§ 10.594 Originating goods.

Except as otherwise provided in this subpart and General Note 29(m), HTSUS, a good imported into the customs territory of the United States will be considered an originating good under the CAFTA-DR only if:

(a) The good is wholly obtained or produced entirely in the territory of one or more of the Parties;

(b) The good is produced entirely in the territory of one or more of the Parties and:

(1) Each non-originating material used in the production of the good undergoes an applicable change in tariff classification specified in General Note 29(n), HTSUS, and the good satisfies all other applicable requirements of General Note 29, HTSUS; or

(2) The good otherwise satisfies any applicable regional value content or other requirements specified in General Note 29(n), HTSUS, and satisfies all other applicable requirements of General Note 29, HTSUS; or

(c) The good is produced entirely in the territory of one or more of the Parties exclusively from originating materials.

§ 10.595 Regional value content.

(a) General. Except for goods to which paragraph (d) of this section applies, where General Note 29(n), HTSUS, sets forth a rule that specifies a regional value content test for a good, the regional value content of such good must be calculated by the importer, exporter, or producer of the good on the basis of the build-down method described in paragraph (b) of this section or the build-up method described in paragraph (c) of this section.

(b) Build-down method. Under the build-down method, the regional value content must be calculated on the basis of the formula \[ RVC = \left( \frac{AV - VNM}{AV} \right) \times 100 \], where RVC is the regional value content, expressed as a percentage; AV is the adjusted value of the good; and VNM is the value of non-originating materials that are acquired and used by the producer in the production of the good, but does not include the value of a material that is self-produced.

(c) Build-up method. Under the build-up method, the regional value content must be calculated on the basis of the formula \[ RVC = \left( \frac{VOM}{AV} \right) \times 100 \], where RVC is the regional value content, expressed as a percentage; AV is the adjusted value of the good; and VOM is the value of originating materials that are acquired or self-produced and used by the producer in the production of the good.

(d) Special rule for certain automotive goods—(1) General. Where General Note 29(n), HTSUS, sets forth a rule that specifies a regional value content test for an automotive good provided for in any of subheadings 8407.31 through 8407.34, subheading 8408.20, heading 8409, or headings 8701 through 8708, HTSUS, the regional value content of such good may be calculated by the importer, exporter, or producer of the good on the basis of the net cost method described in paragraph (d)(2) of this section.
