SUBCHAPTER A—COMMODITY STANDARDS AND STANDARD CONTAINER REGULATIONS

PART 27—COTTON CLASSIFICATION UNDER COTTON FUTURES LEGISLATION

Subpart A—Regulations

DEFINITIONS

Sec.
27.1 Meaning of words.
27.2 Terms defined.

GENERAL

27.3 Requirements of subsection 15b(f) of the Act.
27.4 Obligations and rights under Act: not affected by regulations.
27.5 Effect of amendments.

ADMINISTRATION

27.8 Director.
27.9 Classing Offices; Quality Assurance Division.
27.10 Supervision of cotton inspection, weighing, sampling; and other duties.
27.11 Area Director, Marketing Services Office; responsibility.

CLASSIFICATION REQUESTS

27.12 Classification request for each lot of cotton.
27.13 Micronaire determination request incidental to classification request.
27.14 Filing of classification requests.
27.15 Withdrawal or rejection of classification or Micronaire determination requests.

INSPECTION AND SAMPLES

27.16 Inspection; weighing; samples; supervision.
27.18 Persons not to be employed for inspection or sampling.
27.20 Drawing and handling of samples of cotton; inspection of bales.
27.22 Wrapping and marking of samples of cotton.
27.23 Duplicate sets of samples of cotton.
27.24 Delivery of samples of cotton.
27.25 Additional samples of cotton; drawing.
27.26 Disposition of samples.

CLASSIFICATION AND MICRONAIRE DETERMINATIONS

27.31 Classification of cotton.
27.32 Order of classification.
27.33 Exposing of samples for classification.
27.34 Classification procedure.
27.35 Lower class of two samples to prevail.
27.36 Classification and Micronaire determinations based on official standards.
27.37 Cotton reduced in grade.
27.38 Terms defined for purposes of classification.

COTTON CLASS CERTIFICATES

27.39 Issuance of classification records.
27.40 New certificates; conditions of issuance.
27.41 Lost certificate; duplicate.
27.42 Surrender of certificate.
27.43 Validity of cotton class certificates.
27.44 Invalidity of cotton class certificates.
27.45 No storage of cotton for classification at disapproved place.
27.46 Cotton withdrawn from storage.
27.47 Tender or delivery of cotton; conditions.

DELAYED CERTIFICATION

27.52 Delivery without certification.
27.53 Notice for delayed certification; requirements.
27.54 Inspection and sampling for delayed certification.
27.55 Requirements in lieu of cotton class certificates on delivery day.

POSTPONED CLASSIFICATION

27.57 Request for postponement.
27.58 Postponed classification; must be within 30 days.
27.59 Postponed classification; interference.
27.60 When original request deemed withdrawn.
27.61—27.72 [Reserved]

TRANSFERS OF COTTON

27.73 Supervision of transfers of cotton.

COSTS OF CLASSIFICATION AND MICRONAIRE

27.80 Fees; review classification, futures classification and supervision.
27.81 Fees; certificates.
27.83 No fees for certain certificates.
27.85 Fees; withdrawn requests or applications.
27.87 Fees; classification and Micronaire determination information.
27.89 Expenses; inspection; sampling.
27.90 Bills for payment of fees and expenses.
27.91 Advance deposit may be required.
27.92 Method of payment: advance deposit.

SPOT MARKETS

27.93 Bona fide spot markets.
27.94 Spot markets for contract settlement purposes.
§ 27.1

PRICE QUOTATIONS AND DIFFERENCES

27.95 Spot markets to conform to Act and regulations.
27.96 Quotations in bona fide spot markets.
27.97 Ascertaining the accuracy of price quotations.
27.98 Value of grade where no sale; determination.
27.99 Values; expression.
27.100 Administration.

CROSS REFERENCE: For regulations relating to cotton classing, testing, and standards, and cottonseed sold or offered for sale for crushing purposes, see parts 28 and 61 of this chapter.

Subpart A—Regulations

DEFINITIONS

§ 27.1 Meaning of words.

Words used in this subpart in the singular form shall be deemed to import the plural and vice versa, as the case may demand.

§ 27.2 Terms defined.

As used throughout this subpart, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

(b) Department. The United States Department of Agriculture.
(c) Service. The Agricultural Marketing Service of the Department.
(d) Administrator. The Administrator of the Service, or any officer or employee of the Service, to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in the Administrator’s stead.
(e) Cotton Division. The Cotton Division of the Service.
(f) Director. The Director of the Cotton Division, or any officer or employee of the Division to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated to act in the Director’s stead.
(g) Marketing Services Office. A facility of the Cotton Division established under the Act at any point.
(h) Quality Assurance Division. The Quality Assurance Division at Memphis, Tennessee; shall provide supervision of futures cotton classification.
(i) Exchange. Exchange, board of trade, or similar institution or place of business, at, on, or in which a basis grade contract may be made.
(j) Exchange inspection agency. The inspection agency of the New York Cotton Exchange, the New Orleans Cotton Exchange, the Board of Trade of the city of Chicago, or of any other exchange which may have an organized inspection agency recognized as such by the Director, as the case may be.
(k) Basis grade contract. Contract of sale of cotton for future delivery mentioned in the Act, made at, on, or in any exchange in compliance with subsection 15b(f) of the Act.
(l) Person. Individual, association, partnership, or corporation.
(m) Owner. Person who owns, controls, or has the disposition of any cotton.
(n) Classification. The classification of any cotton shall be determined by the quality of a sample in accordance with the Universal Cotton Standards (the official cotton standards of the United States) for cotton property measurements of American Upland cotton. High Volume Instruments will determine all cotton property measurements except extraneous matter. Cotton classifiers authorized by the Cotton and Tobacco Program will determine the presence of extraneous matter. Original Smith-Doxey data may serve as certification that bales submitted for quality verification meet quality and age parameters set by an applicable exchange inspection agency as a futures classification option.
(o) Micronaire determination. The measure of the fiber fineness and maturity of cotton, in combination, in terms of Micronaire readings as determined by an authorized employee of the Department in accordance with the official cotton standards of the United States for fiber fineness and maturity.
(p) Smith-Doxey data. Data reflecting the original classification of a cotton bale provided to producers of cotton.
Agricultural Marketing Service, USDA

GENERAL

§ 27.3 Requirements of subsection 15b(f) of the Act.

The inspection, sampling, classification, and Micronaire determination of cotton pursuant to subsection 15b(f) of the Act shall be performed as prescribed in this subpart. All tenders of cotton and settlements therefor under basis grade contracts shall be made subject to the regulations in this subpart. No contract shall for the purposes of this subpart be deemed to comply with subsection 15b(f) of the Act if it contain or incorporate therein, by reference or otherwise, any provision or any bylaw, rule, or custom of an exchange which is inconsistent or in conflict with any requirement of said subsection 15b(f), nor if the parties enter into any collateral or additional agreement or understanding, either verbal or written, respecting the subject matter of such contract which is inconsistent or in conflict with any requirement of said subsection 15b(f).

[42 FR 40677, Aug. 11, 1977]

§ 27.4 Obligations and rights under Act: not affected by regulations.

Nothing in this subpart shall be construed as relieving any party to a basis grade contract of any obligation imposed upon the party, or as depriving the party of any right to which the party might be entitled under any provision of the contract or exchange rule made a part thereof which shall not be inconsistent with the act or the regulations made under the Act.

[48 FR 49210, Oct. 25, 1983]

§ 27.5 Effect of amendments.

Any amendment to this subpart, unless otherwise stated therein, shall apply to all tenders of cotton and settlements therefor made on and after the effective date of such amendment, under basis grade contracts entered into prior, as well as subsequent, to such effective date.

ADMINISTRATION

§ 27.8 Director.

The Director shall perform for and under the supervision of the Administrator, such duties as the Administrator may require in enforcing the provisions of the Act and this subpart.

§ 27.9 Classing Offices; Quality Assurance Division.

Classing Offices shall be maintained at points designated for the purpose by the Administrator. The Quality Assurance Division shall provide supervision of futures cotton classification and perform other duties as assigned by the Deputy Administrator.

[77 FR 5380, Feb. 3, 2012]

§ 27.10 Supervision of cotton inspection, weighing, sampling; and other duties.

Authorized employees of the Cotton Division will act, when necessary, as supervisors of cotton inspection to supervise the inspection, weighing, and sampling of cotton to be classified and will perform such other duties as may be required of them for the purposes of this subpart.

[26 FR 1656, Feb. 25, 1961]

§ 27.11 Area Director, Marketing Services Office; responsibility.

Subject to this subpart and the Instructions of the Director, the Area Director of each Marketing Services Office shall be responsible for the proper performance of the duties imposed on such office and on the persons connected therewith.

[48 FR 49210, Oct. 25, 1983]

CLASSIFICATION REQUESTS

§ 27.12 Classification request for each lot of cotton.

For each lot or mark of cotton of which the applicant desires separate classification and certification, the applicant shall make a separate written request in a form prescribed or supplied...
§ 27.13 Micronaire determination request incidental to classification request.

The classification request may include a request for Micronaire determination.

§ 27.14 Filing of classification requests.

Requests for futures classification shall be filed with the Quality Assurance Division within 10 days after sampling and before classification of the samples.

§ 27.15 Withdrawal or rejection of classification or Micronaire determination requests.

Any request for classification or for Micronaire determination may be withdrawn by the applicant at any time before the classification or Micronaire determination of the cotton covered thereby, subject to the payment of such fees, if any, as may be prescribed under §§ 27.80 to 27.92. Any request for classification or for Micronaire determination may be rejected for noncompliance with the act or this subpart.

INSPECTION AND SAMPLES

§ 27.16 Inspection; weighing; samples; supervision.

The inspection, weighing, and sampling of cotton for which classification is desired and the preparation and delivery of samples to the Marketing Services Office shall be (a) under the supervision of a supervisor of cotton inspection, or (b) by or under the direction of an exchange inspection agency and subject to the supervision of a supervisor of cotton inspection.

§ 27.18 Persons not to be employed for inspection or sampling.

No person shall, after notice to the interested parties, be employed in any way in connection with any phase of the inspection and sampling of cotton or the preparation of the samples thereof, for the purposes of classification under this subpart, who for good cause is disapproved by the Director.

§ 27.20 Drawing and handling of samples of cotton; inspection of bales.

One sample shall be drawn from the top side of each bale and one from the bottom side. Each such sample shall weigh not less than 5 ounces, the two samples from each bale to weigh together not less than 10 ounces. The bale shall be inspected and any condition not fully indicated by the samples shall be explained by the supervisor of cotton inspection or exchange inspection agency in a written memorandum, which shall accompany the samples to the Marketing Services Office. Samples shall not be dressed or trimmed and shall be carefully handled in such manner as not to cause loss of leaf, sand, or other material, or otherwise change their representative character. Any sample which does not meet the requirements of this section may be rejected by the supervisor of cotton inspection or the Area Director.

§ 27.22 Wrapping and marking of samples of cotton.

The original sets of samples of the bales constituting a lot or mark to be classified separately shall be inclosed in one or more wrappers or containers, as the case may require. The wrappers or containers of original samples shall be so labeled or marked, or both, as to show that they contain original samples, together with the lot number, if any, the marks, and the number of bales, and such other information as may be necessary in accordance with the instructions of the Area Director of the Marketing Services Office to which the samples are to be delivered.

§ 27.23 Duplicate sets of samples of cotton.

The duplicate sets of samples shall be inclosed in wrappers or containers separate and apart from the original sets in the manner prescribed or original samples in the foregoing section, except that the wrappers or containers...
shall be labeled or marked, or both, so as to show that they contain duplicate samples and shall be delivered to the person requesting the classification of the cotton.

§ 27.24 Delivery of samples of cotton.
The original sample from each bale to be classified shall be delivered to the Marketing Services Office with which the classification request was filed, at its classification room. If there is no Marketing Services Office at the point where the cotton is sampled, the supervisor of cotton inspection or the exchange inspection agency shall forward the samples to the proper Marketing Services Office. No samples covered by pending classification requests which are ready for delivery as provided for herein shall be withheld from such delivery except as authorized in writing by the Area Director or the Director.

§ 27.25 Additional samples of cotton; drawing.
In addition to the samples hereinbefore prescribed, separate samples, if desired, may be drawn and furnished to the owner of the cotton.

§ 27.28 Disposition of samples.
Samples submitted to a Marketing Services Office shall become the property of the Department and shall be disposed of in accordance with the property regulations of Department when no longer needed for classification or Micronaire determinations.

§ 27.31 Classification of cotton.
For purposes of subsection 15b (f) of The Act, classification of cotton is the determination of the quality of a sample in accordance with the Universal Cotton Standards (the official cotton standards of the United States) for the color grade and leaf grade of American upland cotton, and fiber property measurements such as micronaire. High Volume Instruments will determine all fiber property measurements except extraneous matter. High Volume Instrument colorimeter measurements will be used for determining the official color grade. Cotton classers authorized by the Cotton and Tobacco Programs will determine the presence of extraneous matter and authorized employees of the Cotton and Tobacco Programs will determine all fiber property measurements using High Volume Instruments.

§ 27.32 Order of classification.
All cotton for which classifications requests shall be pending shall be classified as far as practicable in the order in which proper samples thereof, ready for such classification, shall have been delivered to the Marketing Services Office, except as otherwise provided in this subpart or when the Area Director or the Director shall find that an emergency exists and shall order otherwise.

§ 27.33 Exposing of samples for classification.
Classification shall not proceed until the samples, after being delivered to the Marketing Services Office, shall have been exposed for such length of time as in the judgment of the Area Director shall be sufficient to put them in proper condition for the purpose.

§ 27.34 Classification procedure.
Classification shall proceed as rapidly as possible, but not when light or other conditions make uncertain the accuracy of the results to be obtained.

§ 27.35 Lower class of two samples to prevail.
In case a sample drawn from one portion of a bale is lower in class than one drawn from another portion of such bale, except as otherwise provided in this subpart, the classification of the bale shall be that of the sample showing the lower class.

§ 27.36 Classification determinations based on official standards.
All cotton shall be classified on the basis of the official cotton standards of
§ 27.37 Cotton reduced in grade.

If cotton be reduced in grade, by reason of the presence of extraneous matter or other irregularities or defects, below its grade according to the official cotton standards of the United States, the grade from which it is so reduced, and the condition or reason which so reduces its grade shall be determined and stated.

[25 FR 5872, June 25, 1960]

§ 27.38 Terms defined for purposes of classification.

For the purposes of classification the following terms shall be construed, respectively, to mean:

(a) Cotton of perished staple. Cotton that has the strength of fiber as ordinarily found in cotton destroyed or unduly reduced through exposure to the weather either before picking or after baling, or through heating by fire, or on account of water packing, or by other causes.

(b) [Reserved]

(c) Gin cut cotton. Cotton that shows damage in ginning, through cutting by the saws, to an extent that reduces its value more than two grades.

(d) Reginned cotton. Cotton that has passed through the ginning process more than once, and cotton that, after having been ginned, has been subjected to a cleaning process and then baled.

(e) Repacked cotton. Cotton that is composed of factors’, brokers’, or other samples, or of loose or miscellaneous lots collected and rebaled, or cotton in a bale which is composed of cotton from two or more smaller bales or parts of bales that are combined after the cotton leaves the gin.

(f) False packed cotton. Cotton in a bale (1) containing substances entirely foreign to cotton, (2) containing damaged cotton in the interior with or without any indication of such damage upon the exterior, (3) composed of good cotton upon the exterior and decidedly inferior cotton in the interior, in such manner as not to be detected by customary examination, or (4) containing pickings or linters worked into the bale.

(g) Mixed packed cotton. Cotton in a bale which, in the sample taken therefrom, shows (1) a difference of three or more grades, or (2) a difference of three or more color groups, or (3) a difference in length of staple of one-eighth inch or more. For purposes of this paragraph, White Cotton (including the Plus grades), Light Gray Cotton, and Gray Cotton shall constitute one color group, and Light Spotted Cotton, Spotted Cotton, Tinged Cotton, and Yellow Stained Cotton shall each constitute a color group.

(h) Water packed cotton. Cotton in a bale that has been penetrated by water during the baling process, causing damage to the fiber, or a bale that through exposure to the weather or by other means, while apparently dry on the exterior, has been damaged by water in the interior.

COTTON CLASS CERTIFICATES

§ 27.39 Issuance of classification records.

Except as otherwise provided in this section, as soon as practicable after the classification of cotton has been completed by the Cotton and Tobacco Programs, the Quality Assurance Division shall issue an electronic cotton classification record showing the results of such classification. Each electronic record shall bear the date of its issuance. The electronic record shall show the identification of the cotton according to the information in the possession of the Cotton and Tobacco Programs, the classification of the cotton and such other facts as the Deputy Administrator may require.

[77 FR 5380, Feb. 3, 2012]

§ 27.40 New certificates; conditions of issuance.

For the business convenience of a holder of a cotton class certificate issued under this subpart a new certificate may be issued at the request of the holder, to take the place of the former certificate without the reclassification of the cotton and without a
new Micronaire determination for the cotton. In any case where a new certificate is issued in accordance with this section, the former certificate shall be surrendered for cancellation, and such new certificate shall bear a new number, the date of its issuance, and the date of original certification, and shall otherwise comply with this subpart.

§ 27.41 Lost certificate; duplicate.
Upon the written request of the last holder of a valid cotton class certificate and a showing to the satisfaction of the Area Director of the Marketing Services Office which issued such certificate, that it has been lost or destroyed and, if lost, that diligent effort has been made to find it without success, a new certificate shall be issued without the reclassification of the cotton and without a new Micronaire determination for the cotton. Such new certificate shall bear the same number and date of issuance as the lost or destroyed certificate, and shall include a statement to the effect that it is a duplicate issued in lieu of the lost or destroyed original, as the case may be.

[48 FR 49211, Oct. 25, 1983]

§ 27.42 Surrender of certificate.
For good cause any certificate issued under this subpart shall be surrendered to a Marketing Services Office for correction or cancellation. If such certificate be not surrendered upon request it shall nevertheless be invalid under subsection 15b(f) of the Act and this subpart.

[48 FR 49211, Oct. 25, 1983]

§ 27.43 Validity of cotton class certificates.
Each cotton class certificate for cotton classified as tenderable shall be valid for use in the tender of such cotton on a basis grade contract made in accordance with the Act and this subpart and the rules of an exchange not inconsistent therewith.

§ 27.44 Invalidity of cotton class certificates.
Any cotton class certificate shall become invalid for use in the tender or delivery of the cotton covered thereby on a basis grade contract whenever such cotton shall be removed from the place of storage specified therein, except when it is handled and re-stored or transferred to a different place of storage and restored under the supervision of an exchange inspection agency or a supervisor of cotton inspection.

(90 Stat. 1841–1846; (7 U.S.C. 15b))

§ 27.45 No storage of cotton for classification at disapproved place.
No cotton submitted for classification under subsection 15b(f) of the Act shall be located or stored at a place disapproved for the purpose by the Area Director or the Director on account of being unsuitable for the safekeeping or proper storage of such cotton, or on account of the failure or refusal of the custodian thereof to comply or to permit compliance with the requirements of this subpart. Notice of such disapproval shall be given in such manner as the Director may direct. Thereafter every cotton class certificate previously issued for cotton located or stored at such place shall be invalid for the delivery of such cotton on a basis grade contract, unless the cotton shall be removed under the supervision of an exchange inspection agency, or a supervisor of cotton inspection, to a place which shall be suitable for the purpose. Upon such removal and the request of the holder of the cotton class certificate for such cotton a new certificate in lieu thereof, as provided elsewhere in this subpart, shall be issued.

[48 FR 49211, Oct. 25, 1983]

§ 27.46 Cotton withdrawn from storage.
The exchange inspection agency under the supervision or control of which any cotton classified pursuant to this subpart shall be held or stored shall furnish to the Marketing Services Office which classified such cotton, on the first business day of each week, a written statement of all cotton withdrawn from storage, or the lot number or other identification of which has
§ 27.47 Tender or delivery of cotton; conditions.

Subject to the provisions of §§ 27.52 through 27.55, no cotton shall be tendered or delivered on a basis grade contract unless on or prior to the date fixed for delivery under such contract, and in advance of final settlement of the contract, the person making the tender shall furnish to the person receiving the same a valid outstanding cotton classification record complying with the regulations in this subpart, showing such cotton to be tenderable on a basis grade contract.

[48 FR 49211, Oct. 25, 1983]

§ 27.53 Notice for delayed certification; requirements.

On the date of giving the transferable notice of the delivery in accordance with subsection 15b(f) of the Act the person issuing such notice or the person on whose behalf it was issued shall also give written notice to the Marketing Services Office with which the classification request was required to be filed, specifying the date of delivery and the number of bales so to be delivered which have not been certified. In such notice, or later in writing before the delivery of the samples to the Marketing Services Office the lot numbers of the cotton so to be delivered shall be specified.

[48 FR 49212, Oct. 25, 1983]

§ 27.54 Inspection and sampling for delayed certification.

Such cotton must have been duly inspected and sampled, and the original samples thereof properly prepared in accordance with this subpart must be delivered to the Marketing Services Office not later than the date of issuance of the transferable notice, except when the delivery day fixed by such transferable notice is the last delivery day in the month of delivery. In such case the cotton must have been duly inspected and sampled, and the original samples thereof properly prepared in accordance with this subpart must have been delivered to the Marketing Services Office in accordance with all regulations applicable and in readiness for classification not later than 8 p.m. of the second business day preceding such last delivery day.

[48 FR 49212, Oct. 25, 1983]

§ 27.55 Requirements in lieu of cotton class certificates on delivery day.

If on the morning of the delivery day specified in the transferable notice the cotton class certificates covering the cotton involved are not ready for delivery when called for, the tenderer of the cotton shall present to the receiver a receipt issued by an exchange inspection agency certifying that warehouse receipts, listed by lot numbers, representing cotton weighed and sampled
§ 27.57 Request for postponement.

If the applicant desires the postponement of the classification of any cotton covered by a classification request filed pursuant to the regulations in this subpart until later notice, the original classification request must so state, or the applicant must so advise the Marketing Services Office in writing before the classification has been entered upon. Such request must show cause and that it is not made merely for dilatory reasons.

§ 27.58 Postponed classification; must be within 30 days.

If thereafter the classification of the cotton be desired, notice thereof shall be filed not later than the expiration of 30 days after the date upon which the samples were drawn from the cotton, and the original samples must have remained continuously in the possession of the Marketing Services Office or under its control.

§ 27.59 Postponed classification; interference.

Classification pursuant to such suspended request shall not be allowed to interfere with or delay the classification of other samples previously made ready for classification or which are otherwise entitled to priority.

§ 27.60 When original request deemed withdrawn.

If the period of 30 days specified in § 27.58 shall expire without the filing of the notice of desire for classification the applicant shall be deemed to have withdrawn the original request for the classification of such cotton.

§ 27.61–27.72 [Reserved]

§ 27.73 Supervision of transfers of cotton.

Whenever the owner of any cotton inspected and sampled for classification pursuant to this subpart and for which the owner holds valid cotton class certificates desires to transfer such cotton to a different delivery point, or to a different warehouse at the same delivery point, for the purpose of having it made available for delivery upon a basis grade contract, such transfer shall be effected under the supervision of an exchange inspection agency or a supervisor of cotton inspection.

§ 27.80 Fees; review classification, futures classification and supervision.

For services rendered by the Cotton and Tobacco Programs pursuant to this subpart, whether the cotton involved is tenderable or not, the person requesting the services shall pay fees as follows:

(a) [Reserved]
(b) [Reserved]
(c) [Reserved]
(d) Futures classification—$3.50 per bale.

§ 27.81 Fees; certificates.

For each new certificate issued in substitution for a prior certificate at the request of the holder thereof, for the purpose of business convenience, or when made necessary by the transfer of cotton under the supervision of any exchange inspection agency as provided in § 27.73, the person making the request shall pay a fee of $.70 cents for each certificate issued.
§ 27.83 No fees for certain certificates.

No fee shall be collected for a new cotton class certificate issued in lieu of a prior certificate solely for the purpose of correcting clerical errors therein or for the purpose of substituting a new form applicable to outstanding certificates, or without an application therefor.

§ 27.85 Fees; withdrawn requests or applications.

When the request for classification, or the application for review or classification, of any cotton or the request for Micronaire determination for any cotton shall be withdrawn after the service requested has been started pursuant to such request or application, the person making such request or application shall pay the fee prescribed by §27.80 as to any service completed prior to such withdrawal.

§ 27.87 Fees; classification and Micronaire determination information.

Whenever the person who requests the classification of, or Micronaire determination for, any cotton, or the person on whose behalf such request is made, also requests the transmission by telegraph or telephone of information concerning such classification or Micronaire determination, the person making the request for such classification or determination shall pay, in addition to the applicable costs prescribed in this subpart, the cost of tolls incurred in such transmission.

§ 27.89 Expenses; inspection; sampling.

Expense of inspection and sampling, the preparation of the samples and the delivery of such samples in accordance with §27.24, shall be borne by the party requesting the classification of the cotton involved. When a review of classification or a Micronaire determination is requested and samples of the cotton involved are not in possession of a Marketing Services Office, the expense of inspection, sampling, preparation of samples, and delivery of the samples to the Marketing Services Office shall be borne by the party requesting the service.

[48 FR 49213, Oct. 25, 1983]

§ 27.90 Bills for payment of fees and expenses.

The Cotton Division shall deliver bills to all persons from whom payment for fees or expenses on account of services under this subpart shall be due. Such bills shall be rendered as soon as practicable after the last day of each month for the amounts due and unpaid on such day. When necessary, in the discretion of the Area Director or the Director, any bill may be rendered at an earlier date for any fees and expenses then due by the person to whom such bill shall be rendered. Payment of any such bill shall be made as soon as possible after the rendition thereof, but in any event not later than 2 weeks after such rendition.

[48 FR 49213, Oct. 25, 1983]

§ 27.91 Advance deposit may be required.

If requested by the Area Director with whom the classification request is required to be filed or by the Director, the person from whom any payment under this subpart may become due shall make an advance deposit to cover such payment in such amount as may be necessary in the judgment of the official requesting the same.

[48 FR 49213, Oct. 25, 1983]

§ 27.92 Method of payment; advance deposit.

Any payment or advance deposit under this subpart shall be by check, draft, or money order, payable to the order of “Agricultural Marketing Service, USDA,” and may not be made in cash except in cases where the total payment or deposit does not exceed $1.

§ 27.93 Bona fide spot markets.

The following markets have been determined, after investigation, and are hereby designated to be bona fide spot markets within the meaning of the act:

Southeastern, North Delta, South Delta, East Texas and Oklahoma, West Texas, Desert Southwest and San Joaquin Valley.

Such markets will comprise the following areas:
Agricultural Marketing Service, USDA

§ 27.94 Spot markets for contract settlement purposes.

The following are designated as spot markets for the purpose of determining as provided in paragraph 15(b)(3) of the Act, the differences above or below the contract price which the receiver shall pay for grades tendered or deliverable in settlement of a basis grade contract:

(a) For cotton delivered in settlement of any No. 2 contract on the Intercontinental Exchange (ICE); Southeastern, North and South Delta, Eastern Texas and Oklahoma, West Texas, and Desert Southwest.

(b) [Reserved]

§ 27.95 Spot markets to conform to Act and regulations.

Every bona fide spot market shall, as a condition of its designation and of the retention thereof, conform to the act and any applicable regulations.

§ 27.96 Quotations in bona fide spot markets.

The price or value and differences between the price or value of grades and staple lengths of cotton shall be based solely upon the official cotton standards of the United States and shall be the actual commercial value or price and differences as determined by the sale of spot cotton in such spot market. Quotations shall be determined and maintained in each designated spot market by the Cotton Division, Agricultural Marketing Service, USDA, as follows:

(a) In spot markets designated to determine differences for the settlement of futures contracts, the Cotton Division will on each business day determine and quote by bale volume the prices or values of base qualities which are deliverable on any active futures contracts, as well as the differences for non-deliverable qualities will be determined and quoted by bale volume in each such spot market for those qualities normally produced or traded in that particular market.

(b) In spot markets not designated to determine differences for the settlement of futures contracts, the Cotton Division will on each business day determine and quote by bale volume the prices or differences for all qualities of
§ 27.97 Ascertaining the accuracy of price quotations.

The buyers and sellers of cotton in each spot market shall be responsible for providing accurate and timely price, quality, and volume of purchases data by growth area to the Cotton Division. The Cotton Division is responsible for ascertaining the accuracy of the price quotations in each designated spot market. The Cotton Division will carry out this responsibility by performing the following duties and functions:

(a) The Cotton Division will collect and analyze pertinent information on the prices and values of spot cotton from each spot market.
(b) In the process of determining price quotations, the Cotton Division will contact a minimum of three buyers and sellers of cotton in each bona fide market at least two times per week during the active trading season and one time per week during the remainder of the year to obtain information on prices, qualities, volume, and terms of sales in sufficient detail to determine quotations.
(c) The Cotton Division will summarize the price and quality data and, based on analysis of this summary, make determinations regarding quotations of price, value and differences.
(d) Quotations for each spot market shall be reviewed and approved by the Cotton Division’s Market News Branch Chief or Assistant Branch Chief prior to publication.
(e) The Cotton Division will publish the appropriate quotations by bale volume for grades, staple lengths, micronaire determinations, and other quality factors for each spot market on a daily basis.

(The information collection requirements contained in this section were approved by the Office of Management and Budget under OMB control number 0581–0029)

§ 27.98 Value of grade where no sale; determination.

As provided in §27.96, whenever no sale of a particular grade of cotton shall have been made on a given day in a particular spot market, the value of such grade in the market on that day will be determined as follows:

(a) If on such given day there shall have been in such market both a sale of any higher grade and a sale of any lower grade, the average of the declines, or advances, or decline and advance, as the case may be, of the next higher grade and the next lower grade so sold shall be deducted from, or added to, as the case may be, the value, on the last preceding business day, of the grade the value of which on such given day is sought to be ascertained.
(b) If on such given day there shall have been in such market a sale of either a higher or a lower grade, but not sales of both, the decline or advance of the next higher or the next lower grade so sold shall be deducted from, or added to, as the case may be, the value on the last preceding business day of the grade the value of which on such given day is sought to be ascertained.
(c) If on such given day there shall have been in such market no sale of spot cotton of any grade, the value of each grade shall be deemed to be the same as its value therein on the last preceding business day, unless in the meantime there shall have been bona fide bids and offers, or sales of hedged cotton, or other sales of cotton, or changes in prices of futures contracts made subject to the act, which in the usual course of business would clearly establish a rise or fall in the value of spot cotton in such market, in which case such rise or fall may be calculated and added to or deducted from the value on the preceding business day of cotton of all grades affected thereby.

§ 27.99 Values; expression.

For the purpose of this subpart values shall be expressed in terms of cents and hundredths of a cent. A fraction of a hundredth, when equal to, or greater than, the half thereof, shall be treated as a hundredth, and when less than a...
half of a hundredth shall be disregarded.

§ 27.100 Administration.

The details of the method of carrying out the provisions of this subpart in each bona fide spot market shall be subject to the approval of the Director or shall be prescribed by the Director.

PART 28—COTTON CLASSING, TESTING, AND STANDARDS

Subpart A—Regulations Under the United States Cotton Standards Act

DEFINITIONS

Sec.  
28.1 Meaning of words.  
28.2 Terms defined.  

ADMINISTRATIVE AND GENERAL

28.3 Director.  
28.4 Classing offices.  
28.5–28.6 [Reserved]  
28.7 Area Director, Classing Office; responsibility.  
28.8 Classification of cotton; determination.  
28.9 Inspection; sampling; classification.  

REQUESTS FOR CLASSIFICATION AND COMPARISON

28.15 Classification and comparison; requests.  
28.16 Request for return of samples.  
28.17 Filing of requests for classification or comparison.  
28.18 One request only for classification.  
28.19 Withdrawal or rejection of classification request.  

LICENSING OF WAREHOUSES AND GINS FOR SAMPLING

28.20 When license is required.  
28.21 Eligibility and application.  
28.22 Authority granted by license.  
28.23 Suspension or revocation of license.  
28.24 Surrender of license certificate.  

DRAWING, SUBMISSION AND DISPOSITION OF SAMPLES

28.25 Samples for Form A determination.  
28.26 Samples for Form C determination.  
28.27 Samples for Form D determination.  
28.28 Lost or damaged samples.  
28.29 Return of samples.  

28.30 Samples not returned are property of Department.  

VIOLATIONS

28.31 Denial of service.  
28.32 Misrepresentation; deceptive or fraudulent acts or practices; violations.  

CLASSIFICATION

28.35 Method of classification.  
28.36 Order of classification.  
28.37 Exposing of samples for classification.  
28.38 Lower grade (of two samples) to determine classification.  
28.39 Cotton reduced in grade.  
28.40 Terms defined; cotton classification.  

SAMPLE OR TYPE COMPARISON

28.45 Scope of comparison; requests.  
28.46 Method of submitting samples and types.  
28.47 Statement of finding of Classing Office in comparisons.  

CERTIFICATES AND MEMORANDA

28.55 Issuance of memoranda and certificates.  
28.56 Form A and Form D memorandum.  
28.57 Form C certificate.  
28.58 New memorandum or certificate; issuance.  
28.59 Lost memorandum or certificate may be replaced by duplicate.  
28.60 Surrender of memorandum or certificate.  

REVIEWS

28.65 Provisions for reviews.  
28.66 Review procedure.  
28.68 Withdrawal of application for review.  

PRACTICAL FORMS OF COTTON STANDARDS

28.105 Practical forms of cotton standards.  
28.106 Universal cotton standards.  
28.107 Original cotton standards and reserve sets.  

FEES AND COSTS

28.115 Fees and costs; payment.  
28.116 Amounts of fees for classification; exemption.  
28.117 Fee for new memorandum or certificate.  
28.118 When no fee collected for new certificate or memorandum.  
28.119 Fee when request for classification is withdrawn.  
28.120 Expenses to be borne by party requesting classification.  
28.121 Advance deposits.  
28.122 Fee for practical classing examination.  
28.123 Costs of practical forms of cotton standards.  
28.124 Payments; procedure.
28.125 No voiding or modifying claims for payment.
28.126 Loaning of forms and exhibits.

### ADJUSTMENT OF CONTRACT DISPUTES

28.150 Cotton examiners on foreign exchanges.
28.151 Disputes involving contracts for shipment of cotton from United States.
28.152 Procedure.

### PUBLICATIONS MEDIA

28.155 OMB control numbers assigned pursuant to the Paperwork Reduction Act.

#### Subpart B—Classification for Foreign Growth Cotton

28.175 Administrative and general.
28.176 Designation of official certificates, memoranda, marks, other identifications, and devices for purpose of the Agricultural Marketing Act.
28.177 Requests for classification and comparison of cotton.
28.178 Submission of cotton samples.
28.179 Methods of cotton classification and comparison.
28.182 Surrender of memoranda.
28.183 Fees and costs; payment.

#### Subpart C—Standards

#### OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR LENGTH OF STAPLE

28.301 Measurement: humidity; temperature.
28.302 Terms of designation.
28.303 Standards for length of staple for American upland cotton.
28.306 Over 13\(\frac{1}{16}\) inch staple.
28.307 Bale of different staple lengths.

#### OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE COLOR GRADE OF AMERICAN UPLAND COTTON

##### White Cotton

28.401 Good Middling Color.
28.402 Strict Middling Color.
28.403 Middling Color.
28.404 Strict Low Middling Color.
28.405 Low Middling Color.
28.407 Good Ordinary Color.

##### Light Spotted Cotton

28.411 Good Middling Light Spotted Color.
28.412 Strict Middling Light Spotted Color.
28.413 Middling Light Spotted Color.

#### OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE LEAF GRADE OF AMERICAN UPLAND COTTON

##### Leaf Grades

28.461 Leaf Grade 1.
28.462 Leaf Grade 2.
28.463 Leaf Grade 3.
28.464 Leaf Grade 4.
28.465 Leaf Grade 5.
28.466 Leaf Grade 6.
28.467 Leaf Grade 7.

##### Below Leaf Grade Cotton

28.471 Below Leaf Grade Cotton.

##### Tinged Cotton

28.431 Strict Middling Tinged Color.
28.432 Middling Tinged Color.
28.433 Strict Low Middling Tinged Color.
28.434 Low Middling Tinged Color.

##### Yellow Stained Cotton

28.441 Strict Middling Yellow Stained Color.
28.442 Middling Yellow Stained Color.

##### Below Color Grade Cotton

28.451 Below Color Grade Cotton.

#### OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE COLOR GRADE OF AMERICAN PIMA COTTON

##### Color Grades

28.501 Color Grade No. 1.
28.502 Color Grade No. 2.
28.503 Color Grade No. 3.
28.504 Color Grade No. 4.
28.505 Color Grade No. 5.
28.506 Color Grade No. 6.
28.507 Color Grade No. 7.
28.508-28.510 [Reserved]

#### OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE LEAF GRADE OF AMERICAN PIMA COTTON

##### Leaf Grades

28.511 Leaf Grade No. 1.
28.512 Leaf Grade No. 2.
Agricultural Marketing Service, USDA

§ 28.2

28.513 Leaf Grade No. 3.
28.514 Leaf Grade No. 4.
28.515 Leaf Grade No. 5.
28.516 Leaf Grade No. 6.
28.517 Leaf Grade No. 7.

APPLICATION OF STANDARDS AND EXPLANATORY TERMS

28.521 Application of color and leaf grade standards.
28.522 Explanatory terms.

SYMBOLS AND CODE NUMBERS USED IN RECORDING COTTON CLASSIFICATION

28.525 Symbols and code numbers.

OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR FIBER FINENESS AND MATURITY

28.602 Terms of designations.
28.603 Procedures for air flow tests of micronaire reading.

Subpart D—Cotton Classification and Market News Service for Producers

DEFINITIONS

28.901 Definitions.

ADMINISTRATION

28.902 Director.

CLASSIFICATION AND MARKET NEWS SERVICES

28.903 Classification of samples.
28.904 Market news.

SAMPLING

28.906 Sampling arrangements.
28.907 Responsibilities of licensed gins or warehouses.
28.908 Samples.
28.909 Costs.

CLASSIFICATION

28.910 Classification of samples and issuance of classification data.
28.911 Review classification.

LIMITATIONS OF SERVICES

28.917 Limitations of Services.

Subpart E—Cotton Fiber and Processing Tests

DEFINITIONS

28.950 Terms defined.

ADMINISTRATION

28.951 Director.

FIBER AND PROCESSING TESTS

28.952 Testing of samples.
28.953 Requirements as to samples.

28.954 Costs of submitting samples.
28.955 Disposition of samples.
28.956 Prescribed fees.
28.957 Special tests and fees.
28.958 Payment of fees.
28.959 Limitation of testing services.
28.960 Confidential information.
28.961 False and misleading information.

Cross Reference: For regulations relating to cotton classification under cotton futures legislation, and cottonseed sold or offered for sale for crushing purposes, see parts 27 and 61 of this chapter.

SOURCE: 22 FR 10930, Dec. 28, 1957, unless otherwise noted.

Subpart A—Regulations Under the United States Cotton Standards Act

DEFINITIONS

§ 28.1 Meaning of words.

Words used in this part in the singular form shall be deemed to import the plural, and vice versa, as the case may demand.

§ 28.2 Terms defined.

As used throughout this subpart, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

(a) The Act. The United States Cotton Standards Act, approved March 4, 1923 (42 Stat. 1517; 7 U.S.C. 51 et seq.) with such amendments as may be made from time to time.

(b) Regulations. Regulations mean the provisions in this subpart.

(c) Department. The United States Department of Agriculture.

(d) Secretary. The Secretary of Agriculture of the United States, or any officer or employee of the Department who has been delegated, or who may hereafter be delegated the authority to act for the Secretary.

(e) Service. The Agricultural Marketing Service of the U.S. Department of Agriculture.

(f) Administrator. The Administrator of the Agricultural Marketing Service, or any officer or employee of the Service, who has been delegated, or who may hereafter be delegated the authority to act for the Administrator.
(g) **Division.** The Cotton Division of the Agricultural Marketing Service.

(h) **Director.** The Director of the Cotton Division, or any officer or employee of the Division who has been delegated, or who may hereafter be delegated the authority to act for the Director.

(i) **Classing Office.** A facility of the Cotton Division established under the act at any point.

(j) **Quality Control Section.** The national classing supervision office at Memphis, Tennessee performing final review of cotton classification.

(k) **Cotton classer.** An employee of the Department so designated by the Director after having passed the prescribed practical cotton classing examination.

(l) **License.** A license issued under the Act by the Secretary to sample cotton.

(m) **Licensed warehouse or gin.** A cotton warehouse or gin licensed under the United States Cotton Standards Act to sample cotton.

(n) **Cotton.** The word cotton means cotton of any variety produced within the continental United States. In this subpart, for administrative convenience the word “cotton” is used to signify vegetable hair removed from cottonseed in the usual process of ginning.

(o) **Upland Cotton.** All cotton grown anywhere within the continental United States including the growths sometimes referred to as Upland Gulf and Texas cotton, but excluding American Pima growths.

(p) **Official Cotton Standards.** Official Cotton Standards of the United States for the color grade and the leaf grade of American upland cotton, the color grade and the leaf grade of American Pima cotton, the length of staple, and fiber property measurements, adopted or established pursuant to the Act, or any change or replacement thereof.

(q) **Universal Standards.** The official cotton standards of the United States for the grade of American upland cotton.

(r) **Person.** Individual, association, partnership, or corporation, or two or more individuals having a joint or common interest.

(s) **Owner.** Person who through financial interest, owns, controls, or has the disposition either of cotton or of samples.

(t) **Custodian.** Person who has possession or control of cotton or of samples, as agent, controller, broker, or factor, as the case may be.

(u) **State.** A State, Territory, or district of the United States.

(SEC. 2, PUB. RES. 72–73, 47 STAT. 1621 (7 U.S.C. 51b); SEC. 3C, PUB. L. 75–28, 50 STAT. 62 (7 U.S.C. 473c))

**ADMINISTRATIVE AND GENERAL**

§ 28.3 **Director.**

The Director shall perform for and under the supervision of the Secretary and the Administrator, such duties as the Secretary or the Administrator may require in enforcing the provisions of the Act and the regulations issued thereunder.

§ 28.4 **Classing offices.**

Classing Offices shall be maintained at points designated by the Administrator. Requests for the review of the classification and/or comparison of cotton performed by Classing Offices may be referred to the Quality Control Section.

[52 FR 30881, Aug. 18, 1987]

§§ 28.5–28.6 [Reserved]

§ 28.7 **Area Director, Classing Office; responsibility.**

Subject to this subpart and the instructions of the Director, the Area Director of each Classing Office shall be responsible for the proper performance of the duties imposed on such office and on the persons connected therewith. The Area Director shall be responsible for receiving all correspondence relating to the classification of cotton under the act and for providing that all samples are prepared for classification and/or comparison in such manner that the name of the owner and/or the custodian shall be unknown.
to the cotton classers until after the samples are classified.

[52 FR 30881, Aug. 18, 1987]

§ 28.8 Classification of cotton; determination.

For the purposes of The Act, the classification of any cotton shall be determined by the quality of a sample in accordance with Universal Cotton Standards (the official cotton standards of the United States) for the color grade and the leaf grade of American upland cotton, the length of staple, and fiber property measurements such as micronaire. High Volume Instruments will determine all fiber property measurements except extraneous matter, special conditions and remarks. High Volume Instrument colorimeter measurements will be used for determining the official color grade. Cotton classers authorized by the Cotton and Tobacco Programs will determine the presence of extraneous matter, special conditions and remarks and authorized employees of the Cotton and Tobacco Programs will determine all fiber property measurements using High Volume Instruments. The classification record of a Classing Office or the Quality Control Division with respect to any cotton shall be deemed to be the classification record of the Department.

[77 FR 20505, Apr. 5, 2012]

§ 28.9 Inspection; sampling; classification.

The inspection, sampling, and classification of cotton in the United States pursuant to the Act shall be performed as prescribed in this subpart. Subject in general to the provisions of this subpart the Director may issue from time to time instructions for the sampling, classification, and issuance of classification memoranda for cotton classed for special programs and other Government agencies, including the review of any classification performed pursuant to §§ 28.901 through 28.919.

[58 FR 41993, Aug. 6, 1993]

REQUESTS FOR CLASSIFICATION AND COMPARISON

§ 28.15 Classification and comparison; requests.

All requests for classification and comparison shall be in writing on a form supplied by the Division and shall contain such information as the Director may require. For each lot or mark of cotton which the applicant desires classified or compared separately he shall specify which of the following forms of service is desired:

(a) Form A determination. The classification or comparison of samples freshly drawn and submitted to a Classing Office direct from a licensed warehouseman, at the request of the owner of the cotton or the owner’s agent. Such classification or comparison shall be evidenced by a Form A memorandum which shall be subject to review as provided in § 28.66.

(b) Form C determination. The classification of bales of cotton inspected and sampled under the supervision of an employee of the Division. The classification in such cases shall be evidenced by a Form C certificate which shall be subject to review as provided in § 28.66.

(c) Form D determination. The classification or comparison of samples submitted by the owner of the cotton or the owner’s agent. Such classification or comparison shall be evidenced by a Form D memorandum which shall be subject to review as provided in § 28.66.

(d) Micronaire reading service. Micronaire (mike) reading service is available under Forms A, C, and D determinations upon request from the applicant and subject to the fees specified in § 28.116 of this part 28.

§ 28.16 Request for return of samples.

Any applicant desiring return of the samples after classification or comparison is completed, at the applicant’s expense, shall indicate this service on the form used for requesting such classification or comparison.

[52 FR 30881, Aug. 18, 1987]
§ 28.17 Filing of requests for classification or comparison.

All requests for classification or comparison leading to Form A, Form D memoranda or, Form C certificates shall be filed with the Classing Office which serves the territory in which the cotton is located. Samples which are submitted to any Classing Office for classification or comparison may be referred by such Classing Office to another Classing Office for classification or comparison.

[52 FR 30881, Aug. 18, 1987]

§ 28.18 One request only for classification.

Not more than one request for a Form A determination, or a Form C determination, or a Form D determination of the same cotton, except a request for a review determination, shall be filed by the same owner within any 30-day period. Any subsequent request shall be accomplished by redrawn samples and the Area Director may require that any Form A or Form D memorandum, Form C certificates, or other classification data previously issued by a Classing Office with respect to samples purporting to represent the same cotton shall be returned before such redrawn samples are classed.

