

take advantage of that business opportunity for personal profit. Recommendations to customers to buy insurance should be based on the benefits of the policy, not the commissions received from the sale.

(c) Except as provided in §§2.4 and 2.5(b), and paragraph (d) of this section, a director, officer, employee, or principal shareholder of a national bank, or an entity in which such person owns an interest of more than ten percent, may not retain commissions or other income from the sale of credit life insurance in connection with any loan made by that bank, and income from credit life insurance sales to loan customers must be credited to the income accounts of the bank.

(d) The requirements of paragraph (c) of this section do not apply to a director, officer, employee, or principal shareholder if:

(1) The person is employed by a third party that has contracted with the bank on an arm's-length basis to sell financial products on bank premises; and

(2) The person is not involved in the bank's credit decision process.

§ 2.4 Bonus and incentive plans.

A bank employee or officer may participate in a bonus or incentive plan based on the sale of credit life insurance if payments to the employee or officer in any one year do not exceed the greater of:

(a) Five percent of the recipient's annual salary; or

(b) Five percent of the average salary of all loan officers participating in the plan.

§ 2.5 Bank compensation.

(a) Nothing contained in this part prohibits a bank employee, officer, director, or principal shareholder who holds an insurance agent's license from agreeing to compensate the bank for the use of its premises, employees, or good will. However, the employee, officer, director, or principal shareholder shall turn over to the bank as compensation all income received from the sale of the credit life insurance to the bank's loan customers.

(b) Income derived from credit life insurance sales to loan customers may be

credited to an affiliate operating under the Bank Holding Company Act of 1956, 12 U.S.C. 1841 *et seq.*, or to a trust for the benefit of all shareholders, provided that the bank receives reasonable compensation in recognition of the role played by its personnel, premises, and good will in credit life insurance sales. Reasonable compensation generally means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the bank's credit life insurance sales.

APPENDIX A TO PART 3—RISK-BASED CAPITAL GUIDELINES

APPENDIX B TO PART 3—RISK-BASED CAPITAL GUIDELINES; MARKET RISK ADJUSTMENT

§ 3.1

12 CFR Ch. I (1-1-06 Edition)

AUTHORITY: 12 U.S.C. 93a, 161, 1818, 1828(n), 1828 note, 1831n note, 1835, 3907, and 3909.

SOURCE: 50 FR 10216, Mar. 14, 1985, unless otherwise noted.

Subpart A—Authority and Definitions

§ 3.1 Authority.

This part is issued under the authority of 12 U.S.C. 1 *et seq.*, 93a, 161, 1818, 3907 and 3909.

[59 FR 64563, Dec. 15, 1994]

§ 3.2 Definitions.

For the purposes of this part:

(a) *Adjusted total assets* means the average total assets figure required to be computed for and stated in a bank's most recent quarterly *Consolidated Report of Condition and Income* (Call Report) minus end-of-quarter intangible assets, deferred tax assets, and credit-enhancing interest-only strips, that are deducted from Tier 1 capital, and minus nonfinancial equity investments for which a Tier 1 capital deduction is required pursuant to section 2(c)(5) of appendix A of this part 3. The OCC reserves the right to require a bank to compute and maintain its capital ratios on the basis of actual, rather than average, total assets when necessary to carry out the purposes of this part.

(b) *Bank* means a national banking association or District of Columbia Bank.

(c) *Tier 1 capital* means *Tier 1 capital* as determined according to section 2 of appendix A of this part, including the deductions described therein.

(d) *Tier 2 capital* means *Tier 2 capital* as determined according to section 2 of appendix A of this part, including the limitations described therein.

(e) *Total capital* means *Total capital* as determined according to section 1(25) and section 2 of appendix A of this part, including the deductions described therein.

[55 FR 38800, Sept. 21, 1990, as amended at 60 FR 7907, Feb. 10, 1995; 67 FR 3795, Jan. 25, 2002]

§ 3.3 Transitional rules.

Intangible assets, other than mortgage servicing rights, purchased prior to April 15, 1985, and accounted for in

accordance with the instruction of the OCC, need not be deducted from Tier 1 capital until December 31, 1992. However, when combined with other qualifying intangible assets, these intangibles may not exceed 25 percent of Tier 1 capital. After December 31, 1992, only those intangible assets that meet the criteria contained in section 2(c)(2) of appendix A will not be deducted from Tier 1 capital.

[55 FR 38800, Sept. 21, 1990]

§ 3.4 Reservation of authority.

(a) *Deductions from capital.* Notwithstanding the definitions of *Tier 1 capital* and *Tier 2 capital* in § 3.2 (c) and (d), the OCC may find that a newly developed or modified capital instrument constitutes *Tier 1 capital* or *Tier 2 capital*, and may permit one or more banks to include all or a portion of funds obtained through such capital instruments as Tier 1 or Tier 2 capital, permanently or on a temporary basis, for the purposes of compliance with this part or for other purposes. Similarly, the OCC may find that a particular intangible asset, deferred tax asset or credit-enhancing interest-only strip need not be deducted from Tier 1 or Tier 2 capital. Conversely, the OCC may find that a particular intangible asset, deferred tax asset, credit-enhancing interest-only strip or other Tier 1 or Tier 2 capital component has characteristics or terms that diminish its contribution to a bank's ability to absorb losses, and may require the deduction from Tier 1 or Tier 2 capital of all of the component or of a greater portion of the component than is otherwise required.

(b) *Risk weight categories.* Notwithstanding the risk categories in sections 3 and 4 of appendix A to this part, the OCC will look to the substance of the transaction and may find that the assigned risk weight for any asset or the credit equivalent amount or credit conversion factor for any off-balance sheet item does not appropriately reflect the risks imposed on a bank and may require another risk weight, credit equivalent amount, or credit conversion factor that the OCC deems appropriate. Similarly, if no risk weight, credit equivalent amount, or credit conversion factor is specifically assigned, the

Comptroller of the Currency, Treasury

§ 3.10

OCC may assign any risk weight, credit equivalent amount, or credit conversion factor that the OCC deems appropriate. In making its determination, the OCC considers risks associated with the asset or off-balance sheet item as well as other relevant factors.

[55 FR 38800, Sept. 21, 1990, as amended at 66 FR 59630, Nov. 29, 2001]

Subpart B—Minimum Capital Ratios

§ 3.5 Applicability.

This subpart is applicable to all banks unless the Office determines, pursuant to the procedures set forth in subpart C, that different minimum capital ratios are appropriate for an individual bank based upon its particular circumstances, or unless different minimum capital ratios have been established or are established for an individual bank in a written agreement or a temporary or final order pursuant to 12 U.S.C. 1818 (b) or (c), or as a condition for approval of an application.

§ 3.6 Minimum capital ratios.

(a) *Risk-based capital ratio.* All national banks must have and maintain the minimum risk-based capital ratio as set forth in appendix A (and, for certain banks, in appendix B).

(b) *Total assets leverage ratio.* All national banks must have and maintain Tier 1 capital in an amount equal to at least 3.0 percent of adjusted total assets.

(c) *Additional leverage ratio requirement.* An institution operating at or near the level in paragraph (b) of this section should have well-diversified risks, including no undue interest rate risk exposure; excellent control systems; good earnings; high asset quality; high liquidity; and well managed on-and off-balance sheet activities; and in general be considered a strong banking organization, rated composite 1 under the Uniform Financial Institutions Rating System (CAMELS) rating system of banks. For all but the most highly-rated banks meeting the conditions set forth in this paragraph (c), the minimum Tier 1 leverage ratio is 4 percent. In all cases, banking institutions should hold capital commensu-

rate with the level and nature of all risks.

[55 FR 38800, Sept. 21, 1990, as amended at 61 FR 47367, Sept. 6, 1996; 64 FR 10199, Mar. 2, 1999]

§ 3.7 Plan to achieve minimum capital ratios.

Effective December 31, 1990, any bank having capital ratios less than the minimums required under § 3.6 (a) and (b) shall, within 60 days, submit to the OCC a plan describing the means and schedule by which the bank shall achieve the applicable minimum capital ratios. The plan may be considered acceptable unless the bank is notified to the contrary by the OCC. A bank in compliance with an acceptable plan to achieve the applicable minimum capital ratios will not be deemed to be in violation of § 3.6.

[55 FR 38800, Sept. 21, 1990]

§ 3.8 Reservation of authority.

When, in the opinion of the Office the circumstances so require, a bank may be authorized to have less than the minimum capital ratios in § 3.6 during a time period specified by the Office.

Subpart C—Establishment of Minimum Capital Ratios for an Individual Bank

§ 3.9 Purpose and scope.

The rules and procedures specified in this subpart are applicable to a proceeding to establish required minimum capital ratios that would otherwise be applicable to a bank under § 3.6. The OCC is authorized under 12 U.S.C. 3907 (a)(2) to establish such minimum capital requirements for a bank as the OCC, in its discretion, deems appropriate in light of the particular circumstances at that bank. Proceedings under this subpart also may be initiated to require a bank having capital ratios above those set forth in § 3.6, or other legal authority to continue to maintain those higher ratios.

[55 FR 38800, Sept. 21, 1990]

§ 3.10 Applicability.

The OCC may require higher minimum capital ratios for an individual

§3.11

12 CFR Ch. I (1-1-06 Edition)

bank in view of its circumstances. For example, higher capital ratios may be appropriate for:

- (a) A newly chartered bank;
- (b) A bank receiving special supervisory attention;
- (c) A bank that has, or is expected to have, losses resulting in capital inadequacy;
- (d) A bank with significant exposure due to the risks from concentrations of credit, certain risks arising from non-traditional activities, or management's overall inability to monitor and control financial and operating risks presented by concentrations of credit and nontraditional activities;
- (e) A bank with significant exposure to declines in the economic value of its capital due to changes in interest rates;
- (f) A bank with significant exposure due to fiduciary or operational risk;
- (g) A bank exposed to a high degree of asset depreciation, or a low level of liquid assets in relation to short term liabilities;
- (h) A bank exposed to a high volume or, or particularly severe, problem loans;
- (i) A bank that is growing rapidly, either internally or through acquisitions; or
- (j) A bank that may be adversely affected by the activities or condition of its holding company, affiliate(s), or other persons or institutions including chain banking organizations, with which it has significant business relationships.

[60 FR 39493, Aug. 2, 1995]

§3.11 Standards for determination of appropriate individual minimum capital ratios.

The appropriate minimum capital ratios for an individual bank cannot be determined solely through the application of a rigid mathematical formula or wholly objective criteria. The decision is necessarily based in part on subjective judgment grounded in agency expertise. The factors to be considered in the determination will vary in each case and may include, for example:

(a) The conditions or circumstances leading to the Office's determination that higher minimum capital ratios are appropriate or necessary for the bank;

(b) The exigency of those circumstances or potential problems;

(c) The overall condition, management strength, and future prospects of the bank and, if applicable, its holding company and/or affiliate(s);

(d) The bank's liquidity, capital, risk asset and other ratios compared to the ratios of its peer group; and

(e) The views of the bank's directors and senior management.

§3.12 Procedures.

(a) *Notice.* When the OCC determines that minimum capital ratios above those set forth in §3.6 or other legal authority are necessary or appropriate for a particular bank, the OCC will notify the bank in writing of the proposed minimum capital ratios and the date by which they should be reached (if applicable) and will provide an explanation of why the ratios proposed are considered necessary or appropriate for the bank.

(b) *Response.* (1) The bank may respond to any or all of the items in the notice. The response should include any matters which the bank would have the Office consider in deciding whether individual minimum capital ratios should be established for the bank, what those capital ratios should be, and, if applicable, when they should be achieved. The response must be in writing and delivered to the designated OCC official within 30 days after the date on which the bank received the notice. The Office may shorten the time period when, in the opinion of the Office, the condition of the bank so requires, provided that the bank is informed promptly of the new time period, or with the consent of the bank. In its discretion, the Office may extend the time period for good cause.

(2) Failure to respond within 30 days or such other time period as may be specified by the Office shall constitute a waiver of any objections to the proposed minimum capital ratios or the deadline for their achievement.

(c) *Decision.* After the close of the bank's response period, the Office will decide, based on a review of the bank's response and other information concerning the bank, whether individual minimum capital ratios should be established for the bank and, if so, the

Comptroller of the Currency, Treasury

§ 3.15

ratios and the date the requirements will become effective. The bank will be notified of the decision in writing. The notice will include an explanation of the decision, except for a decision not to establish individual minimum capital requirements for the bank.

(d) *Submission of plan.* The decision may require the bank to develop and submit to the Office, within a time period specified, an acceptable plan to reach the minimum capital ratios established for the bank by the date required.

(e) *Change in circumstances.* If, after the Office's decision in paragraph (c) of this section, there is a change in the circumstances affecting the bank's capital adequacy or its ability to reach the required minimum capital ratios by the specified date, either the bank or the Office may propose to the other a change in the minimum capital ratios for the bank, the date when the minimums must be achieved, or the bank's plan (if applicable). The Office may decline to consider proposals that are not based on a significant change in circumstances or are repetitive or frivolous. Pending a decision on reconsideration, the Office's original decision and any plan required under that decision shall continue in full force and effect.

[50 FR 10216, Mar. 14, 1985, as amended at 55 FR 38800, Sept. 21, 1990]

§ 3.13 Relation to other actions.

In lieu of, or in addition to, the procedures in this subpart, the required minimum capital ratios for a bank may be established or revised through a written agreement or cease and desist proceedings under 12 U.S.C. 1818 (b) or (c) (12 CFR 19.0 through 19.21), or as a condition for approval of an application.

Subpart D—Enforcement

§ 3.14 Remedies.

A bank that does not have or maintain the minimum capital ratios applicable to it, whether required in subpart B of this part, in a decision pursuant to subpart C of this part, in a written agreement or temporary or final order under 12 U.S.C. 1818 (b) or (c), or in a

condition for approval of an application, or a bank that has failed to submit or comply with an acceptable plan to attain those ratios, will be subject to such administrative action or sanctions as the OCC considers appropriate. These sanctions may include the issuance of a Directive pursuant to subpart E of this part or other enforcement action, assessment of civil money penalties, and/or the denial, conditioning, or revocation of applications. A national bank's failure to achieve or maintain minimum capital ratios in § 3.6 (a) or (b) may also be the basis for an action by the Federal Deposit Insurance Corporation to terminate federal deposit insurance. See 12 CFR 325.4.

[55 FR 38801, Sept. 21, 1990]

Subpart E—Issuance of a Directive

§ 3.15 Purpose and scope.

This subpart is applicable to proceedings by the Office to issue a directive under 12 U.S.C. 3907(b)(2). A directive is an order issued to a bank that does not have or maintain capital at or above the minimum ratios set forth in § 3.6, or established for the bank under subpart C, by a written agreement under 12 U.S.C. 1818(b), or as a condition for approval of an application. A directive may order the bank to:

(a) Achieve the minimum capital ratios applicable to it by a specified date;

(b) Adhere to a previously submitted plan to achieve the applicable capital ratios;

(c) Submit and adhere to a plan acceptable to the Office describing the means and time schedule by which the bank shall achieve the applicable capital ratios;

(d) Take other action, such as reduction of assets or the rate of growth of assets, or restrictions on the payment of dividends, to achieve the applicable capital ratios; or

(e) A combination of any of these or similar actions.

A directive issued under this rule, including a plan submitted under a directive, is enforceable in the same manner and to the same extent as an effective and outstanding cease and desist order which has become final as defined in 12 U.S.C. 1818(k). Violation of a directive

§3.16

may result in assessment of civil money penalties in accordance with 12 U.S.C. 3909(d).

§3.16 Notice of intent to issue a directive.

The Office will notify a bank in writing of its intention to issue a directive. The notice will state:

(a) Reasons for issuance of the directive; and

(b) The proposed contents of the directive.

§3.17 Response to notice.

(a) A bank may respond to the notice by stating why a directive should not be issued and/or by proposing alternative contents for the directive. The response should include any matters which the bank would have the Office consider in deciding whether to issue a directive and/or what the contents of the directive should be. The response may include a plan for achieving the minimum capital ratios applicable to the bank. The response must be in writing and delivered to the designated OCC official within 30 days after the date on which the bank received the notice. The Office may shorten the 30-day time period:

(1) When, in the opinion of the Office, the condition of the bank so requires, provided that the bank shall be informed promptly of the new time period;

(2) With the consent of the bank; or

(3) When the bank already has advised the Office that it cannot or will not achieve its applicable minimum capital ratios. In its discretion, the Office may extend the time period for good cause.

(b) Failure to respond within 30 days or such other time period as may be specified by the Office shall constitute a waiver of any objections to the proposed directive.

§3.18 Decision.

After the closing date of the bank's response period, or receipt of the bank's response, if earlier, the Office will consider the bank's response, and may seek additional information or clarification of the response. Thereafter, the Office will determine whether or not to issue a directive, and if one

12 CFR Ch. I (1-1-06 Edition)

is to be issued, whether it should be as originally proposed or in modified form.

§3.19 Issuance of a directive.

(a) A directive will be served by delivery to the bank. It will include or be accompanied by a statement of reasons for its issuance.

(b) A directive is effective immediately upon its receipt by the bank, or upon such later date as may be specified therein, and shall remain effective and enforceable until it is stayed, modified, or terminated by the Office.

§3.20 Change in circumstances.

