2) Fifty (50) years for WS loans and WS advances and 30 years for RCD loans from the date when the principal benefits from the WS works of improvement or RCD measure being financed first become available.

(3) The useful life of the WS works of improvement or RCD measure being financed with loan or advance funds.

(c) Deferred or partial payments. Deferred or partial payments may be authorized in the following circumstances:

(1) Payments need to be delayed until the receipt of income from taxes or other revenues is enough to meet a regular installment but not exceed:

(i) The completion date of the facility; or

(ii) The date when benefits from the facility begins; but

(iii) In no case for more than 5 years for other than future water supply.

(2) Payments will depend on the increased returns expected from planned improvements, or from the installation on individual farms of land development or other soil and water improvements essential for obtaining benefits from the improvement to be installed with loan funds.

(3) They will not be used to permit the accelerated payment of other debts, to make capital improvements, or to create operating reserves.

(4) Where prohibited by State statutes; interest payments will not be deferred even though payments on principal may be deferred.

(5) Loans or advances for future water supply will be repaid within the life of the reservoir structure but in no event later than 50 years for WS and 30 years for RCD after the reservoir structure is built. Payments on the principal amount may be deferred one year after the water is first used from the storage capacity installed with the advance or for 10 years from the scheduled completion date of the structures, whichever occurs first.

(i) Interest will begin for a future water supply as required by State law, or when water is first used from the future storage capacity or 10 years from the scheduled date of completion of the facility, whichever occurs first.

(ii) If State law requires that interest be charged and repaid before water is first used or earlier than 10 years from completion date of the structure, interest payments will be scheduled to comply with State law even though payments of principal may be deferred.

(iii) The borrower should be encouraged to begin repayments as soon as practicable after the reservoir is built even though this liberal deferment policy exists.
(iv) WS advances for preservation of sites must be fully repaid before beginning construction of the works of improvement for which such sites were acquired.

(A) Unless a WS advance is to be repaid with a WS loan, installments will be scheduled at the earliest possible date following the date of closing the advance. The date and amount of each such installment will be fixed to coincide with the receipt of income from taxes or other revenues.

(B) Payments for both principal and interest on a WS advance for preservation of sites may be scheduled for payment in one installment to be paid on the date of the closing of a WS loan which includes funds for the repayment of the WS advance.

(C) Interest on a WS advance for preservation of sites will begin on the date the WS advance is closed.

(d) Payment amortization and application.

(1) A borrower may make prepayments on WS loans, WS advances or RCD loans in any amount at any time.

(2) Payments will be applied first to interest accrued to the date of receipt of payment, and second to the principal balance. If the regular payments plus any prepayments exceed the cumulative amount due, the excess payments will be applied on the next installment first to interest, then principal. Loan refunds and proceeds from the sale of security property, however, will be applied on the final unpaid installment.

(3) Payments will be scheduled annually beginning one year following the date of loan closing or one year following the end of any approved deferment period, unless another annual due date is required by State statute or upon prior written authorization from the National Office. In those cases where loans are being made under statutes requiring a repayment date other than this, the Rural Development State Director will send a copy of the Regional Attorney's opinion that such is required, to the Finance Office.

(4) When a single obligation instrument is used, amortized installments will be required. When this cannot be done because of state law, serial bonds or a single bond having installments of principal plus interest, stated separately, will be used. In cases where the payment of interest has been deferred, all collections will be applied to interest until such interest has been paid. Also, when a full installment is not paid when due, the payment made will be applied first to accrued interest.

(5) In cases where the indebtedness will be represented by serial bonds or a single bond having installments of principal plus interest, stated separately, annual payments of principal and interest will be scheduled to permit them to be paid in amounts approximately equal to the amounts that would be required for annual amortized installments.

(6) If the borrower will be retiring other debts represented by bonds or notes, the payment on such bonds may be considered in developing the payment schedule for the RUS loan. In some cases, it may be desirable to reduce the amount of payments to RUS in the early years of the loan in order to preclude the necessity for refinancing the outstanding debt. When such payment schedules are proposed, National Office authorization will be obtained prior to loan approval.

(7) Payment date. Insofar as loan payments are consistent with income availability, applicable State statutes, and commercial customs in the preparation of bonds or other evidence of indebtedness, they should be scheduled on a monthly basis either in the bond or other evidence of indebtedness or through the use of a supplemental agreement. Such requirements will be accomplished not later than the time of loan closing. When monthly payments are required, such payments will be scheduled beginning one full month following the date of loan closing or the end of any approved deferment period. Subsequent monthly payments will be scheduled each full month thereafter. In those cases where evidence of indebtedness calls for annual or semiannual payments, they will be scheduled beginning six or twelve full months, respectively following the date of loan closing or the end of any approved deferment period. Subsequent payments will be scheduled each sixth or twelfth full month respectively, thereafter. When the evidence of indebtedness is dated the 29th, 30th, or
§ 1781.9 Security, feasibility, evidence of debt, title, insurance and other requirements.

(a) Security. WS loans, WS advances, and RCD loans will be secured in accordance with applicable provisions of §1780.14 of this chapter.

(b) Feasibility. All projects financed under the provisions of this part must be based on taxes, assessments, revenues, fees, or other satisfactory sources in an amount that will provide for facility operation and maintenance, a reasonable reserve, and payment of the debt. The Rural Development State Director may obtain needed assistance in determining economic feasibility from officials of NRCS and other appropriate USDA agencies. See §1780.7(f) of this chapter for applicable economic feasibility requirements and feasibility reports.

(c) Notes, bonds, and bond transcript documents. See subpart D of Part 1780 of this chapter for applicable requirements and provisions.

(d) Insurance. See §1780.39(g) of this chapter for requirements.

(e) National flood insurance. The requirements of the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.) as amended by the Flood Disaster Protection Act of 1973 (42 U.S.C. 4003 et seq.) will be complied with in accordance with applicable provisions of RD Instruction 1901-L. Also see §1780.39(g) of this chapter.

(f) Borrower contracts and bonds. See subpart C of Part 1780 of this chapter for applicable provisions.

(g) Title requirements. (1) Title evidence for land, easements, and rights-of-way to be acquired with proceeds of loans or advances will be furnished by the sponsoring local organization in accordance with NRCS policies and procedures.

(2) RUS will specify and approve the form and content of instruments for conveying title to or interest in real estate on which a lien will be taken to secure a WS loan, WS advance, or RCD loan. These should be consistent with the applicable provisions of §1780.14 of this chapter. The Rural Development State Director will make his decision after consultation with the Regional Attorney and the State Conservationist. He will notify NRCS in writing of his decision. Thereafter, title clearance will be completed under NRCS regulations except that a marketable title must be obtained on any tract of land, a part of which will be sold as excess land in accordance with §1781.6(a)(9). In addition to the title evidence required by NRCS, applicants will furnish an opinion of legal counsel on all land and interest in land acquired with loan or advance funds.

(h) Purchasing lands, rights and facilities. The amounts paid for lands, rights, and facilities with loan funds will be no more than that determined to be reasonable and fair by the loan approval official based upon an appraisal of the current market value made by an Rural Development employee or an independent appraiser.

(i) Water rights. Applicants will be required to comply with applicable State and local laws and regulations governing appropriating, diverting, storing and using water, changing the place and manner of use of water, and in disposing of water. All of the rights of any landowner, appropriator, or user of water from any source will be fully honored in all respects as they may be affected by facilities installed with WS loans and advances and RCD loans. If, under the provisions of State law, notice of the proposed diversion or storage of water by the applicant may be filed, the applicant will be required to file such a notice. An applicant must furnish evidence to provide reasonable assurance that its water rights will be or have been properly established, will not interfere with prior vested rights, will likely not be contested or enjoined by other water users or riparian owners, and will be within the provisions of any applicable interstate compact.

§ 1781.10 [Reserved]

§ 1781.11 Other considerations.

(a) Technical assistance. When pipelines from reservoirs to treatment plants are included in watershed work
§ 1781.11

(a) Plans. NRCS will not furnish engineering services for their design or installation. When such pipelines are to be financed by WS or RCD loans, RUS will supervise the activities of the private engineers retained for the purpose. Such RUS supervision will include, among other things, approval of private engineer's contracts, approval of plans and specifications, authorization of contract awards, spot checks of engineering inspection, and final inspection and acceptance.

(b) Professional services. Applicants will be responsible for providing the services necessary to plan projects including design of facilities, preparation of cost and income estimates, development of proposals for organization and financing, and overall operation and maintenance of the facility. Necessary professional services may include such as that of an engineer, architect, attorney, bond counsel, accountant, auditor, and financial advisor or fiscal agent. Form RD 442-19, “Agreement for Engineering Services,” may be used when appropriate. RUS Bulletin 1780-7, “Legal Service Agreement” may be used to prepare the agreement for legal services.

(c) Other services. Contracts for other services such as management, operation, and maintenance will be developed by the applicant and presented to the RUS official developing the docket for review and approval.

(d) Fees for services. Fees provided for in contracts, agreements or services will not be more than those ordinarily charged by the profession for similar work when RUS financing is not involved.

(e) State pollution control or Environmental Protection Agency standards. Facilities will be designed, installed and operated to prevent pollution of water in excess of established standards. Effluent disposal will conform with appropriate State and Federal Water Pollution Control Standards.

(f) Water pollution. When repayment of a WS loan, WS advance, or RCD loan will be dependent upon income from the use or sale of water, RUS approval will be contingent upon a determination that the proposed use of stored water for recreation or municipal supply might not be permitted by a State health department because the water is being polluted from an upstream or other source.

(g) Environmental requirements. Actions will be taken to comply with the National Environmental Policy Act (42 U.S.C. 4321 et seq.) in accordance with subpart G of part 1940 of this title. When environmental assessments and environmental impact statements have been prepared on WS plans or RCD area plans by NRCS, a separate environmental impact statement or assessment on WS works of improvement or RCD measures for which a WS loan, WS advance, or RCD loan is requested will not be necessary unless the NRCS environmental review fails to meet the requirements of subpart G of part 1940 of this title. The Rural Development State Director should document the action taken by NRCS in compliance with the requirements of the National Environmental Policy Act and formally adopt the impact statement or assessment if satisfactory. If a determination is made that a further analysis of the environmental impact is needed, the Rural Development State Director will make necessary arrangements with the State NRCS conservationist for such action to be taken before a loan is made.

(h) National Historic Preservation Act. All projects will comply with the provisions of the National Historic Preservation Act of 1966 (16 U.S.C. 470 et seq.) in accordance with RD Instruction 1901-F.

(i) Civil Rights Act of 1964. Recipients of WS loans, WS advances, or RCD loans are subject to Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d et seq.), which prohibits discrimination because of race, color, or national origin. Borrowers must agree not to discriminate in their operations by signing Form RD 400-4, “Nondiscrimination Agreement,” before loan closing. This requirement should be discussed with the applicant as early in the negotiations as possible. Necessary actions will be taken in accordance with RD Instruction 1901-E.

(j) Appraisals. When required by the Rural Development State Director, appraisals will be made by an Rural Development official designated or an independent appraiser. Form RD 442-10,
§ 1781.12 Preapplication and application processing.

(a) WS and RCD loans—(1) Preapplications. (i) The processing office or other person designated by the Rural Development State Director may assist the applicant in completing SF 424.1, “Application for Federal Assistance (For Non-construction),” and will forward one of SF 424.1 to the Rural Development State Director.

(ii) The Rural Development State Director will review SF 424.1 along with other necessary information and will coordinate selection of preapplications to be processed with NRCS. He will consult with NRCS State Conservationist concerning the status of the WS plan or RCD measure plan, the estimated time schedule for construction and cost of the proposed works to be installed with the loan, cost sharing funds to be made available to the applicant, and other pertinent information.

(iii) Form AD–622, “Notice of Preapplication Review Action,” will be prepared and signed by the Rural Development State Director within forty-five (45) days from receipt of the preapplication in the processing office stating the results of the review action. An original and one copy of Form AD–622 will be sent to the processing office who will deliver the original to the applicant.

(2) Applications. (i) The application includes applicable forms and information indicated in RUS Instruction 1790. When the Rural Development State Director determines that an application will be further processed and Form AD–622 is delivered, he will designate a community program specialist (field), or a member of the community program staff to assist the processing office and the applicant with assembling and processing the application.

(ii) The processing office should arrange needed conferences with the applicant and its legal and engineering consultants, and when necessary, arrange for review of other Rural Development officials, and provide bulletins, forms, instructions and other assistance with assembling and processing the application. A processing checklist and time schedule will be established by using Form RD 1942–40, “Processing Check List (Public Bodies),” or Form RD 1942–39, “Processing Check List (Other than Public Bodies).” The processing office will send a letter and a copy of the processing checklist to the applicant to confirm decisions reached at the conference. The original and a copy of the processing checklist will be kept in the processing office and will be posted current as application processing actions are taken. The copy will be circulated from the processing office to the State Office for use in updating copies of the forms retained, after which it will be returned from the State Office to the processing office.

(3) Dockets. WS loan, WS advance, and RCD loan dockets will be developed and assembled in accordance with applicable RUS Instruction 1790.

(b) Watershed advances. Applications for WS advances will be developed and processed with NRCS assistance as necessary.

(1) The Rural Development State Director will arrange with the NRCS State Conservationist to be advised when a local sponsoring organization applies to NRCS for a WS advance.

(2) The Rural Development State Director will request the NRCS State Conservationist to provide information justifying the WS advance along with a written recommendation that it be made. This will include:

(i) Economic feasibility of the proposed WS advance.

(ii) Evidence of the legal authority of the sponsoring local organization to incur the obligation and make required payments.

(iii) Any limitations on the issuance of additional bonds or notes which may be imposed by the provisions of bond ordinances or on resolutions which authorize the issuance of any outstanding bonds.

Architectural Barriers Act of 1968. All facilities financed with RUS loans and grants which are accessible to the public or in which physically handicapped persons may be employed or reside must be developed in compliance with this act (42 U.S.C. 4151 et seq.).
obligation of the sponsoring local organization.

(iv) The amount of WS advance funds to be provided, purpose for which funds will be used, and date funds will be needed.

(3) When the above information has been made available to the Rural Development State Director, he will send written recommendations concerning further action on the WS advance request to the NRCS State Conservationist including actions to be taken in the preparation of the WS advance docket.

(c) Combination WS loans and WS advances. If an applicant requests both a WS loan and WS advance, the application for the WS loan should indicate the amount of the WS advance needed and whether a request for it has been made to NRCS. The Rural Development State Director and the NRCS State Conservationist will coordinate applicable processing actions of such applications. When the Rural Development State Director determines that favorable consideration will be given to an application for a loan or advance, he will provide instructions to the processing office for completing and processing the appropriate docket. Any questions concerning eligibility or other legal matters should be cleared with the Regional Attorney.

(d) Review of decision. When it is determined that the preapplication or application cannot be given favorable consideration, the Rural Development State Director will return it to the processing office along with written reasons. When the processing office receives this information, it will notify the applicant in writing of the reasons why the request was not favorably considered. The notification to the applicant will state that the RUS Administrator may be requested to review the decision. This action will be taken in accordance with §1780.37 of this chapter.

(1) Upon receipt of the State Office copy of a review request from the applicant, the Rural Development State Director will furnish a report on the matter to the Administrator.

(2) The Administrator will notify the applicant and the Rural Development State Director in writing of his decision and the reasons therefore.

§ 1781.13 [Reserved]

§ 1781.14 Planning, options, and appraisals.

(a) WS and RCD area plans are developed by sponsoring local agencies and organizations with technical assistance from NRCS and other Federal and State agencies. These plans include WS works of improvement and RCD measures to be developed or constructed for which NRCS construction funds may be made available on a cost share basis along with funds provided by the sponsoring local organization, a portion or all of which may be obtained by a WS loan and/or WS advance or a RCD loan.

(b) Current information on the availability of cost share funds and purposes for which they may be used is provided by NRCS. The amount of NRCS cost share funds and the amount of funds to be provided by the sponsoring local organizations will be indicated in each plan. The estimated amount of WS loan, WS advance or RCD loan anticipated by the sponsoring local organization should also be included.

(c) Plans for the development or construction of individual WS works of improvement and RCD measures will normally be developed with NRCS technical assistance. In every case they will be approved by both the NRCS State conservationist and the Rural Development State Director or their designated agent when a WS loan, WS advance or RCD loan is made.

(d) Options and appraisals related to the purchase of real estate for which a WS loan, WS advance, or RCD loan is made must be developed in accordance with NRCS and RUS requirements and approved by RUS. The determination of present market value will be made in accordance with §1780.44(g) of this chapter.

§ 1781.15 Planning and performing development.

Planning and performing development will be handled in accordance with subpart C of part 1790 of this chapter and guidance from NRCS.
§ 1781.16 [Reserved]

§ 1781.17 Docket preparation and processing.

(a) Loan dockets. Dockets for WS loans, WS advances and RCD loans will be prepared in accordance with the applicable provisions of part 1780 of this chapter.

(1) Time for preparation of docket. Docket preparation may begin as soon as a preliminary draft of the watershed plan or RCD area plan, together with an estimate of costs and benefits, have been prepared with the assistance of NRCS and approved by the sponsoring local organization applicant. However, the applicant must understand that approval of the WS loan, WS advance, or RCD loan will not be determined until the work plan has been authorized for assistance by NRCS. To the extent practicable, docket preparation may be completed by that time to facilitate the availability of funds when needed.

(2) Instructions for preparation of docket. When the Rural Development State Director has determined that plans and other requirements are completed to the extent that preparation of the loan docket may begin, he will send the processing office a memorandum giving complete instructions for docket preparation, with a list of documents to be included in the docket.

(3) Objectives of the docket. The docket should include information for use in determining that:

(i) The sponsoring local organization:

(A) Has legal authority to construct and operate the proposed facility, borrow money, give security, incur debt, and generate revenue needed for operation, maintenance, reserves, debt payment, and other cash requirements.

(B) Is a sponsor or cosponsor of the WS plan or RCD work plan and is otherwise eligible for assistance.

(ii) Funds will be used for authorized purposes.

(iii) The source of income to be pledged for debt payment and the security proposed is adequate.

(iv) Actions required for loan closing are administratively satisfactory, legally sufficient and properly documented in accordance with Agency regulations.

(4) Assembly of the docket. The docket will be assembled in accordance with paragraph (a)(2) of this section and will include the following:

(i) A copy of the WS works of improvement agreement or RCD measure agreement.

(ii) A copy of the Operation and Maintenance Agreement between NRCS and the WS or RCD sponsoring local organization for the WS works of improvement or the RCD measure.

(iii) A statement from the NRCS State Conservationist concurring in the feasibility of the WS work of improvement or RCD measure and that NRCS is providing financial and/or technical assistance in accordance with applicable WS or RCD authorities.

(5) Narrative by processing office. This should be included in or attached to the Project Summary. It should relate project costs to benefits of the WS or RCD loan or WS advance. Minimum and average individual charges, tax levies or assessments should be given where applicable. Where taxes or assessments on land will be levied, acres should be indicated and average cost per acre should be given. Analyses of income from recreational facilities should be based on the best information available from local, State, and Federal agencies concerned with such recreation facilities. Determination of water rates, schedules, and estimated consumption of water should be made by the same methods as for loans for domestic water and irrigation.

(6) Estimates of right-of-way costs. The docket should include, as part of the Project Summary, current estimated costs of easements, rights-of-way, and other land rights which must be acquired. The amount estimated for such purposes in the WS or RCD plan should reflect current conditions.

(b) Loan processing by State Office—(1) Review of the docket. The processing office will check the docket for accuracy and completeness and forward it to the State Office with their recommendations. The Rural Development State Director will review the docket to determine that:

(i) All documents are accurate and complete.
(ii) The proposed loan complies with WS and RCD program policies and procedures of both RUS and NRCS.

(iii) Security is adequate and the repayment plan is sound.

(iv) Funds requested are for authorized purposes.

(v) Actions are in compliance with requirements of applicable Federal and State laws.

(2) Letter of conditions. When the Rural Development State Director determines that the docket is complete and the proposed activity is feasible, he will prepare a proposed letter of conditions under which the application may be further processed. The letter will be delivered to and discussed with the applicant. Upon acceptance of the conditions the applicant will indicate intentions to meet the conditions by a letter of interest and the application will be further processed.

(3) Legal review. The complete docket and proposed letter of conditions will be forwarded to the Regional Attorney, OGC for review and preparation of closing instructions. If it is not possible to issue closing instructions at that time, the Regional Attorney, will issue a preliminary legal opinion commenting upon the applicants legal existence, authority to incur debt and give security for the WS loan, WS advance, or RCD loan requested and actions to be taken before closing instructions may be issued.

(4) Authorization for approval. When the Rural Development State Director receives closing instructions or a preliminary legal opinion for a WS loan, WS advance, or RCD loan requested and actions to be taken before closing instructions may be issued.

(5) Authorization for approval. When the Rural Development State Director receives closing instructions or a preliminary legal opinion for a WS loan, WS advance, or RCD loan that is not within his approval authority he will send this information along with the docket, the proposed letter of conditions, and a memorandum recommending approval to the National Office. A copy of his memorandum will be sent to the processing office. If the proposed action is within the Rural Development State Director’s approval authority he need not submit the material listed in this paragraph (b)(4) to the National Office unless he wants review and comments before approval.

(c) WS advance processing. (1) When the Rural Development State Director has concurred with the NRCS State Conservationist in the inclusion of a WS advance in a watershed plan, preparation of the advance docket can be initiated and will be processed in the same manner as for a WS loan. Where both a WS loan and WS advance are planned only one docket will be prepared to include both the WS loan and WS advance.

(2) If the advance appears to be sound and proper, the Rural Development State Director will send a proposed memorandum of concurrence to the NRCS State Conservationist. The memorandum will state that RUS concurs in the execution of a work of improvement agreement for which NRCS will obligate advance funds and that RUS will accept the proposed obligations of the applicant to repay the advance subject to conditions specified in or attached to the memorandum. These conditions will include all appropriate requirements in accordance with paragraph (b)(2) of this section and will specify compliance with closing instructions issued by the Regional Attorney. It will also indicate that preparation of the WS advance docket will be in accordance with paragraph (a) of this section.

(3) The Rural Development State Director and the NRCS State Conservationist will sign the memorandum of concurrence to NRCS when:

(i) It has been determined that funds for the advance will be obligated by NRCS; and

(ii) The WS advance docket, has been approved; and

(iii) Closing instructions have been issued by the Regional Attorney; and

(iv) The Rural Development State Director and NRCS State Conservationist have determined that the applicant can comply with all requirements of the letter of conditions and closing instructions.

§1781.18 Feasibility.

(a) Before WS loan, WS advance, or RCD loan is approved, a determination of feasibility will be made by the Rural Development State Director based upon a review of plans developed in cooperation with NRCS personnel. The feasibility determination must have the concurrence of the NRCS State Conservationist before a WS loan, WS advance, or RCD loan is approved.
§ 1781.19 Approval, closing, and cancellation.

(a) Approval and closing actions will be taken in accordance with the applicable provisions of part 1780 of this chapter and the following requirements have been met:

(1) The WS or RCD plan has been approved for operations by NRCS and the applicant is an official sponsoring or cosponsoring local organization for the plan as evidenced by being included in the list of sponsoring or co-sponsoring local organizations in the plan.

(2) Closing instructions or a preliminary legal opinion has been prepared by the Regional Attorney.

(3) The governing body of the applicant's sponsoring local organization has formally passed and approved the loan resolution.

(4) The Rural Development State Director and NRCS State Conservationist have determined that all planned actions can be carried out as proposed in the project plan and the docket.

(5) The NRCS State Conservationist and Rural Development State Director have mutually agreed on the priority to be given the WS loan or WS advance, or RCD loan. In making this determination, consideration will be given to the relative priority of the WS works of improvement or RCD measures to all other such work in the State and the anticipated availability of Federal and local funds to assure continuity of action and work until the project is completed. When funds are to be provided by NRCS for a WS or RCD loan or a WS advance such funds must be obligated by NRCS before closing.

(b) A written assessment of the project's feasibility will be made by the processing office, Architect/Engineer, and Program Chief in their recommendations or comments on the Project Summary. These should reflect concurrence of the respective NRCS personnel in counterpart positions with whom they cooperate in administering these programs.

§ 1781.20 Disbursement of WS and RCD loan funds and WS advance funds.

(a) WS and RCD loan funds will be disbursed by the processing office in accordance with the applicable provisions of §1780.45 of this chapter and RUS Bulletin 1781-1, paragraph (5). Funds will be made available to the borrower as needed for payment of development or other costs for which the loan is made. The processing office must determine that the payment is for an authorized purpose and is for benefits accrued to the borrower. This will require evidence from NRCS in accordance with the applicable provisions of RUS Bulletin 1781-1, "Memorandum of Understanding Between RUS and NRCS."

(b) WS advance funds may be disbursed in the same manner as WS loan funds if such funds are transferred to RUS by NRCS for disbursement or they may be disbursed by NRCS. When WS advance funds are disbursed by NRCS, payments from advance of funds will be reported to the Rural Development State Director each month to be reported to the Finance Office and charged to the borrower’s account. This action will be taken in accordance with the applicable provisions of RUS Bulletin 1781-1 or RUS Bulletin 1781-2 and agreement between the NRCS State Conservationist and Rural Development State Director as follows:

(1) When a future water supply is being developed with NRCS, WS advance funds, the NRCS State Conservationist will send the Rural Development State Director a monthly report of funds disbursed. This will include three (3) copies of Form NRCS-AS-49a and 49b, “Contract Payment Estimate and Construction Progress Report,” along with a transmittal Memorandum showing the sequential number (first, second, third, etc.) of the payment, the amount and date of payment, the
check number by which the payment was made and the cumulative amount of advance funds disbursed to date. When the works of improvement, for which WS advance funds are used is completed the final report will, in addition to the above, show the date that construction was completed and the total amount of WS advance funds used.

(2) WS advances for construction costs will be set out each month on Form NRCS-49a. The Rural Development State Director should make arrangements with the NRCS State Conservationist to be supplied each month with a copy of Form NRCS 49a when advance funds are included together with an official statement from the NRCS State Administrative Officer giving the date of the check and the exact amount of each advance of funds made under the advance provisions of the project agreement or of any engineering services agreement or other supplementary agreement which further implements the proposal for the advance in the project agreement. The original will be sent immediately to the Finance Office and a copy provided for the processing office file.

(3) When WS advance funds are used to acquire property for site preservation the same reporting procedure as for a future water supply will be used except that Form NRCS-AS-49a and 49b if used, should be adopted to indicate fund use. As payments are made on land on which a mortgage or other security instrument is required, such instruments will be executed in accordance with instructions from the Regional Attorney, OGC.

(4) The Rural Development State Director must send the bond or note evidencing WS advance indebtedness of the borrower to the Finance Office along with reports of payments from advance funds disbursed by NRCS. A copy of the bond or note and copy of each report of payment will be sent to the processing office.

(c) Actions subsequent to closing of loans or advances. Actions will be taken in accordance with §1780.44 of this chapter.

§1781.21 Borrower accounting methods, management, reporting, and audits.

These activities will be handled in accordance with the provisions of §1780.47 of this chapter.

§1781.22 Subsequent loans.

Subsequent loans will be processed in accordance with this part.

§1781.23 Servicing.

Servicing will be handled in accordance with the provisions of subpart E of part 1951 of this title.

§1781.24 State supplements and availability of bulletins, instructions, forms, and memorandums.

(a) State supplements will be issued as needed in accordance with applicable provisions of part 1780 of this chapter.

(b) Bulletins, instructions, forms and memorandums are available from any USDA/Rural Development office or the Rural Utilities Service, United States Department of Agriculture, Washington, DC. 20250-1500.

§§1781.25–1781.100 [Reserved]

PART 1785—LOAN ACCOUNT COMPUTATIONS, PROCEDURES AND POLICIES FOR ELECTRIC AND TELEPHONE BORROWERS

Subpart A—[Reserved]

Subpart B—RUS Cushion of Credit Account Computations and Procedures

Sec.
1785.66 General.
1785.67 Definitions.
1785.68 Establishing an RUS cushion of credit payment account.
1785.69 Cushion of credit payment account computations.
1785.70 Application of RETRF cushion of credit payments.

§ 1785.66 General.

This subpart B sets forth policies and procedures on the RUS cushion of credit payments program. The cushion of credit payments program will be maintained only for insured loans evidenced by obligations of the Fund. A subaccount within the Fund is hereby established for purposes of promoting rural economic development. It shall be known as the “Rural Economic Development Subaccount.” The assets of the subaccount shall be obtained from crediting (on a monthly basis) a sum determined by multiplying the outstanding cushion of credit payments made after October 1, 1987, by the difference (converted on a monthly basis) between the average weighted interest rate paid on outstanding certificates of beneficial ownership issued by the Fund and the 5 percent rate of interest provided to borrowers on cushion of credit payments, repayment of loans made pursuant to Section 313 of the Act, and other sources as provided by law. This subaccount shall be used to provide grants or zero interest loans to borrowers under the Act for the purpose of promoting rural economic development.

§ 1785.67 Definitions.

Accumulated (deferred) interest means interest allowed to accumulate up to, and including, the basis date of RUS notes covering loans approved before June 5, 1957. The accumulated interest is payable in equal periodic installments over the remaining life of the notes.

Act means the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 et. seq.).

Advance payment means a voluntary unscheduled payment on an RUS note, made prior to October 2, 1987, credited to the advance payment account of a borrower.

Cushion of Credit Payment means a voluntary unscheduled payment on an RUS note made after October 1, 1987, credited to the cushion of credit account of a borrower.

Current interest means interest payable periodically as it accrues.

Fund means the Rural Electrification and Telephone Revolving Fund established pursuant to the Act.

Interest credit means interest earned on balances in advance payment or cushion of credit accounts. Since the periodic installments are established by the terms of the notes, the interest credits cannot serve to change the total amount of each installment; therefore, an amount equal to the interest credits is added to the principal installment due. On receipt of the full installments, amounts equal to the interest credits (the principal offsets) are added to the respective advance payment accounts.

Prepayment means a voluntary unscheduled payment which the borrower instructs RUS to apply directly and immediately to the principal of an RUS note.

RUS notes means those notes, bonds, or other obligations evidencing indebtedness created by loans made by RUS pursuant to titles I, II, or III of the Act.

Subaccount means the Rural Economic Development Subaccount established pursuant to the Act as part of the Fund.

§ 1785.68 Establishing an RUS cushion of credit payment account.

A cushion of credit account shall be automatically established by RUS for each borrower who makes a payment after October 1, 1987, in excess of amounts then due on an RUS note. Such account will bear interest at a rate of 5 percent per annum. All payments on RUS notes which are in excess of required payments and not otherwise designated shall be deposited in the borrowers’ respective cushion of credit accounts. Payments received in the month in which an installment is due will be applied to the installment due. However, if the regular installment payment is received at a later date in the month, the first payment received will be applied retroactively.
§ 1785.69 Cushion of credit payment account computations.

(a) Deposits. Cushion of credit payments are credited to the borrowers’ cushion of credit accounts.

(b) Interest. Interest at the rate of 5 percent per annum shall be credited on a quarterly basis to cushion of credit accounts. Interest earned will appear as a reduction in the interest billed on the borrower’s RUS notes and will be separately shown on RUS Form 694, “Statement of Interest and Principal Due.”

§ 1785.70 Application of RETRF cushion of credit payments.

(a) If a maturing installment on an RUS note or a note which has been guaranteed by RUS is not received by its due date, funds will be withdrawn from the borrower’s cushion of credit account and applied as of the installment due date beginning with the oldest of such notes as follows: first, to current interest then due on all notes; second, to the accumulated interest due, if any, on all notes; and third, to the principal then due on all notes. In those instances where a borrower has prior to October 2, 1987, maintained an advance payment account with RUS, its cushion of credit account will be applied in accordance with the provisions of this section prior to using any balance remaining in its advance payment account to pay interest and principal installments on notes. Computations required under this section have been made by RUS as of October 2, 1987; however, on or before May 25, 1989 any borrower may make a one time irrevocable election to have all such computations made as of April 5, 1989, by filing written notice to that effect with Robert D. Ruddy, Director, Fiscal Accounting Division, Rural Utilities Service, Washington, DC 20250-1500.

(b) A borrower may reduce the balance of its cushion of credit account only if the amount obtained from the reduction is used to make scheduled payments on loans made or guaranteed under the Act.

Subpart A—General  [Reserved]

§§ 1786.1—1786.24 [Reserved]

Subpart B—Prepayment of RUS Guaranteed Federal Financing Bank Loans Pursuant to Section 306(A) of the RE Act

§ 1786.25 Purpose.

This subpart contains the general regulations of the Rural Utilities Service (RUS) for implementing the provisions of (a) section 306(A) of the Rural Electrification Act of 1936, as amended (RE Act); (b) section 633 of the Rural Development, Agriculture, and Related Agencies Appropriations Act, 1988 (Pub. L. 100-202) (the continuing resolution); and (c) section 637 of the Rural Development, Agriculture, and Related Agencies Appropriations Act, 1990 (Pub. L. 100-460) (the 1989 Appropriations Act) which permit, in certain circumstances, loans made by the Federal Financing Bank (FFB) and guaranteed by the Administrator of RUS to be prepaid by RUS electric and telephone borrowers by paying the outstanding principal balance due on the FFB loan, using a private loan with the existing RUS guarantees or using internally generated funds.
§ 1786.26 Policy.

It is the policy of RUS to facilitate the prepayment of FFB loans in accordance with the provisions of section 306(A) of the RE Act and section 633 of the continuing resolution as modified by section 637 of the 1989 Appropriations Act. Furthermore, consistent with the RE Act, the continuing resolution and the 1989 Appropriations Act, it is the policy of RUS to implement the objectives of the prepayment program in a manner which does not result in an increase in loan guarantee risk or an inappropriate increase in the administrative burden on RUS.

§ 1786.27 Definitions and Rules of Construction.

(a) Definitions. For the purposes of this subpart, the following terms shall have the following meanings:

Administrator means the Administrator of RUS.

Application Category shall have the meaning set forth in § 1786.29(c).

Application period means a period during which RUS is accepting applications to make prepayments pursuant to this subpart, and initially means:

(1) In the case of telephone borrowers, the period commencing on February 12, 1990 and ending on March 12, 1990;

(2) In the case of financially distressed borrowers, the period commencing October 1, 1990 and ending on July 30, 1993; or

(3) In the case of other borrowers, the period to be announced by RUS.

Borrower means any organization which has an outstanding FFB loan guaranteed by RUS under the RE Act.

Business Day means any day other than a Saturday, a Sunday, a legal public holiday under 5 U.S.C. section 6103 for the purposes of statutes relating to pay and leave of employees, or any other day declared to be legal holiday for the purposes of statutes relating to pay and leave of employees by Federal statute or Federal Executive Order.

Date Received means the date inscribed on the Notice of Intent to Prepay the Federal Financing Bank, by an authorized official of RUS, as the date the application was received.

Documentation means all or part of the agreements relating to a prepayment under this part, irrespective of whether RUS is a party to each agreement, including all exhibits to such agreements.

Electric Program Applications shall have the meaning specified in § 1786.29(c)(1).

Existing Loan Guarantee means a guarantee of payment issued by RUS to FFB pursuant to the RE Act for an FFB loan made on or before July 2, 1986.

Fees means any fees, costs or charges, incurred in connection with obtaining the private loan used to make the prepayment including without limitation, accounting fees, filing fees, legal fees (including fees and disbursements charged by counsel representing the borrower), printing costs, recording fees, trustee fees, underwriting fees, capital stock purchases or other equity investment requirements of the lender, and other related transaction expenses.

Financially Distressed Borrower means an RUS-financed electric system determined by the Administrator to be either (1) in default or near default on interest or principal payments due on loans made or guaranteed under the RE Act, and is making a good faith effort to increase rates and reduce costs to avoid or mitigate default; or (2) participating in a work out or debt restructuring plan with RUS, either as the borrower being restructured or as a borrower providing assistance as part of the work out or restructuring.

Financially Viable Lender means:

(1) A lender (i) which has a capital and surplus of at least $50 million; (ii) is a beneficiary of an irrevocable letter of credit, in form and substance satisfactory to the Administrator, payable to it in the amount of $50 million; (iii) is the beneficiary of a guarantee, in form and substance satisfactory to the Administrator, in the amount of $50 million from a lending institution with a capital and surplus of at least $50 million; or (iv) has other credit support, in form and substance satisfactory to the Administrator, in the amount of $50 million; or
(2) In the event of a prepayment totalling less than $100 million, a lender (i) which has a capital and surplus of at least $10 million; (ii) is a beneficiary of an irrevocable letter of credit, in form and substance satisfactory to the Administrator, payable to it in the amount of $10 million; (iii) is the beneficiary of a guarantee, in form and substance satisfactory to the Administrator, in the amount of $10 million from a lending institution with a capital and surplus of at least $10 million; or (iv) has other credit support, in form and substance satisfactory to the Administrator, in the amount of $10 million;

FFB means the Federal Financing Bank, an instrumentality and wholly owned corporation of the United States.

FFB Loan means one or more advances, or a part of one or more advances, made on or before July 2, 1986, by FFB on a promissory note or notes executed by a borrower and guaranteed by RUS pursuant to section 306 of the RE Act (7 U.S.C. 936).

Guarantee means the original endorsement, in the form specified by RUS which is executed by the Administrator and shall be an obligation supported by the full faith and credit of the United States and incontestable except for fraud or misrepresentation of which the holder had actual knowledge at the time it became a holder.

Increase in Loan Guarantee Risk means the change in any of the components of loan guarantee risk associated with the private loan which in the judgment of RUS increases the magnitude or duration of the loan guarantee risk currently assumed by RUS in connection with the existing loan guarantee;

Internally Generated Funds means money belonging to the borrower other than: (1) Proceeds of loans made or guaranteed under the RE Act or (2) funds on deposit in the cash construction trustee account;

Lender means the organization making and servicing the private loan which is to be guaranteed under the provisions of this subpart and used to prepay the FFB loan. The term lender does not include the FFB, or any other Government agency.

Loan Guarantee Agreement means the written contract by and among the lender, the borrower, the Administrator, and such other parties that RUS may require, setting forth the terms and conditions of a guarantee issued pursuant to the provisions of this subpart.

Loan Guarantee Risk means the risk as determined by RUS associated with guaranteeing a loan for a particular borrower. Components of loan guarantee risk include the following:

(1) The outstanding principal balance of a loan;
(2) The dollar weighted average interest rate (stated as an annual percentage rate) on a loan;
(3) The final maturity date of a loan;
(4) The annual principal amortization of the loan; and
(5) Any other factor that as determined by RUS increases the magnitude or duration of the guarantee.

Mortgage means the mortgage and security agreements by and among the borrower and RUS, as from time to time supplemented, amended and restated.

