In one hour of the indication is an exceedance of the applicable monitoring requirements specified in § 63.11562(a).

failure to service the ESP with-ess emissions.

parameters and corresponding parameter values that you select to demonstrate continuous compliance must correlate to the proc-

rameters when the filter media has been comprised.

the process emissions when assessing compliance with the emission limits specified in Tables 1 and 2 of this subpart.

down, when there is no production rate available to assess compliance with the lb/ton of product emission limits, with emissions

startup event, or 24 hours prior to a shutdown event, you must normalize the emissions that occur during the startup or shut-

For * * * You must use * * *

4. Process modifications (i.e., a control device is not re-

TABLE 4 OF SUBPART AAAAAAA OF PART 63—OPERATING LIMITS

If you comply with the emission limits using * * *

You must establish an operating value for * * *

And maintain * * *

1. A thermal oxidizer.............. Combustion zone temperature

The 3-hour average combustion zone temperature at or above the operating value established as specified in § 63.11562(a)(2) and (b)(2).

2. A high-efficiency air filter or fiber bed filter.

a. Inlet gas temperature, and

b. Pressure drop across de-

vice. 

The 3-hour average inlet gas temperature within the oper-

ating range established as specified in § 63.11562(a)(2) and (b)(3).
The 3-hour average pressure drop across the device within the approved operating range established as specified in § 63.11562(a)(2) and (b)(3).

3. An electrostatic precipita-

tor (ESP).

Voltage c to the ESP 

The 3-hour average ESP voltage at or above the approved operating value established as specified in § 63.11562(a)(2) and (b)(3).

4. Process modifications (i.e., a control device is not re-

quired).

Appropriate process moni-

toring parameters. 

The monitoring parameters within the operating values estab-

lished as specified in § 63.11562(c)(2).

For * * *

You must establish an operating value for * * *

And maintain * * *

1. Combined saturator/coater production lines.

b. Limit PM emissions to 0.30 lb/ton of asphalt roofing product manufactured.

a. Limit PAH emissions to 0.0009 lb/ton of asphalt roofing product manufactured; or

b. Limit PM emissions to 0.36 lb/ton of asphalt roofing product manufactured.