Upon a change in circumstances, a bank may request the Office to reconsider the terms of its directive or may propose changes in the plan to achieve the bank's applicable minimum capital ratios. The Office also may take such action on its own motion. The Office may decline to consider requests or proposals that are not based on a significant change in circumstances or are repetitive or frivolous. Pending a decision on reconsideration, the directive and plan shall continue in full force and effect.

§3.21 Relation to other administrative actions.

A directive may be issued in addition to, or in lieu of, any other action authorized by law, including cease and desist proceedings, civil money penalties, or the conditioning or denial of applications. The Office also may, in its discretion, take any action authorized by law, in lieu of a directive, in response to a bank's failure to achieve or maintain the applicable minimum capital ratios.

INTERPRETATIONS

§3.100 Capital and surplus.

For purposes of determining statutory limits that are based on the amount of bank's *capital* and/or *surplus*, the provisions of this section are to be used, rather than the definitions of capital contained in §3.2.

(a) *Capital*. The term *capital* as used in provisions of law relating to the capital of national banking associations shall include the amount of common

stock outstanding and unimpaired plus the amount of perpetual preferred stock outstanding and unimpaired.

(b) *Capital Stock*. The term *capital stock* as used in provisions of law relating to the capital stock of national banking associations, other than 12 U.S.C. 101, 177 and 178, shall have the same meaning as the term *capital* set forth in paragraph (a) of this section.

(c) *Surplus*. The term *surplus* as used in provisions of law relating to the surplus of national banking associations means the sum of paragraphs (c) (1), (2), (3) and (4) of this section:

(1) Capital surplus; undivided profits; reserves for contingencies and other capital reserves (excluding accrued dividends on perpetual and limited life preferred stock); net worth certificates issued pursuant to 12 U.S.C. 1823(i); minority interests in consolidated subsidiaries; and allowances for loan and lease losses; minus intangible assets;

(2) Mortgage servicing assets;

(3) Mandatory convertible debt to the extent of 20% of the sum of paragraphs (a) and (c) (1) and (2) of this section;

(4) Other mandatory convertible debt, limited life preferred stock and subordinated notes and debentures to the extent set forth in paragraph (f)(2) of this section.

(d) *Unimpaired Surplus Fund*. The term *unimpaired surplus fund* as used in provisions of law relating to the unimpaired surplus fund of national banking associations shall have the same meaning as the term *surplus* set forth in paragraph (c) of this section.

(e) *Definitions*. (1) *Allowance for loan and lease losses* means the balance of the valuation reserve on December 31, 1968, plus additions to the reserve charged to operations since that date, less losses charged against the allowance net of recoveries.

(2) *Capital surplus* means the total of those accounts reflecting:

(i) Amounts paid in in excess of the par or stated value of capital stock;

(ii) Amounts contributed to the bank other than for capital stock;

(iii) amounts transferred from undivided profits pursuant to 12 U.S.C. 60; and

(iv) Other amounts transferred from undivided profits.

(3) *Intangible assets* means those purchased assets that are to be reported as intangible assets in accordance with the *Instructions—Consolidated Reports of Condition and Income* (Call Report).

(4) *Limited Life preferred stock* means preferred stock which has a maturity or which may be redeemed at the option of the holder.

(5) *Mandatory convertible debt* means subordinated debt instruments which unqualifiedly require the issuer to exchange either common or perpetual preferred stock for such instruments by a date at or before the maturity of the instrument. The maturity of these instruments must be 12 years or less. In addition, the instrument must meet the requirements of paragraphs (f)(1)(i) through (v) of this section for subordinated notes and debentures or other requirements published by the OCC.

(6) *Minority interest in consolidated subsidiaries* means the portion of equity capital accounts of all consolidated subsidiaries of the bank that is allocated to minority shareholders of such subsidiaries.

(7) *Mortgage servicing assets* means the bank-owned rights to service for a fee mortgage loans that are owned by others.

(8) *Perpetual preferred stock* means preferred stock that does not have a stated maturity date and cannot be redeemed at the option of the holder.

(f) *Requirements and restrictions: Limited life preferred stock, mandatory convertible debt, and other subordinated debt*—(1) *Requirements*. Issues of limited life preferred stock and subordinated notes and debentures (except mandatory convertible debt) shall have original weighted average maturities of at least five years to be included in the definition of *surplus*. In addition, a subordinated note or debenture must also:

(i) Be subordinated to the claims of depositors;

(ii) State on the instrument that it is not a deposit and is not insured by the FDIC;

(iii) Be unsecured;

(iv) Be ineligible as collateral for a loan by the issuing bank;

(v) Provide that once any scheduled payments of principal begin, all scheduled payments shall be made at least annually and the amount repaid in

each year shall be no less than in the prior year; and

(vi) Provide that no prepayment (including payment pursuant to an acceleration clause or redemption prior to maturity) shall be made without prior OCC approval unless the bank remains an eligible bank, as defined in 12 CFR 5.3(g), after the prepayment.

(2) *Restrictions.* The total amount of mandatory convertible debt not included in paragraph (c)(3) of this section, limited life preferred stock, and subordinated notes and debentures considered as surplus is limited to 50 percent of the sum of paragraphs (a) and (c) (1), (2) and (3) of this section.

(3) *Reservation of authority.* The OCC expressly reserves the authority to waive the requirements and restrictions set forth in paragraphs (f) (1) and (2) of this section, in order to allow the inclusion of other limited life preferred stock, mandatory convertible notes and subordinated notes and debentures in the capital base of any national bank for capital adequacy purposes or for purposes of determining statutory limits. The OCC further expressly reserves the authority to impose more stringent conditions than those set forth in paragraphs (f) (1) and (2) of this section to exclude any component of Tier 1 or Tier 2 capital, in whole or in part, as part of a national bank's capital and surplus for any purpose.

(g) *Transitional rules.* (1) Equity commitment notes approved by the OCC as capital and issued prior to April 15, 1985, may continue to be included in paragraph (c)(3) of this section. All other instruments approved by the OCC as capital and issued prior to April 15, 1985, are to be included in paragraph (c)(4) of this section.

(2) Intangible assets (other than mortgage servicing assets) purchased prior to April 15, 1985, and accounted for in accordance with OCC instructions, may continue to be included as surplus up to 25% of the sum of paragraphs (a) and (c)(1) of this section.

(Approved by the Office of Management and Budget under control number 1557-0166)

[50 FR 10216, Mar. 14, 1985, as amended at 55 FR 38801, Sept. 21, 1990; 60 FR 39229, Aug. 1, 1995; 61 FR 60363, Nov. 27, 1996; 63 FR 42674, Aug. 10, 1998]

APPENDIX A TO PART 3—RISK-BASED CAPITAL GUIDELINES

Section 1. Purpose, Applicability of Guidelines, and Definitions.

(a) *Purpose.* (1) An important function of the Office of the Comptroller of the Currency (OCC) is to evaluate the adequacy of capital maintained by each national bank. Such an evaluation involves the consideration of numerous factors, including the riskiness of a bank's assets and off-balance sheet items. This appendix A implements the OCC's risk-based capital guidelines. The risk-based capital ratio derived from those guidelines is more systematically sensitive to the credit risk associated with various bank activities than is a capital ratio based strictly on a bank's total balance sheet assets. A bank's risk-based capital ratio is obtained by dividing its capital base (as defined in section 2 of this appendix A) by its risk-weighted assets (as calculated pursuant to section 3 of this appendix A). These guidelines were created within the framework established by the report issued by the Committee on Banking Regulations and Supervisory Practices in July 1988. The OCC believes that the risk-based capital ratio is a useful tool in evaluating the capital adequacy of all national banks, not just those that are active in the international banking system.

(2) The purpose of this appendix A is to explain precisely (i) how a national bank's risk-based capital ratio is determined and (ii) how these risk-based capital guidelines are applied to national banks. The OCC will review these guidelines periodically for possible adjustments commensurate with its experience with the risk-based capital ratio and with changes in the economy, financial markets and domestic and international banking practices.

(b) *Applicability.* (1) The risk-based capital ratio derived from these guidelines is an important factor in the OCC's evaluation of a bank's capital adequacy. However, since this measure addresses only credit risk, the 8% minimum ratio should not be viewed as the level to be targeted, but rather as a floor. The final supervisory judgment on a bank's capital adequacy is based on an individualized assessment of numerous factors, including those listed in 12 CFR 3.10. With respect to the consideration of these factors, the OCC will give particular attention to any bank with significant exposure to declines in the economic value of its capital due to changes in interest rates. As a result, it may differ from the conclusion drawn from an isolated comparison of a bank's risk-based capital ratio to the 8% minimum specified in these guidelines. In addition to the standards established by these risk-based capital guidelines, all national banks must maintain a minimum capital-to-total assets ratio in

accordance with the provisions of 12 CFR part 3.

(2) Effective December 31, 1990, these risk-based capital guidelines will apply to all national banks. In the interim, banks must maintain minimum capital-to-total assets ratios as required by 12 CFR part 3, and should begin preparing for the implementation of these risk-based capital guidelines. In this regard, each national bank that does not currently meet the final minimum ratio established in section 4(b)(1) of this appendix A should begin planning for achieving that standard.

(3) These risk-based capital guidelines will not be applied to federal branches and agencies of foreign banks.

(c) *Definitions.* For purposes of this appendix A, the following definitions apply:

(1) *Adjusted carrying value* means, for purposes of section 2(c)(5) of this appendix A, the aggregate value that investments are carried on the balance sheet of the bank reduced by any unrealized gains on the investments that are reflected in such carrying value but excluded from the bank's Tier 1 capital and reduced by any associated deferred tax liabilities. For example, for investments held as available-for-sale (AFS), the adjusted carrying value of the investments would be the aggregate carrying value of the investments (as reflected on the consolidated balance sheet of the bank) less any unrealized gains on those investments that are included in other comprehensive income and that are not reflected in Tier 1 capital, and less any associated deferred tax liabilities. Unrealized losses on AFS nonfinancial equity investments must be deducted from Tier 1 capital in accordance with section 1(c)(8) of this appendix A. The treatment of small business investment companies that are consolidated for accounting purposes under generally accepted accounting principles is discussed in section 2(c)(5)(ii) of this appendix A. For investments in a non-financial company that is consolidated for accounting purposes, the bank's adjusted carrying value of the investment is determined under the equity method of accounting (net of any intangibles associated with the investment that are deducted from the bank's Tier 1 capital in accordance with section 2(c)(2) of this appendix A). Even though the assets of the nonfinancial company are consolidated for accounting purposes, these assets (as well as the credit equivalent amounts of the company's off-balance sheet items) are excluded from the bank's risk-weighted assets.

(2) *Allowances for loan and lease losses* means the balance of the valuation reserve on December 31, 1968, plus additions to the reserve charged to operations since that date, less losses charged against the allowance net of recoveries.

(3) *Asset-backed commercial paper program* means a program that primarily issues externally rated commercial paper backed by assets or other exposures held in a bankruptcy-remote, special-purpose entity.

(4) *Asset-backed commercial paper sponsor* means a bank that:

(i) Establishes an asset-backed commercial paper program;

(ii) Approves the sellers permitted to participate in an asset-backed commercial paper program;

(iii) Approves the asset pools to be purchased by an asset-backed commercial paper program; or

(iv) Administers the asset-backed commercial paper program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program's credit and investment policy.

(5) *Associated company* means any corporation, partnership, business trust, joint venture, association or similar organization in which a national bank directly or indirectly holds a 20 to 50 percent ownership interest.

(6) *Banking and finance subsidiary* means any subsidiary of a national bank that engages in banking- and finance-related activities.

(7) *Cash items in the process of collection* means checks or drafts in the process of collection that are drawn on another depository institution, including a central bank, and that are payable immediately upon presentation in the country in which the reporting bank's office that is clearing or collecting the check or draft is located; U.S. Government checks that are drawn on the United States Treasury or any other U.S. Government or Government-sponsored agency and that are payable immediately upon presentation; broker's security drafts and commodity or bill-of-lading drafts payable immediately upon presentation in the United States or the country in which the reporting bank's office that is handling the drafts is located; and unposted debits.

(8) *Central government* means the national governing authority of a country; it includes the departments, ministries and agencies of the central government and the central bank. The U.S. Central Bank includes the 12 Federal Reserve Banks. The definition of central government does not include the following: State, provincial, or local governments; commercial enterprises owned by the central government, which are entities engaged in activities involving trade, commerce, or profit that are generally conducted or performed in the private sector of the United States economy; and non-central government entities whose obligations are guaranteed by the central government.

(9) *Commitment* means any arrangement that obligates a national bank to: (i) Purchase loans or securities; or (ii) extend credit

in the form of loans or leases, participations in loans or leases, overdraft facilities, revolving credit facilities, home equity lines of credit, liquidity facilities, or similar transactions.

(10) *Common stockholders' equity* means common stock, common stock surplus, undivided profits, capital reserves, and adjustments for the cumulative effect of foreign currency translation, less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values.

(11) *Conditional guarantee* means a contingent obligation of the United States Government or its agencies, or the central government of an OECD country, the validity of which to the beneficiary is dependent upon some affirmative action—*e.g.*, servicing requirements—on the part of the beneficiary of the guarantee or a third party.

(12) *Deferred tax assets* means the tax consequences attributable to tax carryforwards and deductible temporary differences. Tax carryforwards are deductions or credits that cannot be used for tax purposes during the current period, but can be carried forward to reduce taxable income or taxes payable in a future period or periods. Temporary differences are financial events or transactions that are recognized in one period for financial statement purposes, but are recognized in another period or periods for income tax purposes. Deductible temporary differences are temporary differences that result in a reduction of taxable income in a future period or periods.

(13) *Derivative contract* means generally a financial contract whose value is derived from the values of one or more underlying assets, reference rates or indexes of asset values. Derivative contracts include interest rate, foreign exchange rate, equity, precious metals and commodity contracts, or any other instrument that poses similar credit risks.

(14) *Depository institution* means a financial institution that engages in the business of banking; that is recognized as a bank by the bank supervisory or monetary authorities of the country of its incorporation and the country of its principal banking operations; that receives deposits to a substantial extent in the regular course of business; and that has the power to accept demand deposits. In the U.S., this definition encompasses all federally insured offices of commercial banks, mutual and stock savings banks, savings or building and loan associations (stock and mutual), cooperative banks, credit unions, and international banking facilities of domestic depository institution. Bank holding companies are excluded from this definition. For the purposes of assigning risk weights, the differentiation between OECD depository institutions and non-OECD depository institutions is based on the country of incorpora-

tion. Claims on branches and agencies of foreign banks located in the United States are to be categorized on the basis of the parent bank's country of incorporation.

(15) *Equity investment* means, for purposes of section 1(c)(19) and section 2(c)(5) of this appendix A, any equity instrument including warrants and call options that give the holder the right to purchase an equity instrument, any equity feature of a debt instrument (such as a warrant or call option), and any debt instrument that is convertible into equity. An investment in any other instrument, including subordinated debt or other types of debt instruments, may be treated as an equity investment if the OCC determines that the instrument is the functional equivalent of equity or exposes the bank to essentially the same risks as an equity instrument.

(16) *Exchange rate contracts* include: Cross-currency interest rate swaps; forward foreign exchange rate contracts; currency options purchased; and any similar instrument that, in the opinion of the OCC, gives rise to similar risks.

(17) *Goodwill* means an intangible asset that represents the excess of the purchase price over the fair market value of tangible and identifiable intangible assets acquired in purchases accounted for under the purchase method of accounting.

(18) *Intangible assets* include mortgage and non-mortgage servicing assets (but exclude any interest only (IO) strips receivable related to these mortgage and nonmortgage servicing assets), purchased credit card relationships, goodwill, favorable leaseholds, and core deposit value.

(19) *Interest rate contracts* include: Single currency interest rate swaps; basis swaps; forward rate agreements; interest rate options purchased; forward forward deposits accepted; and any similar instrument that, in the opinion of the OCC, gives rise to similar risks, including when-issued securities.

(20) *Liquidity facility* means a legally binding commitment to provide liquidity to various types of transactions, structures or programs. A liquidity facility that supports asset-backed commercial paper, in any amount, by lending to, or purchasing assets from any structure, program, or conduit constitutes an *asset-backed commercial paper liquidity facility*.

(21) *Multifamily residential property* means any residential property consisting of five or more dwelling units including apartment buildings, condominiums, cooperatives, and other similar structures primarily for residential use, but not including hospitals, nursing homes, or other similar facilities.

(22) *Nationally recognized statistical rating organization (NRSRO)* means an entity recognized by the Division of Market Regulation of the Securities and Exchange Commission (or any successor Division) (Commission or

SEC) as a nationally recognized statistical rating organization for various purposes, including the Commission's uniform net capital requirements for brokers and dealers.

(23) *Nonfinancial equity investment* means any equity investment held by a bank in a nonfinancial company through a small business investment company (SBIC) under section 302(b) of the Small Business Investment Act of 1958 (15 U.S.C. 682(b)) or under the portfolio investment provisions of Regulation K (12 CFR 211.8(c)(3)). An equity investment made under section 302(b) of the Small Business Investment Act of 1958 in a SBIC that is not consolidated with the bank is treated as a nonfinancial equity investment in the manner provided in section 2(c)(5)(ii)(C) of this appendix A. A nonfinancial company is an entity that engages in any activity that has not been determined to be permissible for a bank to conduct directly or to be financial in nature or incidental to financial activities under section 4(k) of the Bank Holding Company Act (12 U.S.C. 1843(k)).

