### §556.346

- 1 microgram per kilogram of body weight per day.
- (b) Tolerances—(1) Liver. A tolerance is established for 22,23-dihydroavermectin B<sub>1</sub>a (marker residue) in liver (target tissue) as follows:
  - (i) Cattle. 100 parts per billion.
  - (ii) Swine. 20 parts per billion.
  - (iii) Sheep. 30 parts per billion.
  - (iv) Reindeer. 15 parts per billion.
- (v) American bison. 15 parts per billion.
- (2) Muscle. Muscle residues are not indicative of the safety of other edible tissues. A tolerance is established for 22,23-dihydroavermectin  $B_1a$  (marker residue) in muscle as follows:
  - (i) Swine. 20 parts per billion.
  - (ii) Cattle. 10 parts per billion.

### §556.346 Laidlomycin.

- (a) Acceptable daily intake (ADI). The ADI for total residues of laidlomycin is 7.5 micrograms per kilogram of body weight per day.
- (b) *Tolerance*. The tolerance for parent laidlomycin (the marker residue) in the liver (the target tissue) of cattle is 0.2 part per million (ppm).

[68 FR 42590, July 18, 2003]

# §556.347 Lasalocid.

- (a) Acceptable daily intake (ADI). The ADI for total residues of lasalocid is 10 micrograms per kilogram of body weight per day.
- (b) *Tolerances*—(1) *Cattle*. The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 0.7 part per million (ppm).
- (2) Chickens—(i) Skin with adhering fat (the target tissue). The tolerance for parent lasalocid (the marker residue) is 1.2 ppm.
- (ii) *Liver*. The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (3) Turkeys—(i) Liver (the target tissue). The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (ii) Skin with adhering fat. The tolerance for parent lasalocid (the marker residue) is 0.4 ppm.
- (4) Rabbits. The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 0.7 ppm.

(5) *Sheep.* The tolerance for parent lasalocid (the marker residue) in liver (the target tissue) is 1.0 ppm.

[66 FR 19854, Apr. 18, 2001]

#### § 556.350 Levamisole hydrochloride.

A tolerance of 0.1 part per million is established for negligible residues of levamisole hydrochloride in the edible tissues of cattle, sheep, and swine.

### §556.360 Lincomycin.

- (a) Acceptable daily intake (ADI). The ADI for total residues of lincomycin is 25 micrograms per kilogram of body weight per day.
- (b) *Chickens*. A tolerance for residues of lincomycin in chickens is not required.
- (c) Swine. Tolerances for lincomycin of 0.6 part per million in liver and 0.1 part per million in muscle are established.

[64 FR 13342, Mar. 18, 1999]

#### §556.375 Maduramicin ammonium.

- A tolerance is established for residues of maduramicin ammonium in chickens as follows:
- (a) A tolerance for maduramicin ammonium (marker residue) in chickens is 0.38 parts per million in fat (target tissue). A tolerance refers to the concentration of marker residues in the target tissue used to monitor for total drug residues in the target animals.
- (b) The safe concentrations for total maduramicin ammonium residues in uncooked edible chicken tissues are: 0.24 parts per million in muscle; 0.72 parts per million in liver; 0.48 parts per million in skin; and 0.48 parts per million in fat. A safe concentration refers to the total residue concentration considered safe in edible tissues.

[54 FR 5229, Feb. 2, 1989]

### § 556.380 Melengestrol acetate.

A tolerance of 25 parts per billion is established for residues of the parent compound, melengestrol acetate, in fat of cattle.

[59 FR 41241, Aug. 11, 1994]

# $\S 556.410$ Metoserpate hydrochloride.

A tolerance of 0.02 part per million is established for negligible residues of