[52 FR 30881, Aug. 18, 1987]

§ 28.19 Withdrawal or rejection of classification request.

Any classification request may be withdrawn by the applicant at any time before the classification of the cotton covered thereby, subject to the payment of such fees, if any, as may be prescribed in these regulations. Any classification request may be rejected by the Area Director or the Head of the Quality Control Section for noncompliance with the act or this subpart.

[52 FR 30881, Aug. 18, 1987]

LICENSING OF WAREHOUSES AND GINS FOR SAMPLING

SOURCE: Sections 28.20 through 28.24 appear at 42 FR 24711, May 16, 1977, unless otherwise noted.

§ 28.20 When license is required.

Samples for Form A determination shall be accepted under this subpart from licensed warehousemen. Samples for classification pursuant to §§28.901 through 28.917 shall be accepted from licensed gins or warehouses. No license is required to sample cotton for Form C or Form D determination.

§ 28.21 Eligibility and application.

Any cotton warehouse or gin which may desire to submit samples for determination or classification for which a license is required under §28.20 shall be eligible for a license. Application for licenses to draw and submit samples shall be submitted by warehouses and gins on forms furnished by the Division.

§ 28.22 Authority granted by license.

Licenses issued by the Division shall authorize the warehouse to draw and submit samples from cotton stored in the warehouse for Form A determination or for classification pursuant to §§28.901 through 28.917. Licenses issued by the Division shall authorize gins to draw and submit samples from cotton ginned at the gin for classification pursuant to §§28.901 through 28.917. Licenses shall be valid for a period of five years.

§ 28.23 Suspension or revocation of license.

(a) Any license issued to a warehouse or gin to sample cotton may be suspended or revoked, following notice and opportunity for hearing, if the licensee has knowingly or carelessly sampled cotton improperly, or has submitted improper samples for classification, or has violated any provision of the Act or the regulations, or has used the license, or allowed it to be used, for any improper purpose.

(b) Procedure. (1) All cases arising under this paragraph shall be conducted under the Uniform Rules of Practice, 7 CFR 1.130 et seq., and instituted upon a complaint filed by the Administrator.
(2) In all cases except those involving willfulness, or in which the public health, interest, or safety otherwise requires, prior to the institution of a formal proceeding, the Administrator shall give written notice to the licensee of facts or conduct which appear to warrant institution of such a proceeding and shall afford the licensee the opportunity, within a reasonable time, to demonstrate or achieve compliance with the Act and regulations.

(c) Suspension pending adjudication. In any situation where the integrity of sampling procedures would be seriously jeopardized if a license remained valid pending formal adjudication, the Administrator may temporarily suspend the license effective on or after the third day after mailing notice thereof to the licensee’s last known address. Notice of temporary suspension may be made at or after the filing of a complaint and shall contain the reasons for the action.

(d) Conditional suspension. (1) The Administrator may temporarily suspend a license, without hearing, for a correctable cause. Such suspension, after appropriate corrective action is taken, will terminate.

(2) Written notice shall be given to the licensee in advance of a temporary suspension if practicable, or within 2 days of oral notice, stating the reasons and grounds for temporary suspension.

(3) A licensee may request a formal hearing procedure following receipt of oral or written notice of temporary suspension.

(e) During any period in which the cotton sampling license of a warehouse or gin is suspended or revoked, the Division will not accept any samples from the licensee for Form A determination, or for classification pursuant to §§28.901 through 28.917.

§ 28.24 Surrender of license certificate.

In the event of suspension or revocation of a license, the licensee shall promptly surrender the license to the Division.

§ 28.25 Samples for Form A determination.

Samples for Form A determination shall be drawn, handled, identified, and shipped by a licensed warehouse according to the methods and procedures specified in this section. Any samples or set of samples which do not meet these specified requirements may be rejected by the Area Director.

(a) Samples shall be freshly drawn.

(b) Each sample shall consist of two portions, one drawn from each side of the bale. Each portion shall be at least six (6) inches wide and approximately twelve (12) inches long and shall weigh at least three (3) ounces.

(c) Where it is necessary to draw two sets of samples, a single cut should be made in each side of the bale, and the portion of cotton removed from each cut should be broken in half across the layers to provide two complete samples. In those cases where this method would result in samples of insufficient length, it will be acceptable to split the sample lengthwise along the layers provided the outside portion from each side is submitted for the official classification.

(d) Dressing, trimming, or discarding part of the sample is prohibited. No part of the cotton or pieces of bagging, leaf, grass, dirt, sand, or any other material shall be removed from either side of the sample.

(e) A coupon showing the correct warehouse bale number and name and address of warehouse shall be placed between the two portions of each sample.

(f) Samples shall be identified and sacked immediately after they are cut without further handling prior to shipment to the Classing Office.

(g) Samples shall be addressed to and mailed, shipped, or delivered direct to the Classing Office serving the territory in which the warehouse is located. Samples shall in no case be consigned or routed through the owner or custodian of the cotton. Samples mailed or shipped shall be prepaid.

(h) The Area Director may require that any licensed warehouse shall provide the crop year, gin name and gin
§ 28.26 Samples for Form C determination.

Samples submitted for Form C determination shall be drawn under the supervision of a Division employee who shall retain custody or control of the samples until they are shipped prepaid or delivered at the applicant’s expense to the Classing Office serving the territory in which the bales of cotton are located.

[52 FR 30881, Aug. 18, 1987]

§ 28.27 Samples for Form D determination.

Samples for Form D determination shall be shipped or delivered at the owner’s expense to the Classing Office serving the territory in which the samples are located. A tag or coupon showing the bale number of the bale from which the sample was drawn, or other identification, shall be placed between the two portions of each sample.

[52 FR 30881, Aug. 18, 1987]

§ 28.28 Lost or damaged samples.

If any samples are lost, damaged, or mutilated, the Area Director shall inform the applicant.

[52 FR 30882, Aug. 18, 1987]

§ 28.29 Return of samples.

When so stipulated in the classification request for Form A, C or D determination, the samples submitted shall be returned to the applicant at the applicant’s expense, at the time the memorandum is issued or when the request for classification is withdrawn or rejected.

[52 FR 30882, Aug. 18, 1987]

§ 28.30 Samples not returned are property of Department.

Samples not returned in accordance with this subpart, and loose cotton separated from samples in the handling and classification thereof, shall become the property of the Department.

[28 FR 10633, Oct. 3, 1963]

VIOLATIONS

§ 28.31 Denial of service.

The Administrator may for good cause, including the acts or practices set forth in § 28.32, debar any person, including the agents, officers, subsidiaries, or affiliates of such person, from any or all benefits of the Act for a specified period, after notice and opportunity for hearing has been afforded. Procedures outlined, or referred, in part 50 of this chapter (7 CFR 50.1 et seq.) shall govern proceedings under this section.

[42 FR 24712, May 16, 1977]

§ 28.32 Misrepresentation; deceptive or fraudulent acts or practices; violations.

Any of the following acts or practices may result in debarment from any or all benefits of the Act:

(a) Any knowing misrepresentation or deceptive or fraudulent act or practice made or committed, or attempted to be committed, by any person in connection with (1) any request for classification, (2) the drawing, handling, identifying, or submitting of any samples for classification, (3) the making, issuing, or using of any memorandum or certificate of classification issued by a Classing Office or the Quality Control or (4) the changing of any warehouse bale tags or numbers after the cotton has been sampled for classification.
(b) Any knowing violation of the regulations in this subpart or of the Act.

CLASSIFICATION

§ 28.35 Method of classification.

All cotton samples shall be classified on the basis of the official cotton standards of the United States in effect at the time of classification.

§ 28.36 Order of classification.

All samples for which classification requests are pending shall be classified, as far as practicable, in the order in which the samples are delivered for classification. When in the opinion of the Area Director there is a need to deviate from this order of classification, the Area Director shall designate which samples will be given priority in classification.

[52 FR 30882, Aug. 18, 1987]

§ 28.37 Exposing of samples for classification.

Classification shall not proceed until the samples, after being delivered to the Classing Office, shall have been exposed for such length of time as in the judgment of the Area Director shall be sufficient to put them in proper condition for the purpose.

[52 FR 30882, Aug. 18, 1987]

§ 28.38 Lower grade (of two samples) to determine classification.

If a sample drawn from one portion of a bale is lower in grade or shorter in length than one drawn from another portion of such bale, except as otherwise provided in this subpart, the classification of the bale shall be that of the sample showing the lower grade or shorter length.

§ 28.39 Cotton reduced in grade.

If cotton be reduced in grade, by reason of the presence of extraneous matter or other irregularities or defects, below its grade according to the official cotton standards of the United States, the grade from which it is so reduced, the grade to which it is so reduced, and the condition or reason which so reduces its grade shall be determined and stated.

[25 FR 5872, June 25, 1960]

§ 28.40 Terms defined; cotton classification.

For the purposes of classification of any cotton or of its comparison with a type or other samples, the following terms shall be construed, respectively, to mean:

(a) Cotton of perished staple. Cotton that has had the strength of fiber, as ordinarily found in cotton, destroyed or unduly reduced through exposure to the weather either before picking or after baling, or through heating by fire, or on account of water packing, or by other causes.

(b) Micronaire (mike) reading. The measurement of the fiber fineness and maturity, in combination, of cotton as determined by an airflow instrument. For any cotton that has a micronaire reading of 2.6 or lower, the Classing Office will enter the micronaire reading on all classification memoranda issued for such cotton.

(c) Gin-cut cotton. Cotton that shows damage in ginning through cutting by the saws, to an extent that reduces its value more than two grades.

(d) Reginned cotton. Cotton that has passed through the ginning process more than once, and cotton that, after having been ginned, has been subjected to a cleaning process and then baled.

(e) Repacked cotton. Cotton that is composed of factors’, brokers’, or other samples, or of loose or miscellaneous lots collected and rebaled, or cotton in a bale which is composed of cotton from two or more smaller bales or parts of bales that are combined after the cotton leaves the gin.

(f) False packed cotton. Cotton in a bale (1) containing substances entirely foreign to cotton; (2) containing damaged cotton in the interior with or without any indication of such damage upon the exterior; (3) composed of good cotton upon the exterior and decidedly inferior cotton in the interior, in such manner as not to be detected by customary examination; or (4) containing pickings or linters worked into the bale.
§ 28.45

(g) Mixed packed cotton. Cotton in a bale which, in the sample taken therefrom, shows (1) a difference of three or more grades, or (2) a difference of three or more color groups, or (3) a difference in length of staple of one-eighth inch or more. For purposes of this paragraph, White Cotton (including the Plus grades), Light Gray Cotton, and Gray Cotton shall constitute one color group, and Light Spotted Cotton, Tinged Cotton, and Yellow Stained Cotton shall each constitute a color group.

(h) Water-packed cotton. Cotton in a bale that has been penetrated by water during the baling process, causing damage to the fiber, or a bale that through exposure to the weather or by other means, while apparently dry on the exterior, has been damaged by water in the interior.

SAMPLE OR TYPE COMPARISON

§ 28.45 Scope of comparison; requests.

A comparison of cotton samples with a type may be requested with respect to grade, or to staple, including any of the component qualities embodied in the grade, or to all these factors. The classification of the type and the samples in accordance with the official cotton standards of the United States may also be requested. The applicant must specify in a written request the scope of service desired.

[52 FR 30882, Aug. 18, 1987]

§ 28.46 Method of submitting samples and types.

The method of submitting samples and types for comparison shall be the same as that prescribed in this subpart for submitting samples for classification.

§ 28.47 Statement of finding of Classing Office in comparisons.

For each quality factor (grade, staple, etc.) of the samples that the applicant has requested to be compared to the type, the Classing Office shall state in its findings whether such quality factor for each sample is “better,” “equal,” or “deficient” in comparison with the type. When appropriate, the findings of the Classing Office may also show the amount of difference in grade and in length between the sample and the type as measured by the official cotton standards of the United States, and other explanatory notations as needed.

[52 FR 30882, Aug. 18, 1987]

CERTIFICATES AND MEMORANDA

§ 28.55 Issuance of memoranda and certificates.

As soon as practicable after the classification of cotton has been completed by a Classing Office, there shall be issued a cotton class memorandum or certificate of the appropriate kind showing the results of such classification. Upon request from an applicant, classification results may be issued in preliminary form on record sheets.

[52 FR 30882, Aug. 18, 1987]

§ 28.56 Form A and Form D memorandum.

(a) When a classification and/or comparison has been made of any samples submitted to a Classing Office direct from a public warehouse, the results of such classification and/or comparison may be stated in a Form A memorandum.

(b) When a classification and/or comparison has been made of any samples submitted by the owner of the cotton or the owner’s agent, the results of such classification and/or comparison may be stated in a Form D memorandum.

(c) Form A and Form D memoranda shall not be deemed to be final certificates within the meaning of section 4 of the Act (42 Stat. 1517; 7 U.S.C. 54).

§ 28.57 Form C certificate.

When classification has been made of cotton inspected and sampled under supervision of a Division employee there shall be issued a cotton class certificate known as a Form C certificate. Each Form C certificate shall show the true classification of the cotton in the respects specified in the request. Such
§ 28.58 New memorandum or certificate; issuance.

Upon the written request of a holder of a cotton class memorandum or certificate issued under this subpart, a new memorandum or certificate shall be issued, without the reclassification of the cotton, to take the place of the former memorandum or certificate for any cotton covered thereby, when necessary on account of the breaking or splitting of a lot or otherwise for the business convenience of such holder. In any case where a new memorandum or certificate is requested in accordance with this section the former memorandum or certificate shall be surrendered for cancellation, and such new memorandum or certificate shall bear a new number and the date of its issuance and the date of original classification and shall otherwise comply with this subpart.

§ 28.59 Lost memorandum or certificate may be replaced by duplicate.

Upon the written request of the last holder of a valid Form A or Form D memorandum, or Form C Certificate and a showing to the satisfaction of the Area Director of the Classing Office which issued such memorandum or certificate that it has been lost or destroyed, and, if lost, that diligent effort has been made to find it without success, a new memorandum or certificate shall be issued without the reclassification of the cotton. Such new memorandum or certificate shall bear the same number and date of issuance as the lost or destroyed memorandum or certificate and shall include a statement to the effect that it is a duplicate issued in lieu of the lost or destroyed original, as the case may be.

[52 FR 30882, Aug. 18, 1987]

§ 28.60 Surrender of memoranda or certificates.

For good cause, any memorandum or certificate issued under this subpart shall be surrendered to the Area Director of the Classing Office which issued it, upon the Area Director’s request or upon the request of the Director. A new memorandum or certificate complying with this subpart may be issued in substitution therefor. If such memorandum or certificate be not surrendered upon such request, it shall nevertheless be invalid for the purposes of the act and this subpart.

[52 FR 30882, Aug. 18, 1987]

REVIEWS

§ 28.65 Provisions for reviews.

Reviews of classifications or comparisons represented by Form A or D memoranda or Form C certificates shall be governed by §28.66.

§ 28.66 Review procedure.

A review of any Form A, C, or D determination may be requested by the owner or custodian of the cotton from which the sample was drawn within 30 days after the issuance of the original memorandum. Such review shall cover all of the quality factors for which the original determination was made. Requests for reviews of Form A or D determinations may be filed with, and the review made by, the Classing Office which issued such memorandum or the Quality Control System. Requests for reviews of Form C determinations shall be filed with, and the reviews made by, the Quality Control System. Redrawn samples shall be required for reviews of Form A and Form C determinations except in cases where the original samples have remained, identity preserved, in the custody of the Division. When redrawn samples are necessary, they shall be drawn and submitted as prescribed in this subpart. As evidence of a review determination, a Form A or D memorandum or Form C certificate appropriately marked to indicate that it represents a review determination shall be issued to the applicant requesting the review. The applicant may be required by the Classing Office or the Quality Control Section issuing
§ 28.68 Withdrawal of application for review.

Any application for review may be withdrawn by the applicant at any time before the review classification of the cotton covered thereby has been completed, subject to the payment of such fees, if any, as may be prescribed in this subpart.

PRACTICAL FORMS OF COTTON STANDARDS

§ 28.105 Practical forms of cotton standards.

(a) Practical forms of the cotton standards of the United States prepared in physical form, each certified under the seal of the U.S. Department of Agriculture and under the signature of the Administrator, thereto affixed by the Administrator or by some other official or employee of the Department duly authorized by the Administrator, and in the case of the standards for grade accompanied by photographs representing the cotton in such practical forms on the date of certification, are available for sale to any person requesting the same, subject to the other conditions of this section.

(b) Each application for practical forms of the cotton standards shall be upon an application form furnished by the Division, shall be signed by the applicant, and shall incorporate the following conditions:

(1) That no practical form of any of the cotton standards for the grade of American Upland cotton shall be considered or used as representing such standards after the date of its cancellation in accordance with this section or in any event after the expiration of 12 months following the date of its certification: Provided, That sets of practical forms stored, protected, and preserved in accordance with certain agreements for the adoption of universal standards may be used for such periods as may be prescribed in such agreements.

(2) That said practical forms and the photographs accompanying them shall be subject to inspection on any business day, between the hours of 9 a.m. and 4 p.m., by the Administrator or by an officer or agent of the Department authorized by the Administrator for that purpose.

(3) That the signature of the Administrator certifying to any practical form, or any photograph of said practical form accompanying the same, or both, may be cancelled if it be found, upon such inspection, either that copy of said forms for any reason misrepresents the cotton standards or that any such photographs have been altered or mutilated.

§ 28.106 Universal cotton standards.

Whenever any of the official cotton standards shall have been adopted as universal standards by an association or exchange located in a country other than the United States, the name of such association or exchange may be shown on the outside of the box or container.

§ 28.107 Original cotton standards and reserve sets.

(a) The containers of the original Universal Standards and other official cotton standards of the United States currently adopted, whenever such official standards are represented by practical forms, shall be marked as prescribed in the order or orders of their establishment, and shall be wrapped and sealed. After being so marked, wrapped and sealed, they shall be held in secure storage in the custody of the U.S. Department of Agriculture. The Director may authorize the temporary removal of such containers from storage and the transporting of the containers to other locations for purposes of Universal Cotton Standards Conferences and other purposes as deemed necessary by the Director. Such containers shall remain in the control and custody of the Director until the original standards contained therein are superseded by new or revised standards.

(b) At each Universal Cotton Standards Conference held for approving key
Agricultural Marketing Service, USDA

§ 28.116 copies of the Universal Standards there shall be prepared two full sets of practical forms of copies of such standards, which shall be known as “Reserve Sets” and which, upon the certification and recommendation of qualified experts, shall be certified by such experts as true copies of the currently adopted standards as and when established. Such reserve sets shall be enclosed in metal-lined cases and sealed in the presence of a special committee duly authorized by the Director and composed of representatives from the associations attending the conference and the Department. The special committee shall deposit the set designated as the First Reserve Set in a vault in a bank in Memphis, Tenn. The Division shall keep the set designated as the Second Reserve Set in secure storage. These reserve sets shall remain sealed and deposited until such time as they shall be required for examination and use as set forth in paragraph (c) of this section.

(c) At the beginning of the next Universal Cotton Standards Conference, a special committee duly authorized by the Director and composed of representatives from the associations attending the conference and the Department shall deliver the First Reserve Set from its storage place to the site of the conference. This special committee shall witness the opening of the First Reserve Set for display at the conference. The Director shall arrange for removal of the Second Reserve Set from its storage place and for the transport of such set to the site of the conference. If upon examination of the First Reserve Set by representatives at the conference it should appear that such set has undergone any substantial change, the Second Reserve Set shall be opened and used in its stead.

§ 28.115 Fees and costs; payment.

All charges for practical forms of cotton standards and all fees and expenses for services of inspection of bales and supervision of sampling, classification, comparison, or review by a Classing Office shall be paid at the time of filing the request for the service desired, except that in the discretion of the Director bills may be delivered to persons from whom payment or charges or fees may become due. Such bills shall be rendered as soon as practicable after the last day of each month for amounts due and unpaid on such dates. When necessary, in the discretion of the Area Director, any bill may be rendered at an earlier date for any charges or fees then due from the person to whom such bill may be rendered. Payment of any such bill shall be made as soon as possible after the rendition thereof, but in any event not later than the expiration of 2 weeks thereafter.

§ 28.116 Amounts of fees for classification; exemption.

(a) For the classification of any cotton or samples, the person requesting the services shall pay a fee, as follows, subject to the additional fee provided by paragraph (c) of this section.

(1) For American Pima Cotton only—grade, staple and micronaire reading for $2.00 per sample; grade and staple only for $1.50 per sample; grade only or staple only for $1.20 per sample.

(2) High Volume Instrument (HVI) classification, including grade—$2.00 per sample.

(3) High Volume Instrument (HVI) classification, excluding grade—$1.75 per sample.

(b) When a comparison is requested of any samples with a type or with other samples, the fees prescribed in paragraph (a) (1) (2) and (3) of this section shall apply to every sample involved, including each of the samples of which the type is composed.

(c) An additional fee of 40 cents per sample shall be assessed for services described in paragraphs (a) (1), (2), and (3), and (b) of this section unless the request for service is so worded that the
§ 28.117 Fee for new memorandum or certificate.

For each new memorandum or certificate issued in substitution for a prior memorandum or certificate at the request of the holder, thereof, on account of the breaking or splitting of the lot of cotton covered thereby or otherwise for his business convenience, the person requesting such substitution shall pay a fee of 15 cents per bale or a minimum fee of $5.00 per sheet. If the memorandum is provided by means of a computer diskette, the fee for each diskette shall be the higher of $10.00 or 10 cents per bale. The cost of any diskette not returned to the Division will be billed to the requestor.

[56 FR 24673, May 31, 1991]

§ 28.118 When no fee collected for new certificate or memorandum.

No fee shall be collected for a new cotton class certificate or memorandum issued in lieu of a prior certificate or memorandum solely for the purpose of correcting clerical errors therein, or for the purpose of substituting a new form applicable to outstanding certificates or memorandums, or without an application therefor.

§ 28.119 Fee when request for classification is withdrawn.

When the request for the classification or comparison of any cotton or an application for review shall be withdrawn after the classification of such cotton has been started pursuant thereto, the person filing the same shall pay the prescribed fee as to any such cotton already classified.

§ 28.120 Expenses to be borne by party requesting classification.

For any samples submitted for Form A, Form C, or Form D determinations, the expenses of inspecting and sampling, or supervising the sampling, and the preparation of the samples and delivery of such samples to the classification room or other place specifically designated for the purpose by the Director shall be borne by the party requesting classification.

[56 FR 24673, May 31, 1991]

§ 28.121 Advance deposits.

Upon request, the person from whom any payment under this subpart may become due shall make an advance deposit to cover such payment in such amount as may be necessary in the judgment of the official of the Division requesting the same.

§ 28.122 Fee for practical classing examination.

The fee for the practical classing examination for cotton shall be $105.00. Any applicant who passes the examination may be issued a certificate indicating this accomplishment. Any person who fails to pass the examination may be reexamined. The fee for this practical reexamination is $85.00.

[57 FR 27892, June 23, 1992, as amended at 58 FR 41993, Aug. 6, 1993]

§ 28.124 Payments; procedure.

Any payment or advance deposit under §§ 28.115 through 28.123 shall be by check, draft, or money order, payable to the order of the “Agricultural Marketing Service, USDA”, and may not be made in cash except in cases where the total payment or deposit does not exceed $1.

§ 28.125 No voiding or modifying claims for payment.

Nothing in this subpart shall be construed to void or modify any claim which a person or party requesting and paying for a service may have against any other person or party for the payment of part or all of such costs.

§ 28.126 Loaning of forms and exhibits.

In the discretion of the Director, limited numbers of copies of the practical forms of any of the official standards, or specially prepared exhibits illustrating any of such standards or cotton samples, may be loaned to governmental agencies for official purposes or to educational and other institutions or organizations for demonstration purposes.

ADJUSTMENT OF CONTRACT DISPUTES

§ 28.160 Cotton examiners on foreign exchanges.

Whenever any association or exchange in any country other than the United States shall adopt the universal standards and establish them as the basis of all transactions and contracts for American upland cotton, made and executed according to its rules, the Director may appoint certain members or officials of such exchanges as cotton examiners. Insofar as the administration of the act applies to cotton involved in contracts made in accordance with the rules of such exchange, the administration shall be as prescribed in §§ 28.161 through 28.162.

§ 28.161 Disputes involving contracts for shipment of cotton from United States.

When an association or exchange located in a country other than the United States shall adopt any of the official cotton standards of the United States and when the members of the committee of such association or exchange having final jurisdiction in the matter of appeals have been designated as cotton examiners by the Director, such committee may be constituted for the purposes of this act a Board of the Department and authorized to act as follows:

(a) Insofar as the exchange has adopted the universal standards the committee may pass upon the classification of cotton involved in a dispute between a party in the United States and a party without the United States to a contract made under the rules of the association or exchange.

(b) The submission of samples of cotton involved in such a dispute to such association or exchange or such committee in accordance with the rules of the association or exchange shall be deemed to be a submission to the Department.

(c) Determinations of classification made by the boards so constituted shall be final. When so provided in the articles, rules, or bylaws of the association or exchange, such determinations may be evidenced by awards. If an award is made which does not state the classification, such board will, upon request of the owner or custodian of the cotton and the payment of a reasonable additional fee, issue a certificate showing in detail the true classification for grade and color of such cotton, based upon a comparison of the samples with the universal standards or with a type or other samples on which the cotton has been sold, as the case may be.
§ 28.162 Procedure.

The manner of procedure in submitting and handling samples, in classification and in instituting and conducting arbitrations and appeals shall be as prescribed in the articles, bylaws, and rules of the association or exchange.

§ 28.165 OMB control numbers assigned pursuant to the Paperwork Reduction Act.

(a) Purpose. This section collects and displays the control numbers assigned to information collection requirements of the Office of Management and Budget contained in 7 CFR part 28 under the Paperwork Reduction Act of 1980.

(b) Display.

[52 FR 30884, Aug. 18, 1987]

Subpart B—Classification for Foreign Growth Cotton

AUTHORITY: Sec. 205, 60 Stat. 1090, as amended (7 U.S.C. 1624).

§ 28.175 Administrative and general.

Insofar as applicable, and not inconsistent with this subpart, the provisions of subpart A of this part shall likewise apply to the classification and comparison of cotton produced outside the continental United States.

[58 FR 41993, Aug. 6, 1993]
any symbol, stamp, label, or seal indicating that the product has been officially graded or inspected and/or indicating the class, grade, quality, quantity, or condition of the product, approved by the Administrator and authorized to be affixed to any product, or affixed to or printed on the packaging material of any product.

(e) **Official device** means a stamping appliance branding device, stencil, printed label or any other mechanically or manually operated tool that is approved by the Administrator for the purpose of applying any official mark or other identification to any product or the packaging material thereof.

§ 28.177 Request for classification and comparison of cotton.

The applicant shall make a separate written request, on a form supplied by the Division, for each lot or mark of cotton which the applicant desires classified or compared separately. The same applicant shall not file more than one request for the classification or comparison of the same cotton within any 30-day period except for a review classification or comparison as provided in §28.181. All requests for classification or comparison in the United States shall be filed with the Classing Office which serves the territory in which the samples are located. If the cotton is stored outside the United States the request shall be filed with the Classing Office designated by the Director. The Area Director of any Classing Office may refer any request and the samples submitted to another office or to the Quality Control Section for classification or comparison.

§ 28.178 Submission of cotton samples.

Samples of cotton submitted to a Classing Office for classification and/or comparison shall be drawn from both sides of the bale and shall be delivered to the Classing Office with which the request was filed, as soon as possible after the filing of such request. All such samples shall be enclosed in one or more wrappers, which shall be labeled or marked, or both, in such manner as to show the name and address of the owner, the lot number or marks, if any, the number of bales represented by the samples in each wrapper, and such other information as may be necessary in accordance with the instructions of the Area Director. All transportation charges incident to the submission of samples shall be prepaid by the party making the request or the requester’s agent.

§ 28.179 Methods of cotton classification and comparison.

The classification of samples from cotton produced outside the continental United States shall be on the basis of the official cotton standards of the United States in effect at the time of classification. When a comparison of such cotton samples with other actual samples or with a type is requested, the procedure and methods shall be as outlined in §§28.45 through 28.47.

§ 28.180 Issuance of cotton classification memoranda.

As soon as practicable after the classification or comparison of cotton has been completed by a Classing Office, there shall be issued a cotton classification memorandum which shall embody within its written or printed terms:

(a) The results of the classification or comparison.

(b) The name of the country in which the cotton was produced.

(c) The source from which the samples were received for classification.

(d) A statement that any classification made has been on the basis of the official cotton standards of the United States in effect at the time of such classification.

(e) The signature of the Area Director of the Classing Office, the location of the office, and the date of issuance of the memorandum.

A review of any classification or comparison made pursuant to this subpart may be requested by the owner or custodian of the cotton from which the sample was drawn within 30 days after
§ 28.182 Surrender of memoranda.  
For good cause, any memorandum issued under this subpart shall be surrendered to the Area Director which issued it, upon the Area Director's request or upon the request of the Director, and a new memorandum complying with this subpart issued in substitution therefor. If the memorandum be not surrendered upon such request, it shall nevertheless be invalid for the purpose of this subpart.

[52 FR 30884, Aug. 18, 1987]

§ 28.183 Fees and costs; payment.  
The provisions of §§ 28.115 through 28.126 relating to fees, costs, and method of payment shall apply to services performed with respect to cotton produced outside the continental United States.

Subpart C—Standards

OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR LENGTH OF STAPLE

§ 28.301 Measurement: humidity; temperature.  
The length of staple of any cotton shall be the normal length by measurement, without regard to quality or value, of a typical portion of its fibers under a relative humidity of the atmosphere of 65 percent and a temperature of 70 °F.

§ 28.302 Terms of designation.  
The length of staple of any cotton shall be designated by that one of the following terms which expresses its measurement in inches and fractions of an inch in accordance with § 28.301: "Below 13⁄16; 7⁄8; 29⁄32; 15⁄16; 31⁄32; 1; 1 1⁄32; 1 1⁄16; 1 1⁄16; 1 3⁄32; 1 1⁄8; 1 5⁄32; 1 3⁄16; 1 7⁄32; 1 1⁄4; 1 9⁄32; 15⁄16; 1 13⁄32; 13⁄8; 1 15⁄32; 17⁄16; 1 17⁄32; 11⁄2; 1 19⁄32; 19⁄16; 1 21⁄32; 15⁄8; 1 23⁄32; 111⁄16; 1 25⁄32; 13⁄4; and upward in like manner in gradations of thirty-seconds, disregarding any fraction less than a thirty-second."

§ 28.303 Standards for length of staple for American upland cotton.  
(a) Effective July 12, 1985, standards for the lengths of staple of American upland cotton shall be measurements as determined by the Suter-Webb Duplex Cotton Fiber Sorter in accordance with the test method prescribed in paragraph (c) of this section. Ranges for each official staple length are shown in the table below. Staple standards exceeding 1 1⁄4 inches, in graduations of thirty-second inches, will be expressed in increments of .041 inches.

(b) Cotton selected for the preparation of practical forms of staple standards shall, to the extent practicable, measure at the mid-point of the appropriate staple range indicated in paragraph (a) of this section.

(c) Length measurements shall be performed in accordance with the "Standard Test Method for Length and Length Distribution of Cotton Fibers (Array Method), ANSI/ASTM D 1440–77".

[52 FR 30884, Aug. 18, 1987]

The following lengths of American Pima staple are represented by a quantity of cotton in the custody of the United States Department of Agriculture suitably contained and marked “Original Representation of Official Cotton Standards of the United States” followed in each instance by the name of growth, appropriate designation for staple length, and the effective date.

[49 FR 28391, July 12, 1984]

§ 28.306 Over 1 11/16 inch staple.

Cotton which is more than thirteen-sixteenths of an inch in length of staple but is not exactly one of the measurements specified in § 28.302, shall be designated by that one of such measurements which comes nearest under its true measurement.

[22 FR 10930, Dec. 28, 1957. Redesignated at 49 FR 28391, July 12, 1984]
§ 28.405

Low Middling Color.

Low Middling Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Low Middling, effective July 1, 1987.”

§ 28.406

Strict Good Ordinary Color.

Strict Good Ordinary Color is color within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Strict Good Ordinary, effective July 1, 1987.”

§ 28.407

Good Ordinary Color.

Good Ordinary Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Good Ordinary, effective July 1, 1987.”

§ 28.411

Good Middling Light Spotted Color.

Good Middling Light Spotted Color is color which in spot or color, or both, is between Good Middling Color and Good Middling Spotted Color.

§ 28.412

Strict Middling Light Spotted Color.

Strict Middling Light Spotted Color is color which in spot or color, or both, is between Strict Middling Color and Strict Middling Spotted Color.
§ 28.424 **Strict Low Middling Spotted Color.**

Strict Low Middling Spotted Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Strict Low Middling Spotted, effective July 1, 1987.”

§ 28.425 **Low Middling Spotted Color.**

Low Middling Spotted Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Low Middling Spotted, effective July 1, 1987.”

§ 28.426 **Strict Good Ordinary Spotted Color.**

Strict Good Ordinary Spotted Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Strict Good Ordinary Spotted, effective July 1, 1987.”

**TINGED COTTON**

Source: 57 FR 34498, Aug. 5, 1992, unless otherwise noted.

§ 28.431 **Strict Middling Tinged Color.**

Strict Middling Tinged Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Middling Tinged, effective July 1, 1987.”

§ 28.432 **Middling Tinged Color.**

Middling Tinged Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Middling Tinged, effective July 1, 1987.”

§ 28.433 **Strict Low Middling Tinged Color.**

Strict Low Middling Tinged Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Strict Low Middling Tinged, effective July 1, 1987.”

§ 28.434 **Low Middling Tinged Color.**

Low Middling Tinged Color is color which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Upland, Low Middling Tinged, effective July 1, 1987.”

**YELLOW STAINED COTTON**

§ 28.441 **Strict Middling Yellow Stained Color.**

Strict Middling Yellow Stained Color is color which is deeper than that of Strict Middling Tinged Color.

§ 28.442 **Middling Yellow Stained Color.**

Middling Yellow Stained Color is American Upland cotton which in color is deeper than Middling Tinged Color.

§ 28.451 **Below Color Grade Cotton.**

Below color grade cotton is American Upland cotton which is lower in color grade than Good Ordinary, or Strict Good Ordinary Light Spotted, or Strict Good Ordinary Spotted, or Low Middling Tinged, or Middling Yellow Stained. In cotton classification, the official designation for such cotton is Below Color Grade. The term Below Good Ordinary Color, or Below Strict Good Ordinary Light Spotted Color, or Below Strict Good Ordinary Spotted Color, or Below Low Middling Tinged Color, or Below Middling Yellow Stained Color and other additional explanatory terms considered necessary to describe adequately the condition of the cotton may be entered on classification memorandums or certificates.

OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE LEAF GRADE OF AMERICAN UPLAND COTTON

AUTHORITY: Sections 28.461 to 28.482 issued under Sec. 10, 42 Stat. 1518; (7 U.S.C. 61). Section 28.482 also issued under Sec. 3c, 50 Stat. 62 (7 U.S.C. 473c) and 90 Stat. 1841–1846 as amended (7 U.S.C. 15b). Interpret or apply Sec. 6, 42 Stat. 1518, as amended; (7 U.S.C. 56), unless otherwise noted.

LEAF GRADES

SOURCE: 57 FR 34498, Aug. 5, 1992, unless otherwise noted.

§ 28.461 Leaf Grade 1.
Leaf Grade 1 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Good Middling, effective July 1, 1987."

§ 28.462 Leaf Grade 2.
Leaf Grade 2 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Strict Middling, effective July 1, 1987."

§ 28.463 Leaf Grade 3.
Leaf Grade 3 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Middling, effective July 1, 1987."

§ 28.464 Leaf Grade 4.
Leaf Grade 4 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Strict Low Middling, effective July 1, 1987."

§ 28.465 Leaf Grade 5.
Leaf Grade 5 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Low Middling, effective July 1, 1987."

§ 28.466 Leaf Grade 6.
Leaf Grade 6 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Strict Good Ordinary, effective July 1, 1987."

§ 28.467 Leaf Grade 7.
Leaf Grade 7 is leaf which is within the range represented by a set of samples in the custody of the United States Department of Agriculture in a container marked "Original Official Cotton Standards of the United States, American Upland, Good Ordinary, effective July 1, 1987."

BELOW LEAF GRADE COTTON

§ 28.471 Below Leaf Grade Cotton.
Below leaf grade cotton is American Upland cotton which is lower in leaf grade than Leaf Grade 7. In cotton classification, the official designation for such cotton is Below Leaf Grade. Other additional explanatory terms considered necessary to describe adequately the condition of the cotton may be entered on classification memorandums or certificates.

[57 FR 34499, Aug. 5, 1992]

GENERAL

§ 28.480 General.
(a) American Upland cotton which in color is within the range of the color standards established in this part shall be designated according to the color standard irrespective of the leaf content. American Upland cotton which in leaf is within the leaf standards established in this part shall be designated according to the leaf standard irrespective of the color.
(b) The term preparation is used to describe the degree of smoothness or roughness with which cotton is ginned and the relative nepness or nappiness
§ 28.506 Color Grade No. 6.

Color grade No. 6 shall be American Pima cotton which in color is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Color Grade No. 6, effective July 1, 1986.”

[65 FR 36600, June 9, 2000]
§ 28.507 Standards of the United States, American Pima, Color Grade No. 6, effective July 1, 1986.

[65 FR 36600, June 9, 2000]

§ 28.507 Color Grade No. 7.

American Pima cotton which in color is inferior to Color Grade No. 6 shall be designated as “Color Grade No. 7.”

[65 FR 36600, June 9, 2000]

§§ 28.508–28.510 [Reserved]

OFFICIAL COTTON STANDARDS OF THE UNITED STATES FOR THE LEAF GRADE OF AMERICAN PIMA COTTON

§ 28.511 Leaf Grade No. 1.

Leaf grade No. 1 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 1, effective July 1, 1986.”

[65 FR 36601, June 9, 2000]

§ 28.512 Leaf Grade No. 2.

Leaf grade No. 2 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 2, effective July 1, 1986.”

[65 FR 36601, June 9, 2000]

§ 28.513 Leaf Grade No. 3.

Leaf grade No. 3 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 3, effective July 1, 1986.”

[65 FR 36601, June 9, 2000]

§ 28.514 Leaf Grade No. 4.

Leaf grade No. 4 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 4, effective July 1, 2001.”

[65 FR 36601, June 9, 2000]

§ 28.515 Leaf Grade No. 5.

Leaf grade No. 5 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 5, effective July 1, 2001.”

[65 FR 36601, June 9, 2000]

§ 28.516 Leaf Grade No. 6.

Leaf grade No. 6 shall be American Pima cotton which in leaf is within the range represented by a set of samples in the custody of the U.S. Department of Agriculture in a container marked “Original Official Cotton Standards of the United States, American Pima, Leaf Grade No. 6, effective July 1, 2001.”

[65 FR 36601, June 9, 2000]

§ 28.517 Leaf Grade No. 7.

American Pima cotton which in leaf is inferior to Leaf Grade No. 6 shall be designated as “Leaf Grade No. 7.”

[65 FR 36601, June 9, 2000]

APPLICATION OF STANDARDS AND EXPLANATORY TERMS

§ 28.521 Application of color and leaf grade standards.

American Pima cotton which in color is within the range of the color standard established in this part shall be designated according to the color standard irrespective of the leaf content. American Pima cotton which in leaf is within the range of the leaf standards established in this part shall be designated according to the leaf standard irrespective of the color content.

[65 FR 36601, June 9, 2000]
§ 28.522 Explanatory terms.

(a) The term preparation is used to describe the degree of smoothness or roughness of the ginned lint. Normal preparation for any color grade of American Pima cotton for which there is a physical color standard shall be that found in the physical color standard. If the preparation is other than normal, it shall be entered on the classification record.

(b) Explanatory terms considered necessary to adequately describe the presence of preparation, spindle twist, and extraneous matter such as bark, grass, seed coat fragments, oil, etc. in the sample, shall be part of the classification record.

[65 FR 36601, June 9, 2000]

§ 28.525 Symbols and code numbers used in recording cotton classification

Agricultural Marketing Service, USDA

§ 28.525 Symbols and code numbers.

For administrative convenience, the symbols and code numbers prescribed in this section may be used in lieu of cotton grade names and staple length designations in inches.

The official cotton standards of the United States for fiber fineness and maturity shall be the measure of such qualities, in combination, provided by air flow instrument tests in terms of micronaire readings in accordance with the procedure specified in §28.603.

§ 28.602 Terms of designations.

The fiber fineness and maturity of any cotton shall be designated by the micronaire reading obtained from an air flow instrument test for a specimen of the cotton as determined under §28.603, e.g., 4.1, 4.2, 4.3, etc. To simplify recording, the decimal point may be omitted, and the micronaire reading recorded as 41, 42, 43, etc.

§ 28.603 Procedures for air flow tests of micronaire reading.

In determining in terms of micronaire readings, the fiber fineness and maturity, in combination, of cotton, the following procedures shall apply:

(a) Facilities and equipment shall include:

1. Air flow instrument complete with accessories to measure the fineness and maturity, in combination, of cotton in terms of micronaire readings on the curvilinear scale adopted in September 1950 by the Department of Agriculture, or its equivalent.
2. A suitable supply of compressed air filtered to remove moisture and other impurities.
3. Balance or scales suitable for accurately weighing the specimens required for the particular instrument.
4. International Calibration Cotton Standards with established micronaire reading values for calibration of the air flow instrument.

(b) The instrument shall be calibrated each day before routine testing begins, as follows:

1. The air shall be allowed to flow through the instrument until the indicator stabilizes.

(c) Testing of the cotton specimen shall be performed as follows:

1. Approximately the same amount of cotton shall be taken from each side of the sample for a test specimen. The weight of the test specimen shall be that weight prescribed for the air flow instrument being used.
2. The weighed specimen shall be tested in a properly calibrated instrument.
3. The specimen shall be inserted into the specimen holder of the instrument so that the mass of fibers is well distributed within the specimen holder.
(4) The air shall then be allowed to flow through the specimen in accordance with the method of operation of the instrument.

(5) The position of the instrument indicator shall be determined to the nearest 0.1 micronaire reading when it becomes stable.

(d) The accuracy of the instrument shall be checked at least every 2 hours during operation by testing appropriate calibration cottons. If the value obtained on a specimen from the calibration cotton is outside the established limits of 0.1 micronaire reading, or when successive readings show the results to be within the established limits, but consistently high or low, the instrument and technique shall be thoroughly checked to remedy the discrepancies. Additional tests using calibration cottons shall be made until acceptable results are obtained before routine testing is resumed.

Subpart D—Cotton Classification and Market News Service for Producers

SOURCE: 74 FR 26772, June 4, 2009, unless otherwise noted.

DEFINITIONS

§ 28.901 Definitions.

When used in the regulations in this subpart:

(b) Service means the Agricultural Marketing Service of the United States Department of Agriculture.

(c) Administrator means the Administrator of the Agricultural Marketing Service, or any officer or employee of the Service to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated to act for the Administrator.

(d) Division means the Cotton Division of the Agricultural Marketing Service.

(e) Director means the Director of the Cotton Division, or any officer or employee of the Division to whom authority has heretofore been delegated or to whom authority may hereafter be delegated, to act for the Director.

(f) Producer means any individual, partnership, corporation, association, trust, estate, or other legal entity, a State or political subdivision thereof, or any agency of such State or political subdivision producing American Upland or American Pima cotton in the capacity of landowner, landlord, tenant, or sharecropper.

ADMINISTRATION

§ 28.902 Director.

The Director shall perform for and under the supervision of the Administrator, such duties as the Administrator may require in enforcing the regulations in this subpart.

CLASSIFICATION AND MARKET NEWS SERVICES

§ 28.903 Classification of samples.

The Director, or an authorized representative, upon the receipt of a producer’s cotton sample which complies with the regulations in this subpart shall, as hereinafter provided, furnish to such producer or to an agent designated by the producer the classification in accordance with the official cotton standards of the United States.

§ 28.904 Market news.

The Director shall cause to be distributed to producers of cotton and to others on request, timely information on prices for various qualities of cotton.

SAMPLING

§ 28.906 Sampling arrangements.

(a) Cotton must be sampled by a gin or warehouse that holds a valid license to sample cotton issued pursuant to §§ 28.20 through 28.22.

(b) The Director, or an authorized representative may direct that sampling be performed by employees of the Department of Agriculture for the purpose of appraising the sampling procedures at cotton gins or warehouses, or for the purpose of providing service to
§ 28.907 Responsibilities of licensed gins or warehouses.

Each licensee shall be primarily responsible for drawing, identifying, handling, and shipping samples of cotton in accordance with this subpart and with instructions furnished by the Director or an authorized representative from time to time.

§ 28.908 Samples.

(a) Only one sample to be submitted. Only one sample from each bale of eligible cotton shall be submitted for classification under this subpart. This does not prohibit the submission of an additional sample from a bale for review classification if the producer so desires.

(b) Drawing of samples manual. (1) Each cut sample shall be drawn from the bale after it is tied out following the ginning process, and shall be approximately 6 ounces in weight, not less than 3 ounces of which are to be drawn from each side of the bale: Provided, That each sample from a bale of American Pima cotton shall be approximately 10 ounces in weight, not less than 5 ounces of which are to be drawn from each side of the bale.

(2) Where it is necessary to draw two sets of samples, a single cut should be made in each side of the bale, and the portion of cotton removed from each cut should be broken in half across the layers to provide two complete samples. In those cases where this method would result in samples of insufficient length, it will be acceptable to split the sample lengthwise along the layers, provided the outside portion from each side is submitted for the official classification.

(c) Mechanical sampling. Samples may be drawn in gins equipped with mechanical samplers approved by the Division and operated according to sampling instructions furnished by the Director or an authorized representative. Such samples shall not be less than 6 ounces in weight.

(d) Samples must be representative. Each sample must be representative of the bale from which drawn.

(e) Handling samples. Samples shall not be dressed or trimmed and shall be carefully handled in such manner as not to cause loss of leaf, sand, or other material, or otherwise change their representative character. Samples shall be handled only by employees of the licensee prior to shipment or delivery to the cotton classing office of the Division.

