

medical issues listed in paragraph (f)(1)(i) of this section. In these cases, the State agency disability examiner will consider the opinion of the State agency medical or psychological consultant as opinion evidence and weigh this evidence using the relevant factors in paragraphs (a) through (e) of this section.

(iii) When a State agency disability examiner makes a reconsideration determination alone as provided in §416.1015(c)(3), he or she will consider findings made by a State agency medical or psychological consultant at the initial level of the administrative review process and any opinions provided by such consultants at the initial and reconsideration levels as opinion evidence and weigh this evidence using the relevant factors in paragraphs (a) through (e) of this section.

(2) Administrative law judges are responsible for reviewing the evidence and making findings of fact and conclusions of law. They will consider opinions of State agency medical or psychological consultants, other program physicians and psychologists, and medical experts as follows:

(i) Administrative law judges are not bound by any findings made by State agency medical or psychological consultants, or other program physicians or psychologists. State agency medical and psychological consultants and other program physicians, psychologists, and other medical specialists are highly qualified physicians, psychologists, and other medical specialists who are also experts in Social Security disability evaluation. Therefore, administrative law judges must consider findings and other opinions of State agency medical and psychological consultants and other program physicians, psychologists, and other medical specialists as opinion evidence, except for the ultimate determination about whether you are disabled (see §416.912(b)(8)).

(ii) When an administrative law judge considers findings of a State agency medical or psychological consultant or other program physician, psychologist, or other medical specialist, the administrative law judge will evaluate the findings using the relevant factors in paragraphs (a) through

(e) of this section, such as the consultant's medical specialty and expertise in our rules, the supporting evidence in the case record, supporting explanations the medical or psychological consultant provides, and any other factors relevant to the weighing of the opinions. Unless a treating source's opinion is given controlling weight, the administrative law judge must explain in the decision the weight given to the opinions of a State agency medical or psychological consultant or other program physician, psychologist, or other medical specialist, as the administrative law judge must do for any opinions from treating sources, nontreating sources, and other nonexamining sources who do not work for us.

(iii) Administrative law judges may also ask for and consider opinions from medical experts on the nature and severity of your impairment(s) and on whether your impairment(s) equals the requirements of any impairment listed in appendix 1 to subpart P of part 404 of this chapter. When administrative law judges consider these opinions, they will evaluate them using the rules in paragraphs (a) through (e) of this section.

(3) When the Appeals Council makes a decision, it will follow the same rules for considering opinion evidence as administrative law judges follow.

(4) In claims adjudicated under the procedures in part 405 of this chapter at the Federal reviewing official, administrative law judge, and Decision Review Board levels of the administrative review process, we will follow the same rules for considering opinion evidence that administrative law judges follow under this section.

§416.928 Symptoms, signs, and laboratory findings.

(a) *Symptoms* are your own description of your physical or mental impairment. If you are a child under age 18 and are unable to adequately describe your symptom(s), we will accept as a statement of this symptom(s) the description given by the person who is

most familiar with you, such as a parent, other relative, or guardian. Your statements (or those of another person) alone, however, are not enough to establish that there is a physical or mental impairment.

(b) *Signs* are anatomical, physiological, or psychological abnormalities which can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena that indicate specific psychological abnormalities, e.g., abnormalities of behavior, mood, thought, memory, orientation, development, or perception. They must also be shown by observable facts that can be medically described and evaluated.

(c) *Laboratory findings* are anatomical, physiological, or psychological phenomena which can be shown by the use of a medically acceptable laboratory diagnostic techniques. Some of these diagnostic techniques include chemical tests, electrophysiological studies (electrocardiogram, electroencephalogram, etc.), roentgenological studies (X-rays), and psychological tests.

[45 FR 55621, Aug. 20, 1980, as amended at 58 FR 47586, Sept. 9, 1993; 65 FR 50783, Aug. 21, 2000; 71 FR 10431, Mar. 1, 2006]

§416.929 How we evaluate symptoms, including pain.

(a) *General.* In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence, and other evidence. By objective medical evidence, we mean medical signs and laboratory findings as defined in §416.928 (b) and (c). By other evidence, we mean the kinds of evidence described in §§416.912(b)(2) through (8) and 416.913(b)(1), (4), and (5), and (d). These include statements or reports from you, your treating or nontreating source, and others about your medical history, diagnosis, prescribed treatment, daily activities, efforts to work, and any other evidence showing how your impairment(s) and any related symptoms affect your ability to work (or, if you are a child, your func-

tioning). We will consider all of your statements about your symptoms, such as pain, and any description you, your treating source or nontreating source, or other persons may provide about how the symptoms affect your activities of daily living and your ability to work (or, if you are a child, your functioning). However, statements about your pain or other symptoms will not alone establish that you are disabled; there must be medical signs and laboratory findings which show that you have a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and which, when considered with all of the other evidence (including statements about the intensity and persistence of your pain or other symptoms which may reasonably be accepted as consistent with the medical signs and laboratory findings), would lead to a conclusion that you are disabled. In evaluating the intensity and persistence of your symptoms, including pain, we will consider all of the available evidence, including your medical history, the medical signs and laboratory findings and statements about how your symptoms affect you. (Section 416.927 explains how we consider opinions of your treating source and other medical opinions on the existence and severity of your symptoms, such as pain.) We will then determine the extent to which your alleged functional limitations and restrictions due to pain or other symptoms can reasonably be accepted as consistent with the medical signs and laboratory findings and other evidence to decide how your symptoms affect your ability to work (or if you are a child, your functioning).

(b) *Need for medically determinable impairment that could reasonably be expected to produce your symptoms, such as pain.* Your symptoms, such as pain, fatigue, shortness of breath, weakness, or nervousness, will not be found to affect your ability to do basic work activities unless medical signs or laboratory findings show that a medically determinable impairment(s) is present. Medical signs and laboratory findings, established by medically acceptable clinical or laboratory diagnostic techniques, must show the existence of a
