§ 63.2263 Initial compliance demonstration for a hardwood veneer dryer.

If you operate a hardwood veneer dryer, you must record the annual volume percentage of softwood veneer species processed in the dryer as follows:

(a) Use Equation 1 of this section to calculate the annual volume percentage of softwood species dried:

\[ SW_s = \frac{SW}{T} \times 100 \]  

(Eq. 1)

Where:

- \( SW_s \) = annual volume percent softwood species dried;
- \( SW \) = softwood veneer dried during the previous 12 months, thousand square feet (3/8-inch basis);
- \( T \) = total softwood and hardwood veneer dried during the previous 12 months, thousand square feet (3/8-inch basis).

(b) You must designate and clearly identify each hardwood veneer dryer. Submit with the Notification of Compliance Status the annual volume percentage of softwood species dried in the dryer based on your dryer production for the 12 months prior to the compliance date specified for your source in §63.2233. If you did not dry any softwood species in the dryer during the 12 months prior to the compliance date, you may continue to operate without demonstrating compliance.

§ 63.2264 Initial compliance demonstration for a dry rotary dryer.

If you operate a dry rotary dryer, you must demonstrate that your dryer processes furnish with an inlet moisture content of less than or equal to 30 percent (by weight, dry basis) and operates with a dryer inlet temperature of less than or equal to 600 °F. You must designate and clearly identify each dry rotary dryer. You must record the inlet furnish moisture content (dry basis) and inlet dryer operating temperature according to §63.2260(a), (b), and (c) and §63.2270 for a minimum of 30 calendar days. You must submit the highest recorded 24-hour average inlet furnish moisture content and the highest recorded 24-hour average dryer inlet temperature with your Notification of Compliance Status. In addition, you must submit with the Notification of Compliance Status a signed statement by a responsible official that certifies with truth, accuracy, and completeness that the dry rotary dryer will dry furnish with a maximum inlet moisture content less than or equal to 30 percent (by weight, dry basis) and will operate with a maximum inlet temperature of less than or equal to 600 °F in the future.

§ 63.2265 Initial compliance demonstration for a hardwood flake dryer.

If you operate a hardwood flake dryer, you must record the annual volume percentage of softwood species processed in the dryer as follows:

(a) Use Equation 2 of this section to calculate the annual volume percentage of softwood species dried:

\[ SW_s = \frac{SW}{T} \times 100 \]  

(Eq. 2)

Where:

- \( SW_s \) = annual volume percent softwood species dried;
- \( SW \) = softwood veneer dried during the previous 12 months, thousand square feet (3/8-inch basis);
- \( T \) = total softwood and hardwood veneer dried during the previous 12 months, thousand square feet (3/8-inch basis).

(b) If you did not dry any softwood species in the dryer during the 12 months prior to the compliance date specified for your source in §63.2233, you may continue to operate without demonstrating compliance.

§ 63.2266 Initial compliance demonstration for a dry kiln dryer.

If you operate a dry kiln dryer, you must demonstrate that your dryer processes furnish with an inlet moisture content of less than or equal to 30 percent (by weight, dry basis) and operates with a dryer inlet temperature of less than or equal to 600 °F. You must designate and clearly identify each dry kiln dryer. You must record the inlet furnish moisture content (dry basis) and inlet dryer operating temperature according to §63.2260(a), (b), and (c) and §63.2270 for a minimum of 30 calendar days. You must submit the highest recorded 24-hour average inlet furnish moisture content and the highest recorded 24-hour average dryer inlet temperature with your Notification of Compliance Status. In addition, you must submit with the Notification of Compliance Status a signed statement by a responsible official that certifies with truth, accuracy, and completeness that the dry kiln dryer will dry furnish with a maximum inlet moisture content less than or equal to 30 percent (by weight, dry basis) and will operate with a maximum inlet temperature of less than or equal to 600 °F in the future.
