**§ 20.1007**

**TABLE 1004(B).1—QUALITY FACTORS AND ABSORBED DOSE EQUIVALENCIES**

Type of radiation	Quality factor	Absorbed dose equal to a unit dose equivalent <sup>a</sup>
	(Q)	
X-, gamma, or beta radiation .....	1	1
Alpha particles, multiple-charged particles, fission fragments and heavy particles of unknown charge .....	20	0.05
Neutrons of unknown energy .....	10	0.1
High-energy protons .....	10	0.1

<sup>a</sup>Absorbed dose in rad equal to 1 rem or the absorbed dose in gray equal to 1 sievert.

(c) If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in rems per hour or sieverts per hour, as provided in paragraph (b) of this section, 1 rem (0.01 Sv) of neutron radiation of unknown energies may, for purposes of the regulations in this part, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee may use the fluence rate per unit dose equivalent or the appropriate Q value from table 1004(b).2 to convert a measured tissue dose in rads to dose equivalent in rems.

**§ 20.1005 Units of radioactivity.**

For the purposes of this part, activity is expressed in the special unit of curies (Ci) or in the SI unit of becquerels (Bq), or their multiples, or disintegrations (transformations) per unit of time.

(a) One becquerel = 1 disintegration per second (s<sup>-1</sup>).

(b) One curie = 3.7×10<sup>10</sup> disintegrations per second = 3.7×10<sup>10</sup> becquerels = 2.22×10<sup>12</sup> disintegrations per minute.
