#### Food and Drug Administration, HHS

variable tone emitting and fluorescence measurement functions. The intended use of the device is to aid in the detection of tooth decay by measuring increased laser induced fluorescence.

- (b) Classification. Class II, subject to the following special controls:
- (1) Sale, distribution, and use of this device are restricted to prescription use in accordance with §801.109 of this chapter;
- (2) Premarket notifications must include clinical studies, or other relevant information, that demonstrates that the device aids in the detection of tooth decay by measuring increased laser induced fluorescence; and
- (3) The labeling must include detailed use instructions with precautions that urge users to:
- (i) Read and understand all directions before using the device,
- (ii) Store probe tips under proper conditions.
- (iii) Properly sterilize the emitter-detector handpick before each use, and
- (iv) Properly maintain and handle the instrument in the specified manner and condition.

# § 872.1800 Extraoral source x-ray system.

- (a) Identification. An extraoral source x-ray system is an AC-powered device that produces x-rays and is intended for dental radiographic examination and diagnosis of diseases of the teeth, jaw, and oral structures. The x-ray source (a tube) is located outside the mouth. This generic type of device may include patient and equipment supports and component parts.
  - (b) Classification. Class II.

# §872.1810 Intraoral source x-ray system.

- (a) Identification. An intraoral source x-ray system is an electrically powered device that produces x-rays and is intended for dental radiographic examination and diagnosis of diseases of the teeth, jaw, and oral structures. The x-ray source (a tube) is located inside the mouth. This generic type of device may include patient and equipment supports and component parts.
  - (b) Classification. Class II.

### § 872.1820 Dental x-ray exposure alignment device.

- (a) *Identification*. A dental x-ray exposure alignment device is a device intended to position x-ray film and to align the examination site with the x-ray beam.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §872.9.

[52 FR 30097, Aug. 12, 1987, as amended at 59 FR 63008, Dec. 7, 1994; 66 FR 38797, July 25, 2001]

#### §872.1830 Cephalometer.

- (a) *Identification*. A cephalometer is a device used in dentistry during x-ray procedures. The device is intended to place and to hold a patient's head in a standard position during dental x-rays.
  - (b) Classification. Class II.

# §872.1840 Dental x-ray position indicating device.

- (a) Identification. A dental x-ray position indicating device is a device, such as a collimator, cone, or aperture, that is used in dental radiographic examination. The device is intended to align the examination site with the x-ray beam and to restrict the dimensions of the dental x-ray field by limiting the size of the primary x-ray beam.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §872.9.

[52 FR 30097, Aug. 12, 1987, as amended at 61 FR 1121, Jan. 16, 1996; 66 FR 38797, July 25, 2001]

### § 872.1850 Lead-lined position indicator.

- (a) *Identification*. A lead-lined position indicator is a cone-shaped device lined with lead that is attached to a dental x-ray tube and intended to aid in positioning the tube, to prevent the misfocusing of the x-rays by absorbing divergent radiation, and to prevent leakage of radiation.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in
