last month of pregnancy. Trichlorfon is a cholinesterase inhibitor. Do not administer simultaneously or within a few days before or after treatment with, or exposure to, cholinesterase-inhibiting drugs, pesticides, or chemicals. Do not administer intravenous anesthetics, especially muscle relaxants, concurrently. Not for use in horses intended for food. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.

§ 520.1330 Meclonfenamic acid granules.
(a) Chemical name. N-(2,6-Dichloromethyl) anthranilic acid.
(b) Specifications. The drug is in granular form containing 5 percent meclonfenamic acid.
(c) Sponsor. See No. 000856 in § 510.600(c) of this chapter.
(d) Conditions of use.(1) The drug is used in horses for the treatment of acute or chronic inflammatory diseases involving the musculoskeletal system.
(2) It is administered orally at a dosage of 1 milligram per pound of body weight (1 gram per 1,000 pounds) once daily for 5 to 7 days by addition to the daily grain ration.
(3) Treatment beyond the initial 5- to 7-day period may be indicated. A maintenance dosage level should be individualized for each animal.
(4) This drug should not be administered to horses with active gastrointestinal, hepatic, or renal disease.
(5) Not for use in horses intended for food.
(6) Federal law restricts this drug to use by or on the order of a licensed veterinarian.
[41 FR 5632, Feb. 9, 1976, as amended at 53 FR 23390, June 22, 1988]

§ 520.1331 Meclonfenamic acid tablets.
(a) Specifications. Each tablet contains 5 or 20 milligrams of meclonfenamic acid.
(b) Sponsor. See No. 000061 in § 510.600(c) of this chapter.
(c) Conditions of use.(1) The drug is used in female dogs for the postponement of estrus and the alleviation of false pregnancy.
(2) It is administered orally, intact, or crushed and mixed with food as follows:
(i) For the postponement of estrus by proestrus treatment, 1 milligram per pound of body weight per day for 8 days.
(ii) For the postponement of estrus by anestrus treatment, 0.25 milligram per pound of body weight per day for 32 days.
(iii) For alleviation of false pregnancy, 1 milligram per pound of body weight per day for 8 days.
(3) Full dosage regimen must be completed to produce the desired effect.
(4) Examination of vaginal smears is recommended to confirm detection of proestrus.
(5) Do not administer for more than two consecutive treatments.
(6) Once therapy is started, the animal should be confined for 3 to 8 days or until cessation of bleeding, since dogs in proestrus accept a male.
(7) Do not use prior to or during first estrus cycle.
(8) Do not use in pregnant animals.
(9) Do not use in the presence of a disease of the reproductive system or with mammary tumors.
(10) Should estrus occur within 30 days after cessation of treatment, mating should be prevented.
