Food and Drug Administration, HHS

§ 866.5765 Retinol-binding protein immunological test system.

(a) Identification. A retinol-binding protein immunological test system is a device that consists of the reagents used to measure by immunochemical techniques the retinol-binding protein that binds and transports vitamin A in serum and other body fluids. Measurement of multiple autoantibodies aids in the diagnosis of fibrinolytic (blood-clotting) disorders.

(b) Classification. Class II (performance standards).

[47 FR 50823, Nov. 9, 1982, as amended at 59 FR 38783, July 25, 2001]

§ 866.5715 Plasminogen immunological test system.

(a) Identification. A plasminogen immunological test system is a device that consists of the reagents used to measure by immunochemical techniques the plasminogen (an inactive substance from which plasmin, a blood-clotting factor, is formed) in serum, other body fluids, and tissues. Measurement of plasminogen levels may aid in the diagnosis of fibrinolytic (blood-clotting) disorders.

(b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to § 866.9.

§ 866.5750 Radioallergosorbent (RAST) immunological test system.

(a) Identification. A radioallergosorbent immunological test system is a device that consists of the reagents used to measure by immunochemical techniques the allergen antibodies (antibodies which cause an allergic reaction) specific for a given allergen. Measurement of specific allergen antibodies may aid in the diagnosis of asthma, allergies, and other pulmonary disorders.

(b) Classification. Class II (performance standards).

serum and urine. Measurement of this protein may aid in the diagnosis of kidney disease and in monitoring patients with kidney transplants.

(b) **Classification.** Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to §866.9.

§ 866.5775 Rheumatoid factor immunological test system.

(a) **Identification.** A rheumatoid factor immunological test system is a device that consists of the reagents used to measure by immunchemical techniques the rheumatoid factor (antibodies to immunoglobulins) in serum, other body fluids. Measurement of rheumatoid factor may aid in the diagnosis of rheumatoid arthritis.

(b) **Classification.** Class II (performance standards).

§ 866.5785 Anti-Saccharomyces cerevisiae (S. cerevisiae) antibody (ASCA) test systems.

(a) **Identification.** The Anti-Saccharomyces cerevisiae (S. cerevisiae) antibody (ASCA) test system is an in vitro diagnostic device that consists of the reagents used to measure by immunchemical techniques antibodies to *S. cerevisiae* (baker’s or brewer’s yeast) in human serum or plasma. Detection of *S. cerevisiae* antibodies may aid in the diagnosis of Crohn’s disease.

(b) **Classification.** Class II (special controls). The special control is FDA’s “Guidance for Industry and FDA Reviewers: Class II Special Control Guidance Document for Anti-Saccharomyces cerevisiae (S. cerevisiae) Antibody (ASCA) Premarket Notifications.”

[65 FR 70307, Nov. 22, 2000]

§ 866.5800 Seminal fluid (sperm) immunological test system.

(a) **Identification.** A seminal fluid (sperm) immunological test system is a device that consists of the reagents used for legal purposes to identify and differentiate animal and human semen. The test results may be used as court evidence in alleged instances of rape and other sex-related crimes.

(b) **Classification.** Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §866.9.

§ 866.5820 Systemic lupus erythematosus immunological test system.

(a) **Identification.** A systemic lupus erythematosus (SLE) immunological test system is a device that consists of the reagents used to measure by immunchemical techniques the autoimmune antibodies in serum and other body fluids that react with cellular nuclear double-stranded deoxyribonucleic acid (DNA) or other nuclear constituents that are specifically diagnostic of SLE. Measurement of nuclear double-stranded DNA antibodies aids in the diagnosis of SLE (a multisystem autoimmune disease in which tissues are attacked by the person’s own antibodies).

(b) **Classification.** Class II (performance standards).

§ 866.5860 Total spinal fluid immunological test system.

(a) **Identification.** A total spinal fluid immunological test system is a device that consists of the reagents used to measure by immunchemical techniques the total protein in cerebrospinal fluid. Measurement of spinal fluid proteins may aid in the diagnosis of multiple sclerosis and other diseases of the nervous system.

(b) **Classification.** Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §866.9.

§ 866.5870 Thyroid autoantibody immunological test system.

(a) **Identification.** A thyroid autoantibody immunological test system is a device that consists of the reagents used to measure by immunchemical techniques the thyroid autoantibodies (antibodies produced against the body’s own tissues). Measurement of thyroid autoantibodies...
