

be kept for at least 1 year and trapping records provided to the NPPO of the Republic of Korea each month. The NPPO of the Republic of Korea must make the records available to APHIS for review upon request.

(c) *Packinghouse procedures.* The tomatoes must be packed within 24 hours of harvest in a pest-exclusionary packinghouse. During the time the packinghouse is in use for exporting tomatoes to the United States, the packinghouse may only accept tomatoes from registered pest-exclusionary structures. A random sample of fruit per lot, as determined by the NPPO of the Republic of Korea and agreed to by APHIS, must be inspected for external pests and the fruit must be cut to reveal internal pests. Each sample must be of sufficient size in order to detect pest infestations. Any damaged, diseased, or infested fruit should be removed and separated from the commodity destined for export. The tomatoes must be safeguarded by an insect-proof mesh, screen, or plastic tarpaulin while in transit from the production site to the packinghouse and while awaiting packing. The tomatoes must be packed in insect-proof cartons or containers, or covered with insect-proof mesh or plastic tarpaulin, for transit to the United States. These safeguards must remain intact until the arrival of the tomatoes in the United States or the consignment will not be allowed to enter the United States.

(d) *Commercial consignments.* Tomatoes with stems from the Republic of Korea may be imported in commercial consignments only.

(e) *Phytosanitary certificate.* Each consignment of tomatoes must be accompanied by a phytosanitary certificate of inspection issued by the NPPO of the Republic of Korea bearing the following additional declaration: “Tomatoes in this consignment were grown in pest-exclusionary structures in accordance with 7 CFR 319.56–52 and were inspected and found free from *Bactrocera depressa*, *Heliocoverpa armigera*, *Heliocoverpa assulta*, *Mamestra brassicae*, *Ostrinia furnacalis*, *Scirtothrips dorsalis*, and *Thrips palmi*.”

§ 319.56–53 Fresh baby kiwi from Chile.

Fresh baby kiwi (*Actinidia arguta*) may be imported into the continental United States from Chile under the following conditions:

(a) *Production site registration.* The production site where the fruit is grown must be registered with the national plant protection organization (NPPO) of Chile. Harvested baby kiwi must be placed in field cartons or containers that are marked to show the official registration number of the production site. Registration must be renewed annually.

(b) *Low-prevalence production site certification.* The fruit must originate from a low-prevalence production site to be imported under the conditions in this section. Between 1 and 30 days prior to harvest, random samples of fruit must be collected from each registered production site under the direction of the NPPO of Chile. These samples must undergo a pest detection and evaluation method as follows: The fruit must be washed using a flushing method, placed in a 20-mesh sieve on top of a 200-mesh sieve, sprinkled with a liquid soap and water solution, washed with water at high pressure, and washed with water at low pressure. The process must then be repeated. The contents of the 200-mesh sieve must then be placed on a petri dish and analyzed for the presence of live *Brevipalpus chilensis* mites. If a single live *B. chilensis* mite is found, the production site will not qualify for certification as a low-prevalence production site. Each production site may have only one opportunity per season to qualify as a low-prevalence production site, and certification of low prevalence will be valid for one harvest season only. The NPPO of Chile will present a list of certified production sites to APHIS.

(c) *Post-harvest processing.* After harvest, all damaged or diseased fruits must be culled at the packinghouse and must be packed into new, clean boxes, crates, or other APHIS-approved packing containers. Each container must have a label identifying the registered production site where the fruit originated and the packing shed where it was packed.

(d) *Phytosanitary inspection.* Fruit must be inspected in Chile at an APHIS-approved inspection site under the direction of APHIS inspectors in coordination with the NPPO of Chile following any post-harvest processing. A biometric sample must be drawn and examined from each consignment. Baby kiwi in any consignment may be shipped to the continental United States under the conditions of this section only if the consignment passes inspection as follows:

(1) Fruit presented for inspection must be identified in the shipping documents accompanying each lot of fruit to specify the production site or sites in which the fruit was produced and the packing shed or sheds in which the fruit was processed. This identification must be maintained until the fruit is released for entry into the United States.

(2) A biometric sample of the boxes, crates, or other APHIS-approved packing containers from each consignment will be selected by the NPPO of Chile, and the fruit from these boxes, crates, or other APHIS-approved packing containers will be visually inspected for quarantine pests. A portion of the fruit must be washed with soapy water and the collected filtrate must be microscopically examined for *B. chilensis*. If a single live *B. chilensis* mite is found during the inspection process, the certified low-prevalence production site where the fruit was grown will lose its certification.

(e) *Phytosanitary certificate.* Each consignment of fresh baby kiwi must be accompanied by a phytosanitary certificate issued by the NPPO of Chile that contains an additional declaration stating that the fruit in the consignment was inspected and found free of *Brevipalpus chilensis* and was grown, packed, and shipped in accordance with the requirements of 7 CFR 319.56–53.

[76 FR 65934, Oct. 25, 2011]

§ 319.56–54 French beans and runner beans from Kenya.

French beans (*Phaseolus vulgaris* L.) and runner beans (*Phaseolus coccineus* L.) may be imported into the United States from Kenya only under the con-

ditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: *Bactrocera cucurbitae*, *Chrysodeixis chalcites*, *Dacus ciliatus*, *Helicoverpa armigera*, *Lampides boeticus*, *Liriomyza huidobrensis*, *Maconellicoccus hirsutus*, *Maruca vitrata*, *Spodoptera littoralis*, and *Thaumatotibia leucotreta*.

(a) *Packinghouse requirements.* The beans must be packed in packing facilities that are approved and registered with Kenya's national plant protection organization (NPPO). Each shipping box must be marked with the identity of the packing facility.

(b) *Post-harvest processing.* The beans must be washed in potable water. Each bean pod must be either cut into chevrons or pieces that do not exceed 2 centimeters in length, or shredded or split the length of the bean pod. Split or shredded bean pod pieces may not exceed 8 centimeters in length and 8.5 millimeters in diameter.

(c) *Commercial consignments.* French beans and runner beans must be imported as commercial consignments only.

(d) *Phytosanitary certificate.* Each consignment of French beans or runner beans must be accompanied by a phytosanitary certificate issued by Kenya's NPPO attesting that the conditions of this section have been met and that the consignment has been inspected and found free of the pests listed in this section.

[76 FR 68058, Nov. 3, 2011]

§ 319.56–55 Fresh pitaya from certain Central American countries.

Fresh pitaya fruit (*Hylocereus* spp.) may be imported into the United States from Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama in accordance with the conditions described in this section. These conditions are designed to prevent the introduction of the following quarantine pests: *Anastrepha ludens*, *Ceratitis capitata*, *Dysmicoccus neobrevipes*, and *Planococcus minor*.

(a) *Monitoring and oversight.* (1) The national plant protection organization (NPPO) of the exporting country must
