§ 835.501 Radiological areas.
(a) Personnel entry control shall be maintained for each radiological area.
(b) The degree of control shall be commensurate with existing and potential radiological hazards within the area.
(c) One or more of the following methods shall be used to ensure control:
   (1) Signs and barricades;
   (2) Control devices on entrances;
   (3) Conspicuous visual and/or audible alarms;
   (4) Locked entrance ways; or
   (5) Administrative controls.
(d) Written authorizations shall be required to control entry into and perform work within radiological areas. These authorizations shall specify radiation protection measures commensurate with the existing and potential hazards.
(e) No control(s) shall be installed at any radiological area exit that would prevent rapid evacuation of personnel under emergency conditions.

§ 835.502 High and very high radiation areas.
(a) The following measures shall be implemented for each entry into a high radiation area:
   (1) The area shall be monitored as necessary during access to determine the exposure rates to which the individuals are exposed; and
   (2) Each individual shall be monitored by a supplemental dosimetry device or other means capable of providing an immediate estimate of the individual’s integrated equivalent dose to the whole body during the entry.
(b) Physical controls. One or more of the following features shall be used for each entrance or access point to a high radiation area where radiation levels exist such that an individual could exceed an equivalent dose to the whole body of 1 rem (0.01 sievert) in any one hour at 30 centimeters from the source or from any surface that the radiation penetrates:
   (1) A control device that prevents entry to the area when high radiation levels exist or upon entry causes the radiation level to be reduced below that level defining a high radiation area;
   (2) A device that functions automatically to prevent use or operation of the radiation source or field while individuals are in the area;
   (3) A control device that energizes a conspicuous visible or audible alarm signal so that the individual entering...
