## Food and Drug Administration, HHS

### §870.2400 Vectorcardiograph.

- (a) Identification. A vectorcardiograph is a device used to process the electrical signal transmitted through electrocardiograph electrodes and to produce a visual display of the magnitude and direction of the electrical signal produced by the heart.
- (b) Classification. Class II (performance standards).

# § 870.2450 Medical cathode-ray tube display.

- (a) *Identification*. A medical cathoderay tube display is a device designed primarily to display selected biological signals. This device often incorporates special display features unique to a specific biological signal.
- (b) Classification. Class II (performance standards).

### §870.2600 Signal isolation system.

- (a) *Identification*. A signal isolation system is a device that electrically isolates the patient from equipment connected to the commercial power supply received from a utility company. This isolation may be accomplished, for example, by transformer coupling, acoustic coupling, or optical coupling.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §870.9.
- [45 FR 7907-7971, Feb. 5, 1980, as amended at 61 FR 1121, Jan. 16, 1996; 66 FR 38796, July 25, 2001]

## § 870.2620 Line isolation monitor.

- (a) *Identification*. A line isolation monitor is a device used to monitor the electrical leakage current from a power supply electrically isolated from the commercial power supply received from a utility company.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §870.9.
- [45 FR 7907-7971, Feb. 5, 1980, as amended at 61 FR 1121, Jan. 16, 1996; 66 FR 38796, July 25, 2001]

## §870.2640 Portable leakage current alarm.

- (a) *Identification*. A portable leakage current alarm is a device used to measure the electrical leakage current between any two points of an electrical system and to sound an alarm if the current exceeds a certain threshold.
- (b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to the limitations in §870.9.
- [45 FR 7907-7971, Feb. 5, 1980, as amended at 61 FR 1121, Jan. 16, 1996; 66 FR 38796, July 25, 2001]

### §870.2675 Oscillometer.

- (a) *Identification*. An oscillometer is a device used to measure physiological oscillations of any kind, e.g., changes in the volume of arteries.
- (b) Classification. Class II (performance standards).

### §870.2700 Oximeter.

- (a) Identification. An oximeter is a device used to transmit radiation at a known wavelength(s) through blood and to measure the blood oxygen saturation based on the amount of reflected or scattered radiation. It may be used alone or in conjunction with a fiberoptic oximeter catheter.
- (b) Classification. Class II (performance standards).

## §870.2710 Ear oximeter.

- (a) Identification. An ear oximeter is an extravascular device used to transmit light at a known wavelength(s) through blood in the ear. The amount of reflected or scattered light as indicated by this device is used to measure the blood oxygen saturation.
- (b) Classification. Class II (performance standards).

## §870.2750 Impedance phlebograph.

- (a) Identification. An impedance phlebograph is a device used to provide a visual display of the venous pulse or drainage by measuring electrical impedance changes in a region of the body.
- (b) Classification. Class II (performance standards).
