Food and Drug Administration, HHS

total residues considered safe in edible

[54 FR 28052, July 5, 1989, as amended at 56 FR 8711, Mar. 1, 1991; 57 FR 21209, May 19, 1992]

§556.310 Haloxon.

A tolerance of 0.1 part per million is established for negligible residues of haloxon (3-chloro-7-hydroxy-4-methylcoumarin bis(2-chloroethyl) phosphate) in the edible tissues of cattle.

[40 FR 13942, Mar. 27, 1975, as amended at 45 FR 10333, Feb. 15, 1980]

§556.330 Hygromycin B.

A tolerance of zero is established for residues of hygromycin B in or on eggs and the uncooked edible tissues of swine and poultry.

§556.344 Ivermectin.

- (a) Acceptable daily intake (ADI). The ADI for total residues of ivermectin is 1 microgram per kilogram of body weight per day.
- (b) Tolerances—(1) Liver. A tolerance is established for 22,23-dihydroavermectin B_1a (marker residue) in liver (target tissue) as follows:
 - (i) Cattle. 100 parts per billion.
 - (ii) Swine. 20 parts per billion.
 - (iii) Sheep. 30 parts per billion.
- (iv) Reindeer. 15 parts per billion.
- (v) $American\ bison.\ 15\ parts\ per\ billion.$
- (2) Muscle. Muscle residues are not indicative of the safety of other edible tissues. A tolerance is established for 22,23-dihydroavermectin B_1a (marker residue) in muscle as follows:
 - (i) Swine. 20 parts per billion.
 - (ii) Cattle. 10 parts per billion.

 $[63~\mathrm{FR}~54352,~\mathrm{Oct.}~9,~1998,~\mathrm{as}~\mathrm{amended}~\mathrm{at}~64~\mathrm{FR}~26671,~\mathrm{May}~17,~1999]$

§556.346 Laidlomycin.

- (a) Acceptable daily intake (ADI). The ADI for total residues of laidlomycin is 7.5 micrograms per kilogram of body weight per day.
- (b) *Tolerance*. The tolerance for parent laidlomycin (the marker residue) in the liver (the target tissue) of cattle is 0.2 part per million (ppm).

[68 FR 42590, July 18, 2003]

§556.347 Lasalocid.

- (a) Acceptable daily intake (ADI). The ADI for total residues of lasalocid is 10 micrograms per kilogram of body weight per day.
- (b) *Tolerances*—(1) *Cattle*. The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 0.7 part per million (ppm).
- (2) Chickens—(i) Skin with adhering fat (the target tissue). The tolerance for parent lasalocid (the marker residue) is 1.2 ppm.
- (ii) *Liver*. The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (3) Turkeys—(i) Liver (the target tissue). The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (ii) Skin with adhering fat. The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (4) *Rabbits*. The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 0.7 ppm.
- (5) Sheep. The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 1.0 ppm.

[66 FR 19854, Apr. 18, 2001]

§556.350 Levamisole hydrochloride.

A tolerance of 0.1 part per million is established for negligible residues of levamisole hydrochloride in the edible tissues of cattle, sheep, and swine.

§556.360 Lincomycin.

- (a) Acceptable daily intake (ADI). The ADI for total residues of lincomycin is 25 micrograms per kilogram of body weight per day.
- (b) *Chickens*. A tolerance for residues of lincomycin in chickens is not required.
- (c) *Swine*. Tolerances for lincomycin of 0.6 part per million in liver and 0.1 part per million in muscle are established.

[64 FR 13342, Mar. 18, 1999]

§556.375 Maduramicin ammonium.

- A tolerance is established for residues of maduramicin ammonium in chickens as follows:
- (a) A tolerance for maduramicin ammonium (marker residue) in chickens is 0.38 parts per million in fat (target