Notice of Intent to Prepay the Federal Financing Bank means the notice in the form specified in §1786.33 hereof.

Prepayment Authority shall have the meaning specified in §1786.29(a).

Private Loan means a loan or loans to be guaranteed under the provisions of this part and used to prepay an FFB loan.

Pro-rated Percentage shall have the meaning specified in §1786.30(b)(1).

REA means the Rural Electrification Administration formerly an agency of the United States Department of Agriculture and predecessor agency to RUS with respect to administering certain electric and telephone loan programs.

RUS means the Rural Utilities Service, an agency of the United States Department of Agriculture established pursuant to Section 232 of the Federal Crop Insurance Reform and Department of Agriculture Reorganization
§ 1786.28 Qualifications.

(a) Borrowers. To qualify to prepay an FFB loan pursuant to this subpart, the borrower must:

(1) Demonstrate that the FFB loan was outstanding on July 2, 1986;
(2) Prepay the FFB loan by:
   (i) Using a private loan with the existing loan guarantee;
   (ii) Using internally generated funds; or
   (iii) Using a combination of a private loan with the existing loan guarantee and internally generated funds; and
(3) Certify that any savings resulting from such prepayment will be passed on to its customers, or used to improve the financial strength of the borrower in cases of financial hardship.

(b) Lenders. To participate pursuant to this subpart, in a borrower's prepayment of an FFB loan by means of a private loan, the lender must:

(1) Be a private legally organized lender, or a lender established pursuant to the Farm Credit Act of 1971, as amended;
(2)(i) Be subject to credit examination and supervision by either an agency of the United States or a state and be in good standing with its licensing authority and have met the requirements, if any, of licensing, lending and loan servicing in the state where the collateral for the Loan is located;
   (ii) Be a financially viable lender; or
   (iii) Be a trust administered by an entity meeting the requirements of paragraph (b)(2)(i) or (ii) of this section; and
(3) Have the capability to adequately service the private loan either by using its own resources or by contracting for such resources with a financially viable lender. Under no circumstances may the borrower or an affiliate of the borrower service the private loan. A qualified lender may participate out each private loan to entities other than a Government agency, the borrower, or an affiliate of the borrower, provided "hereunder", and words of similar import, refer to this subpart as a whole.

that such participation shall be on terms and conditions satisfactory to the Administrator.

(c) Private Loans. A borrower who qualifies pursuant to §1786.28(a) may at its option elect to use a private loan to make a prepayment, or a portion of a prepayment, pursuant to this subpart. Private loans, the proceeds of which are used exclusively to prepay FFB loans, shall be eligible for a guarantee under this subpart. The Administrator shall endorse a guarantee on each note evidencing a qualifying private loan. The private loan shall be structured in a manner which in the judgment of RUS shall not result in an increase in loan guarantee risk and shall comply with the following:

(1) The private loan shall provide for the periodic payment of interest by the borrower not less frequently than annually, at either a variable or fixed rate in a manner which shall not result in an increase in loan guarantee risk. (i.e. The dollar weighted average interest rate on the private loan shall be less than or equal to the dollar weighted average interest rate on the FFB loan being prepaid, so that:

\[
C_t = C_o + \frac{\sum (C_o - A_i)T_i}{(J-n)}
\]

Where,

- \(C_o\) = The revised interest rate cap;
- \(C_o\) = The original interest rate cap at the time of prepayment;
- \(A_i\) = The average interest rate actually charged in the \(i^{th}\) period;
- \(T_i\) = Length of the \(i^{th}\) period expressed in years;
- \(n\) = The number of years that have elapsed since the initial prepayment;
- \(J\) = The initial term of the private loan, at the time of prepayment;
- Subject to the constraint that \(A_i\) must be less or equal to \(C_o\).

(2) Principal payments on the private loan shall be made either quarterly, semiannually, or annually and shall commence on or before the last day of the calendar year during which the prepayment pursuant to this subpart was made.

(3) With the approval of the Administrator, the lender may refund the private loan with the proceeds of another loan from the same lender, with the existing guarantee and under terms, conditions, and a structure substantially similar to the private loan, on such dates as the lender, the borrower and RUS may agree, provided however, that such a refunding loan shall comply with the provisions of §1786.28(c) hereof. Additionally, with the approval of the Administrator, the private loan may be prepaid either in whole or in part at any time by the borrower using its general funds.

(4) The private loan and the guaranteed note evidencing the private loan shall not be directly or indirectly part of a transaction the income of which is excluded from gross income for the purposes of Chapter I of the Internal Revenue Code of 1986.

(5) The guaranteed note evidencing the private loan shall not be transferable or assignable except

(i) With the written approval of the Administrator;

(ii) In the event that the guaranteed note evidencing the private loan is held by a trust, to a similar trust, in connection with a refunding loan made by the lender pursuant to §1786.28(c)(3); or

(iii) As an undivided pro rata interest in a pool of obligations.

(6) The loan documentation shall provide RUS with the right to accelerate the note evidencing the private loan upon the occurrence of any “Event of Default” under the mortgage with the effect that all of the unpaid principal and interest on any such note shall become immediately due and payable to RUS, and RUS shall continue to pay under its guarantee the principal of and interest on such note without taking into account such acceleration. The loan documentation shall also provide RUS with a right, upon the occurrence of such an “Event of Default,” to accelerate payment on its guarantee and accelerate payment on the note evidencing the private loan on the earlier of any date the interest rate on the private loan is reset, without premium or penalty; any date the borrower may prepay in accordance with the terms of the private loan, or the tenth anniversary of the date the private loan first bears interest at a fixed interest rate.

(7) The principal of the private loan shall not include amounts attributable
to fees associated with the private loan. At the time it submits its application, a borrower may request that the Administrator approve the inclusion of amounts attributable to fees as part of the interest rate on the private loan, if the net effective interest rate including such fees meets the test contained in §1786.28(c)(1). For the purposes of these regulations, such financed fees shall be considered “interest”.

(8) Private loans and guaranteed notes evidencing private loans shall otherwise be in form and substance satisfactory to the Administrator.

(d) Prepayments Without a Guarantee. Qualifying borrowers may elect to utilize internally generated funds without a guarantee to prepay an FFB loan, or partially prepay an FFB loan, pursuant to this subpart, if

(1) The borrower notifies RUS, of its intent to prepay using internally generated funds in accordance with the application procedures set forth in this subpart; and

(2) The borrower submits a certification to RUS that the prepayment does not, materially adversely affect the financial stability of the borrower and its ability to meet all its obligations, including debt service on all loans made, guaranteed or lien accommodated under the RE Act which will remain outstanding after the date of the prepayment.

(e) The Use of both a Private Loan and Internally Generated Funds. Qualifying borrowers may elect to utilize a combination of private loans and internally generated funds without a guarantee, to prepay an FFB loan pursuant to this subpart, if

(1) The private loans comply with the provisions of paragraph (c) of this section, and

(2) The borrower complies with paragraph (d) of this section.

(f) FFB loans. A borrower’s FFB loans that qualify to be prepaid pursuant to this subpart are:

(1) Qualifying Borrowers. In the case of qualifying borrowers other than financially distressed borrowers, FFB advances with long-term maturity dates may be prepaid pursuant to this subpart; and

(2) Financially distressed borrowers. FFB loans that are eligible to be prepaid by utilizing the financially distressed borrowers’ reserve are advances with long-term maturity dates, and which in the opinion of the Administrator, if prepaid, would result in an economic savings to the financially distressed borrower.

and classified as being either (i) a financially distressed borrower's application, or (ii) a standard electric program application. Applications received from borrowers determined by the Administrator not to be a financially distressed borrower will be classified and processed as a standard electric program application;

(2) Telephone Program Applications. Telephone program applications are applications to make a prepayment pursuant to this subpart from RUS-financed telephone utilities that qualify in accordance with §1786.28(a) hereof and which are received by RUS during the application period;

(d) Financially distressed borrowers’ reserve. The $350 million of prepayment authority allocated for RUS-financed electric utilities, is initially set aside into a financially distressed borrowers’ reserve. This reserve of prepayment authority will be available for prepayments pursuant to this subpart from financially distressed borrowers who apply to make such a prepayment during the application period. In the event that a portion of financially distressed borrowers’ reserve remains unsubscribed at the end of the initial application period, the unallocated portion of the financially distressed borrowers’ reserve will be allocated to other electric borrowers having submitted applications during an application period to be announced by RUS. Such prepayment applications shall be classified as standard electric program applications.

§1786.30 Processing procedure.

(a) Priority of Processing. The determination of the order or method in which applications or portions of applications will be processed by RUS pursuant to this subpart rests solely within the discretion of the Administrator. RUS expects that a number of prepayment applications will be processed simultaneously. In the event that it becomes necessary to establish priorities of processing, prepayment applications will be processed without regard to the date received, generally in the following order of priority:

(1) Applications from telephone borrowers;
(2) Applications from financially distressed borrowers;
(3) Applications from all other borrowers. When assigning priority to such applications, RUS will consider a number of factors, including without limitation, (i) the number of prepayment applications being processed by the area office; (ii) the novelty or complexity of the proposed transaction; (iii) the method of prepayment; and (iv) the availability of resources. In the event that RUS receives during the initial application period, prepayment applications from such borrowers in an amount less than remaining prepayment authority for each respective program, RUS will establish a new application period and publish a notice to that effect in the Federal Register.

(b) Pro-rated Applications. Standard electric program applications, and telephone program applications will be prorated within their respective application categories to permit partial prepayments in the event that the aggregate amount of prepayment applications received during the application period exceeds the amount of prepayment authority allocated to that application category. In such circumstances, the amount of each borrower’s permitted prepayment shall be determined within each respective application category, as follows:

(1) The principal amount of FFB advances under each individual application, which, if prepaid pursuant to this subpart, would result in an economic savings to the borrower, shall be divided by the aggregate principal amount of FFB advances, under all of the applications, which, if prepaid pursuant to this subpart, would result in an economic savings to the borrowers, in order to determine a percentage (hereinafter called a pro-rated percentage) for each borrower;

(2) Each borrower’s share of the prepayment authority for its application category shall be equal to the product of (i) the prepayment authority times (ii) the respective pro-rated percentage, and may be used to prepay a portion of any of the borrower’s FFB loans listed pursuant to §1786.31(a)(2);
(3) If any approved prepayment transaction fails to be settled within 180 days of the date the borrower is notified by RUS of its prepayment allocation, RUS may rescind its approval. The unused prepayment authority represented by such a failed transaction is subject to being included in any subsequent notice of a new application period under this subpart; and

(4) In the event that applications from financially distressed borrowers exceed the amount prepayment authority remaining in the financially distressed borrowers' reserve, the Administrator at his discretion shall select one or more of such applications and allocate the reserve. In making such a selection and allocation, the Administrator may consider various factors, including without limitation, (i) the dollar amount of savings to be realized by the proposed prepayment; (ii) the interest rates on the FFB loans proposed to be prepaid; (iii) the magnitude of the default or potential default; and (iv) whether the borrower has previously completed a prepayment under section 306(A).

(c) Notification of Borrowers' Allocations. Promptly after allocating the prepayment authority to borrowers and completing any proration calculations that may be necessary, RUS will return to each borrower submitting a prepayment application pursuant to this subpart, a copy of their Notice of Intent to Prepay the Federal Financing Bank specifying the amount of the borrower's prepayment allocation.

§ 1786.31 Application procedure.

Applications to make a prepayment pursuant to this subpart shall be submitted to RUS on such forms as RUS may prescribe in the following manner:

(a) Application. Each borrower desiring to make a prepayment pursuant to this subpart shall submit an application to RUS. No application from a borrower will be accepted by RUS prior to the commencement of the application period. An application shall not be deemed submitted to RUS until it is received by RUS, and the "Date Received" has been inscribed on the Notice of Intent to Prepay the Federal Financing Bank by an authorized official of RUS. Incomplete applications may be returned to the borrower at the discretion of RUS and thereafter must be resubmitted in order to be processed. To be considered complete, the application should include the following:

(1) "Notice of Intent to Prepay the Federal Financing Bank" in the form specified in §1786.33 hereof;

(2) A listing of each FFB loan advance to be prepaid by loan designation, RUS note number, RUS account number, advance date, maturity date, original amount, outstanding balance, and interest rate;

(3) Evidence that the borrower meets the qualification provisions of §1786.28(a) of these regulations;

(4) The certification set forth in part A of the Notice of Intent to Prepay the Federal Financing Bank executed by the chief executive officer of the borrower;

(5) In the event that a borrower submits a prepayment application which proposes to utilize a portion of the financially distressed borrowers' reserve, a certification signed by the chief executive officer of the system to the effect that the borrower is either (i) in default or near default on interest or principal payments due on loans made or guaranteed under the RE Act, and is making a good faith effort to increase rates and reduce costs to avoid or mitigate default; or (ii) participating in a work out or debt restructuring plan with RUS, either as the borrower being restructured or as a borrower providing assistance as part of the work out or restructuring and stating why the borrower is in default or near default.

(b) Election of Method of Prepayment. Prior to requesting RUS to schedule a settlement date, the borrower shall (1) elect whether it will use a private loan, internally generated funds, or a combination of a private loan and internally generated funds to make the prepayment, by completing part C of its Notice of Intent to Prepay the Federal Financing Bank; (2) specify in part C of the Notice of Intent to Prepay the Federal Financing Bank a date after which
§ 1786.32
Settlement procedure.

(a) General. Settlements in connection with prepaying FFB loans pursuant to this subpart shall be conducted in accordance with the provisions of this section.

(b) Settlement Date. The prepayment will be settled and if a private loan is utilized, the guarantee will be delivered, on a settlement date agreed upon by the borrower and RUS. Prior to scheduling a settlement date for a borrower’s prepayment pursuant to this subpart, RUS shall have received the material specified in §1786.31(b).

(c) Place of Settlement. All settlements will take place in Washington, DC, at a location of the borrower’s choosing.
provided however, if more than one settlement is proposed for the same settlement date, RUS reserves the right to coordinate the date and location of the settlements with borrowers involved.

(d) Repayment of FFB. Prior to 1:00 p.m. prevailing local time in New York, New York, on the settlement date, the borrower shall wire immediately available funds to RUS through the Department of the Treasury account at the Federal Reserve Bank of New York or shall provide for payment to RUS in another manner acceptable to RUS and FFB, in an amount sufficient to pay the outstanding principal of the FFB loan being prepaid plus accrued interest from the last payment date to and including the settlement date.

(e) Documentation. The borrower shall deliver, or cause to be delivered to RUS and FFB, not less than 3 business days prior to the settlement date, written notice of the settlement date and a complete listing of each FFB loan advance to be prepaid or partially prepaid, in the format required by §1786.31(a)(2). In the event that a private loan is used in connection with the prepayment, the following executed documents, opinions and material shall be delivered at the settlement:

1. The guaranteed note evidencing the private loan.
2. The guarantee.
3. The loan guarantee agreement.
4. Copy of the private loan agreement between the lender and the borrower.
5. Evidence that the borrower has received all approvals which are required under Federal or state law, loan agreements, security agreements, existing financing arrangements, or any other agreement to which the borrower is a party.
6. An amendment in recordable form revising the description of the obligations secured by the mortgage including the obligation of the borrower to reimburse RUS for any amounts that RUS may pay under the guarantee.
7. An approving opinion of the borrower’s legal counsel to the effect that the guaranteed note evidencing the private loan is a valid and legally binding obligation of the borrower which is secured under the mortgage, and the priority of the mortgage, as amended pursuant to paragraph (e)(6) of this section, remains undisturbed.
8. An approving opinion of the lender’s legal counsel to the effect that the loan guarantee agreement is a valid and legally binding obligation of the lender.
9. Such other opinions of counsel as may be required by the Administrator.
10. Copies of any other documentation required by the lender.
11. Copies of any other documentation required by RUS to ensure that the obligations of the borrower to reimburse RUS for any amounts that RUS pays under the guarantee or may advance in connection with the private loan are adequately secured under the mortgage.

(Approved by the Office of Management and Budget under control number 0572-0088)

§ 1786.33 Forms.

Guarantees and loan guarantee agreements executed by RUS pursuant to this subpart will be on forms prescribed by RUS. Such forms will include, without limitation, additional details on servicing, procedures for notifying RUS of a default, the manner for requesting payment on a guarantee. The Notice of Intent to Prepay the Federal Financing Bank shall be substantially in the form specified by RUS. RUS may also prescribe standard forms of certifications to be used in connection with materials required to be furnished pursuant to §1786.31 of this subpart.

§ 1786.34 Access to records of lenders, servicers, and trustees.

The lender, the servicer, or the trustee will permit representatives of RUS (or other agencies of the U.S. Department of Agriculture authorized by that Department) to inspect and make copies of any of their records pertaining to RUS guaranteed loans. Such inspection and copying may be made during regular office hours of the respective party or any other time the party and RUS find convenient.
§ 1786.35 Loss, theft, destruction, mutilation, or defacement of RUS guarantee.

(a) Authorized representative. Except where the evidence of debt was or is a bearer instrument, the RUS Administrator is authorized on behalf of RUS to issue a replacement guarantee(s) for one(s) which may have been lost, stolen, destroyed, mutilated, or defaced. Such replacement(s) shall be issued only to the lender or holder and only upon receipt of an acceptable certificate of loss and an indemnity bond.

(b) Requirements. When a guarantee(s) is lost, stolen, destroyed, mutilated, or defaced while in the custody of the lender, or holder, the lender will coordinate the activities of the party who seeks the replacement documents and will submit the required documents to RUS for processing. The requirements for replacement are as follows:

(1) A certificate of loss properly notarized which includes:
   (i) Legal name and present address of the owner, requesting the replacement forms;
   (ii) Legal name and address of lender of record;
   (iii) Capacity of person certifying;
   (iv) Full identification of the guarantor, including the name of the borrower, date of the guarantee, face amount of the evidence of debt purchased, date of evidence of debt and present balance of the loan. Any existing parts of the documents to be replaced should be attached to the certificate;
   (v) A full statement of circumstances of the loss, theft, or destruction of the guarantee; and
   (vi) The lender or holder, shall present evidence demonstrating current ownership of the guarantee and note. If the present holder is not the same as the original lender, a copy of the endorsement of each successive holder in the chain of transfer from the initial private lender to present holder shall be included. If copies of the endorsement cannot be obtained, best available records of transfer shall be presented to RUS (e.g., order confirmation, cancelled checks, etc).

(2) An indemnity bond acceptable to RUS shall accompany the request for replacement except when the holder is the United States, a Federal Reserve Bank, a Federal Government Corporation, a state or territory, or the District of Columbia. The bond may be with or without surety. The bond shall be with surety except when the outstanding principal balance and accrued interest due the present holder is less than $1,000,000 verified by the lender in writing in a letter of certification of balance due. The surety shall be a qualified surety company holding a certificate of authority from the Secretary of the Treasury and listed in Treasury Department Circular 580.

(3) All indemnity bonds shall be issued and/or payable to the United States of America acting through the Administrator of the Rural Utilities Service. The bond shall be in an amount not less than the unpaid principal and interest. The bond shall save RUS harmless against any claim or demand which might arise or against any damage, loss, costs, or expenses which might be sustained or incurred by reasons of the loss or replacement of the instruments.

§ 1786.36 Other prepayments.

Nothing contained in this subpart shall prohibit a borrower from making prepayments of FFB loans in accordance with the terms thereof.

§ 1786.37 Application of regulation to previous prepayments.

Nothing contained in this subpart shall affect the validity of prepayments made or guarantees issued pursuant to previous regulations. Those borrowers, however, that completed a prepayment pursuant to section 306(A) of the RE Act and closed loans prior to February 27, 1988, may, in their discretion request RUS approval and if required by prior regulations the concurrence of the Secretary of the Treasury, of any amendments necessary to make the terms and conditions of such loans consistent with, or to consolidate such loans with, loans guaranteed under these regulations.

§ 1786.38 Judicial review.

This subpart is intended to set forth RUS policies and procedures for the orderly administration of the provisions of section 306(A) of the RE Act, section
§ 1786.53 Discounted present value.

The Discounted Present Value shall be calculated five business days before prepayment is made by summing the present values of all remaining payments by using the following formula:

\[
\text{Present Value} = \sum_{k=1}^{n} \frac{P_k}{\prod_{i=1}^{k} \left(1 + \frac{D1_i}{365} + \frac{D2_i}{366}\right) \times I}
\]

Where:
- \(P_k\) = Total payment including interest, due on the \(k^{th}\) payment date following the prepayment date.
- \(n\) = Total number of remaining payments.
- \(I\) = The discount rate, in decimals, which shall be the average rate on utility bonds bearing a rating of "Aa" as set forth in the issue of Moody's Public Utility News Reports most recently published prior to the date on which Discounted Present
§ 1786.54 Eligibility criteria.

To be eligible to prepay RUS Notes at the Discounted Present Value a borrower must comply with the following criteria:

(a) The borrower must be current on all payments due on its outstanding RUS Notes and all other payment obligations owed to RUS and the Rural Telephone Bank.

(b) The borrower must agree to prepay all of its outstanding RUS Notes.

(c) The borrower must identify the source of private financing that will be used to refinance its outstanding RUS Notes, which financing may not include obligations the income of which is exempt from taxation under the Internal Revenue Code of 1986.

(d) The borrower must have expended all funds advanced on account of the RUS Notes for the purposes for which such funds were advanced.

(e) The borrower must agree to a rescission of the unadvanced balance of the RUS Notes.

(f) The borrower must agree that the borrower, its successors or assigns, shall pay to the Government, as a condition of receiving additional loans or loan guarantees pursuant to Titles I, II and III of the Act, an amount equal to the aggregate of the difference with respect to each of the RUS Notes between the amount outstanding on the RUS Note and the Discounted Present Value of the RUS Note upon prepayment with interest accruing quarterly; the interest rates shall be the rates provided in the respective RUS Notes.

(g) If the borrower is a party to a wholesale power contract with a power supplier financed pursuant to the Act, the borrower must provide the Administrator with such assurances as the Administrator may request that it will meet its obligations to the power supplier.

§ 1786.55 Application procedure.

Any borrower seeking to prepay its RUS Notes under this subpart should apply to the appropriate RUS Area Director by submitting:

(a) A board resolution that:

(1) Requests approval of the prepayment of the borrower's outstanding RUS Notes, and

(2) States the intent of the borrower to comply with all eligibility criteria set forth in § 1786.54 of this subpart.

(b) A list of all RUS Notes together with the outstanding amount on such notes.

(c) Such additional information as the Administrator shall request.

§ 1786.56 Approval of applications.

The applications will ordinarily be reviewed and, if satisfactory, approved, and closing schedule based on the order in which executed prepayment agreements are received. The Administrator may limit the number of applications approved and closings scheduled from time to time taking into account, among other matters, the financial interests and administrative considerations of the Government.

§ 1786.57 Prepayment agreement.

Upon approving an application for prepayment under this subpart, the Administrator shall notify the borrower and deliver to the borrower for its execution a prepayment agreement which shall set forth and provide:

(a) The RUS Notes to be prepaid and when the Discounted Present Value will be calculated.

(b) The place and conditions for closing.

(c) Agreement that the unadvanced balance of RUS Notes shall be rescinded.

(d) Agreement that the borrower, or its successors or assigns, shall pay to the Government, as a condition of receiving additional loans or loan guarantees pursuant to Titles I, II and III of the Act, an amount equal to the aggregate of the difference with respect to each of the RUS Notes between the amount outstanding on the RUS Note and the Discounted Present Value of the RUS Note upon prepayment with interest accruing quarterly; the interest rates shall be the rates provided in the respective RUS Notes.
(e) Assurances that the borrower will meet its obligations to any power supplier financed pursuant to the Act.

(f) Such other terms and conditions as the Administrator deems appropriate.

§ 1786.58 Security.

If, after prepayment of RUS Notes, the Government should continue to hold liens on the borrower’s property that secure loans made or guaranteed pursuant to the Act, the Administrator of RUS or the Governor of the Rural Telephone Bank, as the case may be, will consider request for the accommodation of such liens for the purpose of providing security for loans the proceeds of which were used to prepay RUS Notes. Such lien accommodations shall be limited in amount to the Discounted Present Value of the RUS Notes plus such costs, as the Administrator shall determine to be reasonable, incurred by the borrower in obtaining such loans.

§ 1786.59 Loan fund audit.

Within 6 months of closing RUS shall have the right to audit transactions involving the RUS construction fund established and maintained by the borrower pursuant to the terms of the RUS Loan Agreement and to inspect all books, records, accounts and other documents and papers of the borrower. Should RUS determine that the borrower has made disbursements of funds advanced pursuant to RUS Notes which do not comply with the requirements of the RUS Loan Agreement, the borrower shall be required to pay to the Government an amount equal to the difference between the amount which the borrower prepaid on such RUS Notes evidencing RUS loan funds which were improperly disbursed and the amount which the borrower would otherwise have been required to return to the Government as a result of noncompliance if the borrower had not prepaid such RUS Notes. (See 7 CFR part 1721)

§ 1786.60 Closing.

(a) The borrower shall be responsible for obtaining all approvals necessary to consummate the prepayment as required by the prepayment agreement including such approvals as may be required by regulatory bodies and other lenders.

(b) The RUS Notes shall be prepaid at a closing to be held in accordance with the prepayment agreement; Provided, however, That no closing may be scheduled for after September 30, 1987. At closing, a borrower shall prepay the RUS Notes by paying to the Government an amount equal to the Discounted Present Value of the RUS Notes. The closing shall otherwise be conducted as prescribed in the prepayment agreement.

§ 1786.61 Other prepayments.

RUS loan documentation generally permits borrowers to prepay RUS Notes by paying the outstanding balance due thereon. Nothing in this subpart shall prohibit any borrower from prepaying its outstanding RUS Notes in accordance with the terms thereof. The provisions of this subpart shall not be applicable to such prepayment.

§§ 1786.62–1786.74 [Reserved]

Subpart D [Reserved]

Subpart E—Discounted Prepayments on RUS Notes in the Event of a Merger of Certain RUS Electric Borrowers

SOURCE: 56 FR 37268, Aug. 6, 1991, unless otherwise noted.

§ 1786.95 Purpose.

This subpart sets forth the policies and procedures of RUS whereby certain electric borrowers may prepay outstanding RUS Notes at the Discounted Present Value of the RUS Notes with private financing.

§ 1786.96 Definitions.

As used in this subpart:

Act means the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 et seq.).

Administrator means the Administrator of RUS.

Consolidation means:

(1) The combination, pursuant to state law, of two or more borrower or nonborrower organizations into a new
successor organization that takes over the assets and assumes the liabilities of those organizations; or

(2) Any other transaction including an acquisition which has substantially the same effect.

Discounted Present Value shall have the meaning specified in §1786.98.

Fund means the Rural Electrification and Telephone Revolving Fund pursuant to the Act.

Merger means:

(1) The combination, pursuant to state law, of two or more borrower or nonborrower organizations into an existing survivor organization that takes over the assets and assumes the liabilities of the merged organizations; or

(2) Any other transaction including an acquisition which has substantially the same effect.

REA means the Rural Electrification Administration formerly an agency of the United States Department of Agriculture and predecessor agency to RUS with respect to administering certain electric and telephone loan programs.

RUS Loan Agreement means the agreement between the borrower and RUS providing for loans pursuant to the Act.

RUS Notes means those notes, bonds or other obligations evidencing indebtedness created by loans made or guaranteed by RUS pursuant to titles I and III of the Act (7 U.S.C. 901-940).

§ 1786.97 Prepayment.

There were 29 former RUS electric borrowers that prepaid their direct or insured loans under section 306B(a) of the Act prior to October 1, 1987. (See subpart C of this part.) These borrowers are listed in appendix A to subpart E of this part. Any RUS electric borrower which is the result of a merger or consolidation involving any of these 29 former borrowers and a borrower with outstanding Notes may, after meeting all requirements of this subpart, prepay all outstanding RUS Notes issued or assumed by the borrower upon paying the lesser of the outstanding balance or the Discounted Present Value. Such prepayment must be made not later than one year after the effective date of the merger or consolidation.

§ 1786.98 Discounted present value.

(a) The Discounted Present Value shall be calculated by RUS before prepayment is made by summing the present values of all remaining payments on all outstanding notes according to the following formula to compute the discounted present value of each note and adjusting as here and after provided for tax exempt financing:

\[
\text{Present Value} = \sum_{k=1}^{n} \frac{P_k}{\prod_{i=1}^{k} \left[ 1.0 + \left( \frac{D_1}{365} + \frac{D_2}{366} \right) \times I \right]}
\]

Where:

- \( P_k \) = Total payment, including interest, due on the \( k \)th payment date following the prepayment date.
- \( n \) = Total number of remaining payment dates.
- \( I \) = The discount rate applied to each transaction will be ascertained by using data specified in the "Federal Reserve Statistical Release" which is published each Monday. (See appendix B to subpart E of this part.) The specific discount rate will be the discount rate(s) specified in the "Treasury Constant Maturities" section of this publication eight working days prior to the closing. In applying the discount rate, the 1-year Treasury rate will be used for all notes with a remaining term of less
than 2 years; the 2-year Treasury rate for notes with maturities between 2 and 3 years; the 3-year Treasury rate for all notes with maturities between 3 and 5 years; the 5-year Treasury rate for all notes with maturities between 5 and 7 years; the 7-year Treasury rate for all notes with maturities between 7 and 10 years; the 10-year Treasury rate for all notes with maturities between 10 and 30 years; and the 30-year Treasury rate for all notes with maturities longer than 30 years.

\[ D_i = \text{Number of days in the } i^{\text{th}} \text{ payment period that are in a non-leap year (365 day year).} \]

\[ D_{2i} = \text{Number of days in the } i^{\text{th}} \text{ payment period that are in a leap year (366 day year).} \]

(b) Notwithstanding paragraph (a) of this section, in the event that the borrower shall elect to prepay using tax exempt financing, the calculation of the Discounted Present Value shall be adjusted to make the discount the equivalent of fully taxable financing.

§ 1786.99 Eligibility criteria.

To be eligible to prepay RUS Notes at the Discounted Present Value, a borrower must comply with the following criteria:

(a) The borrower must be current on all payments due on its outstanding RUS Notes and all other payment obligations owed to RUS;

(b) The borrower must agree to prepay all of its outstanding RUS Notes;

(c) The borrower must identify the source of financing that will be used directly or indirectly to refinance its outstanding RUS Notes. The borrower must certify in writing whether such financing will be tax exempt and, if so, shall furnish all information on the financing as RUS may request to enable RUS to adjust the discount to the equivalent to fully taxable financing;

(d) The borrower must have expended all funds advanced on account of the RUS Notes for the purposes for which such funds were advanced or repaid RUS for all unexpended funds;

(e) The borrower must agree to a recission of the unadvanced balance of any RUS Notes outstanding as of the date of its application for prepayment;

(f) The borrower must agree that the borrower, its successors and assigns, shall pay to the Government, as a condition of receiving additional loans or loan guarantees pursuant to titles I and III of the Act, an amount equal to the aggregate of the difference with respect to each of the RUS Notes between the amount outstanding on the RUS Note and the Discounted Present Value of the RUS Note upon prepayment with interest accruing quarterly; the interest rates shall be the rates provided in the respective Notes; and

(g) If the borrower is a party to a wholesale power contract with a power supplier financed pursuant to the Act, the borrower must provide the Administrator with such assurances as the Administrator may request that it will meet its obligations to the power supplier. The borrower must also specifically agree to the following limitation: The borrower agrees that, for so long as the Wholesale Power Contract shall be in effect between the borrower and the power supplier, the borrower will not, without the approval in writing of the power supplier and the Administrator, take or suffer to be taken any steps for reorganization or to consolidate with or merge into any corporation or any other public power district, or to sell, lease or transfer (or make any agreement therefor) all or a substantial portion of its assets, whether now owned or hereafter acquired. Notwithstanding the foregoing, the borrower may take or suffer to be taken any steps for reorganization or to consolidate with or merge into any corporation or any other public power district, or to sell, lease or transfer (or make any agreement therefor) all or a substantial portion of its assets, whether now owned or hereafter acquired, so long as the borrower shall pay such portion of the outstanding indebtedness evidenced by the power supplier’s Notes at the time outstanding as shall be determined by the power supplier with the prior written consent of the Administrator and shall otherwise comply with such reasonable terms and conditions as the Administrator and the Power Supplier shall require.

§ 1786.100 Application procedure.

Any borrower seeking to prepay its RUS Notes under this Subpart should apply to the appropriate RUS Area Director not less than 60 days prior to one year after the effective date of the merger or consolidation by submitting:
§ 1786.101 Approval of application.

The applications will be reviewed and, if satisfactory, approved. Closing will be scheduled upon approval.

§ 1786.102 Prepayment agreement.

Upon approving an application for prepayment under this subpart, the Administrator shall notify the borrower and deliver to the borrower for its execution a prepayment agreement which shall set forth and provide:

(a) The RUS Notes to be prepaid and when the Discounted Present Value will be calculated.
(b) The place, date and conditions for closing.
(c) Agreement that the unadvanced balance of RUS Notes shall be rescinded.
(d) Agreement that the borrower, or its successors or assigns, shall pay to the Government, as a condition of receiving additional loans or loan guarantees pursuant to titles I and III of the Act, an amount equal to the aggregate of the difference with respect to each of the RUS Notes between the amount outstanding on the RUS Note and the Discounted Present Value of the prepaid RUS Note; with interest accruing quarterly. The interest rates shall be the rates provided in the respective RUS Notes.
(e) Assurances that the borrower will meet its obligations to any power supplier financed pursuant to the Act.
(f) Such other terms and conditions as the Administrator deems appropriate.

§ 1786.103 Security.

If, after prepayment of RUS Notes, the Government should continue to hold liens on the borrower’s property, the Administrator of RUS will consider a request for the accommodation of such liens for the purpose of providing security for loans the proceeds of which were used to prepay RUS Notes. Such lien accommodations shall be limited in amount to the Discounted Present Value of the RUS Notes plus such costs, as the Administrator shall determine to be reasonable, incurred by the borrower in obtaining such loans.

§ 1786.104 Loan fund audit.

RUS shall have the right to audit within 6 months of closing, transactions involving the RUS construction fund established and maintained by the borrower pursuant to the terms of the RUS Loan Agreement and to inspect all books, records, accounts and other documents and papers of the borrower. Should RUS determine that the borrower has made disbursements of funds advanced pursuant to RUS Notes which do not comply with the requirements of the RUS Loan Agreement, the borrower shall be required to pay the Government an amount equal to the difference between the amount which the borrower prepaid on such RUS Notes evidencing RUS loans funds which were improperly disbursed and the amount which the borrower would otherwise have been required to return to the Government as a result of non-compliance if the borrower had not prepaid such RUS Notes. (See 7 CFR part 1721, Post-Loan Policies and Procedures for Insured Electric Loans.)

§ 1786.105 Closing.

(a) The borrower shall be responsible for obtaining all approvals necessary to consummate the transaction as required by the prepayment agreement, including such approvals as may be required by regulatory bodies and other lenders.
(b) The RUS Notes shall be prepaid at a closing to be held in accordance with the prepayment agreement. RUS shall designate the date of closing which in no event shall be later than one year after the effective date of the merger.
or consolidation. At closing, in addition to paying all current interest due on the date of prepayment, a borrower shall prepay the RUS Notes by paying to the Government an amount equal to the lesser of the outstanding balance or the Discounted Present Value of the RUS Notes. The closing shall otherwise be conducted as prescribed in the prepayment agreement.

§ 1786.106 Other prepayments.

RUS loan documentation generally permits borrowers to prepay RUS Notes by paying the outstanding balance due thereon. Nothing in this subpart shall prohibit any borrower from prepaying its outstanding RUS Notes in accordance with the terms thereof. The provisions of this subpart shall not be applicable to such prepayment.

Footnotes:
1. The daily effective federal funds rate is a weighted average of rates on trades through N.Y. brokers.
2. Weekly figures are averages of 7 calendar days ending on Wednesday of the current week; monthly figures include each calender day in the month.
3. Annualized using a 360-day year or bank interest.
4. Quoted on a discount basis.
5. An average of offering rates on commercial paper placed by several leading dealers for firms whose bond rating is AA or the equivalent.
6. An average of offering rates on paper directly placed by finance companies.
7. Representative closing yields for acceptances of the highest rated money center banks.
8. An average of dealer offering rates on nationally traded certificates of deposit.
10. One of several base rates used by banks to price short-term business loans.
12. Auction date for daily data; weekly and monthly averages computed on an issue-date basis.
Description of the Treasury Constant Maturity Series

Yields on Treasury securities at "constant maturity" are interpolated by the U.S. Treasury from the daily yield curve. This curve, which relates the yield on a security to its time to maturity, is based on the closing market bid yields on actively traded Treasury securities in the over-the-counter market. These market yields are calculated from composites of quotations reported by five leading U.S. Government securities dealers to the Federal Reserve Bank of New York. The constant maturity yield values are read from the yield curve at fixed maturities, currently 1, 2, 3, 5, 7, 10, and 30 years. This method provides a yield for a 10-year maturity, for example, even if no outstanding security has exactly 10 years remaining to maturity.

Subpart F—Discounted Prepayments on RUS Electric Loans

Source: 59 FR 13620, Mar. 22, 1994, unless otherwise noted.

§ 1786.150 Purpose.

This subpart sets forth the policies and procedures of RUS whereby borrowers may prepay, with private financing or internally generated funds, outstanding RUS Notes evidencing electric loans at the Discounted present value of the RUS Notes, pursuant to the provisions of section 306(B) of the RE Act as amended by Public Law 102-428, 106 Stat. 2183, adopted October 21, 1992.

§ 1786.151 Definitions and rules of construction.

(a) Definitions. As used in this subpart:

Administrator means the Administrator of the Rural Utilities Service (RUS).

Borrower means any organization which has an outstanding note(s) evidencing electric loans made by RUS, or has previously prepaid such notes under subparts C and E of this part.

Business day means any day on which both the RUS and the Federal Reserve Bank of New York are open for business.

Construction Fund Account means the Cash—Construction Fund—Trustee Account, maintained by the borrower pursuant to the terms of the outstanding RUS Loan Contract.

Closing shall mean one of the several contemplated closings of the prepayment of the Qualified Notes prescribed by the Prepayment agreement.

Closing date shall mean any business day identified as such by the Government in its preclosing notice delivered to the Company pursuant to §1786.158.

Closing request shall mean a request by the borrower of the Government to schedule a closing for certain Qualified Notes on the date requested therein.

Direct loan means a loan made pursuant to section 4 of the RE Act.

Discounted present value shall have the meaning set forth in §1786.153.

Distribution borrower means a borrower that sells electric power and energy at retail in rural areas.

Electric loan means a Direct loan or an Insured loan made for the purpose of furnishing electric energy to persons in rural areas.

Final maturity means the final date on which all outstanding principal and accrued interest on an electric loan is due and payable.

