§ 180.541 Propetamphos; tolerances for residues.

(a) A tolerance of 0.1 part per million is established for residues of the insecticide propetamphos ([(e)-methyl-3-[(ethylamino)methoxyphosphinothioyl]oxy]-2-butenolate) in food commodities exposed to the insecticide during treatment of food- or feed-handling establishments.

1. Direct application shall be limited solely to spot and/or crack and crevice treatment in food-handling establishments where food and food products are held, processed, prepared, or served. Spray and dust concentrations shall be limited to a maximum of 1 percent active ingredient. For crack and crevice treatment, equipment capable of delivering a dust or a pin-stream of spray directly into cracks and crevices shall be used. For spot treatment, a coarse, low-pressure spray shall be used to avoid contamination of food or food-contact surfaces.

(b) Direct application shall be limited solely to spot and/or crack and crevice treatment in food-handling establishments where feed and feed products are held, processed, prepared, or sold. Spray and dust concentrations shall be limited to a maximum of 1 percent active ingredient.
