§ 197.450 Breathing gas tests.
The diving supervisor shall insure that—
(a) The output of each air compressor is tested and meets the requirements of §197.340 for quality and quantity by means of samples taken at the connection point to the distribution system—
(1) Every 6 months; and
(2) After every repair or modification.
(b) Purchased supplies of breathing mixtures supplied to a diver are checked before being placed on line for—
(1) Certification that the supply meets the requirements of §197.340; and
(2) Noxious or offensive odor and oxygen percentage;
(c) Each breathing supply system is checked, prior to commencement of diving operations, at the umbilical or underwater breathing apparatus connection point for the diver, for noxious or offensive odor and presence of oil mist; and
(d) Each breathing supply system, supplying mixed-gas to a diver, is checked, prior to commencement of diving operations, at the umbilical or underwater breathing apparatus connection point for the diver, for percentage of oxygen.
§ 197.452 Oxygen cleaning.
The diving supervisor shall ensure that equipment used with oxygen or oxygen mixtures greater than 40 percent by volume is cleaned of flammable materials—
(a) Before being placed into service; and
(b) After any repair, alteration, modification, or suspected contamination.
§ 197.454 First aid and treatment equipment.
The diving supervisor shall ensure that medical kits are checked monthly to insure that all required supplies are present.
§ 197.456 Breathing supply hoses.
(a) The diving supervisor shall insure that—
(1) Each breathing supply hose is pressure tested prior to being placed into initial service and every 24 months thereafter to 1.5 times its maximum working pressure;
(2) Each breathing supply hose assembly, prior to being placed into initial service and after any repair, modification, or alteration, is tensile tested by—
(i) Subjecting each hose-to-fitting connection to a 200 pound axial load; and
(ii) Passing a visual examination for evidence of separation, slippage, or other damage to the assembly;
(3) Each breathing supply hose is periodically checked for—
(i) Damage which is likely to affect pressure integrity; and
(ii) Contamination which is likely to affect the purity of the breathing mixture delivered to the diver; and
(4) The open ends of each breathing supply hose are taped, capped, or plugged when not in use.
(b) To meet the requirements of paragraph (a)(3) of this section, each breathing supply hose must be—
