(f) *Eligible processing plant*. A plant which on examination by the Administrator has been found to be designed, operated, and staffed so as to permit proper samplings and inspections of the naval stores produced thereat, and where a substantial proportion of the output comes from oleoresin obtained from trees growing on land not owned or leased by the processor himself, or from oleoresin contained within felled trees or stumps removed from such land.

(g) *Accredited processor*. Any person owning or having charge of or jurisdiction over the operation of an eligible processing plant, to whom a permit has been issued under these regulations to have inspections of naval stores made by a licensed inspector.

## § 160.2 Spirits of turpentine defined.

Spirits of turpentine, also commonly known as turpentine, is the colorless or faintly colored volatile oil consisting principally of terpene hydrocarbons of the general empirical formula  $C_{10}H_{16}$  and having a characteristic odor and taste. It occurs naturally in and may be recovered by distillation from the oleoresinous secretions obtained from

living trees of the family *Pinaceae*, or present in the cellular structure, or wood, of species thereof.

## § 160.3 Rosin defined.

Except as provided in § 160.15, rosin is the vitreous, well-strained, transparent, solid resin which (a) remains after the volatile terpene oils are distilled from (1) the oleoresin collected from living trees or (2) the oleoresin extracted from wood; or (b) remains after distillation of the fatty acids from tall oil recovered from wood in the course of its chemical disintegration to produce cellulose. In addition to the free resin acids, rosin may contain relatively small proportions of fatty acids, resin esters and other esters, unsaponifiable resenes, and non-resinous foreign matter naturally occurring therein.

## § 160.4 Reclaimed rosin.

Reclaimed rosin is rosin that has been recovered or reclaimed by any means from waste or deteriorated material: *Provided*, That such reclaimed product may be graded as rosin under the act and the provisions in this part only if the concentration of rosin acids therein has not been reduced below the concentration normal for rosin, and any residual or contaminating component remaining from the waste material itself or from any article used in the recovery process is not sufficient to cause the physical or chemical properties of the reclaimed product to differ substantially from the normal properties of rosin.

## § 160.5 Standards for naval stores.

In addition to the standards of identity for spirits of turpentine and rosin and the grade designations for rosin specified in the act, certain standards for naval stores have been promulgated by the Administrator pursuant to the act as indicated in § 160.301 *et seq.*
