

Internal Revenue Service, Treasury

§ 1.471-6

§ 1.471-5 Inventories by dealers in securities.

A dealer in securities who in his books of account regularly inventories unsold securities on hand either—

- (a) At cost,
- (b) At cost or market, whichever is lower, or
- (c) At market value,

may make his return upon the basis upon which his accounts are kept, provided that a description of the method employed is included in or attached to the return, that all the securities are inventoried by the same method, and that such method is adhered to in subsequent years, unless another method is authorized by the Commissioner pursuant to a written application therefor filed as provided in paragraph (e) of § 1.446-1. A dealer in securities in whose books of account separate computations of the gain or loss from the sale of the various lots of securities sold are made on the basis of the cost of each lot shall be regarded, for the purposes of this section, as regularly inventorying his securities at cost. For the purposes of this section, a dealer in securities is a merchant of securities, whether an individual, partnership, or corporation, with an established place of business, regularly engaged in the purchase of securities and their resale to customers; that is, one who as a merchant buys securities and sells them to customers with a view to the gains and profits that may be derived therefrom. If such business is simply a branch of the activities carried on by such person, the securities inventoried as provided in this section may include only those held for purposes of resale and not for investment. Taxpayers who buy and sell or hold securities for investment or speculation, irrespective of whether such buying or selling constitutes the carrying on of a trade or business, and officers of corporations and members of partnerships who in their individual capacities buy and sell securities, are not dealers in securities within the meaning of this section. See §§ 1.263A-1 and 1.263A-3 for rules regarding the treatment of costs with respect to property acquired for resale.

[T.D. 6500, 25 FR 11725, Nov. 26, 1960, as amended by T.D. 8131, 52 FR 10084, Mar 30, 1987; T.D. 8482, 58 FR 42234, Aug. 9, 1993]

§ 1.471-6 Inventories of livestock raisers and other farmers.

(a) A farmer may make his return upon an inventory method instead of the cash receipts and disbursements method. It is optional with the taxpayer which of these methods of accounting is used but, having elected one method, the option so exercised will be binding upon the taxpayer for the year for which the option is exercised and for subsequent years unless another method is authorized by the Commissioner as provided in paragraph (e) of § 1.446-1.

(b) In any change of accounting method from the cash receipts and disbursements method to an inventory method, adjustments shall be made as provided in section 481 (relating to adjustments required by change in method of accounting) and the regulations thereunder.

(c) Because of the difficulty of ascertaining actual cost of livestock and other farm products, farmers who render their returns upon an inventory method may value their inventories according to the “farm-price method”, and farmers raising livestock may value their inventories of animals according to either the “farm-price method” or the “unit-livestock-price method”. In addition, these inventory methods may be used to account for the costs of property produced in a farming business that are required to be capitalized under section 263A regardless of whether the property being produced is otherwise treated as inventory by the taxpayer, and regardless of whether the taxpayer is otherwise using the cash or an accrual method of accounting.

(d) The “farm-price method” provides for the valuation of inventories at market price less direct cost of disposition. If this method of valuation is used, it generally must be applied to all property produced by the taxpayer in the trade or business of farming, except as to livestock accounted for, at the taxpayer’s election, under the unit livestock method of accounting. However, see § 1.263A-4(c)(3) for an exception to this rule. If the use of the “farm-price method” of valuing inventories for any taxable year involves a

change in method of valuing inventories from that employed in prior years, permission for such change shall first be secured from the Commissioner as provided in paragraph (e) of § 1.446-1.

(e) The “unit-livestock-price method” provides for the valuation of the different classes of animals in the inventory at a standard unit price for each animal within a class. A livestock raiser electing this method of valuing his animals must adopt a reasonable classification of the animals in his inventory with respect to the age and kind included so that the unit prices assigned to the several classes will reasonably account for the normal costs incurred in producing the animals within such classes. Thus, if a cattle raiser determines that it costs approximately \$15 to produce a calf, and \$7.50 each year to raise the calf to maturity, his classifications and unit prices would be as follows: Calves, \$15; yearlings, \$22.50; 2-year olds, \$30; mature animals, \$37.50. The classification selected by the livestock raiser, and the unit prices assigned to the several classes, are subject to approval by the district director upon examination of the taxpayer’s return.

(f) A taxpayer that elects to use the “unit-livestock-price method” must apply it to all livestock raised, whether for sale or for draft, breeding, or dairy purposes. The inventoriable costs of animals raised for draft, breeding, or dairy purposes can, at the election of the livestock raiser, be included in inventory or treated as property used in a trade or business subject to depreciation after maturity. See § 1.263A-4 for rules regarding the computation of inventoriable costs for purposes of the unit-livestock-price method. Once established, the methods of accounting used by the taxpayer to determine unit prices and to classify animals must be consistently applied in all subsequent taxable years. A taxpayer that uses the unit-livestock-price method must annually reevaluate its unit prices and adjust the prices either upward to reflect increases, or downward to reflect decreases, in the costs of raising livestock. The consent of the Commissioner is not required to make such upward or downward adjustments. No other changes in the classification of

animals or unit prices may be made without the consent of the Commissioner. See § 1.446-1(e) for procedures for obtaining the consent of the Commissioner. The provisions of this paragraph (f) apply to taxable years ending after October 28, 2002.