Government means the United States of America, acting through the Administrator of the Rural Utilities Service.

Insured loan means a loan made pursuant to Section 305 of the RE Act.

Lien accommodation means the sharing of the Government's (RUS's) lien on property, usually all property, covered by the lien of the RUS Mortgage.

Loan guarantee means a loan guarantee under Section 306 of the RE Act.

Power supply borrower means a borrower that sells or intends to sell electric power at wholesale to distribution or power supply borrowers pursuant to RUS wholesale power contracts.
Preclosing notice shall mean a notice delivered by the Government to the borrower in response to a closing request, identifying the closing date, the Qualified Notes to be prepaid at such closing and documents to be delivered by the borrower to the Government prior to the closing date.

Prepayment agreement shall have the meaning set forth in §1786.158.

Qualified Notes shall have the meaning set forth in §1786.154.

RE Act means the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 et seq.).

RUS means the Rural Utilities Service, an agency of the United States Department of Agriculture.

RUS Loan Contract means the agreement, as amended, supplemented, or restated from time to time, between a borrower and RUS providing for loans or loan guarantees pursuant to the RE Act.

RUS Mortgage means collectively those mortgages and security agreements made by and among the borrower, the Government, and third parties, if any, securing indebtedness evidencing electric loans or loan guarantees pursuant to the RE Act.

Rural development loans means loans or grants made pursuant to Rural development programs.

Rural development programs means loan or grant programs under the authority of the Administrator pursuant to sections 313, 501, and 502 of the RE Act.

Supplemental lender means a private lender whose loan to the borrower is secured by the RUS mortgage.

Tax exempt financing means borrowing evidenced by bonds, notes and other evidence of indebtedness the income of which is excluded from gross income for the purposes of Chapter 1 of the Internal Revenue Code of 1986 (26 U.S.C. ch. 1).

(b) Rules of construction. Unless the context shall otherwise indicate, the terms defined in paragraph (a) of this section include the plural as well as the singular, and the singular as well as the plural.

§1786.152 Prepayments of RUS loans.

An electric loan made under the RE Act shall not be sold or prepaid at a value that is less than the outstanding principal balance, except that, on request of a borrower, an electric loan made under the RE Act or a portion of such a loan, that was advanced before May 1, 1992, or has been advanced for not less than 2 years, shall be prepaid by the borrower at the lesser of the outstanding principal balance of the loan or the discounted present value thereof.

§1786.153 Discounted present value.

(a) The discounted present value shall be calculated by summing the present values of all remaining payments on all Qualified Notes to be prepaid according to the following formula and adjusted as provided in paragraph (b) of this section if tax exempt financing is used.

\[
\text{Present Value} = \sum_{k=1}^{n} \frac{P_k}{\prod_{i=1}^{k} \left[1.0 + \frac{D_{1i}}{365} + \frac{D_{2i}}{366}\right]^{n}}
\]

Where:

- The Greek letter, Sigma (\(\Sigma\)) means the sum of the following terms.
- The Greek letter, Pi (\(\Pi\)) means the product of the following terms.
- \(P_k\) = Total payment, including interest due on the \(K^{th}\) payment date following the prepayment date.
- \(n\) = Total number of remaining payment dates to final maturity.
- \(D_{1i}\) = Number of days in the \(i^{th}\) payment period that are in a non-leap year (365-day year).
- \(D_{2i}\) = Number of days in the \(i^{th}\) payment period that are in a leap year (366-day year).
A = The Treasury interest rate for the most recently published maturity (in years) that is the shortest Treasury term (in years) which is greater than the borrower’s remaining term (in years) to final maturity; i.e., (if the note to be prepaid has a final maturity of more than 10 years but less than 20 years then this term is the 10-year Treasury rate)

B = The Treasury interest rate for the most recently published maturity (in years) that is the longest Treasury term (in years) which is less than the borrower’s remaining term (in years) to final maturity; i.e., (if the note to be prepaid has a final maturity of more than 10 years but less than 20 years then this term is the 10-year Treasury rate)

C = The remaining number of full years to the final maturity of the borrower’s note. Drop all fractions of a year and use the remaining full years.

E = The published Treasury term (in years) to maturity which is the shortest term to maturity for the published term that is greater than the remaining term (in years) to final maturity of the borrower’s note; i.e., (if the note to be prepaid has remaining years to maturity between 11 and 20 years then this term would be 10 or if the note to be prepaid has remaining years to maturity between 21 years and 30 years then this term would be 20).

F = The published Treasury term (in years) to maturity which is the shortest term to maturity for the published term that is greater than the remaining term (in years) to maturity of the borrower’s note; i.e., (if the note to be prepaid has remaining years to maturity between 11 and 20 years then this term would be 10 or if the remaining years to maturity is between 21 and 30 years then this term would be 30).

\[ I = B + \frac{(C - E) \times (A - B)}{F - E} \]

Where:

I = The discount rate interpolated from the cost of money to the Treasury.

A = The Treasury interest rate for the most recently published maturity (in years) that is the shortest Treasury term (in years) which is greater than the borrower’s remaining term (in years) to final maturity; i.e., (if the note to be prepaid has a final maturity of more than 10 years but less than 20 years then this rate is the 20-year Treasury rate)

B = The Treasury interest rate for the most recently published maturity (in years) that is the longest Treasury term (in years) which is less than the borrower’s remaining term (in years) to final maturity; i.e., (if the note to be prepaid has a final maturity of more than 10 years but less than 20 years then this term is the 10-year Treasury rate)

C = The remaining number of full years to the final maturity of the borrower’s note. Drop all fractions of a year and use the remaining full years.

E = The published Treasury term (in years) to maturity which is the shortest term to maturity for the published term that is greater than the remaining term (in years) to final maturity of the borrower’s note; i.e., (if the note to be prepaid has remaining years to maturity between 11 and 20 years then this term would be 10 or if the note to be prepaid has remaining years to maturity between 21 years and 30 years then this term would be 20).

F = The published Treasury term (in years) to maturity which is the shortest term to maturity for the published term that is greater than the remaining term (in years) to maturity of the borrower’s note; i.e., (if the note to be prepaid has remaining years to maturity between 11 and 20 years then this term would be 10 or if the remaining years to maturity is between 21 and 30 years then this term would be 30).
§ 1786.154 Qualified Notes.

An eligible borrower may prepay Qualified Notes under this subpart at the discounted present value. A Qualified Note is a note evidencing an RUS electric loan, all advances of which were made prior to May 1, 1992, or not less than 2 years prior to the date of prepayment closing. See §§ 1786.155(a)(3) and 1786.158(h) and (j).

§ 1786.155 Eligible borrower.

(a) To be eligible to prepay an electric loan under this subpart, the borrower must be in compliance with the following:

(1) The borrower shall be current on all payment obligations on outstanding loans made or guaranteed by RUS. For the purpose of determining eligibility for prepayment, a default by a power supply borrower from which a distribution borrower purchases wholesale power shall not be considered a default by the distribution borrower;

(2) There shall exist no material defaults under the borrower’s RUS Loan Contract and Mortgage;

(3) The borrower shall have expended all funds advanced pursuant to the RUS Loan Contract for the purposes for which such funds were advanced. A borrower will not be eligible to prepay under this subpart if it has any funds advanced pursuant to the RUS Loan Contract in its Construction Fund Account; and

(4) The borrower shall be current on all obligations under any wholesale power contract with an RUS financed power supply borrower.

(b) The eligibility of borrowers that have had any indebtedness representing loans made or guaranteed by RUS restructured shall be determined on a case by case basis considering the terms and conditions of the restructuring agreement.

§ 1786.156 Application procedure.

Any borrower seeking to prepay Qualified Notes under this subpart should apply to the appropriate RUS Regional Director or the Director of the Power Supply Division. The application shall provide the following:

(a) Borrower’s RUS designation;

(b) Borrower’s name and address;

(c) A certified copy of a resolution of the board of directors of the borrower that the borrower wishes to enter into a prepayment agreement providing for the prepayment of all or a portion of its Qualified Notes;

(d) Listing of each Qualified Note to be prepaid by loan designation, RUS account number, advance date, maturity date, original amount, and outstanding principal balance;

(e) Evidence that the borrower has the ability to obtain the financing necessary to prepay its Qualified Notes listed in paragraph (d) of this section and identification of the source of financing and the need if any of obtaining a lien accommodation from RUS; and
§ 1786.157 Approval of applications.

(a) Ordinarily, within 30 days of receipt, an application will be reviewed and the borrower will be notified as to whether the application has been approved. If the application has not been approved, the borrower will be informed as to the reasons. If the application is approved the borrower shall thereafter be provided with a prepayment agreement for execution.

(b) The Administrator may limit the number of applications approved and closings scheduled from time to time, taking into account, among other matters, administrative considerations of the RUS.

§ 1786.158 Terms and conditions of prepayment agreement.

Upon receipt of a satisfactory application, RUS shall provide to the borrower for its execution a prepayment agreement, in form and substance satisfactory to RUS, which may include the following:

(a) Provide for the prepayment of one or more Qualified Notes from time to time, but no more than two closings may be scheduled in any calendar year unless a third closing is for the prepayment of all outstanding electric loans of the borrower;

(b) Set forth procedures and forms through which the borrower will notify the Government of each election it makes to prepay certain Qualified Notes upon a requested closing date and the Government will notify the borrower of the established closing date and prepayment amount for the Qualified Notes for each closing;

(c) Reserve to the Administrator the right to reschedule closing dates to meet administrative considerations;

(d) Set forth closing requirements identifying the location and manner of payment, and all documentation and information to be delivered prior to or at closing, including opinions of counsel and certificates from the borrower;

(e) Provide for notice by either telephone or facsimile to be given by RUS to the borrower not more than 8 nor less than 3 business days before a scheduled closing date of the amount to be paid at closing which shall include all accrued interest and the discounted present value of the Qualified Notes to be prepaid;

(f) Provide for notice of the 120 month period during which the borrower’s eligibility for direct or insured loans will be restricted;

(g) Set forth representations and warranties;

(h) Require the borrower to prepay each Qualified Note specified in full;

(i) Require the borrower to identify the source of the financing that will be used directly or indirectly to refinance the Qualified Notes. If the source is other than internally generated funds, the borrower must certify in writing whether such financing will be tax exempt, and if tax exempt financing will be used, furnish all information on the terms and conditions of the financing as RUS may require;

(j) Require the borrower to rescind the unadvanced balance of all outstanding electric loans as of the date of initial closing;

(k) Require the borrower, if it is a party to a wholesale power contract with a power supply borrower, to provide the Administrator with such assurances as the Administrator may require that it is in compliance with and will continue to comply with its obligation to such power supply borrower;

(l) Provide RUS, if the Administrator determines it necessary, with security for all outstanding rural development loans and amendments to any outstanding rural development loan agreements in form and substance, and on terms and conditions, satisfactory to RUS;

(m) Prescribe remedies for violating the terms and conditions of the prepayment agreement;

(n) Provide for termination by RUS of the right for the borrower to prepay thereunder;

(o) Provide evidence that any approvals required from any supplemental lender have been obtained; and

(p) Set forth such other terms and conditions as the Administrator shall deem appropriate.

§ 1786.159 Initial closing.

(a) Upon receipt of the prepayment agreement, the borrower may submit,
§ 1786.160 Pursuant to the terms of the prepayment agreement, a closing request which shall request a closing date no less than 30 business days from the date of the request.

(b) The Government will respond to the borrower’s closing request by delivering a preclosing notice to the borrower not less than 10 business days prior to the date which the Government, after reviewing the borrower’s closing request, selects as a closing date.

§ 1786.160 Subsequent closings.

(a) Each subsequent prepayment after the initial closing shall be facilitated with the submission of an additional closing request by the borrower. Each closing request must request a closing date no less than 30 business days from the date of the request.

(b) The Government will respond to each subsequent closing request by delivering a preclosing notice to the borrower not less than 10 business days prior to the date which the Government, after reviewing the borrower’s closing request, selects as a closing date in each case.

§ 1786.161 Return of Qualified Notes and release of lien.

Upon payment to RUS at closing of the full amount specified in the notice delivered by RUS to the borrower pursuant to the terms of the prepayment agreement (see §1786.138(e)), RUS will deliver to the borrower at closing those Qualified Notes which have been paid in full at such closing, and upon payment and discharge of all outstanding RUS debt obligations by the borrower, RUS will deliver to the borrower at the final closing a release of lien prepared by the borrower pursuant to the terms of the prepayment agreement.

§ 1786.162 Outstanding loan documents.

(a) Except as expressly provided in this subpart, the borrower shall comply with all provisions of its RUS Loan Contract, its outstanding notes issued to RUS, and the RUS Mortgage.

(b) Nothing in this subpart shall affect any rights of supplemental lenders under the RUS Mortgage, or other creditors of the borrower.

(c) Nothing in this subpart shall prohibit a borrower from making prepayments of any loans pursuant to the RE Act in accordance with the terms of such loans.

§ 1786.163 Existing wholesale power contracts.

(a) If the borrower is a party to a wholesale power contract with a power supply borrower financed pursuant to the RE Act, the Administrator may require that the borrower and the power supply borrower enter into a supplement to the outstanding wholesale power contract providing substantially as follows:

Sample Contract Terms

So long as any of the notes evidencing secured loans of the power supply borrower are outstanding, the borrower will not, without the approval in writing of the power supply borrower and the Administrator, take or suffer to be taken any steps for reorganization or dissolution, or to consolidate with or merge into any corporation, or to sell, lease or transfer (or make any agreement therefor) all or a substantial portion of its assets, whether now owned or hereafter acquired. The power supply borrower will not unreasonably withhold or condition its consent to any such, reorganization, dissolution, consolidation, or merger, or to any such sale, lease or transfer (or any agreement therefor) of assets. The power supply borrower will not withhold or condition such consent except in cases where to do otherwise would result in rate increases for the other members of the power supply borrower or impair the ability of the power supply borrower to repay its secured loans in accordance with their terms, or adversely affect system performance in a material way. Notwithstanding the foregoing, the borrower may take or suffer to be taken any steps for reorganization or dissolution or to consolidate with or merge into any corporation or to sell, lease or transfer (or make any agreement therefor) all or a substantial portion of its assets, whether now owned or hereafter acquired without the power supply borrower’s consent, so long as the borrower shall pay such portion of the outstanding indebtedness on the power supply borrower’s notes or other obligations as shall be determined by the power supply borrower and the Administrator and power supply borrower may require either: (1) To eliminate any adverse effect that such action seems likely to have on the rates of the other members of the power supply borrower, or...
§ 1786.167 Restrictions to additional RUS financing.

(a) No borrower that prepays an electric loan at a discount as provided under this subpart may apply for or receive direct or insured loans during the 120 months from the most recent closing date, except at the discretion of the Administrator. During the 120 month period the Administrator may consider providing an insured loan if, among other matters, it is necessary to assure repayment of, or protect the Government’s security for any outstanding loans or loan guarantees, or the borrower’s system has suffered severe physical plant related damage due to conditions beyond its control and the borrower is unable to obtain financing at reasonable terms to restore the system from non-RUS sources, including the Federal Emergency Management Agency, and from private sources. Upon expiration of the 120 months, such borrowers may apply for direct or insured loans in the same manner as other borrowers provided that such borrowers may not apply for direct or insured loans for facilities, construction of which commenced prior to the expiration of the 120 months. Special provisions for mergers involving a borrower that has prepaid pursuant to this subpart are in 7 CFR 1717.158.

(b) Borrowers that prepaid their direct or insured RUS loans under this subpart remain eligible for certain types of financial assistance under the
§ 1786.168  Borrowers who prepaid under this part prior to October 21, 1992.

(a) A borrower that had prepaid, prior to the date of enactment of Public Law 102–428 (106 Stat. 2183) on October 21, 1992, at a discount rate as provided at 7 CFR part 1786, subpart C:

(1) Shall not be eligible except at the discretion of the Administrator as stated in paragraph §1786.167(a), to apply for or receive direct or insured loans during the 180-month period beginning on the date of the prepayment; and

(2) Shall not be eligible to apply for or receive direct or insured loans from RUS until the borrower has repaid to the RUS the sum of:

(i) The amount (if any) by which the discount the borrower received by reason of the prepayment exceeds the discount the borrower would have received had the discount been based on the cost of funds to the Department of the Treasury as calculated at §1786.153 at the time of the prepayment; and

(ii) Interest on the amount described in paragraph (a)(2)(i) of this section for the period beginning on the date of the prepayment and ending on the date of the repayment, at a rate equal to the average annual cost of borrowing by the Department of the Treasury. This rate will be calculated first on the date of prepayment and at one year intervals from that date based on the same U.S. Treasury issues published in the Federal Reserve Statistical Release closest to that date. The Treasury rate of interest to be applied for each year will be the rate for the Treasury issue of comparable maturity to the number of years from the prepayment date to the repayment date and at one year intervals thereafter.

(b) If a borrower and the Administrator have entered into an agreement with respect to a prepayment occurring before October 21, 1992, this section shall supersede any provision in the agreement relating to the restoration of eligibility for loans under the RE Act.

(c) Borrowers who prepaid prior to October 1, 1987, are eligible for assistance under the RE Act in the same manner as other borrowers with respect to loan guarantees and the rural development loans.

(d) During the 180 month period described in paragraph (a)(1) of this section the Administrator may consider providing an insured loan, if the conditions described in §1786.167(a) exist.

(e) Borrowers may not apply for direct or insured loans for facilities, construction of which commenced prior to the expiration of the 180 month period described in paragraph (a)(1) of this section.

§ 1786.169  Liability.

It is the intent of this subpart that any failure on the part of RUS to comply with any provisions of this subpart, including without limitation, those provisions setting forth specified time-frames for action by RUS on applications for prepayments or closing requests, shall not give rise to liability of any kind on the part of the Government or any employees of the Government including, without limitation, liability for damages, fees, expenses or costs incurred by or on behalf of a borrower, private lender or any other party.

§ 1786.170  Prepayment of loans approved after December 20, 1993.  [Reserved]

§§ 1786.171–1786.199  [Reserved]

Subpart G—Refinancing and Prepayment of RUS Guaranteed FFB Loans Pursuant to Section 306(c) of the RE Act

Source: 59 FR 51008, Sept. 30, 1993, unless otherwise noted.

§ 1786.200  Purpose.

This subpart sets forth the policies and procedures of RUS through the existing FFB program, whereby borrowers may prepay and refinance, outstanding FFB Notes evidencing electric
or telephone loans with FFB, pursuant to the provisions of section 306(C) of the RE Act as added by Public Law 103-66, 107 Stat. 312, enacted August 10, 1993.

§ 1786.201 Definitions and rules of construction.
(a) Definitions. As used in this subpart:
    Administrator means the Administrator of the Rural Utilities Service (RUS).
    Borrower means any organization which has an outstanding note(s) evidencing electric or telephone loans guaranteed by RUS, from FFB.
    Business day means any such day on which both the Federal Financing Bank and Federal Reserve Bank—New York are open for business.
    Electric loan means a loan made by FFB and guaranteed by RUS under section 306 of the RE Act for electric service.
    FFB means the Federal Financing Bank, an instrumentality and wholly owned corporation of the United States.
    Government means the United States of America, acting through the Administrator of the Rural Utilities Service.
    Loan guarantee means RUS’s guarantee under section 306 of the RE Act of a loan from FFB.
    Payment date means the date that payment is due and is the last day in a calendar quarter.
    Prepayment penalty means the same as prepayment premium. Prepayment premium shall have the meaning set forth at §1786.207.
    Prepayment premium shall have the meaning set forth at §1786.206.
    RUS loan contract means the agreement, as amended, supplemented, or restated from time to time, between a borrower and RUS providing for loans or loan guarantees pursuant to the RE Act.
    RUS mortgage means collectively those mortgages and security agreements made by and between the borrower and the Government, securing indebtedness evidencing electric and telephone loans or loan guarantees made pursuant to RE Act. The term includes such mortgages regardless whether third parties are mortgagees with RUS.
    Supplemental lender means a private lender whose loan to the borrower is secured under an RUS mortgage.
    Telephone loan means a loan made by FFB and guaranteed by RUS under section 306 of the RE Act for telephone service.
    Telephone loan guarantee means RUS’s guarantee under section 306 of the RE Act of a loan from FFB.
(b) Rules of construction. Unless the context shall otherwise indicate, the terms defined in paragraph (a) of this section include the plural as well as the singular, and the singular as well as the plural. The words “herein,” “hereof” and “hereunder”, and words of similar import, refer to this subpart as a whole.

§ 1786.202 Prepayment and refinancing of RUS guaranteed FFB loans.
The borrower of an electric or telephone loan made by the FFB and guaranteed by RUS under section 306 of the RE Act, at the option of the borrower, may, at the option of the borrower, refinance or prepay a loan or an advance on the loan, or any portion of the loan or advance in accordance with section 306C of the RE Act, after meeting certain conditions using the procedures prescribed in the note. After refinancing existing notes under this section, additional prepayments or refinancings will be governed by the terms of the refinancing note(s).

§ 1786.203 Special considerations.
Generally all FFB borrowers with loans guaranteed by RUS whose FFB
§ 1786.204 Limitations.

(a) No more than three refinancing notes will be executed for any borrower per calendar year.

(b) The borrower may not select a term for the refinanced advance that ends after the maturity date set for that advance.

§ 1786.205 Application procedure.

(a) Any borrower seeking to prepay or refinance an advance from the FFB under this subpart should apply by letter to the appropriate RUS Regional Director or, in the case of power supply borrowers, to the Director of the Power Supply Division. The borrower will be required to submit applications and elections in a digital format to be supplied by RUS. The application letter shall provide the following:

(1) Borrower's RUS designation;
(2) Borrower's name and address;
(3) Listing of each note to be prepaid by loan designation, RUS note number, RUS account number, advance date, maturity date, original amount, outstanding balance, and date(s) of any substitute FFB note(s) amending the original FFB Note;
(4) A statement of the borrower's intention to finance the premium by an addition to principal balance or to pay the premium in cash or with unsecured debt;
(5) A statement of the maturity options that the borrower wishes to select;
(6) Such additional information as the Administrator may request.

(b) Requests for refinancing or prepayment will ordinarily be processed in the order that they are received. Borrower's may withdraw an application by notifying the appropriate RUS office in which they filed the application.

(c) When the request for prepayment or refinancing is approved for processing the borrower will be provided with appropriate instructions, documents and forms which may include but are not limited to the following:

(1) An FFB refinancing note;
(2) Resolution of Board of Directors;
(3) Legal Opinion;
(4) Certificate of Secretary;
(5) Waiver of Notice;
(6) Notice to borrower electing an effective date other than a scheduled quarterly payment date (if applicable);
(7) Documentation of obligations secured pursuant to section 1786.208 if any; and
(8) Security instrument.

(Approved by the Office of Management and Budget under control number 0572-0032)
§ 1786.207 Prepayment premium.

(a) A premium shall be assessed against a borrower that refinances or prepays a loan or loan advance, or any portion of a loan or advance, under this section. RUS will collect the prepayment premium as calculated by FFB. FFB will calculate this premium as described in this section. Except as provided in paragraph (b) of this section, the premium shall be equal to the lesser of:

(1) The difference between the outstanding principal balance of the loan being refinanced and the present value of the loan discounted at a rate equal to the then current cost of funds to the Department of the Treasury for obligations of comparable maturity to the loan being refinanced or prepaid;

(2) 100 percent of the amount of interest for 1 year on the outstanding principal balance of the loan or loan advance, or any portion of the loan or advance, being refinanced or prepaid, multiplied by the ratio that:

(i) The number of quarterly payment dates between the date of the refinancing or prepayment and the maturity date for the loan advance, bears to

(ii) The number of quarterly payment dates between the first quarterly payment date that occurs 12 years after the end of the year in which the amount being refinanced was advanced and the maturity date of the loan advance; and

(3)(i) The present value of 100 percent of the amount of interest for 1 year on the outstanding principal balance of the loan or loan advance, or any portion of the loan or advance, being refinanced, multiplied by the ratio that:

(A) Each payment scheduled for the interval on the loan amount being refinanced or prepaid; and

(B) The payment amounts that would be required during the interval on the amounts being refinanced or prepaid if the interest rate on the loan were equal to the then current cost of funds to the Department of the Treasury for obligations of comparable maturity to the loan being refinanced or prepaid.

(b)(1) Except as provided in paragraph (b)(2) of this section, the premium provided by paragraph (a)(1) of this section shall be required for refinancing or prepayment under this section.

(2) In the case of a loan advanced under an agreement that permits the refinancing or prepayment of the loan advance based on the payment of 1 year of interest on the outstanding principal balance of the loan advance, a borrower may, in lieu of the premium required by paragraph (a)(1) of this section, pay a premium as provided by:

(i) Paragraph (a)(2) of this section, if the loan advance has reached the 12-year maturity required under the loan agreement for the refinancing or prepayment; or

(ii) Paragraph (a)(3) of this section, if the loan advance has not reached the 12-year maturity required under the loan agreement for the refinancing or prepayment.

§ 1786.208 Increased principal.

A borrower can meet the premium requirements by increasing the outstanding principal balance of the loan advance that is being refinanced. If it does so the borrower shall make a payment at the time of the refinancing equal to 2.5 percent of the amount of the premium that is added to the outstanding principal balance of the loan.

§ 1786.209 Outstanding loan documents.

(a) Except as expressly provided in this subpart, the borrower shall comply with all provisions of its RUS loan contract, its outstanding notes issued to RUS, and the RUS mortgage.

(b) Nothing in this subpart shall affect any rights of supplemental lenders under the RUS mortgage or the rights of any other creditors of the borrower.

(c) Nothing in this subpart shall prohibit a borrower from making prepayments on any loans pursuant to the RE
§ 1786.210

Act in accordance with the terms thereof or as may be otherwise permitted by law.

§ 1786.210 Approvals.

The borrower shall be responsible for obtaining all approvals necessary to consummate the transaction as required by the refinancing note, including such approvals as may be required by regulatory bodies and other lenders.

EXHIBIT A TO PART 1788—RURAL UTILITIES SERVICE ENDORSEMENT

EXHIBIT B TO PART 1788—RURAL UTILITIES SERVICE JOINT INSURED

SOURCE: 51 FR 25855, July 17, 1986, unless otherwise noted.

Subpart A—General Policies and Procedures

§ 1788.1 General.

This part sets forth general Rural Utilities Service (RUS) policy and requirements for minimum insurance and fidelity coverage for electric and telephone borrowers and provides information for borrowers to meet those requirements.

§ 1788.2 Policy.

(a) Specific coverages required. RUS mortgage provisions require that borrowers procure specific minimum insurance and fidelity coverage and that they maintain this coverage as long as the loan or guaranteed loan remains unpaid.

(b) Evidence of coverage. Borrowers shall furnish RUS satisfactory evidence that required insurance and fidelity coverage is being continuously maintained.

(c) Excess coverage. Borrowers may purchase insurance or fidelity coverage in excess of the RUS requirements.
§ 1788.5 RUS endorsement required.

(a) Each insurance policy, other than fidelity bonds or policies, purchased by borrowers to meet the requirements of RUS shall contain the following RUS Endorsement:

The insurer agrees with the Rural Utilities Service as follows:

1. That this endorsement forms a part of the original policy.
2. Changes in policy forms or endorsements, as a result of approval by a regulatory authority, will be submitted to the Rural Utilities Service prior to use for a borrower of said Administration.
3. That it will mail to said Administration, at least 10 days before the effective date thereof, notice of cancellation or termination of said policy.
4. That each endorsement subsequently issued will become a part of said original policy.

(b) When the RUS Borrower is a subsidiary of a parent corporation, RUS requires the following endorsement for policies covering subsidiary companies be included as a part of each public liability and fire policy.

The insurer agrees with the Rural Utilities Service, as follows:
1. That this endorsement forms a part of the original policy.
2. Changes in policy forms or endorsements, as a result of approval by a regulatory authority, will be submitted to the Rural Utilities Service prior to use for a borrower of said Administration.
3. That it will mail to said Administration, at least ten days before the effective date thereof, notice of cancellation or termination of said policy, or cessation of coverage for any reason of any affiliate or subsidiary of the assured which is a borrower from the administration.
4. That each endorsement subsequently issued will become a part of said original policy.

(c) In the case of a cooperative or mutual organization, RUS requires that the following: “Endorsement Waiving Immunity From Tort Liability” be included as a part of each public liability, owned, nonowned, hired automobile, and aircraft liability, employers’ liability policy, and boiler policy:

The Insurer agrees with the Rural Utilities Service that such insurance as is afforded by the policy applies subject to the following provisions:

1. The company agrees that it will not use, either in the adjustment of claims or in the defense of suits against the Insured, the immunity of the Insured from tort liability, unless requested by the Insured to interpose such defense.
2. The Insured agrees that the waiver of the defense of immunity shall not subject the company to liability of any portion of a claim, verdict or judgment in excess of the limits of liability stated in the policy.
3. The company agrees that if the Insured is relieved of liability because of its immunity, either by interposition of such defense at the request of the Insured or by voluntary action of a court, the insurance applicable to the injuries on which such suit is based, to the extent to which it would otherwise have been available to the Insured, shall apply to officers and employees of the Insured in their capacity as such; provided that all defenses other than immunity from tort liability which would be available to the company but for said immunity in suits against the Insured or against the company under the policy shall be available to the company with respect to such officers and employees in suits against such officers and employees or against the company under the policy.

§ 1788.6 Analysis of deductibles.

When deductibles are considered, careful analysis should be given to the size of the deductible and its effect on the financial position of the borrower. A periodic review should be made of the policy to determine the economy and advisability of continuing the deductible.

§ 1788.7 Specialized requirements.

Borrowers with specialized requirements or equipment, such as nuclear facilities, private generation connection, hydro, solar, wind, watercraft, and aircraft, or who do not operate their own systems, will be advised of RUS insurance requirements in each specific case.

§ 1788.8 Procedure for fidelity notices and claims.

Upon discovery by the borrower or RUS of any fraudulent or dishonest act of any officer, employee, or collection agent, the borrower shall notify the bonding company of such discovery promptly in writing. Such notice, a copy of which shall be sent immediately to RUS and each supplemental lender, shall be given on behalf of both the borrower and RUS. If a proof of loss is filed, it shall also be filed on behalf of both the borrower and RUS. A copy of the proof of loss, if any, shall be sent immediately to RUS and each supplemental lender by the borrower.

§ 1788.9 Recovering claims.

The borrower shall, when necessary to protect all rights under the fidelity bond, initiate suit against the insurance company to recover all claims.

§ 1788.10 Reporting accidents.

Borrowers shall promptly provide the insurance company providing coverage a written report of all accidents involving injury to persons, damage to the property of others, or direct damage to the insured property of the borrower and forward at the same time a copy of all reports except those involving only employees of the borrower to RUS and each supplemental lender.

§ 1788.11 Reporting claims to RUS.

The borrower shall furnish RUS and each supplemental lender a copy of any claim submitted to an insurance company seeking recovery of loss for damage or destruction of property.
§ 1788.12 Use of insurance proceeds.

In the event of damage, loss, or destruction of property mortgaged to the government covered by insurance, the borrower shall repair or replace the damaged, lost, or destroyed property so that the property is in substantially the same condition as before the damage, loss, or destruction. Unless mortgagees direct otherwise, the proceeds of the insurance shall be used for that purpose.

§ 1788.13 Package-type policies.

RUS recommends that borrowers secure broad form, package-type policies (special multi-peril, combined fire, and boiler), when possible, combining all or as many as many as possible of the various coverages into a single policy to reduce the number of policies issued by individual insurance companies and to avoid any question between the insurance companies about responsibility.

§ 1788.14 Obtaining minimum cost.

Borrowers should request proposals from several companies, both stock and mutual, for initial and renewal of insurance policies to obtain a minimum cost for their insurance. Borrowers should maintain an accurate loss record for all insurance coverages to establish trends and evaluate the effect of losses on premiums.

§ 1788.15 Type of policies.

RUS recommends term policies, either 1- or 3-years, for insuring buildings, contents, stock, and equipment and reporting policies for insuring fluctuating material inventories.

§ 1788.16 Telephone building rates.

Telephone borrowers should investigate the possibility of having the building fire rate applied to both the buildings and contents in those states that permit the single rate. Buildings and contents coverages should be combined in the same policy.

§ 1788.17 Coinsurance recommended.

RUS recommends coinsurance where it is available. In accepting a policy with a coinsurance clause, the insured agrees to maintain insurance in an amount equal to at least a percentage of the actual cash value stated in the coinsurance clause.

§ 1788.18 Advantageous fire rates.

To eliminate delays and costly alterations, and to secure the most advantageous fire rates for buildings (generation plants, headquarters buildings, etc.) borrowers should have plans and specifications for buildings reviewed by the state fire rating bureau, the insurance agent of record, or competent, independent consultant for their recommendations.

Subpart B—Specific RUS Minimum Requirements

§ 1788.19 General.

This subpart sets forth specific RUS minimum requirements for insurance and fidelity coverages for electric and telephone borrowers.

§ 1788.20 Officers and employees.

Borrowers shall provide fidelity coverage for each officer and employee based on the estimated annual gross revenue of the borrower.

§ 1788.21 Types of coverage.

A new Commercial Crime Policy came into use January 1, 1986. This new policy form should be used in lieu of the Blanket Position Bond or Comprehensive 3D policies.

Under this Commercial Crime Policy the amounts of coverage required are as follows:

<table>
<thead>
<tr>
<th>Annual gross revenue</th>
<th>Amounts of coverage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than $200,000</td>
<td>$50,000</td>
</tr>
<tr>
<td>$200,001 to 400,000</td>
<td>100,000</td>
</tr>
<tr>
<td>400,001 to 600,000</td>
<td>250,000</td>
</tr>
<tr>
<td>600,001 to 800,000</td>
<td>300,000</td>
</tr>
<tr>
<td>800,001 to 1,000,000</td>
<td>400,000</td>
</tr>
<tr>
<td>1,000,001 and over</td>
<td>500,000</td>
</tr>
</tbody>
</table>

The Rural Utilities Service Endorsement, Exhibit A, is necessary on all separate policies or where the fidelity coverage is added to a package policy. For a municipal borrower, a public employees' blanket bond covering employees and officers responsible for activities of the RUS-financed facilities is acceptable.
§ 1788.22 Collection agents.

Each collection agent of the borrower shall be included in the bond for not less than $2,500, or 10 percent of the highest amount collected annually by any one collection agent, whichever is greater. When banks are designated as collection agents, borrowers shall advise RUS regarding any special arrangements for fidelity coverage.

When annual gross revenues for a previous twelve-month period exceed the limit for the amount of fidelity coverage maintained, the borrower shall increase the coverage to the required amount.

§ 1788.23 When revenues exceed $1 million.

When annual gross revenues exceed $1 million, RUS recommends that borrowers obtain additional excess fidelity insurance.

§ 1788.24 Single bond provisions.

When the borrower is one of several affiliated companies and this coverage is provided by naming the borrower as one of several insureds under a single policy, the joint insured paragraph under general or insuring agreements shall be amended to include the provisions of the fidelity rider in exhibit B.

§ 1788.25 Responsibilities of borrowers.

(a) Termination of fidelity coverage. The new Comprehensive Crime Policy provides for fidelity coverage on a term basis. Borrowers should renew on a timely basis.

(b) Effect of fraudulent or dishonest acts. Upon discovery by the borrower or RUS of a fraudulent or dishonest act of any officer or employee, fidelity coverage for this person is automatically cancelled, but remains in effect for all other officers and employees not in collusion with this person. Therefore, borrowers must notify their fidelity insurer of the discovery.

(c) Effect of borrower’s inaction. Upon discovery of a dishonest act, the borrower’s inaction, by its failure to report such acts, whether motivated by restitution or the apparent insignificance of the amount involved, or for any other reason, can affect more than merely the validity of the present claim; it may bar some future loss of real significance caused by the same person.

(d) Avoiding future risks. To avoid this risk of future uninsured loss, the borrower shall obtain written assurance of continued coverage for that individual by the same or another bonding company.

(e) Disclosure of dishonest acts. Assurance of continued coverage, to be effective, requires the borrower to make full disclosure to the bonding company of the dishonest or fraudulent acts. This disclosure, however, need not be of the same degree required to establish a claim under a proof of loss or conviction of a false report violation.

§ 1788.26 Disbursement of recovered sums.

Sums recovered under any fidelity bond by the borrower for a loss of funds advanced under the notes or recovered by the government for any loss under such bond shall, unless otherwise directed by the mortgagees, be applied to the prepayment of indebtedness pro rata on the notes secured by the mortgage or to construct or acquire facilities, approved by the mortgagees, which will become part of the mortgaged property.

§ 1788.27 Requirements of coverage.

Workers’ compensation and employers’ liability insurance covering all employees of the borrower shall be maintained by borrowers in amounts required by law. If the borrower or any of its employees is not subject to the workers’ compensation laws of the state, or states, in which the borrower conducts its operations, then its workers’ compensation policy shall provide voluntary compensation coverage to the same extent as though the borrower and its employees were subject to such laws. The policy shall include:

(a) Occupational disease liability.

(b) Employers’ liability insurance.

(c) “Additional medical” coverage of not less than $10,000 in those states where full medical coverage is not statutory.

When employers’ liability insurance is provided by a separate policy issued to a cooperative or mutual organization, it shall include “Endorsement Waiving
Immunity From Tort Liability.” See §1788.5(c).

§1788.28 Limits required.
RUS requires that public liability insurance be maintained covering the ownership liability and all operations of the borrower with limits for bodily injury or death of not less than $1 million each occurrence—$1 million aggregate per policy period and with limits for property damage of not less than $1 million per occurrence and $1 million aggregate for the policy period. Borrowers have the option to purchase a $1 million single limit coverage for bodily injury and property damage. This required insurance may be in a policy or policies of insurance, primary and excess including the umbrella or catastrophe form.

§1788.29 Contractual liability insurance.
Contractual liability insurance shall be included as part of the public liability policy when the borrower executes an agreement or contract in which it assumes additional liability. The provisions of any “hold harmless” agreement should be referred to the borrower’s insurance company for specific references in the policy.

§1788.30 Provision on explosives.
When explosives are used by employees of the borrower, the property damage exclusion clause for blasting shall be deleted.

§1788.31 Buried plant provision.
Borrowers contemplating construction of buried plant shall immediately obtain an endorsement from their insurance carrier deleting the exclusion in the standard public liability insurance policy which provides that the policy does not apply to injury to, or destruction of, wires, pipes, conduits, mains, sewers, or other similar property below the surface of the ground if the injury or destruction is caused by, or occurs during, the use of mechanical equipment for the purpose of excavating or drilling. For electric borrowers the rating classification includes this coverage automatically.

§1788.32 Appliance sales coverage.
When there are retail sales, repair, or installations of electrical appliances involved in borrowers’ operations, borrowers shall purchase product liability damage.

