such other manner as may be pre-
scribed in the exemption:

CAUTION

This electronic product has been exempted
from Food and Drug Administration radi-
ation safety performance standards pre-
scribed in the Code of Federal Regulations,
title 21, chapter I, subchapter J, pursuant to
Exemption No. ______, granted on

[42 FR 44229, Sept. 2, 1977; 42 FR 61257, Dec. 2,
1977, as amended at 44 FR 17657, Mar. 23, 1979;
22, 1985; 50 FR 13564, Apr. 5, 1985; 53 FR 11254,
Apr. 6, 1988; 59 FR 14365, Mar. 28, 1994; 65 FR
17138, Mar. 31, 2000]

Subpart B—Alternate Test
Procedures

§ 1010.13 Special test procedures.

The Director, Center for Devices and
Radiological Health, may, on the basis
of a written application by a manufac-
turer, authorize test programs other
than those set forth in the standards
under this subchapter for an electronic
product if he determines that such
products are not susceptible to satis-
factory testing by the procedures set
forth in the standard and that the al-
ternative test procedures assure com-
pliance with the standard.

FR 11254, Apr. 6, 1988]

Subpart C—Exportation of
Electronic Products

§ 1010.20 Electronic products intended
for export.

The performance standards pre-
scribed in this subchapter shall not
apply to any electronic product which
is intended solely for export if:

(a) Such product and the outside of
any shipping container used in the ex-
port of such product are labeled or
tagged to show that such product is in-
tended for export, and

(b) Such product meets all the appli-
cable requirements of the country to
which such product is intended for ex-
port.

[40 FR 32257, July 31, 1975]
§ 1020.20

Cold-cathode gas discharge tubes.

(a) Applicability. The provisions of this section are applicable to cold-cathode gas discharge tubes designed to demonstrate the effects of a flow of electrons or the production of x-radiation as specified herein.

(b) Definitions. Beam blocking device means a movable or removable portion of any enclosure around a cold-cathode gas discharge tube, which may be opened or closed to permit or prevent the emergence of an exit beam.

Exit beam means that portion of the radiation which passes through the aperture resulting from the opening of the beam blocking device.

Exposure means the sum of the electrical charges on all of the ions of one sign produced in air when all electrons liberated by photons in a volume element of air are completely stopped in air divided by the mass of the air in the volume element. The special unit of exposure is the roentgen. One (1) roentgen equals 2.58×10⁻⁴ coulombs/kilogram.

(c) Requirements—(1) Exposure rate limit. (i) Radiation exposure rates produced by cold-cathode gas discharge tubes shall not exceed 10 mR./hr. at a distance of thirty (30) centimeters from any point on the external surface of

broadcast, cable, or closed circuit television.

(5) Usable picture means a picture in synchronization and transmitting viewable intelligence.

(6) User controls means all of those controls on a television receiver, provided by the manufacturer for purposes of adjustment, which on a fully assembled receiver under normal usage, are accessible to the user.

(c) Requirements—(1) Exposure rate limit. Radiation exposure rates produced by a television receiver shall not exceed 0.5 millicentgens per hour at a distance of five (5) centimeters from any point on the external surface of the receiver, as measured in accordance with this section.

(2) Measurements. Compliance with the exposure rate limit defined in paragraph (c)(1) of this section shall be determined by measurements made with an instrument, the radiation sensitive volume of which shall have a cross section parallel to the external surface of the receiver with an area of ten (10) square centimeters and no dimension larger than five (5) centimeters. Measurements made with instruments having other areas must be corrected for spatial nonuniformity of the radiation field to obtain the exposure rate average over a ten (10) square centimeter area.

(3) Test conditions. All measurements shall be made with the receiver displaying a usable picture and with the power source operated at supply voltages up to the maximum test voltage of the receiver and, as applicable, under the following specific conditions:

(i) On television receivers manufactured subsequent to January 15, 1970, measurements shall be made with all user controls adjusted so as to produce maximum x-radiation emissions from the receiver.

(ii) On television receivers manufactured subsequent to June 1, 1970, measurements shall be made with all service controls adjusted to combinations which result in the production of maximum x-radiation emissions.

(iii) On television receivers manufactured subsequent to June 1, 1971, measurements shall be made under the conditions described in paragraph (c)(3) (ii) of this section, together with conditions identical to those which result from that component or circuit failure which maximizes x-radiation emissions.

(4) Critical component warning. The manufacturer shall permanently affix or inscribe a warning label, clearly legible under conditions of service, on all television receivers which could produce radiation exposure rates in excess of the requirements of this section as a result of failure or improper adjustment or improper replacement of a circuit or shield component. The warning label shall include the specification of operating high voltage and an instruction for adjusting the high voltage to the specified value.