(24) The *OECD-based group of countries* comprises all full members of the Organization for Economic Cooperation and Development (OECD) regardless of entry date, as well as countries that have concluded special lending arrangements with the International Monetary Fund (IMF) associated with the IMF's General Arrangements to Borrow,¹ but excludes any country that has rescheduled its external sovereign debt within the previous five years. These countries are hereinafter referred to as *OECD countries*. A rescheduling of external sovereign debt generally would include any renegotiation of terms arising from a country's inability or unwillingness to meet its external debt service obligations, but generally would not include renegotiations of debt in the normal course of business, such as a renegotiation to allow the borrower to take advantage of a decline in interest rates or other change in market conditions.

(25) *Original maturity* means, with respect to a commitment, the earliest possible date after a commitment is made on which the commitment is scheduled to expire (i.e., it will reach its stated maturity and cease to be binding on either party), *provided that* either:

(i) The commitment is not subject to extension or renewal and will actually expire on its stated expiration date; or

(ii) If the commitment is subject to extension or renewal beyond its stated expiration date, the stated expiration date will be deemed the original maturity only if the extension or renewal must be based upon terms and conditions independently negotiated in good faith with the customer at the time of the extension or renewal and upon a new, *bona fide* credit analysis utilizing current information on financial condition and trends.

(26) *Preferred stock* includes the following instruments: (i) *Convertible preferred stock*, which means preferred stock that is mandatorily convertible into either common or perpetual preferred stock; (ii) *Intermediate-term preferred stock*, which means preferred stock with an original maturity of at least five years, but less than 20 years; (iii) *Long-term preferred stock*, which means preferred stock with an original maturity of 20 years or more; and (iv) *Perpetual preferred stock*, which means preferred stock without a fixed maturity date that cannot be redeemed at the option of the holder, and that has no other provisions that will require future redemption of the issue. For purposes of these instruments, preferred stock that can be redeemed at the option of the holder is deemed to have an *original maturity* of the earliest possible date on which it may be so redeemed.

(27) *Public-sector entities* include states, local authorities and governmental subdivisions below the central government level in an OECD country. In the United States, this definition encompasses a state, county, city, town, or other municipal corporation, a public authority, and generally any publicly-owned entity that is an instrumentality of a state or municipal corporation. This definition does not include commercial companies owned by the public sector.^{1a}

(28) *Reciprocal holdings of bank capital instruments* means cross-holdings or other formal or informal arrangements in which two or more banking organizations swap, exchange, or otherwise agree to hold each other's capital instruments. This definition does not include holdings of capital instruments issued by other banking organizations that were taken in satisfaction of debts previously contracted, provided that the reporting national bank has not held such instruments for more than five years or a longer period approved by the OCC.

(29) *Replacement cost* means, with respect to interest rate and exchange rate contracts, the loss that would be incurred in the event of a counterparty default, as measured by

¹As of November 1995, the OECD included the following countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States; and Saudi Arabia had concluded special lending arrangements with the IMF associated with the IMF's General Arrangements to Borrow.

^{1a}See Definition (5), *Central government*, for further explanation of commercial companies owned by the public sector.

the net cost of replacing the contract at the current market value. If default would result in a theoretical profit, the replacement value is considered to be zero. The mark-to-market process should incorporate changes in both interest rates and counterparty credit quality.

(30) *Residential properties* means houses, condominiums, cooperative units, and manufactured homes. This definition does not include boats or motor homes, even if used as a primary residence.

(31) *Risk-weighted assets* means the sum of total risk-weighted balance sheet assets and the total of risk-weighted off-balance sheet credit equivalent amounts. Risk-weighted balance sheet and off-balance sheet assets are calculated in accordance with section 3 of this appendix A.

(32) *State* means any one of the several states of the United States of America, the District of Columbia, Puerto Rico, and the territories and possessions of the United States.

(33) *Subsidiary* means any corporation, partnership, business trust, joint venture, association or similar organization in which a national bank directly or indirectly holds more than a 50% ownership interest. This definition does not include ownership interests that were taken in satisfaction of debts previously contracted, provided that the reporting bank has not held the interest for more than five years or a longer period approved by the OCC.

(34) *Total capital* means the sum of a national bank's core (Tier 1) and qualifying supplementary (Tier 2) capital elements.

(35) *Unconditionally cancelable* means, with respect to a commitment-type lending arrangement, that the bank may, at any time, with or without cause, refuse to advance funds or extend credit under the facility. In the case of home equity lines of credit, the bank is deemed able to unconditionally cancel the commitment if it can, at its option, prohibit additional extensions of credit, reduce the line, and terminate the commitment to the full extent permitted by relevant Federal law.

(36) *United States Government or its agencies* means an instrumentality of the U.S. Government whose debt obligations are fully and explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the United States Government.

(37) *United States Government-sponsored agency* means an agency originally established or chartered to serve public purposes specified by the United States Congress, but whose obligations are not explicitly guaranteed by the full faith and credit of the United States Government.

(38) *Walkaway clause* means a provision in a bilateral netting contract that permits a nondefaulting counterparty to make a lower

payment than it would make otherwise under the bilateral netting contract, or no payment at all, to a defaulter or the estate of a defaulter, even if the defaulter or the estate of the defaulter is a net creditor under the bilateral netting contract.

Section 2. Components of Capital.

A national bank's qualifying capital base consists of two types of capital—core (Tier 1) and supplementary (Tier 2).

(a) *Tier 1 Capital.* The following elements comprise a national bank's Tier 1 capital:

- (1) Common stockholders' equity;
- (2) Noncumulative perpetual preferred stock and related surplus; and²
- (3) Minority interests in the equity accounts of consolidated subsidiaries, except that the following are not included in Tier 1 capital or total capital:

(i) Minority interests in a small business investment company or investment fund that holds nonfinancial equity investments and minority interests in a subsidiary that is engaged in a nonfinancial activities and is held under one of the legal authorities listed in section 1(c)(23) of this appendix A.

(ii) Minority interests in consolidated asset-backed commercial paper programs sponsored by a bank if the consolidated assets are excluded from risk-weighted assets pursuant to section 3(a)(5)(i) of this appendix A.

(b) *Tier 2 Capital.* The following elements comprise a national bank's Tier 2 capital:

- (1) Allowance for loan and lease losses, up to a maximum of 1.25% of risk-weighted assets,³ subject to the transition rules in section 4(a)(2) of this appendix A;

²Preferred stock issues where the dividend is reset periodically based upon current market conditions and the bank's current credit rating, including but not limited to, auction rate, money market or remarketable preferred stock, are assigned to Tier 2 capital, regardless of whether the dividends are cumulative or noncumulative.

³The amount of the allowance for loan and lease losses that may be included in capital is based on a percentage of risk-weighted assets. The gross sum of risk-weighted assets used in this calculation includes all risk-weighted assets, with the exception of the assets required to be deducted under section 3 in establishing risk-weighted assets (*i.e.*, the assets required to be deducted from capital under section 2(c)) of this appendix. A banking organization may deduct reserves for loan and lease losses in excess of the amount permitted to be included as capital, as well as allocated transfer risk reserves and reserves held against other real estate owned, from the gross sum of risk-weighted assets in computing the denominator of the risk-based capital ratio.

(2) Cumulative perpetual preferred stock, long-term preferred stock, convertible preferred stock, and any related surplus, without limit, if the issuing national bank has the option to defer payment of dividends on these instruments. For long-term preferred stock, the amount that is eligible to be included as Tier 2 capital is reduced by 20% of the original amount of the instrument (net of redemptions) at the beginning of each of the last five years of the life of the instrument;

(3) Hybrid capital instruments, without limit. Hybrid capital instruments are those instruments that combine certain characteristics of debt and equity, such as perpetual debt. To be included as Tier 2 capital, these instruments must meet the following criteria:⁴

(i) The instrument must be unsecured, subordinated to the claims of depositors and general creditors, and fully paid-up;

(ii) The instrument must not be redeemable at the option of the holder prior to maturity, except with the prior approval of the OCC;

(iii) The instrument must be available to participate in losses while the issuer is operating as a going concern (in this regard, the instrument must automatically convert to common stock or perpetual preferred stock, if the sum of the retained earnings and capital surplus accounts of the issuer shows a negative balance); and

(iv) The instrument must provide the option for the issuer to defer principal and interest payments, if

(A) The issuer does not report a net profit for the most recent combined four quarters, and

(B) The issuer eliminates cash dividends on its common and preferred stock.

(4) Term subordinated debt instruments, and intermediate-term preferred stock and related surplus are included in Tier 2 capital, but only to a maximum of 50% of Tier 1 capital as calculated after deductions pursuant to section 2(c) of this appendix. To be considered capital, term subordinated debt instruments shall meet the requirements of §3.100(f)(1). However, pursuant to 12 CFR 5.47, the OCC may, in some cases, require that the subordinated debt be approved by the OCC before the subordinated debt may qualify as Tier 2 capital or may require prior approval for any prepayment (including payment pursuant to an acceleration clause or redemption prior to maturity) of the subordinated debt. Also, at the beginning of each of the last five years for the life of either type of

⁴Mandatory convertible debt instruments that meet the requirements of 12 CFR 3.100(e)(5), or that have been previously approved as capital by the OCC, are treated as qualifying hybrid capital instruments.

instrument, the amount that is eligible to be included as Tier 2 capital is reduced by 20% of the original amount of that instrument (net of redemptions).

(5) Up to 45 percent of the pretax net unrealized holding gains (that is, the excess, if any, of the fair value over historical cost) on available-for-sale equity securities with readily determinable fair values.⁵ Unrealized gains (losses) on other types of assets, such as bank premises and available-for-sale debt securities, are not included in Tier 2 capital, but the OCC may take these unrealized gains (losses) into account as additional factors when assessing a bank's overall capital adequacy.

(c) *Deductions from Capital.* The following items are deducted from the appropriate portion of a national bank's capital base when calculating its risk-based capital ratio:

(1) *Deductions from Tier 1 Capital.* The following items are deducted from Tier 1 capital before the Tier 2 portion of the calculation is made:

(i) Goodwill;

(ii) Other intangible assets, except as provided in section 2(c)(2) of this appendix A;

(iii) Deferred tax assets, except as provided in section 2(c)(3) of this appendix A, that are dependent upon future taxable income, which exceed the lesser of either:

(A) The amount of deferred tax assets that the bank could reasonably expect to realize within one year of the quarter-end Call Report, based on its estimate of future taxable income for that year; or

(B) 10% of Tier 1 capital, net of goodwill and all intangible assets other than purchased credit card relationships, mortgage servicing assets and non-mortgage servicing assets; and

(iv) Credit-enhancing interest-only strips (as defined in section 4(a)(3) of this appendix A), as provided in section 2(c)(4).

(v) Nonfinancial equity investments as provided by section 2(c)(5) of this appendix A.

(2) *Qualifying intangible assets.* Subject to the following conditions, mortgage servicing assets, nonmortgage servicing assets⁶ and

⁵The OCC reserves the authority to exclude all or a portion of unrealized gains from Tier 2 capital if the OCC determines that the equity securities are not prudently valued.

⁶Intangible assets are defined to exclude IO strips receivable related to these mortgage and non-mortgage servicing assets. See section 1(c)(14) of this appendix A. Consequently, IO strips receivable related to mortgage and non-mortgage servicing assets are not required to be deducted under section 2(c)(2) of this appendix A. However, credit-enhancing interest-only strips as defined in section 4(a)(3) are deducted from Tier 1 capital in accordance with section 2(c)(4) of this appendix A. Any non credit-enhancing IO

purchased credit card relationships need not be deducted from Tier 1 capital:

(i) The total of all intangible assets that are included in Tier 1 capital is limited to 100 percent of Tier 1 capital, of which no more than 25 percent of Tier 1 capital can consist of purchased credit card relationships and non-mortgage servicing assets in the aggregate. Calculation of these limitations must be based on Tier 1 capital net of goodwill and all other identifiable intangibles, other than purchased credit card relationships, mortgage servicing assets and non-mortgage servicing assets.

(ii) Banks must value each intangible asset included in Tier 1 capital at least quarterly at the lesser of:

(A) 90 percent of the fair value of each intangible asset, determined in accordance with section 2(c)(2)(iii) of this appendix A; or

(B) 100 percent of the remaining unamortized book value.

(iii) The quarterly determination of the current fair value of the intangible asset must include adjustments for any significant changes in original valuation assumptions, including changes in prepayment estimates.

(iv) Banks may elect to deduct disallowed servicing assets on a basis that is net of any associated deferred tax liability. Deferred tax liabilities netted in this manner cannot also be netted against deferred tax assets when determining the amount of deferred tax assets that are dependent upon future taxable income.

(3) *Deferred tax assets*—(i) Net unrealized gains and losses on available-for-sale securities. Before calculating the amount of deferred tax assets subject to the limit in section 2(c)(1)(iii) of this appendix A, a bank may eliminate the deferred tax effects of any net unrealized holding gains and losses on available-for-sale debt securities. Banks report these net unrealized holding gains and losses in their Call Reports as a separate component of equity capital, but exclude them from the definition of common stockholders' equity for regulatory capital purposes. A bank that adopts a policy to deduct these amounts must apply that approach consistently in all future calculations of the amount of disallowed deferred tax assets under section 2(c)(1)(iii) of this appendix A.

(ii) *Consolidated groups*. The amount of deferred tax assets that a bank can realize

mortgage and non-mortgage servicing assets are not required to be deducted under section 2(c)(2) of this appendix A. However, credit-enhancing interest-only strips as defined in section 4(a)(3) are deducted from Tier 1 capital in accordance with section 2(c)(4) of this appendix A. Any non credit-enhancing IO strips receivable are subject to a 100% risk weight under section 3(a)(4) of this appendix A.

from taxes paid in prior carryback years and from reversals of existing taxable temporary differences generally would not be deducted from capital. However, for a bank that is a member of a consolidated group (for tax purposes), the amount of carryback potential a bank may consider in calculating the limit on deferred tax assets under section 2(c)(1)(iii) of this appendix A, may not exceed the amount that the bank could reasonably expect to have refunded by its parent holding company.

(iii) *Nontaxable Purchase Business Combination*. In calculating the amount of net deferred tax assets under section 2(c)(1)(iii) of this appendix A, a deferred tax liability that is specifically associated with an intangible asset (other than purchased mortgage servicing rights and purchased credit card relationships) due to a nontaxable purchase business combination may be netted against that intangible asset. Only the net amount of the intangible asset must be deducted from Tier 1 capital. Deferred tax liabilities netted in this manner cannot also be netted against deferred tax assets when determining the amount of net deferred tax assets that are dependent upon future taxable income.

(iv) *Estimated future taxable income*. Estimated future taxable income does not include net operating loss carryforwards to be used during that year or the amount of existing temporary differences expected to reverse within the year. A bank may use future taxable income projections for their closest fiscal year, provided it adjusts the projections for any significant changes that occur or that it expects to occur. Such projections must include the estimated effect of tax planning strategies that the bank expects to implement to realize net operating losses or tax credit carryforwards that will otherwise expire during the year.

(4) *Credit-enhancing interest-only strips*. Credit-enhancing interest-only strips, whether purchased or retained, that exceed 25% of Tier 1 capital must be deducted from Tier 1 capital. Purchased and retained credit-enhancing interest-only strips, on a non-tax adjusted basis, are included in the total amount that is used for purposes of determining whether a bank exceeds its Tier 1 capital.

(i) The 25% limitation on credit-enhancing interest-only strips will be based on Tier 1 capital net of goodwill and all identifiable intangibles, other than purchased credit card relationships, mortgage servicing assets and non-mortgage servicing assets.

(ii) Banks must value each credit-enhancing interest-only strip included in Tier 1 capital at least quarterly. The quarterly determination of the current fair value of the credit-enhancing interest-only strip must include adjustments for any significant changes in original valuation assumptions, including changes in prepayment estimates.

(iii) Banks may elect to deduct disallowed credit-enhancing interest-only strips on a basis that is net of any associated deferred tax liability. Deferred tax liabilities netted in this manner cannot also be netted against deferred tax assets when determining the amount of deferred tax assets that are dependent upon future taxable income.

(5) *Nonfinancial equity investments—(i) General.* (A) A bank must deduct from its Tier 1 capital the appropriate percentage, as determined in accordance with Table A, of the adjusted carrying value of all nonfinancial equity investments held by the bank and its subsidiaries.

TABLE A—DEDUCTION FOR NONFINANCIAL EQUITY INVESTMENTS

| Aggregate adjusted carrying value of all nonfinancial equity investments held directly or indirectly by banks (as a percentage of the Tier 1 capital of the bank) ¹ | Deduction from Tier 1 Capital (as a percentage of the adjusted carrying value of the investment) |
|--|--|
| Less than 15 percent | 8.0 percent. |
| Greater than or equal to 15 percent but less than 25 percent | 12.0 percent. |
| Greater than or equal to 25 percent | 25.0 percent. |

¹For purposes of calculating the adjusted carrying value of nonfinancial equity investments as a percentage of Tier 1 capital, Tier 1 capital is defined as the sum of the Tier 1 capital elements net of goodwill and net of all identifiable intangible assets other than mortgage servicing assets, nonmortgage servicing assets and purchased credit card relationships, but prior to the deduction for disallowed mortgage servicing assets, disallowed nonmortgage servicing assets, disallowed purchased credit card relationships, disallowed credit-enhancing interest only strips (both purchased and retained), disallowed deferred tax assets, and nonfinancial equity investments.

