§ 108.160  Vertical ladders.
(a) Each vertical ladder must have rungs that are—
(1) At least 41 centimeters (16 inches) in length;
(2) Not more than 30 centimeters (12 inches) apart, uniform for the length of the ladder; and
(3) At least 18 centimeters (7 inches) from the nearest permanent object in back of the ladder.
(b) Except when unavoidable obstructions are encountered, there must be at least 11.5 centimeters (41⁄2 inches) clearance above each rung.
(c) Except as provided in §108.540(h)(3)(ii), each exterior vertical ladder more than 6 meters (20 ft.) in length must be fitted with a cage or ladder safety device meeting ANSI Standard 14.3 (1974) for fixed ladders.
(d) No vertical fixed ladders may be made of wood.

§ 108.161  Dead end corridors.
No dead end corridor may be more than 13 meters (43 feet) long.

§ 108.165  Access to lifeboats and life rafts.
Each unit must be designed to provide direct access to the lifeboat and life raft embarkation areas.

§ 108.167  Weather deck ladders.
Each unit must have at least one permanent, inclined ladder between each weather deck.

CLASSIFIED LOCATIONS

§ 108.170  Definitions.
(a) Classified locations are those in which flammable hydrocarbon gas or vapors, resulting from the drilling operations, may be present in quantities sufficient to produce an explosive or ignitable mixture. Location of these areas affect the design of the units’ machinery, electrical, and ventilation systems. (See Notes 1 and 2).
(b) For the purpose of this subpart “semi-enclosed location” means a location where natural conditions of ventilation are notably different from those on open decks due to the presence of structures such as roofs, windbreaks, or bulkheads.

Notes: 1. Further requirements with respect to hazardous locations are contained in part 111, subpart 111.105, of this chapter.
2. For specific requirements for machinery and electrical installations on mobile offshore drilling units see Subchapters “F” and “J” of this chapter.

§ 108.171  Class I, Division 1 locations.
The following are Class I, Division 1 locations:
(a) An enclosed space that contains any part of the mud circulating system that has an opening into the space and is between the well and final degassing discharge.
(b) An enclosed or semi-enclosed location that is below the drill floor, and contains a possible source of gas release.
(c) An enclosed space that is on the drill floor, and is not separated by a solid, gas-light floor from the spaces specified in paragraph (b) of this section.
(d) A space that would normally be considered a Division 2 location under §108.173 but where combustible or flammable gases might accumulate.
(e) A location in the weather, or a semi-enclosed location, except as provided in paragraph (b) of this section that is within 1.5 m (5 ft.) of the boundary of any—
(1) Equipment or opening specified in paragraph (a) of this section;
(2) Ventilation outlet, access, or other opening to a Class I, Division 1 space; or
(3) Gas vent outlet.
(f) Except as provided in §108.175, an enclosed space that has an opening into a Class I, Division 1 location.

§ 108.173  Class I, Division 2 locations.
The following are Class I, Division 2 locations:
