§ 868.5675  Rebreathing device.
(a) Identification. A rebreathing device is a device that enables a patient to rebreathe exhaled gases. It may be used in conjunction with pulmonary function testing or for increasing minute ventilation.
(b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to §868.9.

§ 868.5690  Incentive spirometer.
(a) Identification. An incentive spirometer is a device that indicates a patient’s breathing volume or flow and that provides an incentive to the patient to improve his or her ventilation.
(b) Classification. Class II (performance standards).

§ 868.5700  Nonpowered oxygen tent.
(a) Identification. A nonpowered oxygen tent is a device that encloses a patient’s head and upper body to contain oxygen delivered to the patient for breathing. This generic type of device includes infant oxygen hoods.
(b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to §868.9.

§ 868.5710  Electrically powered oxygen tent.
(a) Identification. An electrically powered oxygen tent is a device that encloses a patient’s head and, by means of an electrically powered unit, administers breathing oxygen and controls the temperature and humidity of the breathing gases. This generic type of device includes the pediatric aerosol tent.
(b) Classification. Class II (performance standards).

§ 868.5720  Bronchial tube.
(a) Identification. A bronchial tube is a device used to differentially intubate a patient’s bronchus (one of the two main branches of the trachea leading directly to the lung) in order to isolate a portion of lung distal to the tube.
(b) Classification. Class II (performance standards).

§ 868.5730  Tracheal tube.
(a) Identification. A tracheal tube is a device inserted into a patient’s trachea via the nose or mouth and used to maintain an open airway.
(b) Classification. Class II (performance standards).

§ 868.5740  Tracheal/bronchial differential ventilation tube.
(a) Identification. A tracheal/bronchial differential ventilation tube is a device used to isolate the left or the right lung of a patient for anesthesia or pulmonary function testing.
(b) Classification. Class II (performance standards).

§ 868.5750  Inflatable tracheal tube cuff.
(a) Identification. An inflatable tracheal tube cuff is a device used to provide an airtight seal between a tracheal tube and a patient’s trachea.
(b) Classification. Class II (performance standards).

§ 868.5760  Cuff spreader.
(a) Identification. A cuff spreader is a device used to install tracheal tube cuffs on tracheal or tracheostomy tubes.
(b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §868.9. If the device is not labeled or otherwise represented as sterile, it is exempt from the current good manufacturing practice requirements of the quality system regulation in part 820 of this chapter, with the exception of §820.180, with respect to general requirements concerning records, and §820.198, with respect to complaint files.

§ 868.5770  Tracheal tube fixation device.
(a) Identification. A tracheal tube fixation device is a device used to hold a