§1788.33 Railroad right-of-way exclusion.
General liability policies in use contain a restriction pertaining to easement agreements involving construction on or adjacent to a railroad which are not automatically covered. Where construction is on a railroad right-of-way under an easement, borrowers shall purchase a general liability policy that specifically includes this necessary insurance coverage.

§1788.34 Pollution exclusion.
Liability policy forms exclude coverage for “bodily injury” or “property damage” arising out of the actual, alleged or threatened discharge, dispersal, release or escape of pollutants. Borrowers may wish to discuss this exclusion with their insurance companies.

§1788.35 Liability requirements.
RUS requires borrowers have liability insurance on all motor vehicles, trailers, semitrailers, and aircraft used in the conduct of the borrower’s business, whether owned, nonowned, or hired by the borrower, with bodily injury limits of not less than $1 million for each person and $1 million for each occurrence, and property damage limits of $1 million for each occurrence; in connection with aircraft liability, also passenger bodily injury limits of $1 million per person and $1 million for each occurrence.

§1788.36 Comprehensive requirements.
RUS requires borrowers have comprehensive or separate fire, theft, and windstorm insurance on all owned motor vehicles, trailers, and aircraft having a unit value in excess of $1,000. The amount of coverage shall not be less than the actual cash value of the property insured.
§ 1788.37 Coverage requirement.

Borrowers shall have fire insurance, including the extended coverage endorsement, on each building and its contents, and on each storage location of materials, supplies, poles, and cross-arms having a value at any one location in excess of $5,000, or in excess of 1 percent of the total plant value, whichever is larger. Such coverage shall be in an amount of not less than 80 percent of the current cost to replace the property new, less depreciation. Surveys should be conducted periodically, every two years at a minimum, to establish property values on an actual cash value basis.

§ 1788.38 RUS endorsement.

When the borrower is one of several affiliated companies and the coverage is provided by naming the borrower as one of several insureds under a single policy, the policy shall be amended to include the provisions of the RUS Endorsement in §1788.5(b).

§ 1788.39 Types of fire insurance policies.

A fire insurance policy may be written on the following basis:

(a) Specified amount basis.
(b) Blanket form basis.
(c) Monthly reporting form basis. The reporting type of policy should include the limit of liability for each location. Whenever it appears that the value at any one location may exceed the limit of liability included in the policy, an endorsement to the policy should be promptly secured increasing the limit of liability for that particular location.
(d) Inland Marine Floater basis. Floater form policies on an all-risk basis are recommended to provide coverage for construction equipment, radio/telephone equipment, and pay stations furnished for use by subscribers and located on their premises or vehicles, and for radio or telephone equipment installed in borrowers' vehicles, for equipment being transported, and for materials stored at various locations.

§ 1788.40 Coverage requirement.

Borrowers shall purchase and maintain flood insurance for buildings in flood hazard areas to the extent available and required under the National Flood Insurance Act of 1968, as amended by the Flood Disaster Protection Act of 1973 (Pub. L. 93-234). The insurance should cover, in addition to the building, any machinery, equipment, fixtures, and furnishings contained in the building.

§ 1788.41 Endorsements required.

The National Flood Insurance Program provides for a standard flood insurance policy; however, other existing insurance policies which provide flood coverages may be used where flood insurance is available in lieu of the standard flood insurance policy. Such policies, in order to satisfy the insurance requirements of section 102 of the Flood Disaster Protection Act of 1973, should be endorsed to provide:

(a) That the insurer give 30 days written notice of cancellation or non-renewal to the insured with respect to the flood insurance coverage. To be effective, such notice must be mailed to both the insured and the lender or Federal agency and must include information as to the availability of flood insurance coverage under the National Flood Insurance Program, and
(b) That the flood insurance coverage offered by the insurer is at least as broad as the coverage offered by the Standard Flood Insurance Policy.

§ 1788.42 Coverage requirement.

Electric borrowers having steam generating facilities shall maintain boiler and machinery insurance. Electric borrowers having internal combustion, gas turbine or hydro-generating facilities shall maintain machinery insurance. The limit for each accident shall not be less than the actual current cash value of the property of the borrower and of the adjacent property that would be damaged by explosion or breakdown of the insured object.

§ 1788.43 Suspension notice.

The standard RUS Endorsement, see §1788.5(a), should be amended to provide written notice of suspension to RUS in the event of suspension of coverage.
§ 1788.44 Annual inspection report.
Borrowers shall provide RUS a copy of the annual inspection report by the insurance company’s engineer.

§ 1788.45 Modifications considered.
When requested by the borrower and if loan security is not jeopardized, RUS will consider modifying the boiler and machinery insurance requirements for those borrowers with special or unusual circumstances, such as limited planned annual use of generating facilities, or where the value of generating facilities at a location is less than $1 million.

Subpart C—Insurance for Contractors, Engineers, and Architects

§ 1788.46 General.
This part sets forth RUS policy on minimum insurance requirements for contractors, engineers, and architects performing work under contracts with borrowers, and requirements for bonds to be furnished by contractors.

§ 1788.47 Policy requirements.
(a) Contractors, engineers, and architects performing work for borrowers under construction, engineering and architectural service contracts shall obtain insurance coverage, as required in §1788.51, and maintain it in effect until work under the contracts is completed.
(b) Contractors entering into construction contracts with borrowers shall furnish a contractors’ bond, except as provided for in §1788.52, covering all of the contractors’ undertaking under the contract.
(c) Borrowers shall make sure that their contractors, engineers, and architects comply with the insurance and bond requirements of their contracts.

§ 1788.48 Contract requirements.
Contracts entered into between borrowers and contractors, engineers, and architects shall provide that they take out and maintain throughout the contract period insurance of the following types and minimum amounts:
(a) Workers’ compensation and employers’ liability insurance, as required by law, covering all their employees who perform any of the obligations of the contractor, engineer, and architect under the contract. If any employer or employee is not subject to the workers’ compensation laws of the governing state, then insurance shall be obtained voluntarily to extend to the employer and employee coverage to the same extent as though the employer or employee were subject to the workers’ compensation laws.
(b) Public liability insurance covering all operations under the contract shall have limits for bodily injury or death of not less than $1 million each occurrence, limits for property damage of not less than $1 million each occurrence, and $1 million aggregate for accidents during the policy period. A single limit of $1 million of bodily injury and property damage is acceptable. This required insurance may be in a policy or policies of insurance, primary and excess including the umbrella or catastrophe form.
(c) Automobile liability insurance on all motor vehicles used in connection with the contract, whether owned, nonowned, or hired, shall have limits for bodily injury or death of not less than $1 million per person and $1 million per occurrence, and property damage limits of $1 million for each occurrence. This required insurance may be in a policy or policies of insurance, primary and excess including the umbrella or catastrophe form.

§ 1788.49 Bond requirements.
Construction contracts for facilities in amounts in excess of $100,000 shall require contractors to secure a contractors’ bond on a form approved by the Administrator attached to the contract in a penal sum of not less than the contract price, which is the sum of all labor and materials including owner-furnished materials installed in the project. RUS Form 168b is for use when the contract exceeds $100,000. RUS Form 168c is for use when the contractor’s surety has accepted a Small Business Administration guarantee and the contract is for $1 million or less. On line extension contracts under which work will be done in sections and no section will exceed a total cost
§ 1788.50 Acceptable sureties.
Surety companies providing contractors’ bonds shall be listed as acceptable sureties in the U.S. Department of Treasury Circular No. 570. A copy of the executed bond shall be furnished RUS. For construction contracts, other than buildings, amounting to $100,000 or less, the borrower shall determine whether a contractors’ bond is required.

§ 1788.51 Borrower options.
For construction contracts for buildings amounting to $100,000 or less, the borrower has the option to require the contractors to furnish:
(a) A contractors’ bond, as described in §§ 1788.52 and 1788.53, or
(b) A builders’ risk policy.

§ 1788.52 Builders’ risk policy.
The builders’ risk policy shall be on a completed value form, effective from the date equipment or material is first delivered to the building site, and shall name both the borrower and the contractors as insureds.
(a) The policy shall insure against loss by fire or lightning and the named perils in the extended coverage endorsement.
(b) The amount of coverage shall be not less than the actual cash value of the property constructed, including all materials to be used in the construction and stored at the site, whether furnished by the borrower or the contractor.

§ 1788.53 Major equipment insurance.
When a borrower contracts for the installation of major equipment by other than the supplier or for the moving of major equipment from one location to another, RUS recommends that these contracts require the contractor to furnish the borrower with an installation floater policy. The policy should cover all risks of damage to the equipment until completion of the installation contract.

§ 1788.54 Compliance with contracts.
It is the responsibility of the borrower to make sure, before the commencement of work, that the engineer, architect, and the contractor have insurance which complies with their contract requirements. Compliance with contract requirements should be a certificate signed by a representative of the insurance company, including a provision that no change in, or cancellation of, any policy listed in the certificate will be made without prior written notice to the borrower.

§ 1788.55 Providing RUS evidence.
When RUS shall specifically so direct, the borrower shall also require the engineer, the architect, or the contractor to forward to RUS evidence of compliance with their contract requirements. The evidence shall be in the form of a certificate of insurance signed by a representative of the insurance company and include a provision that no change in, or cancellation of, any policy listed in the certificate will be made without the prior written notice to the borrower and to RUS.

EXHIBIT A TO PART 1788—RURAL UTILITIES SERVICE ENDORSEMENT

POLICY NUMBER: __________

COMMERCIAL CRIME

This endorsement applies to all forms forming part of the Commercial Crime Policy.

Employee Dishonesty Coverage Form

The Employee Dishonesty Coverage Form is amended by deleting the Cancellation As to Any Employee section and by substituting the following:

Cancellation as to any Employee

Coverage for any Employee shall be deemed cancelled (a) immediately upon discovery by you, or by any of your partners or officers thereof not in collusion with such Employee, or by the Administration of any dishonest act on the part of such Employee (b) at 12:01 a.m., standard time, upon the effective date specified in a written notice served upon you and the Administration or sent by registered mail to you and the Administration.

Crime General Provisions Form

B. General Conditions:
1. Section 4 is replaced by the following:
Duties in the Event of Loss
After you or the Rural Utilities Service of the United States of America (the Administration) discover a loss or situation that
may result in a loss of, or loss from damage to, Covered Property either you or the Administration must:
   a. Notify us as soon as possible.
   b. Submit to examination under oath at our request and give us a signed statement of answers.
   c. Give us a detailed, sworn proof of loss within four months.
   d. Cooperate with us in the investigation and settlement of any claim.

Prior discovery of loss by you shall not affect the right of the Administration to notify us of loss, and to file proof of loss even though such prior discovery by you may have occurred more than four months prior to the discovery of the loss by the Administration.

2. Section 6 is replaced by the following:

   Legal Action Against Us: You or the Administration may not bring legal action against us involving loss:
   a. Unless all the terms of this insurance have been complied with.
   b. Until 60 days after proof of loss has been filed with us.
   c. Unless brought within two years from the date the loss is discovered by you or the Administration.

3. Section 16 is replaced by the following:

   Territory: This insurance covers only acts committed or events occurring within the United States of America, U.S. Virgin Islands, Puerto Rico, Canal Zone, Guam, Micronesia, or Canada.

A new section 19 is added to read as follows:

   Any action, approval or consent which by the provisions of this Policy is required to be taken or signed by the Administration shall be effective if taken or signed by the Administrator of the Administration or by his authorized representative.

A new section 20 is added to read as follows:

   Discovery by you shall be deemed to mean discovery by any officer or employee of the Insured not in collusion with the employee responsible for the loss discovered, and discovery by the Administration shall be deemed to mean discovery by any employee, agent or attorney of the Administration not in collusion with the employee responsible for the loss discovered.

C. General Definitions:

   "Employee" also includes non-salaried officers and collection agents in your service.

Common Policy Conditions

A. Cancellation:

1. Paragraph 2 is replaced by the following:

   We may cancel this policy by mailing or delivering to the first Named Insured and to the Administration written notice of cancellation at least:
   a. 10 days before the effective date of cancellation if we cancel for nonpayment of premium; or
   b. 30 days before the effective date of cancellation if we cancel for any other reason.

   A new section G is added to read as follows:

   G. Notices:

   1. It is agreed that settlement of any claim under this Policy shall be made check or draft payable to you, but no settlement shall be made without prior written approval of the Administration. It is further agreed if you cancel this Policy, the Administration may, within ten days after we receive such notice from you, advise us that the cancellation notice is inoperative. In such case, coverage shall continue as if such notice of cancellation had never been sent. Notices, approvals, and requests by the provisions of this Policy shall be sent as follows:

      a. To us, at our home office.
      b. To you, addressed to you at the city or town at which your principal office is located.
      c. To the Administration, addressed to the Rural Utilities Service, United States Department of Agriculture, South Building, Washington, DC, 20250.

EXHIBIT B TO PART 1788—RURAL UTILITIES SERVICE JOINT INSURED

This Endorsement applies to the CRIME GENERAL PROVISIONS FORM and all Crime Coverage forms forming part of the policy.

PROVISIONS

1. Section 5a of the the CRIME GENERAL PROVISIONS FORM is amended by adding the following:

   Payment by us will be made to the first named insured for the use and benefit of the Insured sustaining the loss.

2. Section 5b is amended by deleting the period at the end thereof and adding the following:

   , except that in the case of a borrowing corporation from the Rural Utilities Service knowledge of any information relevant to this insurance shall be deemed knowledge of such information by the Insured sustaining the loss.

3. Section 2a of the EMPLOYEE DISHONESTY COVERAGE FORM is replaced by the following:

   Immediately upon discovery by:
   (1) The Rural Utilities Service;
   (2) The borrowing corporation employing such "employee"; or
   (3) Any of the partners, officers or directors of the Administration or the borrowing corporation not in collusion with the "employee"; of any dishonest act committed by
that "employee" whether before or after becoming employed by the borrowing corporation.

**Subpart A—Policy and Procedures With Respect to Consultant Services Funded by Borrowers—General**

§ 1789.150 Purpose.

This part sets forth policies and the procedures for implementing subsection (c) of section 18 of the Rural Electrification Act of 1936, as amended (7 U.S.C. 901 et seq.) (RE Act) which authorizes the Rural Utilities Service (RUS) to use the services of Consultants funded by the Borrowers to facilitate timely action on Applications by Borrowers for financial assistance and other approvals.

§ 1789.151 Definitions.

As used in this part:

Administrator means the Administrator of the Rural Utilities Service (RUS).

Application means a request for financial assistance under the RE Act or such other approvals as may be required of the RUS pursuant to the terms of outstanding loan or security instruments or otherwise.

Borrower means any organization which has an outstanding loan(s) made or guaranteed by RUS or its predecessor agency, the Rural Electrification Administration (REA) under the RE Act or any organization which has submitted or submits an Application before RUS.

Consultant means a person or firm which has been retained pursuant to this subpart under a contract to provide financial, legal, engineering, environmental, or other technical advice and services.

Consultant Contract means a contract for the performance of consulting services for RUS, to be paid using funds provided by a Borrower, which may be in the form of a Retainer Contract, purchase order, or other form as may be appropriate.

Escrow Account means an account established pursuant to §1789.158.

Escrow Agreement means an agreement, between a Borrower, a Consultant and a Third-party Commercial Institution, meeting the requirements of §1789.167.

Final Invoice means the closing Invoice prepared for a given Task Order.

Financial Consultant means a Consultant retained pursuant to this part to provide financial advisory services.

Funding Agreement means an agreement, between a Borrower and a Consultant, providing for the Borrower to fund the costs of a Task Order and otherwise meeting the requirements of §1789.166.

Indemnification Agreement means an agreement by a Borrower meeting the requirements of §1789.162.

Invoice means an invoice prepared by a Consultant pursuant to the terms of a Consultant Contract.

Legal Consultant means any Consultant retained pursuant to this part to provide legal services to RUS.

Notice of Proposal to Fund means a notice meeting the requirements of
§ 1789.156 provided to RUS by the Borrower.
Organizational conflict of interest means that because of other activities or relationships with other persons, a person is unable or potentially unable to render impartial assistance or advice to the Government, or the person’s objectivity in performing the contract work is or might be otherwise impaired, or a person has an unfair competitive advantage.

Retainer Contract means a Consultant Contract providing for a minimum required payment to a Consultant irrespective of whether services are utilized by RUS thereunder.

Task Order means a written request for consultant services pursuant to the terms of a Consultant Contract.

Third-party Commercial Institution means a commercial financial institution mutually acceptable to the Borrower and the Consultant.

§ 1789.152 Policy.
(a) As provided in this subpart, RUS may, at its discretion, use the services of Consultants funded by a Borrower where such services will facilitate timely action on an Application by such Borrower for financial assistance or other approvals. Such Consultants may provide financial, legal, engineering, environmental or other technical advice and services in connection with the review of an Application.

(b) With the approval of RUS, a Borrower may fund the cost of consulting services in connection with the review by RUS of an Application by such Borrower. Such funding shall be provided pursuant to the terms of a Funding Agreement between the Borrower and the Consultant designated by RUS.

(c) RUS may not, without the consent of the Borrower, require, as a condition of processing any Application for approval, that the Borrower agree to pay the costs of a Consultant hired to provide services to RUS.

(d) The government shall retain sole discretion in the selection of Consultants to provide services to RUS and the form of contract utilized. RUS may either use the services of one or more Consultants retained under Retainer Contracts or the government may elect to retain a Consultant not otherwise on retainer. The government shall have sole discretion to prescribe terms and conditions of Consultant Contracts. The Borrower may bring considerations to the attention of the government which the Borrower deems pertinent to the selection process.

(e) RUS shall retain sole discretion as to whether to further pursue use of an outside consultant for the relevant application in the event the Borrower does not enter into the agreements referenced in §1789.158(c)(3)(iii) within 60 days of the government providing to the Borrower the information set forth in §1789.158(c)(3).

§ 1789.153 Borrower funding.

Borrowers shall use their general funds for the purposes of funding consultant services hereunder. Borrowers may not use the proceeds of loans made or guaranteed under the RE Act for costs incurred by Borrowers pursuant to the funding of consultant services for RUS.

§ 1789.154 Eligible borrowers.

All Borrowers are eligible to fund consultant services under this part.

§ 1789.155 Approval criteria.

RUS will consider approving the use of consultant services funded by a Borrower on a case by case basis taking into account, among other matters, the following:

(a) Whether such services are required to facilitate timely action on a Borrower’s Application. RUS shall determine what represents timely action with respect to each Application considering, among other matters, the review period normally required for such projects by RUS and other lenders and the consequences to the Borrower of adjusting the review period.

(b) The availability of staff resources, the priorities of other projects then before RUS, and the efficiencies to be realized from the use of consultant services.

(c) Whether it is in the best interest of RUS to use Borrower-funded Consultants. Certain types of projects, such as those involving issues of program-wide significance, may not be well suited for the use of Borrower funded Consultants.
§ 1789.156 Proposal procedure.

(a) In the event RUS determines that consideration should be given to the use of a Borrower-funded consultant in connection with the review of an Application, the RUS Regional Director or the Director of the Power Supply Division, as appropriate, will discuss with the Borrower the nature of the Application and the projected review period required of RUS. If RUS concludes that the projected review period will not result in timely action on the Application, and after being so notified in writing by RUS the Borrower wishes to fund consultant services to facilitate RUS review, the Borrower shall submit to the same Director a funding proposal. The proposal shall set forth the following:

(1) Identification in the heading or caption as a Notice of Proposal to Fund Consulting Services;
(2) Borrower’s REA/RUS designation;
(3) Borrower’s legal name and address;
(4) A description of the Application, critical issues and concerns relating to the Application, time deadlines, and the consequences of any delays in RUS review;
(5) A description of the consulting service(s) that would facilitate timely RUS review of the Application; and
(6) Such additional documents and information as RUS may request.

(b) RUS will review the Notice of Proposal to Fund and any additional information RUS deems relevant in determining whether to proceed with procuring Borrower funded Consultants. If RUS proposes to utilize Legal Consultants, RUS must obtain the concurrence of the Office of General Counsel (OGC) of the Department of Agriculture. RUS will notify the Borrower in writing of its determination.

§ 1789.157 Consultant contract.

(a) The Federal Acquisition Regulation (FAR), 48 CFR Ch. 1, and the Agriculture Acquisition Regulation (AGAR), 48 CFR Ch. 4, shall apply to all Consultant Contracts entered into pursuant to this part except as provided in this section.

(1) Contracts for Legal Consultants shall provide for a technical representative from OGC.

(2) All Consultant Contracts shall provide for an escrow account funding mechanism pursuant to this part and for the government’s sole discretion in determining whether payments are to be made from the Escrow Account to the Consultant.

(3) All Consultant Contracts shall provide that payment of all obligations for work performed thereunder must be satisfied by amounts available in the Escrow Account; with the exception of the annual retainer fee, if any, Consultants shall not be entitled to any payments from the government.

(b) The provisions of paragraph (a) of this section shall be given prominent emphasis in requests for proposals issued under this part.

§ 1789.158 Implementation.

(a) Upon making a determination to go forward with Borrower funding for consulting services, RUS shall initiate a procurement request for a Consultant to provide the services. The government may either contract with a Consultant on a case by case basis or elect to use a Consultant pursuant to an outstanding Retainer Contract. The Borrower will not be informed of the Consultant selected until such time as the government provides the information set forth in paragraph (c)(3) of this section.

(b) If the government determines to contract with a Consultant on a case by case basis, the government shall notify the Borrower of the applicable procedures.

(c) If the government determines to contract with a Consultant under an outstanding Retainer Contract, the following procedures will normally apply:

(1) Pursuant to the terms of the contract, the government will prepare a draft Task Order requesting consultant services in connection with the review of the Borrower’s Application. The draft Task Order shall set forth for the Consultant’s review and acceptance, a description of the services to be provided and applicable time frames for the provision of such services.

(2) The government will request that the Consultant:

(i) Notify the government as to the acceptability of the form and substance of the draft Task Order;
Rural Utilities Service, USDA

§ 1789.161 Conflicts of interest.

The standard for determining organizational conflicts of interest shall be as set forth in the FAR subpart 9.5 (48 CFR part 9, subpart 9.5); however, the identification of the existence of an organizational conflict of interest may be made by either the Administrator or the cognizant Contracting Officer. In the event an organizational conflict of interest is determined to exist, the cognizant Contracting Officer shall take the actions prescribed at FAR 9.504 (48 CFR 9.504) to attempt to avoid, neutralize or mitigate the conflict. Should these actions be deemed by the Administrator and the Contracting Officer to adequately resolve the conflict, the contracting action with the offeror/contractor may proceed. Should the Administrator or the Contracting Officer determine that an organizational conflict of interest still exists such that contract award or other contracting action cannot be taken (award of task/delivery order, etc.) the offeror/contractor shall be so informed by the Contracting Officer and be provided a reasonable opportunity to respond in accordance with FAR 9.504(e) (48 CFR 9.504(e)). After considering the contractor’s response, if it is found by both the Administrator and Contracting Officer to remedy the conflict of interest, the contracting action may proceed. If the Administrator and Contracting Officer determine that the contractor’s response does not resolve the conflict of interest, yet continuing with the contracting action with the offeror/contractor in question is considered in the best interest of the United States, a waiver in accordance with FAR 9.503 (48 CFR 9.503) may be executed. This
waiver shall be submitted under the Contracting Officer’s signature and approved by the Administrator. The Administrator has been delegated Head of Contracting Activity authority by the USDA Senior Procurement Executive solely for the purpose of waiver approval.

§ 1789.162 Indemnification agreement.

As a condition of approving Borrower funding, the government will require the Borrower to enter into an Indemnification Agreement, in form and substance satisfactory to RUS, providing that the Borrower will indemnify and hold harmless the government and any officers, agents or employees of the government from any and all liability, including costs, fees, and settlements arising out of, or in any way connected with the payment of the Consultant’s fee pursuant to the Consultant Contract. The Indemnification Agreement may recognize, as a condition of liability thereunder, the rights of the Borrower to prompt notice, to use of counsel of its own choosing, and to participation in any settlement of a claim against which indemnification is sought.

§ 1789.163 Waiver.

RUS may waive any requirement or procedure of this subpart by determining that its application in a particular situation would not be in the government’s interest, except that certain provisions of the FAR (48 CFR ch. 1) and AGAR (48 CFR ch. 4).

§§ 1789.164–1789.165 [Reserved]

Subpart B—Escrow Account Funding and Payments

§ 1789.166 Terms and conditions of funding agreement.

Funding Agreements between the Borrower and a Consultant shall be in form and substance satisfactory to RUS and provide for, among other matters, the following:

(a) Specific reference by number to the applicable Consulting Contract entered into between the government and the Consultant;

(b) Specific reference by number to the applicable Task Order (where applicable);

(c) A brief description of the Application;

(d) A requirement that Invoices make specific reference to:

(1) The applicable contract and Task Order(s); and

(2) The Escrow Account from which payment is to be made;

(e) A requirement that the Final Invoice for a Task Order be clearly identified as such;

(f) A description of the services to be provided by the Consultant to RUS and the applicable time frames for the provision of such services;

(g) Agreement that the Borrower shall pay for the Consultant services provided to RUS under the applicable contract through an Escrow Account established pursuant to an Escrow Agreement, the Consultant shall not provide services to RUS under the applicable contract unless there are sufficient funds in the Escrow Account to pay for such services, the Consultant shall seek compensation for services provided under the applicable contract from, and only from, funds made available through the Escrow Account, and the Consultant must submit all Invoices to the government for approval.

(h) A form of Escrow Agreement satisfactory to the Borrower, Consultant and the designated Third-party Commercial Institution;

(i) A schedule setting forth when and in what amounts the Borrower shall fund the Escrow Account;

(j) Acknowledgment by the Consultant of the Indemnification Agreement provided by the Borrower to the government;

(k) The Funding Agreement shall not be effective unless and until approved in writing by RUS.

§ 1789.167 Terms and conditions of escrow agreement.

Escrow Agreements between and among the Borrower, Consultant and Third-party Commercial Institution shall be in form and substance satisfactory to RUS and provide for, among other matters, the following:

(a) Specific reference by number to the applicable contract for services;
(b) Specific reference by number to the applicable Task Order;
(c) Specific reference by number to the Escrow Account into which funds are to be deposited;
(d) Invoices to specifically identify the applicable contract and Task Order(s);
(e) Funds to be held in the Escrow Account by the escrow agent until paid to the Consultant pursuant to the government's authorization;
(f) The Escrow Account to be closed and all remaining funds remitted to the Borrower after payment of the Final Invoice, unless otherwise directed by the government;
(g) The government, the Consultant and the Borrower to have the right to be informed, in a timely manner and in such form as they may reasonably request, as to the status of and activity in the Escrow Account; and
(h) The Escrow Agreement shall not be effective unless and until approved in writing by RUS.

§§ 1789.168–1789.175 [Reserved]

PART 1792—COMPLIANCE WITH OTHER FEDERAL STATUTES, REGULATIONS, AND EXECUTIVE ORDERS

Subparts A and B—[Reserved]

Subpart C—Seismic Safety of Federally Assisted New Building Construction

§ 1792.101 General.

(a) The Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.) was enacted to reduce risks to life and property through the establishment and maintenance of an effective earthquake hazards reduction program (the National Earthquake Hazards Reduction Program or NEHRP). The Federal Emergency Management Agency (FEMA) is designated as the agency with the primary responsibilities to plan and coordinate the NEHRP. This program includes the development and implementation of feasible design and construction methods to make structures earthquake resistant. Executive Order 12699 of January 5, 1990, Seismic Safety of Federal and Federally Assisted or Regulated New Building Construction (3 CFR, 1990 Comp., p. 269), requires that measures to assure seismic safety be imposed on federally assisted new building construction.

(b) This subpart identifies acceptable seismic standards which must be employed in new building construction funded by loans, grants, or guarantees made by the Rural Utilities Service (RUS) or the Rural Telephone Bank (RTB) or through lien accommodations or subordinations approved by RUS or RTB. This subpart implements and explains the provisions of the loan contract utilized by the RUS for both electric and telephone borrowers and by the RTB for its telephone borrowers requiring construction certifications affirming compliance with the standards set out in §1792.103 of this subpart.

(c) This subpart applies to both RUS and RTB borrowers. For the purposes of RTB borrowers, as used in this subpart, RUS means RTB and Administrator means Governor.

(d) This subpart applies to the recipients of RUS grants.

(e) This subpart applies to the federally assisted buildings for which designs are prepared on or after the effective date hereof.
§ 1792.102 Definitions.
As used in this subpart, the following terms have the following meaning:
Administrator—Administrator of RUS or the Governor of the Rural Telephone Bank or his or her designee.
Borrower—An entity which borrows or seeks to borrow money from, or arranges financing with the assistance of RUS through guarantees, lien accommodations or lien subordinations.
Building—Any structure, fully or partially enclosed, used or intended for sheltering persons or property.
Federally assisted—The provision of financing assistance by RUS through loans, loan guarantees, grants, and lien accommodations and subordinations.
Grant recipient—Any entity which receives a grant from RUS.
Lien accommodation—The consensual sharing of the government’s (RUS’s) lien on property or the release of government’s lien on property.
Lien subordination—Agreement that the government’s (RUS) lien on property will rank below the lien of another entity.
NEHRP—National Earthquake Hazards Reduction Program. REA means the Rural Electrification Administration formerly an agency of the United States Department of Agriculture and predecessor agency to RUS with respect to administering certain electric and telephone loan programs.
Registered—A person licensed by the State(s) or Authority(ies) to perform architectural or engineering services in the State(s) where construction occurs. RUS means the Rural Utilities Service, an agency of the United States Department of Agriculture established pursuant to Section 232 of the Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994 (Pub. L. 103-354, 108 Stat. 3178), successor to REA with respect to administering certain electric and telephone programs. See 7 CFR 1700.1.
Seismic—To do with or caused by earthquakes.
Seismic factor—The factor used in design based on the seismic zone (Z = .4, .3, .2, etc.) or based on acceleration (Av or Aa, whichever controls) for the location of the building, and given on the seismic maps in the model codes.

§ 1792.103 Design and construction standards for seismic safety.
(a) Borrowers and grant recipients of grants must utilize in the design and construction of federally assisted buildings, the seismic provisions of the most recent edition of those standards and practices that are substantially equivalent to or exceed the seismic safety level in the most recent or immediately preceding edition of the NEHRP Recommended Provisions for the Development of Seismic Regulation for New Buildings. The NEHRP Recommended Provisions are updated triennially.
(b) Each of the following model codes has been found to provide a level of seismic safety substantially equivalent to that provided by the use of the 1988 NEHRP Recommended Provisions and appropriate for federally assisted new building construction:
(1) 1991 International Conference of Building Officials (ICBO) Uniform Building Code;
(2) 1992 Supplement to the Building Officials and Code Administration, International, Inc. (BOCA) National Building Code; and
(c) The model codes identified in §1792.103(b) can be obtained from the following organizations:
(1) ICBO Uniform Building Code. International Conference of Building Officials, Austin Regional Office, 9300 Jollyville Road, suite 101, Austin, Texas 78759-7455.
§ 1792.104 Seismic safety certifications.

Borrowers and grant recipients must with respect to federally assisted buildings:

(a) Provide to RUS a written acknowledgement from a registered architect or engineer responsible for the design of such building project stating that the seismic provisions of one of the model codes listed in §1792.103(b) of this subpart will be used in the design and construction of the building project. This written acknowledgement must include a description of the building project, estimated costs, approximate square footage, the seismic factor for the building location, and the identification and date of the Model Code to be used in the seismic design of the building. The written acknowledgement must be received by RUS prior to the preparation of preliminary plans and specifications for the building.

(b) Include on the final plans and specifications, which are otherwise required to be submitted to RUS, the identification and date of the model code that was used for the seismic design of the building project and the seismic factor for the building location. The plans and specifications must be dated, signed, and sealed by the registered architect or engineer.

(c) Provide to RUS, upon completion of construction, the written certification of the architect or engineer responsible for the design of the project that the building project was designed to meet and that the completed construction meets the seismic requirements set forth in the model code identified in the written acknowledgement required in paragraph (a) of this section. This certification must include the following information:

1. Project designation and project owner’s name;
2. Name of architectural/engineering firm;
3. Name and registration no. (for the State in which the building project is located) of the certifying architect or engineer;
4. Purpose and location of the facility;
5. Seismic factor for the building location;
6. The code identity and the date of the model code used for the design and construction of the building project(s);
7. Total square footage of the building project;
8. Total cost of the building project; and
9. Estimated cost of the structural systems affected by the requirements of this subpart.

(d) The written acknowledgement required by paragraph (a) of this section, the plans and specifications referred to in paragraph (b) of this section, and the written certification required by paragraph (c) of this section are to be submitted to the appropriate Director of the Regional Electric Division, Power Supply Division, Regional Telephone Division, or Rural Development Assistance Staff. When plans and specifications are not otherwise required to be submitted to the RUS Washington’s offices, the data required to be included on the plans and specifications by paragraph (b) of this section must be submitted in letter form to the appropriate Director prior to the release of the plans and specifications for construction purposes.

(The information and recordkeeping requirements of this section have been approved by the Office of Management and Budget (OMB) under the control number 0572-0099.)

PART 1794—ENVIRONMENTAL POLICIES AND PROCEDURES FOR ELECTRIC AND TELEPHONE BORROWERS

Subpart A—General

Sec. 1794.1 Purpose.
1794.2 Actions requiring environmental review.
1794.3 Compliance.
1794.4 Trivial violations.
1794.5 Responsible officials.
1794.6 Metric units.
1794.7 Guidance.
§ 1794.1 Purpose.

§ 1794.2 Actions requiring environmental review.

The provisions of part 1794 apply to proposed administrative actions by RUS including, without limitation, loans, loan guarantees, reclassification of loan funds, lien accommodations, and approvals provided pursuant to loan contracts and security instruments (e.g., approvals of the use of the general funds).

§ 1794.3 Compliance.

The effective date of provisions contained in part 1794 is the date of publication of the final rule in the Federal Register. Any environmental document accepted or prepared by RUS prior to the effective date may be developed in accordance with the RUS environmental requirements in effect at the time the document was accepted or prepared by RUS.

§ 1794.4 Trivial violations.

It is the intent of this part that a trivial violation of its provisions will not give rise to an independent cause of action.

§ 1794.5 Responsible officials.

The agency contact points for environmental matters shall be the Assistant Administrator, Electric or Telephone (as appropriate); Rural Utilities Service; U.S. Department of Agriculture; South Building, Washington, DC 20250. The Assistant Administrators, Electric and Telephone, are responsible for determining the proper definition of proposals and the need for the preparation and approval of draft Environmental Impact Statements (EIS). Final EIS’s will be issued and approved by the Administrator.

§ 1794.6 Metric units.

It is RUS’s policy to prepare environmental documents using metric units with British system equivalents in parentheses. Environmental documents prepared by or for an RUS borrower (Borrower) should follow the same format.

§ 1794.7 Guidance.

For further guidance in the preparation of notices and environmental documents RUS has prepared an RUS Environmental Guide. A copy of this RUS Environmental Guide is available upon request to the Assistant Administrator, Electric or Assistant Administrator, Telephone; Rural Utilities Service; U.S. Department of Agriculture, Washington, DC 20250.

Subpart B—Implementation of the National Environmental Policy Act

§ 1794.10 Apply NEPA early in the planning process.

The environmental review process requires early coordination with and involvement of RUS. Borrowers should consult with RUS at the earliest stages of planning for any proposal which may require RUS action. Since planning efforts and environmental evaluation for power supply facilities, including power plants, transmission lines, coal or other fuel development, are interrelated, these activities should take place within the same time frame.

§ 1794.11 Consideration of alternatives.

In determining what are reasonable alternatives, RUS will consider a number of factors including, but not limited to, state of the technology, availability of resources and the time frame in which the identified need must be fulfilled.

§ 1794.12 Public involvement.

In carrying out its responsibilities under NEPA, RUS shall make diligent efforts to involve the public in the environmental review process through the following means:

(a) RUS notices required by part 1794 shall be published in the Federal Register and shall describe the nature, location and extent of the proposed action and indicate the availability and location of additional information.

(b) Borrower’s notices, when required by this part or otherwise required by RUS, shall consist of both a legal notice and a paid advertisement published in a timely manner in a newspaper or newspapers of general circulation in the counties in which the proposal will take place or such other places as RUS determines. It shall generally describe the nature, location and extent of the Borrower’s proposal and
§ 1794.13 Interagency involvement.

In carrying out its responsibilities under NEPA, RUS shall, to the extent practicable, coordinate its environmental review and combine its meetings and hearings with those of other Federal, state and local agencies. The Borrower shall inform RUS of potential involvement of other agencies in the proposal at the earliest practicable time to facilitate such coordination.

Subpart C—Provisions Applicable to EA or EIS Preparation

§ 1794.20 Interagency coordination.

(a) Whenever practicable, RUS will encourage the use of a lead agency in preparation of an EIS or EA so that a single document and review process will cover all Federal agency actions arising from the proposal or directly related group of proposals. It is the policy of RUS to volunteer to act as lead agency in the preparation of an EA or EIS when the Borrower so requests, and when RUS would normally prepare an EA or EIS for the proposal.

(b) Where RUS acts as a cooperating agency, RUS shall rely upon the lead agency’s procedures for implementing NEPA and CEQ regulations in the preparation and issuance of an EA or EIS, unless the lead and cooperating agencies agree to a modification of these procedures.

(1) RUS shall request that the lead agency indicate that RUS is a cooperating agency in all NEPA related notices published for the proposal. In addition, RUS shall request that the lead agency permit RUS to review and comment on the EA or draft and final EIS prior to issuance.

(2) The Borrower shall inform RUS in a timely manner of its involvement in

indicate the availability and location of additional information. If both the paid advertisement and legal notice appear in the same edition, the advertisement need not be lengthy and can refer the reader to the legal notice for a more detailed explanation. The Borrower shall consult with RUS prior to issuance of Borrower’s notices where an EIS or Environmental Assessment (EA) will be prepared.

(c) The Borrower shall submit to RUS, as soon as practicable after publication, copies and publication dates of all Borrower’s legal notices and paid advertisements published. A copy of all comments received by the Borrower (including the Borrower’s position, if any) concerning environmental aspects of the proposal shall be provided to RUS in a timely manner.

(d) Public hearings or meetings may be held at reasonable times and locations concerning environmental aspects of a proposed action in all cases where, in the Assistant Administrator’s opinion, the need for hearings or meetings is indicated in order to develop adequate information on the environmental implications of the proposed action. The following shall be required in connection with a meeting or a hearing:

(1) Where an environmental document is the subject of the hearing or meeting, that document will be made available to the public at least ten (10) days in advance.

(2) Any person, organization or government body desiring to make a statement at the hearing or meeting may make such statement in writing or orally. Public hearings or meetings normally will be informal and will generally be confined to the environmental aspects of the proposal.

