conference. This paragraph does not apply to airborne contaminants given a "C" designation by the conference in the document. This document is available for examination at the Mine Safety and Health Administration, Department of Labor, 1100 Wilson Blvd., Room 2424, Arlington, Virginia 22209–3939; at every MSHA Coal Mine Safety and Health district office; at the National Institute for Occupational Safety and Health, 5600 Fishers Lane, Rockville, MD; and at the Public Health Service Information Centers listed in 45 CFR 5.31. Copies of the document may be purchased from American Conference of Governmental Industrial Hygienists, 1330 Kemper Meadow Drive, Attn: Customer Service, Cincinnati, OH 45240; http://www.acgih.org.

(b) All persons, including employees, shall be withdrawn from any area in which there is a concentration of an airborne contaminant given a "C" designation by the Conference which exceeds the threshold limit value (ceiling "C" limit) listed for that contaminant.

§ 71.702 Asbestos standard.

(a) Definitions. Asbestos is a generic term for a number of asbestiform hydrated silicates that, when crushed or processed, separate into flexible fibers made up of fibrils. Asbestos means chrysotile, cummingtonite-grunerite asbestos (amosite), crocidolite, anthophylite asbestos, tremolite asbestos, and actinolite asbestos. Asbestos fiber means a fiber of asbestos that meets the criteria of a fiber. Fiber means a particle longer than 5 micrometers (μm) with a length-to-diameter ratio of at least 3-to-1.

(b) Permissible Exposure Limits (PELs)—(1) Full-shift limit. A miner's personal exposure to asbestos shall not exceed an 8-hour time-weighted average full-shift airborne concentration of 0.1 fiber per cubic centimeter of air (f/cc).

(2) Excursion limit. No miner shall be exposed at any time to airborne concentrations of asbestos in excess of 1 fiber per cubic centimeter of air (f/cc) as averaged over a sampling period of 30 minutes.

(c) Measurement of airborne asbestos fiber concentration. Potential asbestos fiber concentration shall be determined by phase contrast microscopy (PCM) using the OSHA Reference Method in OSHA’s asbestos standard found in 29 CFR 1910.1001, Appendix A, or a method at least equivalent to that method in identifying a potential asbestos exposure exceeding the 0.1 f/cc full-shift
30 CFR Ch. 1 (7–1–14 Edition)

PART 72—HEALTH STANDARDS FOR COAL MINES

Subpart A—General

Sec. 72.1 Scope.
The health standards in this part apply to all coal mines.

Subpart B—Medical Surveillance

72.100 Periodic examinations.

(a) Each operator of a coal mine shall provide to each miner periodic examinations including chest x-rays, spirometry, symptom assessment, and occupational history at a frequency specified in this section and at no cost to the miner.

(1) Each operator shall use facilities approved by the National Institute for Occupational Safety and Health (NIOSH) to provide examinations specified in paragraph (a) of this section.

(2) The results of examinations or tests made pursuant to this section shall be furnished only to the Secretary, Secretary of Health and Human Services (HHS), and at the request of the miner, to the miner’s designated physician.

(b) Voluntary examinations. Each operator shall provide the opportunity to have the examinations specified in §72.100 at least every 5 years to all miners employed at a coal mine. The examinations shall be available during a 6-month period that begins no less than 3.5 years and not more than 4.5 years from the end of the last 6-month period.

(c) Mandatory examinations. For each miner who begins work at a coal mine for the first time, the operator shall provide examinations specified in §72.100(a) as follows:

(1) An initial examination no later than 30 days after beginning employment;

(2) A follow-up examination no later than 3 years after the initial examination in paragraph (c)(1); and

AUTHORITY: 30 U.S.C. 811, 813(h), 957.
SOURCE: 59 FR 8327, Feb. 18, 1994, unless otherwise noted.

Subpart E—Miscellaneous

72.610 Abrasive blasting.

72.620 Drill dust control at surface mines and surface areas of underground mines.

72.630 Drill dust control at underground mines.

72.700 Respiratory equipment; respirable dust.

72.701 Respiratory equipment; gas, dusts, fumes, or mists.

72.710 Selection, fit, use, and maintenance of approved respirators.

72.800 Single, full-shift measurement of respirable coal mine dust.

AUTHORITY: 30 U.S.C. 811, 813(h), 957.

EFFECTIVE DATE NOTE: At 79 FR 24986, May 1, 2014, Subpart E was added, effective Aug. 1, 2014.

§ 72.100 Periodic examinations.

(a) Each operator of a coal mine shall provide to each miner periodic examinations including chest x-rays, spirometry, symptom assessment, and occupational history at a frequency specified in this section and at no cost to the miner.

(1) Each operator shall use facilities approved by the National Institute for Occupational Safety and Health (NIOSH) to provide examinations specified in paragraph (a) of this section.

(2) The results of examinations or tests made pursuant to this section shall be furnished only to the Secretary, Secretary of Health and Human Services (HHS), and at the request of the miner, to the miner’s designated physician.

(b) Voluntary examinations. Each operator shall provide the opportunity to have the examinations specified in §72.100 at least every 5 years to all miners employed at a coal mine. The examinations shall be available during a 6-month period that begins no less than 3.5 years and not more than 4.5 years from the end of the last 6-month period.

(c) Mandatory examinations. For each miner who begins work at a coal mine for the first time, the operator shall provide examinations specified in §72.100(a) as follows:

(1) An initial examination no later than 30 days after beginning employment;

(2) A follow-up examination no later than 3 years after the initial examination in paragraph (c)(1); and
