§ 50.6 Identification of animals to be destroyed because of tuberculosis.

(a) Livestock to be destroyed because of tuberculosis must be identified as follows:

(1) Livestock classified as reactors for tuberculosis must be identified within 15 days after being classified as reactors, except that the veterinarian in charge may extend the time limit for identification to 30 days when he or she determines that the animals are infected with or exposed to tuberculosis; and

(c) Cattle and bison are classified as suspects for tuberculosis based on a positive response to an official tuberculin test, in accordance with the "Uniform Methods and Rules—Bovine Tuberculosis Eradication" (incorporated into the regulations by reference in part 77). Captive cervids are classified as suspects for tuberculosis in the same manner as cattle and bison.

(d) The designated tuberculosis epidemiologist will determine whether livestock other than cattle, bison, or captive cervids are classified as exposed to tuberculosis by reason of association with an affected herd of cattle, bison, or captive cervids.
