§ 850.12 Implementation.
(a) The responsible employer must manage and control beryllium exposures in all DOE beryllium activities consistent with the approved CBDPP.
(b) No person employed by DOE or a DOE contractor may take or cause any action inconsistent with the requirements of:
(1) This part,
(2) An approved CBDPP, and
(3) Any other Federal statute or regulation concerning the exposure of workers to beryllium at DOE facilities.
(c) No task involving potential exposure to airborne beryllium that is outside the scope of the existing CBDPP may be initiated until an update of the CBDPP is approved by the Head of DOE Field Element, except in an unexpected situation and, then, only upon approval of the Head of DOE Field Element.
(d) Nothing in this part precludes a responsible employer from taking any additional protective action that it determines to be necessary to protect the health and safety of workers.
(e) Nothing in this part affects the responsibilities of DOE officials under the Federal Employee Occupational Safety and Health Program (29 CFR part 1900) and related DOE directives.

§ 850.20 Baseline beryllium inventory.
(a) The responsible employer must develop a baseline inventory of the locations of beryllium operations and other locations of potential beryllium contamination, and identify the workers exposed or potentially exposed to beryllium at those locations.
(b) In conducting the baseline inventory, the responsible employer must:
(1) Review current and historical records;
(2) Interview workers;
(3) Document the characteristics and locations of beryllium at the facility; and
(4) Conduct air, surface, and bulk sampling.
(c) The responsible employer must ensure that:
(1) The baseline beryllium inventory is managed by a qualified individual (e.g., a certified industrial hygienist); and
(2) The individuals assigned to this task have sufficient knowledge and experience to perform such activities properly.

§ 850.21 Hazard assessment.
(a) If the baseline inventory establishes the presence of beryllium, the responsible employer must conduct a beryllium hazard assessment that includes an analysis of existing conditions, exposure data, medical surveillance trends, and the exposure potential of planned activities. The exposure determinants, characteristics and exposure potential of activities must be prioritized so that the activities with the greatest risks of exposure are evaluated first.
(b) The responsible employer must ensure that:
(1) The hazard assessment is managed by a qualified individual (e.g., a certified industrial hygienist); and
(2) The individuals assigned to this task have sufficient knowledge and experience to perform such activities properly.

§ 850.22 Permissible exposure limit.
The responsible employer must assure that no worker is exposed to an
