 (b) NOTES: The following notes are referenced in column two of the table contained in paragraph (a) of this section.
 (1) Data are required for Special Review and certain public health situations.
 (2) Data are required for pesticides to be used in forests and natural grasslands. For herbicide used in forest site preparation; the aquatic plant growth tests will be required. Data are required to support products to be used in other locations when any of the following conditions are met:
 (i) Phytotoxicity problems concerning the product arise and open literature data are not available to address the problems.
 (ii) The product may pose hazards to endangered or threatened species.
 (iii) Special Review has been initiated on the product.
 (3) Required if a 25 percent or greater detrimental effect was found on any plant species in the corresponding test of the previous tier.
 (4) Required if a 50 percent or greater detrimental effect was found on any plant species in the corresponding test of the previous tier.

Key: CR=Conditionally required; []=Brackets (ie, [CR]) indicate data requirements that apply to products for which an experimental use permit is being sought; TGAI=Technical grade of the active ingredient; TEP=Typical end-use product.

- (b) NOTES: The following notes are referenced in column two of the table contained in paragraph (a) of this section.
 (1) Required only if proposed use will result in honey bee exposure.
 (2) Required only when formulation contains one or more active ingredients having an acute LD₅₀ of less than 1 microgram/bee.
 (3) This requirement is reserved pending development of test methodology.
 (4) May be required under the following conditions:
 (i) Data from the honey bee subacute feeding study indicate adverse effects on colonies, especially effects other than acute mortality (reproductive, behavioral, etc.).
 (ii) Data from residual toxicity studies indicate extended residual toxicity.
 (iii) Data derived from studies with organisms other than bees indicate properties of the pesticide beyond acute toxicity, such as the ability to cause reproductive or chronic effects.
 (5) This requirement is reserved pending further evaluation to determine what and when data should be required, and to develop appropriate test methods.
