be taken as establishing service connection for active pulmonary tuberculosis subsequently diagnosed by approved methods but service connection and evaluation may be assigned only from the date of such diagnosis or other evidence of clinical activity.

(2) A notation of inactive tuberculosis of the reinfection type at induction or enlistment definitely prevents the grant of service connection under §3.307 for active tuberculosis, regardless of the fact that it was shown within the appropriate presumptive period.

(b) Pleurisy with effusion without obvious cause. Pleurisy with effusion with evidence of diagnostic studies ruling out obvious nontuberculous causes will qualify as active tuberculosis. The requirements for presumptive service connection will be the same as those for tuberculous pleurisy.

(c) Tuberculous pleurisy and endobronchial tuberculosis. Tuberculous pleurisy and endobronchial tuberculosis fall within the category of pulmonary tuberculosis for the purpose of service connection on a presumptive basis. Either will be held incurred in service when initially manifested within 36 months after the veteran's separation from service as determined under §3.307(a)(2).

(d) Miliary tuberculosis. Service connection for miliary tuberculosis involving the lungs is to be determined in the same manner as for other active pulmonary tuberculosis.

§ 3.375 Determination of inactivity (complete arrest) in tuberculosis.

(a) Pulmonary tuberculosis. A veteran shown to have had pulmonary tuberculosis will be held to have reached a...
