## § 1033.425

malfunction according to your emission-related maintenance instructions, but only to the degree that an owner/operator would be required to repair the malfunction under §1033.815.

- (d) Results of at least one valid set of emission tests using the test procedure described in subpart F of this part is required for each in-use locomotive.
- (e) If in-use testing results show that an in-use locomotive fails to comply with any applicable emission standards, you must determine the reason for noncompliance and report your findings in the quarterly in-use test result report described in § 1033.425.

## § 1033.425 In-use test program reporting requirements.

- (a) Within 90 days of completion of testing, send us all emission test results generated from the in-use testing program. Report all of the following information for each locomotive tested:
  - (1) Engine family, and configuration.
  - (2) Locomotive and engine models.
- (3) Locomotive and engine serial numbers.
- (4) Date of manufacture or remanufacture, as applicable.
- (5) Megawatt-hours of use (or miles, as applicable).
- (6) Date and time of each test attempt.
  - (7) Results of all emission testing.
- (8) Results (if any) of each voided or failed test attempt.
- (9) Summary of all maintenance and/or adjustments performed.
- (10) Summary of all modifications and/or repairs.
- (11) Determinations of noncompliance.
- (12) The following signed statement and endorsement by an authorized representative of your company.

We submit this report under sections 208 and 213 of the Clean Air Act. Our inuse testing conformed completely with the requirements of 40 CFR part 1033. All the information in this report is true and accurate to the best of my knowledge. I know of the penalties for violating the Clean Air Act and the regulations. (Authorized Company Representative)

(b) Report to us within 90 days of completion of testing the following in-

formation for each engine family test-

- (1) The serial numbers of all locomotive that were excluded from the test sample because they did not meet the maintenance requirements of § 1033.420.
- (2) The owner of each locomotive identified in paragraph (b)(1) of this section (or other entity responsible for the maintenance of the locomotive).
- (3) The specific reasons why the locomotives were excluded from the test sample.
- (c) Submit the information outlined in paragraphs (a) and (b) of this section electronically using an approved format. We may exempt you from this requirement upon written request with supporting justification.
- (d) Send all testing reports and requests for approvals to the Designated Compliance Officer.

## Subpart F—Test Procedures

## §1033.501 General provisions.

- (a) Except as specified in this subpart, use the equipment and procedures for compression-ignition engines in 40 CFR part 1065 to determine whether your locomotives meet the duty-cycle emission standards in §1033.101. Use the applicable duty cycles specified in this subpart. Measure emissions of all the pollutants we regulate in §1033.101 plus CO<sub>2</sub>. Measure N<sub>2</sub>O, and CH<sub>4</sub> as described in §1033.235. The general test procedure is the procedure specified in 40 CFR part 1065 for steady-state discrete-mode cycles. However, if you use the optional ramped modal cycle in §1033.520, follow the procedures for ramped modal testing in 40 CFR part 1065. The following exceptions from the 1065 procedures apply:
- (1) You must average power and emissions over the sampling periods specified in this subpart for both discrete-mode testing and ramped modal testing.
- (2) The test cycle is considered to be steady-state with respect to operator demand rather than engine speed and load
- (3) The provisions related to engine mapping and duty cycle generation (40
