Wage and Hour Division, Labor

§ 548.302 Average earnings for period other than a workweek.

(a) Section 548.3(b) authorizes as an established basic rate: "A rate per hour which is obtained by averaging the earnings, exclusive of payments described in paragraphs (1) through (7) of section 7(e) of the act, of the employee for all work performed during the workday or any other longer period not exceeding sixteen calendar days for which such average is regularly computed under the agreement or understanding. Such a rate may be used to compute overtime compensation for all the overtime hours worked by the employee during the particular period for which the earnings average is computed."

(b)(1) The ordinary method of computing overtime under the act is at the employee’s regular rate of pay, obtained by averaging his hourly earnings for each workweek. Section 548.3(b) authorizes overtime to be computed on the basis of the employee’s average hourly earnings for a period longer or shorter than a workweek. It permits the payment of overtime compensation on the basis of average hourly earnings for a day, a week, two weeks or any period up to 16 calendar days, if the period is established and agreed to with the employee prior to the performance of the work. The agreement or understanding may contemplate that the basic rate will be the average hourly earnings for a day or a specified number of days within the sixteen day limit, or it may provide that the basic rate will be the average hourly earnings for the period required to complete a specified job or jobs.

Example 1. An employee is employed on a piece-work basis with overtime after 8 hours a day and on Saturday. Ordinarily his overtime compensation would be computed by averaging his earnings for the entire workweek to arrive at the regular rate of pay and then computing the overtime compensation due. Under this subsection of the regulations the employer and the employee may agree to compute overtime on the basis of the average hourly earnings for each day. Similarly, in a situation involving a bi-weekly or a semi-monthly pay period the employer may find it convenient to compute overtime on the basis of the average hourly earnings for the bi-weekly or semi-monthly period.

Example 2. An employee, who normally would come within the forty hour provision of section 7(a) of the Act, is paid a fixed amount of money for the completion of each job. Each job takes 2 or 3 days to complete. Under the employment agreement, the employee is entitled to time and one-half an authorized basic rate for all hours worked in excess of forty in the workweek. The authorized basic rate is the employee’s average hourly earnings for each job. Suppose he completes two jobs in a particular workweek and all his overtime hours are on job No. 2.

(A) Averaging over periods in excess of 16 calendar days may in appropriate cases be authorized by the Administrator under § 548.4.

(B) See § 548.301 (c) for a discussion of the method of computing overtime for an employee paid on a semi-monthly basis.
§ 548.303 Average earnings for each type of work.

(a) Section 548.3(c) authorizes as an established basic rate: "A rate per hour which is obtained by averaging the earnings, exclusive of payments described in paragraphs (1) through (7) of section 7(e) of the act, of the employee for each type of work performed during each workweek, or any other longer period not exceeding sixteen calendar days, for which such average is regularly computed under the agreement or understanding. Such a rate may be used to compute overtime compensation, during the particular period for which such average is computed, for all the overtime hours worked by the employee at the type of work for which the rate is obtained."

(b) Section 548.3(c) differs from § 548.3(b) in this way: Section 548.3(b) provides for the computation of the basic rate on the average of all earnings during the specified period; § 548.3(c) permits the basic rate to be computed on the basis of the earnings for each particular type of work. Thus, if the employee performs different types of work, each involving a different rate of pay such as different piece-rate, job rates, or a combination of these with hourly rates, a separate basic rate may be computed for each type of work and overtime computed on the basis of the rate or rates applicable to the type of work performed during the overtime hours.

Example. An employee who is paid on a weekly basis with overtime after 40 hours works six 8-hour days in a workweek under an agreement or understanding pursuant to this subsection. He performs three different types of piecework, each at a different rate of pay. The basic rates to be used for computing overtime in this situation would be arrived at by dividing the earnings for each type of work by the number of hours during which that type of work was performed. There would thus be three different basic rates, one for each type of work. Since the overtime hours used in this illustration occur on the sixth day, the types of work performed on the sixth day would determine the basic rate or rates on which overtime would be computed that week. Thus, if the average hourly earnings for the three types of work are respectively $1.70 an hour in type A, $1.80 an hour in type B, and $2 an hour in type C, and on the sixth day the employee works on type B, his overtime premium for the sixth day would be one-half the basic rate of $1.80 an hour, multiplied by the 8 hours worked on that day.