(g) A livestock raiser who uses the “unit-livestock-price method” must include in his inventory at cost any livestock purchased, except that animals purchased for draft, breeding, or dairy purposes can, at the election of the livestock raiser, be included in inventory or be treated as property used in a trade or business subject to depreciation after maturity. If the animals purchased are not mature at the time of purchase, the cost should be increased at the end of each taxable year in accordance with the established unit prices, except that no increase is to be made in the taxable year of purchase if the animal is acquired during the last six months of that year. If the records maintained permit identification of a purchased animal, the cost of such animal will be eliminated from the closing inventory in the event of its sale or loss. Otherwise, the first-in, first-out method of valuing inventories must be applied.

(h) If a taxpayer using the “farm-price method” desires to adopt the “unit-livestock-price method” in valuing his inventories of livestock, permission for the change shall first be secured from the Commissioner as provided in paragraph (e) of § 1.446-1. However, a taxpayer who has filed returns on the basis of inventories at cost, or cost or market whichever is lower, may adopt the “unit-livestock-price method” for valuing his inventories of livestock without formal application for permission, but the classifications and unit prices selected are subject to approval by the district director upon examination of the taxpayer’s return. A livestock raiser who has adopted a constant unit-price method of valuing livestock inventories and filed returns on that basis will be considered as having elected the “unit-livestock-price method”.

(i) If returns have been made in which the taxable income has been computed upon incomplete inventories, the abnormality should be corrected by

submitting with the return for the current taxable year a statement for the preceding taxable year. In this statement such adjustments shall be made as are necessary to bring the closing inventory for the preceding taxable year into agreement with the opening complete inventory for the current taxable year. If necessary clearly to reflect income, similar adjustments may be made as at the beginning of the preceding year or years, and the tax, if any be due, shall be assessed and paid at the rate of tax in effect for such year or years.

[T.D. 6500, 25 FR 11726, Nov. 26, 1960, as amended by T.D. 8131, 52 FR 10084, Mar. 30, 1987; T.D. 8729, 62 FR 44551, Aug. 22, 1997; T.D. 8897, 65 FR 50650, Aug. 21, 2000; T.D. 9019, 67 FR 65698, Oct. 28, 2002]

§ 1.471-7 Inventories of miners and manufacturers.

A taxpayer engaged in mining or manufacturing who by a single process or uniform series of processes derives a product of two or more kinds, sizes, or grades, the unit cost of which is substantially alike, and who in conformity to a recognized trade practice allocates an amount of cost to each kind, size, or grade of product, which in the aggregate will absorb the total cost of production, may, with the consent of the Commissioner, use such allocated cost as a basis for pricing inventories, provided such allocation bears a reasonable relation to the respective selling values of the different kinds, sizes, or grades of product. See section 472 as to last-in, first-out inventories.

[T.D. 6500, 25 FR 11726, Nov. 26, 1960]

§ 1.471-8 Inventories of retail merchants.

(a) Retail merchants who employ what is known as the "retail method" of pricing inventories may make their returns upon that method, provided that the use of such method is designated upon the return, that accurate accounts are kept, and that such method is consistently adhered to unless a change is authorized by the Commissioner as provided in paragraph (e) of § 1.446-1. Under the retail method the total of the retail selling prices of the goods on hand at the end of the year in each department or of each class of

goods is reduced to approximate cost by deducting therefrom an amount which bears the same ratio to such total as—

(1) The total of the retail selling prices of the goods included in the opening inventory plus the retail selling prices of the goods purchased during the year, with proper adjustment to such selling prices for all mark-ups and mark-downs, less

(2) The cost of the goods included in the opening inventory plus the cost of the goods purchased during the year, bears to (1).

The result should represent as accurately as may be the amounts added to the cost price of the goods to cover selling and other expenses of doing business and for the margin of profit. See §§ 1.263A-1 and 1.263A-3 for rules regarding the computation of costs with respect to property acquired for resale.

(b) For further adjustments to be made in the case of a retail merchant using the last-in, first-out inventory method authorized by section 472, see paragraph (k) of § 1.472-1.

(c) A taxpayer maintaining more than one department in his store or dealing in classes of goods carrying different percentages of gross profit should not use a percentage of profit based upon an average of his entire business, but should compute and use in valuing his inventory the proper percentages for the respective departments or classes of goods.

(d) A taxpayer (other than one using the last-in, first-out inventory method) who previously has determined inventories in accordance with the retail method, except that, to obtain a basis of approximate cost or market, whichever is lower, has consistently and uniformly followed the practice of adjusting the retail selling prices of the goods included in the opening inventory and purchased during the taxable year for mark-ups but not for mark-downs, may continue such practice subject to the conditions prescribed in this section. The adjustments must be bona fide and consistent and uniform. Where mark-downs are not included in the adjustments, mark-ups made to cancel or correct mark-downs shall not be included; and the mark-ups included must be reduced by the mark-downs