(3) RUS notice shall be published at least thirty (30) days before the hearings or meetings. The Borrower’s notice of the hearings or meetings shall be published at least ten (10) days but no more than thirty (30) days before the hearings or meetings. RUS shall determine the counties in which the Borrower’s notice shall be published in newspapers of general circulation to assure that persons most likely to be affected by the proposal will be made aware of the hearings. The notice shall present the date, time, location and purpose of the hearing or meeting. If an environmental document is the subject of the hearing or meeting, the notice shall inform the public where it can be obtained or is available for review.

(e) A list of RUS administrative actions for which EIS’s and EA’s are being prepared or contemplated will be available for public inspection at RUS’s offices in Washington, DC.

§ 1794.13 Interagency involvement.

In carrying out its responsibilities under NEPA, RUS shall, to the extent practicable, coordinate its environmental review and combine its meetings and hearings with those of other Federal, state and local agencies. The Borrower shall inform RUS of potential involvement of other agencies in the proposal at the earliest practicable time to facilitate such coordination.

Subpart C—Provisions Applicable to EA or EIS Preparation

§ 1794.20 Interagency coordination.

(a) Whenever practicable, RUS will encourage the use of a lead agency in preparation of an EIS or EA so that a single document and review process will cover all Federal agency actions arising from the proposal or directly related group of proposals. It is the policy of RUS to volunteer to act as lead agency in the preparation of an EA or EIS when the Borrower so requests, and when RUS would normally prepare an EA or EIS for the proposal.

(b) Where RUS acts as a cooperating agency, RUS shall rely upon the lead agency’s procedures for implementing NEPA and CEQ regulations in the preparation and issuance of an EA or EIS, unless the lead and cooperating agencies agree to a modification of these procedures.

(1) RUS shall request that the lead agency indicate that RUS is a cooperating agency in all NEPA related notices published for the proposal. In addition, RUS shall request that the lead agency permit RUS to review and comment on the EA or draft and final EIS prior to issuance.

(2) The Borrower shall inform RUS in a timely manner of its involvement in
a proposal where another Federal agency is preparing an EIS or EA to permit RUS to adequately fulfill its duties as a cooperating agency.

(c) Where practicable and in order to eliminate duplication and delay, RUS will coordinate its NEPA process with state and local environmental procedures. Where state or local agencies control siting of electric transmission lines or electric generating stations, RUS shall consult and coordinate with those state and local agencies in determining what are the reasonable siting and route alternatives.

§ 1794.21 Limitations on actions during the NEPA process.

In determining which Borrower activities related to a proposal requiring development of an EA or EIS may be approved prior to completion of the NEPA process, RUS must determine, among other matters that:

(a) The activity will not have an adverse environmental impact. For example, purchase of water rights, optioning or transfer of land title, or continued use of land as historically employed will not have an adverse environmental impact. However, site preparation or construction at or near the proposed site (e.g., rail spur) or development of a related facility (e.g., opening a captive mine) normally will have an adverse environmental impact.

(b) The expenditure is “minimal.” To be minimal the expenditure:

(1) Must not exceed the amount of loss which the borrower could absorb without jeopardizing the government's security interest in the event the proposed project is not approved by the Administrator,

(2) Must not compromise the objectivity of RUS’s environmental review. Notwithstanding other considerations, expenditures up to 10 percent of the proposed project cost normally will not compromise RUS’s objectivity.

§ 1794.22 Tiering.

It is RUS’s policy to tier EIS’s and EA’s where:

(a) It is practicable, and

(b) There will be a reduction of delay and paperwork, or where better decisionmaking will be fostered.

[49 FR 9650, Mar. 13, 1984; 49 FR 10083, Mar. 19, 1984]

Subpart D—Classification of Proposals

§ 1794.30 Control.

For environmental review purposes, RUS has identified and set forth categories of Borrower proposals. A Borrower or Borrowers may propose to participate with other parties in the ownership of a project where the Borrowers do not have sufficient control and responsibility to alter the development of the project. In such a case the proposal will be considered a categorical exclusion regarding the category into which the proposal would otherwise be included. Where the Borrowers propose to cumulatively own 5 percent or less of a project, the proposal will normally be considered a categorical exclusion. Where the Borrowers propose to cumulatively own 33 1/3 percent or more of a project, the proposal will be treated in its usual category. Where the Borrowers propose to cumulatively own more than 5 percent but less than 33 1/3 percent of a project, RUS will determine whether the Borrowers have sufficient control and responsibility to alter the development of the project. Consideration will be given to such factors as: (a) Whether construction would be completed regardless of RUS financing assistance; (b) the stage of project planning and construction; (c) total Borrower participation; (d) participation percentage of each utility in the project; and (e) managerial arrangements and contractual provisions.

§ 1794.31 Categorical exclusions (proposals normally requiring neither an EIS nor an EA).

(a) Borrower proposals that do not individually or cumulatively have a significant effect on the environment and do not normally involve significant unresolved conflicts concerning alternate use of available resources, do not
require an EIS or EA. In order to provide for extraordinary circumstances, such proposals may require development of a Borrower’s Environmental Report (BER) or the equivalent.

(b) Certain types of Borrower proposals do not require a BER. Proposals of this type are subject to the requirements of §1794.41. Proposals within this classification are:

(1) Purchase of land where use will remain unchanged.

(2) Routine approvals made pursuant to loan and security documents (e.g., contracts for bulk commodities, fuel, goods and services, capital credit retirements, technical specifications).

(3) Agreements for transmission, wheeling, interconnection with, power purchase from, or sale to other utilities where no associated Borrower construction or financing of construction is involved.

(4) Additional or substitute financing assistance for proposals which have previously received environmental review and approval from RUS, provided that environmental considerations have not changed.

(5) Rehabilitation or reconstruction of roads, railroad tracks, roadbed, bridges and other transportation facilities within transportation rights-of-way or generating facility sites where there is no substantial increase in use. A description of the rehabilitation or reconstruction shall be provided to RUS.

(6) Primary fuel or mineral contracts where, considering all the facts and circumstances, the Borrower does not have effective control over or responsibility to alter the development of the specific fuel or mineral source (e.g., mine).

(7) Changes or additions to existing substations or switching stations or external changes to buildings or small structures requiring new physical disturbance or fencing of less than 0.4 hectares (0.99 acre). A description of changes and additions shall be provided to RUS.

(8) Internal modifications or equipment additions (e.g., computer facilities, relocating interior walls) to small structures or buildings.

(9) Internal or minor external changes to electric generating or fuel processing facilities and related support facilities where there is negligible impact on the outside environment. A description of the changes shall be provided to RUS.

(10) Ordinary maintenance or replacement of equipment or small structures (e.g., line support structures, microwave facilities, valves).

(11) The construction of telephone and communication lines and cables at existing power related facilities sites.

(12) Supervisory control and data acquisition systems (SCADA) and energy management systems involving no new external construction.

(13) Testing work (e.g., test borings or cores, water test wells).

(14) Studies and engineering undertaken to define a proposal or alternatives sufficiently so that environmental effects can be assessed.

(15) The construction of electric power lines within an existing substation, switching station or electric generating facility site. A description of the facilities to be constructed shall be provided to RUS.

(16) Contracts for certain items of equipment which are part of a proposal for which RUS is preparing an EA or EIS, and which meet the limitations on actions during the NEPA process set forth in §1794.21 (e.g., long lead time items such as turbines or boilers).

(17) Internal RUS administrative actions (e.g., personnel actions, procurement) and RUS bulletins that do not concern environmental matters or substantial facility design, construction or maintenance practices.

(c) Certain types of Borrower proposals normally require Borrower submission of a BER or its equivalent. Proposals of this type are subject to the requirements of §1794.42. Proposals within this classification are:

(1) The construction of electric power lines and associated facilities designed for or capable of operation at a nominal voltage of either:

(i) Less than 69 kV (low side) or

(ii) Less than 230 kV (low side) if both:

(A) No more than 40 kilometers (24.85 miles) of power line are involved, and

(B) Substations and switching stations require no new physical disturbance or fencing of no more than 2 hectares

1276
§ 1794.33 Proposals normally requiring an Environmental Assessment without scoping.

(a) RUS will normally prepare an EA for all proposals which are neither categorical exclusions (§1794.31) nor proposals normally requiring an EIS (§1794.32). For certain actions within this class, scoping and document procedures set forth in §§1794.50 to 1794.53 shall be followed (see §1794.34). The following are examples of specific Borrower proposals which normally require an EA without scoping.

(1) Construction of combustion turbine and diesel generating facilities of less than 40 MW (nameplate rating), except for diesel generating facilities of less than 3 MW (nameplate rating) at an existing generating site. All new associated facilities and electric power lines related to the generating proposal shall be covered in the BER.

(13) Modification of an existing hydroelectric project or dam that will have a total installed capacity of 1.5 MW (nameplate rating) or less and which will result in no change in the normal maximum surface area of normal maximum surface elevation of an existing impoundment. All new associated facilities and electric power lines related to the generating proposal shall be covered in the BER.

§ 1794.32 Proposals normally requiring an EIS.

(a) Actions that may significantly affect the quality of the human environment require preparation of an EIS. An EIS normally will be required in connection with Borrower proposals for construction and operation of the following types of facilities:

(1) New electric generating facilities of 40 MW or more (nameplate rating) other than diesel generators or combustion turbines. All new associated facilities and electric power lines related to the generating proposal shall be covered in the EIS.

(2) A new mining operation when the Borrower or Borrowers have effective control (e.g., dedicated mine or purchase of a substantial portion of the mining equipment).

(b) Proposals of this type are subject to the requirements of §§1794.50 to 1794.55.

§ 1794.33 Proposals normally requiring an Environmental Assessment without scoping.

(a) RUS will normally prepare an EA for all proposals which are neither categorical exclusions (§1794.31) nor proposals normally requiring an EIS (§1794.32). For certain actions within this class, scoping and document procedures set forth in §§1794.50 to 1794.53 shall be followed (see §1794.34). The following are examples of specific Borrower proposals which normally require an EA without scoping.

(1) Construction of combustion turbine and diesel generating facilities of less than 40 MW (nameplate rating), except for diesel generating facilities of less than 3 MW (nameplate rating) at an existing generating site. All new associated facilities and electric power lines related to the generating proposal shall be covered in the BER.

(13) Modification of an existing hydroelectric project or dam that will have a total installed capacity of 1.5 MW (nameplate rating) or less and which will result in no change in the normal maximum surface area of normal maximum surface elevation of an existing impoundment. All new associated facilities and electric power lines related to the generating proposal shall be covered in the BER.
§ 1794.34

lines related to the subject generating proposal shall be covered in the EA.

(2) Construction of any other type of new electric generating facilities of less than 5 MW (nameplate rating). All new associated facilities and electric power lines related to the subject generating proposal shall be covered in the EA.

(3) Modification of an existing hydroelectric project or dam if:
   (i) The project or dam will have a total installed capacity of more than 1.5 MW (nameplate rating); or
   (ii) The modification will result in a change in the normal maximum surface area or normal maximum surface elevation of an existing impoundment.

All new associated facilities and electric power lines related to the generating proposal shall be covered in the EA.

(4) The expansion of a mining or drilling operation or a new drilling operation.

(5) Purchase of existing facilities or a portion thereof which are presently in violation of Federal, state or local environmental laws or regulations.

(6) The construction of electric power lines and related facilities designed for or capable of operation at a nominal voltage of 230 kV or more (low side) not covered by §1794.31 (categorical exclusions) or §1794.34 (normally requiring an EA with scoping).

(7) The construction of electric power lines and related facilities designed for or capable of operation at a nominal voltage of 69 kV or more (low side) but less than 230 kV (low side) where:
   (i) More than 40 kilometers (24.85 miles) of power line are involved or
   (ii) Substations and switching stations require new physical disturbance of fencing of more than 2 hectares (4.94 acres) at any single site or more than 8 hectares (19.77 acres) for all sites.

(b) Proposals of this type are subject to the requirements of §§1794.60 to 1794.64.

§ 1794.34 Proposals normally requiring an Environmental Assessment with scoping.

(a) There are certain actions which require the use of a scoping procedure in the development of an EA. After the scoping process is completed and an acceptable Environmental Analysis has been submitted by the Borrower, RUS will determine whether to prepare an EIS or finding of no significant impact (FONSI). The types of proposals falling within this category are:

(1) The construction of electric power lines and related facilities designed for or capable of operation at a nominal voltage of 230 kV or more (low side) where:
   (i) More than 40 kilometers (24.85 miles) of power line are involved; or
   (ii) Substations and switching stations require new physical disturbance or fencing involving a total of more than 2 hectares (4.94 acres) at any single site or more than 8 hectares (19.77 acres) for all sites.

(2) Construction of combustion turbines and diesel generators of 40 MW (nameplate rating) or more; and the construction of any other type of electric generating facilities of 5 or more MW but less than 40 MW (nameplate rating). All new associated facilities and electric power lines related to the subject generating project shall be covered in any EA or EIS prepared.

(b) Proposals of this type are subject to the requirements of §§1794.70 to 1794.73.

§ 1794.35 Work plan proposals.

Borrowers frequently request financing assistance for a number of relatively minor unrelated projects all of which are described in a single “work plan.” In determining the proper environmental classification of construction projects contained in a work plan, RUS will consider as a single proposal all related construction included in the work plan and any additional construction related thereto which, although not included in the work plan, is reasonably foreseeable.
Rural Utilities Service, USDA

Subpart E—Procedure for Categorical Exclusions

§ 1794.40 General.

The following procedure, which applies to action classified as categorical exclusions in §1794.31 hereof, provides RUS with information necessary to determine if the proposed action meets the criteria for a categorical exclusion. Where, because of extraordinary circumstances, an action may have a significant effect on the quality of the human environment, RUS may require additional environmental documentation.

§ 1794.41 Proposals with no BER.

Normally the Borrower shall not submit a BER for proposals included in §1794.31(b). However, if so noted in §1794.31(b) the Borrower shall submit a description of the proposal. Such description shall include, where applicable, a plan for erosion and sedimentation control. No public notice is required unless the proposal is located in and may affect wetlands or floodplains.

§ 1794.42 BER proposals.

For proposals included in §1794.31(c) the Borrower normally shall submit a BER or its equivalent which will assist RUS in identifying extraordinary circumstances in which a normally excluded action may have a significant environmental effect. No public notice is required unless the proposal is located in and may affect wetlands or floodplains. RUS shall not permit construction or other activities which would have an environmental effect until it has received, reviewed and accepted an adequate BER.

Subpart F—Procedure for Proposals Normally Requiring an EIS

§ 1794.50 Normal sequence.

Appendix A to part 1794 (Procedure for Proposals which Normally Require an EIS) describes the normal sequence of EIS preparation to be employed by RUS. For proposals normally requiring an EA with scoping (see §1794.34), the NEPA process shall proceed in the same manner as for proposals normally requiring an EIS through the point at which the Environmental Analysis is submitted (see §1794.53). After the Environmental Analysis has been submitted, RUS shall make a judgment to prepare either an EIS or a finding of no significant impact (FONSI).

§ 1794.51 Preparation for scoping.

(a) RUS has developed a general approach to the NEPA process, including scoping, for proposals normally requiring an EIS (§1794.32) and for proposals normally requiring an EA with scoping (§1794.34). Scoping procedures are designed to determine the scope of issues to be addressed and to identify significant issues related to a proposed action. RUS may require scoping procedures to be followed for other proposals where appropriate to achieve the purposes of NEPA.

(b) As soon as practicable, RUS will publish its notice of intent to prepare an EIS (see 40 CFR 1508.22). The Borrower shall publish, in a timely manner, a notice similar to RUS’s notice. If the proposal is one which normally requires an EA with scoping (§1794.34), the notice shall indicate that: (1) RUS may prepare an EA before or without necessarily preparing an EIS, and (2) the decision whether or not to prepare an EIS will be based on information received from the Borrower, Federal, state and local agencies, organizations and the general public during the scoping process, preparation of the Environmental Analysis, and the review period for a finding of no significant impact (if originally issued).

(c) As part of the early project planning the Borrower should consult with expert and interested Federal, state and local agencies to inform them of the proposed project, and to identify permits and approvals which must be obtained and administrative procedures which must be followed.

(d) Before any scoping meetings are held RUS shall require the Borrower to submit two environmental documents:

1. Alternative evaluation;
2. Siting study (for electric generation or new mines) or Macro-Corridor study (for electric transmission).

(e) The Borrower is encouraged to hold additional public information meetings in the general location of the
§ 1794.52 Scoping meeting.
(a) Both RUS and the Borrower shall publish a notice of the public scoping meeting which shall:
(1) Provide a brief description of the nature and location of the Borrower’s recommended alternative (if any) and reasonable alternatives;
(2) State the intent to hold public scoping meetings, giving the date, time, location and purpose of these meetings;
(3) State where copies of the scoping documents are available for public review, which shall include the Borrower’s headquarters, RUS offices in Washington, and other locations as determined by RUS;
(4) Provide the name and address of the person to whom questions and comments should be sent;
(5) Set forth a thirty (30) day period after the scoping meeting(s) to enter comments into the meeting record.
(b) The RUS notice will be published at least thirty (30) days prior to the meeting(s). The Borrower’s notice shall be published at least ten (10) days, but not more than thirty (30) days prior to the meeting(s).
(c) The scoping meeting(s) will normally be held in the vicinity of the Borrower’s recommended alternative and, where appropriate, the reasonable alternatives or such other places as RUS determines will best afford an opportunity for public involvement. Any person, organization or government body desiring to make a statement at the meeting may make such statement in writing or orally. A record will be made of the scoping meeting.
(d) As soon as practicable after the scoping meeting(s), RUS, as lead agency, shall determine the significant issues to be analyzed in depth and identify and eliminate from detailed study the issues which are not significant or which have been covered by prior environmental review. RUS will develop a proposed scope for further environmental study and review. A copy of this proposed scope will be sent to cooperating agencies and the Borrower, which shall be given thirty (30) days to comment on its adequacy and emphasis. After expiration of the thirty (30) day period RUS will provide formal guidance to the Borrower concerning the scope of environmental study to be performed and information to be gathered.

§ 1794.53 Borrower’s environmental analysis.
(a) After scoping procedures have been completed, RUS shall require the Borrower to develop and submit an Environmental Analysis satisfactory in form and substance to RUS. The Environmental Analysis will be prepared under the guidance of the RUS staff and all information set forth therein shall be subject to independent verification by RUS.
(b) The Environmental Analysis will normally provide a basis for preparation of RUS’s EA or EIS and may be made an appendix to the RUS document. After RUS has reviewed and found an Environmental Analysis to be satisfactory, the Borrower will be required to provide RUS with a sufficient number of copies of the Environmental Analysis to satisfy RUS’s distribution plan.
(c) The Environmental Analysis shall include a summary of the construction and operation monitoring and mitigation measures for the proposed project. This summary shall appear in the draft and final EIS. These measures may be revised as appropriate in response to comments on the draft and final EIS and other information. These measures also shall be incorporated by summary or reference into RUS’s Record of Decision.

§ 1794.54 EIS.
(a) After a draft or final EIS has been prepared, RUS and the Borrower shall issue a notice of availability for the document. The notice shall:
(1) Provide a brief description of the nature and location of the preferred and reasonable alternatives;
(2) State the availability of a draft or final EIS for public review;
§ 1794.62 Notice of availability.

(a) The Borrower shall publish a public notice of availability of the BER. The Borrower's notice shall:

(1) Include a brief description of the nature and location of its recommended and reasonable alternatives;

(2) State the availability of the BER for public review;
§ 1794.63 FONSI and notice requirements.

(a) If RUS, after reviewing the EA, finds that the proposal will not have a significant effect on the human environment, RUS shall prepare a FONSI. After the FONSI has been made, RUS shall publish a notice of availability of the EA and FONSI. The Borrower shall have published, in a timely manner, a similar notice.

(b) Both the RUS and Borrower’s notice shall:

(1) Provide a brief description of the nature and location of the preferred and reasonable alternatives;

(2) State that an EA and FONSI have been prepared;

(3) State how copies of the EA and FONSI can be obtained, and where copies are available for public review which shall include the Borrower’s headquarters, RUS offices in Washington, DC, and other locations as determined by RUS;

(4) Provide the name and address of the person to whom questions and comments should be sent;

(5) Set forth a thirty (30) day time period for review and comment.

§ 1794.70 General.

For those proposals covered by §1794.34, RUS and the Borrower shall follow the procedures for scoping and the requirements for notices and documents set forth in §§1794.50 through 1794.53 of Subpart F, “Procedure for Proposals Normally Requiring an EIS.”

§ 1794.72 Notice requirements for a FONSI determination.

If RUS prepares a FONSI for a proposal covered by §1794.34, RUS and, in a timely manner, the Borrower shall publish notices of availability of the EA and FONSI. The EA and FONSI shall be made available for public review and comment for at least thirty (30) days, and the RUS and Borrower notices shall solicit public comments. Additional RUS and Borrower notice requirements are included in §1794.63.

§ 1794.73 Timing of agency action for FONSI determination.

RUS may take its final action at any time after expiration of the thirty (30) day period measured from the date of publication of the RUS notice in the Federal Register. Normally RUS shall wait thirty (30) days after publication of the Borrower’s notice before taking a final action.
Subpart I—Adoption of Environmental Documents

§ 1794.80 General.
Where Borrowers participate in projects for which other agencies have already prepared an EIS or EA, RUS will adopt the existing EIS or EA consistent with the provisions of 40 CFR 1506.3.

§ 1794.81 Adoption as a final EIS.
(a) If RUS acted as a cooperating agency, the lead agency’s EIS may be adopted as a final EIS without recirculation if RUS has reviewed the comments received on the final EIS and concluded that comments and suggestions have been adequately considered.
(b) If RUS was not a cooperating agency but determines that another Federal agency’s EIS is adequate it will adopt the EIS as its final EIS.
   (1) RUS and the Borrower shall publish a notice stating RUS’s adoption of the EIS and independent determination of its adequacy. The notices are governed by §§1794.12 (general) and 1794.54(a) (EIS).
   (2) If the adopted EIS is generally available, RUS will circulate its written finding that the adopted EIS meets the standards for an adequate EIS. The adopted EIS shall be made available to interested parties upon request.
   (3) If the adopted EIS is not generally available, RUS will circulate its written finding that the adopted statement is an adequate EIS, along with either the adopted EIS or a summary thereof in accordance with 40 CFR 1502.19. The adopted EIS shall be circulated in the same manner as a final EIS (see §1794.54(b)).

§ 1794.82 Adoption as a draft EIS.
Where RUS determines that an existing Federal EIS requires additional information to meet the standards for an adequate statement for a proposed RUS action, RUS may adopt all or a portion of the EIS as a part of its draft EIS. The circulation provisions of §1794.54(b) for draft and final EIS’s apply. The general notice provisions (§1794.12) and notice provisions for EIS’s (§1794.54(a)) apply.

§ 1794.83 Adoption of an EA.
RUS may adopt a Federal EIS or EA or a portion thereof as its EA. RUS shall make the EA available and assure that notice is provided in the same manner as if RUS had prepared the EA.

§ 1794.84 Adoption of environmental materials.
RUS may adopt environmental documents or portions thereof prepared by Federal, state or local agencies or other parties independently of the requirements of NEPA. RUS may adopt such materials into its environmental documents. RUS will circulate the adopted document as a part of its environmental assessment or draft and final EIS in the same manner as if prepared by RUS.

§ 1794.85 Timing of agency action.
Where RUS has adopted another agency’s environmental documents, the timing of the RUS action shall be subject to the same requirements as if RUS had prepared the required EA or EIS.

Subpart J—Supplemental EIS

§ 1794.90 Circulation and notices.
(a) A supplement to a draft or final EIS shall be prepared, circulated and given notice by RUS and the Borrower in the same manner (exclusive of scoping) as a draft and then final EIS (see §1794.54).
(b) Normally RUS and the Borrower shall have published notices of intent to prepare a supplement to a final EIS in those cases where a Record of Decision has already been issued.
   (c) RUS, at its discretion, may issue an information supplement to a final EIS where RUS determines that the purposes of NEPA are furthered by doing so even though such supplement is not required by 40 CFR 1502.9(c)(1). RUS and the Borrower shall publish a notice of availability. The notice requirements shall be the same as for a final EIS indicated in §1794.54(a). The information supplement shall be circulated in the same manner as a final EIS (see §1794.54(b)). RUS shall take no
§ 1794.91 Timing of agency action.

Timing of RUS's action shall be subject to the same requirements as apply to a typical EIS.

Appendix A

Procedure for Proposals Which Normally Require an EIS

Diagram Legend
• On-going activity in the EIS process
B, C, D. Discrete events in the Siting Study and Environmental Analysis path
B1, C1, Discrete events in the Alternative Evaluation path

As the diagram illustrates, there will be two separate but interrelated study processes leading to the preparation of the EIS. One process B through H, will examine alternatives to building a generating (or transmission or new mining) facility. The other process, B1 through H will examine a range of potentially acceptable sites for a generating (or transmission or new mining) facility.

In order to facilitate long-range planning and reduce delays, a Borrower may undertake preliminary evaluations of alternative means of providing power and begin the study of a range of potentially acceptable sites for a generating (or transmission or new mining) facility before demonstrating a need for the proposal. However, the obligation to show a need for the proposal will still remain before RUS financing assistance can be obtained.

Equal spacing between points on the diagram is not meant to suggest equal time intervals. Where two letters are the same (except for subscripts), generally the two indicated events should occur within the same time frame. For BD and B1D1, this is only true where the Borrower initiates site selection at a time when there is a specific need to be filled. For major transmission projects, events occurring with reference to the Macro-Corridor Study are analogous to the generation and mining Siting Study procedures.
The flow diagram is intended to indicate the normal sequence of events although some variance may be acceptable in individual cases if good cause is demonstrated. However, in all instances RUS shall assure that the requirements of the NEPA and CEQ regulations are fulfilled.

Discrete Events

A: The Borrower presents to RUS the underlying needs which form the basis of its proposal. RUS undertakes for electric generation proposals, when necessary, the preparation or update of the power requirements study (PRS) utilizing RUS procedures. For electric generation and transmission and mining proposals, the need for the proposal shall be presented in the draft and final EIS's (or EA, as applicable).

B and B1: The Borrower consults with RUS on the procedures and general parameters for the Siting Study and on potential alternative ways to meet the need, including guidance on preparing the Alternative Evaluation. Consultation may be initiated even if a specific need has not been identified.

B2: Work is performed on the Siting Study by the Borrower and/or consultant. This includes "macroanalysis" in which general criteria, literature search and data are used to identify a reasonable range of potentially acceptable sites.

Borrower/consultant contact Soil Conservation Service (SCS), U.S. Environmental Protection Agency (EPA), U.S. Fish and Wildlife Service (FWS), U.S. Army Corps of Engineers (COE), Federal land use agencies and state agencies for early guidance and input.

As soon as practicable during this period, RUS publishes its "Notice of Intent" in the Federal Register and the Borrower publishes similar information in local newspapers of general circulation. (See §1794.21(b)).

B, C: Borrower does research and consultation, contacts other utilities, etc., to determine whether there are reasonable alternatives to a new generating (or transmission or mining facility). The Alternative Evaluation should include discussion, as appropriate, of joint projects, alternate fuels, alternate energy sources, conservation, etc.

Alternatives eliminated from detailed study should be identified and reasons given for the elimination. The Borrower should also indicate which alternatives are reasonably available to it if its recommended alternative is not approved.

C and C1: Borrower submits draft of Siting Study and Alternative Evaluation to RUS for review. RUS reviews each draft for major flaws. If such flaws are not present, RUS submits both the draft Siting Study and Alternative Evaluation to potentially involved Federal and state agencies (including, but not limited to, all agencies invited to the field investigation) for review and comment.

D and D1: RUS invites other Federal and state agencies to make a field investigation of potentially acceptable alternative siting areas discussed in the draft Siting Study and critique the study methodology, and point out potential problems with these alternative siting areas. The Borrower at this time presents site and nonsite specific alternatives included in the Siting Study and Alternative Evaluation to these agencies for their comments. Participating agencies may critique alternative means of meeting the need and point out potential problems with alternative siting areas. The agencies set up a strategy for conducting the scoping process and tentatively identify the lead and cooperating agencies for the EIS.

DE: Federal agencies are given the opportunity to comment on the potentially acceptable alternatives to point out fatal flaws. During this stage the Borrower may secure land, water or other critical factors for potentially acceptable sites by option or other means (subject to the limitations in §1794.21). If RUS's notice of intent and the Borrower's notice did not give the date and time of the scoping meeting, scoping meeting notices are published now.

E and E1: Scoping meetings is held to receive input from the public, interested parties, and Federal, state and local officials and agencies. Among the topics open to discussion are reasonable alternatives to meet the need, potentially acceptable sites, participation projects or conservation, significant issues to be addressed in the EIS, and the need for the project.

EF: Borrower submits revised Siting Study (or addenda if appropriate) to RUS for review after revising it to reflect input from scoping meeting(s). RUS consults with cooperating agencies on the scope of the EIS and gives the Borrower guidance on scope of the Environmental Analysis. Borrower prepares the draft Environmental Analysis which includes a fatal flaw study of potentially acceptable sites and a "microanalysis" in which detailed field work is conducted on the Borrower's recommended site(s). The Borrower continues consultation with RUS and other interested Federal, state, and local agencies, and the public, and reflects their comments in the Environmental Analysis.

D, F: Borrower updates and expands, as necessary, the Alternative Evaluation on the basis of comments received from Federal, State and local officials and agencies, input from participants at the scoping meeting(s), the general public and new developments (e.g., negotiations with other electric power utilities), RUS provides guidance to the Borrower during this period based on cooperating agency and public input.

F and F1: The Borrower submits draft Environmental Analysis to RUS for review and...
comment. If the draft Environmental Analysis has no readily apparent critical flaws, RUS distributes copies of the Environmental Analysis to cooperating agencies for review. Borrower submits Alternative Evaluation, which has been updated after the scoping meeting, and also includes new alternatives, if any, which have developed. RUS submits updated Alternative Evaluation to requesting cooperating agencies. The Environmental Analysis may incorporate the Alternative Evaluation leading to a single review document.

FG and F₁G₁: RUS and cooperating agencies independently evaluate, for accuracy, scope and content, the information submitted to them. RUS collates responses and reconciles them with the Borrower. RUS may begin writing the draft EIS at this point.

H and H₁: RUS Borrower submits, as appropriate, a final revised Environmental Analysis and Alternative Evaluation to RUS.

HJ and H₁J: RUS independently evaluates the revised documents and verifies the information therein before use in the EIS. During this time, RUS prepares the draft EIS, utilizing the borrower—supplied data, interagency expertise, and other information.

J: RUS issues draft EIS for public review and comment publishing notice of availability in the Federal Register.

K: Public comment period ends on draft EIS. This date may be extended in certain instances.

KL: RUS (and cooperating agencies, as appropriate) review comments received on draft EIS and responds, by modifying alternatives, developing alternatives not previously given sufficient consideration, supplementing, improving or modifying the analyses, etc. A final EIS or supplemental draft EIS is prepared, as appropriate, with cooperating agencies’ assistance.

M: Record of decision is issued. RUS will take no final action on any loan guarantee, etc., sooner than 30 days after issuance of the final Federal EIS.

MN: Implementation of mitigation measures is checked, as necessary, by RUS and other Federal, state, and local agencies during construction and operation of the project.
PART 1804—[RESERVED]

PART 1806—INSURANCE

Subpart A—Real Property Insurance

Sec.
1806.1 General.
1806.2 Companies and policies.
1806.3 Coverage requirements.
1806.4 Examining and general servicing of insurance.
1806.5 Losses.
1806.6 Failure of borrower to provide insurance.

EXHIBIT A TO SUBPART A—ESCROW AGREEMENT REAL PROPERTY INSURANCE

Subpart B—National Flood Insurance

1806.21 General.
1806.22 Areas of responsibility.
1806.23 Definitions.
1806.24 Eligibility.
1806.25 Conditions.
1806.26 Coverage and premium rates.
1806.27 Acceptable policies and servicing.
1806.28 Borrowers required to escrow.

EXHIBIT A TO SUBPART B TO PART 1806—COVERAGE AND PREMIUM RATES

EXHIBIT B TO SUBPART B TO PART 1806—SERVICING COMPANY

Subpart A—Real Property Insurance

§ 1806.1 General.

(a) Authority. This subpart sets forth the policies and procedures regarding insurance requirements on real property which serves as security for a debt under the Farm Credit Programs of the Farm Service Agency (FSA) or the Multi-Family Housing Programs of the Rural Housing Service (RHS). Any references herein to the Farmers Home Administration (FmHA) or its employees are intended to mean FSA or RHS, as applicable, and their employees.

(b) Borrower to furnish insurance. The real estate mortgage executed by the borrower provides that he will furnish and continually maintain and pay for insurance on buildings situated or constructed on the property with companies, in amounts, and on terms and conditions satisfactory to the FmHA or its successor agency under Public Law 103-354 until the loan is repaid.

(c) Borrower's selection of company. The borrower may select the insurance company provided that the company and insurance policy comply with all the requirements set forth in this Instruction.

(d) Responsibility. The County Supervisor is responsible for taking all actions in connection with insurance as may be necessary to protect the security interest of the FmHA or its successor agency under Public Law 103-354. Any unusual situation that may arise with respect to obtaining or servicing insurance should be referred to the State Director. The State Director will refer any questions of a legal nature to the Office of the General Counsel (OGC).

(e) Use of Form FmHA or its successor agency under Public Law 103-354 426-1, ‘‘Valuations of Buildings.’’ The minimum insurance required will be indicated in the appraisal report by the employee who makes the appraisal of property that includes insurable buildings. In the case where no real estate appraisal is required or the appraisal report does not indicate the minimum insurance coverage, Form FmHA or its successor agency under Public Law 103-354 426-1 will be prepared by the County Supervisor. Reevaluation of the buildings will not be done on appraisal reports; however, when new buildings are constructed or values increase or decrease materially and reevaluation is necessary to properly reflect the buildings' security interest of the FmHA or its successor agency under Public Law 103-354, the County Supervisor will prepare or revise Form FmHA or its successor agency under Public Law 103-354 426-1 as appropriate. Changes made on an existing Form FmHA or its successor agency under Public Law 103-354...
§ 1806.2 Companies and policies.

Property insurance policies or other evidence of insurance will be accepted from borrowers when the requirements outlined herein are complied with fully.

(a) Companies. It is desirable that companies be licensed to do business in the particular State or other jurisdiction where the property is located, or that they be otherwise authorized by law to transact business within such State or other jurisdiction (hereinafter called “State”). If the required insurance is not available locally at comparable rates from an insurance company licensed or otherwise authorized to do business in the State, insurance may be accepted from another company if (1) the OGC advises that policies issued by such company will not be rendered unenforceable by virtue of the company’s failure to be licensed or otherwise authorized to transact business in the State and that the company is a legal entity which may be sued in the State where the insured property is located, and (2) the State Director determines that the company is reputable and financially sound. In making the above determinations, the State Director will consider all relevant available information such as that which may be obtained from financial statements, Best’s Insurance Reports, State insurance authorities, and other lending institutions.

(b) Insurance policies—(1) Standard policies. If a standard fire insurance policy has been adopted for the State, it should be used unless State statutes exempt the company from the regulations requiring its use. The standard policy is one containing substantially the same standard provisions adopted or recommended by legislative action or by order of the supervisory insurance authorities of the State in which the security is located.

(2) Other policies. To be acceptable, any other insurance policies must conform to the requirements of this Instruction.

(i) “Homeowner’s” policies, “All Physical Loss” policies, “Broad Form” policies, and other such all-inclusive policies are acceptable if they otherwise meet the requirements of this Instruction.

(ii) A builder’s risk policy naming the borrower as the insured or a builder’s risk endorsement for a policy issued to the borrower may be accepted during the period a building is under construction if the policy otherwise meets the requirements of this Instruction. If such a policy or endorsement does not automatically convert to full coverage when the building is completed, acceptable insurance must be obtained simultaneously with the expiration of the builder’s risk provisions of the policy.

(iii) A builder’s risk insurance policy issued to a contractor only may not be substituted for the property insurance, the borrower is required to provide.

(iv) Borrowers eligible for insurance under the National Flood Insurance Act of 1968, as amended by the Flood Disaster Act of 1973, will be serviced in accordance with subpart B of this part.

(3) State instructions. If the State Director and the OGC consider it advisable, a State Instruction may be issued to help County Supervisors identify standard insurance policies adopted for the State. The Instruction should also furnish a guide to assist in identifying other acceptable insurance policy forms that are commonly used by insurance companies in the State, recognizing that such information is not all inclusive.

(4) Binders. Whenever there is a justifiable reason for not issuing a policy or endorsement, as required, a written binder will be acceptable for a period not to exceed 60 days from the effective date of the insurance. The written binder must have attached thereto the approved form of mortgage clause. Such a binder will be submitted to the County Supervisor in lieu of an insurance policy or endorsement and the insurance policy or endorsement will be submitted on or before the expiration date of the binder. The State Director, with the advice of the OGC and subject
to prior approval of the National Office, may issue a State Instruction authorizing such binders to be accepted for periods longer than 60 days.

(5) Submission of Policies. (i) For Farmer Program (FP) loans secured by a first lien, the original policy or declaration page must be delivered to the County Supervisor. The original policy or declaration page will be returned to the borrower after one year using Form FmHA or its successor agency under Public Law 103-354 426-4, “Notice of Expiration of Insurance.”

(ii) For Single Family Housing (SFH) loans secured by a first lien, the original policy or declaration page must be delivered to the closing agent.

(iii) In cases where an FP or SFH loan is secured by other than a first lien and the mortgage clauses include the names of the prior mortgagees, a certificate of insurance, copy of the policy, or other evidence of insurance is acceptable.

(iv) The County Supervisor will process an advance to pay for insurance only in strict compliance with provisions of §1806.6 of this subpart.

(6) Master sets. If the master sets meet all of the requirements of this Instruction they may be accepted in lieu of an original policy for each FmHA or its successor agency under Public Law 103-354 borrower.

(i) One complete master set of the different insurance forms for policies issued by the insurance company must be on file in each County Office where the company insures property of FmHA or its successor agency under Public Law 103-354 borrowers.

(ii) The “Declaration Page” furnished by the insurance company for each borrower insured, in lieu of a complete policy, will be filed in the borrower’s case folder. When a “Declaration Page” in the form of a computer printout is used by an insurance company an endorsement on every policy issued by that company or a letter from that company will be obtained and attached to the printout. However, a letter signed by an authorized official of the company and addressed to the State Director may cover all policies issued by that company in the State. Any such endorsements or letters should clearly state that the company considers the printout to be an original “Declaration Page”. Such endorsements or letters are not necessary if the printout itself clearly states that it is an original “Declaration Page.”