(B) Deductions for nonfinancial equity investments must be applied on a marginal basis to the portions of the adjusted carrying value of nonfinancial equity investments that fall within the specified ranges of the bank's Tier 1 capital. For example, if the adjusted carrying value of all nonfinancial equity investments held by a bank equals 20 percent of the Tier 1 capital of the bank, then the amount of the deduction would be 8 percent of the adjusted carrying value of all investments up to 15 percent of the bank's Tier 1 capital, and 12 percent of the adjusted carrying value of all investments equal to, or in excess of, 15 percent of the bank's Tier 1 capital.

(C) The total adjusted carrying value of any nonfinancial equity investment that is subject to deduction under section 2(c)(5) of this appendix A is excluded from the bank's weighted risk assets for purposes of computing the denominator of the bank's risk-based capital ratio. For example, if 8 percent of the adjusted carrying value of a nonfinancial equity investment is deducted from Tier 1 capital, the entire adjusted carrying value of the investment will be excluded from risk-weighted assets in calculating the denominator of the risk-based capital ratio.

(D) Banks engaged in equity investment activities, including those banks with a high concentration in nonfinancial equity investments (e.g., in excess of 50 percent of Tier 1 capital), will be monitored and may be subject to heightened supervision, as appropriate, by the OCC to ensure that such banks maintain capital levels that are appropriate in light of their equity investment activities, and the OCC may impose a higher capital charge in any case where the circumstances, such as the level of risk of the particular investment or portfolio of investments, the

risk management systems of the bank, or other information, indicate that a higher minimum capital requirement is appropriate.

(ii) *Small business investment company investments.* (A) Notwithstanding section 2(c)(5)(i) of this appendix A, no deduction is required for nonfinancial equity investments that are made by a bank or its subsidiary through a SBIC that is consolidated with the bank, or in a SBIC that is not consolidated with the bank, to the extent that such investments, in the aggregate, do not exceed 15 percent of the Tier 1 capital of the bank. Except as provided in paragraph (c)(5)(ii)(B) of this section, any nonfinancial equity investment that is held through or in a SBIC and not deducted from Tier 1 capital will be assigned to the 100 percent risk-weight category and included in the bank's consolidated risk-weighted assets.

(B) If a bank has an investment in a SBIC that is consolidated for accounting purposes but the SBIC is not wholly owned by the bank, the adjusted carrying value of the bank's nonfinancial equity investments held through the SBIC is equal to the bank's proportionate share of the SBIC's adjusted carrying value of its equity investments in nonfinancial companies. The remainder of the SBIC's adjusted carrying value (i.e., the minority interest holders' proportionate share) is excluded from the risk-weighted assets of the bank.

(C) If a bank has an investment in a SBIC that is not consolidated for accounting purposes and has current information that identifies the percentage of the SBIC's assets that are equity investments in nonfinancial companies, the bank may reduce the adjusted carrying value of its investment in

the SBIC proportionately to reflect the percentage of the adjusted carrying value of the SBIC's assets that are not equity investments in nonfinancial companies. The amount by which the adjusted carrying value of the bank's investment in the SBIC is reduced under this paragraph will be risk weighted at 100 percent and included in the bank's risk-weighted assets.

(D) To the extent the adjusted carrying value of all nonfinancial equity investments that the bank holds through a consolidated SBIC or in a nonconsolidated SBIC equals or exceeds, in the aggregate, 15 percent of the Tier 1 capital of the bank, the appropriate percentage of such amounts, as set forth in Table A, must be deducted from the bank's Tier 1 capital. In addition, the aggregate adjusted carrying value of all nonfinancial equity investments held through a consolidated SBIC and in a nonconsolidated SBIC (including any nonfinancial equity investments for which no deduction is required) must be included in determining, for purposes of Table A the total amount of nonfinancial equity investments held by the bank in relation to its Tier 1 capital.

(iii) *Nonfinancial equity investments excluded.* (A) Notwithstanding section 2(c)(5)(i) and (ii) of this appendix A, no deduction from Tier 1 capital is required for the following:

(1) Nonfinancial equity investments (or portion of such investments) made by the bank prior to March 13, 2000, and continuously held by the bank since March 13, 2000.

(2) Nonfinancial equity investments made on or after March 13, 2000, pursuant to a legally binding written commitment that was entered into by the bank prior to March 13, 2000, and that required the bank to make the investment, if the bank has continuously held the investment since the date the investment was acquired.

(3) Nonfinancial equity investments received by the bank through a stock split or stock dividend on a nonfinancial equity investment made prior to March 13, 2000, provided that the bank provides no consideration for the shares or interests received, and the transaction does not materially increase the bank's proportional interest in the nonfinancial company.

(4) Nonfinancial equity investments received by the bank through the exercise on or after March 13, 2000, of an option, warrant, or other agreement that provides the bank with the right, but not the obligation, to acquire equity or make an investment in a nonfinancial company, if the option, warrant, or other agreement was acquired by the bank prior to March 13, 2000, and the bank provides no consideration for the nonfinancial equity investments.

(B) Any excluded nonfinancial equity investments described in section 2(c)(5)(iii)(A) of this appendix A must be included in deter-

mining the total amount of nonfinancial equity investments held by the bank in relation to its Tier 1 capital for purposes of Table A. In addition, any excluded nonfinancial equity investments will be risk weighted at 100 percent and included in the bank's risk-weighted assets.

(6) *Deductions from total capital.* The following items are deducted from total capital:

(i) Investments, both equity and debt, in unconsolidated banking and finance subsidiaries that are deemed to be capital of the subsidiary;⁷ and

(ii) Reciprocal holdings of bank capital instruments.

Section 3. Risk Categories/Weights for On-Balance Sheet Assets and Off-Balance Sheet Items

The denominator of the risk-based capital ratio, *i.e.*, a national bank's risk-weighted assets,⁸ is derived by assigning that bank's assets and off-balance sheet items to one of the four risk categories detailed in section 3(a) of this appendix A. Each category has a specific risk weight. Before an off-balance sheet item is assigned a risk weight, it is converted to an on-balance sheet credit equivalent amount in accordance with section 3(b) of this appendix A. The risk weight assigned to a particular asset or on-balance sheet credit equivalent amount determines the percentage of that asset/credit equivalent that is included in the denominator of the bank's risk-based capital ratio. Any asset deducted from a bank's capital in computing the numerator of the risk-based capital ratio is not included as part of the bank's risk-weighted assets.

Some of the assets on a bank's balance sheet may represent an indirect holding of a pool of assets, *e.g.*, mutual funds, that encompasses more than one risk weight within the pool. In those situations, the bank may assign the asset to the risk category applicable to the highest risk-weighted asset that pool is permitted to hold pursuant to its stated investment objectives in the fund's prospectus. Alternatively, the bank may assign the asset on a pro rata basis to different risk categories according to the investment limits in the fund's prospectus. In either case, the minimum risk weight that may be assigned to such a pool is 20%. If a bank assigns the asset on a pro rata basis, and the sum of the investment limits in the fund's

⁷The OCC may require deduction of investments in other subsidiaries and associated companies, on a case-by-case basis.

⁸The OCC reserves the right to require a bank to compute its risk-based capital ratio on the basis of average, rather than period-end, risk-weighted assets when necessary to carry out the purposes of these guidelines.

prospectus exceeds 100%, the bank must assign the highest pro rata amounts of its total investment to the higher risk category. If, in order to maintain a necessary degree of liquidity, the fund is permitted to hold an insignificant amount of its assets in short-term, highly-liquid securities of superior credit quality (that do not qualify for a preferential risk weight), such securities generally will not be taken into account in determining the risk category into which the bank's holding in the overall pool should be assigned. The prudent use of hedging instruments by a fund to reduce the risk of its assets will not increase the risk weighting of the investment in that fund above the 20% category. However, if a fund engages in any activities that are deemed to be speculative in nature or has any other characteristics that are inconsistent with the preferential risk weighting assigned to the fund's assets, the bank's investment in the fund will be assigned to the 100% risk category. More detail on the treatment of mortgage-backed securities is provided in section 3(a)(3)(vi) of this appendix A.

(a) *On-Balance Sheet Assets*. The following are the risk categories/weights for on-balance sheet assets.

(1) *Zero percent risk weight*. (i) Cash, including domestic and foreign currency owned and held in all offices of a national bank or in transit. Any foreign currency held by a national bank should be converted into U.S. dollar equivalents.

(ii) Deposit reserves and other balances at Federal Reserve Banks.

(iii) Securities issued by, and other direct claims on, the United States Government or its agencies, or the central government of an OECD country.

(iv) That portion of assets directly and unconditionally guaranteed by the United States Government or its agencies, or the central government of an OECD country.⁹

(v) That portion of local currency claims on or unconditionally guaranteed by central governments of non-OECD countries, to the extent the bank has local currency liabilities in that country. Any amount of such claims that exceeds the amount of the bank's local currency liabilities is assigned to the 100% risk category of section 3(a)(4) of this appendix.

(vi) Gold bullion held in the bank's own vaults or in another bank's vaults on an allocated basis, to the extent it is backed by gold bullion liabilities.

(vii) The book value of paid-in Federal Reserve Bank stock.

⁹For the treatment of privately-issued mortgage-backed securities where the underlying pool is comprised solely of mortgage-related securities issued by GNMA, see *infra* note 10.

(viii) That portion of assets and off-balance sheet transactions^{9a} collateralized by cash or securities issued or directly and unconditionally guaranteed by the United States Government or its agencies, or the central government of an OECD country, provided that:^{9b}

(A) The bank maintains control over the collateral:

(1) If the collateral consists of cash, the cash must be held on deposit by the bank or by a third-party for the account of the bank;

(2) If the collateral consists of OECD government securities, then the OECD government securities must be held by the bank or by a third-party acting on behalf of the bank;

(B) The bank maintains a daily positive margin of collateral fully taking into account any change in the market value of the collateral held as security;

(C) Where the bank is acting as a customer's agent in a transaction involving the loan or sale of securities that is collateralized by cash or OECD government securities delivered to the bank, any obligation by the bank to indemnify the customer is limited to no more than the difference between the market value of the securities lent and the market value of the collateral received, and any reinvestment risk associated with the collateral is borne by the customer; and

(D) The transaction involves no more than minimal risk.

(2) *20 percent risk weight*. (i) All claims on depository institutions incorporated in an OECD country, and all assets backed by the full faith and credit of depository institutions incorporated in an OECD country. This includes the credit equivalent amount of participations in commitments and standby letters of credit sold to other depository institutions incorporated in an OECD country, but only if the originating bank remains liable to the customer or beneficiary for the

^{9a}See footnote 22 in section 3(b)(5)(iii) of this appendix A (collateral held against derivative contracts).

^{9b}Assets and off-balance sheet transactions collateralized by securities issued or guaranteed by the United States Government or its agencies, or the central government of an OECD country include, but are not limited to, securities lending transactions, repurchase agreements, collateralized letters of credit, such as reinsurance letters of credit, and other similar financial guarantees. Swaps, forwards, futures, and options transactions are also eligible, if they meet the collateral requirements. However, the OCC may at its discretion require that certain collateralized transactions be risk weighted at 20 percent if they involve more than a minimal risk.

full amount of the commitment or standby letter of credit. Also included in this category are the credit equivalent amounts of risk participations in bankers' acceptances conveyed to other depository institutions incorporated in an OECD country. However, bank-issued securities that qualify as capital of the issuing bank are not included in this risk category, but are assigned to the 100% risk category of section 3(a)(4) of this appendix A.

(ii) Claims on, or guaranteed by depository institutions, other than the central bank, incorporated in a non-OECD country, with a residual maturity of one year or less.

(iii) Cash items in the process of collection.

(iv) That portion of assets collateralized by cash or by securities issued or directly and unconditionally guaranteed by the United States Government or its agencies, or the central government of an OECD country, that does not qualify for the zero percent risk-weight category.

(v) That portion of assets conditionally guaranteed by the United States Government or its agencies, or the central government of an OECD country.

(vi) Securities issued by, or other direct claims on, United States Government-sponsored agencies.

(vii) That portion of assets guaranteed by United States Government-sponsored agencies.¹⁰

(viii) That portion of assets collateralized by the current market value of securities

¹⁰ Privately issued mortgage-backed securities, *e.g.*, CMOs and REMICs, where the underlying pool is comprised solely of mortgage-related securities issued by GNMA, FNMA and FHLMC, will be treated as an indirect holding of the underlying assets and assigned to the 20% risk category of this section 3(a)(2). If the underlying pool is comprised of assets which attract different risk weights, *e.g.*, FNMA securities and conventional mortgages, the bank should generally assign the security to the highest risk category appropriate for any asset in the pool. However, on a case-by-case basis, the OCC may allow the bank to assign the security proportionately to the various risk categories based on the proportion in which the risk categories are represented by the composition cash flows of the underlying pool of assets. Before the OCC will consider a request to proportionately risk-weight such a security, the bank must have current information for the reporting date that details the composition and cash flows of the underlying pool of assets. Furthermore, before a mortgage-related security will receive a risk weight lower than 100%, it must meet the criteria set forth in section 3(a)(3)(vi) of this appendix A.

issued or guaranteed by United States Government-sponsored agencies.

(ix) Claims representing general obligations of any public-sector entity in an OECD country, and that portion of any claims guaranteed by any such public-sector entity. In the U.S., these obligations must meet the requirements of 12 CFR 1.2(b).

(x) Claims on, or guaranteed by, official multilateral lending institutions or regional development institutions in which the United States Government is a shareholder or contributing member.¹¹

(xi) That portion of assets collateralized by the current market value of securities issued by official multilateral lending institutions or regional development institutions in which the United States Government is a shareholder or contributing member.

(xii) That portion of local currency claims conditionally guaranteed by central governments of non-OECD countries, to the extent the bank has local currency liabilities in that country. Any amount of such claims that exceeds the amount of the bank's local currency liabilities is assigned to the 100% risk category of section 3(a)(4) of this appendix.

(xiii) Claims on, or guaranteed by, a securities firm incorporated in an OECD country, that satisfies the following conditions:

(A) If the securities firm is incorporated in the United States, then the firm must be a broker-dealer that is registered with the SEC and must be in compliance with the SEC's net capital regulation (17 CFR 240.15c3(1)).

(B) If the securities firm is incorporated in any other OECD country, then the bank must be able to demonstrate that the firm is subject to consolidated supervision and regulation, including its subsidiaries, comparable to that imposed on depository institutions in OECD countries; such regulation must include risk-based capital standards comparable to those applied to depository institutions under the Basel Capital Accord.^{11a}

(C) The securities firm, whether incorporated in the United States or another OECD country, must also have a long-term credit rating in accordance with section

¹¹ These institutions include, but are not limited to, the International Bank for Reconstruction and Development (World Bank), the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the European Investment Bank, the International Monetary Fund and the Bank for International Settlements.

^{11a} See Accord on International Convergence of Capital Measurement and Capital Standards as adopted by the Basle Committee on Banking Regulations and Supervisory Practices (renamed as the Basle Committee on Banking Supervision), dated July 1988 (amended 1998).

3(a)(2)(xiii)(C)(1) of this appendix A; a parent company guarantee in accordance with section 3(a)(2)(xiii)(C)(2) of this appendix A; or a collateralized claim in accordance with section 3(a)(2)(xiii)(C)(3) of this appendix A. Claims representing capital of a securities firm must be risk weighted at 100 percent in accordance with section 3(a)(4) of this Appendix A.

(1) *Credit rating.* The securities firm must have either a long-term issuer credit rating or a credit rating on at least one issue of long-term unsecured debt, from a NRSRO that is in one of the three highest investment-grade categories used by the NRSRO. If the securities firm has a credit rating from more than one NRSRO, the lowest credit rating must be used to determine the credit rating under this paragraph.

(2) *Parent company guarantee.* The claim on, or guaranteed by, the securities firm must be guaranteed by the firm's parent company, and the parent company must have either a long-term issuer credit rating or a credit rating on at least one issue of long-term unsecured debt, from a NRSRO that is in one of the three highest investment-grade categories used by the NRSRO.

(3) *Collateralized claim.* The claim on the securities firm must be collateralized subject to all of the following requirements:

(i) The claim must arise from a reverse repurchase/repurchase agreement or securities lending/borrowing contract executed using standard industry documentation.

(ii) The collateral must consist of debt or equity securities that are liquid and readily marketable.

(iii) The claim and collateral must be marked-to-market daily.

(iv) The claim must be subject to daily margin maintenance requirements under standard industry documentation.

(v) The contract from which the claim arises can be liquidated, terminated, or accelerated immediately in bankruptcy or similar proceedings, and the security or collateral agreement will not be stayed or avoided under the applicable law of the relevant jurisdiction. To be exempt from the automatic stay in bankruptcy in the United States, the claim must arise from a securities contract or a repurchase agreement under section 555 or 559, respectively, of the Bankruptcy Code (11 U.S.C. 555 or 559), a qualified financial contract under section 11(e)(8) of the Federal Deposit Insurance Act (12 U.S.C. 1821(e)(8)), or a netting contract between or among financial institutions under sections 401–407 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (912 U.S.C. 4407), or the Regulation EE (12 CFR part 231).

(3) *50 percent risk weight.* (i) Revenue obligations of any public-sector entity in an OECD country for which the underlying obligor is the public-sector entity, but which are re-

payable solely from the revenues generated by the project financed through the issuance of the obligations.

(ii) The credit equivalent amount of derivative contracts, calculated in accordance with section 3(b)(5) of this appendix A, that do not qualify for inclusion in a lower risk category.