(f) Identifying and shipping samples. Each sample shall be identified with a tag, supplied or approved by the Division, bearing the gin or warehouse number of the bale from which the sample was drawn and the name and address of the producer of the bale. The tag shall be placed between the two halves of the sample, the sample tightly rolled and enclosed in a package or bag for shipment. Each package or bag shall be labeled or marked with the name and address of the licensed gin or warehouse. The packages shall be shipped or delivered direct to the cotton classing office serving the territory in which the cotton is ginned. Samples that were drawn by a mechanical sampler at the gin may be transported with the bales to the warehouse and then shipped or delivered direct to the classing office by the warehouse.

(g) Request for classification. Samples received from a licensed gin or warehouse with the identification tag required in §28.908(f) shall constitute a request for classification service by the producer.

§ 28.909 Costs.

(a) Costs incident to sampling, tagging, and identification of samples and transporting samples to points of shipment shall be assumed by the producer, but tags and containers for the shipment of samples and shipping charges via U.S. Postal Service or duly authorized common carrier will be furnished by the service. After classification the samples shall become the property of the Government. The proceeds of the sale of cotton samples shall be used to defray the costs of providing the services under this subpart.

(b) The cost of High Volume Instrument (HVI) cotton classification service to producers is $2.20 per bale.
(c) The Division will periodically bill producers or the voluntary agents designated by producers for the cost of classification. A discount of 5 cents per sample will be granted for services provided under this section when billing is made to voluntary agents.

CLASSIFICATION

§ 28.910 Classification of samples and issuance of classification data.

(a)(1) The samples submitted as provided in the subpart shall be classified by employees of the Division and classification memoranda showing the official quality determination of each sample according to the official cotton standards of the United States shall be issued by any one of the following methods at no additional charge:

(i) Computer diskettes,

(ii) Computer tapes, or

(iii) Telecommunications, with all long distance telephone line charges paid by the receiver of data.

(2) When an additional copy of the classification memorandum is issued by any method listed in paragraph (a)(1) of this section, there will be a charge of five cents per bale. If provided as an additional method of data transfer, the minimum fee for each tape or diskette issued shall be $10.00.

(b) Owners of cotton, other than producers, may receive classification data showing the official quality determination of each sample by means of telecommunications from a central database to be maintained by the Division. The fee for this service shall be five cents per bale, with all long distance telephone line charges paid by the receiver of data. The minimum charge assessed for services obtained from the central database be $5.00 per monthly billing period.

(c) Upon request of an owner of cotton for which classification memorandum have been issued under the subpart, a new memorandum shall be issued for the business convenience of such owner without the reclassification of the cotton. Such rewritten memorandum shall bear the date of its issuance and the date or inclusive dates of the original classification. The fee for a new memorandum shall be 15 cents per bale or a minimum of $5.00 per sheet.

§ 28.911 Review classification.

(a) A producer may request one review classification for each bale of eligible cotton. The fee for review classification is $2.20 per bale.

(b) Samples for review classification must be drawn by gins or warehouses licensed pursuant to §§ 28.20 through 28.22, or by employees of the United States Department of Agriculture. Each sample for review classification shall be taken, handled, and submitted according to § 28.908 and to supplemental instructions issued by the Director or an authorized representative of the Director. Costs incident to sampling, tagging, identification, containers, and shipment for samples for review classification shall be assumed by the producer. After classification, the samples shall become the property of the Government unless the producer requests the return of the samples. The proceeds from the sale of samples that become Government property shall be used to defray the costs of providing the services under this subpart. Producers who request return of their samples after classing will pay a fee of 50 cents per sample in addition to the fee established above in this section.

LIMITATIONS OF SERVICES

§ 28.917 Limitations of Services.

The Director, or an authorized representative, may suspend, terminate, or withhold cotton classing and market news services to any producer upon any failure of the producer to comply with the act or these regulations. Failure to remit fees for classification services shall result in loss of service.
§ 28.950 Terms defined.

As used throughout this subpart, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

(a) Regulations. Regulations mean the provisions in this subpart.

(b) Service. The Agricultural Marketing Service of the U.S. Department of Agriculture.

(c) Administrator. The Administrator of the Agricultural Marketing Service, or any officer or employee of the Service, to whom authority has been delegated to act for the Administrator.

(d) Division. The Cotton Division of the Agricultural Marketing Service.

(e) Director. The Director of the Cotton Division, or any officer or employee of the Division to whom authority has been delegated to act for the Director.

(f) Laboratories. Laboratories of the Cotton Division that perform the fiber and processing tests described in this subpart.

§ 28.951 Director.

The Director shall perform, for and under the supervision of the Administrator, such duties as the Administrator may require in enforcing the regulations in this subpart.

§ 28.952 Testing of samples.

The Director or an authorized representative, upon written requests, shall make fiber and processing tests of the properties of cotton samples and report the results thereof to the persons from whom such requests are received, subject to compliance by such persons with the regulations in this subpart and to the payment by them of fees as prescribed herein.

§ 28.953 Requirements as to samples.

Each sample of ginned cotton lint submitted for fiber and processing tests shall weigh approximately as shown below unless otherwise specified in the particular test item as prescribed herein:

1 ounce or more for fiber tests.
6 pounds or more for carded yarn spinning tests.
8 pounds or more for combed yarn spinning tests.
10 pounds or more for carded and combed yarn spinning tests.

Each individual sample submitted for testing shall contain a tag or coupon bearing a number or other identification symbol. Individually labeled samples may be sent in one or more parcels, each of which shall bear on the outside thereof the name and address of the person submitting it. Persons who submit samples to laboratories for testing shall comply with any Federal or State quarantine requirements applicable to counties from which such samples are shipped.

§ 28.954 Costs of submitting samples.

The transportation of samples to a laboratory for testing shall be without expense to the Government.

§ 28.955 Disposition of samples.

The remnants of samples accumulated in the making of tests under the regulations in this subpart shall become the property of the Government unless the applicant requests that such remnants be returned. Returns will be at the applicant’s expense.

§ 28.956 Prescribed fees.

Fees for fiber and processing tests shall be assessed as listed below:

### Item number and kind of test

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0</td>
<td>Calibration cotton for use with High Volume Instruments, per 5 pound package:</td>
<td>$85.00</td>
</tr>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$85.00</td>
</tr>
<tr>
<td></td>
<td>b. By surface delivery within continental United States</td>
<td>$100.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$95.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$135.00</td>
</tr>
</tbody>
</table>

1.1 High Volume Instrument (HVI) System Check Level. Furnishing two samples per month for HVI determinations, summarizing returned data, and reporting deviations for average of all laboratories for measurements taken per 12 months:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. By surface delivery within continental United States</td>
<td>$168.00</td>
</tr>
<tr>
<td></td>
<td>b. By air parcel post delivery outside continental United States</td>
<td>$224.00</td>
</tr>
</tbody>
</table>

2.0 Furnishing international calibration cotton standards with standard values for micronaire reading and fiber strength at zero and 1/8-inch gage and Fibrograph length:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee 1-lb. sample</td>
<td>$20.00</td>
</tr>
<tr>
<td></td>
<td>b. By air freight collect outside continental United States, 1/2-lb. sample</td>
<td>$20.00</td>
</tr>
<tr>
<td></td>
<td>c. By air parcel post delivery outside continental United States, 1-lb. sample</td>
<td>$31.00</td>
</tr>
</tbody>
</table>

2.1 Furnishing international calibration cotton standards with standard values for micronaire reading only:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee, 1-lb. sample</td>
<td>$28.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States, 1-lb. sample</td>
<td>$28.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States, 1-lb. sample</td>
<td>$42.00</td>
</tr>
</tbody>
</table>

3.0 Furnishing standard color tiles for calibrating cotton colormeters, per set of five tiles including box:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$125.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$130.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$125.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$165.00</td>
</tr>
</tbody>
</table>

3.1 Furnishing single color calibration tiles for use with specific instruments or as replacements in above sets, each tile:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$22.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$25.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$22.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$35.00</td>
</tr>
</tbody>
</table>

3.2 Furnishing single trashmeter calibration standard, each:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$30.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$33.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$30.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$44.00</td>
</tr>
</tbody>
</table>

3.3 Furnishing one set of standard color tiles for calibrating cotton colormeters and one trashmeter calibration standard, per set of five tiles and the standard including box:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$150.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$155.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$190.00</td>
</tr>
</tbody>
</table>

3.4 Furnishing a single cotton sample of a designated leaf level mounted under glass, each:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$40.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$44.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$40.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$54.00</td>
</tr>
</tbody>
</table>

3.5 Furnishing six cotton samples of six designated leaf levels each mounted under glass, per set of six samples:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$240.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$264.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$240.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$300.00</td>
</tr>
</tbody>
</table>

4.0 Furnishing a calibration sample box containing six cotton samples with color values Rd and Rb for each sample, per box:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$42.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$47.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$42.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$82.00</td>
</tr>
</tbody>
</table>

4.1 Furnishing a trashmeter calibration sample box containing six cotton samples with trashmeter percent area reading for each sample, per box:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. f.o.b. Memphis, Tennessee</td>
<td>$42.00</td>
</tr>
<tr>
<td></td>
<td>b. Surface delivery within continental United States</td>
<td>$47.00</td>
</tr>
<tr>
<td></td>
<td>c. By air freight collect outside continental United States</td>
<td>$42.00</td>
</tr>
<tr>
<td></td>
<td>d. By air parcel post delivery outside continental United States</td>
<td>$82.00</td>
</tr>
</tbody>
</table>

5.0 High Volume Instrument (HVI) measurement. Reporting Micronaire, length, length uniformity, 1/8-inch gage strength, color and trash content. Based on a 6 oz. (170 g) sample, per sample:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>$1.75</td>
</tr>
</tbody>
</table>

6.0 Color of ginned cotton lint. Reporting data on the reflectance and yellowness in terms of Rd and Rb values as based on the Nickerson-Hunter Cotton Colorimeter on samples which measure 5 x 6 1/2 inches and weigh approximately 50 grams, per sample:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>$1.25</td>
</tr>
</tbody>
</table>

7.0 Fiber length of ginned cotton lint by Fibrograph method. Reporting the average length and average length uniformity as based on four specimens from a blended sample, per sample:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>$9.50</td>
</tr>
</tbody>
</table>

7.1 Fiber length of ginned cotton lint by Fibrograph method. Reporting the average length and average length uniformity as based on two specimens from each unblended sample:

<table>
<thead>
<tr>
<th>Item number</th>
<th>Kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>$6.00</td>
</tr>
</tbody>
</table>
§ 28.956 7 CFR Ch. I (1–1–14 Edition)

<table>
<thead>
<tr>
<th>Item number and kind of test</th>
<th>Fee per test</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.0  Pressley strength of ginned cotton lint by flat bundle method for either zero or 1/8-inch gage as specified by applicant. Reporting the strength as based on 3 specimens from a blended sample, per sample.</td>
<td>9.75</td>
</tr>
<tr>
<td>8.1  Pressley strength of ginned cotton lint by flat bundle method for either zero or 1/8-inch gage as specified by applicant. Reporting the strength as based on 6 specimens from a blended sample, per sample.</td>
<td>6.00</td>
</tr>
<tr>
<td>9.0  Spinning potentials test. Reporting the finest yarn which can be spun with no ends down and reporting the spinning potential yarn number. This test requires an additional 4 pounds of cotton, per sample.</td>
<td>110.00</td>
</tr>
<tr>
<td>9.1  Micronaire readings on cotton. Reporting the percent micronaire as based on 2 specimens per sample.</td>
<td>0.70</td>
</tr>
<tr>
<td>9.2  Fiber length array of cotton samples. Reporting the average percentage of fibers by weight as based on 3 specimens from a blended sample:</td>

§ 28.957 Special tests and fees.

Tests may be performed for cooperating agencies and organizations to the extent that available facilities will permit, subject to the payment of fees as determined by the Director. Special tests and services not listed in § 28.956 may be performed to the extent that available facilities will permit, subject to the payment of fees determined by the Director.

§ 28.958 Payment of fees.

As soon as practicable after the last day of each calendar month, bills shall be rendered by officers in charge of testing laboratories to all persons from whom payment of fees and costs under the regulations in this subpart shall become due, provided that when desirable any bill may be rendered at an earlier date. Payment shall be by check or by draft or post office or express money order, payable to the order of “Agricultural Marketing Service, USDA.”

§ 28.959 Limitation of testing services.

If at any time funds available for services under the regulations in this subpart may be insufficient to provide for the testing of all samples that may be submitted for the purpose, the Director may place reasonable limitations upon the quantities of samples to be submitted by individuals during any one fiscal year or any one calendar month, and may direct that samples received from cotton breeders shall
§ 28.960 Confidential information.

No information concerning individual tests under the regulations in this subpart shall be published or communicated in such a way as to disclose to others the identity of the owners of cotton represented by samples submitted for testing, except with the written permission of such owners.

§ 28.961 False and misleading information.

The publication or communication by any person of false or misleading information concerning the results of tests as reported by laboratories under the regulations in this subpart shall be deemed sufficient cause for denial of testing services to such persons.

PART 29—TOBACCO INSPECTION

Subpart A—Policy Statement and Regulations Governing the Extension of Tobacco Inspection and Price Support Services to New Markets and to Additional Sales on Designated Markets

Sec.
29.1 Definitions.
29.2 Policy statement.
29.3 Procedures for filing, hearing, and determination of applications.

Subpart B—Regulations

DEFINITIONS

29.12 Terms defined.
29.13 The act.
29.14 Secretary.
29.15 Department.
29.16 Division.
29.17 Director.
29.18 Person.
29.19 Inspector.
29.20 Sampler.
29.21 Weigher.
29.22 Appeal inspector.
29.23 Tobacco.
29.24 Official standards.
29.25 Tentative standards.
29.26 Office of inspection.

29.27 Certificate.
29.28 Interested party.
29.29 Regulations.
29.30 Package.
29.31 Lot.
29.32 Identification number.
29.33 Official sample.
29.34 Sample seal.
29.35 Lot seal.
29.36 Auction market.
29.37 Designated market.
29.38 Public notice.
29.39 Permissive inspection.
29.40 Mandatory inspection.

DEFINITIONS

29.41 The Appropriations Act.
29.42 Receiving station.

ADMINISTRATION

29.51 Administration.

PERMISSIVE INSPECTION

29.56 Permissive inspection.
29.57 Where inspection is offered.
29.58 Who may obtain inspection.
29.59 How to make application.
29.60 Form of application.
29.61 When application deemed filed.
29.62 When application may be rejected.
29.63 When application may be withdrawn.
29.64 Authority of agent.
29.65 Accessibility of tobacco.
29.66 Certificates.
29.67 Disposition of certificates.
29.68 Advance information.
29.69 Weighing apparatus.

MANDATORY INSPECTION

29.71 Mandatory inspection.
29.72 Where mandatory inspection is required.
29.73 Designation of markets; termination of designation.
29.74 Growers' referendum.
29.74a Producer referenda on mandatory grading.
29.75 Accessibility of tobacco.
29.75a Display of burley tobacco on auction warehouse floors in designated markets.
29.75b Display of baled flue-cured tobacco on auction warehouse floors in designated markets.
29.75c Display of tobacco at receiving stations.
29.76 Mandatory inspection ticket.
29.77 Warehousemen to provide tickets.
29.78 Changes or alterations.
29.79 Disposition of ticket.
29.80 Announcing grades.
29.81 Interference with inspectors.

APPEAL

29.90 When appeal may be taken.
29.91 How to obtain an appeal.
29.92 Record of filing time.
Agricultural Marketing Service, USDA

29.93 When appeal may be refused.
29.94 When appeal may be withdrawn.
29.95 Review or second inspection not an appeal.
29.96 Order in which made.
29.97 Who shall pass upon appeals.
29.98 Appeal findings.
29.99 Superseded certificate or sample.

INSPECTORS, SAMPLERS, AND WEIGHTERS

29.106 Who may be employed, licensed, or authorized.
29.107 Order of providing service.
29.108 Certificate issuance.
29.109 Inspection determinations.
29.110 Method of sampling.
29.111 Weight determinations.
29.112 Proper light.
29.113 Suspension and termination.

FEES AND CHARGES

29.123 Fees and charges.
29.124 When application rejected or withdrawn.
29.125 Charge for appeals.
29.126 When appeal refused or withdrawn.
29.127 Demonstrations and courses of instruction.
29.128 For certificates.
29.129 National Advisory Committee for Inspection Services.

MISCELLANEOUS

29.131 [Reserved]
29.132 Division investigations.
29.133 Identification number.
29.140 Inspection, certification, and testing of imported tobacco.
29.141 Definitions.
29.142 Advance notice.
29.143 Accessibility of tobacco.
29.144 Inspection.
29.145 Inspection by submitted samples.
29.146 Import inspection certificate.
29.147 Disposition of import inspection certificate.
29.148 Submission and disposition of pesticide residues and end user(s) certification.
29.149 Collection of pesticide test samples.
29.150 Identification of sample for testing.
29.151 Disposition of imported tobacco exceeding pesticide residue standards.
29.152 Appeals.
29.153 Handling of imported tobacco pending test results.
29.154 Fees and charges for inspection and acceptance of imported tobacco.

Cross Reference: For regulations with respect to tobacco warehouses, see part 737 of chapter VII.

Subpart A—Policy Statement and Regulations Governing the Extension of Tobacco Inspection and Price Support Services to New Markets and to Additional Sales on Designated Markets

§ 29.1 Definitions.

For purposes of this subpart A, the following terms shall have the following meanings:

(a) Additional sale means an additional auction sale proposed to be conducted on a designated market.

(b) Adequate set of buyers means 5 or more buyers representing 5 or more companies or buying organizations which either will use the tobacco in the manufacture of tobacco products in
§ 29.2

this country or in foreign countries, or will pack and sell the tobacco later for use by manufacturers in this country or foreign countries, and who could reasonably be expected to purchase at least two-thirds of the total U.S. production of the kind of tobacco for which the additional services are requested.

(c) Auction market means a marketing center containing one or more warehouses where tobacco is delivered by producers thereof, or their agents, for sale by the auction process. There may be one or more auction sales on an auction market.

(d) Bona fide auction sale and auction sale mean the buying and selling of tobacco offered by producers by the auction process which customarily and usually consists of an adequate set of buyers; an auctioneer who takes each buyer’s bid; a sales starter who makes the opening bid on each lot; and a ticket marker who records the applicable sales data on each lot.

(e) Designated market means an auction market designated by the Secretary under section 5 of the Tobacco Inspection Act including the town or city which is the population center of the market and whose name the market bears and all of the geographical area within 5 road miles of the boundaries of said city or town as they are constituted on January 1, 1993. Provided, That any warehouse beyond those boundaries which received tobacco inspection and price support services during the 1992 marketing season shall continue to receive such services at the same location regardless of any prohibition contained herein: And further provided, That this geographical limitation may be waived by the Secretary after a hearing held pursuant to §§29.2 and 29.3.

(f) Secretary means the Secretary of Agriculture of the United States, or any officer or employee of the U.S. Department of Agriculture to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in his stead.

(g) Hearing Officer means any administrative law judge appointed pursuant to 5 U.S.C. 3105, and assigned to the proceeding involved, or such other employee of the Department of Agriculture as the Secretary may designate to act as hearing officer at such hearing.

(h) New market means an auction market, other than a designated market, at which inspection service under the tobacco Inspection Act was not provided on a regular basis during the preceding marketing season.

(i) Hearing Clerk means the Hearing Clerk of the U.S. Department of Agriculture, Washington, DC 20250.

(j) Kind of tobacco means any one of the following: Flue-cured, Burley, Fire-cured, Dark air-cured, Maryland or Virginia sun-cured.

§ 29.2 Policy statement.

Inspection and price support services currently provided in auction marketing areas are adequate and the lack of these services is not a limiting factor to accelerated marketings or the extension of price support to producers. Consequently, the extension of inspection and price support services, without limitation even though the cost of such service is paid by the seller, would not contribute to the effectuation of the purposes of either of these services. The additional cost incident to the unlimited extension of these services would be unjustifiable and excessive in relation to the total quantity of tobacco available for market. Accordingly, inspection and price support services shall be made available on new markets at warehouses which are located beyond the geographical limitation for “designated markets” set forth in §29.1(e), and additional sales for other than flue-cured tobacco only as hereinafter provided. With regard to flue-cured tobacco, allocation of inspection services is based on producer designation, as provided for in 7 CFR 1464.2(e)(2)(iii), see subpart G. Also, since these services shall be made available to new markets to warehouses which are located beyond the geographical limitation for “designated markets” set forth in §29.1(e), and additional sales only as herein provided, referenda incident to market designations shall not be conducted.
until auction markets seeking designation have qualified for inspection and price support services as herein provided.

(a) Reasonable inspection and price support services. The extension of tobacco inspection and price support services to new markets to warehouses which are located beyond the geographical limitation for “designated markets” set forth in §29.1(e), and additional sales will be conditioned upon the reasonableness of such services existing in the marketing area of the proposed new market or additional sale. Transactions in tobacco as conducted at auction markets customarily involve the sale of tobacco at a bona fide auction sale. Determination with respect to reasonableness, and consequently with respect to granting or denying additional services, will be based on evidence (1) that the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale will function as a bona fide auction sale, and (2) that additional services are justifiable in relation to other market data, including the volume of tobacco produced in the area surrounding the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale; the roads and road distances involved in moving tobacco to the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale; the roads and road distances involved in moving tobacco to the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale; the relative availability or congestion of all facilities for redrying and packing tobacco handled or to be handled in the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale; the location of other auction markets on which tobacco produced in the marketing area of the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale may be marketed; the number of tobacco growers to be affected by the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale may be marketed; the volume of tobacco likely to be sold in the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale; the relationship of sales in the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale to sales in other auction markets in the producing area for that kind of tobacco; other economic factors affecting the marketing of tobacco, by growers, in the marketing area of the proposed new market, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), or additional sale and in the producing area for that kind of tobacco, including limitations on sales imposed by any marketing agreement and/or order, or by any other means; and also, as to flue-cured tobacco, data with regard to producer designations which shall include, but not be limited to, the markets and warehouses currently available for the producers, who would be eligible to designate the new market or, warehouse located beyond the geographical limitation for “designated markets” set forth in §29.1(e), who already designate and who desire to designate the new market.

(b) Order of priority. If the Secretary finds that there are insufficient qualified tobacco inspectors available to service adequately all applicants otherwise found to be qualified for additional inspection service pursuant to this subpart for a kind of tobacco, those applicants found to be eligible for additional services on auction markets designated for mandatory inspection shall be given priority over applicants for additional inspection service on other auction markets. If it becomes necessary to determine which of several qualified applicants having an equal order of priority under the preceding sentence shall receive additional inspection and price support services, those auction sales or auction markets where the greatest number of growers needing such service may be served with the qualified inspectors
shall have priority. If an application for an additional sale on a designated market is denied for lack of qualified inspectors, the Secretary, on application from such market, may temporarily suspend the requirement of inspection and certification on such market pursuant to section 5 of the Tobacco Inspection Act.

(c) Price support services to be through warehouses. Price support services on any auction market will be offered through tobacco auction warehouses operating in such market, and, notwithstanding any provision of this subpart, the offering of price support services through any auction warehouse located on any auction market will be conditioned upon a qualified, responsible warehouseman entering into an approved auction warehouse contract under the provisions of the applicable tobacco price support program, published at part 1464 of this title.

§ 29.3 Procedures for filing, hearing, and determination of applications.

(a) Time and place of filing. Applications for the extension of tobacco inspection and price support services to new markets, to warehouses located beyond the geographical limitation for “designated markets” set forth in §29.1(e) and to additional sales on designated markets shall be filed, in triplicate, with the Hearing Clerk not later than September 15 in the case of flue-cured tobacco, December 1 in the case of Maryland tobacco, and July 15 in the case of burley and all other kinds of tobacco. Applications should be addressed to the Hearing Clerk, U.S. Department of Agriculture, Washington, DC 20250. Applications which are not received by the Hearing Clerk on or before the foregoing cutoff date for the kind of tobacco shall be rejected as untimely filed. After denial of an application for additional inspection and price support services for a marketing season, no application from the same auction market or proposed new market shall be considered for the next consecutive marketing season, unless the application contains a statement by the applicant setting forth new facts that constitute evidence of such a substantial change in conditions since the previous hearing as the review committee as specified in paragraph (h) of this section deems would warrant such further hearing.

(b) Form and content of application. The application shall be in writing, shall set forth the grounds for the application and shall be signed by the applicant or applicants. If an applicant is a corporation, the application shall be executed by a responsible officer of such corporation. The application shall include a statement of the name, address and form of business organization of each party to the application and the location of the proposed new market or additional sale.

(c) Hearings on applications. Following the closing date for filing applications for each kind of tobacco, a hearing or hearings shall be held on the applications, if any, filed for additional inspection and price support services for the kind of tobacco in question. Such hearing or hearings shall be scheduled to begin within 60 days following the closing date for such applications. Notice of hearing shall be issued by the Secretary, filed with the Hearing Clerk, and published in the FEDERAL REGISTER, and a copy shall be mailed by the Hearing Clerk to each applicant. Such publication and mailing shall be not less than 5 days prior to the opening of the hearing.

(d) Hearing officer. A hearing officer shall preside over each such hearing. The hearing officer shall determine the order of procedure at the hearing, shall have power to administer oaths and affirmations, to rule on and admit evidence, and, following the opening of the hearing, to recess the hearing to such other times and places as he deems desirable or necessary.

(e) Scope of hearing and burden of proof. Each applicant shall have the burden of presenting evidence relative to the factors specified in §29.2(a).

(f) Record and evidence. The proceedings at each such hearing shall be transcribed verbatim. All oral testimony shall be under oath or affirmation. All documentary exhibits shall be submitted in triplicate by the person offering the same. The Hearing Officer
shall, insofar as possible, exclude testimony and exhibits which are irrelevant, immaterial, or not of the sort upon which responsible persons are accustomed to rely. Cross-examination shall be allowed only to the extent that the Hearing Officer in his discretion deems it desirable or necessary to develop the material facts.

(g) Briefs. If requested at the hearing, the presiding officer shall fix a time, not to exceed 20 days from the close of the hearing, within which interested persons may mail briefs to the Hearing Clerk.

(h) Certification and referral. As soon as practicable following the close of the hearing, the Hearing Officer shall certify the transcript of the proceedings at the hearing together with all exhibits and shall transmit the same to the Hearing Clerk for referral to a review committee comprised of the Administrator, Agricultural Marketing Service, the Administrator, Agricultural Stabilization and Conservation Service, and a representative of the Office of the Secretary to be designated by the Secretary.

(i) Recommended action. The review committee shall review and consider the applications, hearing record, including exhibits, and all other available information and data relating to applications for each kind of tobacco and shall submit a recommendation thereon to the Secretary.

(j) Final decision. The Secretary shall issue the decision on each application and such decision shall be final: Provided, That any determination that additional services will be provided may be reconsidered and may be vacated if it is subsequently found that any material fact upon which such determination was based was materially erroneous or false, or that the new market or additional sale in question is not functioning as a bona fide auction sale. Such decision shall be filed with the Hearing Clerk who shall mail a true copy thereof, by certified mail, to the applicant.

§ 29.21 Weigher.
Person employed, licensed, or authorized by the Secretary to weigh and certify the weight of tobacco.

§ 29.22 Appeal inspector.
An inspector or other person designated or authorized by the Division to hear appeals under the Act and the regulations in this subpart.

§ 29.23 Tobacco.
Tobacco in its unmanufactured forms as it appears between the time it is cured and stripped from the stalk, or primed and cured and the time it enters a manufacturing process. Conditioning, sweating, and stemming are not regarded as manufacturing processes.

§ 29.24 Official standards.
Standards for tobacco promulgated by the Secretary under the Act.

§ 29.25 Tentative standards.
Standards for tobacco prepared by the Division for trial purposes and limited use pending promulgation by the Secretary of Official Standards.

§ 29.26 Office of inspection.
A field office of the tobacco inspection service of the Division.

§ 29.27 Certificate.
A certificate issued under the Act and the regulations in this subpart.

§ 29.28 Interested party.
The owner or other financially interested person; including the warehouseman, commission merchant, association, and other person who has the tobacco in his custody for sale; the authorized agent of the owner; and persons to whom or by whom the tobacco has been sold on the basis of a certificate issued, or sample prepared, under the Act, but not including a person who is negotiating for its purchase.

§ 29.29 Regulations.
Rules and regulations of the Secretary under the Act.

§ 29.30 Package.
A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

§ 29.31 Lot.
A pile, basket, bulk, package, or other definite unit.

§ 29.32 Identification number.
A number or a combination of letters and numbers in a design or mark approved by the Director, stamped, printed, or stenciled on a lot of tobacco or attached thereto by an inspector, sampler, or weigher for the purpose of identifying the lot covered by a certificate issued under the Act.

§ 29.33 Official sample.
A sample selected, tagged, and signed by an inspector or sampler under the Act.

§ 29.34 Sample seal.
A seal approved by the Director for sealing official samples.

§ 29.35 Lot seal.
A seal approved by the Director for sealing lots of tobacco certificated under the Act.

§ 29.36 Auction market.
A place to which tobacco is delivered by the producers thereof, or their agents, for sale at auction through a warehouseman or commission merchant.

§ 29.37 Designated market.
An auction market designated by the Secretary, under section 5 of the Act.

§ 29.38 Public notice.
A proclamation by the Secretary under the Act (a) stating that an auction market is designated under the Act; (b) giving notice of such fact; (c) specifying a date when the requirement of inspection and certification under the act shall become effective; and (d) released to the press, mailed to the tobacco board of trade or warehouse association of such market, and mailed to the postmaster at such market for posting.
§ 29.39 Permissive inspection.

Inspection authorized under section 6 of the Act.

§ 29.40 Mandatory inspection.

Inspection authorized or required under section 5 of the Act or section 759 of the Appropriations Act.

[67 FR 36080, May 23, 2002]

DEFINITIONS

§ 29.41 The Appropriations Act.

[67 FR 36080, May 23, 2002]

§ 29.42 Receiving station.

Points at which producer tobacco is offered for marketing (other than sale at auction on a designated market), including tobacco auction warehouses, packing houses, prizeries, or places where tobacco is handled or stored.

[67 FR 36080, May 23, 2002]

ADMINISTRATION

§ 29.51 Administration.

The Director is charged with the supervision of the Division and the performance of all duties assigned thereto in the administration of the Act. Information concerning such administration may be obtained by addressing: The Director, Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250.

PERMISSIVE INSPECTION

§ 29.56 Permissive inspection.

Permissive inspection consists of inspection, including sampling and weighing, and certificating tobacco upon the request of an interested party. Upon such request, the Director may authorize and require an inspector, as a part of his duties, to supervise the preparation of tobacco to be inspected under the Act, including the sorting, handling, conditioning, or packing of such tobacco. Special tests and services may be performed for interested persons to the extent that available facilities will permit, subject to the payment of fees as provided in §29.123.

§ 29.57 Where inspection is offered.

Tobacco may be inspected, sampled, or weighed for the purposes of the Act, upon request of an interested party, at points indicated in paragraphs (a), (b), and (c) of this section whenever official inspectors, samplers, or weighers are available and the tobacco is offered under conditions that permit of its proper examination.

(a) Points at which tobacco enters, or is offered for, interstate or foreign shipment, including packing houses, prizeries, warehouses, and other places where tobacco is handled, packed, or stored.

(b) The stations or the headquarters of inspectors, samplers, or weighers. An official station may be any town, city, or place having a market, receiving station, or other facilities for handling, packing, or storing tobacco and where there is a sufficient volume of work to justify the stationing of an inspector, sampler, or weigher.

(c) Points near an official station, to the extent permitted by the time of the inspector, sampler, or weigher at such official station.

§ 29.58 Who may obtain inspection.

Inspection, sampling, or weighing as described in §29.56 may be requested by an interested party, or his authorized agent, by filing an application in accordance with §§29.59 and 29.60.

§ 29.59 How to make application.

Application for inspection, sampling, or weighing of tobacco shall be made to the Division, the office of inspection, or as the case may be, to an official inspector, sampler, or weigher. It may be made orally or in writing and delivered in person, by mail, by telegraph, or otherwise. If made orally, the Division or the official receiving it may require a written confirmation.

§ 29.60 Form of application.

Application for inspection, sampling, or weighing of tobacco shall include the following information:
§ 29.61 When application deemed filed.

An application shall be deemed filed when delivered to the Division, the office of inspection, or according to the nature of the service requested, to an official inspector, sampler, or weigher. When an application is filed, the date and time of filing shall be recorded by the official receiving it.

§ 29.62 When application may be rejected.

An application may be rejected (a) for noncompliance with the Act or the regulations in this subpart, or (b) when it is not practicable to provide the service. All expenses incurred in connection with an application rejected for noncompliance with the Act or the regulations in this subpart shall be paid by the applicant as provided in §29.124.

§ 29.63 When application may be withdrawn.

An application may be withdrawn at any time before the requested service is rendered upon payment of expenses incurred in connection therewith as provided in §29.124.

§ 29.64 Authority of agent.

Proof of authority of any person making an application as agent may be required in the discretion of the official receiving the application.

§ 29.65 Accessibility of tobacco.

All tobacco to be inspected, sampled, or weighed upon application shall be made accessible by the applicant for proper examination, including any necessary display in proper light for determination of grade or other characteristics or for drawing of samples. In the case of tobacco in packages, the coverings shall be removed by the applicant in such manner as may be prescribed by the inspector, sampler, or weigher.

§ 29.66 Certificates.

(a) Forms. Each certificate issued under this regulation shall (1) show that it was issued under The Tobacco Inspection Act; (2) be in a form approved for the purpose by the Director and (3) embody within its written or printed terms, with respect to the particular kind of service, all applicable information required by paragraphs (b), (c), (d), (e), and (f) of this section. Each certificate may also contain any information, not inconsistent with the act and the regulations in this subpart, as may be approved or required by the Director. The Director may, in his discretion, specify or limit the period in which a certificate shall be valid.

(b) Inspection certificate. Each inspection certificate shall show (1) the caption “Tobacco Inspection Certificate”; (2) whether it is an original, first, second, or other copy; (3) the number of the certificate; (4) the identification number and private identification marks on the lot; (5) the date and number of the official sample, if any; (6) the location of the tobacco at the time of inspection or sampling; (7) the date of inspection; (8) the type and grade of the tobacco; (9) the kind of lot or package; and (10) the signature of the official inspector; also such additional information as may be required by the Director. An inspection certificate covering a package of tobacco shall also
§ 29.72 Where mandatory inspection is required.

(a) Auction. All tobacco offered for sale at auction on a market designated in accordance with the Act and §29.73 shall be inspected and certified under the Act upon the date specified by the Secretary in public notice of such designation, and thereafter, except when the requirement of such inspection and certification is temporarily suspended by the Deputy Administrator in accordance with the Act and the regulations in this subpart.

§ 29.68 Advance information.

Upon the request of an applicant for whom tobacco has been inspected, sampled, or weighed and certified under the Act, all or any part of the contents of such certificate may be telegraphed or telephoned to him as his expense. Information relative to grade or other determinations contained or to be contained in a certificate shall not be divulged by an inspector, sampler, or weigher to any person other than an interested party or his agent without the approval of the Director, and such information shall not be furnished an interested party before the certificate is issued.

§ 29.69 Weighing apparatus.

A scale used for determination of weight to be certified under the Act shall be subject to examination for accuracy according to the regulations of the State or municipality in which located. No disapproved scale shall be used to determine weight of tobacco for the purposes of the Act and the regulations in this subpart.

MANDATORY INSPECTION

§ 29.71 Mandatory inspection.

Mandatory inspection consists of:

(a) Inspecting and certifying tobacco under the Act on designated markets before it is offered for sale at auction; or

(b) Inspecting and certifying tobacco at receiving stations under the Appropriations Act at the time the tobacco is delivered for sale.

[67 FR 36080, May 23, 2002]

§ 29.72 Where mandatory inspection is required.

(a) Auction. All tobacco offered for sale at auction on a market designated in accordance with the Act and §29.73 shall be inspected and certified under the Act upon the date specified by the Secretary in public notice of such designation, and thereafter, except when the requirement of such inspection and certification is temporarily suspended by the Deputy Administrator in accordance with the Act and the regulations in this subpart.
(b) Other. Tobacco of the kinds specified below offered for sale by the producers thereof at receiving stations shall be inspected and certificated under the Appropriations Act at the time of delivery and prior to change of ownership. The specified kinds are flue-cured tobacco, types 11, 12, 13, and 14; burley tobacco, type 21; Kentucky-Tennessee fire-cured tobacco, types 22 and 23; Virginia fire-cured tobacco, type 21; Virginia sun-cured tobacco, type 37; and dark air-cured tobacco, types 35 and 36.

[67 FR 36080, May 23, 2002]

§ 29.73 Designation of markets; termination of designation.

An auction market where tobacco bought or sold thereon at auction or the products customarily manufactured therefrom move in commerce may be designated under the Act by the Secretary after the Director has advised the Secretary that two-thirds of the growers voting in the referendum held in accordance with § 29.74 favored the designation of such market. When a market is designated by the Secretary, he shall give public notice of the fact and in such notice he shall specify the date on which the requirement of inspection and certification of tobacco sold at auction on such market shall become effective. The Director may temporarily suspend the requirement of inspection and certification on a designated market when it is found impracticable to provide such services because competent inspectors are not obtainable or because the quantity of tobacco available for inspection is insufficient to justify the cost of such service. A designation shall terminate automatically at the end of any two consecutive marketing seasons during which a designated market does not conduct any sales of tobacco at auction. A market whose designation is terminated under this section shall be considered as a new market, as defined in §29.1, and any future application for services shall be filed and determined in accordance with the provisions of §§29.3 and 29.2.

[38 FR 27599, Oct. 5, 1973]

§ 29.74 Growers’ referendum.

(a) Method of conducting. Any referendum held as provided in section 5 of the Act shall be conducted by the Division in accordance with this section. The Director shall determine (1) the market or group of markets to be covered by a referendum; (2) when a referendum is to be held; and (3) the period during which growers, entitled to vote therein, may cast their ballots. When a referendum is held for a group of markets, the result of such referendum may be construed to apply either individually or collectively to such markets. Before holding a referendum, the Division shall establish from the records of the collectors of internal revenue for the preceding marketing season, or in the absence of such records then from such other reliable sources of information as are available, a list showing the names of all growers who are entitled to vote in the referendum, and from the list so established the eligibility of growers to vote in a referendum shall be determined by the Division: Provided, That if a grower, whose name appears on such lists for two or more markets selling the same class of tobacco, votes in one referendum for a market selling such type, he shall not be eligible to vote in a referendum for any other market selling such type. If no growers sold tobacco at auction on a proposed new market during the preceding marketing season, then the list of growers entitled to vote in the referendum shall be comprised of the growers residing in the county where the proposed new market is located and in the adjacent counties.

(b) Form of ballot. Ballots to be used for voting in a referendum held under the Act shall be in a form approved for the purpose by the Director.

(c) Distribution of ballots. Ballots to be used by growers in a referendum under the act may be distributed by mail or otherwise as the Director may select. The Director may establish and publish a list of voting places for the purpose of any referendum and distribute ballots therewith. When ballots are not
§ 29.74a Producer referenda on mandatory grading.

(a)(1) Method of conducting. Referenda shall be conducted among producers who were engaged in the production of the following types of tobacco harvested in the immediately preceding crop year: flue-cured tobacco, types 11, 12, 13, 14; Kentucky-Tennessee fire-cured tobacco, types 22 and 23; Virginia fire-cured tobacco, type 21; Virginia sun-cured tobacco, type 37; dark air-cured tobacco, types 35 and 36; burley tobacco, type 31; and cigar filler and binder tobacco, types 42, 43, 53, 54, and 55. A referendum will be conducted for each kind of tobacco and the results will apply to each individual kind. A producer is eligible to vote in a referendum for each kind of tobacco they produce.

(2) Farmers engaged in the production of tobacco. For purposes of the referendum, persons engaged in the production of tobacco includes any person who is entitled to share in a crop of the tobacco or the proceeds thereof because he or she shares in the risks of production of the crop as an owner, landlord, tenant, or sharecropper (a landlord whose return from the crop is fixed regardless of the amount of the crop produced is excluded) on a farm on which such crop is planted in a workmanlike manner for harvest: Provided, That any failure to harvest the crop because of conditions beyond the control of such person shall not affect his or her status as a person engaged in the production of the crop. In addition, persons engaged in the production of tobacco also includes each person who it is determined would have had an interest as a producer in the crop on a farm for which a farm allotment under the quota program (7 CFR part 723, subpart B) for the crop was established and no acreage of the crop was planted but an acreage of the crop was regarded as planted for history acreage purposes under the applicable Farm Service Agency commodity regulations of the Department of Agriculture.

(3) One vote limitation. Each person eligible to vote in a particular referendum shall be entitled to only one vote in such referendum regardless of the number of farms in which such person is interested or the number of communities, counties, or States in which farms are located in which farms such person is interested: Provided, That:

(i) The individual members of a partnership shall each be entitled to one vote, but the partnership as an entity shall not be entitled to vote;
§ 29.75 Accessibility of tobacco.

(a) All tobacco subject to mandatory inspection shall be made readily accessible for inspection.

(b)(1) Each warehouse operator shall block off in his warehouse adequate space for each basket of flue-cured tobacco offered for sale on the auction market, and shall prominently number each 10th basket space. The blocking and numbering arrangement shall follow the order of sale; that is, down one row and back on the adjacent row.

(2) Each warehouse shall display a plainly visible sign with the total number of baskets of flue-cured tobacco allotted to be sold each day. Each warehouse operator shall designate to the inspector the number of the starting space for each day’s sale and grading will begin at this designated space. All spaces, whether empty or full, shall be counted. No tobacco will be graded beyond the numbered space corresponding with the number of baskets allotted for each day’s sale. The grading shall proceed from the beginning point of the sale to the closing point of the sale in an orderly sequence. An inspector shall not go back and grade any basket of tobacco placed in a space which was empty when grading for the day’s sales passed such sales space.

(c) Before starting inspection of the day’s sale of flue-cured tobacco in each warehouse, the head grader or market supervisor grader shall determine if there is compliance with the requirements of paragraph (b) of this section. If he determines that the prescribed system has not been followed, the inspectors shall proceed to the next scheduled warehouse and shall return to the noncomplying warehouse on the next sales day for such warehouse when the head grader or market supervisor grader shall again determine if the prescribed system has been followed before starting the inspection.

(d) A reduction in daily sales for any warehouse resulting from noncompliance with this section, including empty spaces, shall not prevent the maximum number of baskets allotted per day per
set of buyers from being sold in the market.

(e) Each receiving station operator shall make tobacco accessible to the inspector for proper examination including any necessary display in adequate light for determination of grade, class, type, or other characteristics.

§ 29.75a Display of burley tobacco on auction warehouse floors in designated markets.

(a)(1) Each lot of burley tobacco displayed for sale on auction warehouse floors shall have a minimum space of 24 inches from butts to butts between the rows. Distances between lots of tobacco within the row shall be no less than 8 inches between immediately adjacent lots.

(2) The number of bales on a pallet shall not exceed eight. Tobacco packed in bales shall have the stems turned toward the aisle.

(3) Each warehouse operator shall display a plainly visible sign showing the total number of lots of burley tobacco allotted to be sold each day. Such sign shall be displayed at the point of lots where the days' sales will conclude and no additional tobacco shall be graded beyond that point.

(4) Each warehouse operator shall arrange his entire day's sale in a continuous and orderly arrayed sequence of lots and rows of tobacco. Any arrangement of tobacco in rows of progressively varying lengths, or any deviations from an orderly arrayed sequence of lots and rows of tobacco, shall have prior approval of the Set Work Leader or Circuit Supervisor.

(5) Each warehouse operator shall designate to the Set Work Leader or Circuit Supervisor the starting point or lot for each day's sale, and counting and grading will begin at this designated point and proceed to the closing point of the sale in an orderly sequence. All lot spaces, containing or not containing a lot of tobacco, and all lots of tobacco, covered or uncovered, shall be counted and included in the daily sales allotment. Lots of tobacco shall not be removed, added, rearranged, or substituted between the time they are counted for the day's sale and the time they are graded for the day's sale, provided, however, that with prior approval of the Set Work Leader or Circuit Supervisor compensating lots of tobacco may be substituted for empty spaces and covered lots included in a daily sales count.

(6) Each operator of a warehouse at which baled burley tobacco is offered for sale shall open the particular bale, in a lot of tobacco, chosen by a grader for inspection and reseal that bale after inspection.

(7) Each seller, by offering burley tobacco for sale, certifies that the lot inspected by a grader is representative of the grade of all the tobacco in that lot, that the leaf was stalk-cured, that the bales do not contain any foreign matter or material, and are not nested.

(b) Before starting inspection of the day's sale of burley tobacco in each warehouse, the Set Work Leader or Circuit Supervisor shall determine if there is compliance with the requirements of paragraph (a) of this section. If he determines that the prescribed requirements have not been followed, the inspector shall proceed to the next sale or sales as originally scheduled for that day and grade the number of lots of tobacco scheduled for such sale or sales, and shall return to the noncomplying warehouse on the next regularly scheduled sales day for such warehouse, at which time the Set Work Leader or Circuit Supervisor shall again determine if the prescribed system has been followed before starting the inspection. If noncompliance or failure to observe requirements of paragraph (a) of this section are discovered after inspection for the day's sale has started, the inspector shall discontinue inspection and proceed to the next sale or sales scheduled for that day and shall return to the noncomplying warehouse on the next regularly scheduled sales day for such warehouse.

(c) The provisions of this section shall not preclude the application of other administrative remedies or the institution of criminal proceedings in appropriate cases as provided by the Act.

§ 29.75b  Display of baled flue-cured tobacco on auction warehouse floors in designated markets.

Each lot of baled flue-cured tobacco displayed for sale on auction warehouse floors shall have a minimum of 30 inches from side to side between rows with the open side of the bale facing the aisles. Distance between lots of baled tobacco within the row shall be no less than 18 inches between immediately adjacent lots.

[65 FR 46086, July 27, 2000]

§ 29.75c  Display of tobacco at receiving stations.