(7) Name and location. The policy should contain names of all the borrowers who are owners of the property being insured, and it will be returned for correction if it does not do so. The location of the property should be so described in the policy that the property can easily be identified. The complete legal description of the property by metes and bounds is not required. Any deviation from the requirements of this paragraph must first be cleared with the National Office.

(8) Loss or damage covered. Buildings must be insured against loss or damage by fire, lightning, windstorm, hail, explosion, riot, civil commotion, aircraft, vehicles, and smoke.

(9) Effective date of insurance. If there are insurable buildings located on the property, the borrower will arrange with his agent or company to have adequate insurance in force at the time the loan, assumption, or credit sale is closed so that the policy will properly insure the borrower and the mortgagees. When new buildings are erected or major improvements are made to existing buildings, such insurance will be made effective as of the date materials are delivered to the property. The County Supervisor will make no payments from loan funds for labor or materials until the borrower has furnished adequate insurance to protect the interest of the FmHA or its successor agency under Public Law 103-354 in the buildings being erected or improved.

(10) Term. The borrower will be required to furnish insurance for a term of at least one year with evidence that a full year’s premium is paid. The term “premium” as used herein includes any assessments which may be charged to the borrower. If the assessments are of the type imposed only after a loss occurs involving property insured by the insurance company, then the borrower must present evidence (such as a letter from the company) that he currently does not owe any such assessments. The borrower may receive a discount for insuring for a longer period such as three years or five years and with an
(1) Mortgage clause. The standard mortgage clause adopted by the State must be attached to or printed in the policy, or Form FmHA or its successor agency under Public Law 103-354 426-2, "Property Insurance Mortgage Clause (Without Contribution)," must be attached to or the provisions thereof printed in the policy. A letter signed by an authorized official of an insurance company to the State Director, stating that all insurance policies the company issues in the State and in which the FmHA or its successor agency under Public Law 103-354 has a mortgage interest incorporates all of the provisions of Form FmHA or its successor agency under Public Law 103-354 426-2 may be accepted in lieu of attaching Form FmHA or its successor agency under Public Law 103-354 426-2 to each policy. If such a blanket letter is used, the FmHA or its successor agency under Public Law 103-354 will be named in the mortgage clause for direct and insured loan mortgages naming FmHA or its successor agency under Public Law 103-354 as mortgagee, whether in its own right or as trustee under a 2(f) or other agreement with a State Rural Rehabilitation Corporation.

(i) If the use of a mortgage clause, other than the standard mortgage clause (without contribution), has been made mandatory by State laws or insurance regulations, a State Instruction will be issued, after prior approval is obtained from the National Office, authorizing the use of such method.

(ii) When an approved mortgage clause is printed in the policy a "Loss Payable Clause" is acceptable provided the FmHA or its successor agency under Public Law 103-354, as mortgagee, would receive payment in case of loss even though the company would not be liable to the borrower. A "Loss Payable Clause" which contains the statement that the mortgagee is "subject to all terms and conditions of the policy" is not acceptable.

(iii) Whenever a new mortgage clause including the interest of the FmHA or its successor agency under Public Law 103-354 is issued after the policy has been in force, the new mortgage clause must be signed by an authorized agent or officer of the company that issued the policy. Form FmHA or its successor agency under Public Law 103-354 426-6, "Transmittal of Property Insurance Mortgage Clause," may be used to transmit the mortgage clause to the insurance official.

(iv) The FmHA or its successor agency under Public Law 103-354 and all other mortgagees whose interests are insured by the policy will be shown either in the mortgage clause or in the "Declaration Page" in the order of priority of their mortgages.

A) "United States of America (Farmers Home Administration or its successor agency under Public Law 103-354)" will be named in the mortgage clause for direct and insured loan mortgages naming FmHA or its successor agency under Public Law 103-354 as mortgagee, whether in its own right or as trustee under a 2(f) or other agreement with a State Rural Rehabilitation Corporation.

B) "United States of America (Farmers Home Administration or its successor agency under Public Law 103-354), as first mortgagee or as statutory agent and insurer of such mortgagee," will be named in the mortgage clause for insured FD mortgages naming the lender as mortgagee, whether the mortgage is held by the original or a subsequent lender or by the insurance fund or by FmHA or its successor agency under Public Law 103-354 under a trust agreement or declaration of trust.

C) If the designation is not identical to that set forth in paragraphs (b)(11)(iv)(A) or (B) of this section, whichever is applicable, it will be sufficient if the mortgagee is readily identifiable as the Farmers Home Administration or its successor agency under Public Law 103-354.
§ 1806.2

agency under Public Law 103-354 426-2 is attached to or the provisions thereof are printed in the policy, or a blanket letter from an insurance company incorporating the provisions of Form FmHA or its successor agency under Public Law 103-354 426-2 in all policies in which the FmHA or its successor agency under Public Law 103-354 426-2 has a mortgagee interest in effect, in accordance with paragraph (b)(11) of this section, no evidence of premium or assessment payment is required except for the first year of the loan. When a subsequent FP or section 502 RH loan is made to build, buy or rehabilitate essential buildings an endorsement to the existing policy including coverage for the property improved will be sufficient.

(2) [Reserved]

(d) Policy restrictions. (1) Any insurance on essential buildings as defined in §1806.3 having restrictions which limit the amount of collectable insurance must meet the FmHA or its successor agency under Public Law 103±354 requirements set forth below (except for the clause described in paragraph (d)(1)(iv) of this section which is never acceptable); otherwise, such restrictions must be eliminated or modified to afford the required protection.

(i) Coinsurance clause. This clause generally provides that in consideration of a reduced rate, the borrower agrees to maintain insurance on his buildings up to a specified percentage (usually 80 percent) of their value and that the company will not be liable for a greater proportion of any partial loss than the amount of insurance bears to the specified percentage of either the undepreciated replacement value or the depreciated replacement value or the depreciated replacement value (actual cash value) of the buildings at the time of the loss. When the buildings are insured for the specified percentage of their value, the company, in the event of a partial loss, will be liable for the full amount of the loss not to exceed the amount of insurance. A coinsurance clause can be accepted only where the amount of insurance is at least equal to the specified percentage of either the undepreciated replacement value or the depreciated replacement value (actual cash value). For example, an 80 percent coinsurance clause can be accepted only where the amount of insurance on each insured building is at least equal to 80 percent of the appropriate replacement value of the insured building.

(ii) Three-fourths’ value clause. This clause provides that the liability of the company shall be limited to three-fourths of the depreciated replacement value of the buildings covered at the time of the loss, not to exceed the amount of insurance. This clause may be accepted if the unpaid balance of the loan is not greater than three-fourths of the depreciated replacement value of the building and the amount of insurance is at least equal to the unpaid balance of the loan and any prior liens and no building is insured for more than three-fourths of its depreciated replacement value.

(iii) Loss deductible clause. (A) For all loans other than RRH, RCH, and LH organizations this clause generally provides that loss to each building to the extent of the limitation is not recoverable. The company is liable only for loss to each building in excess of such limitation stated in the clause. This clause may be accepted where the limitation does not exceed $150, or one percent of the insurance coverage whichever is greater. In no case, however, may the limitation on any one building exceed $500.00.

(B) For RRH, RCH, and LH organization loans this clause generally provides that loss to each project to the extent of the limitation is not recoverable. The company is liable only for loss to each project in excess of such limitation stated in the clause. This clause may be accepted where the limitation does not exceed the option shown below that is chosen by the borrower and agreed to by the Loan Approving Official and properly annotated in the borrower file. The borrower and FmHA or its successor agency under Public Law 103-354 Official should consider the economic impact to the project when selecting the appropriate option.

(1) Option 1—Up to one-fourth of one percent (0.0025) of the insurable value. Maximum deductible $5,000.00.
(2) Option 2—Up to a maximum deductible of $500 on any project with an insurable value not exceeding $200,000.
(3) Option 3—Option 1 may be chosen and increased above the maximum deductible by an amount equivalent to funds specifically escrowed in the project replacement reserve account as an offset to the increased deductible.
(4) Option 4—Option 2 may be chosen and increased above the maximum deductible by an amount equivalent to funds specifically escrowed in the project replacement reserve account as an offset to the increased deductible.
(5) The funds used to increase the deductible in Option 3 or Option 4 may be from project funds if it does not create an unsecure financial situation for the project. Also, non-project funds may be used for Option 3 or 4 and then repaid by withdrawal from the project at the rate of 75 percent of the annual insurance premium savings earned by the amount of escrow deposit, up to the amount deposited.
(6) The funds escrowed to increase the authorized deductible will be placed in the project reserve account as an increased amount in and above the amount required by the Loan Agreement/Resolution and so annotated in the borrower’s accounting system.
(iv) Three-fourths’ loss clause. This clause provides that the company will not pay more than three-fourths of any loss, nor more than three-fourths of the amount of insurance in force. This clause is never acceptable and must be eliminated.
(v) Deferred loss payable clause. This clause provides that, if the amount payable under the policy for any loss to any building insured shall be in excess of a specified portion, (usually 60 percent) of the amount of insurance on such building, the company will withhold from its initial loss payment any sum in excess of the specified portion of the amount of insurance on such building. If the building sustaining such loss is repaired or replaced within six months from the date of the fire and at or within 300 feet of the original location, as described in the policy, the company upon receipt of evidence to that effect from the insured will pay the full balance withheld from the initial payment, provided the amount expended in repairing or replacing the building damaged or destroyed will equal or exceed the amount of loss as determined under the terms of the policy. Failure to repair or replace any insured building within the time and manner provided will constitute acceptance of the initial payment as full and final settlement under the policy with respect to the loss. This clause may be accepted if the amount of insurance is for the full depreciated replacement value (actual cash value) of the building and the unpaid balance of the loan and any prior lien(s) is not greater than the initial loss payment made by the company.
(vi) Construction specifications and use conditions. If the insurance policy contains clauses which specify certain standards of construction or prescribes certain uses of the property for the insurance to be valid, the policy is acceptable only if the property meets such specifications or conditions at the time of acceptance. For example, if the policy provides that the chimney be constructed of a certain type of material, the County Supervisor should be assured that the required material has been used, or if the policy provides that farming operations are not carried out on the premises he should be assured that this condition is met.
(2) Policies generally will not be accepted if, under the terms of the policies or local laws, contributions or assessments may be made against the FmHA or its successor agency under Public Law 103–354. However, policies which impose assessments on the borrower may be accepted only if the FmHA or its successor agency under Public Law 103–354 mortgage will be recorded prior to any failure of the borrower to pay any such assessments. Policies also will not be accepted if, by their terms or other conditions, loss payments are contingent upon collective action by the Board of Directors, or the stockholders, or the members.
(e) Buildings on leaseholds. The policy will indicate that the insured is the lessee or tenant and not the owner of the buildings securing the FmHA or its successor agency under Public Law 103–354 loan; or, if he is the owner of the building on the leased land, the policy will indicate that the insured is the
§ 1806.3 Coverage requirements.

The County Supervisor should encourage the borrower for his own protection to insure for their depreciated replacement value (actual cash value) all essential buildings. Essential buildings include the dwelling and any other buildings that are necessary for the operation of the property or that provide income to assure orderly repayment of the loan. If insurance is less than the depreciated replacement value of all essential buildings, the County Supervisor will see that the coverage is obtained on one or more of the most essential buildings. The minimum amount of coverage will be furnished as prescribed below:

(a) Loans secured by a first lien. (1) When the unpaid balance of the FMHA or its successor agency under Public Law 103-354 loan secured by a first lien is equal to or greater than the depreciated replacement value of the essential buildings, or the cost of adequate essential buildings which can be constructed for amounts less than the depreciated replacement value of the existing buildings to be insured, the amount of insurance required will be the lesser of (i) their depreciated replacement value, or (ii) the cost of constructing adequate essential buildings. For example, if insurance is available in only multiples of $1,000, the minimum insurance required on an essential building valued at $6,600 would be $7,000, and that required on an essential building valued at $6,400 would be $6,000.

(2) When the unpaid balance of the loan is less than the sum of the depreciated replacement value of the essential buildings to be insured, the total amount of insurance must be at least equal to the lesser of (i) the unpaid balance of the loan, or (ii) the cost of adequate essential buildings which can be constructed for amounts less than the depreciated replacement value of the existing buildings to be insured.

(3) When, by the use of loan funds or otherwise, buildings are erected or substantial improvements are made to essential buildings, the amount of insurance will be adjusted in accordance with paragraphs (a)(1) or (2) of this section, whichever is applicable.

(b) Loans secured by other than first liens. The amount of insurance on buildings in the case of FMHA or its successor agency under Public Law 103-354 loans secured by other than a first lien will be the same as required in paragraph (a) of this section, with the understanding that the unpaid balance of the loan will be deemed for this purpose to be the amount of the total real estate mortgage indebtedness owed all prior mortgagees named in the mortgage clause, plus the debt to the FMHA or its successor agency under Public Law 103-354 which is secured by real estate mortgage.

(c) Exception of buildings from insurance.

(1) Insurance will not be required on a building:

(i) That is not essential.
(ii) In such a state of disrepair that the cost of insurance would be prohibitive.
(iii) Which has a depreciated replacement value of $2,500 or less.
(iv) Which is being or has been repaired with a section 504 loan of $7,500 or less. Families receiving section 504 loans should be encouraged but not required to carry insurance on their home.
(v) On LH security property which was not built or repaired with FMHA or its successor agency under Public Law 103-354 loan funds provided that the State Director determines that the
RHS, RBS, RUS, FSA, USDA

§ 1806.4 Examining and general servicing of insurance.

(a) Examination by county office of policies, endorsements, binders, and other evidence of insurance. Upon receipt in the County Office of a policy, endorsement, binder, or other evidence of insurance, submitted by a borrower, it will be examined promptly for compliance with the requirements of this Instruction. If the evidence of insurance is found to be acceptable, it will be placed in the borrower's case folder.

1. Unacceptable policies. (i) When the borrower furnishes any policy or other evidence of insurance which does not meet the requirements of this Instruction such policy or other evidence of insurance will be returned to the borrower with the reasons why it is not acceptable.

(ii) If the borrower does not furnish acceptable insurance by the date the previous policy expired or was canceled, the County Supervisor will proceed as provided in § 1806.6.

(2) Expiration Records and Notices.

After the insurance has been accepted, the expiration date will be inserted on Form FmHA or its successor agency under Public Law 103-354 1905±1, “Management System Card—Individual,” or Form FmHA or its successor agency under Public Law 103±354 1905±5, “Management System Card—Individual (Rural Housing Only),” or Form FmHA or its successor agency under Public Law 103±354 1905±10, “Management System Card—Association or Organization,” or Form 1905±12, “Monthly Expirations,” as provided in FmHA or its successor agency under Public Law 103±354 Instruction 1905-A for servicing the renewal of insurance.

(i) In cases other than those involving FP or section 502 RH borrowers, the County Supervisor will notify the borrower of the expiration of his insurance at least 30 days in advance of such expiration unless he has received written evidence that the insurance has been renewed.

(ii) FP and Section 502 RH borrowers will be informed during the tenth month after the date of loan closing of their responsibility to carry insurance. Form FmHA or its successor agency under Public Law 103±354 426±4 will be sent to these borrowers, regardless of whether there is evidence that the insurance has been renewed. Thereafter, the County Supervisor will not be required to further determine whether
the borrower has adequately maintained insurance; however, if a further notice of expiration is received in the County Office, the County Supervisor will again notify the borrower by using Form FmHA or its successor agency under Public Law 103-354 of his responsibility.

(3) Release of mortgage interest. When the borrower’s loan has been paid in full and the satisfaction or release of the mortgage has been executed, the County Supervisor or his delegate will execute the following Release of Mortgage Interest on the mortgage clause attached to the policy or other evidence of insurance and transmit it with the policy or other evidence of insurance, the paid-in-full note, and the satisfaction to the borrower:

It is understood and agreed that the interest of the United States of America in the property insured hereunder ceased as of (Date of Final Payment), and that the Government shall have no interest in any loss or damage to such property occurring thereafter.

(4) Lost or misplaced policies. When an unexpired insurance policy or other evidence of insurance is lost or misplaced, it will be necessary to obtain a replacement policy or other evidence of insurance. The County Supervisor is authorized to sign a Lost Policy Receipt on behalf of the FmHA or its successor agency under Public Law 103-354. For FP and section 502 RH loans, this paragraph applies only during the period the policy is retained in the County Office.

(5) Disposition of expired and canceled policies. An expired or canceled policy or other evidence of insurance will be returned to the borrower, unless there is a loss settlement pending.

(b) Special servicing of insurance. (1) Vacancy or unoccupancy—tenant occupancy—increased hazard. If the County Supervisor has knowledge that insured property is vacant or unoccupied or that the ownership or occupancy has changed from owner to tenant, or that the hazards otherwise are increased, he will examine the policy to determine whether the policy permits such conditions. Unless the insurance permits such conditions, the County Supervisor will immediately notify the company or agent in writing. In any case where there is an additional premium due because of vacancy, unoccupancy, tenant occupancy, or other increased hazard, and upon demand to FmHA or its successor agency under Public Law 103-354 from the company or agent because the borrower cannot, or will not, pay the additional premium, it may be paid in accordance with FmHA or its successor agency under Public Law 103-354 Instruction 2024-A, to the company or agent. For FP and section 502 RH borrowers, property insurance will not be obtained except in cases where an unusual and severe hazard exists and insurance is necessary to protect the interests of the Government.

(2) Transfer of property. (i) When a borrower or transferee requests the consent of FmHA or its successor agency under Public Law 103-354 to a transfer of the security property which already has been made, or when the County Supervisor learns that any such transfer has been made, he will immediately inform the transferee that the mortgage requires the owner to provide and maintain adequate insurance acceptable to, and with loss payable to, FmHA or its successor agency under Public Law 103-354 as mortgagor. The transferee may obtain a new insurance policy or the transferor may have the insurance company or agent issue an endorsement to the current insurance policy changing the name of the assured to that of the transferee. If a new insurance policy is obtained, the old policy or other evidence of insurance will be returned to the transferor unless there is an unsettled loss. If there is an unsettled loss, the policy or other evidence of insurance will not be returned until the claim has been settled. The County Supervisor, with the concurrence of the State Director and the OGC, will notify the borrower and transferee that acceptance of the new policy or endorsement will not constitute consent by the Government to the transfer even though the Government is protected by a loss payable clause in such an insurance policy.

(ii) In a transfer with assumption, insurance will be required in the same amount and according to the same provisions as for an initial loan of the same type.
§ 1806.5 Losses.

(a) Protecting property. It is the responsibility of the borrower to immediately notify the County Supervisor and insurance company or agent of any loss or damage to insured property and collect the amount of the loss. When the County Supervisor learns of a loss to property which secures an FmHA or its successor agency under Public Law 103-354 loan, he will:

(1) Check the borrower’s casefile for an insurance policy or other evidence of insurance. When a policy or other evidence of insurance has not been retained by the FmHA or its successor agency under Public Law 103-354, such as for FP and section 502 RH borrowers, the County Supervisor will determine whether the property was insured and whether FmHA or its successor agency under Public Law 103-354 was named as mortgagee in the insurance policy.

(2) Determine that the borrower has taken such steps as are necessary to protect the interest of the FmHA or its successor agency under Public Law 103-354 in the security property against further damage. When serious problems arise with respect to protecting the property from further damage, the borrower cannot or will not arrange adequate protection for the property, or when legal action appears to be necessary, the County Supervisor will arrange for emergency protection and immediately refer the case with complete information to the State Director.

(b) Loss covered by insurance. (1) If the FmHA or its successor agency under Public Law 103-354 is listed as mortgagee in the insurance policy, the County Supervisor will collect the amount of the loss and may consent to the borrower using funds to repair or replace damaged or destroyed property or to apply loss proceeds to his loan account or to any prior liens that might exist in the order of their priority.

(2) If the FmHA or its successor agency under Public Law 103-354 is not listed as mortgagee in the insurance policy, the County Supervisor will contact the borrower to determine whether he has received the loss proceeds. If the borrower has received the loss proceeds but not yet paid for improvements to repair or replace the property, or has not received the loss proceeds the County Supervisor will:

(i) Notify the insurance company in writing of the FmHA or its successor agency under Public Law 103-354’s interest in the security property and request that the loss proceeds be made payable jointly to the FmHA or its successor agency under Public Law 103-354 and the borrower.

(ii) Inform the borrower of his responsibility for repairing or replacing the damaged or destroyed property or for authorized disposition of the loss proceeds as outlined in paragraph (b)(1) of this section.

(c) Loss drafts—when loan is secured by a first mortgage. (1) A loss draft which in the opinion of the County Supervisor represents a satisfactory adjustment of the loss will be endorsed immediately without recourse and deposited in a supervised bank account to be used in repairing or replacing the damaged building, except:

(i) Where the amount of the loss is $1,000 or less and the borrower will use the funds for repairing or replacing an essential building, the loss draft may be endorsed without recourse and given to the borrower upon satisfactory proof that the repairs or replacements have been made, or upon satisfactory assurance that the work will be performed.

(ii) When (A) the essential buildings are not to be repaired or replaced and other suitable buildings are not to be erected, or (B) a balance remains after all repairs, replacements, and other authorized disbursements have been made, such insurance funds will be applied on prior liens or as an extra payment to the borrower’s loan accounts secured by the real estate or disposed...
of in accordance with the general principles applicable to the use of proceeds from the sale of a part of the security contained in applicable security servicing regulations for the type loan involved.

(iii) An insurance payment for loss or damage to a nonessential building the borrower voluntarily insured will be applied on prior liens, or to current delinquencies to FmHA or its successor agency under Public Law 103-354 or as an extra payment on the borrower’s loan accounts secured by real estate, disposed of as authorized by the State Director in accordance with the general principles applicable to the use of proceeds from the sale of a part of the security contained in applicable security servicing regulations for the type loan involved, or used for other purposes as authorized by the State Director if the loan is adequately secured and the loan account is current.

(iv) When the indebtedness secured by the insured property has been paid in full or the draft is in payment for loss of property on which the FmHA or its successor agency under Public Law 103-354 has no claim, a loss draft which includes the FmHA or its successor agency under Public Law 103-354 as a joint payee may be endorsed without recourse and delivered to the borrower.

(d) Loss drafts—When loan is secured by other than first mortgage. (1) When the loss draft does not include the interest of a prior mortgagee, it will be processed as provided in paragraph (c) of this section.

(2) When the loss draft includes the interest of a prior mortgagee, the County Supervisor is authorized to endorse and process the draft as follows:

(i) When the prior mortgagee will permit the use of such loss funds to repair or replace the damaged building, the draft may be endorsed without recourse upon satisfactory proof that the repairs or replacements have been made or upon satisfactory assurance that the work will be performed.

(ii) When the amount of the draft does not exceed the amount of the indebtedness then secured by the prior mortgage as stated in writing by the holder of the prior mortgage, and the holder of the prior mortgage has agreed in a written statement to the County Supervisor that he will apply such funds as a payment on the borrower’s prior mortgage indebtedness, the draft may be endorsed without recourse.

(iii) When the amount of the draft exceeds the amount of the indebtedness then secured by the prior mortgage, as stated in writing by the holder, and he has agreed in writing to pay such indebtedness from the loss funds, the draft will be endorsed without recourse only after all parties named as payees in the draft have signed an agreement to deliver the draft “in escrow” to a bank acceptable to the named parties. The agreement will specify the manner in which the funds will be disbursed by the bank, as escrow agent, to the several mortgagees named in the draft. After the loss funds have been collected by the bank, it will issue cashier’s checks in the manner prescribed in the escrow agreement (see exhibit A for suggested form). If this procedure is found to be impractical in an individual instance, the State Director may authorize an alternative method for disbursing the loss funds to protect the Government’s financial interest.

(iv) Drafts which have been endorsed by all other payees will be endorsed immediately without recourse. Such drafts or other loss funds will be processed in accordance with the methods described in paragraph (c) of this section.

(e) Servicing insurance losses under special circumstances—(1) Foreclosures and voluntary conveyances. Losses on properties in process of foreclosure or voluntary conveyance will be handled with the advice of the OGC. If the necessary cooperation of the borrower cannot be obtained, the State Director, with the advice of the OGC, will determine the proper action to be taken. To the extent feasible from a legal and practical standpoint, all loss payments should be received for a damaged or destroyed building and applied on the borrower’s real estate indebtedness before title to the property is taken by the Government through foreclosure sale, voluntary conveyance, or otherwise, unless absolute assignment has been made by the borrower to the Government of all loss funds due from the insurance company.
(2) Subrogation agreements. When a company claims nonliability to the borrower and subrogation to the rights of the FmHA or its successor agency under Public Law 103-354, the County Supervisor will forward a full report of the facts in the case to the State Director. The State Director will upon advice from OGC, instruct the County Supervisor regarding further action to be taken.

(f) Repairs and replacements. When any loss payments have been deposited in a supervised bank account, all repairs and replacements done by or under the direction of the borrower, or by contract, will be planned, performed, inspected, and paid for in the same manner as improvements financed with loan funds.

(g) Completing adjustment. The borrower must complete the adjustment of the loss with the company or its authorized representatives. The County Supervisor, upon request of the borrower, may consult with the borrower regarding the loss adjustment, but will not enter into negotiations with insurance adjusters or company representatives relative to the adjustment or settlement of losses on borrower property, or make any commitments, or sign any forms in connection with the adjustment of the loss. The FmHA or its successor agency under Public Law 103-354 will not waive any rights which it may have against the company except when the borrower's account or the FmHA or its successor agency under Public Law 103-354 claim has been paid-in-full.

(1) The County Supervisor will maintain a proper followup on all losses until satisfactory settlement has been made by the company.

(2) Where the County Supervisor has evidence that the adjustment agreed to by the borrower is significantly less than the amount of damage to which the borrower is entitled under the terms of the policy, the loss draft accompanied by a report will be sent to the State Director so that he may reopen the adjustment, if he considers it in the interest of the FmHA or its successor agency under Public Law 103-354 to do so.

(3) When it appears evident that the amount of the loss is $1,000 or less, the County Supervisor may rely on estimates of contractors, building supply firms, reliable carpenters, or other evidence rather than personal inspection in determining whether the adjustment is equitable and the Government's interest is protected.

(h) Reinstatement after loss. In cases where insurance in the amount of the loss is not reinstated automatically by the provisions of the policy, it will be the responsibility of the County Supervisor to have the borrower reinstate as much of the insurance as may be necessary to fulfill the requirements of the FmHA or its successor agency under Public Law 103-354.

(i) Losses not covered by insurance. When a loss occurs and insurance is not in force, the County Supervisor will:

(1) Inform the borrower that he has violated the security instrument by not providing insurance coverage and that it is his responsibility to make the needed repairs or replacements.

(2) If the borrower is unable or unwilling to make needed repairs or replacements from his own resources, the County Supervisor will submit complete information to the FmHA or its successor agency under Public Law 103-354 official authorized to determine whether FmHA or its successor agency under Public Law 103-354 will or will not continue with the loan. The County Supervisor's report will include recommendations on the following items:

(i) The advisability and possibility of making a subsequent loan to pay for needed repairs.

(ii) Subordination of the FmHA or its successor agency under Public Law 103-354 real estate lien to permit the borrower to obtain funds for needed repairs from another source.

(iii) The possibility of the borrower obtaining funds secured by a junior lien from another source.

(iv) Whether an advance is needed to protect the Government's interest in the property.

(3) If the loan will not be continued with the borrower, it must be serviced in accordance with the applicable Instructions.

(4) If the borrower has improperly disposed of loss proceeds, the County Supervisor will refer the case with complete information and recommendations to the State Director.
§ 1806.6 Failure of borrower to provide insurance.

When a borrower fails to provide and maintain property insurance which meets the requirements set forth in §1806.2 of this subpart, every effort will be made to have the borrower provide coverage acceptable to FmHA or its successor agency under Public Law 103-354. It will be emphasized that under the terms of the security instrument, it is the borrower’s responsibility to provide and maintain proper insurance coverage. Existing borrowers required to escrow will be notified by letter at least 90 days prior to initiating escrowing for insurance. Failure to provide insurance is a nonmonetary default and will be a consideration in determining if the loan is to be continued. For FP or SFH borrowers not required to escrow, the County Supervisor will obtain insurance coverage and voucher for the insurance premium only in cases where: An unusual and severe hazard, such as recurring fires or unstable ground conditions, exists, or, an SFH borrower on a moratorium is unable to pay the insurance premium and the borrower requests that FmHA or its successor agency under Public Law 103-354 pay the premium. For SFH borrowers required to escrow, force placed insurance will be obtained if the borrower fails to provide acceptable insurance. Borrowers being phased into escrow will be given at least 30 days to obtain coverage, after which force placed insurance will be obtained. If the escrow account contains insufficient funds to pay the insurance when due, the County Supervisor will request the borrower to pay an amount equal to the difference between the premium due and the escrow balance in a lump sum within 30 days after notification. If the borrower fails to remit the amount requested, the amount will be advanced and charged to the borrower’s account as a recoverable cost. The amortization period for an advance due to an escrow shortage will be one year. Insurance coverage shall be provided continuously unless the property is acquired by FmHA or its successor agency under Public Law 103-354. The cost of obtaining such a policy shall be advanced and charged to the borrower’s account as a recoverable cost. Amortization of the charge will be handled in accordance with §1951.310 of subpart G of part 1951 of this chapter. If a borrower indebted for other than an FP or SFH loan fails to provide acceptable insurance, the Servicing Official will take the following action:

(a) Expired policies. (i) The County Supervisor will request the insurance agency or broker who issued the expired policy to issue a new policy which is acceptable to the FmHA or its successor agency under Public Law 103-354.

(ii) The new policy will be effective as of the date of the County Supervisor’s contact with the insurance agency or broker or as soon thereafter as possible, and will be for a term of one year. If State insurance regulations require a longer term, the State Director will issue a State Instruction authorizing County Supervisors to obtain policies for the minimum period permitted by State insurance regulations.

(iii) Insurance coverage on each building usually will be the same as shown on the expired policy if it meets or exceeds FmHA or its successor agency under Public Law 103-354 requirements. If the coverage shown on the expired policy does not meet FmHA or its successor agency under Public Law 103-354 requirements, proper coverage will be obtained.

(iv) The County Supervisor will, if possible, have an automatic renewal provision included in the policy.

(v) If the borrower refuses to pay the insurance premium with his own funds or arrange with the agent for subsequent payment by premium not or otherwise, the County Supervisor will pay the amount of the insurance premium in accordance with FmHA or its successor agency under Public Law 103-354 Instruction 2024-A. The amount of the...
premium payment will be charged to the borrower’s FmHA or its successor agency under Public Law 103-354 account with the highest lien priority as a recoverable cost item.

(vi) If the insurance agency or broker who issued the expired policy refuses to issue a new policy, the County Supervisor will have the borrower designate in writing another insurance agency or broker from whom the insurance can be obtained.

(vii) After the County Supervisor and the borrower exhaust all efforts to obtain acceptable insurance, the County Supervisor will request advice from the State Office as to companies issuing acceptable policies in the State and from which the borrower might be able to obtain an acceptable policy. If the borrower still cannot obtain an acceptable policy from any such company, and the determination has been made to continue with the borrower, the County Supervisor will temporarily accept from the borrower the available insurance policy the FmHA or its successor agency under Public Law 103-354 determines most nearly conforms to the requirements of § 1806.2 of this subpart.

(A) In making this determination, the following deficiencies become more objectionable in the order from (1) to (5) paragraphs (a)(1)(vii)(A) of this section:

1. A policy written for an initial term of less than one year.
2. A policy which will insure the most essential buildings but will not cover all essential buildings.
3. A policy which covers major risks such as fire and lightning, but does not include one or more of the other risks specified in §1806.3.
4. A policy for a lesser amount of insurance than is required by §1806.3.
5. A policy that is issued by a company which is not licensed to do business in the State or otherwise does not meet the requirements of §1806.3.

(B) Whenever adequate insurance becomes available, the County Supervisor will require the borrower to deliver to the County Office an acceptable insurance policy. The temporary policy will be returned to the borrower for cancellation after all losses claimed under the policy have been settled.

(C) If the borrower is unable to furnish a property insurance policy of any kind, he is still responsible for the debt in the event of loss.

(D) If the County Supervisor accepts an inadequate insurance policy under these conditions or the borrower fails to furnish any insurance policy, the County Supervisor will include in his report to the State Director an explanation of the efforts he and the borrower made to obtain acceptable insurance and his justification for accepting an inadequate policy, or for not obtaining an insurance policy of any kind.

(b) Insurance canceled for reasons other than nonpayment of insurance premium.

(1) The County Supervisor, immediately upon receipt of a 10-day notice of cancellation for a policy, will urge the borrower to provide acceptable insurance.

(2) If the borrower fails to provide acceptable insurance before the cancellation is effective, the County Supervisor will contact the insurance agency or broker who issued the insurance policy to determine the reasons for cancellation and, if possible, have the policy reinstated.

(3) If the insurance company will not reinstate the policy, the County Supervisor will attempt to obtain an acceptable insurance policy from another agency or broker in accordance with the provisions of paragraph (a) of this section.

(c) Insurance canceled for nonpayment of premium.

(1) The County Supervisor, immediately upon receiving a 10-day cancellation notice for a policy, will, if possible, contact the borrower in an effort to have him pay the insurance premium from his own funds or arrange with the agent for subsequent payment by premium note, or otherwise.

(2) If the borrower does not pay or arrange to pay the premium before the policy cancellation is effective, the County Supervisor will, before the cancellation becomes effective, notify the insurance company or broker by certified mail (return receipt requested), that the FmHA or its successor agency under Public Law 103-354 as mortgagee (or trustee) will pay the premium for one year to continue the policy in effect for that period. The County Supervisor will, in accordance with FmHA or
its successor agency under Public Law 103-354 Instruction 2024-A, pay the amount of the premium for a period of one year. The amount of the premium will be charged to the borrower's loan account as a recoverable cost item.

(3) If a property insurance mortgage clause other than Form FmHA or its successor agency under Public Law 103-354 426-2 is used in connection with the policy and the insurance company or broker refuses to accept payment from the FmHA or its successor agency under Public Law 103-354 in this manner to reinstate or continue the policy, the County Supervisor will attempt to obtain an acceptable insurance policy from another insurance company or broker in accordance with the provisions of paragraph (a) of this section.

Subpart B—National Flood Insurance

SOURCE: 39 FR 17093, May 13, 1974, unless otherwise noted.

§ 1806.21 General.

(a) Authority. This subpart prescribes the policies and procedures to be followed in implementing the National Flood Insurance Act of 1968 as amended by the Flood Disaster Protection Act of 1973. The provisions of these Acts are applicable to Farmers Home Administration (FmHA) or its successor agency under Public Law 103-354 authorities permitting financing of buildings of any type now located in or to be located in special flood or mudslide prone areas as designated by the Federal Insurance Administration (FIA) of the Department of Housing and Urban Development (HUD), and any machinery, equipment, fixtures and furnishings contained or to be contained therein.

(b) Background. The Congress has found that annual losses throughout the nation caused by floods and mudslides are increasing at an alarming rate, largely as a result of the accelerated development and concentration of populations in areas subject to floods and mudslides. The availability of federal funds in the form of loans, grants, guarantees, insurance and other forms of financial assistance are often determining factors in the utilization of land and the location and construction of industrial, commercial and residential facilities.

(c) Scope. The National Flood Insurance Program (the program) was authorized and created because the private insurance industry has been unable to provide insurance coverage at reasonable prices for such natural disasters as floods and mudslides. Subsidized and affordable insurance has been made available under the Act through an agreement between the Federal Insurance Administration and
§ 1806.22 Areas of responsibility.

(a) Federal Insurance Administration (FIA). (1) Identify and publish information with respect to all areas in the country which are subject to floods and mudslides and designate those areas on Flood Hazard Boundary maps.

(2) Notify affected communities of their designations and encourage them to adopt and enforce land use and other control measures and to adopt ordinances or laws which will regulate and control construction in areas designated as having special flood or mudslide hazards.

(3) Make flood insurance available at reasonable rates in sufficient amounts, within the statutory limits, to adequately protect owners against loss to their buildings and contents when those buildings are located in or will be located in designated special flood and mudslide prone areas in communities participating in the National Flood Insurance Program.

(b) Farmers Home Administration or its successor agency under Public Law 103-354. The State Director, after being notified by the FmHA or its successor agency under Public Law 103-354 National Office or FIA of designated flood or mudslide hazard areas and receiving flood hazard boundary maps identifying the hazard areas, FIA insurance rate charts, or other information concerning the program, will inform the appropriate County Supervisors and provide them the maps, rate charts, and other relevant information concerning the program in areas they serve. Permanent records indicating the date a community was notified as containing identified flood hazard areas, communities participating in the program, and communities eligible to participate but not participating in the program will be maintained in the State Office. County Supervisors will notify, in writing, those borrowers whose insurable buildings are located in designated flood or mudslide hazard areas of the availability of national flood insurance and encourage them to obtain flood insurance to protect their and the Government’s financial interest.

(c) Lender. The lender must determine whether real property is located in an area identified as having special flood or mudslide hazards and cannot discharge the responsibility merely by obtaining a self-certification from the applicant that the property is not located in an area having special flood hazards.

§ 1806.23 Definitions.

For the purpose of this subpart, the following definitions apply:

(a) Financial assistance means any form of direct, insured or guaranteed loan, including reamortization and assumption on new terms of any loan, any form of grant, or other form of direct or indirect assistance extended by the FmHA or its successor agency under Public Law 103-354.

(b) Financial assistance for acquisition or construction purposes means any form of Federal financial assistance which is intended in whole or in part for the acquisition, construction, reconstruction, or substantial improvement of any building and for any machinery, equipment, fixtures and furnishings contained or to be contained in such buildings.

(c) Community. Communities are required to participate in the National Flood Insurance Program within 1 year after notification of its formal identification as a community containing one or more special flood and mudslide prone areas, or by July 1, 1975, whichever is later, or be denied Federal financial assistance or Federal-related financial assistance for acquisition or construction purposes in such areas. Communities wishing to qualify for the program may submit a completed application to: Administrator, Federal Insurance Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410.

(d) Eligible community means a community in which the Administrator of
§ 1806.24 Eligibility.

In addition to an applicant meeting the requirements for the type of financial assistance requested, the following requirements for eligibility of applicants for financial assistance for acquisition and construction purposes in designated special flood and mudslide prone areas must be met:

(a) If flood insurance is available, to be eligible after March 1, 1974, the applicant must have purchased a flood insurance policy at the time the loan or grant is closed.

(b) Applicants will not receive financial assistance in those communities that have been notified as having special flood and mudslide prone areas and where flood insurance is not available within 1 year after such notification or by July 1, 1975, whichever is later.

§ 1806.25 Conditions.

FmHA or its successor agency under Public Law 103–354 financial assistance may be extended to eligible applicants meeting the eligibility requirements of §1806.24 of this subpart, provided the following conditions are also met:

(a)(i) Dwelling and multi-unit housing facilities.

