§ 1.1031(e)-1

Exchange of livestock of different sexes.

Section 1031(e) provides that livestock of different sexes are not property of like kind. Section 1031(e) and this section are applicable to taxable
§ 1.1031(j)–1 Exchanges of multiple properties.

(a) Introduction—(1) Overview. As a general rule, the application of section 1031 requires a property-by-property comparison for computing the gain recognized and basis of property received in a like-kind exchange. This section provides an exception to this general rule in the case of an exchange of multiple properties. An exchange is an exchange of multiple properties if, under paragraph (b)(2) of this section, more than one exchange group is created. In addition, an exchange is an exchange of multiple properties if only one exchange group is created but there is more than one property being transferred or received within that exchange group. In addition, an exchange is an exchange of multiple properties if only one exchange group is created but there is more than one property being transferred or received within that exchange group. Paragraph (b) of this section provides rules for computing the amount of gain recognized in an exchange of multiple properties qualifying for nonrecognition of gain or loss under section 1031. Paragraph (c) of this section provides rules for computing the basis of properties received in an exchange of multiple properties qualifying for nonrecognition of gain or loss under section 1031.

(2) General approach. (i) In general, the amount of gain recognized in an exchange of multiple properties is computed by first separating the properties transferred and the properties received by the taxpayer in the exchange into exchange groups and a residual group to the extent provided in this paragraph (b)(2).

(ii) Exchange groups. Each exchange group consists of the properties transferred and received in the exchange into exchange groups in the manner described in paragraph (b)(2) of this section. The separation of the properties transferred and the properties received in the exchange into exchange groups involves matching up properties of a like kind or like class to the extent possible. Next, all liabilities assumed by the taxpayer as part of the transaction are offset by all liabilities of which the taxpayer is relieved as part of the transaction, with the excess liabilities assumed or relieved allocated in accordance with paragraph (b)(2)(ii) of this section. Then, the rules of section 1031 and the regulations thereunder are applied separately to each exchange group to determine the amount of gain recognized in the exchange. See §§1.1031(b)–1 and 1.1031(c)–1. Finally, the rules of section 1031 and the regulations thereunder are applied separately to each exchange group to determine the basis of the properties received in the exchange. See §§1.1031(d)–1 and 1.1031(d)–2.

(b) Computation of gain recognized—(1) In general. In computing the amount of gain recognized in an exchange of multiple properties, the fair market value must be determined for each property transferred and for each property received by the taxpayer in the exchange. In addition, the adjusted basis must be determined for each property transferred by the taxpayer in the exchange.

(2) Exchange groups and residual group. The properties transferred and the properties received by the taxpayer in the exchange are separated into exchange groups and a residual group to the extent provided in this paragraph (b)(2).

(i) Exchange groups. Each exchange group consists of the properties transferred and received in the exchange, all of which are of a like kind or like class. If a property could be included in more than one exchange group, the taxpayer may include the property in any of those exchange groups. Property eligible for inclusion within an exchange group does not include money or property described in section 1031(a)(2) (i.e., stock in trade or other property held primarily for sale, stocks, bonds, notes, other securities or evidences of indebtedness or interest, interests in a partnership, certificates of trust or beneficial interests, or choses in action). For example, an exchange group may consist of all exchanged properties that are within the same General Asset Class or within the same Product Class (as defined in §1.1031(a)–2(b)). Each exchange group must consist of at least
