Subpart D—Certain Adjuvants and Production Aids

§ 178.3010 Adjuvant substances used in the manufacture of foamed plastics.

The following substances may be safely used as adjuvants in the manufacture of foamed plastics intended for use in contact with food, subject to any prescribed limitations:

<table>

§ 178.3120 Animal glue.

Animal glue may be safely used as a component of articles intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food, subject to the provisions of this section.

(a) Animal glue consists of the proteinaceous extractives obtained from hides, bones, and other collagen-rich substances of animal origin (excluding diseased or rotted animals), to which may be added other optional adjuvant substances required in its production or added to impart desired properties.

(b) The quantity of any substance employed in the production of animal glue does not exceed the amount reasonably required to accomplish the intended physical or technical effect nor any limitation further provided.

(c) Any substance employed in the production of animal glue and which is the subject of a regulation in parts 174, 175, 176, 177, 178 and §179.45 of this chapter conforms with any specification in such regulation.

(d) Optional adjuvant substances employed in the production of animal glue include:

1. Substances generally recognized as safe in food.
2. Substances subject to prior sanction or approval for use in animal glue and used in accordance with such sanction or approval.
3. Substances identified in this paragraph (d)(3) and subject to such limitations as are provided:
List of substances Limitations

Alum (double sulfate of aluminum and ammonium, potassium, or sodium). For use as preservative only.
4-Chloro-3-methylphenol (p-chlorome-tacresol) For use as preservative only.
Chromium potassium sulfate (chrome alum) For use only in glue used as a colloidal flocculant added to the pulp suspension prior to the sheet-forming operation in the manufacture of paper and paperboard.
3,5-Dimethyl-1,3,5-H-tetrahydrothiadia-zine-2-thione For use as preservative only.
Ethanolamine. Do.
Ethylenediamine. As provided in § 176.210 of this chapter.
Formaldehyde. Do.
Potassium N-methyldithiocarbamate. Do.
Potassium pentachlorophenate. Do.
Rosins and rosin derivatives. As provided in § 178.3870.
Sodium chlorate. Do.
Sodium dodecylbenzenesulfonate. Do.
Sodium 2-mercaptobenzothiazole. Do.
Sodium pentachlorophenate. Do.
Sodium o-phenylphenate. Do.
Zinc dimethylthiocarbamate. Do.
Zinc 2-mercaptobenzothiazole. Do.

(e) The conditions of use are as follows:
(1) The use of animal glue in any substance or article that is the subject of a regulation in this subpart conforms with any specifications or limitations prescribed by such regulation for the finished form of the substance or article.
(2) It is used as an adhesive or component of an adhesive in accordance with the provisions of § 175.105 of this chapter.
(3) It is used as a colloidal flocculant added to the pulp suspension prior to the sheet-forming operation in the manufacture of paper and paperboard.
(4) It is used as a protective colloid in resinous and polymeric emulsion coatings.

§ 178.3125 Anticorrosive agents.
The substances listed in this section may be used as anticorrosive agents in food-contact materials subject to the provisions of this section:

<table>
<thead>
<tr>
<th>Substances Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Zinc hydroxyphosphate (CAS Reg. No. 55799-16-1). For use only as a component of resinous and polymeric food-contact coatings intended for repeated use in contact with dry foods.</td>
</tr>
</tbody>
</table>

[50 FR 21835, May 29, 1985]

§ 178.3130 Antistatic and/or antifogging agents in food-packaging materials.
The substances listed in paragraph (b) of this section may be safely used as antistatic and/or antifogging agents in food-packaging materials, subject to the provisions of this section:
(a) The quantity used shall not exceed the amount reasonably required to accomplish the intended technical effect.
(b) List of substances:

<table>
<thead>
<tr>
<th>List of substances Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>N-Acyl sarcosines where the acyl group is lauroyl, oleoyl, or derived from the combined fatty acids of coconut oil. For use only:</td>
</tr>
</tbody>
</table>
| 1. As antistatic and/or antifogging agent at levels not to exceed a total of 0.15 pct by weight of polyolefin film used for packaging meat, fresh fruits, and fresh vegetables. The average thickness of such polyolefin film shall not exceed 0.003 inch.
2. As antistatic and/or antifogging agent at levels not to exceed a total of 0.15 pct by weight of ethylene-vinyl acetate copolymer film complying with § 177.1350 of this chapter and used for packaging meat, fresh fruits, fresh vegetables, and dry food of Type VIII described in table 1 of § 176.170(c) of this chapter. The average thickness of such ethylene-vinyl acetate copolymer film shall not exceed 0.003 inch when used for packaging meat, fresh fruits, and fresh vegetables. |