(iii) Loans secured by first mortgages on one-to-four family residential properties, either owner-occupied or rented, provided that such loans are not otherwise 90 days or more past due, or on nonaccrual or restructured. It is presumed that such loans will meet prudent underwriting standards. If a bank holds a first lien and junior lien on a one-to-four family residential property and no other party holds an intervening lien, the transaction is treated as a single loan secured by a first lien for the purposes of both determining the loan-to-value ratio and assigning a risk weight to the transaction. Furthermore, residential property loans made for the purpose of construction financing are assigned to the 100% risk category of section 3(a)(4) of this appendix A; however, these loans may be included in the 50% risk category of this section 3(a)(3) of this appendix A if they are subject to a legally binding sales contract and satisfy the requirements of section 3(a)(3)(iv) of this appendix A.

(iv) Loans to residential real estate builders for one-to-four family residential property construction, if the bank obtains sufficient documentation demonstrating that the buyer of the home intends to purchase the home (*i.e.*, a legally binding written sales contract) and has the ability to obtain a mortgage loan sufficient to purchase the home (*i.e.*, a firm written commitment for permanent financing of the home upon completion), subject to the following additional criteria:

(A) The builder must incur at least the first 10% of the direct costs (*i.e.*, actual costs of the land, labor, and material) before any drawdown is made under the construction loan and the construction loan may not exceed 80% of the sales price of the resold home;

(B) The individual purchaser has made a substantial "earnest money deposit" of no less than 3% of the sales price of the home that must be subject to forfeiture by the individual purchaser if the sales contract is terminated by the individual purchaser; however, the earnest money deposit shall not be subject to forfeiture by reason of breach or termination of the sales contract on the part of the builder;

(C) The earnest money deposit must be held in escrow by the bank financing the builder or by an independent party in a fiduciary capacity; the escrow agreement must provide that in the event of default the escrow funds must be used to defray any cost

Pt. 3, App. A

12 CFR Ch. I (1-1-06 Edition)

incurred relating to any cancellation of the sales contract by the buyer;

(D) If the individual purchaser terminates the contract or if the loan fails to satisfy any other criterion under this section, then the bank must immediately recategorize the loan at a 100% risk weight and must accurately report the loan in the bank's next quarterly Consolidated Reports of Condition and Income (Call Report);

(E) The individual purchaser must intend that the home will be owner-occupied;

(F) The loan is made by the bank in accordance with prudent underwriting standards;

(G) The loan is not more than 90 days past due, or on nonaccrual; and

(H) The purchaser is an individual(s) and not a partnership, joint venture, trust, corporation, or any other entity (including an entity acting as a sole proprietorship) that is purchasing one or more of the homes for speculative purposes.

(v) Loans secured by a first mortgage on multifamily residential properties:^{11b}

(A) The amortization of principal and interest occurs in not more than 30 years;

(B) The minimum original maturity for repayment of principal is not less than 7 years;

(C) All principal and interest payments have been made on a timely basis in accordance with the terms of the loan for at least one year immediately preceding the risk weighting of the loan in the 50% risk weight category, and the loan is not otherwise 90 days or more past due, or on nonaccrual status;

(D) The loan is made in accordance with all applicable requirements and prudent underwriting standards;

(E) If the rate of interest does not change over the term of the loan:

(I) The current loan amount outstanding does not exceed 80% of the current value of the property, as measured by either the value of the property at origination of the loan (which is the lower of the purchase price or the value as determined by the initial appraisal, or if appropriate, the initial evaluation) or the most current appraisal, or

^{11b}The portion of multifamily residential property loans that is sold subject to a pro rata loss sharing arrangement may be treated by the selling bank as sold to the extent that the sales agreement provides for the purchaser of the loan to share in any loss incurred on the loan on a pro rata basis with the selling bank. The portion of multifamily residential property loans sold subject to any loss sharing arrangement other than *pro rata* sharing of the loss shall be accorded the same treatment as any other asset sold under an agreement to repurchase or sold with recourse under section 4(b) of this appendix A.

if appropriate, the most current evaluation; and

(II) In the most recent fiscal year, the ratio of annual net operating income generated by the property (before payment of any debt service on the loan) to annual debt service on the loan is not less than 120%;^{11c}

(F) If the rate of interest changes over the term of the loan:

(I) The current loan amount outstanding does not exceed 75% of the current value of the property, as measured by either the value of the property at origination of the loan (which is the lower of the purchase price or the value as determined by the initial appraisal, or if appropriate, the initial evaluation) or the most current appraisal, or if appropriate, the most current evaluation; and

(II) In the most recent fiscal year, the ratio of annual net operating income generated by the property (before payment of any debt service on the loan) to annual debt service on the loan is not less than 115%; and

(G) If the loan was refinanced by the borrower:

(I) All principal and interest payments on the loan being refinanced which were made in the preceding year prior to refinancing shall apply in determining the one-year timely payment requirement under paragraph (a)(3)(v)(C) of this section; and

(II) The net operating income generated by the property in the preceding year prior to refinancing shall apply in determining the applicable debt service requirements under paragraphs (a)(3)(v)(E) and (a)(3)(v)(F) of this section.

(vi) Privately-issued mortgage-backed securities, *i.e.* those that do not carry the guarantee of a government or government-sponsored agency, if the privately-issued mortgage-backed securities are at the time the mortgage-backed securities are originated fully secured by or otherwise represent a sufficiently secure interest in mortgages

^{11c}For the purposes of the debt service requirements in sections 3(a)(3)(v)(E)(II) and 3(a)(3)(v)(F)(II) of this appendix A, other forms of debt service coverage that generate sufficient cash flows to provide comparable protection to the institution may be considered for (a) a loan secured by cooperative housing or (b) a multifamily residential property loan if the purpose of the loan is for the development or purchase of multifamily residential property primarily intended to provide low- to moderate-income housing, including special operating reserve accounts or special operating subsidies provided by federal, state, local or private sources. However, the OCC reserves the right, on a case-by-case basis, to review the adequacy of any other forms of comparable debt service coverage relied on by the bank.

that qualify for the 50% risk weight under paragraphs (a)(3) (iii), (iv) and (v) of this section,¹² provided that they meet the following criteria:

(A) The underlying assets must be held by an independent trustee that has a first priority, perfected security interest in the underlying assets for the benefit of the holders of the security;

(B) The holder of the security must have an undivided pro rata ownership interest in the underlying assets or the trust that issues the security must have no liabilities unrelated to the issued securities;

(C) The trust that issues the security must be structured such that the cash flows from the underlying assets fully meet the cash flows requirements of the security without undue reliance on any reinvestment income; and

(D) There must not be any material reinvestment risk associated with any funds awaiting distribution to the holder of the security.

(4) *100 percent risk weight.* All other assets not specified above,^{12a} including:

(i) Claims on or guaranteed by depository institutions incorporated in a non-OECD country, as well as claims on the central bank of a non-OECD country, with a residual maturity exceeding one year.

(ii) All non-local currency claims on non-OECD central governments, as well as local currency claims on non-OECD central governments that are not included in section 3(a)(1)(v) of this appendix A.

(iii) Asset- or mortgage backed securities that are externally rated are risk weighted in accordance with section 4(d) of this appendix A.

¹²If all of the underlying mortgages in the pool do not qualify for the 50% risk weight, the bank should generally assign the entire value of the security to the 100% risk category of section 3(a)(4) of this appendix A; however, on a case-by-case basis, the OCC may allow the bank to assign only the portion of the security which represents an interest in, and the cash flows of, nonqualifying mortgages to the 100% risk category, with the remainder being assigned a risk weight of 50%. Before the OCC will consider a request to risk weight a mortgage-backed security on a proportionate basis, the bank must have current information for the reporting date that details the composition and cash flows of the underlying pool of mortgages.

^{12a}A bank subject to the market risk capital requirements pursuant to appendix B of this part 3 may calculate the capital requirement for qualifying securities borrowing transactions pursuant to section 3(a)(1)(ii) of appendix B of this part 3.

(iv) All stripped mortgage-backed securities, including interest only portions (IOs), principal only portions (POs) and other similar instruments, regardless of the issuer or guarantor.

(v) Obligations issued by any state or any political subdivision thereof for the benefit of a private party or enterprise where that party or enterprise, rather than the issuing state or political subdivision, is responsible for the timely payment of principal and interest on the obligation, *e.g.*, industrial development bonds.

(vi) Claims on commercial enterprises owned by non-OECD and OECD central governments.

(vii) Any investment in an unconsolidated subsidiary that is not required to be deducted from total capital pursuant to section 2(c)(3) of this appendix A.

(viii) Instruments issued by depository institutions incorporated in OECD and non-OECD countries that qualify as capital of the issuer.

(ix) Investments in fixed assets, premises, and other real estate owned.

(x) Claims representing capital of a securities firm notwithstanding section 3(a)(2)(xiii) of this appendix A.

(5) *Asset-backed commercial paper programs subject to consolidation.* (i) A bank that qualifies as a primary beneficiary and must consolidate an asset-backed commercial paper program as a variable interest entity under generally accepted accounting principles may exclude the consolidated asset-backed commercial paper program assets from risk-weighted assets if the bank is the sponsor of the consolidated asset-backed commercial paper program.

(ii) If a bank excludes such consolidated asset-backed commercial paper program assets from risk-weighted assets, the bank must assess the appropriate risk-based capital charge against any risk exposures of the bank arising in connection with such asset-backed commercial paper program, including direct credit substitutes, recourse obligations, residual interests, asset-backed commercial paper liquidity facilities, and loans, in accordance with section 3 and section 4 of this appendix A.

(iii) If a bank either is not permitted to exclude consolidated asset-backed commercial paper program assets or elects not to exclude consolidated asset-backed commercial paper program assets from its risk-weighted assets, the bank must assess a risk-based capital charge based on the appropriate risk weight of the consolidated asset-backed commercial paper program assets in accordance with sections 3(a) and 4 of this appendix A. Any direct credit substitutes and recourse obligations (including residual interests and asset-backed commercial paper liquidity facilities), and loans that sponsoring banks provide to such asset-backed commercial paper

programs are not subject to a capital charge under this section 4 of this appendix A.

(iv) If a bank has multiple overlapping exposures (such as a program-wide credit enhancement and an asset-backed commercial paper liquidity facility) to an asset-backed commercial paper program that is not consolidated for risk-based capital purposes, the bank must apply the highest capital charge applicable to the exposures but is not required to hold capital multiple times for the overlapping exposures under section 4 of this appendix A.

(6) *Other variable interest entities subject to consolidation.* If a bank is required to consolidate the assets of a variable interest entity other than an asset-backed commercial paper program under generally accepted accounting principles, the bank must assess a risk-based capital charge based on the appropriate risk weight of the consolidated assets in accordance with sections 3(a) and 4 of this appendix A. Any direct credit substitutes and recourse obligations (including residual interests), and loans that a bank may provide to such a variable interest entity are not subject to any capital charge under section 4 of this appendix A.

(b) *Off-Balance Sheet Activities.* The risk weight assigned to an off-balance sheet item is determined by a two-step process. First, the face amount of the off-balance sheet item is multiplied by the appropriate credit conversion factor specified in this section. This calculation translates the face amount of an off-balance sheet item into an on-balance sheet credit equivalent amount. Second, the resulting credit equivalent amount is then assigned to the proper risk category using the criteria regarding obligors, guarantors, and collateral listed in section 3(a) of this appendix A, or external credit rating in accordance with section 4(d), if applicable. Collateral and guarantees are applied to the face amount of an off-balance sheet item; however, with respect to derivative contracts under section 3(b)(5) of this appendix A, collateral and guarantees are applied to the credit equivalent amounts of such derivative contracts. The following are the credit conversion factors and the off-balance sheet items to which they apply. However, direct credit substitutes, recourse obligations, and securities issued in connection with asset securitizations are treated as described in section 4 of this appendix A.

(1) *100 percent credit conversion factor.* (i) [Reserved]¹³

(ii) Risk participations purchased in bankers' acceptances;

(iii) [Reserved]¹⁴

¹³ [Reserved]

¹⁴ [Reserved]

(iv) Contingent obligations with a certain draw down, *e.g.*, legally binding agreements to purchase assets as a specified future date.

(v) Indemnification of customers whose securities the bank has lent as agent. If the customer is not indemnified against loss by the bank, the transaction is excluded from the risk-based capital calculation.¹⁵

(2) *50 percent credit conversion factor.* (i) Transaction-related contingencies including, among other things, performance bonds and performance-based standby letters of credit related to a particular transaction.¹⁶ To the extent permitted by law or regulation, performance-based standby letters of credit include such things as arrangements backing subcontractors' and suppliers' performance, labor and materials contracts, and construction bids;

(ii) Unused portion of commitments with an original maturity exceeding one-year;¹⁷ however, commitments that are asset-backed commercial paper liquidity facilities must satisfy the eligibility requirements under section 3(b)(6)(ii) of this appendix A;

(iii) Revolving underwriting facilities, note issuance facilities, and similar arrangements pursuant to which the bank's customer can issue short-term debt obligations in its own name, but for which the bank has a legally binding commitment to either:

(A) Purchase the obligations the customer is unable to sell by a stated date; or

(B) Advance funds to its customer, if the obligations cannot be sold.

(3) *20 percent credit conversion factor.* (i) Trade-related contingencies. These are short-term self-liquidating instruments used to finance the movement of goods and are collateralized by the underlying shipment. A

¹⁵ When a bank lends its own securities, the transaction is treated as a loan. When a bank lends its own securities or, acting as agent, agrees to indemnify a customer, the transaction is assigned to the risk weight appropriate to the obligor or collateral that is delivered to the lending or indemnifying institution or to an independent custodian acting on their behalf.

¹⁶ For purposes of this section 3(b)(2)(i), a "performance-based standby letter of credit" is any letter of credit, or similar arrangement, however named or described, which represents an irrevocable obligation to the beneficiary on the part of the issuer to make payment on account of any default by the account party in the performance of a non-financial or commercial obligation. Participations in performance-based standby letters of credit are treated in accordance with section 4 of this appendix A.

¹⁷ Participations in commitments are treated in accordance with section 4 of this Appendix A.

commercial letter of credit is an example of such an instrument.

(4) *10 percent credit conversion factor.* Unused portion of asset-backed commercial paper liquidity facilities with an original maturity of one year or less that satisfy the eligibility requirements under section 3(b)(6)(ii) of this appendix A.

(5) *Zero percent credit conversion factor.* (i) Unused portion of commitments with an original maturity of one year or less, but excluding any asset-backed commercial paper liquidity facilities;

(ii) Unused portion of commitments with an original maturity of greater than one year, if they are unconditionally cancelable¹⁸ at any time at the option of the bank and the bank has the contractual right to make, and in fact does make, either—

(A) A separate credit decision based upon the borrower's current financial condition, before each drawing under the lending facility; or

(B) An annual (or more frequent) credit review based upon the borrower's current financial condition to determine whether or not the lending facility should be continued; and

(iii) The unused portion of retail credit card lines or other related plans that are unconditionally cancelable by the bank in accordance with applicable law.

(6) *Liquidity facility provided to asset-backed commercial paper.* (i) *Noneligible asset-backed commercial paper liquidity facilities treated as recourse or direct credit substitute.* Unused portion of asset-backed commercial paper liquidity facilities that do not meet the criteria for an eligible liquidity facility provided to asset-backed commercial paper in accordance with section 3(b)(6)(ii) of this appendix A must be treated as recourse or as a direct credit substitute, and assessed the appropriate risk-based capital charge in accordance with section 4 of this appendix A.

(ii) *Eligible asset-backed commercial paper liquidity facility.* Except as provided in section 3(b)(6)(iii) of this appendix A, in order for the unused portion of an asset-backed commercial paper liquidity facility to be eligible for either the 50 percent or 10 percent credit conversion factors under section 3(b)(2)(ii) or 3(b)(4) of this appendix A, the asset-backed commercial paper liquidity facility must satisfy the following criteria:

(A) At the time of draw, the asset-backed commercial paper liquidity facility must be subject to an asset quality test that:

(1) Precludes funding of assets that are 90 days or more past due or in default; and

(2) If the assets that an asset-backed commercial paper liquidity facility is required to fund are externally rated securities at the

time they are transferred into the program, the asset-backed commercial paper liquidity facility must be used to fund only securities that are externally rated investment grade at the time of funding. If the assets are not externally rated at the time they are transferred into the program, then they are not subject to this investment grade requirement.

(B) The asset-backed commercial paper liquidity facility must provide that, prior to any draws, the bank's funding obligation is reduced to cover only those assets that satisfy the funding criteria under the asset quality test as provided in section 3(b)(6)(ii)(A) of this appendix A.

(iii) *Exception to eligibility requirements for assets guaranteed by the United States Government or its agencies, or the central government of an OECD country.* Notwithstanding the eligibility requirements for asset-backed commercial paper program liquidity facilities in section 3(b)(6)(i), the unused portion of an asset-backed commercial paper liquidity facility may still qualify for either the 50 percent or 10 percent credit conversion factors under section 3(b)(2)(ii) or 3(b)(4) of this appendix A, if the assets required to be funded by the asset-back commercial paper liquidity facility are guaranteed, either conditionally or unconditionally, by the United States Government or its agencies, or the central government of an OECD country.

