Food and Drug Administration, HHS

§ 880.6785 Manual patient transfer device.

(a) Identification. A manual patient transfer device is a device consisting of a wheeled stretcher and a mechanism on which a patient can be placed, so that the patient can be transferred with minimal disturbance in a horizontal position to the stretcher.

(b) Classification. Class I (general controls). The device is exempt from the premarket notification procedures in subpart E of part 807 of this chapter subject to §880.9.