(i) If the financial assistance is to buy a dwelling or multi-unit housing facility:

(ii) The first floor elevation of the habitable space of the dwelling or housing unit must be above the 100-year flood level.

(ii) The housing must be served by public utilities and facilities, such as sewer, gas, electrical and water systems that are located and constructed to minimize or eliminate flood damage, or have an onsite water supply system and waste disposal system located so as to avoid impairment of such systems and contamination from the waste disposal system to the water supply system from flooding.

(2) If the financial assistance is to build or provide substantial improvement, the requirements of paragraph (a)(1) of this section must be met and all construction must meet requirements of the applicable development standards, and:

(i) A building permit must be issued by the appropriate governing officials having jurisdiction in the area and compliance must be had with the zoning code or other established legal requirements of the area for reducing or eliminating flood or mudslide damage.
(ii) The structure must be designed and anchored to prevent flotation, collapse or lateral movement of the structure.

(iii) Construction materials and utility equipment that are resistant to flood damage must be used.

(iv) Construction methods and practices that will minimize flood damage must be followed.

(3) If the financial assistance is to make minor repairs, the conditions of paragraphs (a)(1) (i) and (ii) and (2) (i), (ii) and (iii) of this section must be met or the building must have existed on the site prior to the date the area was identified as having special flood or mudslide hazards and the loan approval official must determine that the dwelling is suitable as a residence.

(4) When applications for financial assistance are received in areas identified as having special flood and mudslide hazards, the loan approval official will consider the expected severity and frequency of floods and mudslides in determining whether any housing loans should be made in the area. He should be sure, if loans are made, that the objectives of the loans can be accomplished and the Government's financial interest will be adequately protected.

(b) Nonresidential buildings. Construction plans and specifications for new buildings or improvements to existing buildings must comply with flood plain area management or control laws, regulations or ordinances.

(c) Flood insurance coverage. (1) Any property on which flood insurance is required must be covered by such insurance during its anticipated economic and useful life in an amount at least equal to its development or replacement cost (except estimated land cost), or to the maximum limit of coverage made available with respect to the particular type of property under the National Flood Insurance Program, whichever is less. However, if the financial assistance provided is in the form of a loan, the amount of flood insurance required need not exceed the outstanding principal balance of the loan and need not be required beyond the term of the loan.

(2) The contents of a building must be insured separately from a building but coverage cannot be written on the contents of a three-walled machinery shed or similar type open building.

(3) Flood insurance shall not be required on any state owned property that is covered under an adequate state policy of self-insurance satisfactory to the Secretary of HUD, who will publish a list of states with such policies.

(4) It will be emphasized that under the terms of the security instrument it is the borrower's responsibility to provide and maintain proper flood insurance coverage. If flood insurance is not provided on any property for which it is required, the flood insurance premium will be paid to protect the Government's security interest. For borrowers required to escrow for flood insurance, payment of the premium will be handled in accordance with § 1806.28 of this subpart. Existing borrowers required to escrow will be notified by letter at least 90 days prior to initiating escrowing for flood insurance. If FHA or its successor agency under Public Law 103-354 pays the flood insurance premium for borrowers not required to escrow, the cost will be charged to the borrower's account as a recoverable cost. Failure to provide flood insurance is a nonmonetary default and will be a consideration in determining if the loan is to be continued.

§ 1806.28

State Director will attempt to resolve any problems concerning the flood insurance program in the state with the Servicing Company. Flood hazard boundary maps, insurance rate tables, the insurability of specific structures, and other information concerning the program may be obtained from the Servicing Company. Difficulties in administering the program which the State Director is unable to resolve should be referred to the National Office for Assistance.

§ 1806.28 Borrowers required to escrow.

For borrowers required to use escrow accounts for the payment of real estate taxes and insurance, the flood insurance premium will be paid when due from funds contained in the escrow account. If the escrow account contains insufficient funds to pay the flood insurance premium when due, the County Supervisor will request the borrower to pay an amount equal to the difference between the premium due and the escrow balance in a lump sum within 30 days after notification. If the borrower fails to remit the amount requested, the amount will be advanced and charged to the borrower's account as a recoverable cost. The amortization period for an advance due to an escrow shortage will be one year. Amortization of the charge will be handled in accordance with §1951.310 of subpart G of part 1951 of this chapter. When a borrower has more than one loan secured by the real estate on which the flood insurance premium is being paid, the advance will be charged to the initial or lowest numbered loan.

[56 FR 6946, Feb. 21, 1991]

EXHIBIT A TO SUBPART B TO PART 1806—
COVERAGE AND PREMIUM RATES

1. The following table sets forth the limits of coverage available under the program:

<table>
<thead>
<tr>
<th>Type of structure</th>
<th>Structure coverage</th>
<th>Contents of coverage</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Subsidized</td>
<td>Total a</td>
</tr>
<tr>
<td>Single family, residential</td>
<td>$35,000</td>
<td>$70,000</td>
</tr>
<tr>
<td>All other, residential</td>
<td>100,000</td>
<td>200,000</td>
</tr>
<tr>
<td>All nonresidential</td>
<td>100,000</td>
<td>200,000</td>
</tr>
</tbody>
</table>

aFor Alaska, Hawaii, and the Virgin Islands, the following limits of coverage apply: Structure coverage for one family residential is $50,000 subsidized and $100,000 total coverage, and structure coverage for other residential is $150,000 subsidized and $300,000 total coverage.
bIncludes hotels and motels with normal occupancy of less than 6 months.

Coverage in amounts exceeding the subsidized limits is available only after an actuarial cost has been established and flood insurance rate may be issued.

Contents of a building must be insured separately from the building. Therefore, coverage cannot be written on the contents of a building.

EXHIBIT B TO SUBPART B TO PART 1806—
SERVICING COMPANY

The servicing company office to be contacted for information relative to the availability of coverage under the national flood insurance program, flood hazard boundary maps, insurance rate tables, and related material.

[43 FR 18538, May 1, 1978]
Subpart A—Interest Rates, Amortization, Guarantee Fee, Annual Charge, and Fixed Period

Sec. 1810.1 Information concerning interest rates, amortization, guarantee fee, annual charge, and fixed period.

1810.2 Adjustment of interest rates for certain loans involving use of or construction on prime or unique farmland.

(a) For essential community facility loans, insured farm ownership loans for recreation or non-farm enterprises, insured farm operating loans for recreation enterprises, soil and water loans for recreation purposes, individual recreation loans, and insured business and industry loans, the interest rate will be increased by two per centum per annum if the project being financed will involve the use of, or construction on, prime or unique farmland. Prime or unique farmland is as defined in §657.5 (a) and (b) of title 7, Code of Federal Regulations (1980).

(b) The two per centum interest rate increase will not apply if the applicant/borrower is a public body or Indian tribe and has demonstrated to FmHA or its successor agency under Public Law 103–354 that there are no suitable options for locating the proposed essential community facility project on land that is not prime or unique farmland.

(c) For each essential community facility loan and insured business and industry loan the District Director, after consultation with the Soil Conservation Service (SCS), will determine whether the proposed project will involve the use of, or construction on, prime or unique farmland. For each insured farm ownership loan for a recreation or non-farm enterprise, insured farm operating loan for a recreation enterprise, soil and water loan for a recreational purpose, or individual recreation loan, the County Supervisor, after consultation with SCS, will determine whether the proposed project will involve the use of, or construction on, prime or unique farmland. The determination will be documented by FmHA or its successor agency under Public Law 103–354 and made a part of the official case file.

§ 1822.261 General.
This subpart sets forth the policies and procedures and delegates authority for making Rural Housing Site (RHS) loans under sections 523 and 524 of the Housing Act of 1949. Any processing or servicing activity conducted pursuant to this subpart involving authorized assistance to FmHA or its successor agency under Public Law 103-354 employees, members of their families, known close relatives, or business or close personal associates, is subject to the provisions of subpart D of part 1900 of this chapter. Applicants for this assistance are required to identify any known relationship or association with an FmHA or its successor agency under Public Law 103-354 employee. Section 523 loans are direct loans for the purchase and development of building sites for housing to be built by the self-help method; they have additional requirements which are contained in § 1822.278.

[35 FR 16087, July 1, 1970, as amended at 58 FR 224, Jan. 5, 1993]

§ 1822.262 Objective.
The basic objective of RHS loans is to assist public or private nonprofit organizations interested in providing sites for housing to acquire and develop land in rural areas. This land will be subdivided into adequate building sites and sold on a nonprofit basis to (a) families eligible for low and moderate income section 502 Rural Housing (RH) loans, including self-help housing; (b) cooperative Rural Cooperative Housing (RCH) applicants and broadly based nonprofit Rural Rental Housing (RRH) applicants; and (c) applicants eligible for Housing and Urban Development (HUD) sections 235 and 236 insured mortgages.

[35 FR 16087, July 1, 1970]

§ 1822.263 Definitions.
As used in this subpart:
(a) A private nonprofit organization is a corporation which is owned and controlled by private persons; it is organized and operated for purposes other than

Source: 35 FR 16087, July 1, 1970, unless otherwise noted.
making gains or profits for the corporation or members; and, is legally precluded from distributing to its members any gains or profits.

(b) A public nonprofit organization is a nonprofit corporation other than a private nonprofit corporation, including a municipal corporation or other corporate agency of a State or local government.

(c) Rural area is open country or rural places as defined in §1944.10 of subpart A.

(d) Development cost means the cost of purchasing and developing the sites including engineering and legal fees, streets, roads, utilities, minimum essential administrative costs, necessary equipment and estimated interest which the borrower cannot pay from other sources.

(e) RHS section 523 loan means a loan to an organization which will provide sites for housing to be built by the self-help method.

(f) RHS section 524 loan means a loan to an organization which will provide sites for housing to be built with no limitation as to the method of construction that will be used.

(g) OGC means the Office of the General Counsel, including the regional attorney or attorney in charge serving the State in which the RHS project is located.

§ 1822.265 Loan purposes.

RHS loans may be made to qualified applicants:

(a) For the purchase and development of adequate sites, including the construction of essential access roads, streets, utility lines, and necessary equipment which will become a permanent part of the development. If public water and waste disposal facilities are not available and cannot reasonably be provided on a community basis with other financing, including FmHA or its successor agency under Public Law 103-354 Water and Waste Disposal Association loans, funds may be included for this purpose.

(b) For the payment of necessary engineering fees, legal fees, and closing costs.

(c) For the payment of actual cash cost of incidental administrative expenses such as postage, telephone, advertising, and temporary secretarial help, if funds to pay these expenses are not otherwise available. The estimated cost of these items should be identified and shown in the budget.

(d) To provide for needed landscaping, planting, seeding, or sodding, or other necessary facilities related to buildings such as walks, parking areas, and driveways.

(e) When legally required by proper local, county, and State Governmental bodies as a condition for subdivision approval, RHS loan funds may be used to provide common areas playgrounds and tot lots, provided such facilities are dedicated to, and maintained by, a public body.
§ 1822.266 Limitations.

(a) Loan limits. No RHS loan(s) will be made to any applicant which will result in the applicant’s owning an unpaid principal balance of more than $100,000 on such loan(s) unless prior authorization for a larger loan is obtained from the national office. No such loan will exceed the development cost as defined in §1822.263(d), or the value of the property as improved with the loan. These limitations also apply to cases in which the same persons hold a majority of the membership interests or constitute a majority of the directors of two or more applicants.

(b) Limitations of use of loan funds. Loans will not be made for:

1. The purchase of land in excess of the immediate and identified needs in the locality.

2. The purchase of land from a member of an applicant-organization, or from another organization in which any member of the applicant-organization has an interest, without prior consent of the national office.

3. Refinancing of debts, except in accordance with paragraph (e) of this section.

4. Payment of any fee, commission to any broker, negotiator, or other person for the referral of a prospective applicant or solicitation of a loan.

5. Payment of any fee, salary, commission, profit, or compensation to an applicant, or to any officer, director, trustee, stockholder, member or agent of an applicant, except as provided in §1822.265(b). No contract or agreement for services to be paid for with loan funds should be executed by the applicant without prior approval by the State director.

(c) Sale of developed sites. The sites developed with a section 524 loan must be for housing low- and moderate-income families and may be sold to families, nonprofit organizations, public agencies, and cooperatives eligible for assistance under any section of title V of the Housing Act of 1949, or under any other law which provides financial assistance. For example, this may include:

1. Individuals with low and moderate incomes eligible for HUD mortgages.

2. Individuals with low and moderate incomes eligible for VA guaranteed loans.

3. Individuals with low or moderate incomes eligible for a loan from any private lender which is authorized by law to provide financial assistance for housing.

4. Nonprofit organizations funded by Federal, State, or local governments carrying out programs for low- and moderate-income families to obtain housing.

5. State or local public agencies such as a housing authority or a housing finance development agency carrying out programs for low- and moderate-income families to obtain housing.

(d) Suitability of sites. Sites will meet the requirements of the planned use; for example, individual housing or multiple housing or any combination thereof. Building sites must be well located and designed to provide a desirable living environment. Generally a loan will not be made for the development of less than 10 units, but they need not be contiguous.

(e) Obligations incurred before loan closing. When an applicant files an application for a loan, the county supervisor will advise the applicant that development work must not be started and obligations for work, materials, or land purchase must not be incurred before the loan is closed. If, nevertheless, the applicant incurs obligations for work, materials, or land purchase before the loan is closed, the State director may authorize the use of loan funds to pay such obligations only when he finds that all the following conditions exist:

1. The obligations were incurred after the applicant filed a written application for a loan.

2. The applicant is unable to pay such obligations from its own resources or to obtain credit from other sources, and failure to authorize the use of loan funds to pay such debts would impair the applicant’s financial position.
§ 1822.267 Special conditions.

(a) Evidence of need. Loans will be made on the basis of the applicant providing firm information as to the number of sites to be developed and evidence of a need for the proposed building sites in the locality.

(b) Nondiscrimination. The borrower will be required to agree not to discriminate or permit discrimination, in accordance with section 3 of the loan resolution form “(Rural Housing Site) Loan to Nonprofit Corporation)” available at all FmHA or its successor agency under Public Law 103-354 ofices.

(c) Supervisory assistance. Supervision will be provided borrowers to the extent necessary to achieve the objectives of the loan and to protect the interests of the Government. County supervisors will counsel with applicants in selecting locations that will provide essential services and facilities and will result in the development of desirable residential communities.

(d) Loan resolution. A Loan Resolution will be adopted by the applicant’s Board of Directors or similar governing body using a form entitled “(Rural Housing Site) Loan to Nonprofit Corporation)” available at all FmHA or its successor agency under Public Law 103-354 ofices. If any provisions are not appropriate to a particular case, proposed substitute language should be submitted to the national office with the recommendations of the State director.

(e) Development policies. Development will be planned and performed in accordance with subparts A and C of part 1924 of this chapter, and certain information in a guide entitled “Planning and Developing Building Sites” available at all FmHA or its successor agency under Public Law 103-354 ofices.

(f) Water and waste disposal facilities. If public water and waste disposal facilities are not available and these facilities will be provided on a community basis with funds included in the RHS loan or with other financing, provision should be made to form an organization with members who will provide continuing maintenance and management of facilities. The cost of the facilities should be considered as a cost of developing the sites and included in the price charged for the lots when they are sold.

(g) Compliance with local codes and regulations. Planning and development of sites will comply with all State, county, and local planning and zoning requirements, and will be for housing that will conform with any applicable laws, ordinances, codes, and regulations governing such matters as construction, heating, plumbing, electrical installation, fire prevention, health, and sanitation.

(h) Optioning of land. If a loan includes funds to purchase real estate, the applicable provisions of subpart A of part 1943 regarding options will be followed. After the loan is approved, the county supervisor will have Form FmHA or its successor agency under Public Law 103-354 440±35, “Form Letter—Acceptance of Option,” or other appropriate form of acceptance, completed, signed by the applicant, and mailed to the seller.

(i) Use of and accountability for loan funds. Supervised bank accounts will not be used except when their requirement is made or authorized by the State director for cases where adequate bonding is not available. If a supervised bank account is used, collateral for deposits of funds will be pledged when the supervised bank account exceeds $100,000. All loan funds and funds from other sources to be used to pay the development costs of the site, as well as proceeds from the sale of any sites, will be deposited in accordance with part 1902, subpart A of this chapter. The county supervisor will be responsible for seeing that funds for land purchase are paid to the seller simultaneously with loan closing. After the loan is closed, monthly reports will be provided to FmHA or its
successor agency under Public Law 103-354 of all disbursements made and income received by the borrower. Reports for each month will be submitted to the FmHA or its successor agency under Public Law 103-354 county office during the first 10 days of the next month. No expenditures will be made without prior FmHA or its successor agency under Public Law 103-354 consent for items which are not included in the FmHA or its successor agency under Public Law 103-354 approved development cost estimate or for amounts greater than those set forth in such estimate.

(j) Insurance. The State director will determine the minimum amounts and types of insurance the applicant will carry.

(1) Suitable workman's compensation insurance will be carried by the applicant for all its employees.

(2) The applicant will be advised of the possibility of incurring liability and encouraged, or required when appropriate, to obtain liability insurance.

(k) Bonding. (1) Approved corporate surety bonds will be required in all cases involving a development contract in excess of $20,000, unless an exception is made by the national office. In other cases, the county supervisor will determine whether a surety bond is required.

(2) The applicant will provide fidelity bond coverage for its officers and employees entrusted with the receipt, custody, and disbursement of its funds and the custody of any other negotiable or readily saleable personal property. The amount of the bond will be at least equal to the maximum amount of such funds including funds in bank accounts, and property that the applicant will have in its possession or control at any one time. If permitted by State law, the United States will be named coobligee in the bond. Form FmHA or its successor agency under Public Law 103-354 440-24, "Position Fidelity Schedule Bond," may be used if permitted by State law.

(li) Conditional commitments for construction of homes on developed sites. Conditional commitments may be issued on sites developed with section 524 Rural Housing Site loans will be limited to families eligible for assistance under any section of title V of the Housing Act of 1949 or under any other law which provides financial assistance for housing low- and moderate-income families. The approval of FmHA or its successor agency under Public Law 103-354 will be obtained prior to the sale of each home. The request for approval shall be submitted to the local FmHA or its successor agency under Public Law 103-354 office along with an application for an RH 502 loan or a financial statement from the purchaser and verification of the other credit that is available.

(ii) The benefits of the nonprofit development of the site(s) must be passed on to the purchaser. This will result in this site being sold for $—— (price to be determined as provided for in (§ 1822.275(b))).

(3) In arriving at the commitment price for the site and the completed home, the value will be based on the present market value of the house only, plus the nonprofit selling price of the lot.

(4) If in order to obtain interim financing for the construction of the homes, the RHS loan borrower requests a subordination by FmHA or its successor agency under Public Law 103-354 on
individual lots, the State Director may approve the subordination by completing and executing a subordination in the format of exhibit C of this subpart.

(5) FmHA or its successor agency under Public Law 103-354’s lien on any lot will be released only at the time of sale to an eligible purchaser.

(6) The County Supervisor should provide the necessary supervision to assure that the RHS loan borrower takes the necessary action to assure that all qualified builders in the area are aware of the availability of rural housing sites and are given an equal opportunity to participate in this conditional commitment program. As a minimum, the borrower will be required to submit a signed statement indicating the actions taken including names and dates of contacts with builders.

§ 1822.268 Rates, terms, and source of funds.

(a) Interest rate. Upon request of the applicant, the interest rate charged by FmHA or its successor agency under Public Law 103-354 will be the lower of the interest rates in effect at the time of loan approval or loan closing. If an applicant does not indicate a choice, the loan will be closed at the interest rate in effect at the time of loan approval. Interest rates are specified in exhibit B of FmHA or its successor agency under Public Law 103-354 Instruction 440.1 (available in any FmHA or its successor agency under Public Law 103-354 office) for the type assistance involved.

(b) Repayment period. Final payment will be due 2 years after the date of the loan. When necessary to carry out the loan purposes, the national office may authorize extension of maturity dates. As lots are sold before the final due date of the note, the proceeds of the sales will be applied on the account or any prior lien, or, with the prior approval of the national office, used in a manner consistent with the purposes of the loan and the security interest of the Government.

§ 1822.270 Technical, legal, and other services.

(a) Appraisals. The property will be appraised by an FmHA or its successor agency under Public Law 103-354 employee authorized to make real estate appraisals. The appraisal will consist of a narrative statement prepared and signed by the authorized employee describing in detail the items considered in arriving at the value of the property. Two values will be established by the appraiser:

(i) The fair market value of the total property "as is".

(ii) The aggregate fair market value of the building sites after development.

(i) In determining the value of the property, the appraiser will consider the value and selling prices of similar building sites in the area. The selling prices of similar sites must be fully documented.

(ii) [Reserved]

(b) Title Clearance and Legal Services. For a loan to a public nonprofit organization, title clearance and legal services will be obtained in accordance with instructions from the OGC, observing the provisions of subpart B of part 1927 of this chapter to the extent feasible. For a loan to a private nonprofit organization, the provisions of subpart B of part 1927 of this chapter regarding title clearance and legal
services will apply. The applicant will be encouraged to have the same approved closing agent, where practical, perform the title clearance work in connection with the purchase of the land and the sale of the individual sites.

(c) Contracts for legal services. On projects requiring more legal services than are customarily required for title clearance alone, the applicant will be required to have a written contract when loan funds will be used for legal services. All such contracts will be subject to review and approval by the State director and therefore should be submitted to the State Director before execution by the applicant. Contracts will provide for the types of service to be performed and the amount of fees to be paid either in lump sum on the completion of all services or in installments as services are performed.

(d) Engineering services. On projects requiring engineering services, a written contract will be required between the engineer and the borrower. All such contracts will be subject to review and approval by the State director and therefore should be submitted to the State Director before execution by the applicant. The form of contract must conform with standard professional practices and describe the types of services to be performed and fees to be paid.

§ 1822.271 Processing applications.

(a) Application. The application will be in the form of a letter to the county supervisor with the following information included in or attached to the letter:

(1) Name and address of applicant.

(2) A copy of, or an accurate citation to, the specific provisions of State law under which the applicant is organized; a copy of the applicant’s articles of incorporation, bylaws, and other authorizing documents; the names and addresses of the applicant’s members, directors, and officers; and if another organization is a member of the applicant organization, its name, address, and principal business.

(3) A current, dated, and signed financial statement showing assets, and liabilities, together with information on the repayment schedule and status of each debt.

(4) Evidence of inability to obtain credit from other sources.

(5) General description of the project.

(i) Location and size of tract or tracts to be bought and/or developed.

(ii) Number and size of individual sites planned together with a detailed plot plan.

(iii) Preliminary engineering plans, if available.

(6) Estimated cost and amount of loan needed.

(7) Explanation of applicant’s financial contribution to the project.

(8) A map showing the location of and other supporting information on neighborhood and existing facilities such as distance to shopping area, neighborhood churches, available transportation, drainage, sanitation facilities, water supply available or planned, and access to essential services such as doctors, dentists, and hospitals.

(9) If facilities such as water and sewage systems, paved streets, and utilities are not currently available, information on when and how they will be provided.

(10) Evidence of the need for the proposed sites in the locality by low- and moderate-income families and other qualified applicants that are likely to be able to obtain financing for a home.

(11) Written evidence of any State, county, or local planning, zoning, or other ordinances imposing additional restrictions or requirements upon the proposed sites.

(b) County supervisor’s review and evaluation of applications. The county supervisor will:

(1) Determine that the applicant meets the eligibility requirements of §1822.264.

(2) Verify that the information provided is accurate and complete.

(3) Determine that:

(i) The sites will be located in a good residential area and that essential facilities and services will be provided.

(ii) The lots will be reasonable in cost and of a type FMHA or its successor agency under Public Law 103-354 can appropriately finance.
(iii) There is an immediate and ready market for the proposed sites in the planned location.
(iv) The total number of sites planned does not exceed the number of loans the county supervisor can reasonably expect to include in the rural housing program or for which other credit is reasonably assured when the sites are developed.
(v) Proposed subdivisions will comply with the local codes and ordinances and also meet the requirements of subpart C of part 1924 of this chapter.

(4) Evaluate the manner in which the applicant plans to conduct its business and financial affairs.

(5) Comment on the background of the members, directors and officials.

(6) If he has questions about the proposal, send the incomplete docket to the State office for advice.

(7) If for any reason the loan cannot be made, inform the applicant.

(c) Completion of the docket. If the county supervisor determines that the applicant is eligible and the loan will be sound and proper, he should request the applicant to make any needed revisions. In addition to the items required in the application the docket must include:

(1) A plot plan and detailed preliminary plans and specifications for development of the building sites.

(2) A detailed cost breakdown of the project for such items as land and rights-of-way, utility installations or connections, on-site improvements, engineering and legal services, and estimated interest.

(3) If water and sanitary facilities are not publicly owned, a complete statement as to how they will be provided and details about their ownership and operation.

(4) Satisfactory evidence of review and approval of the proposed development by applicable State and local officials whose approval is required by State or local laws, ordinances, or regulations.

(5) Satisfactory evidence that the appropriate public bodies will accept and maintain all public facilities, including common areas, playgrounds, and tot lots, when dedicated to such bodies.

(d) Preparation of docket forms—(1) Request for obligation of funds and fund analysis. Forms FmHA or its successor agency under Public Law 103-354 1944-50, “Multiple Family Housing Borrower/Project Characteristics,” and FmHA or its successor agency under Public Law 103-354 1944-51, “Multiple Family Housing Obligation-Fund Analysis,” will be completed in accordance with the Forms Manual Insert (FMI).

(2) County committee certification or recommendation. County committees will not be used to review RHS loan applications.

(e) Assembly, review and distribution of complete loan docket items. When all items required for the complete loan docket have been furnished, they will be examined thoroughly to make sure they are properly and accurately prepared and are complete in all respects, including dates and signatures. The loan docket items will be assembled in the following order and distributed as follows:

1 **Data input to Finance Office through field office terminals.**

(f) Submission of complete docket. The complete docket will be sent to the State office together with the District Director’s comments and recommendations and a draft for a press release.

(g) Loan approval authority and State Office action. The State Director is authorized to approve loans in accordance with this subpart and subpart A of part 1901 of this chapter. As soon as it is evident that a loan will be approved, the State Director will complete exhibit A to subpart C of part 2015 of this chapter and submit to the FmHA or its successor agency under Public Law 103–354 Finance Office through field office terminals that information contained in Form FmHA or its successor agency under Public Law 103–354 1944–50, “Multiple Family Housing Borrower/Project Characteristics.” The State Director may redelegate approval authority to qualified State Office employees. When a docket or preliminary application is received in the State Office, the State Director will:

1. Utilize the services of technicians on his staff and from other agencies in evaluating the application.
2. Review the applicant’s articles of incorporation and bylaws. If they conform to approved forms for the State as
provided in §1822.264(a)(1)(ii), the State director need not obtain a preliminary opinion from the OGC. In all other cases the State director will, and in any case may, submit the docket with any comments or questions to the OGC for a preliminary opinion as to whether the applicant and the proposed loan meet or can meet the requirements of State law and this subpart.

(3) If additional information is needed to adequately evaluate the application, return the loan docket to the District Director with any comments and recommendations for further processing.

(4) If the docket is sufficiently complete to enable the State Director to determine that the applicant is eligible and the loan would be sound and proper, issue a proposed memorandum of approval listing any specific conditions that must be met before loan closing.

(5) If the applicant is not eligible or the loan would not be sound and proper and the deficiencies cannot be corrected, inform the District Director accordingly.

§1822.272 Approval or disapproval of a loan.

The provisions of part 1944, subpart E of this chapter will be followed.

§1822.273 Actions subsequent to loan approval.

After the loan is approved, actions to be taken will be in accordance with §1944.235.

§1822.274 Loan closing.

(a) Applicable instructions. The complete loan docket will be sent to the OGC for loan closing instructions. RHS loans will be closed in accordance with applicable provisions of subpart B of part 1927 of this chapter, and State Instructions which supplement this Instruction, and closing instructions of the OGC, and with the assistance of the approved attorney, representatives of the title insurance company, or local attorney, whichever is appropriate.

(b) Mortgage. Unless the OGC determines the Form to be inappropriate, real estate mortgage Form FmHA or its successor agency under Public Law 103-354 1927-1 (state), "Real Estate Mortgage for..." will be used for all RHS section 524 loans modified as prescribed by or with the advice of the OGC with respect to the name, address, and other identification of the borrower, the style of execution, and the acknowledgement. Additional paragraphs will be included in the mortgage to read as follows:

The borrower agrees not to discriminate in the sale of the dwelling financed under this mortgage due to a prospective purchaser's race, color, national origin, sex, religion, age, marital status, or handicap. The borrower further agrees to comply with all Federal, State, or local laws and ordinances prohibiting discrimination in the sale of housing. The borrower's failure or refusal to comply with this agreement will be a basis for the FmHA or its successor agency under Public Law 103-354 to deny future requests for participation in its rural housing programs and activities.

This instrument also secures the obligations and covenants of borrower set forth in Borrower's Loan Resolution of (date), which is hereby incorporated herein by reference.

(c) Promissory note. Form FmHA or its successor agency under Public Law 103-354 1944-52, "Promissory Note," will be used. Instructions for preparation will be in accordance with the FMI and the following:

(1) The total amount to be shown in the note will be the amount of the loan shown on Form FmHA or its successor agency under Public Law 103-354 1944-51. The note will be dated the date of the loan closing.

(2) The note will be signed in accordance with subpart B of part 1927 of this chapter and the forms manual insert for Form FmHA or its successor agency under Public Law 103-354 1944-52 (available in any FmHA or its successor agency under Public Law 103-354 office).
§ 1822.275  Actions after sites are developed.

The building sites will be sold on a nonprofit basis to eligible families or organizations as described in §1822.266(c).

(a) An option, Form FmHA or its successor agency under Public Law 103–354 440–34, “Option to Purchase Real Property,” will be executed. The site will be clearly identified by a land survey.

(b) The sale price of each individual site will not be more than a sufficient amount to pay a proportionate part of the RHS loan and any other actual costs of buying, developing, and selling the building site.

(c) The proceeds from sale of the building sites will be applied on the RHS loan and any prior lien or, with the prior approval of the National Office, used in a manner consistent with the purpose of the loan and the security interest of the Government. The sites will be released from the mortgage in accordance with §1965.110 of subpart C of part 1965 of this chapter or otherwise in accordance with prior approval of the National Office.

§ 1822.276  Subsequent RHS loans.

A subsequent RHS loan is an RHS loan to an applicant indebted for an initial RHS loan. Subsequent RHS loans will be made on the same basis as initial RHS loans.

§ 1822.277  Complaints regarding discrimination in opportunity to buy developed sites.

Any applicant wishing to purchase a site financed by an RHS loan who believes he or she has been discriminated against because of race, color, national origin, religion, sex, handicap, or age, may file a complaint with the County Supervisor or State Director. Any such complaint will be handled in accordance with §1944.239 of part 1944, subpart E of this chapter.

[56 FR 1777, Jan. 25, 1991]

§ 1822.278  Special requirements for RHS section 523 loans (loans to organizations providing sites for self-help housing).

Loans to organizations which will provide sites for self-help housing (RHS sec. 523 loans) will be made under the provisions of this subpart with the following exceptions:

(a) Eligibility. The applicant must be a nonprofit organization engaged in assisting self-help projects.

(b) Interest. The interest rate will be 3 percent per annum on the unpaid principal balance.

(c) Source of funds. These will be direct loans made from the self-help fund.

(d) Evidence of need. Loans to newly formed organizations will be made on the basis of the applicant’s providing firm information as to the number of sites to be developed and the names of eligible bona fide prospective purchasers who are assured of available home financing. Loans to organizations currently involved in mutual self-help housing projects may be made without submitting a list of the names of prospective site purchasers. There must, however, be definite evidence that enough families are available who are eligible and who will buy the sites when they are developed.

(e) Multiple advances. These loans may be disbursed over a period not to exceed 18 months from the date of the first advance.

(f) Note forms. Form FmHA or its successor agency under Public Law 103–354 1944–52, “Multiple Family Housing...
Promissory Note,” will be used. See §1822.274 (c).

(g) Mortgage. Unless the OGC determines the Form to be inappropriate, real estate mortgage Form FmHA or its successor agency under Public Law 103-354, 1927-1 (state), “Real Estate Mortgage (Direct Loan),” will be used modified as prescribed by or with the advice of the OGC with respect to the name, address, and other identification of the borrower, the style of execution, and the acknowledgement. Additional paragraphs will be included in the mortgage to read as follows:

The borrower agrees not to discriminate in the sale of the dwelling financed under this mortgage due to a prospective purchaser's race, color, national origin, sex, religion, age, marital status, or handicap. The borrower further agrees to comply with all Federal, State, or local laws and ordinances prohibiting discrimination in the sale of housing. The borrower's failure or refusal to comply with this agreement will be a basis for the FmHA or its successor agency under Public Law 103-354 to deny future requests for participation in its rural housing programs and activities.

This instrument also secures the obligations and covenants of borrower set forth in Borrower's Loan Resolution of [date], which is hereby incorporated herein by reference.

§1822.279 Loan supervision and servicing.

Loan supervision will be provided according to subpart C of part 1930 of this chapter. Loan servicing will be provided according to subpart B of part 1965 of this chapter.

[48 FR 56139, Dec. 19, 1983]

Exhibits A-B to Subpart G to Part 1822—[Reserved]

Exhibit C to Subpart G to Part 1822—Subordination by the Government for Use with Rural Housing Site Loans

Whereas, The United States of America acting through the Farmers Home Administration or its successor agency under Public Law 103-354 (hereinafter called the “Government”) is the holder of the following-described instrument(s) executed by

of ________________
County, State of ________________
(hereinafter called the “Borrower”)

And whereas, ___________ (hereinafter called the “Lender”) has agreed to provide a loan to the borrower or to a builder designated by the borrower to construct a home on the property described in this instrument.

Now Therefore, in consideration of the Lender's agreement to make such loan to the borrower, the Government hereby consents to the Borrower obtaining said loan from the lender, and agrees to and hereby subordinates in favor of the Lender and his successors and assigns its liens or security interests created or evidenced by the above-described instrument(s) insomuch as they cover the following described property:

Except That, The Government shall retain a first lien or security interest in the above-described property in an amount of $—. Such first lien will be released only when satisfactory evidence is provided indicating that the lot with completed home is being sold to a family eligible for assistance under any section of Title V of the Housing Act of 1949 or under any other law which provides financial assistance for housing low- and moderate-income families and that the benefits of the nonprofit development of the site are being passed on to the eligible purchaser and that the amount of that first lien is paid on the Borrower’s Rural Housing Site Loan debt to the Government.

This subordination is limited to the amount actually loaned by the Lender to the Borrower for the foregoing purpose, but shall not exceed $—.

Only the above described property is affected by this subordination. This subordination shall not otherwise affect or modify the obligations secured by the aforesaid lien instrument(s), and the said obligations shall continue in force and effect until fully paid, satisfied, and discharged.

No member of Congress shall be admitted to any share or part of this agreement or to any benefit that may arise thereupon.

In Witness Whereof, The United States of America has caused these presents to be signed on the ______ day of ________, 19—, pursuant to delegated authority published in 7 CFR, Part 1800.
Subpart N—Loans to Indian Tribes and Tribal Corporations

§ 1823.401 General.
This subpart contains policies and procedures of the Farmers Home Administration (FmHA) or its successor agency under Public Law 103–354 applicable to making initial and subsequent insured loans to Indian tribes or tribal corporations for the acquisition of land within tribal reservations and Alaskan communities. Any processing or servicing activity conducted pursuant to this subpart involving authorized assistance to FmHA or its successor agency under Public Law 103–354 employees, members of their families, known close relatives, or business or close personal associates, is subject to the provisions of subpart D of part 1900 of this chapter. Applicants for this assistance are required to identify any known relationship or association with an FmHA or its successor agency under Public Law 103–354 employee. The Secretary of the Interior or authorized representative will determine whether lands lie within a tribal reservation or community.

§ 1823.402 Definitions.
The following definitions are applicable to the subsequent provisions of this subpart.

(a) Land. The term “land” includes any or all rights or interests therein.
(b) Tribe. The term “tribe” means an Indian Tribe recognized by the Secretary of the Interior or a tribal corporation established pursuant to the Indian Reorganization Act, and/or a community in Alaska incorporated by the Secretary of the Interior pursuant to the Indian Reorganization Act.
(c) Tribal. The term “tribal” refers to an Indian tribe or Alaskan community described in paragraph (b) of this section, and “tribal members” refers to the members of such a tribe or community.
(d) Reservation. The term “reservation” means the lands or interests therein within the tribe’s reservation as determined by the Secretary of the Interior, or within a community in Alaska incorporated by the Secretary of the Interior pursuant to the Indian Reorganization Act.

(e) Mortgage. The term “mortgage” includes deeds of trust and other liens on land.

§ 1823.403 Eligibility.
To be eligible for a loan, the tribe must:
(a) Be without adequate uncommitted funds to acquire needed land within the reservation.
(b) Be unable to obtain sufficient credit elsewhere at reasonable rates and terms to finance the proposed land acquisition.
(c) Show reasonable prospects of repaying the loan as determined by:
(1) A feasible plan for the use of the tribe’s land.
(2) Satisfactory evidence of financial ability to develop and operate the land.
(3) A satisfactory management and repayment plan.

§ 1823.404 Loan purposes.
Loan funds may be used by the tribe to:
(a) Acquire land within the reservation for use of the tribe or its members. The land acquisition may be made for purposes such as elimination of fractional heirships and rounding out farming and ranching units.
(b) Pay costs incidental to land acquisition, such as those for appraisals, title clearance, legal services, land surveys, and loan closing.

§ 1823.405 Ineligible loan purposes.
Loan funds may not be used for any improvement or development purposes, acquisition or repair of buildings or personal property, payment of operating costs, refinancing of debts, payment of finder’s fees, or similar costs. Loans also may not be made for any purpose that will contribute to excessive erosion of highly erodible land or to the conversion of wetlands to produce an agricultural commodity, as further explained in exhibit M of subpart G of part 1940 of this chapter.

§ 1823.406 Rates and terms.
Each loan will be amortized over a period not to exceed 40 years. Upon request of the applicant, the interest rate charged by FmHA or its successor agency under Public Law 103-354 will be the lower of the interest rates in effect at the time of loan approval or loan closing. If an applicant does not indicate a choice, the loan will be closed at the interest rate in effect at the time of loan approval. Interest rates are specified in exhibit B of FmHA or its successor agency under Public Law 103-354 Instruction 440.1 (available in any FmHA or its successor agency under Public Law 103-354 office) for the type assistance involved.