(iv) *Transition period for asset-backed commercial paper liquidity facilities.* Notwithstanding the eligibility requirements for asset-backed commercial paper program liquidity facilities in section 3(b)(6)(i) of this appendix A, the unused portion of an asset-backed commercial paper liquidity facility will be treated as eligible liquidity facilities pursuant to section 3(b)(6)(ii) of this appendix A regardless of their compliance with the definition of eligible liquidity facilities until September 30, 2005. On that date and thereafter, the unused portions of asset-backed commercial paper liquidity facilities that do not meet the eligibility requirements in section 3(b)(6)(i) of this appendix A will be treated as recourse obligations or direct credit substitutes.

(7) *Derivative contracts—(i) Calculation of credit equivalent amounts.* The credit equivalent amount of a derivative contract equals the sum of the current credit exposure and the potential future credit exposure of the derivative contract. The calculation of credit equivalent amounts must be measured in U.S. dollars, regardless of the currency or currencies specified in the derivative contract.

(A) *Current credit exposure.* The current credit exposure for a single derivative contract is determined by the mark-to-market value of the derivative contract. If the mark-to-market value is positive, then the current credit exposure equals that mark-to-market

¹⁸ See section 1(c)(26) of appendix A to this part.

value. If the mark-to-market is zero or negative, then the current credit exposure is zero. The current credit exposure for multiple derivative contracts executed with a single counterparty and subject to a qualifying bilateral netting contract is determined as provided by section 3(b)(5)(ii)(A) of this appendix A.

(B) *Potential future credit exposure.* The potential future credit exposure for a single derivative contract, including a derivative contract with negative mark-to-market value, is calculated by multiplying the notional principal¹⁹ of the derivative contract by one of the credit conversion factors in Table A—Conversion Factor Matrix of this appendix A, for the appropriate category.²⁰ The potential future credit exposure for gold contracts

shall be calculated using the foreign exchange rate conversion factors. For any derivative contract that does not fall within one of the specified categories in Table A—Conversion Factor Matrix of this appendix A, the potential future credit exposure shall be calculated using the other commodity conversion factors. Subject to examiner review, banks should use the effective rather than the apparent or stated notional amount in calculating the potential future credit exposure. The potential future credit exposure for multiple derivatives contracts executed with a single counterparty and subject to a qualifying bilateral netting contract is determined as provided by section 3(b)(5)(ii)(A) of this appendix A.

TABLE B—CONVERSION FACTOR MATRIX¹

| Remaining maturity ² | Interest rate | Foreign exchange rate and gold | Equity ² | Precious metals | Other commodity |
|---------------------------------|---------------|--------------------------------|---------------------|-----------------|-----------------|
| One year or less | 0.0 | 1.0 | 6.0 | 7.0 | 10.0 |
| Over one to five years | 0.5 | 5.0 | 8.0 | 7.0 | 12.0 |
| Over five years | 1.5 | 7.5 | 10.0 | 8.0 | 15.0 |

¹For derivative contracts with multiple exchanges of principal, the conversion factors are multiplied by the number of remaining payments in the derivative contract.

²For derivative contracts that automatically reset to zero value following a payment, the remaining maturity equals the time until the next payment. However, interest rate contracts with remaining maturities of greater than one year shall be subject to a minimum conversion factor of 0.5 percent.

(i) *Derivative contracts subject to a qualifying bilateral netting contract—(A) Netting calculation.* The credit equivalent amount for multiple derivative contracts executed with a single counterparty and subject to a qualifying bilateral netting contract as provided by section 3(b)(5)(ii)(B) of this appendix A is calculated by adding the net current credit exposure and the adjusted sum of the potential future credit exposure for all derivative contracts subject to the qualifying bilateral netting contract.

(1) *Net current credit exposure.* The net current credit exposure is the net sum of all positive and negative mark-to-market values of the individual derivative contracts subject to a qualifying bilateral netting contract. If the net sum of the mark-to-market value is positive, then the net current credit exposure equals that net sum of the mark-to-market value. If the net sum of the mark-to-market value is zero or negative, then the net current credit exposure is zero.

(2) *Adjusted sum of the potential future credit exposure.* The adjusted sum of the potential future credit exposure is calculated as:

$$A_{\text{net}} = 0.4 \times A_{\text{gross}} + (0.6 \times \text{NGR} \times A_{\text{gross}})$$

A_{net} is the adjusted sum of the potential future credit exposure, A_{gross} is the gross potential future credit exposure, and NGR is the net to gross ratio. A_{gross} is the sum of the potential future credit exposure (as determined under section 3(b)(5)(i)(B) of this appendix A) for each individual derivative contract subject to the qualifying bilateral netting contract. The NGR is the ratio of the net current credit exposure to the gross current credit exposure. In calculating the NGR, the gross current credit exposure equals the sum of the positive current credit exposures (as determined under section 3(b)(5)(i)(A) of this appendix A) of all individual derivative contracts subject to the qualifying bilateral netting contract.

¹⁹For purposes of calculating either the potential future credit exposure under section 3(b)(5)(i)(B) of this appendix A or the gross potential future credit exposure under section 3(b)(5)(ii)(A)(2) of this appendix A for foreign exchange contracts and other similar contracts in which the notional principal is equivalent to the cash flows, total notional principal is the net receipts to each party

falling due on each value date in each currency.

²⁰No potential future credit exposure is calculated for single currency interest rate swaps in which payments are made based upon two floating indices, so-called floating/floating or basis swaps; the credit equivalent amount is measured solely on the basis of the current credit exposure.

(B) *Qualifying bilateral netting contract.* In determining the current credit exposure for multiple derivative contracts executed with a single counterparty, a bank may net derivative contracts subject to a qualifying bilateral netting contract by offsetting positive and negative mark-to-market values, provided that:

(1) The qualifying bilateral netting contract is in writing.

(2) The qualifying bilateral netting contract is not subject to a walkaway clause.

(3) The qualifying bilateral netting contract creates a single legal obligation for all individual derivative contracts covered by the qualifying bilateral netting contract. In effect, the qualifying bilateral netting contract must provide that the bank would have a single claim or obligation either to receive or to pay only the net amount of the sum of the positive and negative mark-to-market values on the individual derivative contracts covered by the qualifying bilateral netting contract. The single legal obligation for the net amount is operative in the event that a counterparty, or a counterparty to whom the qualifying bilateral netting contract has been assigned, fails to perform due to any of the following events: default, insolvency, bankruptcy, or other similar circumstances.

(4) The bank obtains a written and reasoned legal opinion(s) that represents, with a high degree of certainty, that in the event of a legal challenge, including one resulting from default, insolvency, bankruptcy, or similar circumstances, the relevant court and administrative authorities would find the bank's exposure to be the net amount under:

(i) The law of the jurisdiction in which the counterparty is chartered or the equivalent location in the case of noncorporate entities, and if a branch of the counterparty is involved, then also under the law of the jurisdiction in which the branch is located;

(ii) The law of the jurisdiction that governs the individual derivative contracts covered by the bilateral netting contract; and

(iii) The law of the jurisdiction that governs the qualifying bilateral netting contract.

(5) The bank establishes and maintains procedures to monitor possible changes in relevant law and to ensure that the qualifying bilateral netting contract continues to satisfy the requirement of this section.

(6) The bank maintains in its files documentation adequate to support the netting of a derivative contract.²¹

²¹By netting individual derivative contracts for the purpose of calculating its credit equivalent amount, a bank represents that documentation adequate to support the netting of a set of derivative contract is in the bank's files and available for inspection by

(iii) *Risk weighting.* Once the bank determines the credit equivalent amount for a derivative contract or a set of derivative contracts subject to a qualifying bilateral netting contract, the bank assigns that amount to the risk weight category appropriate to the counterparty, or, if relevant, the nature of any collateral or guarantee.²² However, the maximum weight that will be applied to the credit equivalent amount of such derivative contract(s) is 50 percent.

(iv) *Exceptions.* The following derivative contracts are not subject to the above calculation, and therefore, are not part of the denominator of a national bank's risk-based capital ratio:

(A) An exchange rate contract with an original maturity of 14 calendar days or less;²³ and

(B) A derivative contract that is traded on an exchange requiring the daily payment of any variations in the market value of the contract.

Section 4. Recourse, Direct Credit Substitutes and Positions in Securitizations

(a) *Definitions.* For purposes of this section 4 of this appendix A, the following definitions apply:

(1) *Credit derivative* means a contract that allows one party (the protection purchaser) to transfer the credit risk of an asset or off-balance sheet credit exposure to another party (the protection provider). The value of a credit derivative is dependent, at least in part, on the credit performance of a "reference asset."

(2) *Credit-enhancing interest-only strip* means an on-balance sheet asset that, in form or in substance:

the OCC. Upon determination by the OCC that a bank's files are inadequate or that a qualifying bilateral netting contract may not be legally enforceable in any one of the bodies of law described in section 3(b)(5)(ii)(B)(3)(i) through (iii) of this appendix A, the underlying derivative contracts may not be netted for the purposes of this section.

²²Derivative contracts are an exception to the general rule of applying collateral and guarantees to the face value of off-balance sheet items. The sufficiency of collateral and guarantees is determined on the basis of the credit equivalent amount of derivative contracts. However, collateral and guarantees held against a qualifying bilateral netting contract is not recognized for capital purposes unless it is legally available for all contracts included in the qualifying bilateral netting contract.

²³Notwithstanding section 3(b)(5)(B) of this appendix A, gold contracts do not qualify for this exception.

(i) Represents the contractual right to receive some or all of the interest due on transferred assets; and

(ii) Exposes the bank to credit risk directly or indirectly associated with the transferred assets that exceeds its *pro rata* claim on the assets whether through subordination provisions or other credit enhancing techniques.

(3) *Credit-enhancing representations and warranties* means representations and warranties that are made or assumed in connection with a transfer of assets (including loan servicing assets) and that obligate a bank to protect investors from losses arising from credit risk in the assets transferred or the loans serviced. Credit-enhancing representations and warranties include promises to protect a party from losses resulting from the default or nonperformance of another party or from an insufficiency in the value of the collateral. Credit-enhancing representations and warranties do not include:

(i) Early-default clauses and similar warranties that permit the return of, or premium refund clauses covering, 1-4 family residential first mortgage loans (as described in section 3(a)(3)(iii) of this appendix A) for a period not to exceed 120 days from the date of transfer. These warranties may cover only those loans that were originated within 1 year of the date of transfer;

(ii) Premium refund clauses that cover assets guaranteed, in whole or in part, by the U.S. Government, a U.S. Government agency, or a U.S. Government-sponsored enterprise, provided the premium refund clauses are for a period not to exceed 120 days from the date of transfer; or

(iii) Warranties that permit the return of assets in instances of fraud, misrepresentation or incomplete documentation.

(4) *Direct credit substitute* means an arrangement in which a bank assumes, in form or in substance, credit risk associated with an on- or off-balance sheet asset or exposure that was not previously owned by the bank (third-party asset) and the risk assumed by the bank exceeds the *pro rata* share of the bank's interest in the third-party asset. If a bank has no claim on the third-party asset, then the bank's assumption of any credit risk is a direct credit substitute. Direct credit substitutes include:

(i) Financial standby letters of credit that support financial claims on a third party that exceed a bank's *pro rata* share in the financial claim;

(ii) Guarantees, surety arrangements, credit derivatives and similar instruments backing financial claims that exceed a bank's *pro rata* share in the financial claim;

(iii) Purchased subordinated interests that absorb more than their *pro rata* share of losses from the underlying assets;

(iv) Credit derivative contracts under which the bank assumes more than its *pro*

rata share of credit risk on a third-party asset or exposure;

(v) Loans or lines of credit that provide credit enhancement for the financial obligations of a third party;

(vi) Purchased loan servicing assets if the servicer is responsible for credit losses or if the servicer makes or assumes credit-enhancing representations and warranties with respect to the loans serviced. Mortgage servicer case advances that meet the conditions of section 4(a)(8)(i) and (ii) of this appendix A, are not direct credit substitutes;

(vii) Clean-up calls on third-party assets. Clean-up calls that are 10% or less of the original pool balance and that are exercisable at the option of the bank are not direct credit substitutes; and

(viii) Unused portion of noneligible asset-backed commercial paper liquidity facilities.

(5) *Externally rated* means that an instrument or obligation has received a credit rating from at least one nationally recognized statistical rating organization.

(6) *Face amount* means the notional principal, or face value, amount of an off-balance sheet item; the amortized cost of an asset not held for trading purposes; and the fair value of a trading asset.

(7) *Financial asset* means cash or other monetary instrument, evidence of debt, evidence of an ownership interest in an entity, or a contract that conveys a right to receive or exchange cash or another financial instrument from another party.

(8) *Financial standby letter of credit* means a letter of credit or similar arrangement that represents an irrevocable obligation to a third-party beneficiary:

(i) To repay money borrowed by, or advanced to, or for the account of, a second party (the account party); or

(ii) To make payment on behalf of the account party, in the event that the account party fails to fulfill its obligation to the beneficiary.

(9) *Mortgage servicer cash advance* means funds that a residential mortgage servicer advances to ensure an uninterrupted flow of payments, including advances made to cover foreclosure costs or other expenses to facilitate the timely collection of the loan. A mortgage servicer cash advance is not a recourse obligation or a direct credit substitute if:

(i) The servicer is entitled to full reimbursement and this right is not subordinated to other claims on the cash flows from the underlying asset pool; or

(ii) For any one loan, the servicer's obligation to make nonreimbursable advances is contractually limited to an insignificant amount of the outstanding principal amount of that loan.

(10) *Nationally recognized statistical rating organization (NRSRO)* means an entity recognized by the Division of Market Regulation

of the Securities and Exchange Commission (or any successor Division) (Commission) as a nationally recognized statistical rating organization for various purposes, including the Commission's uniform net capital requirements for brokers and dealers.

(11) *Recourse* means a bank's retention, in form or in substance, of any credit risk directly or indirectly associated with an asset it has sold that exceeds a *pro rata* share of that bank's claim on the asset. If a bank has no claim on a sold asset, then the retention of any credit risk is recourse. A recourse obligation typically arises when a bank transfers assets and retains an explicit obligation to repurchase assets or to absorb losses due to a default on the payment of principal or interest or any other deficiency in the performance of the underlying obligor or some other party. Recourse may also exist implicitly if a bank provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

(i) Credit-enhancing representations and warranties made on transferred assets;

(ii) Loan servicing assets retained pursuant to an agreement under which the bank will be responsible for losses associated with the loans serviced. Mortgage servicer cash advances that meet the conditions of section 4(a)(9)(i) and (ii) of this appendix A, are not recourse arrangements;

(iii) Retained subordinated interests that absorb more than their *pro rata* share of losses from the underlying assets;

(iv) Assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet;

(v) Loan strips sold without contractual recourse where the maturity of the transferred portion of the loan is shorter than the maturity of the commitment under which the loan is drawn;

(vi) Credit derivatives issued that absorb more than the bank's *pro rata* share of losses from the transferred assets;

(vii) Clean-up calls. Clean-up calls that are 10% or less of the original pool balance and that are exercisable at the option of the bank are not recourse arrangements; and

(viii) Noneligible asset-backed commercial paper liquidity facilities.

(12) *Residual interest* means any on-balance sheet asset that represents an interest (including a beneficial interest) created by a transfer that qualifies as a sale (in accordance with generally accepted accounting principles) of financial assets, whether through a securitization or otherwise, and that exposes a bank to any credit risk directly or indirectly associated with the transferred asset that exceeds a *pro rata* share of that bank's claim on the asset, whether through subordination provisions or other credit enhancement techniques. Residual interests generally include credit-en-

hancing interest-only strips, spread accounts, cash collateral accounts, retained subordinated interests (and other forms of overcollateralization) and similar assets that function as a credit enhancement. Residual interests further include those exposures that, in substance, cause the bank to retain the credit risk of an asset or exposure that had qualified as a residual interest before it was sold. Residual interests generally do not include interests purchased from a third party.

(13) *Risk participation* means a participation in which the originating party remains liable to the beneficiary for the full amount of an obligation (e.g. a direct credit substitute) notwithstanding that another party has acquired a participation in that obligation.

(14) *Securitization* means the pooling and repackaging by a special purpose entity of assets or other credit exposures that can be sold to investors. Securitization includes transactions that create stratified credit risk positions whose performance is dependent upon an underlying pool of credit exposures, including loans and commitments.

(15) *Structured finance program* means a program where receivable interests and asset-backed securities issued by multiple participants are purchased by a special purpose entity that repackages those exposures into securities that can be sold to investors. Structured finance programs allocate credit risks, generally, between the participants and credit enhancement provided to the program.

(16) *Traded position* means a position retained, assumed or issued in connection with a securitization that is externally rated, where there is a reasonable expectation that, in the near future, the rating will be relied upon by:

(i) Unaffiliated investors to purchase the position; or

(ii) An unaffiliated third party to enter into a transaction involving the position, such as a purchase, loan or repurchase agreement.

(b) *Credit equivalent amounts and risk weights of recourse obligations and direct credit substitutes*—(1) *Credit-equivalent amount*. Except as otherwise provided, the credit-equivalent amount for a recourse obligation or direct credit substitute is the full amount of the credit-enhanced assets for which the bank directly or indirectly retains or assumes credit risk multiplied by a 100% conversion factor.

(2) *Risk-weight factor*. To determine the bank's risk-weighted assets for off-balance sheet recourse obligations and direct credit substitutes, the credit equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct credit substitute that is an on-balance sheet asset (e.g., a purchased subordinated security), a bank must

calculate risk-weighted assets using the amount of the direct credit substitute and the full amount of the assets it supports, *i.e.*, all the more senior positions in the structure.

