Rural Utilities Service, USDA

§ 1778.21 Application processing.

(a) The material submitted with the application should include the Preliminary Engineering Report, population and median household income of the area to be served, description of project, and nature of emergency that caused the problem(s) being addressed by the project. The documentation must clearly show that the applicant has had a significant decline in the quantity or quality of potable water or an acute shortage of potable water, or that such a decline or shortage is imminent, and that the proposed project will eliminate or alleviate the problem. For projects to be funded in accordance with §1778.11(a), evidence must be furnished that a significant decline in quantity or quality occurred within two years before filing the application with the Agency, or is expected to occur within one year after filing the application.

(b) When favorable action will not be taken on an application, the applicant
