Food and Drug Administration, HHS

exceed 2.2 percent by weight; **Provided,** That:
(1) The hops extract is added to the wort before or during cooking in the manufacture of beer.
(2) The label of the hops extract specifies the presence of the hexane and provides for the use of the hops extract only as prescribed by paragraph (b)(1) of this section.

§ 173.275 Hydrogenated sperm oil.
The food additive hydrogenated sperm oil may be safely used in accordance with the following prescribed conditions:
(a) The sperm oil is derived from rendering the fatty tissue of the sperm whale or is prepared by synthesis of fatty acids and fatty alcohols derived from the sperm whale. The sperm oil obtained by rendering is refined. The oil is hydrogenated.
(b) It is used alone or as a component of a release agent or lubricant in bakery pans.
(c) The amount used does not exceed that reasonably required to accomplish the intended lubricating effect.

§ 173.280 Solvent extraction process for citric acid.
A solvent extraction process for recovery of citric acid from conventional *Aspergillus niger* fermentation liquor may be safely used to produce food-grade citric acid in accordance with the following conditions:
(a) The solvent used in the process consists of a mixture of n-octyl alcohol meeting the requirements of §172.864 of this chapter, synthetic isoparaffinic petroleum hydrocarbons meeting the requirements of §172.882 of this chapter, and tridodecyl amine.
(b) The component substances are used solely as a solvent mixture and in a manner that does not result in formation of products not present in conventionally produced citric acid.
(c) The citric acid so produced meets the specifications of the “Food Chemicals Codex,” 3d Ed. (1981), pp. 86-87, which is incorporated by reference (Copies may be obtained from the National Academy Press, 2101 Constitution Ave. NW., Washington, DC 20418, or may be examined at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html., and the polynuclear aromatic hydrocarbon specifications of §173.165.
(d) Residues of n-octyl alcohol and synthetic isoparaffinic petroleum hydrocarbons are removed in accordance with good manufacturing practice. Current good manufacturing practice results in residues not exceeding 16 parts per million (ppm) n-octyl alcohol and 0.47 ppm synthetic isoparaffinic petroleum hydrocarbons in citric acid.
(e) Tridodecyl amine may be present as a residue in citric acid at a level not to exceed 100 parts per billion.

§ 173.290 Trichloroethylene.
Tolerances are established for residues of trichloroethylene resulting from its use as a solvent in the manufacture of foods as follows:

<table>
<thead>
<tr>
<th>Product</th>
<th>Residue Tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decaffeinated ground coffee</td>
<td>25 parts per million.</td>
</tr>
<tr>
<td>Decaffeinated soluble (in-</td>
<td>5 parts per million.</td>
</tr>
<tr>
<td>standing) coffee extract</td>
<td></td>
</tr>
<tr>
<td>Spice oleoresins</td>
<td>30 parts per million (provided that if residues of other chlorinated solvents are also present, the total of all residues of such solvents in spice oleoresins shall not exceed 30 parts per million).</td>
</tr>
</tbody>
</table>

Subpart D—Specific Usage Additives

§ 173.300 Chlorine dioxide.
Chlorine dioxide (CAS Reg. No. 10049–04–4) may be safely used in food in accordance with the following prescribed conditions:
(a)(1) The additive is generated by one of the following methods:
   (i) Treating an aqueous solution of sodium chlorite with either chlorine gas or a mixture of sodium hypochlorite and hydrochloric acid.
   (ii) Treating an aqueous solution of sodium chlorate with hydrogen peroxide in the presence of sulfuric acid.
   (iii) Treating an aqueous solution of sodium chlorite by electrolysis.
