§ 197.332 PVHO—Decompression chambers.

Each decompression chamber must—
(a) Meet the requirements of §197.328;
(b) Have internal dimensions sufficient to accommodate a diver lying in a horizontal position and another person tending the diver;
(c) Have a capability for ingress and egress of personnel and equipment while the occupants are under pressure;
(d) Have a means of operating all installed man-way locking devices, except disabled shipping dogs, from both sides of a closed hatch;
(e) Have interior illumination sufficient to allow visual observation, diagnosis, and medical treatment of an occupant.
(f) Have one bunk for each two occupants;
(g) Have a capability that allows bunks to be seen over their entire lengths from the exterior;
(h) Have a minimum pressure capability of—

(1) 6 ATA, when used for diving to 300 fsw; or
(2) The maximum depth of the dive, when used for diving operations deeper than 300 fsw, unless a closed bell meeting the requirements of §197.330(a) (3), (4), and (5) is used;
(i) Have a minimum pressurization rate of 2 ATA per minute to 60 fsw and at least 1 ATA per minute thereafter;
(j) Have a decompression rate of 1 ATA per minute to 33 fsw;
(k) Have an external pressure gage for each pressurized compartment;
(l) Have a capability to supply breathing mixtures at the maximum rate required by each occupant doing heavy work; and
(m) Have a sound-powered headset or telephone as a backup to the communications system required by §197.328(c) (5) and (6), except when that communications system is a sound-powered system.

§ 197.334 Open diving bells.

Each open diving bell must—
(a) Have an upper section that provides an envelope capable of maintaining a bubble of breathing mixture available to a diver standing on the lower section of the platform with his body through the open bottom and his head in the bubble;
(b) Have lifting equipment capable of returning the occupied open bell to the dive location;
(c) Have an umbilical; and
(d) Be—(1) Made of corrosion-resisting material; or
(2) Protected against and maintained free from injurious corrosion.

§ 197.336 Pressure piping.

Piping systems that are not an integral part of the vessel or facility, carrying fluids under pressures exceeding 15 psig must—
(a) Meet the ANSI Code;
(b) Have the point of connection to the integral piping system of the vessel or facility clearly marked; and
(c) Be tested after every repair, modification, or alteration to the pressure boundaries as set forth in §197.462.

§ 197.338 Compressed gas cylinders.

Each compressed gas cylinder must—
(a) Be stored in a ventilated area;