(c) *Credit equivalent amount and risk weight of participations in, and syndications of, direct credit substitutes.* The credit equivalent amount for a participation interest in, or syndication of, a direct credit substitute is calculated and risk weighted as follows:

(1) In the case of a direct credit substitute in which a bank has conveyed a risk participation, the full amount of the assets that are supported by the direct credit substitute is converted to a credit equivalent amount using a 100% conversion factor. The *pro rata* share of the credit equivalent amount that has been conveyed through a risk participation is then assigned to whichever risk-weight category is lower: the risk-weight category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral, or the risk-weight category appropriate to the party acquiring the participation. The *pro rata* share of the credit equivalent amount that has not been participated out is assigned to the risk-weight category appropriate to the obligor after considering any associated guarantees or collateral.

(2) In the case of a direct credit substitute in which the bank has acquired a risk participation, the acquiring bank’s *pro rata* share of the direct credit substitute is multiplied by the full amount of the assets that are supported by the direct credit substitute

and converted using a 100% credit conversion factor. The resulting credit equivalent amount is then assigned to the risk-weight category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral.

(3) In the case of a direct credit substitute that takes the form of a syndication where each bank or participating entity is obligated only for its *pro rata* share of the risk and there is no recourse to the originating entity, each bank’s credit equivalent amount will be calculated by multiplying only its *pro rata* share of the assets supported by the direct credit substitute by a 100% conversion factor. The resulting credit equivalent amount is then assigned to the risk-weight category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral.

(d) *Externally rated positions: credit-equivalent amounts and risk weights.*—(1) *Traded positions.* With respect to a recourse obligation, direct credit substitute, residual interest (other than a credit-enhancing interest-only strip) or asset- or mortgage-backed security that is a “traded position” and that has received an external rating on a long-term position that is one grade below investment grade or better or a short-term position that is investment grade, the bank may multiply the face amount of the position by the appropriate risk weight, determined in accordance with Tables C or D of this Appendix A.²⁴ If a traded position receives more than one external rating, the lowest single rating will apply.

TABLE C

| Long-term rating category | Examples | Risk weight (In percent) |
|--|---------------|--------------------------|
| Highest or second highest investment grade | AAA, AA | 20 |
| Third highest investment grade | A | 50 |
| Lowest investment grade | BBB | 100 |
| One category below investment grade | BB | 200 |

TABLE D

| Short-term rating category | Examples | Risk weight (In percent) |
|---------------------------------------|----------------|--------------------------|
| Highest investment grade | A-1, P-1 | 20 |
| Second highest investment grade | A-2, P-2 | 50 |
| Lowest investment grade | A-3, P-3 | 100 |

(2) *Non-traded positions.* A recourse obligation, direct credit substitute, residual interest (but not a credit-enhancing interest-only strip) or asset- or mortgage-backed security extended in connection with a securitization

that is not a “traded position” may be assigned a risk weight in accordance with section 4(d)(1) of this appendix A if:

(i) It has been externally rated by more than one NRSRO;

²⁴ Stripped mortgage-backed securities or other similar instruments, such as interest-only or principal-only strips, that are not

credit enhancing must be assigned to the 100% risk category.

(ii) It has received an external rating on a long-term position that is one category below investment grade or better or a short-term position that is investment grade by all NRSROs providing a rating;

(iii) The ratings are publicly available; and

(iv) The ratings are based on the same criteria used to rate traded positions.

If the ratings are different, the lowest rating will determine the risk category to which the recourse obligation, residual interest or direct credit substitute will be assigned.

(e) *Senior positions not externally rated.* For a recourse obligation, direct credit substitute, residual interest or asset- or mortgage-backed security that is not externally rated but is senior or preferred in all features to a traded position (including collateralization and maturity), a bank may apply a risk weight to the face amount of the senior position in accordance with section 4(d)(1) of this appendix A, based upon the traded position, subject to any current or prospective supervisory guidance and the bank satisfying the OCC that this treatment is appropriate. This section will apply only if the traded position provides substantive credit support to the unrated position until the unrated position matures.

(f) *Residual Interests—(1) Concentration limit on credit-enhancing interest-only strips.* In addition to the capital requirement provided by section 4(f)(2) of this appendix A, a bank must deduct from Tier 1 capital all credit-enhancing interest-only strips in excess of 25 percent of Tier 1 capital in accordance with section 2(c)(2)(iv) of this appendix A.

(2) *Credit-enhancing interest-only strip capital requirement.* After applying the concentration limit to credit-enhancing interest-only strips in accordance with section (f)(1), a bank must maintain risk-based capital for a credit-enhancing interest-only strip equal to the remaining amount of the credit-enhancing interest-only strip (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets

transferred. Transactions that, in substance, result in the retention of credit risk associated with a transferred credit-enhancing interest-only strip will be treated as if the credit-enhancing interest-only strip was retained by the bank and not transferred.

(3) *Other residual interests capital requirement.* Except as provided in sections (d) or (e) of this section, a bank must maintain risk-based capital for a residual interest (excluding a credit-enhancing interest-only strip) equal to the face amount of the residual interest that is retained on the balance sheet (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets transferred. Transactions that, in substance, result in the retention of credit risk associated with a transferred residual interest will be treated as if the residual interest was retained by the bank and not transferred.

(4) *Residual interests and other recourse obligations.* Where the aggregate capital requirement for residual interests (including credit-enhancing interest-only strips) and recourse obligations arising from the same transfer of assets exceed the full risk-based capital requirement for those assets, a bank must maintain risk-based capital equal to the greater of the risk-based capital requirement for the residual interest as calculated under sections 4(f)(1) through (3) of this appendix A or the full risk-based capital requirement for the assets transferred.

(g) *Positions that are not rated by an NRSRO.* A position (but not a residual interest) extended in connection with a securitization and that is not rated by an NRSRO may be risk-weighted based on the bank's determination of the credit rating of the position, as specified in Table E of this appendix A, multiplied by the face amount of the position. In order to qualify for this treatment, the bank's system for determining the credit rating of the position must meet one of the three alternative standards set out in section 4(g)(1) through (3) of this appendix A.

TABLE E

| Rating category | Examples | Risk weight (In percent) |
|---|----------------------|--------------------------|
| Investment grade | BBB, or better | 100 |
| One category below investment grade | BB | 200 |

(1) *Internal risk rating used for asset-backed programs.* A direct credit substitute (but not a purchased credit-enhancing interest-only strip) is assumed by a bank in connection with an asset-backed commercial paper program sponsored by the bank and the bank is able to demonstrate to the satisfaction of

the OCC, prior to relying upon its use, that the bank's internal credit risk rating system is adequate. Adequate internal credit risk rating systems usually contain the following criteria:

(i) The internal credit risk system is an integral part of the bank's risk management

system that explicitly incorporates the full range of risks arising from a bank's participation in securitization activities;

(ii) Internal credit ratings are linked to measurable outcomes, such as the probability that the position will experience any loss, the position's expected loss given default, and the degree of variance in losses given default on that position;

(iii) The bank's internal credit risk system must separately consider the risk associated with the underlying loans or borrowers, and the risk associated with the structure of a particular securitization transaction;

(iv) The bank's internal credit risk system must identify gradations of risk among "pass" assets and other risk positions;

(v) The bank must have clear, explicit criteria that are used to classify assets into each internal risk grade, including subjective factors;

(vi) The bank must have independent credit risk management or loan review personnel assigning or reviewing the credit risk ratings;

(vii) An internal audit procedure should periodically verify that internal risk ratings are assigned in accordance with the bank's established criteria.

(viii) The bank must monitor the performance of the internal credit risk ratings assigned to nonrated, nontraded direct credit substitutes over time to determine the appropriateness of the initial credit risk rating assignment and adjust individual credit risk ratings, or the overall internal credit risk ratings system, as needed; and

(ix) The internal credit risk system must make credit risk rating assumptions that are consistent with, or more conservative than, the credit risk rating assumptions and methodologies of NRSROs.

(2) *Program Ratings.* A direct credit substitute or recourse obligation (but not a residual interest) is assumed or retained by a bank in connection with a structured finance program and a NRSRO has reviewed the terms of the program and stated a rating for positions associated with the program. If the program has options for different combinations of assets, standards, internal credit enhancements and other relevant factors, and the NRSRO specifies ranges of rating categories to them, the bank may apply the rating category applicable to the option that corresponds to the bank's position. In order to rely on a program rating, the bank must demonstrate to the OCC's satisfaction that the credit risk rating assigned to the program meets the same standards generally used by NRSROs for rating traded positions. The bank must also demonstrate to the OCC's satisfaction that the criteria underlying the NRSRO's assignment of ratings for the program are satisfied for the particular position. If a bank participates in a securitization sponsored by another party,

the OCC may authorize the bank to use this approach based on a program rating obtained by the sponsor of the program.

(3) *Computer Program.* The bank is using an acceptable credit assessment computer program to determine the rating of a direct credit substitute or recourse obligation (but not a residual interest) extended in connection with a structured finance program. A NRSRO must have developed the computer program and the bank must demonstrate to the OCC's satisfaction that ratings under the program correspond credibly and reliably with the rating of traded positions.

(h) *Limitations on risk-based capital requirements—(1) Low-level exposure rule.* If the maximum contractual exposure to loss retained or assumed by a bank is less than the effective risk-based capital requirement, as determined in accordance with section 4(b) of this appendix A, for the asset supported by the bank's position, the risk based capital required under this appendix A is limited to the bank's contractual exposure, less any recourse liability account established in accordance with generally accepted accounting principles. This limitation does not apply when a bank provides credit enhancement beyond any contractual obligation to support assets that it has sold.

(2) *Related on-balance sheet assets.* If an asset is included in the calculation of the risk-based capital requirement under this section 4 of this appendix A and also appears as an asset on a bank's balance sheet, the asset is risk-weighted only under this section 4 of this appendix A, except in the case of loan servicing assets and similar arrangements with embedded recourse obligations or direct credit substitutes. In that case, both the on-balance sheet servicing assets and the related recourse obligations or direct credit substitutes must both be separately risk weighted and incorporated into the risk-based capital calculation.

(i) *Alternative Capital Calculation for Small Business Obligations—(1) Definitions.* For purposes of this section 4(i):

(i) *Qualified bank* means a bank that:

(A) Is well capitalized as defined in 12 CFR 6.4 without applying the capital treatment described in this section 4(i), or

(B) Is adequately capitalized as defined in 12 CFR 6.4 without applying the capital treatment described in this section 4(i) and has received written permission from the appropriate district office of the OCC to apply the capital treatment described in this section 4(i).

(ii) *Recourse* has the meaning given to such term under generally accepted accounting principles.

(iii) *Small business* means a business that meets the criteria for a small business concern established by the Small Business Administration in 13 CFR part 121 pursuant to 15 U.S.C. 632.

(2) *Capital and reserve requirements.* Notwithstanding the risk-based capital treatment outlined in section 2(c)(4) and any other subsection (other than subsection (i)) of this section 4, with respect to a transfer of a small business loan or a lease of personal property with recourse that is a sale under generally accepted accounting principles, a qualified bank may elect to apply the following treatment:

(1) The bank establishes and maintains a non-capital reserve under generally accepted accounting principles sufficient to meet the reasonable estimated liability of the bank under the recourse arrangement; and

(i) For purposes of calculating the bank's risk-based capital ratio, the bank includes only the face amount of its recourse in its risk-weighted assets.

(3) *Limit on aggregate amount of recourse.* The total outstanding amount of recourse retained by a qualified bank with respect to transfers of small business loans and leases of personal property and included in the risk-weighted assets of the bank as described in section 4(i)(2) of this appendix A may not exceed 15 percent of the bank's total capital after adjustments and deductions, unless the OCC specifies a greater amount by order.

(4) *Bank that ceases to be qualified or that exceeds aggregate limit.* If a bank ceases to be a qualified bank or exceeds the aggregate limit in section 4(i)(3) of this appendix A, the bank may continue to apply the capital treatment described in section 4(i)(2) of this appendix A to transfers of small business loans and leases of personal property that occurred when the bank was qualified and did not exceed the limit.

(5) *Prompt Corrective Action not affected.* (i) A bank shall compute its capital without regard to this section 4(i) for purposes of prompt corrective action (12 U.S.C. 1831o and 12 CFR part 6) unless the bank is an adequately or well capitalized bank (without applying the capital treatment described in this section 4(i)) and, after applying the capital treatment described in this section 4(i), the bank would be well capitalized.

(ii) A bank shall compute its capital without regard to this section 4(i) for purposes of 12 U.S.C. 1831o(g) regardless of the bank's capital level.

Section 5. Implementation, Transition Rules, and Target Ratios

(a) *December 31, 1990 to December 30, 1992.* During this time period:

(1) All national banks are expected to maintain a minimum ratio of total capital (after deductions) to risk-weighted assets of 7.25%.

(i) Fifty percent of this 7.25% must be made up of Tier 1 capital; however, up to 10% of Tier 1 capital can be comprised of Tier 2 capital elements, before any deductions for goodwill. The amount of Tier 2 elements in-

cluded in Tier 1 will not be subject to the sublimits on the amount of such elements in Tier 2 capital, with the exception of the allowance for loan and lease losses.

(ii) Goodwill that national banks have been allowed to count as capital as a result of the transition rules contained in 12 CFR 3.3 is grandfathered until December 31, 1992, but will be deducted from Tier 1 capital after that date.

(2) The allowance for loan and lease losses can be included in total capital up to a maximum of 1.5% of a bank's risk-weighted assets, including the portion that can be borrowed to make up Tier 1.

(3) Tier 2 capital elements that are not used as part of Tier 1 capital will qualify as part of a national bank's total capital base up to a maximum of 100% of the bank's Tier 1 capital.

(4) In addition to the standards established by these risk-based capital guidelines, all national banks must maintain a minimum capital-to-total assets ratio in accordance with the provisions of 12 CFR part 3.

(b) *On December 31, 1992.* (1) All national banks are expected to maintain a minimum ratio of total capital (after deductions) to risk-weighted assets of 8.0%.

(2) Tier 2 capital elements qualify as part of a national bank's total capital base up to a maximum of 100% of that bank's Tier 1 capital.

(3) In addition to the standards established by these risk-based capital guidelines, all national banks must maintain a minimum capital-to-total assets ratio in accordance with the provisions of 12 CFR part 3.

[54 FR 4177, Jan. 27, 1989]

EDITORIAL NOTE: For FEDERAL REGISTER citations affecting Appendix A to part 3 of title 12, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and on GPO Access.

APPENDIX B TO PART 3—RISK-BASED CAPITAL GUIDELINES; MARKET RISK ADJUSTMENT

Section 1. Purpose, Applicability, Scope, and Effective Date

(a) *Purpose.* The purpose of this appendix is to ensure that banks with significant exposure to market risk maintain adequate capital to support that exposure.¹ This appendix

¹This appendix is based on a framework developed jointly by supervisory authorities from the countries represented on the Basle Committee on Banking Supervision and endorsed by the Group of Ten Central Bank Governors. The framework is described in a

Continued

supplements and adjusts the risk-based capital ratio calculations under appendix A of this part with respect to those banks.

(b) *Applicability.* (1) This appendix applies to any national bank whose trading activity² (on a worldwide consolidated basis) equals:

- (i) 10 percent or more of total assets;³ or
- (ii) \$1 billion or more.

(2) The OCC may apply this appendix to any national bank if the OCC deems it necessary or appropriate for safe and sound banking practices.

(3) The OCC may exclude a national bank otherwise meeting the criteria of paragraph (b)(1) of this section from coverage under this appendix if it determines the bank meets such criteria as a consequence of accounting, operational, or similar considerations, and the OCC deems it consistent with safe and sound banking practices.

(c) *Scope.* The capital requirements of this appendix support market risk associated with a bank's covered positions.

(d) *Effective date.* This appendix is effective as of January 1, 1997. Compliance is not mandatory until January 1, 1998. Subject to supervisory approval, a bank may opt to comply with this appendix as early as January 1, 1997.⁴

Section 2. Definitions

For purposes of this appendix, the following definitions apply:

(a) *Covered positions* means all positions in a bank's trading account, and all foreign exchange⁵ and commodity positions, whether or not in the trading account.⁶ Positions include on-balance-sheet assets and liabilities and off-balance-sheet items. Securities subject to repurchase and lending agreements are included as if they are still owned by the lender. Asset backed commercial paper liquidity facilities, in form or in substance, in a bank's trading account are excluded from covered positions, and instead, are subject to

Basle Committee paper entitled "Amendment to the Capital Accord to Incorporate Market Risk," January 1996.

²Trading activity means the gross sum of trading assets and liabilities as reported in the bank's most recent quarterly Consolidated Report of Condition and Income (Call Report).

³Total assets means quarter-end total assets as reported in the bank's most recent Call Report.

⁴A bank that voluntarily complies with the final rule prior to January 1, 1998, must comply with all of its provisions.

⁵Subject to supervisory review, a bank may exclude structural positions in foreign currencies from its covered positions.

⁶The term trading account is defined in the instructions to the Call Report.

the risk-based capital requirements as provided in appendix A of this part.

(b) *Market risk* means the risk of loss resulting from movements in market prices. Market risk consists of general market risk and specific risk components.

(1) *General market risk* means changes in the market value of covered positions resulting from broad market movements, such as changes in the general level of interest rates, equity prices, foreign exchange rates, or commodity prices.