Each lot of tobacco delivered for sale at receiving stations and transferred to a conveyor system for unloading shall maintain a distance between adjacent lots of not less than 18 inches during the inspection process. The platform area used for examination with a conveyor system shall be a minimum of 4 × 4 feet. Any lots of tobacco displayed in a manner other than a conveyor system shall maintain a minimum clearance of 18 inches on all sides. If the tobacco is inspected or graded by the recipient, it shall be made available for mandatory inspection at the same time and location within the receiving station.

[67 FR 36081, May 23, 2002]

§ 29.76  Mandatory inspection ticket.

A mandatory inspection ticket shall consist of a Tobacco Inspection Certificate made and issued in combination with an auction warehouse ticket in a form approved by the Director.

§ 29.77  Warehousemen to provide tickets.

A mandatory inspection ticket, in the form required by § 29.76 shall be provided by each auction warehouseman on a designated market to cover each lot of tobacco offered for sale at auction by him on such market.

§ 29.78  Changes or alterations.

No change or alteration shall be made, in the weight or other identification of the lot, on a mandatory inspection ticket after the certification of type and grade by an official inspector, and any such change or alteration shall constitute and be construed as a change or alteration in the certificate issued or authorized under the Act.

§ 29.79  Disposition of ticket.

One copy of the mandatory inspection ticket shall be attached to, or placed on, the tobacco certificated as a further identification of the lot and all copies of such ticket shall become null and void when such identifying copy is removed from the lot. When and as requested by the Director, one copy of such ticket, showing (a) the certification of type and grade; (b) the weight and other identification; and (c) the details of the sale at auction, shall be delivered by the warehouseman to the Division or the head inspector of the market.

§ 29.80  Announcing grades.

The grade of each lot of tobacco as certified by an official inspector on a designated market shall be clearly announced by the warehouseman or his representative at the time the lot is offered in the auction: Provided, That the Director may waive the requirement of announcing grades in the auction if he finds it impractical for the warehouseman to render this service.

§ 29.81  Interference with inspectors.

(a) Auction. (1) No person, including the owner, producer, warehouseman, purchaser, agent, or employee thereof shall attempt, in any manner, to influence an inspector with respect to the grade designation of tobacco, or impede, in any manner, an inspector while the inspector is in the process of grading tobacco on the warehouse auction floor, or ask any question or discuss any matter pertaining to the grading of tobacco while the inspector is grading any tobacco on the warehouse auction floor. While inspectors are engaged in grading the day’s sale, all requests for information concerning the grade designation on or requests to review the grade of any lot of tobacco shall be made only to the head grader or to the market supervisor grader.

(2) In the event that the head grader or market supervisor grader determines that a person has violated any provision of this section, inspection ticket(s) if already issued on the lot(s)
of unsold tobacco involved shall be null and void and no further inspection shall be performed on such lot(s) offered for sale by the warehouseman in whose premises the violation occurred until the next regularly-scheduled sale for such warehouse: Provided, That if violation consists of talking to the inspector while he/she is grading the tobacco, a warning shall be given on first offense and penalty provisions shall apply on any subsequent offense. A reduction in daily sales for any warehouse resulting from a violation of this section shall not prevent the maximum number of lots or pounds allotted per day per set of buyers from being sold in a designated market.

(b) Other. No person, including the owner, producer, receiving station operator, purchaser, agent, or employee thereof shall attempt, in any manner, to influence an inspector with respect to the grade designation of tobacco, or impede, in any manner, an inspector while the inspector is in the process of grading tobacco.

(c) Administrative Remedies. The provisions of this section shall not preclude the application of other administrative remedies or the institution of criminal proceedings in appropriate cases as provided by the Act.

[67 FR 36081, May 23, 2002]
§ 29.95 Review or second inspection not an appeal.

A review or investigation made in accordance with §29.132, or a second inspection, sampling, or weighing made upon the request of an interested party for the purpose of securing new or later information when the correctness of an old certificate or sample is not questioned, shall not be considered an appeal.

§ 29.96 Order in which made.

Appeals shall be heard and passed upon, so far as practicable, in the order in which they are filed.

§ 29.97 Who shall pass upon appeals.

Appeals shall be passed upon by an appeal inspector designated for the purpose by the Director. When authorized, by the Director, two or more appeal inspectors may jointly pass upon an appeal. The Division may authorize an inspector, supervising inspector, or other person to act as an appeal inspector, but no appeal inspector shall pass upon an appeal involving the correctness of a certificate issued or sample prepared by him.

§ 29.98 Appeal findings.

Immediately after an appeal has been heard and the tobacco involved therein has been reexamined, an appeal certificate shall be issued or an appeal sample prepared by the appeal inspector. Such certificate or sample shall show the finding of the appeal inspector and shall be labeled “Appeal Certificate” or “Appeal Sample”, as the case may be, over the signature of the appeal inspector. An appeal certificate or sample shall supersede all other certificates or samples for the same lot of tobacco and shall refer specifically to the certificate or sample from which the appeal was made. In all other respects the provisions of this subpart relative to certificates or samples shall apply to an appeal certificate or sample. The findings of the appeal inspector as certified shall be final, unless the Director shall direct a review of such findings.

§ 29.99 Superseded certificate or sample.

When superseded under this subpart by an appeal certificate or an appeal sample, such superseded certificate or sample shall become null and void and shall not thereafter be used to represent the tobacco described therein. If the original and the copies of the old certificate were not delivered to the appeal inspector for cancellation, the appeal inspector shall notify such persons or firms as he may consider necessary to prevent fraudulent use of any such null and void certificate.

INSPECTORS, SAMPLERS, AND WEIGHERS

§ 29.106 Who may be employed, licensed, or authorized.

Any persons who is not financially interested directly or indirectly in merchandising tobacco, except as a grower or except in disposing of tobacco previously acquired, and who has demonstrated his competency may be employed, licensed, or authorized to inspect, sample, or weigh tobacco. Licenses issued by the Secretary shall be countersigned by a supervising official of the Division. Licenses to inspect or sample shall specify the type or types of tobacco which the licensee is authorized to inspect or sample.

§ 29.107 Order of providing service.

When tobacco is to be inspected, sampled, or weighed upon request, such services shall be rendered as far as practicable in the order in which applications were received. In conducting mandatory inspection, the inspection shall start at the beginning of the “break” in the auction warehouse where the sale is scheduled to start and the inspection shall continue in the order of sale on each warehouse floor and from warehouse to warehouse.

§ 29.108 Certificate issuance.

A certificate shall be issued as soon as practicable after any tobacco has been inspected or weighed, except when a certificate covering two or more lots is specifically authorized by the Director. In case of a lost or destroyed certificate, a duplicate thereof may be issued under the same number, date, and name by an authorized supervising official. Any such duplicate certificate
shall be plainly marked "Duplicate" above the signature of the supervising official who issued it.

§ 29.109 Inspection determinations.

The determination of type, grade, size, form, condition, or other tobacco characteristics shall be based upon a thorough examination of the lot of tobacco to be certificated or an official sample of such lot. The certification of a lot of tobacco shall be a true representation of the lot, or of the official sample, at the time of inspection.

§ 29.110 Method of sampling.

In sampling tobacco under the Act, at least three breaks shall be made at different points in the lot, and in the discretion of the sampler as many more breaks shall be made as seem necessary to show the range of the entire lot. From the breaks so made tobacco to be used in the official sample shall be selected. The official shall, so far as practicable, include tobacco of each quality, color, length, and other characteristics found in the lot in such proportions as would truly represent the lot. In case a lot is found to be damaged, nested, or in doubtful keeping order, the official sample tag shall be so marked. Official sample tags shall be attached to the sample, in a manner prescribed by the Director.

§ 29.111 Weight determinations.

Daily before weighing any tobacco for the purposes of the Act, a weigher shall verify the accuracy of the scales to be used by him. Except as may be otherwise specified by the Director, all weights certificated shall be within an accuracy of 1 pound.

§ 29.112 Proper light.

Tobacco shall not be inspected or sampled for the purposes of the Act except when displayed in proper light for correct determination of grade or other characteristics of tobacco. No tobacco shall be inspected or sampled for the purposes of the Act in the direct rays of the sun or by any artificial light which does not permit the inspector correctly to determine the grade or other characteristics of tobacco.

§ 29.113 Suspension and termination.

The license of an inspector, sampler, or weigher may be suspended, pending final action by the Secretary, by any official authorized to countersign licenses whenever he considers such action to be for the best interest of the service. The designation of an appeal inspector may be withdrawn at any time by the Division. Before the license of an inspector, sampler, or weigher is terminated or revoked pursuant to the Act and the regulations in this subpart, such appointee or licensee shall be furnished by the Secretary, or his designated representative, with a written statement specifying the charges, and within 7 days after his suspension, the licensee may file an appeal in writing with the Secretary supported by any evidence he may wish to offer in connection therewith.

FEES AND CHARGES

§ 29.123 Fees and charges.

Fees and charges for tobacco inspection and certification service shall be collected by the Director to cover, insofar as practicable, all costs of the services, including establishment of standards, administrative, and supervisory costs, as follows:

(a) Mandatory inspection. The inspection and certification fee is $0.009 per pound. The fee shall be paid by sellers of tobacco and assessed against the warehouse or receiving station operator irrespective of ownership or interest in the tobacco. When the warehouse or receiving station operator pays the Department, it is presumed the fee was collected from the seller. Inspection and related services shall be suspended or denied if the warehouse or receiving station operator fails to pay the fees and charges imposed under this section. The fee shall be due and payable on the first day of the immediately following month and on the day immediately following the last sale each marketing year. Mandatory inspection and certification services shall take precedence over permissive inspections, other than reinspections.
(b) **Domestic permissive inspection and certification.** (1) Fees and charges for inspection at redrying plants shall comprise the cost of salaries, travel, per diem, and related expenses to cover the cost of performing the service. Fees shall be for the actual time required to render the service calculated to the nearest 30-minute period. The hourly rate shall be $47.40 per hour. The overtime rate for service performed outside the inspector’s regularly scheduled tour of duty shall be $53.70 per hour. The rate of $64.45 per hour shall be charged for work performed on Sundays and holidays. These same fees shall be applicable for hogshead, bale, cases or sample inspections. (2) Fees and charges for inspection of tobacco performed at receiving points is $.01 per pound.

(c) **Export permissive inspection and certification.** The inspection and certification fee for export tobacco is $.0025 per pound.

(d) Fees and charges fixed in accordance with this subpart shall be paid by the applicant or person obtaining the service in accordance with a statement rendered by the Division. A deposit to cover all, or a part of, fees and charges for services to be rendered may be required by the Division. Fees for services rendered shall be remitted by check or draft made payable to “Agricultural Marketing Service”, United States Department of Agriculture.

(e) Fees for special tests and services will be determined by agreement between the Deputy Administrator, Tobacco Programs, and the applicant or applicants for service.

§ 29.125 **Charge for appeals.**

A charge of $5 shall be made for each appeal filed under §29.90 and the fee for an appeal inspection, sampling, or weighing shall equal the fee for the original inspection, sampling, or weighing from which the appeal is taken, plus any charges for travel or other expenses incurred in hearing the appeal: *Provided,* That when a material error in the certificate or sample from which the appeal is taken is found by the appeal inspector the charge and fee shall be waived.

§ 29.126 **When appeal refused or withdrawn.**

When an appeal is refused in accordance with §29.93 or withdrawn in accordance with §29.94, the appellant may be required to pay a reasonable charge for the time used by the appeal inspector and other expenses incurred in connection with such appeal prior to its denial, dismissal, or withdrawal.

§ 29.127 **Demonstrations and courses of instruction.**

Charges, not in excess of the cost thereof, as may be approved by the Director, may be made for demonstrations, samples, or courses of instruction when such are furnished upon request.

§ 29.128 **For certificates.**

A charge may be made, in the discretion of the Director, for copies of certificates other than those required to be distributed in §29.67, and for the issuance of a duplicate certificate in accordance with §29.108.

§ 29.129 **National Advisory Committee for Inspection Services.**

(a) To assist the Secretary in determining the level of inspection and related services and the fees and charges therefore, a National Advisory Committee of tobacco producers shall be
appointed in accordance with the Federal Advisory Committee Act (5 U.S.C. appendix I).

(b) The committee shall consist of 14 members and 14 alternates. There will be a flue-cured subcommittee, a burley subcommittee, and a fire and dark air-cured subcommittee.

(c) Recommendations to the Secretary for membership on the committee will be received from the following organizations: One from the Georgia Farm Bureau, one from the South Carolina Farm Bureau, one from the Virginia Farm Bureau, three from the North Carolina Farm Bureau, two from the North Carolina Grange, one from the Tennessee Farm Bureau, three from the Kentucky Farm Bureau, one from the Florida, Indiana, Missouri, West Virginia, or Maryland Farm Bureau, and one from the Wisconsin or Ohio Farm Bureau.

(d) The committee and/or subcommittees shall meet at the call of the Secretary.

[46 FR 62394, Dec. 24, 1981]

§ 29.131 [Reserved]

§ 29.132 Division investigations.

An inspector, sampler, or weigher, when authorized by the Division, may of his own initiative, or upon the request of an interested party, review for the purpose of verification or confirmation any tobacco which he has certified, and any supervising official may review the work of any inspector, sampler, or weigher: Provided, That such review shall not be made if the ownership of the tobacco involved has changed since the date of certification, unless there is intimation or evidence of deterioration or of irregularities or of fraud in connection with the certification or sampling. When such review discloses an error in the certification, the inspector, sampler, or weigher concerned, or supervising official shall immediately correct the error by making an appropriate change in the certificate or by canceling the certificate and issuing a new certificate in lieu thereof. Any correction made on a certificate shall be initialed by the issuing official or by the supervising official.

When a new certificate is issued for a lot of tobacco, the old certificate and copies thereof shall become null and void and shall not thereafter be used to represent the tobacco described there-in.

§ 29.133 Identification number.

The Director may require the use of official identification numbers in connection with tobacco certified or sampled under the Act. When identification numbers are required, they shall be specified by the Director, and shall be attached to, or stamped, printed, or stencilled on, the lots of tobacco certified or sampled, in a manner specified by the Director.

§ 29.400 Inspection, certification, and testing of imported tobacco.

(a) All tobacco offered for importation into the United States, including tobacco entering foreign trade zones, but excluding transshipped tobacco, oriental and cigar tobacco, shall be inspected for grade and quality. Tobacco subject to inspection shall be inspected at the point of entry.

(b) All flue-cured or burley tobacco, including stems, offered for importation into the United States, including tobacco entering foreign trade zones, but excluding transshipped tobacco, shall be accompanied by a pesticide and end user certification completed by the importer. Any flue-cured or burley tobacco that is not certified as being free of prohibited pesticide residues shall not be permitted entry into the United States until the Secretary has determined that the tobacco meets the pesticide residue requirements in these regulations.

§ 29.401 Definitions.

As used in §§ 29.400 through 29.500, the words and phrases hereinafter defined shall have the following meanings:

(a) Importation. Arriving within the territorial limits of the United States with the intent to unload.

(b) Importer. The owner of the tobacco at the time of importation or the owner’s successor in interest if the tobacco is sold prior to the completion of the requirements of §§ 29.400 through 29.500.
(c) Inspection certificate. An official written representation of a lot of tobacco made by an inspector and issued to an importer.

(d) Invoice. A writing on behalf of the importer that is used in commercial transactions of tobacco for selling, purchasing, shipping, or consigning.

(e) Lot. A unit of shipment of tobacco encompassed by a single invoice.

(f) Package. A hogshead, carton, case, bale, or other securely enclosed parcel or bundle.

(g) Packing list. A document itemizing each package covered by a single invoice listing, among other things, the kind of tobacco in each package, the net weight, and the marks and numbers identifying each package.

(h) Point of entry. The place at the port of entry or foreign trade zone where tobacco is unloaded from a carrier or unpacked from a container for the purpose of warehousing, manipulation, or manufacturing.

(i) Port of entry. Any place designated by Executive order of the President, by order of the Secretary of the Treasury, or by Act of Congress, at which a customs officer is authorized to accept entries of merchandise, to collect duties, and to enforce the various provisions of the Customs and Navigation Laws. The term “port of entry” incorporates the geographical area under the jurisdiction of the port director when such port is one other than a district headquarters port.

(j) Tobacco. Tobacco between the time it is cured and stripped from the stalk or primed and cured, in whole leaf or unmanufactured form, and the time it is utilized in product manufacturing. Conditioning, sweating, stemming, and threshing are not considered manufacturing.

(k) Transshipped tobacco. Tobacco that arrives within the territorial limits of the United States for the purpose of continuous transportation without being unloaded for warehousing, manipulation, or manufacturing, to a destination outside the territorial limits of the United States.

(l) Unload. To remove from a carrier at the port of entry or at a foreign trade zone.

(m) End user certification. A document issued by the Tobacco Division in a form approved by the Director containing a certification by the importer or subsequent purchaser to identify any and all end users of imported flue-cured or burley tobacco.

(n) Pesticide. Any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, and any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant.

(o) Pesticide certification. A document issued by the Tobacco Division in a form approved by the Director containing a certification by the importer that flue-cured and burley tobacco offered for importation does not exceed the maximum allowable residue levels of any banned pesticide.

(p) Prohibited pesticide residue. The maximum concentration of residue allowable for a specific pesticide or combination of pesticides as set forth in §29.427.

(q) Stems. The midribs or large central veins of tobacco leaves.

(r) Pesticide test sample. An official sample or samples, collected from a lot of tobacco by the Secretary of Agriculture for analysis by a certified chemist to ascertain the residue levels of banned pesticides.

(s) Sample Identification Form. A document approved by the Director that identifies and accompanies the sample to the testing facility on which the test results will be certified by a chemist in charge of testing.

(t) Subsequent purchaser. Any entity that acquires ownership of tobacco after importation.

(u) Testing. The chemical analysis of a pesticide test sample to determine levels of pesticide residues.

(v) End user. A domestic manufacturer of cigarettes or other tobacco products; an entity that mixes, blends, processes, alters in any manner, or stores imported tobacco for export; or any individual that the Secretary may identify as making use of imported tobacco for the manufacture of tobacco products.

(w) Reexported. Any imported tobacco not used to manufacture tobacco products that is subsequently exported.

(x) Blended. Tobacco that is combined or mixed into a uniform product.
Agricultural Marketing Service, USDA § 29.425

(y) Leaves. Whole, undivided tobacco leaves containing lamina and stem.

(z) Strips. The sides (including portions of sides) of tobacco leaf from which the stem has been removed or a lot of tobacco composed of strips.

§ 29.402 Advance notice.

The importer shall notify, orally or in writing, the Raleigh Regional Office, USDA, AMS, Tobacco Division, P.O. Box 27846, Raleigh, North Carolina 27611, or the Lexington Regional Office, USDA, AMS, Tobacco Division, 333 Waller Avenue, Lexington, Kentucky 40504, of the date and location that tobacco subject to inspection under § 29.400 will be unloaded for warehousing, manipulation, or manufacturing. This notice shall be received at the Regional Office at least five working days prior to unloading the tobacco for warehousing, manipulation, or manufacturing.

§ 29.403 Accessibility of tobacco.

All tobacco subject to inspection under § 29.400 shall be made accessible by the importer for examination in a manner prescribed by the inspector. This includes providing proper lighting, removal of package coverings, and such other provisions as the inspector may deem necessary for inspection.

§ 29.404 Inspection.

The inspector shall review each lot of tobacco through a process of selective sampling in sufficient detail to allow an accurate determination of the types and grades contained in each lot.

§ 29.405 Inspection by submitted samples.

The Director, in lieu of onsite inspection, may approve submission by the importer of samples where time, geographical distance, or availability of inspectors prevent a timely onsite inspection, or where tobacco is classified as a “temporary importation under bond” as defined in 19 CFR 10.31 et seq. The importer shall certify that sampling was conducted in accordance with procedures approved by the Director. All tobacco inspected by submitted sample is subject to spot-checking at the discretion of the Director. Submitted samples shall be disposed of in a manner approved by the Director unless return of the sample is requested by the importer at the time of submission. Samples will only be returned at the importer’s expense.

§ 29.406 Import inspection certificate.

An import inspection certificate shall consist of a certificate issued by the Tobacco Division in a form approved by the Director. A certificate shall be issued to the importer as soon as practicable following the completion of inspection. A separate certificate shall be issued for each lot of tobacco. In case of a lost or destroyed certificate, a duplicate may be issued under the same number, date, and name by an authorized official. Duplicate certificates shall be plainly marked “Duplicate” above the signature of the supervising official who issued it.

§ 29.407 Disposition of import inspection certificate.

The inspector shall provide the importer with the original portion of the certificate and forward the first copy to the Director and the second copy to the appropriate Regional Office. The importer shall retain the original inspection certificate until the lot inspected has been sold, manufactured into products or exported from the United States.

§ 29.425 Submission and disposition of pesticide residues and end user(s) certification.

(a) Completion of certification: The importer shall complete a pesticide residue and end user(s) certification on a form approved by the Director for each lot of flue-cured or burley tobacco, including stems, offered for importation. If the importer is unable to identify the end user(s) or purchasers...
§ 29.426 Collection of pesticide test samples.

Any lot of tobacco not certified by the importer as being free of prohibited pesticide residues shall be sampled in sufficient detail to determine whether the lot conforms with the pesticide residue standards. Lots of imported tobacco certified by the importer shall be sampled on a random basis and tested to determine whether they conform with the pesticide residue standards.

[51 FR 30199, Aug. 22, 1986]

§ 29.427 Pesticide residue standards.

The maximum concentration of residues of the following pesticides allowed in flue-cured or burley tobacco, expressed as parts by weight of the residue per one million parts by weight of the tobacco (ppm) are:

[54 FR 24663, June 9, 1989; 54 FR 27855, July 3, 1989]

§ 29.428 Identification of sample for testing.

Samples of imported tobacco shall be identified by the inspector on a form approved by the Director. The original and first two copies shall accompany the sample to the designated testing facility. The remaining copy of the identification form will be sent to the Director. Upon the completion of testing the designated facility will complete the form and mail the original and one copy to the Director and retain one copy for their records.

[51 FR 30199, Aug. 22, 1986]

§ 29.429 Disposition of imported tobacco exceeding pesticide residue standards.

Within 10 days of the receipt of test results from pesticide test samples, the Director shall notify the importer or entity responsible for the lot of tobacco of the test results. If the test results indicate that the lot or any portion of the lot contains prohibited pesticide residues, the Director will notify the importer or entity responsible for the affected tobacco and the appropriate U.S. Customs officials that the tobacco cannot enter the United States. The importer or other entity shall notify the Director in writing of the methods by which the tobacco will be disposed of and provide 5 days advance notice of time and place of final disposition. The Department will monitor the disposition procedures to verify that the tobacco has been accurately identified as to lot, kind, type, and grade.

[54 FR 24663, June 9, 1989]

§ 29.430 Appeals.

Appeals of test results for imported tobacco must be made in writing to the Director within 30 days from the receipt of notification. The statement
must specify in detail the relief requested. The importer or entity requesting the appeal will bear the cost of any subsequent sampling and testing. Subsequent samples will be selected only from tobacco which is in the original package and from tobacco which has not been mixed, blended, or altered in any manner since the initial sampling.

[51 FR 30199, Aug. 22, 1986]

§ 29.431 Handling of imported tobacco pending test results.

After an individual shipment of imported flue-cured or burley tobacco has been sampled, regardless of whether it is certified as being free from prohibited pesticide residues, it must be kept in the original packages, and not be mixed, blended, manipulated, or altered in any manner, or moved, shipped, or transported from the point of entry until it has been determined that the tobacco does not contain prohibited pesticide residues.

[54 FR 24663, June 9, 1989]

§ 29.500 Fees and charges for inspection and acceptance of imported tobacco.

(a) The fee for inspection of imported tobacco is $.0099 per kilogram and shall be paid by the importer. This inspection fee applies to all tobacco imported into the United States except as provided in §29.400. Fees for services rendered shall be remitted by check or draft in accordance with a statement issued by the Director, and shall be made payable to "Agricultural Marketing Service."

(b) The fee for sampling, accepting, and certification of imported flue-cured and burley tobacco for prohibited pesticide residues is $.0077 per kilogram and shall be paid by the importer.

(c) The fee for accepting imported flue-cured and burley tobacco not accompanied by a certification that it is free of prohibited pesticide residues shall be an additional $.0077 per kilogram. The minimum fee assessed pursuant to this paragraph shall be $162.00 per lot. Fees for services rendered shall be remitted by check or draft in accordance with a statement issued by the Director, and shall be made payable to "Agricultural Marketing Service."

Subpart C—Standards

OFFICIAL STANDARD GRADES FOR FLUE-CURED TOBACCO (U.S. TYPES 11, 12, 13, 14 AND FOREIGN TYPE 92)

AUTHORITY: 7 U.S.C. 511b, 511m, and 511r.

SOURCE: 42 FR 21092, Apr. 25, 1977, unless otherwise noted.

DEFINITIONS

§ 29.1001 Definitions.

As used in these standards, the words and phrases hereinafter defined shall have the indicated meanings assigned.

§ 29.1002 Body.

The thickness and density of a leaf or the weight per unit of surface. (See Elements of Quality Chart.)

§ 29.1003 Class.

A major division of tobacco based on method of cure or principal usage.

§ 29.1004 Clean.

Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower position of the stalk normally contain more sand or dirt than those from higher stalk positions. (See Rule 4.)

§ 29.1005 Color.

The third factor of a grade based on the relative hues, saturations or chromas, and color values common to the type.

§ 29.1006 Color intensity.

The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. (See Elements of Quality Chart.)

§ 29.1007 Color symbols.

As applied to flue-cured tobacco, color symbols are L—lemon, F—orange, FR—orange red, R—red, V—
§ 29.1008 Combination symbols.

A color or group symbol used with another symbol to form the third factor of a grademark to denote a particular side or characteristic of the tobacco. As applied to flue-cured tobacco, the combination symbols are XL—lug side, PO—oxidized primings, XO—oxidized leaf or smoking leaf, GL—thin-bodied nondescript, GF—medium-bodied nondescript, LP—lemon (primings side), and FP—orange (primings side), KK—excessively scorched.

§ 29.1009 Condition.

The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are: Undried, air-dried, steam-dried, sweating, sweated, and aged.

§ 29.1010 Crude.

A subdegree of maturity. Crude leaves are usually hard and stick as a result of extreme immaturity. A similar condition may result from fire-kill, sunburn, or sunscald. Any leaf which is crude to the extent of 20 percent or more of its surface may be described as crude. (See Rule 20.)

§ 29.1011 Cured.

Tobacco dried of its sap by either natural or artificial processes.

§ 29.1012 Damage.

The effect of mold, must, rot, black rot, or other fungus or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must, or rot is considered damaged. (See Rule 21.)

§ 29.1013 Dirty.

The state of tobacco containing moderate to excessive amounts of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 24.)

§ 29.1014 Elasticity.

The flexible, springy nature of the tobacco leaf to recover approximately its original size and shape after it has been stretched.

§ 29.1015 Elements of quality.

Elements of quality and the degrees used in the specifications of the Official Standard Grades for Flue-cured, U.S. Types 11–14, and Foreign Type 92 are shown in chart form. Words have been selected to describe the degrees of each element.

[42 FR 21092, Apr. 25, 1977, as amended at 49 FR 16755, Apr. 20, 1984]

§ 29.1016 Excessively scorched.

As applied to flue-cured tobacco, the combination symbol “KK” when used as the third factor of a grademark denotes that a lot contains over 50 percent of unripe tobacco.

[51 FR 25027, July 10, 1986]

§ 29.1017 Finish.

The reflectance factor in color perception. Finish indicates the sheen or shine of the surface of a tobacco leaf.

§ 29.1018 Fire-killed.

Any leaf of which 5 percent or more of its surface has a set green color caused by excessive heat in the curing process. Any lot containing 5 percent or more of such tobacco may be described as fire-killed. (See Rule 23.)

§ 29.1019 Flue-cured.

Tobacco cured under artificial atmospheric conditions by a process of regulating the heat and ventilation without allowing smoke or fumes from the fuel to come in contact with the tobacco; or tobacco cured by some other
§ 29.1020 Foreign matter.

Any extraneous substance or material such as straw, strings, rubber bands, grass, weeds, or an excessive amount of dirt or sand. (See Rule 24.)

§ 29.1021 Form.

The stage or preparation of tobacco such as stemmed or unstemmed.

§ 29.1022 Grade.

A subdivision of a type according to group, quality, and color.

§ 29.1023 Grademark.

A grademark normally consists of three symbols which indicate group, quality, and color. A letter is used to indicate group, a number to indicate quality, and a letter or letters to indicate color. For example, B3F means Leaf, good quality, orange color.

§ 29.1024 Green (G).

A color term applied to immature or crude tobacco. Any leaf which has a green color affecting 20 percent or more of its surface may be described as green. (See Rule 19.)

§ 29.1025 Greenish (V).

A color term applied to greenish-tinged tobacco. Any leaf which has a greenish tinge or a pale green color affecting 20 percent or more of its surface may be described as greenish. (See Rule 18.)

§ 29.1026 Group.

A division of a type covering closely related grades based on certain characteristics which are related to stalk position, body, or the general quality of the tobacco. Groups in Flue-cured, U.S. Types 11–14, and Foreign Type 92 are: Leaf (B), Smoking Leaf (H), Cutters (C), Lugs (X), Primings (P) Mixed (M), Nondescript (N), and Scrap (S).

§ 29.1027 Injury.

Hurt or impairment from any cause except the fungus or bacterial diseases which attack tobacco in its cured state, but which is not serious enough to be classified as waste. (See definitions of Damage and Waste; see also Rule 14.)

§ 29.1028 Leaf.

Whole, unstemmed leaf. Leaf, when applied to tobacco in strip form, shall describe the divided unit of a whole leaf.

§ 29.1029 Leaf scrap.

A byproduct of stemmed and unstemmed tobacco.

§ 29.1030 Leaf structure.

The cell development of a leaf as indicated by its porosity. (See Elements of Quality Chart.)

§ 29.1031 Lemon (L).

Yellow.

§ 29.1032 Length.

The linear measurement of cured tobacco leaves from the butt of the midrib to the extreme tip. Length, as an
§ 29.1033 Element of quality, does not apply to tobacco in strip form.

§ 29.1033 Lot.
A pile, basket, bulk, or more than one bale, case, hogshead, tierce, package, or other definite package unit.

§ 29.1034 Maturity.
The degree of ripeness. (See Elements of Quality Chart.)

§ 29.1035 Mixed color (KM).
Distinctly different colors of the type mingled together. (See Rule 16.)

§ 29.1036 Mixed Group (M).
This group consists of tobacco from three or more groups or two distinctly different groups which are mixed together in various combinations.

§ 29.1037 Nested.
Any lot of Types 11–14 tobacco which has been loaded, packed or arranged to conceal tobacco of inferior grade, quality or condition. Nested includes: (a) Any lot of tobacco which contains injured or other inferior tobacco, any of which cannot be readily detected upon inspection because of the way the lot is packed or arranged; (b) Any lot of tobacco which consists of distinctly different grades, qualities or conditions and which is stacked or arranged with the same kinds together so that the tobacco in the lower portions of the lot is distinctly inferior in grade, quality or condition from the tobacco in the top portion of the lot.
[52 FR 28534, July 31, 1987]
§ 29.1044 Orange Red (FR).
A yellowish red.

§ 29.1045 Order (case).
The state of tobacco with respect to its moisture content.

§ 29.1046 Oxidized (O).
A term applied to tobacco that has deteriorated and turned black during the curing process. Any leaf of which 10 percent or more of its surface has been blackened during the curing process may be described as oxidized. Oxidized tobacco is also known as barn scald or barn rot. (See Rules 23 and 25.)

§ 29.1047 Package.
A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

§ 29.1048 Packing.
A lot of tobacco consisting of a number of packages submitted as one definite unit for sampling or inspecting. It is represented to contain the same kind of tobacco and has a common identification number or mark on each package.

§ 29.1049 Papery.
A term used to describe thin-bodied, oilless tobacco usually associated with whitish-lemon color.
[51 FR 25027, July 10, 1986; 51 FR 28687, Aug. 11, 1986]

§ 29.1050 Prematurity.
A condition of growth and development characteristic of the lower leaves of the tobacco plant. Premature leaves have some appearance of ripeness due to a process of starvation caused by translocation of plant food elements from these leaves to other leaves higher on the stalk.

§ 29.1051 Quality.
A division of a group or the second factor of a grade based on the relative degree of one or more elements of quality.

§ 29.1052 Raw.
Tobacco as it appears between the time of harvesting and the beginning of the curing process.

§ 29.1053 Red (R).
A brownish red.

§ 29.1054 Semicured.
Tobacco in the process of being cured or which is partially but not thoroughly cured. Semicured includes tobacco which contains fat stems, swelled stems, frozen tobacco, frozen stems, or stems that have not been thoroughly dried in the curing process. (See Rule 23.)

§ 29.1055 Side.
A certain phase of quality, color, or length as contrasted with some other
§ 29.1056 Phase of quality, color, or length; or any peculiar characteristic of tobacco.

§ 29.1056 Slick.

A term used to denote tobacco having a close or tight leaf structure. Any leaf of lemon or orange color of which 20 percent or more of its surface is close or tight may be described as slick. (See Rule 17.)

§ 29.1057 Smoked.

Any tobacco affected by smoke or fumes in the curing process. (See Rule 23.)

§ 29.1058 Sound.

Free of damage.

§ 29.1059 Special factor.

A symbol or term authorized to be used with specified grades. Tobacco to which a special factor is applied may meet the general specifications but which has a peculiar side or characteristic which tends to modify the grade. (See Rules 10, 21, 22, 26, 28, 29, and 30.)

§ 29.1060 Steam-dried.

The condition of unfermented tobacco as customarily prepared for storage by means of a redrying machine or other steam-conditioning equipment.

§ 29.1061 Stem.

The midrib or large central vein of a tobacco leaf.

§ 29.1062 Stemmed.

A form of tobacco, including strips or strip scrap, from which the stems or midribs have been removed.

§ 29.1063 Strips.

The sides of a tobacco leaf from which the stem has been removed from a lot of tobacco composed of strips.

§ 29.1064 Sweated.

The condition of tobacco which has passed through one or more fermentations natural to tobacco packed with a normal percentage of moisture. This condition sometimes is described as aged.

§ 29.1065 Sweating.

The condition of tobacco in the process of fermentation.

§ 29.1066 Symbol (S).

As applied to Flue-cured tobacco the symbol (S) when used (a) as the third factor of a grademark, denotes slick, unripe tobacco in lemon or orange color, and (b) when used preceding a grademark, denotes tobacco in strip form. (See Rules 17 and 28.)

§ 29.1067 Tobacco.
Tobacco as it appears between the time it is primed and cured, and the time it enters into the different manufacturing processes. The acts of stemming, threshing, sweating, and conditioning are not regarded as manufacturing processes. Tobacco, as used in these standards, does not include manufactured or semi-manufactured products, stems, cuttings, clippings, trimmings, siftings, or dust.

§ 29.1068 Tobacco products.
Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff.

§ 29.1069 Type.
A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.1070 Type 11.
That type of flue-cured tobacco commonly known as Western Flue-cured or Old Belt and Middle Belt Flue-cured, produced principally in the Piedmont sections of Virginia and North Carolina and the district extending eastward to the coastal plains region. That portion of this type known as Old Belt Flue-cured, normally characterized by a heavier body and darker color shade and produced principally in the Piedmont sections of Virginia and North Carolina, may be classified as Type 11a; and that portion of the type known as Middle Belt Flue-cured, normally characterized by a thinner body and lighter color shade and produced principally in a section lying between the Piedmont and coastal plains regions of Virginia and North Carolina, may be classified as Type 11b.

§ 29.1071 Type 12.
That type of flue-cured tobacco commonly known as Eastern Flue-cured or Eastern Carolina Flue-cured, produced principally in the coastal plains section of North Carolina, north of the South River.

§ 29.1072 Type 13.
That type of flue-cured tobacco commonly known as Southeastern Flue-cured or South Carolina Flue-cured, produced principally in the coastal plains section of South Carolina and the southeastern counties of North Carolina, south of the South River.

§ 29.1073 Type 14.
That type of flue-cured tobacco commonly known as Southern Flue-cured, produced principally in the southern section of Georgia, in northern Florida, and to some extent in Alabama.

§ 29.1074 Type 92.
That type of flue-cured tobacco commonly known as Foreign-grown Flue-cured, produced in countries other than the United States.
§ 29.1075 Undried.

The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.1076 Uniformity.

An element of quality which describes the consistency of a lot of tobacco as it is prepared for market. Uniformity is expressed as a percentage in grade specifications. (See Rule 13.)

§ 29.1077 Unsound (U).

Damaged. (See Rule 21.)

§ 29.1078 Unstemmed.

A form of tobacco, including whole leaf and leaf scrap, from which the stems or midribs have not been removed.

§ 29.1079 Variegated (K).

Any tobacco that does not blend with the normal colors of the types; any leaf of which 20 percent or more of its surface is grayish, mottled, bleached, doty-faced, scalded, or sunbaked. (See Rule 15.)

§ 29.1080 Variegated dark red (KD).

A dark brownish-red discoloration which usually results from excessive sunbaking during the growing process or from storing cured tobacco over extended periods of time. Any leaf of which 20 percent or more of its surface is dark brownish-red may be described as variegated dark red.

§ 29.1081 Variegated red or scorched (KR).

A red discoloration which usually results from excessive heat in the curing process. Any leaf of which 20 percent or more of its surface has been reddened in the curing process may be described as variegated red or scorched. (See Rule 16.)

§ 29.1082 Waste.

The portion or portions of the web of tobacco leaves which have been lost or rendered less serviceable for use in tobacco products, including:

(a) Portions which have decomposed or largely decomposed by field diseases and field-firing, pole-burning, bulk-burning; (b) portions which are dead, lifeless, and do not have sufficient strength or stability to hold together in the normal manufacturing process due to excessive injury of any kind.

§ 29.1083 Wet (W).

Any sound tobacco containing excessive moisture to the extent that it is in unsafe or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 22.)

§ 29.1084 Whitish-lemon (LL).

A whitish-yellow color which usually results during wet growing seasons when rain leaches or washes out the yellow color from the leaf. Any leaf of
which 20 percent or more of its leaf surface has whitish-yellow color may be described as whitish-lemon.

§ 29.1085 Width.

The relative breadth of a tobacco leaf expressed in relation to its length. Width, as an element of quality, does not apply to tobacco in strip form. (See Elements of Quality Chart.)

1 Expressed in inches.
2 Expressed in percentage.

§ 29.1101 Elements of quality and degrees of each element.

These standardized words or terms are used to describe tobacco quality and to assist in interpreting grade specifications. Tobacco attributes or characteristics which constitute quality are designated as elements of quality. The range within each element is expressed by the use of words or terms designated as degrees. These several degrees are arranged to show their relative value, but the actual value of each degree varies with group.

RULES

§ 29.1106 Rules.

The application of these official standard grades shall be in accordance with the following rules.

§ 29.1107 Rule 1.

Each grade shall be treated as a subdivision of a particular type. When the grade is stated in an inspection certificate, the type also shall be stated.

§ 29.1108 Rule 2.

The determination of a grade shall be based upon a thorough examination of a lot of tobacco or of an official sample of the lot.

§ 29.1109 Rule 3.

In drawing an official sample from a hogshead or other package of tobacco, three or more breaks shall be made at such points and in such manner as the inspector or sampler may find necessary to determine the kinds of tobacco and the percentage of each kind contained in the lot. All breaks shall be made so that the tobacco contained in the center of the package is visible to the sampler, except for baled tobacco that is not opened for inspection (see Rule 30). Tobacco shall be drawn from at least three breaks from which a representative sample shall be selected. The sample shall include tobacco of each different group, quality, color, length, and kind found in the lot in proportion to the quantities of each contained in the lot.
§ 29.1110 Rule 4.
All standard grades must be clean unless otherwise noted by a special factor.

§ 29.1111 Rule 5.
The grade assigned to any lot of tobacco shall be a true representation of the tobacco at the time of inspection and certification. If, at any time, it is found that a lot of tobacco does not comply with the specifications of the grade previously assigned, it shall not thereafter be represented as such grade.

§ 29.1112 Rule 6.
A lot of tobacco on the marginal line between two colors shall be placed in the color with which it best corresponds with respect to body or other associated elements of quality.

§ 29.1113 Rule 7.
Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.

§ 29.1114 Rule 8.
A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.1115 Rule 9.
The use of any grade may be restricted by the Director during any marketing season when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.1116 Rule 10.
Any special factor approved by the Director of the Tobacco Division, Agricultural Marketing Service, may be used to show a peculiar side or characteristic of the tobacco which tends to modify the grade.

§ 29.1117 Rule 11.
Interpretations, the use of specifications, and the meaning of terms shall be in accordance with determinations or clarifications made by the Chief of the Marketing Programs Branch and approved by the Director.

§ 29.1118 Rule 12.
In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over one percent of the tobacco shall be overlooked.

Degrees of uniformity shall be expressed in terms of percentages. The percentages shall govern the portion of a lot which must meet the specifications of the grade. (These percentages shall not affect limitations established by other rules.) The minor portion must be closely related, but may be of a different group, quality, and color from the major portion.

§ 29.1120 Rule 14.
The application of injury tolerance as an element of quality shall be expressed in terms of a percentage. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury. In appraising injury, consideration shall be given to the normal characteristics of the group as related to injury.

§ 29.1121 Rule 15.
Any lot of tobacco containing 20 percent or more of variegated tobacco other than variegated red or scorched shall be described as variegated and designated by the color symbol "K," "KL," "KF," "KD," or "KV."

§ 29.1122 Rule 16.
Any lot of ripe tobacco which contains 20 percent or more of variegated red or scorched tobacco shall be designated by the color symbol "KR." Any lot of unripe tobacco which is under 20 percent greenish or green but which contains 20 percent or more of scorched tobacco, or any lot of tobacco which contains 20 percent or more of a color distinctly different from the major color shall be classified as mixed color and designated by the color symbol...
“KM”. Any lot of unripe tobacco in the C, or B groups which is under 20 percent greenish or green but which contains 50 percent or more of scorched tobacco shall be classified as excessively scorched and designated by the combination symbol “KK”.

§ 29.1123 Rule 17.
Any lot of lemon, or orange colored tobacco containing over 20 percent of slick tobacco shall be designated by the symbol “S” in the X, C, or B groups.

§ 29.1124 Rule 18.
Any lot of mature tobacco in lemon or orange color containing 20 percent or more of greenish tobacco, or any lot which is not green but which contains 20 percent or more of greenish and green tobacco combined shall be designated by the color symbol “V.”

§ 29.1125 Rule 19.
Any lot of tobacco containing 20 percent or more of green tobacco, or any lot which is not crude but contains 20 percent or more of green and crude combined shall be designated by the color symbols “G,” “GR,” “GK,” “GG,” or the combination symbols “GL,” or “GF.”

§ 29.1126 Rule 20.
Crude tobacco shall not be included in any grade of any color except green, green red, green variegated, gray green, or the combination symbols “GL,” or “GF” in the nondescript group. Any lot containing 20 percent or more of crude tobacco shall be classified as nondescript.

§ 29.1127 Rule 21.
Damaged tobacco which otherwise meets the specifications of a grade shall be treated as a special factor grade by placing the special factor “U” after the grademark.

§ 29.1128 Rule 22.
Sound tobacco that is wet or in doubtful-keeping order but which otherwise meets the specifications of a grade shall be treated as a special factor grade by placing the special factor “W” after the grademark.

§ 29.1129 Rule 23.
Tobacco shall be designated by the grademark “No-G,” when it is offtype, semicured, fire-killed, smoked, oxidized over 10 percent, has an odor foreign to the type, or is packed in bales which are not approximately 42 inches wide × 42 inches high × 40 inches long.

[65 FR 46086, July 27, 2000]

§ 29.1130 Rule 24.
Tobacco shall be designated by the grademark, “No-G-F,” when it contains stalks, suckers, or foreign matter such as straw, strings, rubber bands, grass, weeds, or an excessive amount of dirt or sand.

§ 29.1131 Rule 25.
Any lot of tobacco containing 10 percent or less of oxidized tobacco, except as provided in rule 12, shall be designated by the combination symbols “PO,” “XO,” or “BO.” Crude or green tobacco containing 10 percent or less of oxidized shall be grade “N2.”

Tobacco that contains a moderate amount of dirt or sand, but which otherwise meets the specifications of any Primings grade, including the first quality Nondescript from the Primings group, shall be designated by placing the special factor, “dirt” or “sand” after the grademark.

§ 29.1133 Rule 27.
Tobacco in Types 11–14 shall be designated by the grademark “No-G-Nested” when it is nested.

[47 FR 51721, Nov. 17, 1982, as amended at 49 FR 16756, Apr. 20, 1984]

§ 29.1134 Rule 28.
Tobacco in strip form which otherwise meets the specifications of a grade shall be treated as a special factor grade by placing the special factor “S” preceding the grademark.

[49 FR 16756, Apr. 20, 1984]
§ 29.1135 Rule 29.

Any lot of tobacco containing 25 percent or more of an adjacent group, which otherwise meets the specifications of a grade shall be treated as a special factor grade by placing the special factor "M" preceding the grademark.

[60 FR 36028, July 13, 1995]

§ 29.1136 Rule 30.

Any lot of baled tobacco that is not opened for inspection but which otherwise meets the specifications of a grade shall be graded by the exterior only.

[65 FR 46086, July 27, 2000]

GRADENAMES

B1L—Choice Quality Lemon Leaf
Ripe, firm leaf structure, medium body, rich in oil, deep color intensity, spready, 20 inches or over in length. Uniformity, 90 percent; injury tolerance, 5 percent.

B2L—Fine Quality Lemon Leaf
Ripe, firm leaf structure, medium body, rich in oil, deep color intensity, normal width, 18 inches or over in length. Uniformity, 90 percent; injury tolerance, 10 percent.

B3L—Good Quality Lemon Leaf
Ripe, firm leaf structure, medium body, oily, strong color intensity, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

B4L—Fair Quality Lemon Leaf
Ripe, firm leaf structure, medium body, oily, strong color intensity, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 20 percent, of which not over 5 percent may be waste.

B5L—Low Quality Lemon Leaf
Ripe, firm leaf structure, medium body, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance, 30 percent, of which not over 10 percent may be waste.