§ 1823.407 Use of acquired land.
The land acquired with the FmHA or its successor agency under Public Law 103-354 loan may be leased or sold to tribal members for dwelling, farming, grazing, recreational, and other purposes approved by the National Office as beneficial to the tribe or its members. The plan for use of the land must have the approval of the tribal council or other authorized governing body, and should be in accordance with the recommendations of appropriate Bureau of Indian Affairs (BIA) officials. It should also be consistent with the land use in the area unless other uses are justified. The plan should make maximum use of cost sharing and technical assistance of Federal and State programs.

§ 1823.408 Special requirements.
(a) Loan authorization. The tribe will take appropriate action to authorize obtaining and giving security for the loan, using exhibit B of this subpart N, Tribal Council Resolution, as a guide.
(b) Right to mortgage. If a mortgage is to be obtained on trust or restricted property and the tribe’s constitution or charter does not specifically authorize
§ 1823.409 Security.

(a) Security. All loans will be secured in a manner that will adequately protect the interests of FmHA or its successor agency under Public Law 103-354. Ordinarily, the security will include a lien on land acquired with loan funds plus assignment(s) of income. However, the security may consist only of assignments of income if the State Director determines that it will provide as good or better security than the land acquired with loan funds. Such security may be supplemented by security interests in personal property which is available and needed to protect the interests of

(b) Waiver of immunity. The appropriate tribal official(s) will execute on behalf of the tribe and in favor of FmHA or its successor agency under Public Law 103-354 a waiver of any immunity from suit or liability which it possesses. The waiver will be approved by the Secretary of the Interior or his authorized representative.

(c) Mortgages or assignments to third parties. At the time of loan closing an agreement will be obtained from the tribe that as long as any indebtedness on the loan is outstanding it will not, without the written consent of FmHA or its successor agency under Public Law 103-354:

(1) Give assignments or pledges to other parties of income, revenue, or other property assigned or pledged to FmHA or its successor agency under Public Law 103-354.

(2) Mortgage, sell, or otherwise dispose of any land (except sales to tribal members for market value) regardless of whether it is or is not mortgaged to FmHA or its successor agency under Public Law 103-354.

(3) This agreement will be submitted to the Office of the General Counsel (OGC) for review as to content and validity. For trust lands, a copy will be forwarded to the BIA. For other than trust lands, it will be recorded in the land records if OGC advises that such recordation is legally necessary.

(d) Land acquisition, debt service, and reserve accounts. The following accounts will be established at the time of loan closing. A properly bonded official of the tribe will receive the monies for each account and issue receipts therefor. The bonded official will deposit all such monies in the appropriate trust or counter-signature accounts. As a basis for withdrawals, the deposit agreement for each account will require the signatures of appropriate tribal official(s) and the FmHA or its successor agency under Public Law 103-354 County Supervisor or a BIA official, depending on whether the account is a BIA trust account or an FmHA or its successor agency under Public Law 103-354 supervised account in a commercial bank.

(1) Land acquisition account. The loan funds will be deposited in this account which will be established as a “Supervised Bank Account.” If funds in this account exceed $100,000, it shall be secured by the financial institution in advance in accordance with U.S. Treasury Department Circular No. 176.

(2) Debt service account. A debt service account will be established at the time of loan closing for deposit of income assigned to FmHA or its successor agency under Public Law 103-354 to be used in making repayments on the loan and payments to the reserve account.

(3) Reserve account. This account will be established for debt service reserve purposes. On or before the first installment due date, an amount equal to one-tenth (1/10) of the amount to be paid annually on the loan will be deposited in this reserve account. An equal amount will be deposited in the account during each succeeding year until a full annual payment is accumulated.

(i) Funds in the reserve account may be used to make repayments on the loan when the tribe cannot meet the installments from other sources as they fall due. Any funds used for that purpose will be replaced as soon as possible before the next installment due date.

(ii) The reserve fund may be invested in short-term investments that are issued, guaranteed, or insured by the Federal or a State Government and name FmHA or its successor agency under Public Law 103-354 as co-owner.

§ 1823.414 Title to security property.

The applicant will provide evidence of title satisfactory to the FmHA or its successor agency under Public Law 103-354 for all property that will serve as security for the loan.

(a) Real estate security. (1) Trust property. The applicant will request BIA to furnish Title Status Reports to the
§ 1823.414  

County Supervisor. The County Supervisor will review the reports in accordance with subpart B of part 1927 of this chapter. Form FmHA or its successor agency under Public Law 103–354 1927–13, “Waiver of Encumbrances, Exceptions, and Reservations,” will be used as appropriate. The County Supervisor will ask the State Director for advice if necessary.

(i) If administrative closing requirements can be met, BIA will prepare the deeds and obtain the needed signatures. The County Supervisor will supply BIA with Forms 1927–1, “Real Estate Mortgagor (State),” and FmHA or its successor agency under Public Law 103–354 440–22, “Promissory Note (Association or Organization).” BIA will insert the appropriate land descriptions.

(ii) The partly completed real estate mortgage and note will be returned to the County Supervisor. The loan check can then be ordered and the loan closed. The mortgage and note will be completed and signed, but no funds will be disbursed.

(iii) A conformed copy of the note with the original mortgage and two copies will be forwarded to BIA. They will insert a certification on the mortgage and return it to the County Supervisor. BIA will also indicate that the deeds have been recorded and the priority of the Government’s lien in a continuation of the Title Status Report. However, the certification about the lien priority may be made on the old Status Report if BIA prefers this.

(iv) The certified original mortgage will then be recorded by the County Supervisor in the county where the land is located if OGC determines that such recordation is necessary. Funds can be disbursed as soon as the mortgage is recorded or the determination is made that recordation is not necessary.

(2) Nontrust land. Title clearance will be obtained in accordance with subpart B of part 1927 of this chapter.

(b) Rights of way. The applicant will be responsible for obtaining adequate, continuous, and valid rights-of-way for operation, and maintenance of its property. The following documentary evidence will be furnished FmHA or its successor agency under Public Law 103–354.

(1) A copy of the form of right-of-way instrument to be used if it differs from Form FmHA or its successor agency under Public Law 103–354 442–20, “Right-of-Way Easement.” Rights-of-way with restrictive provisions should be accepted only in very unusual circumstances. Whenever the form of the instrument differs from Form FHA or its successor agency under Public Law 103–354 442–20 or contains special provisions that are required by either the applicant or the grantor, copies of such instruments will be submitted to the FHA or its successor agency under Public Law 103–354 for review prior to acceptance and recording. Either specific rights-of-way containing a legal property description of a centerline description of the rights-of-way or general rights-of-way containing only a description of the tract or parcel of land affected, may be used.

(2) A certificate by a duly authorized official of the applicant that it has obtained and presently holds adequate and sufficient legal title to all rights-of-way, permits and other authorizations deemed necessary by the applicant and its attorney for an uninterrupted right-of-way for the operation and maintenance of the property. Use Form FmHA or its successor agency under Public Law 103–354 442–21, “Right-of-Way Certificate.”

(3) An opinion by the applicant’s attorney relating to the adequacy and legality of the rights-of-way covered by the right-of-way certificate. Use Form FmHA or its successor agency under Public Law 103–354 442–22, “Opinion of Counsel Relative to Rights-of-Way,” to the extent possible.

(c) Lien on water rights. When a mortgage or an assignment will be taken on water rights, the applicant’s attorney will furnish a statement regarding the nature of the water rights owned such as convenance of title, appropriation and decree, application and permit, public notice of appropriation and use, and so forth.

(d) Lien on chattel property. When liens will be taken on chattel property, the following will be furnished:

(1) Description of the property for use in preparing security instruments.

(2) Form FmHA or its successor agency under Public Law 103–354 440–13.
“Report of Lien Search,” or similar form prepared in accordance with the State requirements prescribing the use of such form for Operating loans.

(e) Disposition of title evidence. All title evidence other than the opinion of title, mortgage title insurance policy, and water stock certificates will be returned to the borrower when the loan has been closed. The opinion of title or title insurance policy and any water stock certificates will be retained in the borrower’s county office case folder.

§ 1823.415 Supervision and servicing.

Borrowers will be supervised in accordance with subpart A of part 1942 of this chapter. Loans will be serviced in accordance with subpart E of part 1951 of this chapter. The cooperation, assistance, and advice of appropriate BIA officials will be sought at all times.

§ 1823.416 Check request and loan closing.

Before any loan can be closed, the District Director must notify the State Director in writing that all loan closing conditions have been met. Checks will be requested and loans will be closed in accordance with subpart A of part 1942 of this chapter.

§ 1823.417 Civil rights.

Indian tribes, for the purpose of this subpart, are not subject to title VI of the Civil Rights Act of 1964 so long as the expected use of land acquired does not include operation of a facility which would be open to the public. Therefore, such tribes are not subject to part 1816 of this chapter.

§ 1823.418 State requirements.

Each State Director will, with the assistance of OGC, supplement this Subpart with State regulations, forms, worksheets, sample documents, and such other guidance as necessary to successfully carry out the program.

EXHIBIT A TO SUBPART N TO PART 1823—LOAN DOCKET ITEMS—LOANS TO INDIAN TRIBES AND TRIBAL CORPORATIONS

1. The tribe with the assistance of BIA will provide the following:
   - SF 424.1: Application for Federal Assistance (For Non-construction).
   - Form FMHA or its successor agency under Public Law 103-354 1910-11: Applicant Certification, Federal Collection Policies for Consumer or Commercial Debts. (O & 1C—Sign O);
   - Official audit report of the preceding 4 years including income and expenses;
   - List of tribal officers, including title and addresses and signature identifications;
   - Copy of tribe’s constitution and bylaws or charter or other evidence of organization and rules of operation;
   - Legal services contract approved by BIA if a private law firm. A written statement will be provided when a BIA attorney performs the legal services.

2. Land Utilization Plan including:
   - (a) A short narrative description of why the land is being purchased, what use is to be made of it, and the annual net income expected to be derived from the land. If it has proven income record, that information should be included. If not, it should be so stated. If any development work is contemplated by the tribe, this should be explained, including assurance of the source of funds to carry out such development. If the land is to be operated by the tribe, this should be described, including assurance of availability of the necessary money to meet operating costs and method of management. If the land is to be leased, there should be a description of how it will be used and assurance that its intended use will conform to the overall land use pattern of the reservation or any variations justified; (b) Recommendation of BIA Soil Conservation Specialist.

3. Form FMHA or its successor agency under Public Law 103-354 440-34: Option to Purchase Real Property or similar purchase agreement containing the provisions of the option.

4. Form FMHA or its successor agency under Public Law 103-354 440-35: Acceptance of Option.

5. Form FMHA or its successor agency under Public Law 103-354 442-7: Operating Budget or Statement of Income and Expenses including income and expenses from all sources.

6. Resolution of Tribal Council or other governing body approving and providing for the proposed land acquisition and any actions necessary to carry it out, such authority to encumber real estate and waiver of immunity and, where legally necessary, evidence of any required tribal election or referendum. The resolution should substantially conform with Exhibit B.
Subordination Agreement by BIA using Exhibit D as a guide.

Form FmHA or its successor agency under Public Law 103-354 1942-46: Letter of Intent to Meet Loan Conditions Fidelity Bond for tribal officers authorized to handle monies.

Form FmHA or its successor agency under Public Law 103-354 1927-9: Preliminary Title Opinion, if required.

Form FmHA or its successor agency under Public Law 103-354 1942-20: Right-of-Way easement, or right-of-way instrument, if appropriate.

Form FmHA or its successor agency under Public Law 103-354 1942-21: Right-of-Way Certificate, if appropriate.

Form FmHA or its successor agency under Public Law 103-354 1942-22: Opinion of Counsel Relative to Right-of-Way, if appropriate.

Form FmHA or its successor agency under Public Law 103-354 1927-13: Waiver of Encumbrances, Exceptions and Reservations, if required.

Form FmHA or its successor agency under Public Law 103-354 1942-2: County Committee Certification of Recommendation.

Form FmHA or its successor agency under Public Law 103-354 1942-49: Project Summary (Loans to Indian Tribes and Tribal Corporations).

Form FmHA or its successor agency under Public Law 103-354 1942-14: Association Project Fund Analysis Letter of Conditions.

Form FmHA or its successor agency under Public Law 103-354 1940-22: Promissory Note.

Form FmHA or its successor agency under Public Law 103-354 1940-9: Supplementary Payment Agreement, if required.

Form FmHA or its successor agency under Public Law 103-354 1927-1 (State): Real Estate Mortgage.

Form FmHA or its successor agency under Public Law 103-354 402-1: Deposit Agreement, if required.

A RESOLUTION OF THE TRIBAL COUNCIL OF THE TRIBE AUTHORIZING AND PROVIDING FOR: (1) THE ISSUANCE OF AN INSTALLMENT PROMISSORY NOTE IN THE PRINCIPAL AMOUNT OF TO FINANCE THE PURCHASE OF LAND, (2) THE GIVING OF SECURITY, (3) THE COLLECTION, HANDLING, AND DISPOSITION OF REVENUES OF THE LAND TO BE PURCHASED AND ANY OTHER LAND TO BE ENCUMBERED AS SECURITY, AND (4) RELATED ACTIONS AND MATTERS.

The Tribe wishes to acquire interests in approximately acres of real estate (hereinafter called “the land”) within its reservation or community for the use of and the improvement of the economic standing of the Tribe or its members but does not have adequate uncommitted funds for such acquisition.

A meeting of the tribal council or other governing body (hereafter called the “Council”) with the required number of Council members present was held at on the day of , 19, pursuant to notice thereof as required by its constitution, by-laws, corporate charter, or other organizational documents, (hereafter called the “constitution”) to consider a plan to finance the proposed land acquisition.

The Tribe has the authority to acquire lands or interests therein.

The Tribe is authorized to mortgage or otherwise hypothecate its land either by its constitution, or by a tribal referendum whereby such mortgage or other hypothecation was approved by at least a majority of the qualified voters at an election in which at least 20 percent of those eligible voted, or under such other rules as may be prescribed by the constitution of the Secretary of the Interior.

The Secretary of the Interior or his authorized representative has approved the mortgaging or hypothecation of the land.

As shown by the minutes of said meeting, of the Council members of record of the Tribe there were present and voting Council Members and by a recorded majority vote, determinations were made and actions authorized as follows:

That in order to acquire the land, the Council was authorized and empowered, in its discretion, for and in the name of the Tribe, to make application to the Farmers
Home Administration or its successor agency under Public Law 103-354 of the United States Department of Agriculture (hereafter referred to as the "Government") for financial assistance; to enter into agreements and, without limitation, to take any other action as may be necessary, incidental, or appropriate to finance acquisition of the land or interests therein on behalf of the Tribe.

Now therefore, it is hereby resolved by the Council of the Tribe as follows:

Section 1. (Determination of Council) It is necessary to defray all of a portion of the costs of acquiring the land or interests therein by obtaining a loan to be made or insured by the Government in accordance with applicable provisions of the Consolidated Farm and Rural Development Act and Pub. L. 91-229, it being determined that the Tribe is unable to obtain sufficient credit elsewhere to finance the acquisition taking into consideration prevailing private and cooperative rates and terms currently available.

Section 2. (Amount and Terms of Loan) The Tribe shall borrow $_______ and issue as evidence thereof installation promissory note(s) in the form prescribed by the Government for the full principal amount of the loan. The note(s) shall be signed by the ______________ (Appropriate Official) and attested by the ______________ (Appropriate Official) and the corporate or other seal of the Tribe affixed thereto, and shall bear interest from its date, which shall be the date of loan closing, at a rate prescribed by the Government in its approval of the loan, but not to exceed ______ percent per annum. The security instruments shall be in such form and contain the terms and conditions required by the Government.

Section 3. (Pledge of Revenue) The indebtedness hereby authorized shall be payable from the gross income and revenue to be derived from the operation of the tribal land, a portion of which sufficient to pay the principal and interest as and when the same shall be due is hereby pledged and shall be set aside for that purpose.

Section 4. (Pledge of Additional Security) If the revenue pledged in Section 3 is insufficient to pay the principal and interest as and when the same shall become due or if it appears the revenue will be insufficient, the Council hereby pledges its taxing authority and the funds held in the United States Treasury in trust for the Tribe, for the purpose of making up the deficiency or expected deficiency shall be deposited in the debt service and reserve accounts established by Sections 5B and C hereof and used as therein prescribed.

Section 5. (Protection and Disposition of Funds) The ______________ (Appropriate Official) of the Tribe shall be the custodian of all loan funds of the Tribe and all revenues pledged for the repayment of the loan. All such funds shall be deposited in accordance with Part 1902, Subpart A of this chapter. The ______________ (Appropriate Official) shall execute a fidelity bond in an amount not less than $_______ with a surety company approved by the Government. The United States of America shall be named as co-obligee in such bond, and the amount thereof shall not be reduced without the prior written consent of the Government. The ______________ (Appropriate Official) is hereby directed to establish the following accounts into which proceeds of the note, the revenues from the land, and any other income pledged for repayment shall be deposited, which accounts shall be continually maintained, except as otherwise provided, so long as the indebtedness hereby authorized remains unpaid:

A. Land Acquisition Account. The proceeds of the loan hereby authorized shall be deposited in the Land Acquisition Account which shall be established as a "supervised bank account" as required by the Government. If funds in this account exceed $200,000, it shall be secured by the financial institution in advance in accordance with U.S. Treasury Department Circular No. 176. When all land acquisition costs have been paid in full, the balance remaining in the Land Acquisition Account shall be applied as a refund on the loan and the Land Acquisition Account shall be closed.

B. Debt Service Account. All assigned revenues shall be deposited in the Debt Service Account until there is an amount equal to the next annual installment to become due plus any delinquencies and payments are made to the Reserve Account. The Debt Service Account will be used for making annual installment payments on the loan, payments on any delinquencies that may occur, and payments to the Reserve Account.

C. Reserve Account. Out of the funds in the Debt Service Account, there shall be transferred annually to the Reserve Account the sum of $_______ (5% of an annual payment of principal and interest) until there is accumulated in that fund the sum of $_______ (one annual installment of principal and interest), after which no further transfers need be made to said account except that transfers shall be made to replace any withdrawals. Funds in the Reserve Account shall be used only for the purpose of making payments of principal and interest in the event the amount in the Debt Service Account is insufficient to meet such payments.
Section 6. (Other Covenants and Agreements of the Tribe) The Tribe covenants and agrees that, so long as the indebtedness here-}

1328

bey authorized remains unpaid, the Tribe will:

A. Comply with applicable Federal, State, and Tribal laws and regulations and maintain the land in good condition.

B. Impose and collect such rates and charges that gross revenues will be sufficient at all times for the maintenance of the land and the funding of the Debt Service and Reserve Accounts.

C. Cause to be levied and collected such taxes or assessments as may be necessary to maintain the land in good condition, meet payments on the loan, and make the deposits required by Sections 5 B and C, if for any reason gross revenues are insufficient.

D. Maintain complete books and records relating to the operation and maintenance of the land and its financial affairs and will cause such books and records to be audited annually at the end of each fiscal year and an audit report prepared, and will furnish the Government without request a copy of each annual audit report. The audit will be conducted by independent Certified Public Accountants or by licensed Public Accountants, licensed before December 31, 1970, who are certified or licensed by a regulatory authority of a state or other political subdivision of the United States. At all reasonable times, the Government shall have the right to inspect the land and to inspect and copy the records, accounts, and data of the Tribe relating thereto.

E. Maintain such insurance coverage as may be required by the Government.

F. Not borrow any money from any source or enter into any contract or agreement or incur any other liabilities in connection with making improvements to the land (exclusive of normal maintenance) without obtaining the prior written consent of the Government.

G. Not cause or permit any voluntary dissolution of its organization; merge or consolidate with any other organization; dispose of, transfer, or convey its title to any land or any part thereof or interest therein, by sale, mortgage, lease or other encumbrance, without obtaining the prior written consent of the Government.

H. Not modify or amend its constitution in any way that would affect the Government’s security without the written consent of the Government.

Section 7. (Security Instruments) In order to secure the payment of the principal and interest or the note and any related obligations of the Tribe to the Government the Tribe is hereby authorized and directed to execute and deliver a good and sufficient security instrument encumbering the land or other property and an assignment of reve-

1328

nues and funds held in the United States Treasury for the Tribe. The security instrument shall give the Government the lien on the land, Tribal revenues, Tribal Treasury funds or other property and said officials are authorized and directed to acquire such sub-

ordination agreements as are necessary to achieve the required priority.

Section 8. (Refinancing) If at any time it shall appear to the Government that the Tribe is able to refinance the loan, in whole or in part, by obtaining a loan for such purposes from responsible cooperative or private credit sources, at reasonable rates and terms for loans for similar purposes and periods of time, the Tribe will, upon request of the Government, apply for and accept such loan in sufficient amount to repay the Government and will take such action as may be required in connection with such refinancing loan.

Section 9. (Waiver of Immunity) In order to secure the payment of the principal and interest of the note and any related obligations, the Tribe hereby waives for the benefit of the Government any immunity from suit or liability which it may possess except that this waiver shall not extend to the acquiring of any judgment, lien, or attachment upon the property of the Tribe other than property specifically pledged, assigned, or mortgaged to the Government in connection with this loan provided that if no real estate is mortgaged to the Government, this waiver shall extend to acquiring of judgment, lien or attachment on real estate purchased with the loan herein authorized.

Section 10. (Resolution a Contract) The provisions of this resolution shall constitute a contract between the Tribe and the Govern-

ment so long as the loan made or insured by the Government remains unpaid.

Section 11. This resolution shall take effect and be in force immediately.

EXHIBIT C TO SUBPART N TO PART 1823—ASSIGNMENT OF TRIBAL INCOME AND FUNDS

Whereas, the United States of America, acting through the Farmers Home Administration or its successor agency under Public Law 103-354, United States Department of Agriculture (hereinafter called the "FmHA or its successor agency under Public Law 103-354") is the holder or insurer of a promissory note (hereinafter called the "Note") in the sum of ________ bearing interest at the rate of ________ percent per annum; and

Whereas, the Note was given by ___________ (hereinafter called the "Tribe") to evidence the indebtedness incurred by the Tribe under a loan (hereinafter called the "Loan") made or insured by the FmHA or its successor agency under Public Law 103-354, and

Whereas, Tribal Council Resolution No. ________ dated ________ authorized the acceptance of the Loan and the issuance of the Note and pledged and assigned income and funds as security for the payment thereof; and

Whereas, the Tribe has entered into a subordination agreement with the United States Department of the Interior, Bureau of Indian Affairs (hereinafter called the "BIA"), whereby the General Assignment of Income dated ________ in favor of the BIA is fully subordinated to the Assignment made herein;

Now, therefore, in consideration of the FmHA or its successor agency under Public Law 103-354's making or insuring the Loan and to secure the payment when due of the installments on the Note, the Tribe does hereby grant, convey, pledge and assign to the FmHA or its successor agency under Public Law 103-354 (1) all annual gross income from the land purchased with the loan, and (2) all annual gross income from other sources. If the Tribe shall pay the entire principal of and interest on the Note, this Assignment shall terminate and be of no further force and effect.

In Witness Whereof, the ___________ Tribe of the ___________ Reservation causes this Assignment to be executed by its President and its Tribal seal to be affixed and duly attested.

(Seal) ___________ Tribe of the ___________ Reservation.

Attest: By ___________ (Appropriate Official)

Date ___________

The terms and conditions of the foregoing Assignment are hereby agreed to as of the date hereof.

Bureau of Indian Affairs

Title ___________

EXHIBIT D TO SUBPART N TO PART 1823—SUBORDINATION AGREEMENT

This Agreement, dated ___________, between the United States of America, Department of the Interior (hereinafter called the "BIA"), and the ___________ Tribe of the ___________ Reservation (hereinafter called the "Tribe"), for the benefit of the Tribe and to induce the United States of America, acting through the Farmers Home Administration or its successor agency under Public Law 103-354, United States Department of Agriculture (hereinafter called the "FmHA or its successor agency under Public Law 103-354"), to make or insure a loan to the Tribe:

Witnesseth:

Whereas, under date of ___________, the Tribe executed and delivered to the BIA a "General Assignment and Assignment of Income" (hereinafter called the "General Assignment"), a copy of which is attached hereto and marked Exhibit A; and under date of ___________, an "Assignment of Specific Income" a copy of which is attached hereto and marked Exhibit B, and Whereas, the FmHA or its successor agency under Public Law 103-354 has offered to loan or insure a loan to the Tribe in the sum of ___________, for the purpose of paying part or all of the cost of acquiring interests in approximately ___________ acres of real estate within its reservation pursuant to the provisions of the Act of April 11, 1970, Pub. L. 91-229; and

Whereas, the BIA is willing to subordinate to FmHA or its successor agency under Public Law 103-354 the annual gross income from the real estate purchased with the loan and the annual gross income from all other sources in such amount as may be necessary to pay debt service on such loan be pledged to pay the principal and interest on the loan; and

Now, Therefore, the BIA does agree as follows:
1. That the right it has under the General Assignment and under the Assignment of Specific Income as referred to in the first WHEREAS above, or any other instrument not mentioned herein to receive the income derived by the Tribe from all sources shall be in all respects subordinate, subject to and junior in right to the right of FmHA or its successor agency under Public Law 103-354 in and to said income as said rights are created and defined in the Assignment Pledge Agreements, or other agreements now or hereafter given resulting from the loan from the Farmers Home Administration or its successor agency under Public Law 103-354 to the Tribe.

2. That this subordination Agreement shall be effective as of the date hereof.

Dated this ______ day of __________, 19____.

50-60 (T-9) REA Specifications—Single Pole Steel Structures, Complete with Arms 12/71. 1728.97
50-70 (U-1) REA Specifications for 15 kV and 25 kV Primary Underground Power Cable 12/87. 1728.97
50-72 (U-4) REA Specifications for Electrical Equipment Enclosures (5-35 kV) 10/79. 1728.97
50-73 (U-5) REA Specifications for Pad-Mounted Transformers (Single and Three-Phase) 1/77. 1728.97
50-74 (U-6) REA Specifications for Secondary Pedestals (600 Volts and Below) 10/79. 1728.97
50-91 (S-3) REA Specifications for Step-Down Distribution Substation Transformers (34.4-138 kV) 1/78. 1728.97
345±6 REA Standard for Splicing Plastic-insulated Cables (PC-2) 1/78. 1755.97
345±13 REA Specifications for Aerial and Underground Telephone Cable (PE-22) 1/83. 1755.97
345±22 REA Specifications for Voice Frequency Loading Coils (PE-26) 1/89. 1755.97
345±29 REA Specifications for Self-supporting Cable (PE-38) 2/82 1755.97
345±39 REA Specifications for Telephone Station Protectors 3/83 1755.97
345±50 REA Specifications for Trunk Carrier Systems (PE-60) 9/79. 1755.97; 1755.397; 1755.522
345±52 REA Standard for Service Entrance and Station Protector Installations (PC-5A) 1/80. 1755.97
345±52 REA Standard for Station Installations (PC-5B) 4/81 ................. 1755.97
345±54 REA Specifications for Telephone Cable Splicing Connectors (PE-52) 12/71. 1755.97
345±55 REA Specifications for Central Office Loop Extenders and Loop Extender Voice Frequency Repeater Combinations (PE-52) 12/73. 1755.97
345±55 REA Specifications for Central Office Loop Extenders and Loop Extender Voice Frequency Repeater Combinations (PE-52) 12/73. 1755.97
345±55 REA Specifications for Central Office Loop Extenders and Loop Extender Voice Frequency Repeater Combinations (PE-52) 12/73. 1755.97
345±55 REA Specifications for Central Office Loop Extenders and Loop Extender Voice Frequency Repeater Combinations (PE-52) 12/73. 1755.97
345±63 REA Standard for Acceptance Tests and Measurements of Telephone Plant (PC-4) 5/76. 1755.97
345±65 REA Specifications for Cable Shield Bonding Connectors (PE-33) 6/78. 1755.97
345±66 REA Specifications for Subscriber Carrier Systems (PE-64) 9/79. 1755.97
345±67 REA Specifications for Filled Telephone Cables (PE-39) 11/81. 1755.97
345±69 REA Specifications for Two-wire Voice Frequency Repeater Equipment (PE-29) 1/78. 1755.97
345±72 REA Specifications for Filled Splice Cases (PE-74) 1/76 ........... 1755.97
345±75 REA Specifications for Electronic Trunk Circuits (PE-65) 1/77. 1755.97

1336

II Indian Arts and Crafts Board, Department of the Interior (Parts 300—399)

III National Indian Gaming Commission, Department of the Interior (Parts 500—599)

IV Office of Navajo and Hopi Indian Relocation (Parts 700—799)

V Bureau of Indian Affairs, Department of the Interior, and Indian Health Service, Department of Health and Human Services (Part 900)

VI Office of the Assistant Secretary-Indian Affairs, Department of the Interior (Part 1001)
Title 30—Mineral Resources

I Mine Safety and Health Administration, Department of Labor (Parts 1—199)
II Minerals Management Service, Department of the Interior (Parts 200—299)
III Board of Surface Mining and Reclamation Appeals, Department of the Interior (Parts 300—399)
IV Geological Survey, Department of the Interior (Parts 400—499)
V Bureau of Mines, Department of the Interior (Parts 600—699)
VI Office of Surface Mining Reclamation and Enforcement, Department of the Interior (Parts 700—999)

Title 31—Money and Finance: Treasury

SUBTITLE A—Office of the Secretary of the Treasury (Parts 0—50)
SUBTITLE B—Regulations Relating to Money and Finance
I Monetary Offices, Department of the Treasury (Parts 51—199)
II Fiscal Service, Department of the Treasury (Parts 200—399)
IV Secret Service, Department of the Treasury (Parts 400—499)
V Office of Foreign Assets Control, Department of the Treasury (Parts 500—599)
VI Bureau of Engraving and Printing, Department of the Treasury (Parts 600—699)
VII Federal Law Enforcement Training Center, Department of the Treasury (Parts 700—799)
VIII Office of International Investment, Department of the Treasury (Parts 800—899)

Title 32—National Defense

SUBTITLE A—Department of Defense
I Office of the Secretary of Defense (Parts 1—399)
V Department of the Army (Parts 400—699)
VI Department of the Navy (Parts 700—799)
VII Department of the Air Force (Parts 800—1099)
SUBTITLE B—Other Regulations Relating to National Defense
XII Defense Logistics Agency (Parts 1200—1299)
XVI Selective Service System (Parts 1600—1699)
XIX Central Intelligence Agency (Parts 1900—1999)
XX Information Security Oversight Office, National Archives and Records Administration (Parts 2000—2099)
XXI National Security Council (Parts 2100—2199)
XXIV Office of Science and Technology Policy (Parts 2400—2499)
XXVII Office for Micronesian Status Negotiations (Parts 2700—2799)
XXVIII Office of the Vice President of the United States (Parts 2800—2899)
XXIX Presidential Commission on the Assignment of Women in the Armed Forces (Part 2900)
Title 33—Navigation and Navigable Waters

Chap.
I Coast Guard, Department of Transportation (Parts 1—199)
II Corps of Engineers, Department of the Army (Parts 200—399)
IV Saint Lawrence Seaway Development Corporation, Department of Transportation (Parts 400—499)

Title 34—Education

Subtitle A—Office of the Secretary, Department of Education (Parts 1—99)
Subtitle B—Regulations of the Offices of the Department of Education
I Office for Civil Rights, Department of Education (Parts 100—199)
II Office of Elementary and Secondary Education, Department of Education (Parts 200—299)
III Office of Special Education and Rehabilitative Services, Department of Education (Parts 300—399)
IV Office of Vocational and Adult Education, Department of Education (Parts 400—499)
V Office of Bilingual Education and Minority Languages Affairs, Department of Education (Parts 500—599)
VI Office of Postsecondary Education, Department of Education (Parts 600—699)
VII Office of Educational Research and Improvement, Department of Education (Parts 700—799)
XI National Institute for Literacy (Parts 1100—1199)
Subtitle C—Regulations Relating to Education
XII National Council on Disability (Parts 1200—1299)

Title 35—Panama Canal

I Panama Canal Regulations (Parts 1—299)

Title 36—Parks, Forests, and Public Property

I National Park Service, Department of the Interior (Parts 1—199)
II Forest Service, Department of Agriculture (Parts 200—299)
III Corps of Engineers, Department of the Army (Parts 300—399)
IV American Battle Monuments Commission (Parts 400—499)
V Smithsonian Institution (Parts 500—599)
VII Library of Congress (Parts 700—799)
VIII Advisory Council on Historic Preservation (Parts 800—899)
IX Pennsylvania Avenue Development Corporation (Parts 900—999)
XI Architectural and Transportation Barriers Compliance Board (Parts 1100—1199)
XII National Archives and Records Administration (Parts 1200—1299)
XIV Assassination Records Review Board (Parts 1400—1499)
Title 37—Patents, Trademarks, and Copyrights

Chap.
I Patent and Trademark Office, Department of Commerce (Parts 1—199)
II Copyright Office, Library of Congress (Parts 200—299)
IV Assistant Secretary for Technology Policy, Department of Commerce (Parts 400—499)
V Under Secretary for Technology, Department of Commerce (Parts 500—599)

Title 38—Pensions, Bonuses, and Veterans’ Relief

I Department of Veterans Affairs (Parts 0—99)

Title 39—Postal Service

I United States Postal Service (Parts 1—999)
III Postal Rate Commission (Parts 3000—3099)

Title 40—Protection of Environment

I Environmental Protection Agency (Parts 1—799)
V Council on Environmental Quality (Parts 1500—1599)

Title 41—Public Contracts and Property Management

SUBTITLE B—Other Provisions Relating to Public Contracts
50 Public Contracts, Department of Labor (Parts 50—1—50—999)
51 Committee for Purchase From People Who Are Blind or Severely Disabled (Parts 51—1—51—99)

63 Department of Transportation (Parts 6300–6399)
64 Department of Transportation (Parts 6400–6499)
65 Department of Transportation (Parts 6500–6599)
66 Department of Transportation (Parts 6600–6699)
67 Department of Transportation (Parts 6700–6799)
68 Department of Transportation (Parts 6800–6899)
69 Department of Transportation (Parts 6900–6999)
70 Department of Transportation (Parts 7000–7099)
71 Department of Transportation (Parts 7100–7199)
72 Department of Transportation (Parts 7200–7299)
73 Department of Transportation (Parts 7300–7399)
74 Department of Transportation (Parts 7400–7499)
75 Department of Transportation (Parts 7500–7599)
76 Department of Transportation (Parts 7600–7699)
77 Department of Transportation (Parts 7700–7799)
78 Department of Transportation (Parts 7800–7899)
79 Department of Transportation (Parts 7900–7999)
80 Department of Transportation (Parts 8000–8099)
81 Department of Transportation (Parts 8100–8199)
82 Department of Transportation (Parts 8200–8299)
83 Department of Transportation (Parts 8300–8399)
84 Department of Transportation (Parts 8400–8499)
85 Department of Transportation (Parts 8500–8599)
86 Department of Transportation (Parts 8600–8699)
87 Department of Transportation (Parts 8700–8799)
88 Department of Transportation (Parts 8800–8899)
89 Department of Transportation (Parts 8900–8999)
90 Department of Transportation (Parts 9000–9099)
91 Department of Transportation (Parts 9100–9199)
92 Department of Transportation (Parts 9200–9299)
93 Department of Transportation (Parts 9300–9399)
94 Department of Transportation (Parts 9400–9499)
95 Department of Transportation (Parts 9500–9599)
96 Department of Transportation (Parts 9600–9699)
97 Department of Transportation (Parts 9700–9799)
98 Department of Transportation (Parts 9800–9899)
99 Department of Transportation (Parts 9900–9999)

Title 49—Transportation

Subtitle A—Office of the Secretary of Transportation (Parts 1–99)

Subtitle B—Other Regulations Relating to Transportation

1 Research and Special Programs Administration, Department of Transportation (Parts 100–199)

II Federal Railroad Administration, Department of Transportation (Parts 200–299)
Title 49—Transportation—Continued

III Federal Highway Administration, Department of Transportation (Parts 300—399)

IV Coast Guard, Department of Transportation (Parts 400—499)

V National Highway Traffic Safety Administration, Department of Transportation (Parts 500—599)

VI Federal Transit Administration, Department of Transportation (Parts 600—699)

VII National Railroad Passenger Corporation (AMTRAK) (Parts 700—799)

VIII National Transportation Safety Board (Parts 800—999)

X Surface Transportation Board, Department of Transportation (Parts 1000—1399)

List of CFR Sections Affected

All changes in this volume of the Code of Federal Regulations which were made by documents published in the Federal Register since January 1, 1986, are enumerated in the following list. Entries indicate the nature of the changes effected. Page numbers refer to Federal Register pages. The user should consult the entries for chapters and parts as well as sections for revisions.

### Chapter XVI

- 1610.6 (d) added
- 1610.11 (c) added

### Chapter XVII

- Policy statement
- 1703.100–1703.140 (Subpart D) Revised
- Effective date confirmation
- 1710.7 (b)(3) revised
- 1710.106 (e) revised; interim
- 1710.113 (c) redesignated as (c)(1); (c)(2) added
- Authority citation revised
- 1717.1200–1717.1208 (Subpart Y) Added
- Heading and authority citation revised
- 1735.2 Amended
- 1735.3 Amended
- 1735.17 (c) revised
- 1735.22 (f) revised; (g) redesignated as (i); new (g) and (h) added
- 1735.31 (d) and (e) redesignated as (e) and (f); new (d) added
- 1735.32 (b) amended; (c) revised
- 1735.33 Added
- 1735.43 Heading and (a) revised; (b) redesignated as (f); new (b) through (e) added
- 1735.46 (b), (c) and (d) revised; (e) and (f) removed; (g) and (h) redesignated as (e) and (f)
- 1735.60 (a) introductory text amended; (a)(3) removed
- 1735.76 Amended
- Heading and authority citation revised
- Heading correctly revised
- 1737.70 (d) removed

- 1739 Removed
- 1746 Removed
- 1753.39 (c) revised
- 1755.97 Table amended
- 1755.98 Table amended
- 1755.217 Added
- 1755.400 Added
- 1755.401 Added
- 1755.402 Added
- 1755.403 Added
- 1755.404 Added
- Authority citation revised
- 1767 Authority citation revised
- 1767.13 (a) and (d) revised
- 1767.17 (a) and (b) revised
- 1767.21 Amended
- 1767.27 Amended
- 1767.28 Amended
- 1767.29 Amended
- 1767.30 Amended
- 1767.31 Amended
- 1767.41 Introductory text revised
- 1775 Redesignated from 1942.451–1942.500 (Subpart J) and revised
- 1777 Redesignated from 4284.401–4284.500 (Subpart E) and revised
- 1778 Redesignated from 1942.501–1942.550 (Subpart K) and revised
- 1780 Added
- 1781 Redesignated from 1942.401–1942.424 (Subpart I) and revised
- 1786.75–1786.86 (Subpart D) Removed
