§ 433.4 Energy efficiency performance standard.

(a) (1) All Federal agencies shall design new Federal buildings that are commercial and multi-family high-rise residential buildings, for which design for construction began on or after January 3, 2007, but before August 10, 2012, to:

(i) Meet ASHRAE 90.1–2004, (incorporated by reference, see § 433.3); and

(ii) If life-cycle cost-effective, achieve energy consumption levels, calculated consistent with paragraph (b) of this section, that are at least 30 percent below the levels of the ASHRAE Baseline Building 2004.

(2) All Federal agencies shall design new Federal buildings that are commercial and multi-family high-rise residential buildings, for which design for construction began on or after August 10, 2012, to:

(i) Meet ASHRAE 90.1–2007, (incorporated by reference, see § 433.3); and

(ii) If life-cycle cost-effective, achieve energy consumption levels, calculated consistent with paragraph (b) of this section, that are at least 30 percent below the levels of the ASHRAE Baseline Building 2007.

(b) Energy consumption for the purposes of calculating the 30 percent savings shall include space heating, space cooling, ventilation, service water heating, lighting and all other energy consuming systems normally specified as part of the building design except for receptacle and process loads.

(c) If a 30 percent reduction is not life-cycle cost-effective, the design of the proposed building shall be modified so as to achieve an energy consumption level at or better than the maximum level of energy efficiency that is life-cycle cost-effective, but at a minimum complies with paragraph (a) of this section.

§ 433.5 Performance level determination.

(a)(1) For Federal buildings for which design for construction began on or after January 3, 2007, but before August 10, 2012, each Federal agency shall determine energy consumption levels for both the ASHRAE Baseline Building 2004 and proposed building by using the Performance Rating Method found in appendix G of ASHRAE 90.1–2004 (incorporated by reference, see § 433.3), except the formula for calculating the Performance Rating in paragraph G1.2 shall read as follows:

Percentage improvement = \(100 \times \frac{\text{Baseline building consumption} - \text{Proposed building consumption}}{\text{Baseline building consumption} - \text{Receptacle and process loads}}\)

(2) For Federal buildings for which design for construction began on or after August 10, 2012, each Federal agency shall determine energy consumption levels for both the ASHRAE Baseline Building 2007 and proposed building by using the Performance Rating Method found in appendix G of ASHRAE 90.1–2007 (incorporated by reference, see § 433.3), except the formula for calculating the Performance Rating in paragraph G1.2 shall read as follows:

Percentage improvement = \(100 \times \frac{\text{Baseline building consumption} - \text{Proposed building consumption}}{\text{Baseline building consumption} - \text{Receptacle and process loads}}\)
§ 433.6 Percentage improvement = 100 × ((Baseline building consumption – Receptacle and process loads) – (Proposed building consumption – Receptacle and process loads)) / (Baseline building consumption – Receptacle and process loads) (which simplifies as follows):

Percentage improvement = 100 × (Baseline building consumption – Proposed building consumption) / (Baseline building consumption – Receptacle and process loads).

(b) Each Federal agency shall consider laboratory fume hoods and kitchen ventilation systems as part of the ASHRAE-covered HVAC loads subject to the 30 percent savings requirements, rather than as process loads.

§ 433.6 Sustainable principles for siting, design and construction. [Reserved]

§ 433.7 Water used to achieve energy efficiency. [Reserved]

§ 433.8 Life-cycle costing. Each Federal agency shall determine life-cycle cost-effectiveness by using the procedures set out in subpart A of part 436. A Federal agency may choose to use any of four methods, including lower life-cycle costs, positive net savings, savings-to-investment ratio that is estimated to be greater than one, and an adjusted internal rate of return that is estimated to be greater than the discount rate as listed in OMB Circular Number A-94 “Guidelines and Discount Rates for Benefit-Cost Analysis of Federal Programs.”

PART 434—ENERGY CODE FOR NEW FEDERAL COMMERCIAL AND MULTI-FAMILY HIGH RISE RESIDENTIAL BUILDINGS

Subpart A—Administration and Enforcement—General

434.101 Purpose.
434.102 Scope.

Subpart B—Definitions

434.103 Referenced standards (RS).
434.105 Materials and equipment.

Subpart C—Design Conditions

434.201 Definitions.

Subpart D—Building Design Requirements—Electric Systems and Equipment

434.301 Definitions.

Subpart E—Building Energy Cost Compliance Alternative

434.301 General.
434.303 Prototype building procedure.
434.304 Use of the prototype building to determine the energy cost budget.
434.305 Reference building method.
434.306 Use of the reference building to determine the energy cost budget.
434.307 Calculation procedure and simulation tool.
434.308 Determination of the design energy consumption and design energy cost.
434.309 Compliance.
434.310 Standard calculation procedure.
434.311 Orientation and shape.
434.312 Internal loads.
434.313 Occupancy.
434.314 Lighting.
434.315 Receptacles.
434.316 Building exterior envelope.
434.317 HVAC systems and equipment.
434.318 Service water heating.
434.319 Controls.
434.320 Speculative buildings.
434.321 The simulation tool.

Subpart F—Building Energy Compliance Alternative

434.401 Electrical power and lighting systems.
434.402 Building envelope assemblies and materials.
434.403 Building mechanical systems and equipment.
434.404 Building service systems and equipment.

434.401 General.
434.402 Determination of the annual energy budget.
434.403 Prototype building procedure.
434.404 Use of the prototype building to determine the energy cost budget.
434.405 Reference building method.
434.406 Use of the reference building to determine the energy cost budget.
434.407 Calculation procedure and simulation tool.
434.408 Determination of the design energy consumption and design energy cost.
434.409 Compliance.
434.410 Standard calculation procedure.
434.411 Orientation and shape.
434.412 Internal loads.
434.413 Occupancy.
434.414 Lighting.
434.415 Receptacles.
434.416 Building exterior envelope.
434.417 HVAC systems and equipment.
434.418 Service water heating.
434.419 Controls.
434.420 Speculative buildings.
434.421 The simulation tool.

434.501 General.
434.502 Determination of the annual energy budget.
434.503 Prototype building procedure.
434.504 Use of the prototype building to determine the energy cost budget.
434.505 Reference building method.
434.506 Use of the reference building to determine the energy cost budget.
434.507 Calculation procedure and simulation tool.
434.508 Determination of the design energy consumption and design energy cost.
434.509 Compliance.
434.510 Standard calculation procedure.
434.511 Orientation and shape.
434.512 Internal loads.
434.513 Occupancy.
434.514 Lighting.
434.515 Receptacles.
434.516 Building exterior envelope.
434.517 HVAC systems and equipment.
434.518 Service water heating.
434.519 Controls.
434.520 Speculative buildings.
434.521 The simulation tool.

434.601 General.
434.602 Determination of the annual energy budget.
434.603 Determination of the design energy use.
434.604 Compliance.
434.605 Standard calculation procedure.
434.606 Simulation tool.
434.607 Life cycle cost analysis criteria.