B6L—Poor Quality Lemon Leaf
Ripe, firm leaf structure, medium body, lean in oil, weak color intensity, stringy. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

B1F—Choice Quality Orange Leaf
Ripe, firm leaf structure, fleshy, rich in oil, deep color intensity, normal width, 18 inches or over in length. Uniformity, 90 percent; injury tolerance, 5 percent.

B2F—Fine Quality Orange Leaf
Ripe, firm leaf structure, fleshy, rich in oil, deep color intensity, normal width, 18 inches or over in length. Uniformity, 90 percent; injury tolerance, 10 percent.

B3F—Good Quality Orange Leaf
Ripe, firm leaf structure, fleshy, oily, strong color intensity, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

B4F—Fair Quality Orange Leaf
Ripe, firm leaf structure, fleshy, oily, moderate color intensity, normal width. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

B5F—Low Quality Orange Leaf
Ripe, firm leaf structure, fleshy, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B6F—Poor Quality Orange Leaf
Ripe, firm leaf structure, fleshy, lean in oil, weak color intensity, stringy. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

B1FR—Choice Quality Orange Red Leaf
Ripe, firm leaf structure, fleshy, rich in oil, deep color intensity, normal width, 18 inches or over in length. Uniformity, 90 percent; injury tolerance, 5 percent.

B2FR—Fine Quality Orange Red Leaf
Ripe, firm leaf structure, fleshy, rich in oil, deep color intensity, normal width, 18 inches or over in length. Uniformity, 90 percent; injury tolerance, 10 percent.

B3FR—Good Quality Orange Red Leaf
Ripe, firm leaf structure, fleshy, oily, strong color intensity, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

B4FR—Fair Quality Orange Red Leaf
Ripe, firm leaf structure, fleshy, oily, moderate color intensity, normal width. Uniformity, 80 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

B5FR—Low Quality Orange Red Leaf
Ripe, firm leaf structure, fleshy, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B6FR—Poor Quality Orange Red Leaf
B3V—Good Quality Greenish Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B4V—Fair Quality Greenish Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 5 percent may be waste.

B5V—Low Quality Greenish Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B3KL—Good Quality Variegated Lemon Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance 15 percent.

B4KL—Fair Quality Variegated Lemon Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent of which not over 5 percent may be waste.

B5KL—Low Quality Variegated Lemon Leaf
Unripe, tight leaf structure, heavy, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B6KL—Poor Quality Variegated Lemon Leaf
Unripe, tight leaf structure, heavy, narrow. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

B3KR—Good Quality Variegated Red or Scorched Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance 15 percent.

B4KR—Fair Quality Variegated Red or Scorched Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B5KR—Low Quality Variegated Red or Scorched Leaf
Ripe, firm leaf structure, fleshy, lean in oil, normal width. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 5 percent may be waste.

B6KF—Poor Quality Variegated Orange Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance 15 percent.

B3KF—Good Quality Variegated Orange Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 15 percent.

B4KF—Fair Quality Variegated Orange Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

B5KF—Low Quality Variegated Orange Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B6KF—Poor Quality Variegated Orange Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

B3K—Good Quality Variegated Dark Red Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 80 percent; injury tolerance 15 percent.

B4K—Quality Variegated Dark Red Leaf
Unripe, close leaf structure, heavy, normal width. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

B5K—Low Quality Variegated Dark Red Leaf
Unripe, close leaf structure, heavy, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

B6K—Poor Quality Variegated Dark Red Leaf
Unripe, close leaf structure, heavy, narrow. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

B3KM—Good Quality Variegated Mixed Leaf
Unripe, close leaf structure, heavy, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

B4KM—Fair Quality Variegated Mixed Leaf
§ 29.1163 Smoking Leaf (H Group).

This group consists of leaves normally grown at or above the midportion of the stalk. Leaves of the H group show a high degree of maturity, more open leaf structure in relation to the B Group, and a material amount of injury characteristic of very ripe leaf tobacco.

Grades, Grade Names, Minimum Specifications, and Tolerances

H3F—Good Quality Orange Smoking Leaf
Immature, open leaf structure, medium body, lean in oil, strong color intensity, normal width, 16 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

H4F—Fair Quality Orange Smoking Leaf
Immature, close leaf structure, fleshy, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance, 20 percent; of which not over 5 percent may be waste.

B5G—Low Quality Green Leaf
Immature, close leaf structure, fleshy, lean in oil, narrow. Uniformity, 70 percent; injury tolerance, 30 percent, of which not over 10 percent may be waste.

B6G—Poor Quality Green Leaf
Immature, tight leaf structure, fleshy, lean in oil, stringy. Uniformity, 70 percent; injury tolerance, 40 percent, of which not over 20 percent may be waste.
Mellow, open leaf structure, medium body, lean in oil, moderate color intensity, normal width. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

H5F—Low Quality Orange Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

H6F—Poor Quality Orange Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, stringy. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

H4FR—Fair Quality Orange Red Smoking Leaf
Mellow, open leaf structure, fleshy, lean in oil, moderate color intensity, normal width. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

H5FR—Low Quality Orange Red Smoking Leaf
Mellow, open leaf structure, fleshy, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

H5F—Low Quality Orange Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, stringy. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

H4FR—Fair Quality Orange Red Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

H5F—Low Quality Orange Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

H6FR—Poor Quality Orange Red Smoking Leaf
Mellow, open leaf structure, medium body, lean in oil, weak color intensity, narrow. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C1L—Choice Quality Lemon Cutters
Ripe, open leaf structure, medium body, oily, deep color intensity, spready, 20 inches or over in length. Uniformity, 90 percent; injury tolerance, 5 percent.

C2L—Fine Quality Lemon Cutters
Ripe, open leaf structure, thin, oily, deep color intensity, spready, 20 inches or over in length. Uniformity, 80 percent; injury tolerance, 10 percent.

C3L—Good Quality Lemon Cutters
Ripe, open leaf structure, thin, oily, strong color intensity, spready, 18 inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.

C4L—Fair Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C5L—Low Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, weak color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C6L—Poor Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C0L—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C1LL—Fair Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C2LL—Low Quality Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C0LL—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C5L—Low Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C6L—Poor Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C0L—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C1LL—Fair Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C2LL—Low Quality Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C0LL—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C5L—Low Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C6L—Poor Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C0L—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C1LL—Fair Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C2LL—Low Quality Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C0LL—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C5L—Low Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C6L—Poor Quality Lemon Cutters
Ripe, open leaf structure, thin, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 5 percent may be waste.

C0L—Low Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

C1LL—Fair Quality Whitish-Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.

C2LL—Low Quality Lemon Cutters
Unripe, firm leaf structure, thin (papery), lean in oil, normal width, 16 inches (40.6 cm) or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.
§ 29.1165

inches or over in length. Uniformity, 80 percent; injury tolerance, 15 percent.
C4F—Fair Quality Orange Cutters
Ripe, open leaf structure, medium body, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.
C5F—Low Quality Orange Cutters
Ripe, open leaf structure, medium body, lean in oil, weak color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.
C5FP—Low Quality Orange Cutters (Primings Side)
Prematurely ripe, open leaf structure, medium body, lean in oil, pale color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 30 percent, of which not over 10 percent may be waste.
C4KR—Fair Quality Variegated Red or Scorched Cutters
Ripe, open leaf structure, medium body, lean in oil, moderate color intensity, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.
C4V—Fair Quality Greenish Cutters
Mature, open leaf structure, medium body, lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.
C4G—Fair Quality Green Cutters
Immature, close leaf structure, medium body, lean in oil, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.
C4GK—Fair Quality Green Variegated Cutters
Immature, close leaf structure, medium body, normal width, 16 inches or over in length. Uniformity, 70 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

§ 29.1165 Lugs (X Group).

This group consists of leaves normally grown near the bottom of the stalk. Leaves of the X group usually have a blunt tip and open face; they show some ground injury characteristic of the group.

Grades, Grade Names, Minimum Specifications, and Tolerances
X1L—Choice Quality Lemon Lugs
Ripe, open leaf structure, thin, oily, strong color intensity. Uniformity, 80 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.
X2L—Fine Quality Lemon Lugs
Ripe, open leaf structure, thin, oily, strong color intensity. Uniformity, 75 percent; injury tolerance 25 percent, of which not over 10 percent may be waste.
X3L—Good Quality Lemon Lugs
Ripe, open leaf structure, thin, lean in oil, moderate color intensity. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.
X4L—Fair Quality Lemon Lugs
Ripe, open leaf structure, thin, lean in oil, weak color intensity. Uniformity, 70 percent; tolerance, 30 percent waste.
X5L—Low Quality Lemon Lugs
Ripe, open leaf structure, thin, lean in oil, pale color intensity. Uniformity, 70 percent; tolerance, 40 percent waste.
X3LL Good Quality Whitish-Lemon Lugs
Unripe, firm leaf structure, thin (papery), lean in oil. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.
X4LL—Fair Quality Whitish-Lemon Lugs
Unripe, firm leaf structure, thin (papery), lean in oil. Uniformity, 70 percent; tolerance, 30 percent waste.
X1F—Choice Quality Orange Lugs
Ripe, open leaf structure, medium body, oily, strong color intensity. Uniformity, 80 percent; injury tolerance 20 percent, of which not over 5 percent may be waste.

X2F—Fine Quality Orange Lugs
Ripe, open leaf structure, medium body, oily, strong color intensity. Uniformity, 75 percent; injury tolerance 25 percent, of which not over 10 percent may be waste.

X3F—Good Quality Orange Lugs
Ripe, open leaf structure, medium body, lean in oil, moderate color intensity. Uniformity, 70 percent; tolerance, 30 percent waste.

X4F—Fair Quality Orange Lugs
Ripe, open leaf structure, medium body, lean in oil, weak color intensity. Uniformity, 70 percent; tolerance, 40 percent waste.

X5F—Low Quality Orange Lugs
Immature, firm leaf structure, medium body, lean in oil. Uniformity, 70 percent; tolerance, 40 percent waste.

X3KR—Good Quality Variegated Red or Scorched Lugs
Ripe, open leaf structure, medium body, lean in oil, moderate color intensity. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

X4KR—Fair Quality Variegated Red or Scorched Lugs
Ripe, open leaf structure, medium body, lean in oil, weak color intensity. Uniformity, 70 percent; tolerance, 30 percent waste.

X4KL—Fair Quality Variegated Lemon Lugs
Unripe, close leaf structure, thin. Uniformity, 70 percent; tolerance, 30 percent waste.

X4KF—Fair Quality Variegated Orange Lugs
Unripe, close leaf structure, medium body. Uniformity, 70 percent; tolerance, 30 percent waste.

X4KV—Fair Quality Variegated Greenish Lugs
Unripe, firm leaf structure, medium body. Uniformity, 70 percent; tolerance, 30 percent waste.

X3KM—Good Quality Variegated Mixed Lugs
Unripe, close leaf structure, medium body. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

X4KM—Fair Quality Variegated Mixed Lugs
Unripe, close leaf structure, medium body. Uniformity, 70 percent; tolerance, 30 percent waste.

X3S—Good Quality Slick Lugs
Unripe, close leaf structure, medium body. Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

X4S—Fair Quality Slick Lugs
Unripe, close leaf structure, medium body. Uniformity, 70 percent; tolerance, 30 percent waste.

X4G—Fair Quality Green Lugs
Immature, firm leaf structure, medium body, lean in oil. Uniformity, 70 percent; tolerance, 30 percent waste.

X4GK—Fair Quality Green Variegated Lugs
Immature, close leaf structure, medium body. Uniformity, 70 percent; tolerance, 30 percent waste.
Uniformity, 70 percent; injury tolerance 40 percent, of which not over 20 percent may be waste.

P4F—Fair Quality Orange Primings
Prematurely ripe, open leaf structure, medium body, lean in oil, pale color intensity. Uniformity, 70 percent; tolerance, 30 percent waste.

P5F—Low Quality Orange Primings
Prematurely ripe, open leaf structure, medium body, lean in oil, pale color intensity. Uniformity, 70 percent; tolerance, 40 percent waste.

P4G—Fair Quality Green Primings
Immature, firm leaf structure, medium body, lean in oil. Uniformity, 70 percent; tolerance, 30 percent waste.

P5G—Low Quality Green Primings
Immature, firm leaf structure, medium body, lean in oil. Uniformity, 70 percent; tolerance, 40 percent waste.

§ 29.1167 Mixed (M Group).
This group consists of tobacco from three or more groups or two distinctly different groups which are mixed together in various combinations.

Grades, Grade Names, Minimum Specifications, and Tolerances

M4F—Fair Quality Mixed Groups
Ripe, firm leaf structure, heavy, lean in oil. Injury tolerance 30 percent, of which not over 10 percent may be waste.

M5F—Low Quality Mixed Groups
Ripe, firm leaf structure, heavy, lean in oil. Injury tolerance 40 percent, of which not over 20 percent may be waste.

M4K—Fair Quality Variegated Mixed Groups
Ripe, close leaf structure, heavy. Injury tolerance 30 percent, of which not over 10 percent may be waste.

M5K—Low Quality Variegated Mixed Groups
Unripe, tight leaf structure, heavy. Injury tolerance 40 percent, of which not over 20 percent may be waste.

M4GK—Fair Quality Green Variegated Mixed Groups
Immature, close leaf structure, heavy. Injury tolerance 30 percent, of which not over 10 percent may be waste.

M5GK—Low Quality Green Variegated Mixed Groups
Immature, tight leaf structure, heavy. Injury tolerance 40 percent, of which not over 20 percent may be waste.

N1L—Best Nondescript from the P Group
Tolerance: 50 percent waste.

N1XL—Best Nondescript from the X Group
Tolerance: 50 percent waste.

N1K—Best Nondescript from the B or H Groups
Tolerance: 50 percent injury or waste.

N1R—Best, Heavy, Dark-colored Nondescript from the B Group
Tolerance: 50 percent injury or waste.

N1KV—Best, Variegated, Medium-bodied Greenish Nondescript from the B Group
Tolerance: 50 percent waste.

N1GL—Best, Thin, Crude Green Nondescript from the P or X Groups
Tolerance: 50 percent crude or waste.

N1GF—Best, Fleshy, Medium-colored, Crude Green Nondescript from the B Group
Tolerance: 50 percent crude, injury or waste.

N1GR—Best, Heavy, Dark-colored, Crude Green Nondescript from the B Group
Tolerance: 50 percent crude, injury or waste.

N1GG—Best, Crude, Gray Green Nondescript from the B Group
Tolerance: 50 percent crude, injury or waste.

N2—Poorest Nondescript of any Group or Color
Tolerance: Over 50 percent crude, injury or waste.

Pursuant to Rule 25, this grade also includes crude or green tobacco containing 10 percent or less of oxidized.
§ 29.1169 Scrap (S Group).
A byproduct of stemmed and unstemmed tobacco. Scrap accumulates from handling tobacco in farm buildings, warehouses, packing and conditioning plants, and stemmeries.

Grade, Grade Name and Specifications
S—Scrap. Loose, whole, or broken unstemmed leaves; or the web portion of tobacco leaves reduced to scrap by any process.

[42 FR 21092, Apr. 25, 1977, as amended at 49 FR 16756, Apr. 20, 1984]

OFFICIAL STANDARD GRADES FOR VIRGINIA FIRE-CURED TOBACCO (U.S. TYPE 21)

AUTHORITY: Sections 29.2251 to 29.2481, issued under 7 U.S.C. 511m and 511r.

SOURCE: Sections 29.2251 through 29.2481 appear at 37 FR 13521, July 11, 1972, unless otherwise noted.

DEFINITIONS

§ 29.2251 Definitions.

As used in these standards, the words and phrases hereinafter defined shall have the indicated meanings as assigned.

§ 29.2252 Air-dried.

The condition of unfermented tobacco as customarily prepared for storage under natural atmospheric conditions.

§ 29.2253 Body.

The thickness and density of a leaf or the weight per unit of surface. (See chart, § 29.2351.)

§ 29.2254 Brown colors.

A group of colors ranging from a reddish brown to yellowish brown. These colors vary from low to medium saturation and from very low to medium brilliancy. As used in these standards, the range is expressed as light brown (L), medium brown (F), and dark brown (D).

§ 29.2255 Class.

A major division of tobacco based on method of cure or principal usage.

§ 29.2256 Clean.

Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally
contain more dirt or sand than those from higher stalk positions. (See Rule 4, § 29.2395.)

§ 29.2257 Color.

The third factor of a grade based on the relative hues, saturation or chroma, and color values common to the type.

§ 29.2258 Color intensity.

The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. It is applicable to brown colors. (See chart, § 29.2351.)

§ 29.2259 Color symbols.

As applied to this type, color symbols are: L—light brown, F—medium brown, D—dark brown, M—mixture or variegated, G—green, GL—light green, and GD—dark green.

[45 FR 47115, July 14, 1980]

§ 29.2260 Condition.

The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are undried, air-dried, steam-dried, sweating, sweated, and aged.

§ 29.2261 Crude.

A subdegree of maturity. Crude leaves are usually hard and slick as a result of extreme immaturity. A similar condition may result from fire-kill, sunburn, or sunscald. Any leaf which is crude to the extent of 20 percent or more of its surface may be described as crude. (See Rule 19, § 29.2410.)

§ 29.2262 Cured.

Tobacco dried of its sap by either natural or artificial processes.

§ 29.2263 Damage.

The effect of mold, must, rot, black rot, or other fungous or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must, or rot is considered damaged. (See Rule 20, § 29.2411.)

§ 29.2264 Dirty.

The state of tobacco containing an abnormal amount of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 22, § 29.2413.)

§ 29.2265 Elasticity.

The flexible, springy nature of the tobacco leaf to recover approximately its original size and shape after it has been stretched. (See chart, § 29.2351.)

§ 29.2266 Elements of quality.

Physical characteristics used to determine the quality of tobacco. Words selected to describe degrees within each element are shown in the chart in § 29.2351.

§ 29.2267 Fiber.

The term applied to the veins in a tobacco leaf. The large central vein is called the midrib or stem. The smaller lateral and cross veins are considered from the standpoint of size and color.

§ 29.2268 Finish.

The reflectance factor in color perception. Finish indicates the sheen or shine of the surface of a tobacco leaf. (See chart, § 29.2351.)

§ 29.2269 Fire-cured.

Tobacco cured under artificial atmospheric conditions by the use of open fires from which the smoke and fumes of burning wood are partly absorbed by the tobacco.

§ 29.2270 Foreign matter.

Any extraneous substance or material such as stalks, suckers, straw, strings, rubber bands, and abnormal amounts of dirt or sand. (See Rule 22, § 29.2413.)

§ 29.2271 Form.

The stage of preparation of tobacco such as unstemmed or stemmed.

§ 29.2272 Grade.

A subdivision of a type according to group, quality, and color.

§ 29.2273 Grademark.

A grademark normally consists of three symbols which indicate group,
§ 29.2274 Quality, and color. A letter is used to indicate group, a number to indicate quality, and a letter or letters to indicate color. For example, B3D means Heavy Leaf, good quality, and dark-brown color.

§ 29.2274 Green (G).

A term applied to green-colored tobacco. Any leaf which has a green color affecting 20 percent or more of its surface may be described as green. (See Rule 18, § 29.2409.)

§ 29.2275 Group.

A division of a type covering closely related grades based on certain characteristics which are usually related to stalk position, body, or the general quality of the tobacco. Groups in this type are Wrappers (A), Heavy Leaf (B), Thin Leaf (C), Lugs (X), Nondescript (N), and Scrap (S).

§ 29.2276 Injury.

Hurt or impairment from any cause except the fungous or bacterial diseases which attack tobacco in its cured state. (See Rule 16, § 29.2407.)

§ 29.2277 Leaf scrap.

A byproduct of unstemmed tobacco. Leaf scrap results from handling unstemmed tobacco and consists of tangled whole or broken leaves.

§ 29.2278 Leaf structure.

The cell development of a leaf as indicated by its porosity. (See chart, § 29.2351.)

§ 29.2279 Length.

The linear measurement of cured tobacco leaves from the butt of the midrib to the extreme tip.

§ 29.2280 Lot.

A pile, basket, bulk, or more than one bale, case, hogshead, tierce, package, or other definite package unit.

§ 29.2281 Maturity.

The degree of ripeness. (See chart, § 29.2351.)
§ 29.2290 Premature primings.

Ground leaves harvested before reaching complete growth and development. These leaves lack body and strength. (See Rule 22, § 29.2413.)

§ 29.2291 Quality.

A division of a group or the second factor of a grade based on the relative degree of one or more elements of quality.

§ 29.2292 Resweated.

The condition of tobacco which has passed through a second fermentation under abnormally high temperatures or refermented with a relatively high percentage of moisture. Resweated includes tobacco which has been dipped or reconditioned after its first fermentation and put through a forced or artificial sweat.

§ 29.2293 Rework.

Any lot of tobacco which needs to be resorted or otherwise reworked to prepare it properly for market, including:

(a) Tobacco which is so mixed that it cannot be classified properly in any grade of the type, because the lot contains a substantial quantity of two or more distinctly different grades which should be separated by sorting;

(b) tobacco which contains an abnormally large quantity of foreign matter or an unusual number of muddy or extremely dirty leaves which should be removed;

and (c) tobacco not packed straight or otherwise not properly prepared for market. (See Rule 22, § 29.2413.)

§ 29.2294 Semicured.

Tobacco in the process of being cured or which is partially but not thoroughly cured. Semicured includes tobacco which contains fat stems, wet butts, swelled stems, or stems that have not been thoroughly dried in the curing process. (See Rule 22, § 29.2413.)

§ 29.2295 Semifired (SF).

Tobacco that is partially or lightly smoked or has not received the amount of smoke that is characteristic of fire-cured tobacco.

[51 FR 40406, Nov. 7, 1986]

§ 29.2296 Side.

A certain phase of quality, color, or length as contrasted with some other phase of quality, color, or length; or any peculiar characteristics of tobacco.

§ 29.2297 Size.

The length of tobacco leaves. (See chart, § 29.2371.)

§ 29.2298 Sound.

Free of damage.

§ 29.2299 Special factor.

A symbol or term authorized to be used with specified grades. Tobacco to which a special factor is applied may meet the general specifications but has a peculiar side or characteristic which tends to modify the grade. (See Rule 10, § 29.2401.)

§ 29.2300 Steam-dried.

The condition of unfermented tobacco as customarily prepared for storage by means of a redrying machine or other steam-conditioning equipment.

§ 29.2301 Stem.

The midrib or large central vein of a tobacco leaf.

§ 29.2302 Stemmed.

A form of tobacco, including strips and strip scrap, from which the stems or midribs have been removed.

§ 29.2303 Strength.

The stress a tobacco leaf can bear without tearing. (See chart, § 29.2351.)

§ 29.2304 Strips.

The sides of a tobacco leaf from which the stem has been removed or a lot of tobacco composed of strips.

§ 29.2305 Subgrade.

Any grade modified by a special factor symbol.

§ 29.2306 Sweated.

The condition of tobacco which has passed through one or more fermentations natural to tobacco packed with a normal percentage of moisture. This condition is sometimes described as aged.

§ 29.2307 Sweating.

The condition of tobacco in the process of fermentation.

§ 29.2308 Tobacco.

Tobacco as it appears between the time it is cured and stripped from the stalk, or primed and cured, and the time it enters into the different manufacturing processes. The acts of stemming, sweating, and conditioning are not regarded as manufacturing processes. Tobacco, as used in these standards, does not include manufactured or semimanufactured products, stems, cuttings, clippings, trimmings, siftings, or dust.

§ 29.2309 Tobacco products.

Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff.

§ 29.2310 Type.

A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.2311 Type 21.

That type of fire-cured tobacco, known as Virginia Fire-cured or Dark-fired, produced principally in the Piedmont and mountain sections of Virginia.

§ 29.2312 Undried.

The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.2313 Uniformity.

An element of quality which describes the consistency of a lot of tobacco as it is prepared for market. Uniformity is expressed as a percentage in grade specifications. (See Rule 15, § 29.2406.)

§ 29.2314 Unsound (U).

Damaged under 20 percent. (See Rule 20, § 29.2411.)

§ 29.2315 Unstemmed.

A form of tobacco, including whole leaf and leaf scrap, from which the
Agricultural Marketing Service, USDA

§ 29.2316 Wet (W).

Any sound tobacco containing excessive moisture to the extent that it is in unsafe or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 21, § 29.2412.) (For extremely wet or watered tobacco, see Rule 22, § 29.2413.)

§ 29.2317 Width.

The relative breadth of a tobacco leaf expressed in relation to its length. (See chart, § 29.2351.)

ELEMENTS OF QUALITY

§ 29.2351 Elements of quality and degrees of each element.

Tobacco attributes or characteristics which constitute quality are designated as elements of quality. The range within each element is expressed by words or terms designated as degrees. These degrees are arranged to show their relative value and are used in determining the quality of tobacco. The actual value of each degree varies with group.

1 The application of sizes is governed by the major portion of the lot or package.

[51 FR 40406, Nov. 7, 1986]

RULES

§ 29.2391 Rules.

The application of these official standard grades shall be in accordance with the following rules.

§ 29.2392 Rule 1.

Each grade shall be treated as a subdivision of a particular type. When the grade is stated in an inspection certificate, the type also shall be stated.

§ 29.2393 Rule 2.

The determination of a grade shall be based upon a thorough examination of a lot of tobacco or of an official sample of the lot.

§ 29.2394 Rule 3.

In drawing an official sample from a hogshead or other package of tobacco, two or more breaks shall be made at such points and in such manner as the inspector or sampler may find necessary to determine the kinds of tobacco and the percentage of each kind contained in the lot. All breaks shall be made so that the tobacco contained in the center of the package is visible to the sampler. Tobacco shall be drawn from at least two breaks from which a representative sample shall be selected.

§ 29.2395 Rule 4.

All standard grades must be clean.

§ 29.2396 Rule 5.

The grade assigned to any lot of tobacco shall be a true representation of the tobacco at the time of inspection and certification. If, at any time, it is found that a lot of tobacco does not comply with the specifications of the grade previously assigned it shall not thereafter be represented as such grade.
§ 29.2397  Rule 6.
A lot of tobacco on the marginal line between two colors shall be placed in the color with which it best corresponds with respect to body or other associated elements of quality.

§ 29.2398  Rule 7.
Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.

§ 29.2399  Rule 8.
A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.2400  Rule 9.
In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over 1 percent of the tobacco shall be overlooked.

§ 29.2401  Rule 10.
Any special factor symbol approved by the Director of the Tobacco Division, Agricultural Marketing Service, may be used after a grademark to show a peculiar side or characteristic of the tobacco which tends to modify the grade.

§ 29.2402  Rule 11.
Interpretations, the use of specifications, and the meaning of terms shall be in accordance with determinations or clarifications made by the Chief of the Standards and Testing Branch and approved by the Director.

§ 29.2403  Rule 12.
The use of any grade may be restricted by the Director during any marketing season, when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.2404  Rule 13.
Length shall be stated in connection with each grade of the A, B and C groups and may be stated in connection with the grades of other groups. The standard tobacco sizes shall be used.

[51 FR 40406, Nov. 7, 1986]

§ 29.2405  Rule 14.
The standard tobacco size 2 shall be used to designate X group tobacco of M or G color when such tobacco is 20 inches or over in length.

[51 FR 40406, Nov. 7, 1986]

§ 29.2406  Rule 15.
Uniformity shall be expressed in percentages. These percentages shall govern the portion of a lot which must meet each specification of the grade. The minor portion must be closely related but may be of a different group, quality, and color from the major portion. Specified percentages of uniformity shall not affect limitations established by other rules.

§ 29.2407  Rule 16.
Injury tolerance shall be expressed in percentages. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury. In appraising injury, consideration shall be given to the normal characteristics of the group.

§ 29.2408  Rule 17.
Any lot of tobacco of the B, C, or X groups containing over 30 percent of mixed color or variegated leaves or over 30 percent of mixed color and variegated leaves combined shall be classified as “mixed” and designated by the color symbol “M.”

§ 29.2409  Rule 18.
Any lot of tobacco containing 20 percent or more of green leaves or any lot which is not crude but contains 20 percent or more of green and crude combined shall be designated by the color symbols “G”, “GL”, or “GD”.

[45 FR 47115, July 14, 1980]

§ 29.2410  Rule 19.
Crude leaves shall not be included in any grade of any color except green,
light green, or dark green. Any lot containing 20 percent or more of crude leaves shall be designated nondescript.

§ 29.2411 Rule 20.

Tobacco damaged under 20 percent but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “U” after the grademark. Tobacco damaged 20 percent or more shall be designated “No-G.”

§ 29.2412 Rule 21.

Sound tobacco that is wet or in doubtful-keeping order but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “W” after the grademark. This special factor does not apply to tobacco designated “No-G.”

§ 29.2413 Rule 22.

Tobacco shall be designated No Grade, using the grademark “No-G,” when it is classified as dirty, nested, offtype, semicured, premature primings, damaged 20 percent or more, extremely wet or watered or when it needs to be reworked, contains foreign matter, or has an odor foreign to type.

§ 29.2414 Rule 23.

Tobacco that is semifired but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “SF” after the grademark. This factor does not apply to tobacco designated “No-G.”

§ 29.2436 Wrappers (A Group).

This group consists of leaves usually grown at or above the center portion of the stalk. Cured leaves of the A group show a low percentage of injury affecting wrapper yield. Wrappers are high in oil, very elastic, and have a smooth leaf surface.

<table>

</tr>
</tbody>
</table>

§ 29.2437 Heavy Leaf (B Group).

This group consists of leaves usually grown at or above the center portion of the stalk. These leaves have a pointed tip, tend to fold, are heavier in body than those of the X or C groups, and show no ground injury. Choice- and fine-quality leaves of this group have a distinctive, smooth leaf surface.

</table>
### § 29.2438 Thin Leaf (C Group).

This group consists of leaves usually grown at the center portion of the stalk. These leaves normally have a rounded tip, are thinner in body than those of the B group, and show little or no ground injury. Choice- and fine-quality tobacco of this group has a distinctive, smooth leaf surface.

OFFICIAL STANDARD GRADES FOR KENTUCKY AND TENNESSEE FIRE-CURED AND FOREIGN-GROWN FIRE-CURED TOBACCO (U.S. TYPES 22, 23, AND FOREIGN TYPE 96)

SOURCE: Sections 29.2501 through 29.2696 appear at 37 FR 13626, July 12, 1972, unless otherwise noted.

DEFINITIONS

§ 29.2501 Definitions.

As used in these standards, the words and phrases hereinafter defined shall have the indicated meanings so assigned.

§ 29.2502 Air-dried.

The condition of unfermented tobacco as customarily prepared for storage under natural atmospheric conditions.
§ 29.2503 Body.
The thickness and density of a leaf or the weight per unit of surface. (See chart, §29.2601.)

§ 29.2504 Brown colors.
A group of colors ranging from a reddish brown to yellowish brown. These colors vary from low to medium saturation and from very low to medium brilliance. As used in these standards, the range is expressed as light brown (L), medium brown (F), and dark brown (D).

§ 29.2505 Class.
A major division of tobacco based on method of cure or principal usage.

§ 29.2506 Clean.
Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally contain more dirt or sand than those from higher stalk positions. (See Rule 4, §29.2620.)

§ 29.2507 Color.
The third factor of a grade based on the relative hues, saturation or chroma, and color values common to the type.

§ 29.2508 Color intensity.
The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. It is applicable to brown colors. (See chart, §29.2601.)

§ 29.2509 Color symbols.
As applied to these types, color symbols are L—light brown, F—medium brown, D—dark brown, M—mixed or variegated, VF—greenish medium brown, and G—green.

§ 29.2510 Condition.
The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are undried, air-dried, steam-dried, sweating, sweated, and aged.

§ 29.2511 Crude.
A subdegree of maturity. Crude leaves are usually hard and slick as a result of extreme immaturity. A similar condition may result from firekill, sunburn, or sunscald. Any leaf which is crude to the extent of 20 percent or more of its surface may be described as crude. (See Rule 19, §29.2635.)

§ 29.2512 Cured.
Tobacco dried of its sap by either natural or artificial processes.

§ 29.2513 Damage.
The effect of mold, must, rot, black rot, or other fungus or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must, or rot is considered damaged. (See Rule 20, §29.2636.)

§ 29.2514 Dirty.
The state of tobacco containing an abnormal amount of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 22, §29.2638.)

§ 29.2515 Elasticity.
The flexible, springy nature of the tobacco leaf to recover approximately its original size and shape after it has been stretched. (See chart, §29.2601.)

§ 29.2516 Elements of quality.
Physical characteristics used to determine the quality of tobacco. Words selected to describe degrees within each element are shown in the chart in §29.2601.

§ 29.2517 Fiber.
The term applied to the veins in a tobacco leaf. The large central vein is called the midrib or stem. The smaller lateral and cross veins are considered from the standpoint of size and color.

§ 29.2518 Finish.
The reflectance factor in color perception. Finish indicates the sheen or shine of the surface of a tobacco leaf. (See chart, §29.2601.)

§ 29.2519 Fire-cured.
Tobacco cured under artificial atmospheric conditions by the use of
§ 29.2520

open fires from which the smoke and fumes of burning wood are partly absorbed by the tobacco.

§ 29.2520 Foreign matter.

Any extraneous substance or material such as stalks, suckers, straw, strings, rubber bands, and abnormal amounts of dirt or sand. (See Rule 22, § 29.2638.)

§ 29.2521 Form.

The stage of preparation of tobacco such as unstemmed or stemmed.

§ 29.2522 Grade.

A subdivision of a type according to group, quality, and color.

§ 29.2523 Grademark.

A grademark normally consists of three symbols which indicate group, quality, and color. A letter is used to indicate group, a number to indicate quality, and a letter or letters to indicate color. For example, B3D means Heavy Leaf, good quality, and dark-brown color.

§ 29.2524 Green (G).

A term applied to green-colored tobacco. Any leaf which has a green color affecting 20 percent or more of its surface may be described as green. (See Rule 18, § 29.2634.)

§ 29.2525 Greenish.

A term applied to greenish-tinged tobacco. Any leaf which has a greenish tinge or a pale green color affecting 20 percent or more of its surface may be described as greenish. (See Rule 17, § 29.2633.)

§ 29.2526 Group.

A division of a type covering closely related grades based on certain characteristics which are usually related to stalk position, body, or the general quality of the tobacco. Groups in these types are Wrappers (A), Heavy Leaf (B), Thin Leaf (C), Lugs (X), Nondescript (N), and Scrap (S).

§ 29.2527 Injury.

Hurt or impairment from any cause except the fungous or bacterial diseases which attack tobacco in its cured state. (See Rule 15, § 29.2631.)

§ 29.2528 Leaf.

Whole, unstemmed leaf. Leaf, when applied to tobacco in strip form, shall describe the divided unit of a whole leaf.

[49 FR 16757, Apr. 20, 1984]

§ 29.2529 Leaf scrap.

A byproduct of unstemmed tobacco. Leaf scrap results from handling unstemmed tobacco and consists of loose and tangled whole or broken leaves.

[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2530 Leaf structure.

The cell development of a leaf as indicated by its porosity. (See chart, § 29.2601.)

[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2531 Length.

The linear measurement of cured tobacco leaves from the butt of the midrib to the extreme tip.

[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2532 Lot.

A pile, basket, bulk, or more than one bale, case, hogshead, tierce, package, or other definite package unit.

[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2533 Maturity.

The degree of ripeness. (See chart, § 29.2601.)

[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2534 Mixed color or variegated (M).

Distinctly different colors of the type mingled together, or any leaf of which 20 percent or more of its surface is off brown, grayish, mottled, or bleached and does not blend with the normal
§ 29.2535 Nested.
Any lots of Types 22 and 23 tobacco which has been loaded, packed, or arranged to conceal foreign matter or tobacco of inferior grade, quality, or condition. (See Rule 22, § 29.2638.)

§ 29.2536 No grade.
A designation applied to a lot of tobacco classified as nested, offtype, rework, or semicured; tobacco that is damaged 20 percent or more, abnormally dirty, extremely wet or watered, contains foreign matter, or has an odor foreign to the type. (See Rule 22, § 29.2638.)

§ 29.2537 Offtype.
Tobacco of distinctly different characteristics which cannot be classified as Fire-cured, U.S. Types 22, 23, or Foreign Type 96. (See Rule 22, § 29.2638.)

§ 29.2538 Oil.
A soft, semifluid constituent of tobacco. (See chart, § 29.2601.)

§ 29.2539 Order (case).
The state of tobacco with respect to its moisture content.

§ 29.2540 Package.
A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

§ 29.2541 Packing.
A lot of tobacco consisting of a number of packages submitted as one definite unit for sampling or inspection. It is represented to contain the same kind of tobacco and has a common identification number or mark on each package.

§ 29.2542 Quality.
A division of a group or the second factor of a grade based on the relative degree of one or more elements of quality.

§ 29.2543 Raw.
Freshly harvested tobacco or tobacco as it appears between the time of harvesting and the beginning of the curing process.

§ 29.2544 Resweated.
The condition of tobacco which has passed through a second fermentation under abnormally high temperatures or refermented with a relatively high percentage of moisture. Resweated includes tobacco which has been dipped or reconditioned after its first fermentation and put through a forced or artificial sweat.

§ 29.2545 Rework.
Any lot of Types 22 and 23 tobacco which needs to be resorted or otherwise reworked to prepare it properly for market, including: (a) Tobacco which is so mixed that it cannot be classified properly in any grade of the type, because the lot contains a substantial quantity of two or more distinctly different grades which should be separated by sorting; (b) tobacco which contains an abnormally large quantity of foreign matter or an unusual number of muddy or extremely dirty leaves which should be removed; and (c) tobacco not packed straight or otherwise not properly prepared for market. (See Rule 22, § 29.2638.)
§ 29.2546 Semicured.

Tobacco in the process of being cured or which is partially but not thoroughly cured. (See Rule 22, §29.2638.)
[37 FR 13626, July 12, 1972. Redesignated at 49 FR 16757, Apr. 20, 1984]

§ 29.2547 Semifired (SF).

Tobacco that is partially or lightly smoked or has not received the amount of smoke that is characteristic of fire-cured tobacco.
[51 FR 40406, Nov. 7, 1986]

§ 29.2548 Side.

A certain phase of quality, color, or length as contrasted with some other phase of quality, color, or length; or any peculiar characteristic of tobacco.

§ 29.2549 Size.

The length of tobacco leaves. Size does not apply to tobacco in strip form. (See chart, §29.2601.)

§ 29.2550 Sound.

Free of damage.

§ 29.2551 Special factor.

A symbol or term authorized to be used with specified grades. Tobacco to which a special factor is applied may meet the general specifications but has a peculiar side or characteristic which tends to modify the grade. (See Rule 10, §29.2626.)

§ 29.2552 Steam-dried.

The condition of unfermented tobacco as customarily prepared for storage by means of a redrying machine or other steam-conditioning equipment.

§ 29.2553 Stem.

The midrib or large central vein of a tobacco leaf.

§ 29.2554 Stemmed.

A form of tobacco, including strips and strip scrap, from which the stems or midribs have been removed.

§ 29.2555 Strength.

The stress a tobacco leaf can bear without tearing. (See chart, §29.2601.)

§ 29.2556 Strips.

The sides of a tobacco leaf from which the stem has been removed or a lot of tobacco composed of strips.

§ 29.2557 Subgrade.

Any grade modified by a special factor symbol.

§ 29.2558 Sweated.

The condition of tobacco, which has passed through one or more fermentations natural to tobacco packed with a normal percentage of moisture. This condition is sometimes described as aged.
§ 29.2559 Sweating.
The condition of tobacco in the process of fermentation.

§ 29.2560 Tobacco.
Tobacco as it appears between the time it is cured and stripped from the stalk, or primed and cured, and the time it enters into the different manufacturing processes. The acts of stemming, threshing, sweating, and conditioning are not regarded as manufacturing processes. Tobacco, as used in these standards, does not include manufactured or semimanufactured products, stems, cutting, clippings, trimmings, siftings, or dust.

§ 29.2561 Tobacco products.
Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff.

§ 29.2562 Type.
A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.2563 Type 22.
That type of Fire-cured tobacco, known as Eastern District Fire-cured, produced principally in a section east of the Tennessee River in southern Kentucky and northern Tennessee.

§ 29.2564 Type 23.
That type of Fire-cured tobacco, known as Western District Fire-cured or Dark-fired, produced principally in a section west of the Tennessee River in Kentucky and extending into Tennessee.

§ 29.2565 Type 96.
That type of fire-cured tobacco known as Foreign-grown Fire-cured produced in countries other than the United States.

§ 29.2566 Undried.
The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.2567 Uniformity.
An element of quality which describes the consistency of a lot of tobacco as it is prepared for market. Uniformity is expressed as a percentage in grade specifications. (See Rule 14, § 29.2630.)

§ 29.2568 Unsound (U).
Damaged under 20 percent. (See Rule 20, § 29.2636.)

§ 29.2569 Unstemmed.
A form of tobacco, including whole leaf and leaf scrap, from which the stems or midribs have not been removed.

§ 29.2570 Wet (W).
Any sound tobacco containing excessive moisture to the extent that it is in
§ 29.2571

Unsafe or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 21, §29.2637.) (For extremely wet or watered tobacco, see rule 22, §29.2638.)

§ 29.2571 Width.

The relative breadth of a tobacco leaf expressed in relation to its length. Width, as an element of quality, does not apply to tobacco in strip form. (See chart, §29.2601.)

ELEMENTS OF QUALITY

§ 29.2601 Elements of quality and degrees of each element.

Tobacco attributes or characteristics which constitute quality are designated as elements of quality. The range within each element is expressed by words or terms designated as degrees. These degrees are arranged to show their relative value and are used in determining the quality of tobacco. The actual value of each degree varies with group.

1 The application of sizes is governed by the major portion of the lot or package.

[51 FR 40406, Nov. 7, 1986]
§ 29.2623 Rule 7.
Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.

§ 29.2624 Rule 8.
A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.2625 Rule 9.
In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over one percent of the tobacco shall be overlooked.

§ 29.2626 Rule 10.
Any special factor approved by the Director of the Tobacco Division, Agricultural Marketing Service, may be used to show a peculiar side of the character of the tobacco which tends to modify the grade.

(37 FR 13626, July 12, 1972, as amended at 49 FR 16757, Apr. 20, 1984)

§ 29.2627 Rule 11.
Interpretations, the use of specifications, and the meaning of terms shall be in accordance with determinations or clarifications made by the Chief of the Standards and Testing Branch and approved by the Director.

§ 29.2628 Rule 12.
The use of any grade may be restricted by the Director during any marketing season, when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.2629 Rule 13.
Length shall be stated in connection with each grade of the A, B, and C groups, except strip grades, and may be stated in connection with the grades of other groups. The standard tobacco sizes shall be used.

(37 FR 13626, July 12, 1972, as amended at 49 FR 16757, Apr. 20, 1984; 51 FR 40406, Nov. 7, 1986)

§ 29.2630 Rule 14.
Uniformity shall be expressed in percentages. These percentages shall govern the portion of a lot which must meet each specification of the grade. The minor portion must be closely related but may be of a different group, quality, and color from the major portion. Specified percentages of uniformity shall not affect limitations established by other rules.

§ 29.2631 Rule 15.
Injury tolerance shall be expressed in percentages. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury. In appraising injury, consideration shall be given to the normal characteristics of the group.

§ 29.2632 Rule 16.
Any lot of tobacco containing 20 percent or more of greenish leaves or any lot which contains 20 percent of greenish and green leaves combined shall be designated by the color symbol “VF.”

§ 29.2633 Rule 17.
Any lot of tobacco containing 20 percent or more of crude leaves or any lot which contains 20 percent of green and crude combined shall be designated by the color symbol “G.”

§ 29.2635 Rule 19.
In the B, C, and X groups crude leaves shall be restricted to the fourth and fifth qualities of green grades. Any lot containing 20 percent or more of crude leaves shall be classified as Non-descript.

§ 29.2636 Rule 20.
Tobacco damaged under 20 percent but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor
§ 29.2637

“U” after the grademark. Tobacco damaged 20 percent or more shall be designated “No-G.”

§ 29.2637 Rule 21.

Sound tobacco that is wet or in doubtful-keeping order but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “W” after the grademark. This special factor does not apply to tobacco designated “No-G.”

§ 29.2638 Rule 22.

Tobacco shall be designated No Grade, using the grademark “No-G,” when it is dirty, nested, offtype, semicured, damaged 20 percent or more, extremely wet or watered, or when it needs to be reworked, contains foreign matter, or has an odor foreign to type.

§ 29.2639 Rule 23.

Tobacco in strip form which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “S” preceding the grademark.

[49 FR 16757, Apr. 20, 1984]

§ 29.2640 Rule 24.

Tobacco that is semifired but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “SF” after the grademark. This factor does not apply to tobacco designated “No-G.”

[37 FR 13626, July 12, 1972, as amended at 49 FR 16757, Apr. 20, 1984]

§ 29.2662 Heavy Leaf (B Group).

This group consists of leaves which are medium to heavy in body.

Grades | Grade names and specifications
---|---
B1F | Choice Medium-brown Heavy Leaf. Medium body, ripe, firm, oily, elastic, strong, bright finish, normal width, 95 percent uniform, and 5 percent injury tolerance.
B2F | Fine Medium-brown Heavy Leaf. Medium body, ripe, firm, oily, elastic, strong, clear finish, deep color intensity, normal width, 95 percent uniform, and 10 percent injury tolerance.
B3F | Good Medium-brown Heavy Leaf. Medium body, ripe, firm, oily, semielastic, normal strength, clear finish, moderate color intensity, normal width, 90 percent uniform, and 20 percent injury tolerance.
B4F | Fair Medium-brown Heavy Leaf. Medium body, mature, close, lean in oil, inelastic, weak, dull finish, pale color intensity, narrow, 70 percent uniform, and 30 percent injury tolerance.
B5F | Low Medium-brown Heavy Leaf. Medium body, mature, close, lean in oil, inelastic, weak, dull finish, pale color intensity, narrow, 60 percent uniform, and 30 percent injury tolerance.
B1D | Choice Dark-brown Heavy Leaf. Medium body, ripe, firm, oily, elastic, strong, bright finish, deep color intensity, normal width, 95 percent uniform, and 5 percent injury tolerance.
B2D | Fine Dark-brown Heavy Leaf. Medium body, ripe, firm, oily, elastic, strong, clear finish, deep color intensity, normal width, 90 percent uniform, and 10 percent injury tolerance.
B3D | Good Dark-brown Heavy Leaf.

