§ 255.2 Consumer endorsements.

(a) An advertisement employing endorsements by one or more consumers about the performance of an advertised product or service will be interpreted as representing that the product or service is effective for the purpose depicted in the advertisement. Therefore, the advertiser must possess and rely upon adequate substantiation, including, when appropriate, competent and reliable scientific evidence, to support such claims made through endorsements in the same manner the advertiser would be required to do if it had made the representation directly, i.e., without using endorsements. Consumer endorsements themselves are not competent and reliable scientific evidence.

(b) An advertisement containing an endorsement relating the experience of one or more consumers on a central or key attribute of the product or service also will likely be interpreted as representing that the endorser’s experience is representative of what consumers will generally achieve with the advertised product or service in actual, albeit variable, conditions of use. Therefore, an advertiser should possess and rely upon adequate substantiation for this representation. If the advertiser does not have substantiation that the endorser’s experience is representative of what consumers will generally achieve, the advertisement should clearly and conspicuously disclose the generally expected performance in the depicted circumstances, and the advertiser must possess and rely upon adequate substantiation for that representation. 105

The Commission tested the communication of advertisements containing testimonials that clearly and prominently disclosed either “Results not typical” or the stronger “These testimonials are based on the experiences of a few people and you are not likely to have similar results.” Neither disclosure adequately reduced the communication that the experiences depicted are
§ 255.2

(c) Advertisements presenting endorsements by what are represented, directly or by implication, to be “actual consumers” should utilize actual consumers in both the audio and video, or clearly and conspicuously disclose that the persons in such advertisements are not actual consumers of the advertised product.

Example 1: A brochure for a baldness-treatment consists entirely of testimonials from satisfied customers who say that after using the product, they had amazing hair growth and their hair is as thick and strong as it was when they were teenagers. The advertiser must have competent and reliable scientific evidence that its product is effective in producing new hair growth.

The ad will also likely communicate that the endorsers’ experiences are representative of what new users of the product can generally expect. Therefore, even if the advertiser includes a disclaimer such as, “Notice: These testimonials do not prove our product works. You should not expect to have similar results,” the ad is likely to be deceptive unless the advertiser has adequate substantiation that new users typically will experience results similar to those experienced by the testimonialists.

Example 2: An advertisement disseminated by a company that sells heat pumps presents endorsements from three individuals who state that after installing the company’s heat pump in their homes, their monthly utility bills went down by $100, $125, and $150, respectively. The ad will likely be interpreted as conveying that such savings are representative of what consumers who buy the company’s heat pump can generally expect. The advertiser does not have substantiation for that representation because, in fact, less than 20% of purchasers will save $100 or more. A disclosure such as, “Results not typical” or, “These testimonials are based on the experiences of a few people and generally representative. Based upon this research, the Commission believes that similar disclaimers regarding the limited applicability of an endorser’s experience to what consumers may generally expect to achieve are unlikely to be effective.

Nonetheless, the Commission cannot rule out the possibility that a strong disclaimer of typicality could be effective in the context of a particular advertisement. Although the Commission would have the burden of proof in a law enforcement action, the Commission notes that an advertiser possessing reliable empirical testing demonstrating that the net impression of its advertisement with such a disclaimer is non-deceptive will avoid the risk of the initiation of such an action in the first instance.
§ 255.3 Expert endorsements.

(a) Whenever an advertisement represents, directly or by implication, that the endorser is an expert with respect to the endorsement message, then the endorser’s qualifications must in fact give the endorser the expertise that he or she is represented as possessing with respect to the endorsement.

(b) Although the expert may, in endorsing a product, take into account factors not within his or her expertise (e.g., matters of taste or price), the endorsement must be supported by an actual exercise of that expertise in evaluating product features or characteristics with respect to which he or she is expert and which are relevant to an ordinary consumer’s use or experience with the product and are available to the ordinary consumer. This evaluation must have included an examination or testing of the product at least as extensive as someone with the same degree of expertise would normally need to conduct in order to support the conclusions presented in the endorsement. To the extent that the advertisement implies that the endorsement was based upon a comparison, such comparison must have been included in the expert’s evaluation; and as a result of such comparison, the expert must have concluded that, with respect to those features on which he or she is expert and which are relevant and available to an ordinary consumer, the endorsed product is at least equal overall to the competitors’ products. Moreover, where the net impression created by the endorsement is that the advertised product is superior to other products with respect to any such feature or features, then the expert must in fact have found such superiority. [See §255.1(d) regarding the liability of endorsers.]

Example 1: An endorsement of a particular automobile by one described as an “engineer” implies that the endorser’s professional training and experience are such that he is well acquainted with the design and offered them free tickets if they would talk about the movie on camera afterwards, that arrangement should be clearly and conspicuously disclosed. [See §255.5.]
