Food and Drug Administration, HHS

§ 520.23 Acepromazine.

(a) Specifications. Each tablet contains 5, 10, or 25 milligrams (mg) acepromazine maleate.

(b) Sponsors. See No. 000010 in §510.600(c) of this chapter.

(c) Conditions of use. (1) Dogs—(i) Amount. 0.25 to 1.0 mg per pound (/lb) body weight orally.

(ii) Indications for use. As an aid in tranquilization and as a preanesthetic agent.

(iii) Limitations. Federal law restricts this drug to use by or on the order of a licensed veterinarian.

(2) Cats—(i) Amount. 0.5 to 1.0 mg/lb body weight orally.

(ii) Indications for use. As a tranquilizer.

(iii) Limitations. Federal law restricts this drug to use by or on the order of a licensed veterinarian.

[75 FR 10165, Mar. 5, 2010]

§ 520.28 Acetazolamide sodium soluble powder.

(a) Specifications. The drug is in a powder form containing acetazolamide sodium, USP equivalent to 25 percent acetazolamide activity.

(b) Sponsor. See No. 053501 in §510.600(c) of this chapter.

(c) Conditions of use. (1) It is used in dogs as an aid in the treatment of mild congestive heart failure and for rapid reduction of intraocular pressure.1

(2) It is administered orally at a dosage level of 5 to 15 milligrams per pound of body weight daily.1

(3) For use only by or on the order of a licensed veterinarian.1

§ 520.38 Albendazole oral dosage forms.

§ 520.38a Albendazole suspension.

(a) Specifications. Each milliliter of suspension contains 45.5 milligrams

[1]These conditions are NAS/NRC reviewed and deemed effective. Applications for these uses need not include effectiveness data as specified by §514.111 of this chapter, but may require bioequivalency and safety information.
\(§ 520.38b\) 

\section*{Albendazole paste.}

\begin{itemize}
  \item [(a)] \textbf{Specifications.} The product contains 30 percent albendazole.
  \item [(b)] \textbf{Sponsor.} See No. 000069 in §510.600 of this chapter.
  \item [(c)] \textbf{Related tolerances.} See §556.34 of this chapter.
\end{itemize}

\section*{Conditions of use in cattle}

\begin{enumerate}
  \item [(1)] \textbf{Amount.} 4.54 mg/lb body weight (10 mg/kg) as a single oral dose using dosing gun or dosing syringe.
  \item [(ii)] \textbf{Indications for use.} For removal and control of the following internal parasites of cattle: adult liver flukes (\textit{Fasciola hepatica}); heads and segments of tapeworms (\textit{Moniezia benedeni} and \textit{M. expansa}); adult and 4th stage larvae of stomach worms (brown stomach worms including 4th stage inhibited larvae (\textit{Ostertagia ostertagi}), barberpole worm (\textit{Haemonchus contortus} and \textit{H. placei}), small stomach worm (\textit{Trichostrongylus axei}); adult and 4th stages larvae of intestinal worms (\textit{Nematodirus spathiger} and \textit{N. helvetianus}), small intestinal worm (\textit{Cooperia punctata} and \textit{C. oncophora})); adult and fourth stage larvae of intestinal worms (\textit{Trichostrongylus axei}); adult and fourth stage larvae of intestinal worms (\textit{Trichostrongylus colubriformis}), nodular worm (\textit{Oesophagostomum columbianum}), and large-mouth bowl worm (\textit{Chabertia ovina}); adult and larval stages of lungworms (\textit{Dictyocaulus filaria}).
  \item [(iii)] \textbf{Limitations.} Do not slaughter within 7 days of last treatment. Do not administer to ewes during first 30 days of pregnancy or for 30 days after removal of rams.
\end{enumerate}

\section*{Goats}

\begin{itemize}
  \item [(3)] \textbf{Amount.} 11.36 percent suspension:
    \begin{enumerate}
      \item [(i)] \textbf{Indications for use.} For removal and control of adult liver flukes (\textit{Fasciola hepatica}); heads and segments of tapeworms (\textit{Moniezia benedeni} and \textit{M. expansa}); adult and 4th stage larvae of stomach worms (brown stomach worms including 4th stage inhibited larvae (\textit{Ostertagia ostertagi}), barberpole worm (\textit{Haemonchus contortus} and \textit{H. placei}), small stomach worm (\textit{Trichostrongylus axei}); adult and 4th stages larvae of intestinal worms (\textit{Nematodirus spathiger} and \textit{N. helvetianus}), small intestinal worm (\textit{Cooperia punctata} and \textit{C. oncophora})); adult and fourth stage larvae of intestinal worms (\textit{Trichostrongylus axei});
\end{enumerate}

\section*{Sheep}

\begin{itemize}
  \item [(2)] \textbf{Amount.} 3.4 mg/lb body weight (7.5 mg/kg) as a single oral dose using dosing gun or dosing syringe.
  \item [(i)] \textbf{Indications for use.} For removal and control of adult liver flukes (\textit{Fasciola hepatica} and \textit{Fascioloides magna}); heads and segments of common tapeworms (\textit{Moniezia expansa}) and fringed tapeworm (\textit{Thysanosoma actinioideis}); adult and fourth stage larvae of stomach worms (brown stomach worm (\textit{Ostertagia circumcincta} and \textit{Marshallagia marshalli}), barberpole worm (\textit{Haemonchus contortus}), small stomach worm (\textit{Trichostrongylus axei})); adult and fourth stage larvae of intestinal worms (\textit{Trichostrongylus colubriformis}), nodular worm (\textit{Oesophagostomum columbianum}), and large-mouth bowl worm (\textit{Chabertia ovina})); adult and larval stages of lungworms (\textit{Dictyocaulus filaria}).
\end{itemize}
