

§ 1203.404

is an additional substantive factor requiring consideration.

§ 1203.404 Handling of unprocessed data.

It is the usual practice to withhold the release of raw scientific data received from spacecraft until it can be calibrated, correlated and properly interpreted by the experimenter under the monitorship of the cognizant NASA office. During this process, the data are withheld through administrative measures, and it is not necessary to resort to security classification to prevent premature release. However, if at any time during the processing of raw data it becomes apparent that the results require protection under the criteria set forth in this subpart D, it is the responsibility of the cognizant NASA office to obtain the appropriate security classification.

§ 1203.405 Proprietary information.

Proprietary information made available to NASA is subject to examination for classification purposes under the criteria set forth in this subpart D. Where the information is in the form of a proposal and accepted by NASA for support, it should be categorized in accordance with the criteria of §1203.400. If NASA does not support the proposal but believes that security classification would be appropriate under the criteria of §1203.400 if it were under Government jurisdiction, the contractor should be advised of the reasons why safeguarding would be appropriate, unless security considerations preclude release of the explanation to the contractor. NASA should identify the Government department, agency or activity whose national security interests might be involved and the contractor should be instructed to protect the proposal as though classified pending further advisory classification opinion by the Government activity whose interests are involved. If such a Government activity cannot be identified, the contractor should be advised that the proposal is not under NASA jurisdiction for classification purposes, and that the information should be sent, under proper safeguards, to the Director, Information Security Oversight Office, General Services Adminis-

14 CFR Ch. V (1-1-10 Edition)

tration, Washington, DC 20405, for a determination.

§ 1203.406 Additional classification factors.

In determining the appropriate classification category, the following additional factors should be considered:

(a) *Uniformity within government activities.* The effect classification will have on technological programs of other Government departments and agencies should be considered. Classification of official information must be reasonably uniform within the Government.

(b) *Applicability of classification directives of other Government agencies.* It is necessary to determine whether authoritative classification guidance exists elsewhere for the information under consideration which would make it necessary to assign a higher classification than that indicated by the applicable NASA guidance. Generally, the classification by NASA should not be higher than that of equivalent information in other departments or agencies of the Government.

§ 1203.407 Duration of classification.

(a) Information shall be classified as long as required by national security considerations. When it can be determined, a specific date or event for declassification shall be set by the original classification authority at the time the information is originally classified.

(b) Information classified under predecessor orders and marked for declassification review shall remain classified until reviewed for declassification under the provisions of the "the Order."

§ 1203.408 Assistance by installation security classification officers.

Installation Security Classification Officers, as the installation point-of-contact, will assist installation personnel in:

(a) Interpreting security classification guides and classification assignments for the installation.

(b) Answering questions and considering suggestions concerning security classification matters.
