§ 74.25 Current promulgated SO\textsubscript{2} emissions limit.

The designated representative shall submit the following data:
(a) Current promulgated SO\textsubscript{2} emissions limit of the combustion source, expressed in lbs/mmBtu, which shall be the most stringent federally enforceable emissions limit that has been promulgated as of the date of submission of the opt-in permit application and that either is in effect on that date or will take effect after that date. If the promulgated SO\textsubscript{2} emissions limit is not expressed in lbs/mmBtu, the limit shall be converted to lbs/mmBtu by multiplying the limit by the appropriate factor as specified in Table 1 of §74.23(a)(1)(i).
(b) Citations of statute, regulation, and any other authority under which the emissions limit under paragraph (a) of this section is established as applicable to the combustion source;
(c) Averaging time associated with the emissions limit under paragraph (a) of this section.

§ 74.26 Allocation formula.

(a) The Administrator will calculate the annual allowance allocation for a combustion source based on the data, corrected as necessary, under §74.20 through §74.25 as follows:
(1) For combustion sources for which the current promulgated SO\textsubscript{2} emissions limit under §74.25 is greater than or equal to the current allowable SO\textsubscript{2} emissions rate under §74.24, the number of allowances allocated for each year equals:

\[
\text{Allowances} = \left[ \begin{array}{c} \text{baseline} \\ \text{alternative baseline} \end{array} \right] \times \begin{array}{c} \text{the actual SO}_2 \text{ emissions rate} \\ \text{or} \\ \text{the 1985 allowable SO}_2 \text{ emissions rate} \\ \text{or} \\ \text{the current allowable SO}_2 \text{ emissions rate} \end{array} \right] \times 2000
\]

(2) For combustion sources for which the current promulgated SO\textsubscript{2} emissions limit under §74.25 is less than the current allowable SO\textsubscript{2} emissions rate under §74.24.

(i) The number of allowances for each year ending prior to the effective date of the promulgated SO\textsubscript{2} emissions limit equals:

\[
\text{Allowances} = \left[ \begin{array}{c} \text{baseline} \\ \text{alternative baseline} \end{array} \right] \times \begin{array}{c} \text{the actual SO}_2 \text{ emissions rate} \\ \text{or} \\ \text{the 1985 allowable SO}_2 \text{ emissions rate} \\ \text{or} \\ \text{the current allowable SO}_2 \text{ emissions rate} \end{array} \right] \times 2000
\]
§ 74.28 Allowance allocation for combustion sources becoming opt-in sources on a date other than January 1.

(a) **Dates of entry.** (1) If an opt-in source provided monthly data under § 74.20, the opt-in source’s opt-in permit may become effective at the beginning of a calendar quarter as of January 1, April 1, July 1, or October 1.

(2) If an opt-in source provided annual data under § 74.20, the opt-in source’s opt-in permit must become effective on January 1.

(b) **Prorating by Calendar Quarter.** Where a combustion source’s opt-in permit becomes effective on April 1, July 1, or October 1 of a given year, the Administrator will prorate the allowance allocation for that first year by the calendar quarters remaining in the year as follows:

Allowances for the first year

\[
\text{Allowances} = \left( \frac{\text{first year partial baseline}}{\text{baseline or alternative baseline}} \right) \times \text{annual allocation of allowances for the first year}
\]

(1) For combustion sources that commenced operations before January 1, 1985,

\[
\text{first year partial baseline} = \sum_{\text{Year}=1985}^{1987} \frac{\text{fuel consumption for remaining calendar quarters}}{3}
\]

(2) For combustion sources that commenced operations after January 1, 1985,

\[
\text{first year partial baseline} = \sum_{\text{Years}} \frac{\text{fuel consumption for the remaining calendar quarters}}{3}
\]

(3) Under paragraphs (b) (1) and (2) of this section,

(i) “Remaining calendar quarters” shall be the calendar quarters in the
