§ 311.13 Pigmentary conditions; melano-

(a) Except as provided in § 311.19, car-
casses of livestock showing generalized pigmen-
tary deposits shall be con-
demned.

(b) The affected parts of carcasses showing localized pigmentary deposits of such character as to be unwholesome or otherwise adulterated shall be re-

§ 311.14 Abrasions, bruises, abscesses, pus, etc.

All slight, well-limited abrasions on the tongue and inner surface of the lips and mouth, when without lymph node involvement, shall be carefully excised, leaving only sound, normal tissue, which may be passed for human food. Any organ or other part of a carcass which is badly bruised or which is af-
ected by an abscess, or a suppurating sore shall be condemned; and when the lesions are of such character or extent as to affect the whole carcass, the whole carcass shall be condemned. Port-
ions of carcasses which are contami-
nated by pus or other diseased material shall be condemned.

§ 311.15 Brucellosis.

Carcasses affected with localized lesions of brucellosis may be passed for human food after the affected parts are removed and condemned.

§ 311.16 Carcasses so infected that con-
sumption of the meat may cause food poisoning.

(a) All carcasses of animals so in-

(7) Any acute inflammation, abscess, or suppurating sore, if associated with acute nephritis, fatty and degenerated liver, swollen soft spleen, marked pul-

(b) Implements contaminated by con-
tact with carcasses affected with any of the disease conditions mentioned in this section shall be thoroughly cleaned and sanitized as prescribed in part 308 of this subchapter. The equip-
ment used in the dressing of such car-
casses, such as viscera trucks or in-

(8) Salmonellosis.

(b) A thin carcass showing well-
marked lesions in the viscera with only