Grades | Grade names and specifications
---|---
A1F | Choice Medium-brown Wrappers. Thin to medium body, ripe, firm, rich in oil, elastic, strong, bright finish, deep color intensity, spready, 75 percent uniform, and 25 percent of leaves not lower than B2 or C2.
A2F | Fine Medium-brown Wrappers.
A3F | Good Medium-brown Wrappers. Thin to medium body, ripe, firm oily, elastic, strong, clear finish, moderate color intensity, spready, 60 percent uniform, and 40 percent of leaves not lower than B3 or C3.
A1D | Choice Dark-brown Wrappers. Thin to heavy body, ripe, firm, rich in oil, elastic, strong, bright finish, deep color intensity, spready, 90 percent uniform, and 10 percent of leaves not lower than B1 or C1.
A2D | Fine Dark-brown Wrappers.
A3D | Good Dark-brown Wrappers. Thin to heavy body, ripe, firm, oily, elastic, strong, clear finish, moderate color intensity, spready, 60 percent uniform, and 40 percent of leaves not lower than B3 or C3.

[37 FR 13626, July 12, 1972, as amended at 49 FR 16757, Apr. 20, 1984]
### § 29.2663 Thin Leaf (C Group)

This group consists of leaves that are thin in body.

§ 29.2696 Key to standard grademarks.

Groups

A—Wrappers.
B—Heavy Leaf.
C—Thin Leaf.
X—Lugs.
N—Nondescript.
S—Scrap.

Qualities

1—Choice.
2—Fine.
3—Good.

[37 FR 13626, July 12, 1972, as amended at 49 FR 16757, Apr. 20, 1984; 51 FR 40407, Nov. 7, 1986]
§ 29.3001 Definitions.
As used in these standards, the words and phrases hereinafter defined shall have the indicated meanings so assigned.

§ 29.3002 Air-cured.
Tobacco cured under natural atmospheric conditions. Artificial heat is sometimes used to control excess humidity during the curing period to prevent house-burn and barn-burn in damp weather. Air-cured tobacco should not carry the odor of smoke or fumes resulting from the application of artificial heat.

§ 29.3003 Air-dried.
The condition of unfermented tobacco as customarily prepared for storage under natural atmospheric conditions.

§ 29.3004 Body.
The thickness and density of a leaf or the weight per unit of surface. (See Elements of quality.)

§ 29.3005 Burley, Type 31.
That type of air-cured tobacco, commonly known as Burley, produced principally in Kentucky, Tennessee, Virginia, North Carolina, Ohio, Indiana, West Virginia, and Missouri.

§ 29.3006 Burley, Type 93.
That type of air-cured tobacco commonly known as Foreign-grown Burley, produced in countries other than the United States.

§ 29.3007 Buff color (L).
A light yellow slightly shaded toward red.

§ 29.3008 Class.
A major division of tobacco based on method of cure or principal usage.

§ 29.3009 Clean.
Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally contain more dirt or sand than those from higher stalk positions. (See Rule 20.)

§ 29.3010 Color.
The third factor of a grade, based on the relative hues, saturations or chroma, and color values common to the type.

§ 29.3011 Color intensity.
The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. It is applicable to all colors except variegated. Color intensity is reversed in its application to grades of greenish and green tobaccos and is omitted from these grade specifications. (See Elements of quality.)

§ 29.3012 Color symbols.
As applied to Burley, single color symbols are as follows: L—buff, F—tan, R—red, D—dark red, K—variegated,
§ 29.3013 Combination color symbols.

As applied to Burley, combination color symbols are as follows: FL—tannish buff, FR—tannish red, VF—greenish tan, VR—greenish red, GF—green tan, and GR—green red. (See rules 17 and 18.)

§ 29.3014 Condition.

The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are as follows: Undried, air-dried, steam-dried, sweating, sweated, and aged. Burley is air-dried or steam-dried for storage and aging.

§ 29.3015 Crude.

A subdegree of maturity. Crude leaves are usually hard and slick as a result of extreme immaturity. A similar condition may result from sunburn or sunscald. Any leaf which is crude to the extent of 20 percent of its leaf surface may be described as crude. (See Rule 19.)

§ 29.3016 Cured.

Tobacco dried of its sap by either natural or artificial processes.

§ 29.3017 Damage.

The effect of mold, must, rot, black rot, or other fungous or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must, or rot is considered damaged. (See Rule 23.)
strings, rubber bands, et cetera. Abnor-
mal amounts of dirt or sand also are
included. (See Rule 23.)
§ 29.3024 Form.
The stage of preparation of tobacco
such as unstemmed or stemmed.
§ 29.3025 General color.
The color of tobacco considered in re-
lation to the type as a whole. General
color is distinguished from the re-
stricted use of the term “color” within
a group. It is basically related to body
and other overall characteristics of the
type.
§ 29.3026 General quality.
The quality of tobacco considered in
relation to the type as a whole. Gen-
eral quality is distinguished from the
restricted use of the term “quality” within
a group.
§ 29.3031 Group.
A division of a type covering closely
related grades based on certain charac-
teristics which are related to stalk po-
sition or the general quality of the to-
bacco. Groups in Burley, Types 31 and
93, are as follows: Flyings (X), Lugs or
Cutters (C), Leaf (B), Tips (T), Mixed
(M), Nondescript (N), and Scrap (S).
§ 29.3032 Injury.
Hurt or impairment from any cause
except the fungous or bacterial dis-
eases which attack tobacco in its cured
state. (See definition of Damage.) In-
jury to tobacco may be caused by field
diseases, insects, or weather condi-
tions; insecticides, fungicides, or cell
growth inhibitors; nutritional defi-
ciencies or excesses; or improper fer-
tilizing, harvesting, curing, or han-
dling. Injured tobacco includes dead,
burnt, half-cut, torn, broken, frost-
bitten, sunburned, sunscalded,
scorched, fire-killed, bulk-burnt,
steam-burnt, barn-burnt, house-burnt,
bleached, bruised, discolored, or de-
formed leaves; or tobacco affected by
wildfire, rust, frog-eye, mosaic, root
rot, wilt, black shank, or other dis-
eases. (See Elements of quality and
Rule 14.)
§ 29.3033 Leaf.
Whole, unstemmed leaf. Leaf, when
applied to tobacco in strip form, shall
describe the divided unit of a whole leaf.
[49 FR 16758, Apr. 20, 1984]

§ 29.3034 Leaf scrap.
A by-product of unstemmed tobacco. Leaf scrap results from handling unstemmed tobacco and consists of loose and tangled whole or broken leaves.

§ 29.3035 Leaf structure.
The cell development of a leaf as indicated by its porosity or solidity. (See Elements of quality.)

§ 29.3036 Leaf surface.
The smoothness or roughness of the web or lamina of a tobacco leaf. Leaf surface is affected to some extent by the size and shrinkage of the veins or fibers. (See Elements of quality.)

§ 29.3037 Length.
The linear measurement of cured tobacco leaves from the butt of the midrib to the extreme tip. Length, as an element of quality, does not apply to tobacco in strip form. (See Elements of quality.)

§ 29.3038 Lot.
A pile, basket, bulk, bale or bales, sheet, case hogshead, tierce, package, or other definite package unit.

§ 29.3039 Maturity.
The degree of ripeness. Tobacco is mature when it reaches its prime state of development. The extremes are expressed as immature and mellow. (See Elements of quality.)

§ 29.3040 Mixed color (M).
Distinctly different colors of the type mingled together. (See Rule 16.)

§ 29.3041 Nested.
Any lot of Type 31 tobacco which as has been loaded, packed or arranged to conceal foreign matter or tobacco of inferior grade, quality, or condition. Nested includes:
(a) Any lot of tobacco which contains foreign matter, is damaged, injured, or tangled, or contains other inferior tobacco, any of which cannot be readily detected upon inspection because of the way the lot is packed or arranged;
(b) Any lot of tobacco which consists of distinctly different grades, qualities or conditions and which is stacked or arranged with the same kinds together so that the tobacco in the lower portions of the lot is distinctly inferior in grade, quality or condition from the tobacco in the top portion of the lot.

§ 29.3042 No grade.
A designation applied to a lot of tobacco which is classified as offtype, rework, semicured, damaged 20 percent or more, abnormally dirty, contains foreign matter, and/or having an odor foreign to the type.
[47 FR 51721, Nov. 17, 1982. Redesignated at 49 FR 16758, Apr. 20, 1984]

§ 29.3043 No-G-Nested.
A designation applied to a lot of Type 31 tobacco which is classified as nested.

§ 29.3044 Offtype.
Tobacco of distinctly different characteristics which cannot be classified as Burley, Type 31 or 93. (See Rule 23.)
§ 29.3045 Order (case).

The state of tobacco with respect to its moisture content.

§ 29.3046 Oriented.

A term applied to Type 31 untied tobacco which denotes the arrangement of leaves in a straight and orderly manner. Oriented includes:
(a) Any lot of baled tobacco in which the leaves are packed parallel to the length of the bale with the butts to the outside and the tips of the leaves overlapping sufficiently to make a level, solid and uniform package;
(b) Any lot of sheeted tobacco in which the leaves are arranged in a circular pattern with the butts to the outside.

§ 29.3047 Package.

A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

§ 29.3048 Packing.

A lot of tobacco consisting of a number of packages submitted as one definite unit for sampling or inspection. It is represented to contain the same kind of tobacco and has a common identification number or mark on each package.

§ 29.3049 Pink or pinkish.

A color term applied to pink or pinkish tobacco. Any leaf which has a pink or pinkish color affecting 20 percent or more of its leaf surface is considered as mixed color. (See Rule 16.)

§ 29.3050 Quality.

A division of a group or the second factor of a grade, based on the relative degree of one or more elements of quality in tobacco.

§ 29.3051 Raw.

Freshly harvested tobacco or tobacco as it appears between the time of harvesting and the beginning of the curing process.

§ 29.3052 Red color (R).

A brownish red.

§ 29.3053 Rework.

Any lot of Type 31 tobacco which needs to be restored or otherwise rearranged to prepare it properly for market, including:
(a) Tobacco which contains an abnormally large quantity of foreign matter or an unusual number of muddy or extremely dirty leaves which should be removed;
(b) Tobacco not properly tied in hands, not packed in bales approximately 1 × 2 × 3 feet, not oriented, not packed straight, bales not opened for inspection when chosen by a grader, or otherwise not properly prepared for market.

§ 29.3054 Semicured.

Tobacco in the process of being cured or which is partially but not thoroughly cured. Semicured includes tobacco which contains fat stems, wet butts, swell stems, frozen tobacco, and tobacco having frozen stems or stems that have not been thoroughly dried in the curing process. (See Rule 23.)

§ 29.3055 Side.

A certain phase of quality, color, or length as contrasted with some other
phase of quality, color, or length; or any peculiar characteristic of tobacco.

§ 29.3056 Sound.
Free of damage.

§ 29.3057 Special factor.
A symbol or term authorized to be used with specified grades. Tobacco to which a special factor is applied may meet the general specifications but has a peculiar side or characteristic which tends to modify the grade. (See Rule 9.)

§ 29.3058 Steam-dried.
The condition of unfermented tobacco as customarily prepared for storage by means of a redrying machine or other steam-conditioning equipment.

§ 29.3059 Stem.
The midrib or large central vein of a tobacco leaf.

§ 29.3060 Stemmed.
A form of tobacco, including strips and strip scrap, from which the stems or midribs have been removed.

§ 29.3061 Strength (tensile).
The stress a tobacco leaf can bear without tearing. Tensile strength is not an important element of quality in Burley tobacco.

§ 29.3062 Strips.
The sides of a tobacco leaf from which the stem has been removed; or a lot of tobacco composed of strips.

§ 29.3063 Subgrade.
Any grade modified by a special factor symbol.

§ 29.3064 Sweated.
The condition of tobacco which has passed through one or more fermentations natural to tobacco packed with a normal percentage of moisture. This condition is sometimes described as aged.

§ 29.3065 Sweating.
The condition of tobacco in the process of fermentation.

§ 29.3066 Tan color.
A light red-yellow.

§ 29.3067 Tannish-buff (FL).
A light red-yellow shaded toward buff.

§ 29.3068 Tannish-red color (FR).
A light red shaded toward tan.

§ 29.3069 Tobacco.
Tobacco as it appears between the time it is cured and stripped from the stalk, or primed and cured, and the
§ 29.3070 Tobacco products.
Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff, which is subject to Internal Revenue tax.

§ 29.3071 Type.
A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.3072 Undried.
The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.3073 Uniformity.
An element of quality which describes the consistency of a lot of tobacco as it is prepared for market. Uniformity is expressed in grade specifications as a percentage. The percentage is applicable to group, quality, and color. (See Rule 13.)

§ 29.3074 Unsound (U).
Damaged under 20 percent. (See Rule 21.)

§ 29.3075 Unstemmed.
A form of tobacco, including whole leaf and leaf scrap, from which the stems or midribs have not been removed.

§ 29.3076 Variegated (K).
Any leaf of which 20 percent or more of its surface is yellow, grayish, mottled, or bleached, and does not blend with the normal colors of the type or group and is generally characterized by a lower degree of leaf structure and maturity than tobacco of the corresponding group and quality. (See Rule 15.)

§ 29.3077 Wet (W).
Any sound tobacco containing excessive moisture to the extent that it is in an unsafe or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 22.)

§ 29.3078 Width.
The relative breadth of a tobacco leaf expressed in relation to its length. Width as an element of quality, does not apply to tobacco in strip form. (See Elements of quality.)
§ 29.3101 Elements of quality and degrees of each element.

These standardized words or terms are used to describe tobacco quality and to assist in interpreting grade specifications. Tobacco attributes or characteristics which constitute quality are designated as elements of quality. The range within each element is expressed by the use of words or terms designated as degrees. These several degrees are arranged to show their relative value, but the actual value of each degree varies with type, group, and grade. In each case the first and last degrees represent the full range for the element, and the intermediate degrees show gradual steps between them.

1 Expressed in inches.  
2 Expressed in percentage.

§ 29.3103 Rules.

The application of these official standard grades shall be in accordance with the following rules.

§ 29.3104 Rule 1.

Each grade shall be treated as a subdivision of a particular type. When the grade is stated in an inspection certificate, the type also shall be stated.

§ 29.3105 Rule 2.

The determination of a grade shall be based upon a thorough examination of a lot of tobacco or of an official sample of the lot.

§ 29.3106 Rule 3.

In drawing an official sample from a hogshead or other package of tobacco, three or more breaks shall be made at such points and in such manner as the inspector or sampler may find necessary to determine the kinds of tobacco and the percentage of each kind contained in the lot. One break shall be made not more than six inches from the top of the package and one not more than six inches from the bottom. All breaks shall be made so that the tobacco contained in the center of the package is visible to the sampler. Tobacco shall be drawn from at least three breaks from which a representative sample shall be selected. The sample shall include tobacco of each different group, quality, color, length, and kind found in the lot in proportion to the quantities of each contained in the lot.

§ 29.3107 Rule 4.

A lot of tobacco on the marginal line between two colors shall be placed in the color with which it best corresponds with respect to body or other associated elements of quality.

§ 29.3108 Rule 5.

A lot of tobacco on the marginal line between two colors shall be placed in the color with which it best corresponds with respect to body or other associated elements of quality.

§ 29.3109 Rule 6.

Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.
§ 29.3110 Rule 7.

A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.3111 Rule 8.

In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over one percent of the tobacco shall be overlooked.

§ 29.3112 Rule 9.

Any special factor symbol, approved by the Director of the Tobacco Division of the Agricultural Marketing Service, may be used to show a peculiar side or character of the tobacco which tends to modify the grade.

§ 29.3113 Rule 10.

Interpretations, the use of specifications, and the meaning of terms shall be in accordance with determinations or clarifications made by the Chief of the Standards Branch and approved by the Director.

§ 29.3114 Rule 11.

The use of any grade may be restricted by the Director during any marketing season, when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.3115 Rule 12.

Any lot, except strip form, of Leaf (B Group) tobacco in which 20 percent or more of its leaves are under 16 inches in length shall be designated as Tips (T Group).

[49 FR 16758, Apr. 20, 1984]

§ 29.3116 Rule 13.

Degrees of uniformity shall be expressed in terms of percentages. The percentages shall govern the portion of a lot which must meet the specifications of the grade. The minor portion must be closely related but may be of a different group, quality, and color from the major portion. These percentages shall not affect limitations established by other rules.

§ 29.3117 Rule 14.

The application of injury as an element of quality shall be expressed in terms of a percentage of tolerance. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury. In appraising injury, consideration shall be given to the normal characteristics of the group as related to injury.

§ 29.3118 Rule 15.

Any lot of tobacco containing over 20 percent of variegated leaves shall be described as “variegated” and designated by the color symbol “K.”

[51 FR 40407, Nov. 7, 1986]

§ 29.3119 Rule 16.

Any lot of tobacco of B, C, or X groups which contains 30 percent or more of pink or pinkish leaves or contains 30 percent or more of a color distinctly different from the major color shall be classified as “mixed” and designated by the color symbol “M.”

§ 29.3120 Rule 17.

Any lot of tobacco containing 20 percent or more of greenish leaves, or any lot which contains 20 percent of greenish and green leaves combined, shall be designated by the color symbol “V” in the C group and the combination color symbols “VF” or “VR” in the B and T groups.

[55 FR 40645, Oct. 4, 1990]

§ 29.3121 Rule 18.

Any lot of tobacco containing 20 percent or more of green leaves, or any lot which is not crude but contains 20 percent or more of green and crude combined, shall be designated by the color symbol “G” in the X, C, and M groups and the combination color symbol “GF” and “GR” in the B and T groups.

§ 29.3122 Rule 19.

Crude leaves shall not be included in any grade of any color except green, green tan, and green red. Any lot containing 20 percent or more of crude leaves shall be designated as Non-descript.
§ 29.3123 Rule 20.
All standard grades must be clean.

§ 29.3124 Rule 21.
Tobacco damaged under 20 percent but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “U” after the grademark. Tobacco damaged 20 percent or more shall be designated as “No-G.”

§ 29.3125 Rule 22.
Sound tobacco that is wet or is doubtful-keeping order but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “W” after the grademark. This special factor does not apply to tobacco designated as “No-G.”

§ 29.3126 Rule 23.
Tobacco shall be designated as No Grade, using the grademark, “No-G,” when it is dirty, offtype, semicured, needs to be reworked, damaged 20 percent or more, contains foreign matter, or has an odor foreign to the type.

[47 FR 51722, Nov. 17, 1982]

§ 29.3127 Rule 24.
Tobacco in Type 31 shall be designated by the grademark “No-G-Nested” when it is nested.

[47 FR 51722, Nov. 17, 1982, as amended at 49 FR 16758, Apr. 20, 1984]

§ 29.3128 Rule 25.
Tobacco in strip form which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “S” preceding the grademark.

[49 FR 16758, Apr. 20, 1984]

GRADIENT

§ 29.3151 Flyings (X Group).
This group consists of leaves normally grown at the bottom of the stalk. These leaves are flat and open-faced and have a blunt or oblate tip. Compared with other groups on the stalk, Flyings consist of relatively thin to tissuey leaves which show the highest degree of maturity and the most open leaf structure. Flyings show a material amount of injury characteristic of leaves grown near the ground. (See Rule 14.)

§ 29.3152 Lugs or Cutters (C Group).

This group consists of leaves normally grown at the midportion of the stalk. Cured leaves from this stalk position have a tendency to roll, concealing the stem or midrib. Lugs or Cutters have an oblate to rounded tip and are usually thin to medium in body. The leaves are spready in relation to their length and show little or no ground injury.

§ 29.3153 Leaf (B Group).

This group consists of leaves normally grown above the midpoint of the stalk. Cured leaves from the upper stalk position have a tendency to fold, concealing the stem or midrib. These leaves have a pointed tip and generally are medium to heavy in body. They are narrower in relation to their length than corresponding qualities of the C Group.

21 Grades of Lugs or Cutters

39 Grades of Leaf

8 Grades of Mixed Group

7 Grades of Nondescript

1 Grade of Scrap

Special factors “U”, “W” and “S” may be applied to all grades. Tobacco not covered by the standard grades is designated by No-G or No-G-Nested.

OFFICIAL STANDARD GRADES FOR DARK AIR-CURED TOBACCO (U.S. TYPES 35, 36, 37 AND FOREIGN TYPE 95)

AUTHORITY: Sections 29.3501 to 29.3686 issued under 7 U.S.C. 511m and 511r.

SOURCE: Sections 29.3501 through 29.3686 appear at 30 FR 9207, July 23, 1965, unless otherwise noted.

DEFINITIONS

§ 29.3501 Definitions.

As used in §§ 29.3501 to 29.3686, the words and phrases hereinafter defined shall have the indicated meanings so assigned.

§ 29.3502 Air-cured.

Tobacco cured under natural atmospheric conditions without the use of fire, except for the purpose of preventing pole-burn in damp weather.

136
§ 29.3503 Air-dried.

The condition of unfermented tobacco as customarily prepared for storage under natural atmospheric conditions.

§ 29.3504 Body.

The thickness and density of a leaf or the weight per unit of surface. (See Elements of Quality, § 29.3586.)

§ 29.3505 Brown colors.

A group of colors ranging from a light brown to a dark brown. These colors vary from medium to low saturation and from medium to very low brilliance. As used in these standards, the colors are expressed as light brown (L), medium brown (F), reddish brown (R), and dark brown (D).

§ 29.3506 Class.

A major division of tobacco based on method of cure or principal usage.

§ 29.3507 Clean.

Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally contain more dirt or sand than those from higher stalk positions. (See Rule 4, § 29.3605.)

§ 29.3508 Color.

The third factor of a grade based on the relative hues, saturations or chromas, and color values common to the type.

§ 29.3509 Color intensity.

The varying degree of saturation or chroma. Color intensity as applied to tobacco describes the strength or weakness of a specific color or hue. It is applicable to all colors except green. (See Elements of Quality, § 29.3586.)

§ 29.3510 Color symbols.

As applied to Dark Air-cured tobacco, color symbols are L—light brown, F—medium brown, R—reddish brown, D—dark brown, M—mixed, and G—green.

§ 29.3511 Condition.

The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are: Undried, air-dried, steam-dried, sweating, sweated, and aged.

§ 29.3512 Crude.

A subdegree of maturity. Crude leaves are usually hard and slick as a result of extreme immaturity. A similar condition may result from firekill, sunburn, or sunscald. Any leaf which is crude to the extent of 20 percent or more of its leaf surface may be described as crude. (See Rule 20, § 29.3621.)

§ 29.3513 Cured.

Tobacco dried of its sap by either natural or artificial processes.

§ 29.3514 Damage.

The effect of mold, must, rot, black rot, or other fungus or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must, or rot is considered damaged. (See Rule 24, § 29.3625.)

§ 29.3515 Dirty.

The state of tobacco containing an abnormal amount of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 24, § 29.3625.)

§ 29.3516 Elasticity.

The flexible, springy nature of the tobacco leaf to recover approximately its original size and shape after it has been stretched. (See Elements of Quality, § 29.3586.)

§ 29.3517 Finish.

The reflectance factor in color perception. Finish indicates the sheen or shine of the surface of a tobacco leaf. (See Elements of Quality, § 29.3586.)

§ 29.3518 Foreign matter.

Any extraneous substance or material such as stalks, suckers, straw, strings, and rubber bands. Abnormal amounts of dirt or sand are also included. (See Rule 24, § 29.3625.)

§ 29.3519 Form.

The stage of preparation of tobacco such as unstemmed or stemmed.
§ 29.3520 Grade.
A subdivision of a type according to group, quality, and color.

§ 29.3521 Grademark.
A grademark normally consists of three symbols which indicate group, quality, and color. A letter is used to indicate group, a number to indicate quality, and a letter or letters to indicate color. For example, B3D means Heavy Leaf, third quality, and dark-brown color.

§ 29.3522 Green (G).
A term applied to green-colored, immature, or crude tobacco. Any leaf which has a green color affecting 20 percent or more of its leaf surface may be described as green. (See Rule 19, § 29.3620.)

§ 29.3523 Group.
A division of a type covering closely related grades based on certain characteristics which are related to stalk position, body, or the general quality of the tobacco. Groups in Dark Air-cured types are: Wrappers (A), Heavy Leaf (B), Thin Leaf (C), Lugs (X), Non-descript (N), and Scrap (S).

§ 29.3524 Injury.
Hurt or impairment from any cause except the fungus or bacterial diseases which attack tobacco in its cured state. (See definition of Damage, §29.3514.) Injury to tobacco may be caused by field diseases, insects, or weather conditions; insecticides, fungicides, or cell growth inhibitors; nutritional deficiencies or cesses; or improper fertilizing, harvesting, curing, or handling. Injured tobacco includes dead, burned, hail-cut torn, broken, frostbitten, sunburned, sunscalded, scorched, fire-killed, bulk-burnt, steam-burnt, house-burnt bleached, bruised, discolored, or deformed leaves; or tobacco affected by wildfire rust, frogeye, mosaic, root rot, wilt, black shank, or other diseases. (See Rule 15, §29.3616.)

§ 29.3525 Leaf.
Whole, unstemmed leaf. Leaf, when applied to tobacco in strip form, shall describe the divided unit of a whole leaf.

§ 29.3526 Leaf scrap.
A byproduct of unstemmed tobacco. Leaf scrap results from handling unstemmed tobacco and consists of loose and tangled whole or broken leaves.

§ 29.3527 Leaf structure.
The cell development of a leaf as indicated by its porosity. (See Elements of Quality, §29.3586.)

§ 29.3528 Leaf surface.
The roughness or smoothness of the web or lamina of a tobacco leaf. Leaf surface is affected to some extent by the size and shrinkage of the veins or fibers. (See Elements of Quality, §29.3586.)

§ 29.3529 Length.
The linear measurement of cured tobacco leaves from the butt of the mid-rib to the extreme tip. (See Standard Tobacco Sizes, §29.3591.)

§ 29.3530 Lot.
A pile, basket, bulk, or more than one bale, case, hogshead, tierce, package, or other definite package unit.

§ 29.3531 Maturity.
The degree of ripeness. (See Elements of Quality, §29.3586, and Rule 16, §29.3617.)
§ 29.3532 Mixed (M).
Variegated or distinctly different colors of the type mingled together. (See Rules 17, §29.3618; 18, §29.3619.)

§ 29.3533 Nested.
Any lot of Types 35, 36 and 37 tobacco which has been loaded, packed, or arranged to conceal foreign matter or tobacco of inferior grade, quality, or condition. Nested includes:
(a) Any lot of tobacco which contains foreign matter or damaged, injured, tangled, or other inferior tobacco, any of which cannot be readily detected upon inspection because of the way the lot is packed or arranged; (b) any lot of tied tobacco which contains foreign matter in the inner portions of the hands or which contains foreign matter in the heads under the tie leaves; (c) any lot of tied tobacco in which the leaves on the outside of the hands are placed or arranged to conceal inferior quality leaves on the inside of the hands or which contains wet tobacco or tobacco of lower quality in the heads under the tie leaves; and (d) any lot of tobacco which consists of distinctly different grades, qualities, or conditions and which is stacked or arranged in layers with the same kinds together so that the tobacco in the lower layer or layers is distinctly inferior in grade, quality, or condition from the tobacco in the top or upper layers. (See Rule 24, §29.3625.)

§ 29.3534 No grade.
A designation applied to a lot of tobacco classified as nested, offtype, rework, or semicured; tobacco that is damaged 20 percent or more, abnormally dirty, extremely wet or watered, contains foreign matter, or has an odor foreign to the type. (See Rule 24, §29.3625.)

§ 29.3535 Offtype.
Tobacco of distinctly different characteristics which cannot be classified as Dark Air-cured, U.S. Type 35, 36, 37, or Foreign Type 95. (See Rule 24, §29.3625.)

§ 29.3536 Order (case).
The state of tobacco with respect to its moisture content.

§ 29.3537 Package.
A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

§ 29.3538 Packing.
A lot of tobacco consisting of a number of packages submitted as one definite unit for sampling or inspecting. It is represented to contain the same kind of tobacco and has a common identification number or mark on each package.

§ 29.3539 Quality.
A division of a group or the second factor of a grade based on the relative degree of one or more elements of quality in tobacco.

§ 29.3540 Raw.
Freshly harvested tobacco or tobacco as it appears between the time of harvesting and the beginning of the curing process.

§ 29.3541 Resweated.
The condition of tobacco which has passed through a second fermentation under abnormally high temperatures or reffermented with a relatively high percentage of moisture. Resweated includes tobacco which has been dipped
§ 29.3542 Rework.

Any lot of Types 35, 36, and 37 tobacco which needs to be resorted or otherwise reworked to prepare it properly for market in the manner which is customary in the type area, including:

(a) Tobacco which is so mixed that it cannot be classified properly in any grade of the type, because the lot contains a substantial quantity of two or more distinctly different grades which should be separated by sorting;

(b) Tobacco which contains an abnormally large quantity of foreign matter or an unusual number of muddy or extremely dirty leaves which should be removed; and

(c) Tobacco not tied in hands, not packed straight, not properly tied, or otherwise not properly prepared for market. (See Rule 24, § 29.3625.)

§ 29.3543 Semicured.

Tobacco in the process of being cured or which is partially but not thoroughly cured. Semicured includes tobacco which contains fat stems, wet butts, swelled stems, frozen tobacco, and tobacco having frozen stems or stems that have not been thoroughly dried in the curing process. (See Rule 24, § 29.3625.)

§ 29.3544 Side.

A certain phase of quality, color, or length as contrasted with some other phase of quality, color, or length; or any peculiar characteristic of tobacco.

§ 29.3545 Size.

The length of tobacco leaves. Size does not apply to tobacco in strip form. (See Standard Tobacco Sizes § 29.3591.)

[51 FR 40408, Nov. 7, 1986]
condition is sometimes described as aged.

§ 29.3554 Sweating.
The condition of tobacco in the process of fermentation.

§ 29.3555 Tobacco.
Tobacco as it appears between the time it is cured and stripped from the stalk, or primed and cured, and the time it enters into the different manufacturing processes. The acts of stemming, threshing, sweating, and conditioning are not regarded as manufacturing processes. Tobacco, as used in these standards, does not include manufactured or semimanufactured products, stems, cuttings, clippings, trimmings, siftings, or dust.

§ 29.3556 Tobacco products.
Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff, which is subject to Internal Revenue tax.

§ 29.3557 Type.
A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.3558 Type 35.
That type of air-cured tobacco commonly known as One Sucker Air-cured, Kentucky-Tennessee-Indiana One Sucker, or Dark Air-cured One Sucker, including the upper Cumberland District One Sucker, and produced principally in northern Tennessee, south central Kentucky, and southern Indiana.

§ 29.3559 Type 36.
That type of air-cured tobacco commonly known as Green River, Green River Air-cured, or Dark Air-cured of the Henderson and Owensboro Districts, and produced principally in the Green River section of Kentucky.

§ 29.3560 Type 37.
That type of air-cured or sun-cured tobacco commonly known as Virginia Sun-cured, Virginia Sun and Air-cured, or Dark Air-cured of Virginia, and produced principally in the central section of Virginia north of the James River.

§ 29.3561 Type 95.
That type of air-cured tobacco commonly known as Foreign-grown Dark Air-cured produced in countries other than the United States.
[49 FR 16759, Apr. 20, 1984]

§ 29.3562 Undried.
The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.3563 Uniformity.
An element of quality which describes the consistency of a lot of tobacco as it is prepared for market. Uniformity is expressed in grade specifications as a percentage. The percentage is applicable to group, quality, and color. (See Rule 14, §29.3615.)

§ 29.3564 Unsound (U).
Damaged under 20 percent. (See Rule 21, §29.3622.)
§ 29.3565 Unstemmed.
A form of tobacco, including whole leaf and leaf scrap, from which the stems or midribs have not been removed.

§ 29.3566 Variegated.
Any leaf of which 20 percent or more of its leaf surface is off brown, grayish, mottled, or bleached and does not blend with the normal colors of the type. (See Rules 17, §29.3618; 18, §29.3619.)

§ 29.3567 Wet (W).
Any sound tobacco containing excessive moisture to the extent that it is in unsafe- or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 22, §29.3623.) (For extremely wet or watered tobacco, see rule 24, §29.3625.)

§ 29.3568 Width.
The relative breadth of a tobacco leaf expressed in relation to its length. Width, as an element of quality, does not apply to tobacco in strip form. (See Elements of Quality, §29.3586.)

ELEMENTS OF QUALITY
§ 29.3586 Elements of quality and degrees of each element.
These standardized words or terms are used to describe tobacco quality and to assist in interpreting grade specifications. Tobacco attributes or characteristics which constitute quality are designated as elements of quality. The range within each element is expressed by the use of words or terms designated as degrees. These several degrees are arranged to show their relative value, but the actual value of each degree varies with type, group, and grade.

1 The application of sizes is governed by the major portion of the lot or package.
§ 29.3602 Rule 1.
Each grade shall be treated as a subdivision of a particular type. When the grade is stated in an inspection certificate, the type also shall be stated.

§ 29.3603 Rule 2.
The determination of a grade shall be based upon a thorough examination of a lot of tobacco or of an official sample of the lot.

§ 29.3604 Rule 3.
In drawing an official sample from a hogshead or other package of tobacco, three or more breaks shall be made at such points and in such manner as the inspector or sampler may find necessary to determine the kinds of tobacco and the percentage of each kind contained in the lot. All breaks shall be made so that the tobacco contained in the center of the package is visible to the sampler. Tobacco shall be drawn from at least three breaks from which a representative sample shall be selected. The sample shall include tobacco of each different group, quality, color, length, and kind found in the lot in proportion to the quantities of each contained in the lot.

§ 29.3605 Rule 4.
All standard grades must be clean.

§ 29.3606 Rule 5.
The grade assigned to any lot of tobacco shall be a true representation of the tobacco at the time of inspection and certification. If, at any time, it is found that a lot of tobacco does not comply with the specifications of the grade previously assigned it shall not thereafter be represented as such grade.

§ 29.3607 Rule 6.
A lot of tobacco on the marginal line between two colors shall be placed in the color with which it best corresponds with respect to body or other associated elements of quality.

§ 29.3608 Rule 7.
Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.

§ 29.3609 Rule 8.
A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.3610 Rule 9.
In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over one percent of the tobacco shall be overlooked.

§ 29.3611 Rule 10.
Any special factor approved by the Director of the Tobacco Division, Agricultural Marketing Service, may be used to show a peculiar side or characteristic of the tobacco which tends to modify the grade.

§ 29.3612 Rule 11.
Interpretations, the use of specifications, and the meaning of the terms shall be in accordance with determinations or clarifications made by the Chief of the Standards and Testing Branch and approved by the Director.

§ 29.3613 Rule 12.
The use of any grade may be restricted by the Director during any marketing season, when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.3614 Rule 13.
Length shall be stated in connection with each grade of the A, B, and C groups, except strip grades, and may be stated in connection with grades of other groups. For this purpose, the standard tobacco sizes shall be used. (See Applicable Standard Sizes, §29.3681.)

[51 FR 40408, Nov. 7, 1986]
§ 29.3615  Rule 14.

Degrees of uniformity shall be expressed in terms of percentages. The percentages shall govern the portion of a lot which must meet the specifications of the grade. The minor portion must be closely related but may be of a different group, quality, and color from the major portion. These percentages shall not affect limitations established by other rules.

§ 29.3616  Rule 15.

The application of injury as an element of quality shall be expressed in terms of a percentage of tolerance. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury. In appraising injury, consideration shall be given to the normal characteristics of the group as related to injury.

§ 29.3617  Rule 16.

Normal injury associated with ripeness shall be excluded from injury tolerance except when such injury is considered detrimental to the quality of the tobacco.

§ 29.3618  Rule 17.

Any lot of tobacco which is not green but contains over 30 percent of variegated leaves shall be described as “variegated” and designated by the color symbol “M.” Variegated leaves may be included in any group to the following extent: In the third quality, 10 percent; in the fourth quality, 20 percent; and in the fifth quality, 30 percent.

§ 29.3619  Rule 18.

Any lot of tobacco of the B, C, or X groups shall be classified as “mixed” and designated by the color symbol “M” when it is not green but contains (a) over 30 percent of colors distinctly different from the major color or (b) over 30 percent of a combination of variegated and colors distinctly different from the major color mingled together.

§ 29.3620  Rule 19.

Any lot of tobacco containing 20 percent or more of green leaves or any lot which is not crude but contains 20 percent or more of green and crude combined shall be designated by the color symbol “G.”

§ 29.3621  Rule 20.

Crude leaves shall not be included in any grade of any color except the fourth and fifth qualities of the B, C, and X groups in green color. Any lot containing 20 percent or more of crude leaves shall be designated as Non-descript.

[51 FR 40408, Nov. 7, 1986]

§ 29.3622  Rule 21.

Tobacco damaged under 20 percent but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “U” after the grademark. Tobacco damaged 20 percent or more shall be designated “No-G.”

§ 29.3623  Rule 22.

Sound tobacco that is wet or in doubtful-keeping order but which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “W” after the grademark. This special factor does not apply to tobacco designated “No-G.”

§ 29.3624  Rule 23.

Special factors “BH” (big heads) and “BL” (broad leaf) shall be used as follows: “BH” in types 35 and 36 to designate tobacco tied in extremely big hands and “BL” in type 35 to designate broad leaf tobacco.

§ 29.3625  Rule 24.

Tobacco shall be designated as No Grade, using the grademark “No-G.” when it is dirty, nested, offtype, semicured, damaged 20 percent or more, extremely wet or watered, or when it needs to be reworked, contains foreign matter, or has an odor foreign to the type.

§ 29.3626  Rule 25.

Tobacco in strip form which otherwise meets the specifications of a grade shall be treated as a subgrade by placing the special factor “S” preceding the grademark.

[49 FR 16759, Apr. 20, 1984]
Agricultural Marketing Service, USDA

§ 29.3646 Wrappers (A Group).

This group consists of leaves from the Heavy Leaf and the Thin Leaf groups. Cured leaves of the A group are very elastic, have small- to medium-sized and blending fibers, and show a low percentage of injury affecting wrapper yield.

§ 29.3649 [Reserved]

§ 29.3650 Lugs (X Group).

This group consists of leaves that normally grow on the lower portions of the stalk. Leaves of the X group usually have a high degree of maturity and show ground and other injury characteristic of the group.

Special factors “U”, “W”, and “S” may be applied to all grades in all types, “BH” to grades in types 35 and 36, and “BL” to type 35. Tobacco not covered by the standard grades is designated “No-G.”

§ 29.3652 Scrap (S Group).

A byproduct of stemmed and unstemmed tobacco. Scrap accumulates from handling tobacco in farm buildings, warehouses, packing and conditioning plants, and stemmeries.

Grades | Grade name and specifications
-------|--------------------------------------------------
S      | Scrap

Loose, tangled, whole, or broken unstemmed leaves; or the web portions of tobacco leaves reduced to scrap by any process.

OFFICIAL STANDARD GRADES FOR WISCONSIN CIGAR-BINDER TOBACCO (U.S. Types 54 and 55)¹

DEFINITIONS

§ 29.6001 Definitions.

As used in these standards, the words and phrases hereinafter defined shall have the indicated meanings so assigned.

¹These standards also apply to Type 53 Havana seed tobacco.
§ 29.6002 Air-cured.  
Tobacco cured under natural atmospheric conditions. Artificial heat sometimes is used to control excess humidity during the curing period to prevent pole-sweat, pole-burn, and shed-burn in damp weather. Air-cured tobacco should not carry the odor of smoke or fumes resulting from the application of artificial heat.

§ 29.6003 Body.  
The thickness and density of a leaf or the weight per unit of surface. (See chart.)

§ 29.6004 Burn.  
The duration of combustion or length of time that a tobacco leaf will hold fire after ignition. (See Rule 18.)

§ 29.6005 Case (order).  
The state of tobacco with respect to its moisture content.

§ 29.6006 Class.  
A major division of tobacco based on method of cure or principal usage.

§ 29.6007 Clean.  
Tobacco is described as clean when it contains only a normal amount of sand or soil particles. Leaves grown on the lower portion of the stalk normally contain more sand or dirt than those from higher stalk positions. (See Rule 4.)

§ 29.6008 Condition.  
The state of tobacco which results from the method of preparation or from the degree of fermentation. Words used to describe the condition of tobacco are Undried, air-dried, steam-dried, sweating, sweated, and aged.

§ 29.6009 Crude.  
A subdegree of maturity. (See Rule 15.)

§ 29.6010 Cured.  
Tobacco dried of its sap by either natural or artificial processes.

§ 29.6011 Damage.  
The effect of mold, must, rot, black rot or other fungus or bacterial diseases which attack tobacco in its cured state. Tobacco having the odor of mold, must or rot is considered damaged. (See Rule 17.)

§ 29.6012 Dirty.  
The state of tobacco containing an abnormal amount of dirt or sand, or tobacco to which additional quantities of dirt or sand have been added. (See Rule 17.)

§ 29.6013 Elasticity.  
The flexible, springy nature of the tobacco leaf to recover approximately its original size and shape after it has been stretched. (See chart.)

§ 29.6014 Elements of quality.  
Physical characteristics used to determine the quality of tobacco. Words selected to describe degrees within each element are shown in the chart in § 29.6081.

§ 29.6015 Foreign matter.  
Any extraneous substance or material such as stalks, suckers, straw, strings, and rubber bands. (See Rule 17.)

§ 29.6016 Form.  
The stage of preparation of tobacco such as stemmed or unstemmed.

§ 29.6017 General quality.  
The quality of tobacco considered in relation to the type as a whole. General quality is distinguished from the restricted use of the term “quality” within a group.

§ 29.6018 Grade.  
A subdivision of a type according to group and quality and to other characteristics when they are of sufficient importance to be treated separately.

§ 29.6019 Grademark.  
In these types a grademark normally consists of a letter to indicate group and a number to indicate quality. For example, B2 means Binder, fair quality.

§ 29.6020 Group.  
A type division consisting of one or more grades based on the general quality of tobacco. Groups in these types are: Binder (B), Stripper (C), Straight...
\section*{§ 29.6021 Injury.}

Hurt or impairment from any cause except the fungus or bacterial diseases which attack tobacco in its cured state. (See definition of Damage.) Injury to tobacco may be caused by field diseases, insects, or weather conditions; insecticides, fungicides, or cell growth inhibitors; nutritional deficiencies or excesses; or improper fertilization, harvesting, curing, or handling. Injured tobacco includes dead, burnt, hail-cut, torn, broken, frost-bitten, frozen (see Rule 16), sunburned, sun-scaled, bulk-burnt, pole-burnt, shed-burnt, pole-sweated, stem-rotted, bleached, bruised, discolored, or deformed leaves; or tobacco affected by wildfire, rust, frogeye, mosaic, root rot, wilt, black shank, or other diseases. (See Rule 13.)

\section*{§ 29.6022 Leaf scrap.}

A byproduct of unstemmed tobacco. Leaf scrap results from handling unstemmed tobacco and consists of loose and tangled whole or broken leaves.

\section*{§ 29.6023 Leaf structure.}

The cell development of a leaf as indicated by its porosity. The degrees range from close (slick and tight) to open (porous). (See chart.)

\section*{§ 29.6024 Length.}

The linear measurement of cured tobacco leaves from the butt of the midrib to the extreme tip.

\section*{§ 29.6025 Lot.}

A pile, basket, bulk, package, or other definite unit.

\section*{§ 29.6026 Maturity.}

The degree of ripeness. (See chart.)

\section*{§ 29.6027 Nested.}

Any tobacco which has been loaded, packed, or arranged to conceal foreign matter or tobacco of inferior grade, quality, or condition. Nested includes any lot of tobacco which contains foreign matter or damaged, injured, tangled, or other inferior tobacco, any of which cannot be readily detected upon inspection because of the way the lot is packed or arranged. (See Rule 17.)

\section*{§ 29.6028 No Grade.}

A designation applied to a lot of tobacco classified as damaged, dirty, nested, offtype, semicured, or wet; tobacco that is improperly packed, contains foreign matter, or has an odor foreign to the type. (See Rules 5 and 17.)

\section*{§ 29.6029 Offtype.}

Tobacco of distinctly different characteristics which cannot be classified as Type 53, 54, or 55. (See Rule 17.)

\section*{§ 29.6030 Package.}

A hogshead, tierce, case, bale, or other securely enclosed parcel or bundle.

\section*{§ 29.6031 Packing.}

A lot of tobacco consisting of a number of packages submitted as one definite unit for sampling or inspection. It is represented to contain the same kind of tobacco and has a common identification number or mark on each package.

\section*{§ 29.6032 Quality.}

A division of a group or the second factor of a grade based on the relative degree of one or more elements of quality.

\section*{§ 29.6033 Raw.}

Tobacco as it appears between the time of harvesting and the beginning of the curing process.

\section*{§ 29.6034 Semicured.}

Tobacco in the process of being cured or which is partially but not thoroughly cured. Semicured includes tobacco which contains fat stems, wet butts, swelled stems, and tobacco having frozen stems or stems that have not been thoroughly dried in the curing process. (See definition of No Grade and Rule 17.)
§ 29.6035 Side.
A certain phase of quality as contrasted with some other phase of quality or any peculiar characteristic of tobacco.

§ 29.6036 Sound.
Free of damage. (See Rule 4.)

§ 29.6037 Stem.
The midrib or large central vein of a tobacco leaf.

§ 29.6038 Stemmed.
A form of tobacco, including strips and strip scrap, from which the stems or midribs have been removed.

§ 29.6039 Stem rot.
The deterioration of an uncured or frozen stem resulting from bacterial action. Although stem rot results from bacterial action, it is inactive in cured tobacco and is treated as a kind of injury in these types. (See Rule 14.)

§ 29.6040 Strength (tensile).
The stress a tobacco leaf can bear without tearing. (See chart.)

§ 29.6041 Strips.
The sides of a tobacco leaf from which the stem has been removed or a lot of tobacco composed of strips.

§ 29.6042 Sweated.
The condition of tobacco which has passed through one or more fermentations natural to tobacco packed with a normal percentage of moisture. This condition sometimes is described as aged.

§ 29.6043 Tobacco.
Tobacco in its unmanufactured forms as it appears between the time it is cured and stripped from the stalk, or primed and cured, and the time it enters a manufacturing process. Conditioning, sweating, and stemming are not regarded as manufacturing processes.

