§ 95.29 Certification for certain materials.

(a) In addition to meeting any other certification or permit requirements of this chapter, the following articles may be imported into the United States from any region not listed in §94.18(a) only if they are accompanied by a certificate, as described in paragraph (b) of this section:

1. Processed animal protein, tankage, offal, and tallow other than tallow derivatives, unless, in the opinion of the Administrator, the tallow cannot be used in feed, regardless of the animal species from which the material is derived;

2. Glands and unprocessed fat tissue derived from ruminants;

3. Processed fats and oils, and derivatives of processed animal protein, tankage, and offal, regardless of the animal species from which the material is derived;

4. Derivatives of glands from ruminants; and

5. Any product containing any of the materials listed in paragraphs (a)(1) through (a)(4) of this section.

(b) The certificate required by paragraph (a) of this section must be an original official certificate, signed by a full-time, salaried veterinarian of the agency responsible for animal health in the exporting region, that states the following:

1. The animal species from which the material was derived;

2. The region in which any facility where the material was processed is located;

3. The region in which any facility where the material was derived is located;

4. The region in which any facility where the material was subjected to any treatment is located;

5. The region in which any facility where the material was submitted to any examination is located;

6. The region in which any facility where the material was stored is located;

7. The region in which any facility where the material was shipped is located;

8. The region in which any facility where the material was produced is located;

9. The region in which any facility where the material was grown is located;

10. The region in which any facility where the material was collected is located;

11. The region in which any facility where the material was prepared is located;

12. The region in which any facility where the material was processed is located;

13. The region in which any facility where the material was manufactured is located;

14. The region in which any facility where the material was assembled is located;

15. The region in which any facility where the material was packaged is located;

16. The region in which any facility where the material was shipped is located;

17. The region in which any facility where the material was sold is located;

18. The region in which any facility where the material was consigned is located;

19. The region in which any facility where the material was delivered is located;

20. The region in which any facility where the material was transported is located.

5Due to the extreme caustic nature of sodium hydroxide solution, precautionary measures such as the wearing of rubber gloves, boots, raincoat and goggles should be observed. An acid solution such as vinegar shall be kept readily available in case any of the sodium hydroxide solution should come in contact with the body.