(2) *Specific risk* means changes in the market value of specific positions due to factors other than broad market movements and includes default and event risk as well as idiosyncratic variations.

(c) *Tier 1* and *Tier 2* capital are the same as defined in appendix A of this part.

(d) *Tier 3 capital* is subordinated debt that is unsecured; is fully paid up; has an original maturity of at least two years; is not redeemable before maturity without prior approval by the OCC; includes a lock-in clause precluding payment of either interest or principal (even at maturity) if the payment would cause the issuing bank's risk-based capital ratio to fall or remain below the minimum required under appendix A of this part; and does not contain and is not covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices.

(e) *Value-at-risk (VAR)* means the estimate of the maximum amount that the value of covered positions could decline during a fixed holding period within a stated confidence level, measured in accordance with section 4 of this appendix.

Section 3. Adjustments to the Risk-Based Capital Ratio Calculations

(a) *Risk-based capital ratio denominator.* A bank subject to this appendix shall calculate its risk-based capital ratio denominator as follows:

(1) *Adjusted risk-weighted assets.* (i) *Covered positions.* Calculate adjusted risk-weighted assets, which equal risk-weighted assets (as determined in accordance with appendix A of this part), excluding the risk-weighted amount of all covered positions (except foreign exchange positions outside the trading account and over-the-counter derivatives positions).⁷

(ii) *Securities borrowing transactions.* In calculating adjusted risk-weighted assets, a bank also may exclude a receivable that results from the bank's posting of cash collateral in a securities borrowing transaction to the extent that the receivable is collateralized by the market value of the borrowed securities and subject to the following conditions:

(A) The borrowed securities must be includable in the trading account and must be liquid and readily marketable;

(B) The borrowed securities must be marked to market daily;

(C) The receivable must be subject to a daily margining requirement; and

(D) The securities borrowing transaction must be a securities contract for purposes of section 555 of the Bankruptcy Code (11 U.S.C. 555741(7)), a qualified financial contract for purposes of section 11(e)(8) of the Federal Deposit Insurance Act (12 U.S.C. 1821(e)(8)), or a netting contract between or among financial institutions, for purposes of sections 401–407 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 U.S.C. 4401–4407) or Regulation EE (12 CFR Part 231).

(2) *Measure for market risk.* Calculate the measure for market risk, which equals the sum of the VAR-based capital charge, the specific risk add-on (if any), and the capital charge for de minimis exposure (if any).

(i) *VAR-based capital charge.* The VAR-based capital charge equals the higher of:

(A) The previous day's VAR measure; or

(B) The average of the daily VAR measures for each of the preceding 60 business days multiplied by three, except as provided in section 4(e) of this appendix;

(ii) *Specific risk add-on.* The specific risk add-on is calculated in accordance with section 5 of this appendix; and

(iii) *Capital charge for de minimis exposure.* The capital charge for de minimis exposure is calculated in accordance with section 4(a) of this appendix.

(3) *Market risk equivalent assets.* Calculate market risk equivalent assets by multiplying the measure for market risk (as calculated in paragraph (a)(2) of this section) by 12.5.

(4) *Denominator calculation.* Add market risk equivalent assets (as calculated in paragraph (a)(3) of this section) to adjusted risk-weighted assets (as calculated in paragraph (a)(1) of this section). The resulting sum is the bank's risk-based capital ratio denominator.

(b) *Risk-based capital ratio numerator.* A bank subject to this appendix shall calculate its risk-based capital ratio numerator by allocating capital as follows:

(1) *Credit risk allocation.* Allocate Tier 1 and Tier 2 capital equal to 8.0 percent of adjusted risk-weighted assets (as calculated in paragraph (a)(1) of this section).⁸

(2) *Market risk allocation.* Allocate Tier 1, Tier 2, and Tier 3 capital equal to the measure for market risk as calculated in paragraph (a)(2) of this section. The sum of Tier 2 and Tier 3 capital allocated for market risk must not exceed 250 percent of Tier 1 capital allocated for market risk. (This requirement means that Tier 1 capital allocated in this

paragraph (b)(2) must equal at least 28.6 percent of the measure for market risk.)

(3) *Restrictions.* (i) The sum of Tier 2 capital (both allocated and excess) and Tier 3 capital (allocated in paragraph (b)(2) of this section) may not exceed 100 percent of Tier 1 capital (both allocated and excess).⁹

(ii) Term subordinated debt (and intermediate-term preferred stock and related surplus) included in Tier 2 capital (both allocated and excess) may not exceed 50 percent of Tier 1 capital (both allocated and excess).

(4) *Numerator calculation.* Add Tier 1 capital (both allocated and excess), Tier 2 capital (both allocated and excess), and Tier 3 capital (allocated under paragraph (b)(2) of this section). The resulting sum is the bank's risk-based capital ratio numerator.

Section 4. Internal Models

(a) *General.* For risk-based capital purposes, a bank subject to this appendix must use its internal model to measure its daily VAR, in accordance with the requirements of this section.¹⁰ The OCC may permit a bank to use alternative techniques to measure the market risk of de minimis exposures so long as the techniques adequately measure associated market risk.

(b) *Qualitative requirements.* A bank subject to this appendix must have a risk management system that meets the following minimum qualitative requirements:

(1) The bank must have a risk control unit that reports directly to senior management and is independent from business trading units.

(2) The bank's internal risk measurement model must be integrated into the daily management process.

(3) The bank's policies and procedures must identify, and the bank must conduct,

⁹Excess Tier 1 capital means Tier 1 capital that has not been allocated in paragraphs (b)(1) and (b)(2) of this section. Excess Tier 2 capital means Tier 2 capital that has not been allocated in paragraph (b)(1) and (b)(2) of this section, subject to the restrictions in paragraph (b)(3) of this section.

¹⁰A bank's internal model may use any generally accepted measurement techniques, such as variance-covariance models, historical simulations, or Monte Carlo simulations. However, the level of sophistication and accuracy of a bank's internal model must be commensurate with the nature and size of its covered positions. A bank that modifies its existing modeling procedures to comply with the requirements of this appendix for risk-based capital purposes should, nonetheless, continue to use the internal model it considers most appropriate in evaluating risks for other purposes.

⁸A bank may not allocate Tier 3 capital to support credit risk (as calculated under appendix A).

appropriate stress tests and backtests.¹¹ The bank's policies and procedures must identify the procedures to follow in response to the results of such tests.

(4) The bank must conduct independent reviews of its risk measurement and risk management systems at least annually.

(c) *Market risk factors.* The bank's internal model must use risk factors sufficient to measure the market risk inherent in all covered positions. The risk factors must address interest rate risk,¹² equity price risk, foreign exchange rate risk, and commodity price risk.

(d) *Quantitative requirements.* For regulatory capital purposes, VAR measures must meet the following quantitative requirements:

(1) The VAR measures must be calculated on a daily basis using a 99 percent, one-tailed confidence level with a price shock equivalent to a ten-business day movement in rates and prices. In order to calculate VAR measures based on a ten-day price shock, the bank may either calculate ten-day figures directly or convert VAR figures based on holding periods other than ten days to the equivalent of a ten-day holding period (for instance, by multiplying a one-day VAR measure by the square root of ten).

(2) The VAR measures must be based on an historical observation period (or effective observation period for a bank using a weighting scheme or other similar method) of at least one year. The bank must update data sets at least once every three months or more frequently as market conditions warrant.

(3) The VAR measures must include the risks arising from the non-linear price characteristics of options positions and the sensitivity of the market value of the positions to changes in the volatility of the underlying rates or prices. A bank with a large or complex options portfolio must measure the volatility of options positions by different maturities.

(4) The VAR measures may incorporate empirical correlations within and across risk categories, provided that the bank's process for measuring correlations is sound. In the

¹¹ Stress tests provide information about the impact of adverse market events on a bank's covered positions. Backtests provide information about the accuracy of an internal model by comparing a bank's daily VAR measures to its corresponding daily trading profits and losses.

¹² For material exposures in the major currencies and markets, modeling techniques must capture spread risk and must incorporate enough segments of the yield curve—at least six—to capture differences in volatility and less than perfect correlation of rates along the yield curve.

event that the VAR measures do not incorporate empirical correlations across risk categories, then the bank must add the separate VAR measures for the four major risk categories to determine its aggregate VAR measure.

(e) *Backtesting.* (1) Beginning one year after a bank starts to comply with this appendix, a bank must conduct backtesting by comparing each of its most recent 250 business days' actual net trading profit or loss¹³ with the corresponding daily VAR measures generated for internal risk measurement purposes and calibrated to a one-day holding period and a 99 percent, one-tailed confidence level.

(2) Once each quarter, the bank must identify the number of exceptions, that is, the number of business days for which the magnitude of the actual daily net trading loss, if any, exceeds the corresponding daily VAR measure.

(3) A bank must use the multiplication factor indicated in Table 1 of this appendix in determining its capital charge for market risk under section 3(a)(2)(i)(B) of this appendix until it obtains the next quarter's backtesting results, unless the OCC determines that a different adjustment or other action is appropriate.

TABLE 1—MULTIPLICATION FACTOR BASED ON RESULTS OF BACKTESTING

| Number of exceptions | Multiplication factor |
|----------------------|-----------------------|
| 4 or fewer | 3.00 |
| 5 | 3.40 |
| 6 | 3.50 |
| 7 | 3.65 |
| 8 | 3.75 |
| 9 | 3.85 |
| 10 or more | 4.00 |

Section 5. Specific Risk

(a) *Specific risk surcharge.* For purposes of section 3(a)(2)(ii) of this appendix, a bank shall calculate its specific risk surcharge as follows:

(1) *Internal models that incorporate specific risk.* (i) *No specific risk surcharge required for qualifying internal models.* A bank that incorporates specific risk in its internal model has no specific risk surcharge for purposes of section 3(a)(2)(ii) of this appendix if the bank demonstrates to the OCC that its internal model adequately measures all aspects of specific risk, including default and event risk, of covered debt and equity positions. In evaluating a bank's internal model the OCC

¹³ Actual net trading profits and losses typically include such things as realized and unrealized gains and losses on portfolio positions as well as fee income and commissions associated with trading activities.

will take into account the extent to which the internal model:

(A) Explains the historical price variation in the trading portfolio; and

(B) Captures concentrations.

(ii) *Specific risk surcharge for modeled specific risk that fails to adequately measure default or event risk.* A bank that incorporates specific risk in its internal model but fails to demonstrate that its internal model adequately measures all aspects of specific risk, including default and event risk, as provided by this section 5(a)(1), must calculate its specific risk surcharge in accordance with one of the following methods:

(A) If the bank's internal model separates the VAR measure into a specific risk portion and a general market risk portion, then the specific risk surcharge equals the previous day's specific risk portion.

(B) If the bank's internal model does not separate the VAR measure into a specific risk portion and a general market risk portion, then the specific risk surcharge equals the sum of the previous day's VAR measure for subportfolios of covered debt and equity positions.

(2) *Specific risk surcharge for specific risk not modeled.* If a bank does not model specific risk in accordance with section 5(a)(1) of this appendix, then the bank shall calculate its specific risk surcharge using the standard specific risk capital charge in accordance with section 5(c) of this appendix.

(b) *Covered debt and equity positions.* If a model includes the specific risk of covered debt positions but not covered equity positions (or vice versa), then the bank may reduce its specific risk charge for the included positions under section 5(a)(1)(ii) of this appendix. The specific risk charge for the positions not included equals the standard specific risk capital charge under paragraph (c) of this section.

(c) *Standard specific risk capital charge.* The standard specific risk capital charge equals the sum of the components for covered debt and equity positions as follows:

(1) *Covered debt positions.* (i) For purposes of this section 5, covered debt positions means fixed-rate or floating-rate debt instruments located in the trading account and instruments located in the trading account with values that react primarily to changes in interest rates, including certain non-convertible preferred stock, convertible bonds, and instruments subject to repurchase and lending agreements. Also included are derivatives (including written and purchased options) for which the underlying instrument is a covered debt instrument that is subject to a non-zero specific risk capital charge.

(A) For covered debt positions that are derivatives, a bank must risk-weight (as described in paragraph (c)(1)(iii) of this section) the market value of the effective no-

tional amount of the underlying debt instrument or index portfolio. Swaps must be included as the notional position in the underlying debt instrument or index portfolio, with a receiving side treated as a long position and a paying side treated as a short position; and

(B) For covered debt positions that are options, whether long or short, a bank must risk-weight (as described in paragraph (c)(1)(iii) of this section) the market value of the effective notional amount of the underlying debt instrument or index multiplied by the option's delta.

(ii) A bank may net long and short covered debt positions (including derivatives) in identical debt issues or indices.

(iii) A bank must multiply the absolute value of the current market value of each net long or short covered debt position by the appropriate specific risk weighting factor indicated in Table 2 of this appendix. The specific risk capital charge component for covered debt positions is the sum of the weighted values.

TABLE 2—SPECIFIC RISK WEIGHTING FACTORS FOR COVERED DEBT POSITIONS

| Category | Remaining maturity (contractual) | Weighting factor (in percent) |
|-------------------------------|----------------------------------|-------------------------------|
| Government ¹ | N/A | 0.00 |
| Qualifying ² | 6 months or less | 0.25 |
| | Over 6 months to 24 months | 1.00 |
| | Over 24 months | 1.60 |
| Other ³ | N/A | 8.00 |

¹The "government" category includes all debt instruments of central governments of OECD countries (as defined in appendix A of this part) including bonds, Treasury bills, and other short-term instruments, as well as local currency instruments of non-OECD central governments to the extent the bank has liabilities booked in that currency.

²The "qualifying" category includes debt instruments of U.S. government-sponsored agencies (as defined in appendix A of this part), general obligation debt instruments issued by states and other political subdivisions of OECD countries, multilateral development banks (as defined in appendix A of this part), and debt instruments issued by U.S. depository institutions or OECD-banks (as defined in appendix A of this part) that do not qualify as capital of the issuing institution. This category also includes other debt instruments, including corporate debt and revenue instruments issued by states and other political subdivisions of OECD countries, that are: (1) Rated investment grade by at least two nationally recognized credit rating services; (2) rated investment grade by one nationally recognized credit rating agency and not rated less than investment grade by any other credit rating agency; or (3) unrated, but deemed to be of comparable investment quality by the reporting bank and the issuer has instruments listed on a recognized stock exchange, subject to review by the OCC.

³The "other" category includes debt instruments that are not included in the government or qualifying categories.

(2) *Covered equity positions.* (i) For purposes of this section 5, covered equity positions means equity instruments located in the trading account and instruments located in the trading account with values that react primarily to changes in equity prices, including voting or non-voting common stock, certain convertible bonds, and commitments

to buy or sell equity instruments. Also included are derivatives (including written and purchased options) for which the underlying is a covered equity position.

(A) For covered equity positions that are derivatives, a bank must risk weight (as described in paragraph (c)(2)(iii) of this section) the market value of the effective notional amount of the underlying equity instrument or equity portfolio. Swaps must be included as the notional position in the underlying equity instrument or index portfolio, with a receiving side treated as a long position and a paying side treated as a short position; and

(B) For covered equity positions that are options, whether long or short, a bank must risk weight (as described in paragraph (c)(2)(iii) of this section) the market value of the effective notional amount of the underlying equity instrument or index multiplied by the option's delta.

(i) A bank may net long and short covered equity positions (including derivatives) in identical equity issues or equity indices in the same market.¹⁴

(iii)(A) A bank must multiply the absolute value of the current market value of each net long or short covered equity position by a risk weighting factor of 8.0 percent, or by 4.0 percent if the equity is held in a portfolio that is both liquid and well-diversified.¹⁵ For covered equity positions that are index contracts comprising a well-diversified portfolio of equity instruments, the net long or short position is multiplied by a risk weighting factor of 2.0 percent.

(B) For covered equity positions from the following futures-related arbitrage strategies, a bank may apply a 2.0 percent risk weighting factor to one side (long or short) of each position with the opposite side exempt from charge:

¹⁴ A bank may also net positions in depository receipts against an opposite position in the underlying equity or identical equity in different markets, provided that the bank includes the costs of conversion.

¹⁵ A portfolio is liquid and well-diversified if: (1) It is characterized by a limited sensitivity to price changes of any single equity issue or closely related group of equity issues held in the portfolio; (2) the volatility of the portfolio's value is not dominated by the volatility of any individual equity issue or by equity issues from any single industry or economic sector; (3) it contains a large number of individual equity positions, with no single position representing a substantial portion of the portfolio's total market value; and (4) it consists mainly of issues traded on organized exchanges or in well-established over-the-counter markets.

(1) Long and short positions in exactly the same index at different dates or in different market centers; or

(2) Long and short positions in index contracts at the same date in different but similar indices.

(C) For futures contracts on broadly-based indices that are matched by offsetting positions in a basket of stocks comprising the index, a bank may apply a 2.0 percent risk weighting factor to the futures and stock basket positions (long and short), provided that such trades are deliberately entered into and separately controlled, and that the basket of stocks comprises at least 90 percent of the capitalization of the index.

(iv) The specific risk capital charge component for covered equity positions is the sum of the weighted values.

Section 6. Reservation of Authority

The OCC reserves the authority to modify the application of any of the provisions in this appendix to any bank, upon reasonable justification.

[61 FR 47367, Sept. 6, 1996, as amended at 62 FR 68067, Dec. 30, 1997; 65 FR 75858, Dec. 5, 2000; 69 FR 44916, July 28, 2004]