§ 29.6044 Tobacco products.
Manufactured tobacco, including cigarettes, cigars, smoking tobacco, chewing tobacco, and snuff, which is subject to Internal Revenue tax.

§ 29.6045 Type.
A division of a class of tobacco having certain common characteristics and closely related grades. Tobacco which has the same characteristics and corresponding qualities, colors, and lengths is classified as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 29.6046 Type 53.
That type of cigar-leaf tobacco commonly known as York State or Havana Seed of New York and Pennsylvania, produced principally in the Big Flats and Onondaga sections of New York and extending into Pennsylvania.

§ 29.6047 Type 54.
That type of cigar-leaf tobacco commonly known as Southern Wisconsin Cigar-leaf or Southern Wisconsin Binder-type, produced principally south and east of the Wisconsin River.

§ 29.6048 Type 55.
That type of cigar-leaf tobacco commonly known as Northern Wisconsin Cigar-leaf or Northern Wisconsin Binder-type, produced principally north and west of the Wisconsin River and extending into Minnesota.

§ 29.6049 Undried.
The condition of unfermented tobacco which has not been air-dried or steam-dried.

§ 29.6050 Uniformity.
A grade requirement designating the percentage of a lot which must meet the specified degree of each element of quality. (See Rule 12.)

§ 29.6051 Unstemmed.
A form of tobacco, including whole leaf and leaf scrap, from which the stems or midribs have not been removed.

§ 29.6052 Unsweated.
The condition of cured tobacco which has not been sweated.
§ 29.6053 Wet (high-case).

Any sound tobacco containing excessive moisture to the extent that it is in unsafe or doubtful-keeping order. Wet applies to any tobacco which is not damaged but which is likely to damage if treated in the customary manner. (See Rule 17.)

§ 29.6054 Width.

The relative breadth of a tobacco leaf expressed in relation to its length. (See chart.)

1 Expressed in inches.
2 Expressed in percentages.

§ 29.6086 Rules.

The application of these official standard grades shall be in accordance with the following rules.

§ 29.6087 Rule 1.

Each grade shall be treated as a subdivision of a particular type. When the grade is stated in an inspection certificate, the type also shall be stated.

§ 29.6088 Rule 2.

The determination of grade shall be based upon a representative sample or a thorough examination of a packing of tobacco.

§ 29.6089 Rule 3.

The grade of unsorted tobacco shall be based upon a representative sample of the packing. A minimum of 10 percent of the bundles or bales shall be selected at random for sampling; a higher percentage may be sampled at the discretion of the inspector. To obtain the sample, a sufficient amount of tobacco shall be drawn to be representative of each selected bale. In determining the grade, the inspector shall consider the quality of all samples. The grade assigned shall represent the quality of the lot as a whole.

§ 29.6090 Rule 4.

Standard grades shall be assigned to clean and sound tobacco only.

§ 29.6091 Rule 5.

Tobacco leaves shall be placed straight in bundles or bales of normal weight, size, and shape with the butts out and tips overlapping from 6 to 8 inches or sufficiently to make a level, solid, and uniform pack. The sides of the bundles shall be completely covered with paper, or other suitable protective material, and tightly bound with not less than three large twines spaced so that the tobacco will be held securely together. Improperly packed tobacco shall be designated as “No—G.”

§ 29.6092 Rule 6.

The grade assigned to any lot of tobacco shall be a true representation of
the tobacco at the time of inspection and certification. If, at any time, it is found that a lot of tobacco does not comply with the specifications of the grade previously assigned, it shall not thereafter be represented as such grade.

§ 29.6093 Rule 7.
Any lot of tobacco which meets the specifications of two grades shall be placed in the higher grade. Any lot of tobacco on the marginal line between two grades shall be placed in the lower grade.

§ 29.6094 Rule 8.
A lot of tobacco meets the specifications of a grade when it is not lower in any degree of any element of quality than the minimum specifications of such grade.

§ 29.6095 Rule 9.
In determining the grade of a lot of tobacco, the lot as a whole shall be considered. Minor irregularities which do not affect over one percent of the tobacco shall be overlooked.

§ 29.6096 Rule 10.
Interpretations, the use of specifications, and the meaning of terms shall be in accordance with determinations or clarifications made by the Chief of the Standardization Branch and approved by the Director of the Tobacco Division, Agricultural Marketing Service.

§ 29.6097 Rule 11.
The use of any grade may be restricted by the Director during any marketing season when it is found that the grade is not needed or appears in insufficient volume to justify its use.

§ 29.6098 Rule 12.
Uniformity shall be expressed in percentages. These percentages shall govern the portion of a lot which must meet each specification of the grade; the remaining portion must be related. Grade specifications state the minimum acceptable degree of each element of quality. Specified percentages of uniformity shall not affect limitations established by other rules.

§ 29.6099 Rule 13.
Injury tolerance shall be expressed in percentages. The appraisal of injury shall be based upon the percentage of affected leaf surface or the degree of injury, and consideration shall be given to the kinds of injury normal to the group or grade.

§ 29.6100 Rule 14.
Stem rot shall not exceed 40 percent of the specified injury tolerance for any grade.

§ 29.6101 Rule 15.
In grade specifications the tolerance of crude shall apply to the entire leaf surface of the lot.

§ 29.6102 Rule 16.
In grade specifications frozen shall be treated as a separate kind of injury and the tolerance shall apply to the entire leaf surface of the lot.

§ 29.6103 Rule 17.
Tobacco shall be designated as No Grade, using the grademark “No—G,” when it is damaged, dirty, nested, offtype, semicured, wet, improperly packed, contains foreign matter, or has an odor foreign to the type.

§ 29.6104 Rule 18.
Burn shall be determined as the average burning time of leaves selected at random from the sample. A minimum of 10 leaves shall be selected as representative regardless of the number of bundles or bales in the lot. All burn tests shall be made in the bindercutting area on the same side of the leaf. The leaf shall be punctured to permit quick ignition when placed over a candle, alcohol lamp, or electrical-lighting device. Good burn shall average 6 seconds or longer; fair burn, 3 to 5 seconds; and poor burn, under 3 seconds. B1 and B2 shall require good burn and B3, fair burn.
§ 29.6126 Binder (B Group).

Tobacco of this group is of cigar-binder quality from which trash and trashy Farm Fillers have been removed.

<table>

Subpart D—Orders of Designation of Tobacco Markets

§ 29.8001 Designation of tobacco markets.

The Act of Congress approved August 23, 1935 (49 Stat. 731; 7 U.S.C., Chapter 21A) entitled “The Tobacco Inspection Act” contains the following provisions:

Sec. 2. That transactions in tobacco involving the sale thereof at auction as commonly conducted at auction markets are affected with a public interest; that such transactions are carried on by tobacco producers generally and by persons engaged in the business of buying and selling tobacco in commerce; that the classification of tobacco according to type, grade, and other characteristics affects the prices received therefor by producers; that without uniform standards of classification and inspection the evaluation of tobacco is susceptible to speculation, manipulation, and control, and unreasonable fluctuations in prices and quality determinations occur which are detrimental to producers and persons handling tobacco in commerce; that such fluctuations constitute a burden upon commerce and make the use of uniform standards of classification and inspection imperative for the protection of producers and others engaged in commerce and the public interested therein. * * *

Sec. 5. That the Secretary is authorized to designate those auction markets where tobacco bought and sold thereon at auction, or the products customarily manufactured therefrom, moves in commerce. Before any market is designated by the Secretary under this section he shall determine by referendum the desire of tobacco growers who sold tobacco at auction on such market during the preceding marketing season. The Secretary may at his discretion hold one referendum for two or more markets or for all markets in a type area. No market or group of markets shall be designated by the Secretary unless two-thirds of the growers voting favor it. The Secretary shall have access to the tobacco records of the Collector of Internal Revenue and of the several collectors of internal revenue for the purpose of obtaining the names and addresses of growers who sold tobacco on any auction market, and the Secretary shall determine from said records the eligibility of such grower to vote in such referendum, and no grower shall be eligible to vote in more than one referendum. After public notice of not less than thirty days that any auction market has been so designated by the Secretary, no tobacco shall be offered for sale at auction on such market until it shall have been inspected and certified by an authorized representative of the Secretary according to the standards established under this Act, except that the Secretary may temporarily suspend the requirement of inspection and certification at any
designated market whenever he finds it impracticable to provide for such inspection and certification because competent inspectors are not obtainable or because the quantity of tobacco available for inspection is insufficient to justify the cost of such service: Provided, That, in the event competent inspectors are not available, or for other reasons, the Secretary is unable to provide for such inspection and certification at all auction markets within a type area, he shall first designate those auction markets where the greatest number of growers may be served with the facilities available to him. No fee or charge shall be imposed or collected for inspection or certification under this section at any designated auction market. Nothing contained in this Act shall be construed to prevent transactions in tobacco at markets not designated by the Secretary or at designated markets where the Secretary has suspended the requirement of inspection or to authorize the Secretary to close any market.

Subpart E [Reserved]

Subpart F—Policy Statement and Regulations Governing the Identification and Certification of Nonquota Tobacco Produced and Marketed in a Quota Area

SOURCE: 47 FR 8980, Mar. 3, 1982, unless otherwise noted.

DEFINITIONS

§ 29.9201 Terms defined.
As used in this subpart and in all instructions, forms, and documents in connection therewith, the words and phrases hereinafter defined shall have the indicated meanings so assigned.

§ 29.9202 Approved receiving station.
Points approved by the Director at which tobacco is offered for marketing or shipment into commerce including tobacco auction warehouses, packing houses, prizeries, or places where tobacco is handled or stored.

§ 29.9203 Certification.
The documentation of class or type, weight, or other tobacco characteristics as required in §29.9263.

§ 29.9204 Crop-lot.
The assemblage of individual lots representing the season’s production of each kind or type of nonquota tobacco produced on an individual farm.

§ 29.9205 Identification number (farm serial number).
The serial number assigned to an individual farm by the appropriate office of the Agricultural Stabilization and Conservation Service.

§ 29.9206 Inspection.
The examination by an inspector of a lot or crop-lot of tobacco to make determinations necessary for proper certification.

§ 29.9207 Nonquota tobacco.
Any kind or type of tobacco not subject to production and/or marketing limitations or restrictions under regulations issued by the Agricultural Stabilization and Conservation Service.

§ 29.9208 Permissive inspection.
Permissive inspection consists of inspecting and certificating tobacco, upon the request of an interested party.

§ 29.9209 Lot.
A pile, basket, bulk, package, or other definite unit.

§ 29.9210 Office of inspection.
A field office of the inspection service of the Tobacco Division.

POLICY STATEMENT

§ 29.9221 Policy statement.
Public Law 97–98 enacted on December 22, 1981, amended section 320 of the Agricultural Adjustment Act of 1938, to preserve the effectiveness of the tobacco program by discouraging the production of tobacco not under quota in states where tobacco farmers have elected to comply with marketing quotas. Under the amendment, any tobacco represented by the producer as nonquota which is produced in a state where producers have approved marketing quotas shall be determined to be subject to marketing quotas for the quota tobacco produced in that state having the highest price support, with the specific exemptions provided for in section 320(b) and set out in 7 CFR parts 724, 725, and 726 of these regulations. The regulations in this subpart...
set out procedures for requesting a Tobacco Classification Certificate which would certify that the inspected tobacco is readily and distinguishably different from all kinds of quota tobacco, as determined through application of the standards for inspection and identification of tobacco.

**ADMINISTRATION**

§ 29.9231 Administration.

The Director, Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC, 20250, is charged with the supervision of the Division and the performance of all duties assigned thereto in the administration of the act. The conduct of all services and the licensing or employment of inspection/grading/sampling personnel under these regulations shall be accomplished without discrimination as to race, color, creed, sex, or national origin. Information concerning such administration may be obtained from the Director.

§ 29.9232 Where certification is available.

Nonquota tobacco may be inspected and certified by class or type, upon request of an interested party, when the tobacco is displayed at an approved receiving station where the tobacco is accessible to the inspector.

§ 29.9233 When certification will be made.

Certification services for the nonquota tobacco shall be made when inspectors are available and such sales will not interfere with scheduled sales on designated auction markets.

§ 29.9234 Who may obtain certification.

Certification of nonquota tobacco may be requested by an interested party (applicant) by filing an application in accordance with §§ 29.9236 and 29.9237.

§ 29.9235 How to make application.

Application for certification by class or type of nonquota tobacco shall be in writing and signed by the applicant.

§ 29.9236 Form of application.

Application for inspection and certification of class or type of nonquota tobacco shall include the following information:

(a) The date of the application;

(b) The producer's certification of the type of the tobacco, the crop year when produced, and where produced;

(c) The name and post office address of the applicant;

(d) The financial interest of the applicant in the tobacco;

(e) The exact nature of the service desired;

(f) A statement that the tobacco is (1) in commerce, as defined in the act, or (2) entering such commerce; and

(g) Such other necessary information as the Director may require.

§ 29.9237 When application deemed filed.

An application shall be deemed filed when delivered to the office of inspection. When an application is filed, the date and time of filing shall be recorded by the official receiving it.

§ 29.9238 When application may be rejected.

An application may be rejected (a) for noncompliance with the act or the regulations in this subpart, or (b) when it is not practicable to provide the service. All expenses incurred in connection with an application rejected for noncompliance with the act or the regulations in this subpart shall be paid by the applicant as provided in § 29.124 of subpart B of this part.

§ 29.9239 When application may be withdrawn.

An application may be withdrawn at any time before the requested service is rendered. Payment of expenses incurred in connection therewith shall be paid by the applicant as provided in § 29.124 and subpart B of this part.

§ 29.9240 Responsibilities of applicant.

Any applicant requesting class or type certification on nonquota tobacco produced in a quota area, shall obtain from the appropriate county office of
the Agricultural Stabilization and Conservation Service a certificate showing the acreage of nonquota tobacco grown on each affected farm and the identification number. It shall also be the responsibility of the applicant to:

(a) Make available to the inspector any or all information required by the inspector for completion of the Tobacco Classification Certificate,

(b) Make the tobacco accessible to the inspector, and

(c) Surrender to the inspector at time of certification a copy of the ASCS certificate and sale bill.

§ 29.9241 Accessibility of tobacco.

All tobacco to be inspected and certified by class or type upon application shall be made accessible by the applicant for proper examination, including any necessary display in proper light for determination of grade, class, type, or other characteristics or for drawing of samples. Each croplot shall be displayed at an approved receiving station in a continuous and orderly sequence with no other quota, nonquota, or other producer’s tobacco in between. The lots shall be arranged in rows 18 inches apart with the leaves of adjacent lots not touching within the rows. Coverings shall be removed by the applicant in such manner as may be prescribed by the inspector.

FEES AND CHARGES

§ 29.9251 Fees and charges.

Fees and charges for inspection and certification services shall comprise the cost of salaries, travel, per diem, and related expenses to cover the costs of performing the service. Fees shall be for actual time required to render the service calculated to the nearest 30-minute period. The hourly rate shall be $47.40. The overtime rate for service performed outside the inspector’s regularly scheduled tour of duty shall be $53.70. The rate of $64.45 shall be charged for work performed on Sundays and holidays.

CERTIFYING PROCEDURES

§ 29.9261 Procedure to be followed.

In certifications based on permissive inspection of nonquota tobacco produced in a state where any quota tobacco is produced, the inspector shall use the Official Standard Grades for all types of quota tobacco. The inspector shall determine by inspecting each lot in the crop-lot whether the crop-lot can be certified as the nonquota tobacco requested by the applicant. If the inspector determines upon inspection that any individual lot in the crop-lot meets the specifications of any grade of any quota tobacco, no certificate will be issued on any tobacco in the crop-lot.

§ 29.9262 Issuance of certificates.

A “Tobacco Classification Certificate” may be issued upon request of an applicant for nonquota tobacco certified in accordance with §29.9261. The Tobacco Classification Certificate will be supplied by the inspection office.

§ 29.9263 Tobacco classification certificate.

Each tobacco classification certificate shall show:

(a) The caption “Tobacco Classification Certificate”;

(b) Whether it is an original, first, second, or other copy;

(c) The number of the certificate;

(d) The sale bill identification number;

(e) The location of the tobacco at the time of inspection and certification;

(f) The date of certification;

(g) The class or type of tobacco;

(h) The number of lots in the croplot;

(i) The weight of each lot;

(j) The signature of the inspector and;

(k) Such additional information as may be required by the Director.

§ 29.9264 Forms.

Each certificate issued under this regulation shall:

(a) Show that it was issued under the Tobacco Inspection Act;

(b) Be in a form approved for the purpose by the Director, and
Embody within it, written or printed terms with respect to the particular kind of service, all applicable information required by § 29.9263. Each certificate may also contain any information, not inconsistent with the act and the regulations in this subpart, as may be approved or required by the Director. The Director may, in his discretion, specify or limit the period in which a certificate shall be valid.

§ 29.9265 Disposition of certificate.

Distribution of the Tobacco Classification Certificate shall be limited to the provisions of this section. The original certificate and one copy shall be delivered or mailed to the applicant or his agent. One copy and the copy of the ASCS certificate shall be forwarded by the inspector to the Division or office of inspection.

§ 29.9266 Changes or alterations.

No change or alteration shall be made in the weight or other identification of a lot on the Tobacco Classification Certificate after the certification of class or type, and any such change or alteration shall constitute and be construed as a change or alteration in the certificate issued or authorized under the act.

PRECLUSION

§ 29.9281 Preclusion.

The provisions of this subpart shall not preclude the application of other administrative remedies or the institution of criminal proceedings in appropriate cases as provided by the act.

Subpart G—Policy Statement and Regulations Governing Availability of Tobacco Inspection and Price Support Services to Flue-Cured Tobacco on Designated Markets

SOURCE: 39 FR 17754, May 20, 1974, unless otherwise noted.

As used in this subpart, the following terms shall have the following meanings:

(a) Secretary means the Secretary of Agriculture of the United States, or any officer or employee of the Department to whom authority has heretofore been delegated or may hereafter be delegated to act in his stead.

(b) Marketing area means a geographical area within the flue-cured tobacco production area specified by the Secretary each year on the basis of his determination that significant quantities of tobacco produced in such area are ready for marketing.

(c) Resale tobacco means any tobacco offered for sale, or sold, by someone other than its producer.

(d) Non-auction-purchased tobacco means tobacco purchased at other than a bona fide auction sale, as defined in 7 CFR 29.1(d), on a designated market, as defined in 7 CFR 29.1(e).

(e) Non-auction-purchased resale tobacco means tobacco being offered for sale, or sold, at auction by a person who purchased it at other than a bona fide auction sale, as defined in 7 CFR 29.1(d), on a designated market, as defined in 7 CFR 29.1(e).

§ 29.9402 Policy statement.

The sets of inspectors available to serve the flue-cured marketing areas are currently adequate to provide inspection service as rapidly as tobacco can be purchased, handled and processed by the currently existing facilities of the buyers, and the lack of inspection personnel is not a limiting factor to accelerated marketings or the extension of price support to producers. The sets of buyers assigned to the flue-cured markets by the buying industry are adequate to purchase tobacco as rapidly as it can be handled and processed by the buyers’ facilities. However, the tobacco ready for marketing during most weeks of the marketing season substantially exceeds the quantities which can be purchased, handled and processed by the currently existing facilities of the buyers. Moreover, the total number of flue-cured markets are
substantially greater than the number of sets of buyers assigned by the buying companies or the number of sets of available inspectors. In this situation, about 6 months is required to market a year’s crop of flue-cured tobacco and all warehouses cannot be served at the same time by the available sets of inspectors and the sets of buyers assigned by the buying companies. As additional sets of inspectors would not relieve the situation, inspection service will be provided by assigning the available inspectors to the various marketing areas and to warehouses within the marketing areas in a manner determined by the Secretary to provide the best and most equitable service to all growers.

§ 29.9403 Flue-Cured Tobacco Advisory Committee.
To assist the Secretary in making the apportionment and assignment of inspectors, a Flue-Cured Tobacco Advisory Committee, appointed in accordance with the Federal Advisory Committee Act (5 U.S.C. appendix I), shall advise and recommend to the Secretary marketing area opening dates and selling schedules for both designated and undesignated tobacco for each marketing area and for the individual warehouses in each marketing area, which specify the length of time inspectors will be available to inspect designated tobacco and undesignated tobacco and/or the quantity of designated or undesignated tobacco to be marketed in each area and through each warehouse within each marketing area.

§ 29.9404 Marketing area opening dates and marketing schedules.
(a) The Flue-Cured Tobacco Advisory Committee shall recommend, to the Secretary, marketing areas in the flue-cured tobacco production area and marketing area opening dates and selling schedules for both designated and undesignated tobacco for each marketing area and for the individual warehouses in each marketing area, which specify the length of time inspectors will be available to inspect designated tobacco and undesignated tobacco and/or the quantity of designated or undesignated tobacco to be marketed in each area and through each warehouse within such marketing area. In developing such opening date and selling schedules, the Committee shall take into account the following:

1. When a sufficient volume of tobacco produced within a specific area of the flue-cured tobacco production area will be ready for marketing;

2. The volume of tobacco ready for marketing which the producers have designated under §1464.2(e) of this title to be sold at specific warehouses and also the volume of tobacco ready for marketing which has not been so designated by the producer;

3. With regard to undesignated tobacco, the Committee shall first determine, on the basis of all information available to it, the volume of undesignated tobacco in a geographical area, and then shall provide sales opportunity for each warehouse to sell an amount of the undesignated tobacco available for sale from that geographical area in proportion to the amount of tobacco designated to the warehouse in comparison to the total amount of tobacco designated in the marketing area in which the warehouse is located. Provided, however, that the Secretary may authorize additional undesignated sales opportunity if the warehouse provided proper proof that it does, in fact, have available for sale a volume of tobacco which has not previously been designated and which was eligible for designation to that warehouse had the producer chosen to designate and that such additional volume of tobacco warrants more sales opportunity than allowed by the schedule;

4. The processing or redrying capacity of the industry and the number of inspectors available to provide inspection service during the specific period involved;

5. Such other factors or information as may be necessary to develop an effective and equitable opening date and selling schedule.

(b) The Flue-Cured Tobacco Advisory Committee shall thereupon submit its recommended opening date and selling schedules for designated and undesignated tobacco and the geographic areas to be included in specific marketing areas to the Secretary together with a basis supporting its recommendations.

§ 29.9405 Issuance of marketing area opening date and selling schedules by the Secretary.

(a) The Secretary shall review the recommendations of the Flue-Cured Tobacco Advisory Committee and based upon such recommendations and the basis therefor and such other information as may be available to him, shall specify the geographic areas to be encompassed by specific marketing areas, set the opening dates for sale within the marketing areas and issue the selling schedules for designated and undesignated tobacco. The inspection of flue-cured tobacco shall be in accordance with said schedules.

(b) The Flue-Cured Tobacco Advisory Committee shall recommend modifications in the opening date and marketing schedule during the flue-cured tobacco marketing season as may be warranted by changes in marketing conditions and the Secretary shall act thereon in the same manner as approving the initial opening date and marketing schedules.

§ 29.9406 Failure of warehouse to comply with opening and selling schedule.

(a) Each warehouse shall comply with opening and selling schedules issued by the Secretary for designated and undesignated flue-cured tobacco.

(b) For each of any two consecutive sales days during the marketing season a warehouse may exceed its scheduled sales opportunity for designated or undesignated tobacco, but the pounds sold during the second or third sales day must be adjusted so the warehouse will be back in compliance at the end of the third sales day or no tobacco inspection or price support services will be made available on the next succeeding sales day. Any such adjustment which is within 100 pounds of the required reduction shall be considered as in compliance with this section. During the closeout period, if a warehouse sells tobacco in excess of that allowed by the sales schedule on either of the last two sales days of the marketing season, then such excess sales shall be deducted from its scheduled sales opportunity on the first, or more, sales days of the next marketing season.

(c) The amount of the poundage adjustment specified in paragraph (b) of this section for a warehouse selling in excess of the sales schedule shall be as follows:

1. If the excess is 5,000 pounds or less of designated producer tobacco, the adjustment in producer sales opportunity shall be one pound for each pound of excess; sales in excess of 5,000 pounds shall be a violation of the sales schedule and the adjustment for the first violation shall be 5,000 pounds plus the larger of 3 pounds for each pound in excess of 5,000 pounds or 5,000 pounds; for the second violation, the adjustment shall be 5,000 pounds plus the larger of 5 pounds for each pound in excess of 5,000 or 15,000 pounds; and for the third and subsequent violations, the adjustment shall be 5,000 pounds plus the larger of 5 pounds for each pound in excess of 5,000 pounds or 50 percent of a scheduled day’s sales opportunity.

2. If the excess is 1,000 pounds or less of undesignated producer tobacco, the adjustment in producers sales opportunity is one pound for each pound of excess; if the excess is larger than 1,000 pounds, the adjustment is 1,000 pounds plus the larger of 3 pounds for each pound in excess of 1,000 or 2,000 pounds.

3. If the excess is designated producer tobacco that is not eligible for sale at the warehouse on the day of the sale, the adjustment in producers sales opportunity for the first violation is the larger of 3 pounds for each pound in excess of 5,000 pounds, and for the second and succeeding violations, the larger of 5 pounds for each pound in excess or 10,000 pounds.

(d) If, on any sales day, a warehouse does not sell the full quantity of designated or undesignated tobacco authorized to be sold at such warehouse, the designated or undesignated sales opportunity at such warehouse on the next immediate sales day shall automatically be increased by the unsold quantity except that no such increase in sales opportunity shall exceed 5,000 pounds for designated tobacco or 500 pounds for undesignated tobacco.

§ 29.9407 Records and reports.

(a) Each warehouse, on a designated market, shall provide the Secretary with any information that is requested on forms provided said warehouse by the Secretary.

(b) Each warehouse shall keep records for a period of two years from the opening of the marketing season in which the tobacco is sold, and make available to the Secretary such records as are necessary for the Secretary to verify the information required by paragraph (a) of this section.

(c) Failure to comply with the requirements of this section including but not limited to failure to provide information which is accurate, shall result in suspension of tobacco inspection services for a minimum of the equivalent of one sales day or until such time as the warehouse comes into compliance.

(Approved by the Office of Management and Budget under control number 0581–0056)

SOURCE: 39 FR 5300, Feb. 12, 1974, unless otherwise noted.

CLASSIFICATION OF LEAF TOBACCO COVERING CLASSES, TYPES AND GROUPS OF GRADES

§ 30.1 Definitions of terms used in classification of leaf tobacco.

For the purpose of §§30.1 through 30.44 the terms appearing in §§30.2 through 30.21 shall be construed as explained therein.

§ 30.2 Leaf tobacco.

Tobacco in the forms in which it appears between the time it is cured and stripped from the stalk, or primed and cured, and the time it enters into the different manufacturing processes. The acts of stemming, sweating or fermenting, and conditioning are not regarded as manufacturing processes. Leaf tobacco does not include any manufactured or semimanufactured tobacco, stems which have been removed from leaves, cuttings, clippings, trimmings, shorts, or dust.

§ 30.3 Unstemmed.

A form of leaf tobacco consisting of a collection of leaves from which the stems or midribs have not been removed, including leaf-scrap.

§ 30.4 Stemmed.

A form of leaf tobacco consisting of a collection of leaves from which the stems or midribs have been removed, including strip scrap.
§ 30.5 Class.

One of the major divisions of leaf tobacco based on the distinct characteristics of the tobacco caused by differences in varieties, soil and climatic conditions, and the methods of cultivation, harvesting, and curing.

§ 30.6 Type.

A subdivision of a class of leaf tobacco, having certain common characteristics which permit of its being divided into a number of related grades. Any tobacco that has the same characteristics and corresponding qualities, colors, and lengths, shall be treated as one type, regardless of any factors of historical or geographical nature which cannot be determined by an examination of the tobacco.

§ 30.7 Group.

A group of grades, or a division of a type covering several closely related grades, based on the general quality of the tobacco, including the percentage of injury, and other factors. The factors that determine the group divisions also largely determine the usage or suitability of tobacco for certain purposes.

§ 30.8 Scrap.

A byproduct from handling leaf tobacco in both the unstemmed and stemmed forms, consisting of loose and tangled portions of tobacco leaves, floor sweepings, and all other tobacco materials (except stems) which accumulate in auction and storage warehouses, packing and conditioning plants, and stemmeries. Scrap which accumulates from handling unstemmed leaf tobacco is known as leaf-scrap, and scrap which accumulates from handling stemmed leaf tobacco is known as strip-scrap. The scrap group, covering both leaf-scrap and strip-scrap is designated by the letter “S”.

§ 30.9 Nondescript.

Any tobacco of a certain type which cannot be placed in other groups of the type, or any nested tobacco, or any muddy or extremely dirty tobacco, or any tobacco containing an unusual quantity of foreign matter, or any crude tobacco, or any tobacco which is damaged to the extent of 20 percent or more, or any tobacco infested with live tobacco beetles or other injurious insects, or any wet tobacco, or any tobacco that contains fat stems or wet butts. The nondescript group is designated by the letter “N”.

[39 FR 11893, Apr. 1, 1974]

§ 30.10 Cure.

To dry the sap from newly harvested tobacco by either natural or artificial process. Proper curing is done under such conditions as will permit of the chemical and physiological changes necessary to develop the desired quality of color in tobacco.

§ 30.11 Flue-cure.

To cure tobacco under artificial atmospheric conditions by a process of regulating the heat and ventilation without allowing smoke or fumes from the fuel to come in contact with the tobacco.

§ 30.12 Fire-cure.

To cure tobacco under artificial atmospheric conditions by the use of open fires, the smoke and fumes of which are allowed to come in contact with the tobacco.

§ 30.13 Air-cure.

To cure tobacco under natural atmospheric conditions without the use of fire, except for the purpose of preventing pole burn (house burn) in damp weather.

§ 30.14 Cigar filler.

The tobacco that forms the core or inner part of a cigar. Cigar-filler tobacco is tobacco of the kind and quality commonly used for cigar fillers. Cigar-filler types are those which produce chiefly tobacco suitable for cigar-filler purposes.

§ 30.15 Cigar binder.

A portion of a tobacco leaf rolled around the filler of a cigar to bind or hold it together and form the first covering. Cigar-binder tobacco is tobacco of the kind and quality commonly used for cigar binders. Cigar-binder types
are those which produce chiefly tobacco suitable for cigar-binder purposes.

§ 30.16 Cigar wrapper.
A portion of a tobacco leaf forming the outer covering of a cigar. Cigar-wrapper tobacco is tobacco of the kind and quality commonly used for cigar wrappers. Cigar-wrapper types are those which produce chiefly tobacco suitable for cigar-wrapper purposes.

§ 30.17 Damage.
The effect of mold, must, rot, black rot, or other fungous or bacterial diseases which attack tobacco in its cured state. Any tobacco having the odor of mold, must, or rot shall be included in damaged tobacco. (Note distinction between “damage” and “injury.”)

§ 30.18 Injury.
Hurt or impairment from any cause except the fungous or bacterial diseases which attack tobacco in its cured state. Injured tobacco shall include any dead, burnt, or ragged tobacco; or tobacco that has been torn or broken, frozen or frosted, sunburned or scalded, scorched or fire-killed, bulk-burnt or stem-burnt, pole burnt or house burnt, bleached or bruised; or tobacco containing discolored or deformed leaves; or tobacco hurt by insects; or tobacco affected by wild-fire, black fire, rust, frogeye, mosaic, frenching, sanddrown, or other field diseases.

§ 30.19 Nested.
Any lot of tobacco which has been so handled or packed as to conceal damaged, injured, tangled, or inferior tobacco, or foreign matter.

§ 30.20 Crude.
A subdegree of maturity, crude leaves usually have the general appearance of being raw and unfinished as a result of extreme immaturity. Crude tobacco ordinarily has a characteristic green color.

§ 30.21 Foreign matter.
Any substance or material extraneous to tobacco leaves, such as dirt, sand, stalks, suckers, straws, and strings.

§ 30.31 Classification of leaf tobacco.
For the purpose of this classification leaf tobacco shall be divided into the following classes:
Class 1. Flue-cured types.
Class 2. Fire-cured types.
Class 3. Air-cured types.
Class 4. Cigar-filler types.
Class 5. Cigar-binder types.
Class 6. Cigar-wrapper types.
Class 7. Miscellaneous domestic types.
Class 8. Foreign-grown cigar-leaf types.
Class 9. Foreign-grown types, other than cigar types.

Class 3 covers Air-cured tobacco other than cigar leaf. This class may be subdivided as follows: Class 3a, Light Air-cured tobacco, including types 31 and 32, and Class 3b, Dark Air-cured tobacco, including types 35, 36, and 37.

For the purpose of this classification the classes shall be divided into the types and groups set forth in §§ 30.36 through 30.44.

§ 30.36 Class 1; flue-cured types and groups.
All flue-cured tobacco is graded under the same set of Official Standard Grades for Flue-cured Tobacco (U.S. Types 11, 12, 13, and 14). Flue-cured types are defined according to established general geographical areas of production. However, the determination as to type designations are based upon and indicate the geographic location where inspection and certification are performed—and do not necessarily identify the production area in which the tobacco was grown.
(a) Type 11a. That type of flue-cured tobacco commonly known as Western Flue-cured or Old Belt Flue-cured, produced principally in the Piedmont sections of Virginia and North Carolina.
(b) Type 11b. That type of flue-cured tobacco commonly known as Middle Belt Flue-cured, produced principally in a section lying between the Piedmont and coastal plains regions of Virginia and North Carolina.
(c) Type 12. That type of flue-cured tobacco commonly known as Eastern Flue-cured or Eastern Carolina Flue-cured, produced principally in the coastal plains section of North Carolina, north of the South River.
(d) Type 13. That type of flue-cured tobacco commonly known as Southeastern Flue-cured or South Carolina Flue-cured, produced principally in the
coastal plains section of South Carolina and the southeastern counties of North Carolina, south of the South River.

(e) Type 14. That type of flue-cured tobacco commonly known as Southern Flue-cured, produced principally in the southern section of Georgia, in northern Florida, and to some extent, in Alabama.

Groups applicable to types 11, 12, 13, and 14:
A—Wrappers.
B—Leaf.
H—Smoking Leaf.
C—Cutters.
X—Lugs.
P—Primings.
N—Nondescript, as defined.
S—Scrap, as defined.

§ 30.37 Class 2; fire-cured types and groups.

(a) Type 21. That kind of fire-cured tobacco commonly known as Virginia Fire-cured, or Dark-fired, produced principally in the Piedmont and mountain sections of Virginia.

(b) Type 22. That type of fire-cured tobacco, known as Eastern District Fire-cured, produced principally in a section east of the Tennessee River in southern Kentucky and northern Tennessee.

(c) Type 23. That type of fire-cured tobacco, known as Western District Fire-cured or Dark-fired, produced principally in a section west of the Tennessee River in Kentucky and extending into Tennessee.

Groups applicable to types 21, 22, and 23:
A—Wrappers.
B—Heavy Leaf.
C—Thin Leaf.
X—Lugs.
P—Primings.
N—Nondescript, as defined.
S—Scrap, as defined.

§ 30.38 Class 3; air-cured types and groups.

(a) Type 31. That type of air-cured tobacco, commonly known as Burley, produced principally in Kentucky, Tennessee, Virginia, North Carolina, Ohio, Indiana, West Virginia, and Missouri.

Groups applicable to type 31:
X—Flyings.
C—Lugs or Cutters.
B—Leaf.
T—Tips.
M—Mixed.
N—Nondescript, as defined.
S—Scrap, as defined.

(b) Type 31–V. Notwithstanding the definitions of “Type” and “Type 31”, any tobacco having the general visual characteristics of quality, color, and length of Class 3, Type 31, air-cured tobacco, but which is a low-nicotine strain or variety, produced and to be marketed under such restrictions or controls as shall be specified by the Director of the Tobacco Division, Agricultural Marketing Service, United States Department of Agriculture, and which in its cured state is found by an authorized representative of the Department to have a nicotine content of not more than eight-tenths of one percent (% of 1%), oven dry weight, shall not be classified as Type 31 but shall be classified and designated upon certification by the Department as Type 31–V. No groups are established for Type 31–V.

(c) Restrictions and controls relating to the production and marketing of Type 31–V tobacco as a prerequisite to the classification and certification of such tobacco—(1) Declaration of seed or seedlings. Tobacco shall be produced from seed or seedlings declared to be a suitable low-nicotine strain or variety for the production of Type 31–V, by an agency or agencies designated by the Director of the Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture.

(2) Production under contract. Type 31–V tobacco shall be grown under contract with a dealer in tobacco or a manufacturer of tobacco products. In addition to any other provisions not inconsistent herewith, the contract shall provide that:

(i) The dealer or manufacturer shall furnish to the grower seed or seedlings declared therefor as provided in paragraph (c)(1) of this section.

(ii) The grower shall deliver to the dealer or manufacturer all tobacco produced from such seed or seedlings;

(iii) The grower shall produce not in excess of the number of acres of low-nicotine tobacco specified in the contract;

(iv) The grower shall establish clear lines of demarcation between the low-nicotine tobacco and any other type of tobacco grown on the farm; and

(v) The low-nicotine tobacco shall be housed and handled separately and
shall not be commingled with any other type of tobacco. Provided, That this provision shall not prohibit the housing of low-nicotine and other types of tobacco in the same curing barn so long as the low-nicotine tobacco is clearly identified and is not commingled with any other type of tobacco.

(3) Filing of copy of contract. A copy of each contract referred to in paragraph (c)(2) of this section shall be filed by the dealer or manufacturer with the Director, Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250, by May 1 of each year.

(4) Restrictions on sale and marketing. The low-nicotine tobacco shall not be offered for sale, sold, marketed, or otherwise disposed of unless such tobacco is clearly represented and identified as being low-nicotine tobacco. Provided, That this restriction shall not apply to products manufactured from such tobacco.

(5) Nicotine content. The nicotine content of the tobacco in its cured state, based on an official sample drawn and selected as being representative of the whole production from the acreage of low-nicotine tobacco planted under said contract by the same grower during the same calendar year, shall not be more than eight-tenths of one percent (% of 1%) oven dry weight.

(6) Furnishing of information. Each dealer or manufacturer and each grower shall, from time to time, furnish to the Director of the Tobacco Division, such information as shall be requested relating to his production, stocks, and disposition of low-nicotine tobacco.

(7) Prohibitions relating to seed and plants. No seed shall be saved or harvested from the tobacco produced under a contract referred to in paragraph (d)(2) of this section. No grower to whom seed or seedlings is furnished pursuant to paragraph (d)(2)(i) of this section shall deliver or transfer any such seed or any plant produced therefrom to any other person.

(8) Designation of seed or seedlings declaring agencies. The Kentucky Agricultural Experiment Station, Lexington, Kentucky, is designated as an agency for the declaration of seed or seedlings pursuant to paragraph (d)(1) of this section.

(9) Definitions. For the purposes of the restrictions and controls hereinbefore set forth a “dealer” or a “manufacturer” shall be a dealer in tobacco or a manufacturer of tobacco products.

(d) Type 32. That type of air-cured tobacco commonly known as Southern Maryland tobacco or Maryland Air-cured, and produced principally in southern Maryland. (Upper Country Maryland is classed as “miscellaneous domestic.”)

Groups applicable to type 32:
X—Seconds.
C—Bright-crop or Thin-crop.
B—Dull-crop or Heavy-crop.
T—Tips.
N—Nondefect, as defined.
S—Scrap, as defined.

(e) Type 35. That type of air-cured tobacco commonly known as One Sucker Air-cured, Kentucky-Tennessee-Indiana One Sucker, or Dark Air-cured One Sucker, including the upper Cumberland District One Sucker, and produced principally in northern Tennessee, south central Kentucky, and southern Indiana.

(f) Type 36. That type of air-cured tobacco commonly known as Green River, Green River Air-cured, or Dark Air-cured of the Henderson and Owensboro Districts, and produced principally in the Green River section of Kentucky.

(g) Type 37. That type of air-cured or sun-cured tobacco commonly known as Virginia Sun-cured, Virginia Sun and Air-cured, or Dark Air-cured of Virginia, and produced principally in the central section of Virginia north of the James River.

Groups applicable to types 35, 36, and 37:
A—Wrappers.
B—Heavy Leaf.
C—Thin Leaf.
T—Tips.
X—Lugs.
N—Nondefect, as defined.
S—Scrap, as defined.

§ 30.39 Class 4; cigar-filler types and groups.

(a) Type 41. That type of cigar-leaf tobacco commonly known as Pennsylvania Seedleaf or Pennsylvania Broadleaf, produced principally in Lancaster County, Pennsylvania, and adjoining counties and including other areas of Pennsylvania and Maryland in which the seedleaf variety is grown.
§ 30.40 Class 5; cigar-binder types and groups.

(a) Type 51. That type of cigar-leaf tobacco commonly known as Connecticut Valley Broadleaf or Connecticut Broadleaf, produced principally in the Connecticut River Valley.

(b) Type 52. That type of cigar-leaf tobacco commonly known as Connecticut Valley Havana Seed or Havana Seed of Connecticut and Massachusetts, produced principally in the Connecticut River Valley.

(c) Type 53. That type of cigar-leaf tobacco commonly known as York State or Havana Seed of New York, and Pennsylvania, produced principally in the Big Flats and Onondaga sections of New York State, and extending into Pennsylvania.

§ 30.41 Class 6; cigar-wrapper types and groups.

(a) Type 61. That type of shade-grown tobacco known as Connecticut Valley Shade-grown, produced principally in the Connecticut Valley section of Connecticut and Massachusetts.

(b) Type 62. That type of shade-grown tobacco known as Georgia and Florida Shade-grown, produced principally in southwestern Georgia and in the central part of northern Florida.

§ 30.42 Class 7; miscellaneous domestic types.

No group divisions are established for any of the types in Class 7. Notwithstanding the definitions of “Class,” “Type,” “Type 11,” “Type 12,” “Type 13,” and “Type 14,” any tobacco having the general visual characteristics of quality, color and length of the types and groups contained in Class 1, flue-cured tobacco, but which is a strain or variety found in its cured state by an authorized representative of the Department to have a nicotine content of not more than eight-tenths of one percent (8⁄10 of 1%), oven dry weight, shall be designated upon certification by the Department as Class 7: Provided, That for the purpose of establishing and maintaining the identity of such tobacco, it shall not be sold or offered for sale through customary marketing...
§ 30.60 Reports.

Within fifteen (15) days after January 1, April 1, July 1, and October 1 of each year, all manufacturers, dealers, grower cooperative associations, owners or agents, other than the original grower of the tobacco and manufacturers who produced less than 185,000 cigars, or 750,000 cigarettes or 35,000 pounds of manufactured tobacco during the first three quarters of the preceding calendar year, shall complete and mail to the Director, Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250, in the detail required on forms available from him, reports showing the following information as to leaf tobacco in leaf and sheet form:

(a) Tobacco in leaf form. The pounds of tobacco in leaf form or stems owned on the first day of the applicable quarter, with all stocks reported by types of tobacco and whether stemmed or unstemmed.

(b) Tobacco in sheet form. The pounds of tobacco sheet owned on the first day
§ 30.61 Administration.

The Director, Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, DC 20250, is charged with the supervision of the Division and the performance of all duties assigned thereto in the administration of the Tobacco Stocks and Standards Act. The conduct of all services, classification of leaf tobacco, or employment of inspection/grading/sampling personnel under these regulations shall be accomplished without discrimination as to race, color, religion, sex, or national origin. Information concerning such administration may be obtained from the Director.

PART 31—PURCHASE OF WOOL AND WOOL TOP SAMPLES

Sec.
31.400 Samples for wool and wool top grades; method of obtaining.
31.401 Cost of samples for wool grades.
31.402 Cost of samples for wool top grades.

SOURCE: 62 FR 43438, Aug. 13, 1997, unless otherwise noted.

§ 31.400 Samples for wool and wool top grades; method of obtaining.

Samples certified as representative of the official standards of the United States for grades of wool and wool top will be furnished as follows, subject to other conditions of this section, upon filing of an approved application and prepayment of costs thereof as fixed in §§31.401 and 31.402. The certification will be issued by the United States Department of Agriculture and will be signed by the Director of the Livestock Division or other duly authorized official.

(a) Samples representative of each of the standard grades of wool:

(1) Complete set: Grades 80's through 36's. Fourteen samples, each of approximately 1/8 pound grease wool, or
(2) Individual sample: Individual samples of approximately 1/8 pound of grease wool.

(b) Samples representative of each of the standard grades of wool top:

(1) Complete set: Grades 80's through 36's. Fourteen samples, each of approximately 3 ounces wool top, or
(2) Individual sample: Individual samples of approximately 3 ounces of wool top, representing a standard grade.

(c) Each application for standard samples of wool or wool top shall be upon an application form furnished or approved by the Agricultural Marketing Service, shall be signed by the applicant, and shall be accompanied by certified check, draft, post office money order, or express money order, payable to the “Agricultural Marketing Service,” in an amount to cover the cost of the samples requested, and shall incorporate the following agreement:

(1) That no samples representative of the official wool or wool top standards shall be considered or used as representing such standards after cancellation in accordance with this section.

(2) That the said standard samples shall be subject to inspection by the Secretary or by any duly authorized officer or agent of the Department of Agriculture during usual business hours of the person having custody of the samples.

(3) That the certificate covering any of the samples representative of the standards may be revoked and canceled by the Director of the Livestock Division if it is found upon such inspection that the said samples are not representative of the official standards.

NOTE TO §31.400: A sample consists of wool randomly selected from a bulk sample. The measured average and standard deviation of fiber diameter of the bulk sample are within the limits corresponding to the grade of the standard sample as set forth in the voluntary U.S. grade standards. Copies of the voluntary U.S. grade standards can be obtained from Director, Livestock and Seed Division, Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 96456, Washington, DC 20090-6456.
§ 31.401 Cost of samples for wool grades.

(a) Complete set: $22 each, delivered to any destination within the United States and $24 each, delivered to any destination outside the United States.

(b) Individual sample: $2 each, delivered to any destination within the United States and $2.50 each, delivered to any destination outside the United States.

§ 31.402 Cost of samples for wool top grades.

(a) Complete set: $42 each, delivered to any destination within the United States and $44 each, delivered to any destination outside the United States.

(b) Individual sample: $3 each, delivered to any destination within the United States and $3.50 each, delivered to any destination outside the United States.

PART 32—PURCHASE OF GREASE MOHAIR AND MOHAIR TOP SAMPLES

§ 32.400 Samples of grease mohair grades; method of obtaining.

