

Farm Credit Administration

§615.5210

the allocated investments of the non-agreeing associations, all of the remaining allocated investments of the nonagreeing associations must be allotted to the bank.

(c) If a payment or part of a payment to the Farm Credit System Financial Assistance Corporation pursuant to section 6.9(e)(3)(D)(ii) of the Act would cause a bank to fall below its minimum permanent capital requirement, the bank and one or more associations shall amend their allocation agreements to increase the allotment of the allocated investment to the bank sufficiently to enable the bank to make the payment to the Farm Credit System Financial Assistance Corporation, provided that the associations would continue to meet their minimum permanent capital requirement. In the case of a nonagreeing association, the Farm Credit Administration may require a revision of the allotment sufficient to enable the bank to make the payment to the Farm Credit System Financial Assistance Corporation, provided that the association would continue to meet its minimum permanent capital requirement. The Farm Credit Administration may, at the request of one or more of the institutions affected, waive the requirements of this paragraph if the FCA deems it is in the overall best interest of the institutions affected.

§615.5209 Deferred-tax assets.

For purposes of calculating capital ratios under this part, deferred-tax assets are subject to the conditions, limitations, and restrictions described in this section.

(a) Each institution must deduct an amount of deferred-tax assets, net of any valuation allowance, from its assets and its total capital that is equal to the greater of:

(1) The amount of deferred-tax assets that is dependent on future income or future events in excess of the amount that is reasonably expected to be realized within 1 year of the most recent calendar quarter-end date, based on financial projections for that year, or

(2) The amount of deferred-tax assets that is dependent on future income or future events in excess of 10 percent of the amount of core surplus that exists

before the deduction of any deferred-tax assets.

(b) For purposes of this calculation:

(1) The amount of deferred-tax assets that can be realized from taxes paid in prior carryback years and from the reversal of existing taxable temporary differences may not be deducted from assets and from equity capital.

(2) All existing temporary differences should be assumed to fully reverse at the calculation date.

(3) Projected future taxable income should not include net operating loss carryforwards to be used within 1 year or the amount of existing temporary differences expected to reverse within that year.

(4) Financial projections must include the estimated effect of tax-planning strategies that are expected to be implemented to minimize tax liabilities and realize tax benefits. Financial projections for the current fiscal year (adjusted for any significant changes that have occurred or are expected to occur) may be used when applying the capital limit at an interim date within the fiscal year.

(5) The deferred tax effects of any unrealized holding gains and losses on available-for-sale debt securities may be excluded from the determination of the amount of deferred-tax assets that are dependent upon future taxable income and the calculation of the maximum allowable amount of such assets. If these deferred-tax effects are excluded, this treatment must be followed consistently over time.

§615.5210 Risk-adjusted assets.

(a) *Computation.* Each asset on the institution's balance sheet and each off-balance-sheet item, adjusted by the appropriate credit conversion factor in §615.5212, is assigned to one of the risk categories specified in §615.5211. The aggregate dollar value of the assets in each category is multiplied by the percentage weight assigned to that category. The sum of the weighted dollar values from each of the risk categories comprises "risk-adjusted assets," the denominator for computation of the permanent capital ratio.