Samples certified as representative of the official standards of the United States for grades of grease mohair will be furnished as follows, subject to other conditions of this section, upon filing of an approved application and prepayment of the costs thereof as fixed in §32.401. The certification will be issued by the U.S. Department of Agriculture and will be signed by the Director of the Livestock Division or other duly authorized official.

(a) Samples representative of each of the standard grades of grease mohair:

(1) Complete set. Ten certified samples of grease mohair, grades 40s through 18s.

(2) Individual sample. Individual certified samples of grease mohair.

(b) Each application for standard samples of grease mohair shall be upon an application form furnished or approved by the Consumer and Marketing Service, shall be signed by the applicant, and shall be accompanied by certified check, draft, post office money order, or express money order, payable to the “Agricultural Marketing Service,” in an amount to cover the cost of the samples requested, and shall incorporate the following agreement.

(1) That no samples representative of the official grease mohair standards shall be considered or used as representing such standards after cancellation in accordance with this section.

(2) That the said standard samples shall be subject to inspection by the Secretary or by any duly authorized officer or agent of the Department of Agriculture during usual business hours of the person having custody of the samples.

(3) That the certificate covering any of the samples representative of the standards may be revoked and canceled by the Director of the Livestock Division, if it is found upon such inspection that the said samples are not representative of the official standards.

NOTE TO §32.400: A certified sample consists of grease mohair randomly selected from a bulk sample. The measured average and standard deviation of fiber diameter of bulk sample were within the limits corresponding to the grade of the standard sample as set forth in the voluntary U.S. grade standards. Copies of the voluntary U.S. grade standards can be obtained from Director, Livestock and Seed Division, Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 96456, Washington, DC 20090-6456.

§ 32.401 Cost of samples for grease mohair grades.

(a) Complete set. $22 each, delivered to any destination within the United States and $25 each, delivered to any destination outside the United States.

(b) Individual sample. $2.50 each, delivered to any destination within the United States, and $3 each, delivered to...
any destination outside the United States.

§ 32.402 Samples of mohair top grades; method of obtaining.

Samples certified as representative of the official standards of the United States of grades of mohair top will be furnished when available as follows, subject to other conditions for this section, upon filing of an approved application and prepayment of the cost thereof as fixed in § 32.403. The certification will be issued by the U.S. Department of Agriculture and will be signed by the Director of the Livestock Division or other official duly authorized by him.

(a) Samples representative of the official grades of mohair top:

(1) Complete set. Nine certified samples of mohair top, grades 40s through 20s.

(2) Individual sample. Individual certified samples of mohair top, grades 40s through 20s.

(b) Each application for standard samples of mohair top shall be upon an application form furnished or approved by the Agricultural Marketing Service, shall be signed by the applicant, and shall be accompanied by certified check, draft, postal money order, or express money order, payable to the “Agricultural Marketing Service,” in an amount to cover the cost of the samples requested and shall incorporate the following agreement:

(1) That no samples representative of the official mohair top standards shall be considered or used as representing such standards after cancellation in accordance with this section.

(2) That the said standard samples shall be subject to inspection by the Secretary or by any duly authorized officer or agent of the Department of Agriculture during usual business hours of the person having custody of the samples.

(3) That the certificate covering any of the samples representative of the standards may be revoked and canceled by the Director of the Livestock Division, if it is found upon such inspection that the said samples are not representative of the official standards.

§ 32.403 Cost of samples for mohair top grades.

(a) Complete set. Twenty-seven dollars each, delivered to any destination within the United States and $30 each, delivered to any destination outside the United States.

(b) Individual sample. Three dollars each, delivered to any destination within the United States, and $3.50 each, delivered to any destination outside the United States.

PART 33—REGULATIONS ISSUED UNDER AUTHORITY OF THE EXPORT APPLE ACT

DEFINITIONS

Sec.
33.1 Act.

33.3 Secretary.
33.4 Carrier.
33.5 Apples.
33.6 Package.
33.7 Less than carload lot.

REGULATIONS

33.10 Minimum requirements.
33.11 Inspection and certification.

EXEMPTIONS

33.12 Apples not subject to regulations.

WITHHOLDING CERTIFICATES

33.13 Notice.
33.14 Opportunity for hearing.
33.15 Suspension of inspection.
33.16 Service of notice or order.

INTERPRETIVE RULES

33.50 Apples for processing.
33.60 OMB control number assigned pursuant to the Paperwork Reduction Act.

SOURCE: 71 FR 70644, Dec. 6, 2006, unless otherwise noted.

DEFINITIONS

§ 33.1 Act.

Act and Export Apple Act are synonymous and mean “An act to promote the foreign trade of the United States in apples to protect the reputation of American-grown apples in foreign markets, to prevent deception or misrepresentation as to the quality of such products moving to foreign commerce,
§ 33.11 Inspection and certification.

(a) Each person shipping, or offering for shipment, apples to any foreign destination shall cause them to be inspected by the Federal or Federal-State Inspection Service in accordance with regulations governing the inspection and certification of fresh fruits, and vegetables and other products (Part 51 of this chapter) and certified as meeting the requirements of the Act and this part. No carrier shall transport, or receive for transportation, apples to any foreign destination unless they have been so inspected and certified. Inspection and certification may be obtained at any time prior to exportation of the apples. Such a Federal or Federal-State certificate shall be designated as an “Export Form Certificate” and shall include the following...
§ 33.12 Apples not subject to regulation.

Except as otherwise provided in this section, any person may, without regard to the provisions of this part, ship or offer for shipment, and any carrier may, without regard to the provisions of this part, transport or receive for transportation to any foreign destination:

(a) A quantity of apples to any foreign country not exceeding a total of 5,000 pounds gross weight or 100 boxes of apples packed in standard boxes on a single conveyance:

(b) Apples to Pacific ports west of the International Date Line which do not meet maturity standards of the grade specified in §33.10, if the packages are conspicuously marked or printed with the words “Immature Fruit;” (in letters at least two inches high) if inspected and certified as meeting all other requirements of §§33.10 and 33.11.

(c) Apples for processing which do not meet the grade standards specified in §33.10, if such apples grade at least U.S. No. 1 as specified in U.S. Standards for Apples for Processing (§§51.340 to 51.344 of this chapter), and if the containers are conspicuously marked “Cannery” (in letters at least two inches high) if inspected and certified as meeting all other requirements of §§33.10 and 33.11.

WITHHOLDING CERTIFICATES

§ 33.13 Notice.

If the Secretary is considering withholding the issuance of certificates under the Act for a period of not exceeding 90 days to any person who ships, or offers for shipment, apples to any foreign destination in violation of any provisions of the Act or this part, he or she shall cause notice to be given to the person accused of the nature of the charges against him or her and of the specific instances in which violation of the Act or the regulations in this part is charged.

§ 33.14 Opportunity for hearing.

The person accused shall be entitled to a hearing, provided he or she makes written requests therefore and files a written responsive answer to the charges made not later than 10 days after service of such notice on him or her. The right to hearing shall be restricted to matters in issue. At such hearing, he or she shall have the right to be present in person or by counsel and to submit evidence and argument in his or her behalf. Failure to request a hearing within the specified time or failure to appear at the hearing when scheduled shall be deemed a waiver of the right to hearing. Such person may, in lieu of requesting an oral hearing, file a sworn written statement with the Secretary not later than 10 days after service of such notice upon him or her.

§ 33.15 Suspension of inspection.

Any order to withhold the issuance of a certificate, as provided in section 6 of the Act, will be effective from the date specified in the order but no earlier than the date of its service upon the person found to have been guilty. Such
Agricultural Marketing Service, USDA § 35.4

order will state the inclusive dates during which it is to remain in effect, and during this period no inspector employed or licensed by the Secretary shall issue any Export Form Certificate or Memorandum of Inspection to such person.

§ 33.16 Service of notice or order.

Service of any notice or order required by the Act or prescribed by the regulations in this part shall be deemed sufficient if made personally upon the person served, by registered mail, or by leaving a copy of such notice or order with an employee or agent at such person’s usual place of business or abode or with any member of his immediate family at his or her place of abode. If the person named is a partnership, association, or corporation, service may similarly be made by service on any member of the partnership or any officer, employee, or agent of the association or corporation.

INTERPRETIVE RULES

§ 33.50 Apples for processing.

The terms “apples for processing” as used in §33.12 of this part apply only and is restricted to packages of apples which were originally packaged for processing and marked “Cannery” as required by §33.12(c) of this part. Packages of apples not so originally packaged and marked are not eligible for certification as “apples for processing” for purposes of this part.

§ 33.60 OMB control number assigned pursuant to the Paperwork Reduction Act.

The OMB control number assigned pursuant to the Paperwork Reduction Act for this part is OMB No. 0581–0143.

SOURCE: 26 FR 8934, Sept. 22, 1961, unless otherwise noted.

DEFINITIONS

§ 35.1 Act.

Act or Export Grape and Plum Act means “An Act to promote the foreign trade of the United States in grapes and plums, to protect the reputation of American-grown grapes and plums in foreign markets, to prevent deception or misrepresentation as to the quality of such products moving in foreign commerce, to provide for the commercial inspection of such products entering such commerce, and for other purposes” (74 Stat. 734; 75 Stat. 220; 7 U.S.C. 591–599).

§ 35.2 Person.

Person means an individual, partnership, association, corporation, or any other business unit.

§ 35.3 Secretary.

Secretary means the Secretary of Agriculture of the United States or any officer or employee of the United States Department of Agriculture to whom authority has heretofore been delegated or to whom authority may hereafter be delegated to act in his stead.

§ 35.4 Carrier.

Carrier means any common or private carrier, including, but not being limited to, trucks, rail, airplanes, vessels,
§ 35.5

tramp or chartered steamers, whether carrying for hire or otherwise.

§ 35.5 Package.

Package means any container of any variety of vinifera species table grapes.  
[41 FR 32877, Aug. 6, 1976]

§ 35.6 Shipment.

Shipment means one or more lots of any variety of vinifera species table grapes shipped or offered for shipment by any one person in a single conveyance to a foreign country regardless of the number of consignees, receivers, or ports of destination in that country.  
[41 FR 32877, Aug. 6, 1976]

§ 35.7 Certificate.

Certificate or Certificate of Inspection means any of the official forms of inspection certificate, bearing the statement “meets Export Grape and Plum Act,” issued by the Federal or Federal-State Inspection Service in accordance with regulations governing the inspection of fresh fruits, vegetables, and other products (7 CFR part 2851).  

§ 35.8 Date of export.

Date of export means the date of loading on board the exporting carrier on which movement of the grapes from the United States is effected. The date of the on board bill of lading (or loading tally sheet) shall be considered to be the date the grapes were loaded on board, unless an “on board” date is shown.

§ 35.11 Minimum requirements.

No person shall ship, or offer for shipment, and no carrier shall transport, or receive for transportation, any shipment of any variety of vinifera species table grapes unless such grapes meet the following quality and container marking requirements applicable to the variety and destination specified:

(a) Any such variety for export to destinations in Japan, Europe (defined to mean the following countries: Albania, Austria, Belgium, Bosnia, Bulgaria, Croatia, Czech Republic, Denmark, England, Finland, France, Germany, Greece, Herzegovina, Hungary, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Macedonia, Montenegro, Netherlands, Northern Ireland, Norway, Poland, Portugal, Romania, Scotland, Serbia, Slovenia, Spain, Sweden, Switzerland, Wales), or Greenland shall meet each applicable minimum requirement of the U.S. Fancy Table grape grade as specified in the U.S. Standards for Grades of Table Grapes (European or Vinifera Type) (§§ 51.880–51.912 of this title). The Black Corinth variety shall be exempt from bunch and berry size requirements.

(b) Any such variety for export to any foreign destination, other than destinations in Japan, Europe, Greenland, Canada, or Mexico, shall meet each applicable minimum requirement of the U.S. No. 1 Table grape grade as specified in the U.S. Standards for Grades of Table Grapes (European or Vinifera Type) (§§ 51.880–51.912 of this title), except that an additional 2 percent tolerance for sealed berry cracks on the Ribier variety is allowed. The Black Corinth variety shall be exempt from bunch and berry size requirements.

(c) Each package of any such variety, other than those in packages of 5 pounds or less in master containers, to any destination other than in Canada or Mexico shall be plainly and conspicuously marked with the name and address of the grower or packer, the variety, and the applicable inspection lot stamp number, except that when the packages are unitized, the requirement as to inspection lot stamp marking shall be deemed met if the exposed box ends on one end of the unit are so marked.

§ 35.12 Inspection and certification.

(a) Each person shipping or offering for shipment any variety of vinifera species table grapes, to any foreign destination other than destinations in Canada or Mexico, shall cause them to be inspected within 14 days prior to
date of export by the Federal or Federal-State Inspection Service in accordance with regulations governing the inspection and certification of fresh fruits, vegetables, and other products (part 51 of this chapter) and certified as meeting the requirements of the act and this part.

(b) The Federal or Federal-State certificate shall be designated as an “Export Form Certificate” and shall include one of the following statements as applicable:

(1) For any variety meeting specifications of paragraph (a) of §35.11 “Meets requirements of Export Grape and Plum Act” or (2) For any variety meeting specifications of paragraph (b) of §35.11 “Meets requirements of Export Grape and Plum Act except for export to destinations in Europe, Greenland, or Japan.” No carrier shall transport or receive for transportation any such variety to any foreign destination other than Canada or Mexico unless a copy of the certificate of inspection issued thereon showing that the grapes meet requirements for the applicable export destination is surrendered to such carrier when such variety is so received. The shipper shall deliver a copy of such certificate covering the shipment to the export carrier. Such grapes may be inspected at points other than port of exportation. Whenever such grapes are inspected and certified at any point other than port of exportation, the shipper shall deliver a copy of such certificate to the agent of the first carrier that thereafter transports such grapes and such agent shall deliver such copy to the proper official of the carrier on which the grapes are to be exported.

(c) A copy of the Certificate of Inspection shall be filed by the export carrier for a period of not less than three (3) years following date of export.

(d) Persons exporting grapes under the provisions of section 2 of the Act shall first submit to the Federal or Federal-State Inspection Service a certificate in duplicate stating the names and addresses of the contracting parties, the date of contract, the quantity of grapes to be delivered, the U.S. grade specified, the expected date of shipment, and the name and address of the export carrier. The certificate of inspection shall indicate that the grapes are eligible for export under section 2 of the Act.

(e) If the inspector has reason to believe that samples of a lot of any variety of vinifera species table grapes have been obtained for a determination as to compliance with tolerance for spray residue, established under the Federal Food, Drug and Cosmetic Act, as amended (52 Stat. 1040; 21 U.S.C. 301 et seq.), he shall not issue a certificate on the lot unless it complies with such tolerances.

EXEMPTIONS

§ 35.13 Minimum quantity.

Any person may, without regard to the provisions of this part, ship or offer for shipment, and any carrier may, without regard to the provisions of this part, transport or receive for transportation to any foreign destination, a shipment of 25 packages or less of vinifera species table grapes, either a single variety or a combination of two or more varieties, not exceeding 1,250 pounds gross weight.

[41 FR 32678, Aug. 6, 1976]

WITHHOLDING CERTIFICATES

§ 35.14 Notice.

If the Secretary is considering withholding the issuance of certificates under the Act for a period of not exceeding 90 days to any person who ships, or offers for shipment, any variety of vinifera species table grapes to any foreign destination in violation of any provisions of the Act or this part, he shall cause notice to be given to the person accused of the nature of the charges against him and of the specific instances in which violation of the Act or the regulations in this part is charged.

[41 FR 32678, Aug. 6, 1976]

§ 35.15 Opportunity for hearing.

The person accused shall be entitled to a hearing, provided he makes written request therefor and files a written responsive answer to the charges made not later than 10 days after service of
§ 35.16 Suspension of inspection.

Any order to withhold the issuance of a certificate, as provided in section 6 of the Act, will be effective from the date specified in the order but no earlier than the date of its service upon the person found to have been guilty. Such order will state the inclusive dates during which it is to remain in effect, and during this period no inspector employed or licensed by the Secretary shall issue any Certificate of Inspection to such person.

§ 35.17 Service of notice or order.

Service of any notice or order required by the Act or prescribed by the regulations in this part shall be deemed sufficient if made personally upon the person served, by registered mail, or by leaving a copy of such notice or order with an employee or agent at such person’s usual place of business or abode or with any member of his immediate family at his place of abode. If the person named is a partnership, association, or corporation, service may similarly be made by service on any member of the partnership or any officer, employee, or agent of the association or corporation.

§ 35.60 OMB control numbers assigned pursuant to the Paperwork Reduction Act.

The information collection requirements contained in this part have been approved by the Office of Management and Budget (OMB) under the provisions of 44 U.S.C. chapter 35 and have been assigned OMB control number 0581–0143.

[49 FR 23826, June 8, 1984]
or revise a standard) should be addressed to the Director of the appropriate Division (Dairy, Fruit and Vegetable, Livestock and Seed, Poultry, or Tobacco). All communications should include in the address: Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 96456, Washington, DC 20090-6456.

§ 36.2 Initiating action on grade standards.

The Agency will develop, revise, suspend, or terminate grade standards if it determines that such action is in the public interest. Any standardization action should reflect the broad interest of individuals or an industry involved in manufacturing, producing, packaging, distributing, testing, consuming, or using the product; or the interest of a Federal, State, or local agency. Proposed actions should always be based on sound technical and marketing information and should include careful consideration of the factors that determine a commodity’s quality and condition and that will allow trained personnel to determine objectively conformance or non-conformance.

(a) AMS encourages interested parties to participate in the review, development, and revision of grade standards. Interested parties include growers, producers, processors, shippers, distributors, consumers, individuals or groups, trade associations, companies, and State or Federal agencies. Such groups and individuals may at any time recommend that AMS develop, revise, suspend, or terminate a grade standard. Requests for Agency action should be in writing, preferably accompanied by a draft of the suggested change.

(1) The Agency, in cooperation with interested parties, as applicable, will:

(i) Determine the need for new or revised standards;

(ii) Collect technical, marketing, or other appropriate data;

(iii) Conduct research regarding new or revised standards, as appropriate; and,

(iv) Draft the proposed standards;

(2) [Reserved]

(b) If the Agency determines that new standards are needed, existing standards need to be revised, or the suspension or termination of existing standards is justified, it will undertake the action, with input from all interested parties.

§ 36.3 Public notification of grade standards action.

After developing a standardization proposal, the Agency will publish a notice in the FEDERAL REGISTER describing new or changes to existing standards or to suspend or terminate existing standards. AMS will simultaneously issue a news release about these actions. AMS will also distribute copies of the full text of the proposals to anyone requesting a copy or to anyone the Agency believes may be interested, including other Federal, State, or local government agencies, and on the Internet. For other than minor editorial or technical changes, the notice will provide at least 60 days for interested parties to submit comments to the Agency.

(a) All comments received within the comment period will be part of the public record maintained by the Agency, will be available to the public for review, and will be considered by the Agency before final action is taken on the proposal.

(1) Based on the comments received, the Agency’s knowledge of standards, grading, marketing, and other technical factors, and any other relevant information AMS will decide whether the proposed actions should be implemented.

(2) If AMS concludes that the actions as proposed or with minor modifications should be adopted, AMS will publish a description of the changes or actions in a FEDERAL REGISTER notice. The Agency, through the appropriate AMS Divisions, will make the grade standards and related information available in printed form and electronic media.

(3) If the Agency determines that proposed changes are not warranted, or otherwise are not in the public interest, the Agency will either publish in the FEDERAL REGISTER a notice withdrawing the proposal, or will revise the proposal and again seek public input.

(b) [Reserved]

§ 37.1 Definitions.

Words used in this part in the singular form shall be deemed to impart the plural, and vice versa, as the case may demand. For the purposes of such regulations, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

Assessment services. The services provided by the Meat Grading and Certification Branch in accordance with the regulations that may result in assessment of an organic certification program that certifies agricultural commodities to established specifications or standards.

Agricultural commodity. Any agricultural commodity or product, raw or processed, that is used for human or animal consumption or use.

Agricultural Marketing Service. The Agricultural Marketing Service of the Department.

Applicant. Any person who applies for service under the regulations.

Audit. A systematic review of the adequacy of program or system documentation, or the review of the completeness of implementation of a documented program or system.

Auditor. Person authorized by the Branch to conduct official assessments of agricultural commodity product certification programs.

Branch. The Meat Grading and Certification Branch.

Branch Chief. The Chief of the Branch, or any officer or employee of the Meat Grading and Certification Branch, Livestock and Seed Program, Agricultural Marketing Service, to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in his or her stead.

Department. The United States Department of Agriculture.

Deputy Administrator. The Deputy Administrator of the Livestock and Seed Program of the Agricultural Marketing Service or any officer or employee of the Livestock and Seed Program to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated to act in his or her stead.

Legal holiday. Those days designated as legal public holidays in Title 5, United States Code, Section 6103(a).

Livestock and Seed Program. The Livestock and Seed Program of the Agricultural Marketing Service.

Part. The program to assess organic certifying agencies in the regulations.

Person. Any individual, partnership, corporation, or other legal entity, or Government agency.

Quality Manual. A manual documenting an organic certifying agency’s quality system and associated quality certification procedures used to certify organic producers and handlers of organically produced agricultural commodities in accordance with established specifications or standards.

Regulations. The regulations in this part.

§ 37.2 Services.

Organic certifying agencies requesting assessment services under this part shall conform to the provisions of the regulations and the requirements of International Organization for Standardization/International Electrotechnical Commission (ISO/IEC) Guide 65—General Requirements for Bodies

(a) Assessment services provided under the regulations shall consist of:

(1) Review of the adequacy of an applicant’s quality manual against the requirements of ISO Guide 65; and

(2) Onsite auditing of an applicant’s organic certification program to ensure implementation of the provisions of the quality manual and the applicant’s compliance with the requirements of ISO Guide 65.

(b) Organic certifying agencies also may request assessment services under other international recognized guidelines or requirements. Developmental assistance in the form of training to explain requirements for quality system assessment is available upon request.

§ 37.3 Availability of service.

Service under these regulations is available to State and private organic certifying agencies.

§ 37.4 How to apply for service.

(a) Application. Any organic certifying agency may apply to the Branch Chief, Meat Grading and Certification (MGC) Branch, Livestock and Seed (LS) Program, AMS, P.O. Box 96456, Room 2628-South, Washington, DC, 20090–6456 for assessment service. The application shall be made on Form LS–314, Application for Service. The applicant shall provide the following:

(1) The name and address of the establishment at which service is desired;

(2) The name and post office address of the applicant;

(3) The financial interest of the applicant in the program, except where application is made by an official of a State Government agency in their official capacity;

(4) The type of business and services provided;

(5) The type of commodity certified; and

(6) the signature of the applicant (or the signature and title of his representative). The application shall indicate the status of the applicant as an individual, partnership, corporation, or other form of entity. Any change in such status, at any time while service is being received, shall be promptly reported to the Department by the person receiving the service.

(b) Notice of eligibility for service. The applicant will be notified whether its application is approved, and the request for service deemed made under the regulations. Upon approval of a request for service, the applicant shall provide a copy of its quality manual.

(c) Applicants requiring additional assessment audits who have already submitted Form LS–314 are not required to submit an additional Form LS–314: Provided that, the required information on the original Form LS–314 remains unchanged.

§ 37.5 Order of furnishing service.

Service under the regulations shall be furnished to applicants in the order in which requests for service therefore are received, insofar as consistent with good management, efficiency, and economy.

§ 37.6 When application may be withdrawn.

An application or a request for service may be withdrawn by the applicant at any time before the application is approved or prior to performance of service: provided that, the applicant shall pay any expenses which have been incurred by the Department in connection with such application.
§ 37.7 Authority to request service.

Proof of the interest of an applicant involved in the request for service, or of the authority of any person applying for the service on behalf of another may be required, at the discretion of the reviewing official.

§ 37.8 Financial interest of official.

No auditor or other Department official shall review any programs or documents concerning a certification program in which the official is directly or indirectly financially interested.

§ 37.9 Access to establishments or records; record retention.

The applicant shall cause records and documents, with respect to which service is requested, to be made easily accessible for examination. Supervisors and other employees of the Department responsible for maintaining uniformity and accuracy of service shall have access to all parts of establishments covered by approved applications for service under the regulations, during normal business hours or during periods of production, for the purpose of evaluating systems or processes associated with an approved certification program. Records and documents shall be retained for at least 5 years beyond the date of the applicant’s request for service.

§ 37.10 Official assessment.

Official assessment of an applicant’s certification program shall be granted upon successful completion of a two-step review process, as provided for in § 37.2.

(a) Documentation approval. Documentation approval will be provided by the Branch Chief regarding the adequacy of an applicant’s quality manual with respect to ISO Guide 65 requirements upon completion of an adequacy audit by the auditors.

(b) Program assessment. Assessment of a certification program will be issued by the Branch Chief by written memorandum or other approved method of assessment upon successful completion of an onsite audit conducted by the auditors of an applicant’s organic certification program ensuring that the provisions of the applicant’s quality manual have been implemented and that the applicant’s certification program complies with the requirements of ISO Guide 65.

(c) Disapproval and corrections. An applicant determined not to meet applicable assessment requirements shall be provided by the Branch Chief with a written summary of observed program deficiencies. The applicant may appeal such a determination in accordance with the provisions of § 37.13 or implement required corrective action. After completion of the corrective action, the applicant may contact the Branch Chief to schedule another audit for assessment.

§ 37.11 Publication of program assessment status.

(a) The names of assessed certifying agencies shall be posted for public reference on the Livestock and Seed Program’s website at: http://www.ams.usda.gov/lsg/. Such postings shall include: certifier’s name and contact information; referenced specification or standard(s) covered under the scope of assessment; effective date of assessment; and control number(s) of official certificate(s), as applicable.

(b) The names of assessed certifying agencies posted on the Livestock and Seed Program’s website may be removed from the website upon suspension or termination of assessment for noncompliance with the regulations pursuant to § 37.13.

§ 37.12 Reassessment.

Approved certification programs shall be subject to periodic reassessment to ensure ongoing compliance with the regulations, including the requirements of ISO Guide 65. The frequency of such reassessment shall be based on the relative risk associated with the certification program’s integrity, as determined by the Branch Chief.

§ 37.13 Suspension or denial of program assessment; appeals and termination.

(a) Suspension or denial of assessment. When a review of a certification program by auditors finds noncompliance with the regulations, including the requirements of ISO Guide 65, the Branch Chief may suspend or deny assessment.
§ 37.15 Payment of fees.

Fees and other charges for service shall be paid by the applicant to the Livestock and Seed Program, AMS,
PART 38–41 [RESERVED]

PART 42—STANDARDS FOR CONDITION OF FOOD CONTAINERS

Subpart A—Definitions

Sec.
42.101 Meaning of words.
42.102 Definitions, general.

Subpart B—Procedures for Stationary Lot Sampling and Inspection

42.103 Purpose and scope.
42.104 Sampling plans and defects.
42.105 Basis for selection of sample.
42.106 Classifying and recording defects.
42.107 Lot acceptance criteria.
42.109 Sampling plans for normal condition of container inspection, Tables I and I-A.
42.110 Sampling plans for tightened condition of container inspection, Tables II and II-A.
42.111 Sampling plans for reduced condition of container inspection, Tables III and III-A; and limit number for reduced inspection, Table III-B.
42.112 Defects of containers: Tables IV, V, VI, and VII.
42.113 Defects of label, marking, or code: Table VIII.
42.114 Procedures for evaluating interior container defects.

Subpart C—Skip Lot Sampling and Inspection Procedures

42.120 Description and qualifications.
42.121 Sampling and inspection procedures.
42.122 Applicability of other procedures.
42.123 Flow diagram for skip lot sampling and inspection.

Subpart D—On-Line Sampling and Inspection Procedures

42.130 Description and qualifications.
42.131 Selection of samples.
42.132 Determining cumulative sum values.
42.133 Portion of production acceptance criteria.
42.134 Disposition of rejected portions of production.
42.135 Normal, tightened or reduced on-line inspection.
42.136 Applicability of other procedures.

Subpart E—Miscellaneous

42.140 Operating Characteristic (OC) curves for on-line sampling and inspection.
42.141 Obtaining Operating Characteristic (OC) curve information for skip lot sampling and inspection.
42.142 Curve for obtaining Operating Characteristic (OC) curve information for skip lot sampling and inspection.
42.143 Operating Characteristic (OC) curves for on-line sampling and inspection.

Subpart A—Definitions

§ 42.101 Meaning of words.

Words used in this part in the singular form shall be considered to import the plural, or vice versa, as the case may demand.

§ 42.102 Definitions, general.

For the purpose of this part, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

Acceptable Quality Level (AQL). The maximum number of defects per hundred units (DHU) which is acceptable as a process average. Lots, or portions of production, having a quality level equal to a specified AQL will be accepted approximately 95 percent of the time when using the sampling plans prescribed for the AQL.

Acceptance Number (Ac). The number in a sampling plan that indicates the maximum number of defects permitted in a sample in order to consider a lot as meeting a specific requirement.

Administrator. The Administrator of the Agricultural Marketing Service.
Basic Inspection Period. A specified period of consecutive production designated for on-line inspection (e.g., one shift’s production, one day’s production, etc.).

Condition. The degree of acceptability of the container with respect to freedom from defects which affect the serviceability, including appearance as well as usability, of the container for its intended purpose.

Cumulative Sum Sampling (CuSum) Plan. An on-line sampling plan that accumulates the number of defects which exceed the subgroup tolerance (“T”) in a series of consecutive subgroups. Terms specified to the CuSum sampling plans are:

(a) Acceptance Limit (“L’’). The maximum accumulation of defects allowed to exceed the subgroup tolerance (“T”) in any subgroup or consecutive subgroups.
(b) CuSum value. The accumulated number of defects that exceed the subgroup tolerance (“T”).
(c) Subgroup tolerance (“T”). The allowable number of defects in any subgroup.
(d) Starting value (“S’’). The initial CuSum value used to begin a CuSum sampling plan.

Defect. Any nonconformance of a container from specified requirements.

Defect classifications. The terms used to denote the severity of a defect. The terms are as follows:

(a) Critical defect. A defect that seriously affects, or is likely to seriously affect, the usability of the container for its intended purpose.
(b) Major defect. A defect that materially affects, or is likely to materially affect, the usability of the container for its intended purpose.
(c) Minor defect. A defect that materially affects the appearance of the container but is not likely to affect the usability of the container for its intended purpose.
(d) Insignificant defect. A flaw in the container that does not materially affect the appearance and does not affect usability of the container for its intended purpose. When performing examinations, insignificant defects shall not be recorded.

Defective. A container which has one or more defects.

Department. The U.S. Department of Agriculture.

Double sampling. A sampling scheme which involves use of two independently drawn but related samples, a first sample and a second sample which is added to the first to form a total sample size. A double sampling plan consists of first and total sample sizes with associated acceptance and rejection criteria. The first sample must be inspected first, and if possible, a decision as to acceptance or rejection of the lot made before a second sample is inspected. When the decision cannot be made on the first sample, a second sample is inspected; the decision to accept or reject is based on the total sample size.

Lot or inspection lot. A collection of filled food containers of the same size, type, and style. The term shall mean “inspection lot,” i.e., a collection of units of product from which a sample is to be drawn and inspected to determine conformance with the applicable acceptance criteria. An inspection lot may differ from a collection of units designated as a lot for other purposes (e.g., production lot, shipping lot, etc.).

On-line sampling. The random selection of samples from a production line.

Origin inspection. An inspection made at any location where the filled containers are examined prior to shipment or transfer to the purchaser.

Primary container. The immediate container in which the product is packaged and which serves to protect, preserve, and maintain the condition of the product. It may be metal, glass, fiber, wood, textile, plastic, paper, or any other suitable type of material and may be supplemented by liners, overwraps, or other protective materials.

For On-line Sampling. The chance that a portion of production with a given level of quality will be accepted. Probability of acceptance is synonymous with “Percent of Production Expected to be Accepted.” The probability of acceptance is normally designated as “Pa.” In on-line sampling
inspection, the probability of acceptance of any portion of production depends on the sample results obtained from the preceding portions. The probability of acceptance values associated with these procedures are the values which would be expected if a large number of samples are to be inspected. For the CuSum plans referenced in this standard, the probability of acceptance at the Acceptable Quality Level (AQL) is approximately 95 percent. The starting value ("S") associated with each CuSum plan helps to make the probability of acceptance of the first portions of production of a basic inspection period as close as possible to 95 percent.

Random sampling. A process of selecting a sample from a lot, or portion of production, whereby each unit in the lot of portion of production, has an equal chance of being chosen.

Rejection number (Re). The number in a sampling plan that indicates the minimum number of defects in a sample that will cause a lot to fail a specific requirement.

Sample. Any number of sample units which are to be used for inspection.

Sample size (n). The number of sample units included in the sample.

Sample unit. The individual container including any component parts.

Sampling plan. Any plan stating the number of sample units to be included in the sample as well as the corresponding plan parameters used to make acceptance and rejection decisions.

Secondary container. The container in which one or more primary containers are packed. For example, a shipping case containing canned product.

Shipping case. The container in which the product or primary containers of the product are placed to protect, preserve, and maintain the condition of the product during transit or storage. The shipping case may include strapping, liners or other protective material.

Single sampling. A sampling scheme where the decision to accept or reject an inspection lot with respect to a specified requirement is made after the inspection of a single sample. A single sampling plan consists of a single sample size with associated acceptance and rejection criteria.

Stationary lot sampling. The process of randomly selecting sample units from a lot whose production has been completed. This type of lot is usually stored in a warehouse or in some other storage facility and is offered in its entirety for inspection.

Subgroup. A group of sample units representing a portion of production.

Total defects. The sum of critical, major, and minor defects.

User. The person or agency at whose request inspection is conducted.

Subpart B—Procedures for Stationary Lot Sampling and Inspection

§ 42.103 Purpose and scope.

(a) This subpart outlines the procedure to be used to establish the condition of containers in stationary lots of packaged foods. This subpart shall be used to determine the acceptability of a lot based on specified acceptable quality levels and defects referenced in §42.104 or any alternative plan which is approved by the Administrator. In addition, any other sampling plan in the tables with a larger first sample size than that indicated by the lot size range may be specified when approved by the Administrator. This subpart or approved alternative plan will be applied when a Government agency or private user of the inspection or grading services requests that filled primary containers or shipping cases, or both, be certified for condition. Unless the request for certification specifically asks that only the primary container or only the shipping case be examined, both containers will be examined.

(b) Unless otherwise specified by the user of service, this subpart will not apply to inspection lots of less than 50 shipping cases or to inspection lots of less than 300 primary containers. When the primary container is the shipping case, the shipping case limit will apply.
When the lot size exceeds either the 50 shipping case limit or the 300 primary container limit or both, the provisions of paragraph (a) of this section will apply.

(c) Under certain conditions, special procedures (Skip Lot Sampling and Inspection) may be used to determine the condition of containers in stationary lots of packaged foods. Subpart C sets forth the requirements and procedures for Skip Lot Sampling and Inspection.

§ 42.104 Sampling plans and defects.

(a) Sampling plans. Sections 42.109 through 42.111 show the number of containers to examine for condition in relation to lot size ranges. The tables provide acceptance (Ac) and rejection (Re) numbers for lot acceptance (or rejection) based on the number, class, and type of defects present in the sample.

(b) Defects. The tables in § 42.112 enumerate and classify defects according to the degree to which the individual defect affects the serviceability, including appearance as well as usability, of the container for its intended purpose. The table in § 42.113 enumerates and classifies the label, marking, or code.

§ 42.105 Basis for selection of sample.

(a) Identification of lot. Selection of proper samples requires sufficient information to identify the lot; such information includes, but is not limited to:

1. The lot size (see § 42.103 for restrictions on small lots);
2. The type and size of container;
3. The code marks or other identification marks and the number of containers represented by each mark;
4. The history of the lot regarding previous inspections; and
5. The inspection status (normal, tightened, or reduced).

(b) Preliminary scanning. Prior to drawing the sample, the lot should be scanned to determine if any segments or portions are abnormal with respect to wet cases, blown cans, top layer rust, leaking bags, etc. If such segments or portions noted are of any consequence, the lot may be rejected for condition of containers without sampling.

(c) Sample size. Determination of the number of containers to check for condition.

1. Refer to the table in §§ 42.109 through 42.111 (sampling plans) and find where the lot size (number of individual containers) fits into the column headed “Lot Size Ranges.”

(i) Tables I-A (normal), II-A (tightened), or III-A (reduced), as applicable, will apply to origin inspections, unless the contractor requests that corresponding single sampling plans be used.

(ii) The appropriate double sampling plans in Table I will apply to other than origin inspections, unless the contractor requests that corresponding single sampling plans be used.

2. Select the appropriate sample size for the corresponding lot size range as indicated in the appropriate column headed “Sample Size.”

3. Lots rejected for unsatisfactory condition of containers may be subsequently sampled after being reconditioned or reworked. Such lots or resulting portion of a lot may be sampled as a reoffered lot providing the reoffered portion is separately identifiable. When making such inspections, the appropriate sampling plan for tightened inspection shall be used. Except in the case of an appeal inspection, it is not permissible to reinspect a previously rejected lot until it has been reconditioned or reworked.

(d) Sample selection. Select samples from the lot presented in accordance with either of the following two procedures as may be applicable. (A lot offered for inspection will be accepted or rejected in its entirety with either sampling procedure used to select the sample.)

1. Proportional random sampling. When the number of codes or other identifying marks within the lot and the approximate number of cases or
containers per code are known, select sample units at random within each mark and in a number proportionate to the number of containers represented by such mark.

(2) *Simple random sampling.* When there are no code or other identifying marks, or when the number of codes or identifying marks within the lot and/or approximate number of cases or containers per mark are not known, select sample units at random from the entire lot.

(e) *Maximum sample units per case.* If the lot is cased, predetermine the number of containers to draw from each sampled case as well as the position within the case. Do not restrict the sampling to the top or bottom layers or to the corners. The best sample is one selected from all the various positions in the shipping case. It is desirable but not mandatory to limit the number of sample units to a single container from any one case. Multiple sample units may be taken from a single case but not in excess of the following plan:

(1) When containers are packed 12 or less to a case, draw a maximum of 6 sample units from any one case; and

(2) When containers are packed more than 12 to a case but not more than 60, draw a maximum of 12 sample units from any one case; and

(3) When containers are packed more than 60 to a case but not more than 250, draw a maximum of 16 sample units from any one case; and

(4) When containers are packed more than 250 in a case, draw a maximum of 24 sample units from any one case.

§ 42.106 Classifying and recording defects.

(a) *Classifying defects.* Examine each sample unit for the applicable type of defects listed in the table covering the container being inspected in §§ 42.112 and 42.113. Other defects, not specifically listed, shall be classified according to their effect on the intended use of the container.

(1) Related defects are defects on a single container that are related to a single cause. If the initial incident causing one of the defects had not occurred, none of the other related defects on the container would be present. As an example of related defects, a can may be a leaker and the exterior may also be seriously rusted due to the leakage of the contents. In this case, the container is scored only once for these two defects since the rust condition can be attributed to the leak. Score the container according to whichever condition is the most serious. In this example, score as a "leaker" (a critical defect) and not as "pitted rust" (a major defect).

(2) Unrelated defects are defects on a single container that result from separate causes. If the incident that caused one of the defects had not occurred, the other unrelated defects on the container would still be present. As an example of unrelated defects, a can may be seriously rusted, may have a bad dent along the seam, and the label may also be detached from the can because of improper gluing. In this case it is unlikely that any of the three defects exist because of a common cause. Therefore, they are considered unrelated defects and should be scored as three defects.

(3) The lot acceptance portion of this procedure is based on the number of defects per 100 containers. It is necessary to determine if the defects on any one container are "related" defects or "unrelated" defects. A container is scored for the most serious of related defects, and is also scored for each unrelated defect.

(b) *Recording defects.* Record on a worksheet the number, type, and class (critical, major, or minor) of defects on each sample unit.

(c) *Totaling defects.* Add the number of defects in each class, then add the number of minor, major, and critical defects to obtain the total defects.

§ 42.107 Lot acceptance criteria.

(a) The acceptability of the lot is determined by relating the number and class of defects enumerated on the
Agricultural Marketing Service, USDA

§ 42.108

worksheet to the acceptance and rejection numbers shown in §§ 42.109 through 42.111 for the respective sample size and Acceptable Quality Level (AQL).

(b) Unless otherwise specified, use the following AQL’s for the respective class of defects:

<table>
<thead>
<tr>
<th>Defect class</th>
<th>AQL at origin inspection</th>
<th>AQL at other than origin inspection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical</td>
<td>0.25</td>
<td>0.25</td>
</tr>
<tr>
<td>Major</td>
<td>1.5</td>
<td>2.5</td>
</tr>
<tr>
<td>Total</td>
<td>6.5</td>
<td>10.0</td>
</tr>
</tbody>
</table>

(c) Refer to the appropriate sample size and AQL and compare the number of defects found in the sample with the acceptance (Ac) and rejection (Re) numbers in the sampling plan.

(1) Accept the lot after examining the single sample or first sample of a double sampling plan when all of the following conditions are met:

(i) The number of critical defects does not exceed the applicable acceptance number (Ac) for critical defects, and

(ii) The number of major defects does not exceed the applicable acceptance number (Ac) for major defects, and

(iii) The total number of critical, major, and minor defects does not exceed the applicable acceptance number (Ac) for total defects.

(2) Reject the lot after examining the single sample or first sample of a double sampling plan when any one or more of the following conditions occur:

(i) The number of critical defects equals or exceeds the applicable rejection number (Re) for critical defects, or

(ii) The number of major defects equals or exceeds the applicable rejection number (Re) for major defects, or

(iii) The total number of critical, major, and minor defects equals or exceeds the applicable rejection number (Re) for total defects.

(3) If the lot can neither be accepted nor rejected on the first sample, when a double sampling plan is used, select and examine the prescribed second sample. Accept the lot if the accumulated defects of the first and second sample meet conditions of paragraph (c)(1) of this section, otherwise, reject the lot.

§ 42.108 Normal, tightened, or reduced inspection.

(a) Normal inspection. Sampling plans for normal inspection are those in Tables I and I-A. These plans shall be used except when the history of inspection permits reduced inspection or requires tightened inspection.

(b) Tightened inspection. Sampling plans for tightened inspection are those in Tables II and II-A.

(c) Reduced inspection. Sampling plans for reduced inspection are those in Tables III and III-A.

(d) Switching rules. The normal inspection procedure shall be followed except when conditions in paragraph (d) (1) or (3) of this section are applicable or unless otherwise specified. Application of the following switching rules will be restricted to the inspection of lots for one applicant at a single location (plant, warehouse, etc.), and will be based upon records of original inspections of lots (excluding resubmitted lots) at that same location.

(1) Normal inspection to reduced inspection. When normal inspection is in effect, reduced inspection shall be instituted providing that reduced inspection is considered desirable by the Administrator and further provided that all of the following conditions are satisfied for each class of defect:

(i) The preceding 10 inspection lots (or more, as indicated by the note to Table III-B) which have been inspected within the preceding 6 months have been on normal inspection and none has been rejected on original inspection; and

(ii) The total number of defects in the samples from the preceding 10 inspection lots (or such other number of lots used for condition in paragraph (d)(1)(i) of this section) is equal to or less than the applicable number given in Table III-B. If a double sampling plan is used, all samples inspected should be included, not “first” samples only; and

191
(2) **Reduced inspection to normal inspection.** When reduced inspection is in effect, normal inspection shall be re-instituted if any of the following occur:

(i) An inspection lot is rejected on original inspection; or

(ii) Production becomes irregular (delayed or accelerated); or

(iii) Other valid conditions warrant that normal inspection shall be re-instituted.

(3) **Normal inspection to tightened inspection.** When normal inspection is in effect, tightened inspection shall be instituted when 2 out of 5 consecutive inspection lots have been rejected on original inspection.

(4) **Tightened inspection to normal inspection.** When tightened inspection is in effect, normal inspection shall be re-instituted when five consecutive inspection lots have been considered acceptable on original inspection.

(e) When the rules require a switch in the inspection status because of one or more classes of defects, all classes of defects shall be inspected under the new inspection criteria. At the option of the user of the service and when approved by the Administrator, such user may elect to remain on normal inspection when qualified for reduced inspection, or on tightened inspection when qualified for normal inspection.

(f) **Appeal inspection.**

(1) **Appeal request.** Any interested party who is not satisfied with the results of a condition inspection on packaged food containers, as stated on an official certificate, may request an appeal inspection.

(2) **How to file an appeal.** A request for an appeal inspection may be made orally or in writing. If made orally, written confirmation may be required. The applicant shall clearly state the reasons for requesting the appeal service and a description of the product to be appealed.

(3) **When an application for an appeal inspection may be refused.** When it appears that:

(i) The reasons given in the request are frivolous or not substantial; or

(ii) the condition of the containers has undergone a material change since the original inspection; or

(iii) the original lot is no longer intact, the applicant’s request for the appeal inspection may be refused. In such case, the applicant shall be promptly notified of the reason(s) for such refusal.

(4) **Who shall perform the appeal.** An appeal inspection shall be performed by a person(s) other than the person who made the inspection being appealed.

(5) **Sampling procedures.** The sampling plan for an appeal inspection shall be the next larger sampling plan from the plan in the table used in the original inspection.

(6) **Appeal certificate.** Immediately after an appeal inspection is completed, an appeal certificate shall be issued to show that the original inspection was sustained or was not sustained. Such certificate shall supersede any previously issued certificate for the inspection involved and shall clearly identify the number and date of the superseded certificate. The issuance of the appeal certificate may be withheld until the previously issued certificate and all copies have been returned when such action is deemed necessary to protect the interest of the Government.

§ 42.114 Procedures for evaluating interior container defects.

(a) Sections 42.101–42.136 provide procedures for determining lot conform-
(d) If a user of the inspection service requests an examination for internal container defects in addition to an official USDA/USDC inspection for product quality and/or U.S. grade, the containers opened by the official inspection service for inspection of product quality and/or U.S. grade will be used for examination of interior container defects. The minimum sample size for evaluation of interior container defects will be 13 containers. As a result, additional containers will be required if the inspection for quality or U.S. grade calls for fewer than 13 containers. Table XIII provides acceptance numbers for internal container defects for selected sample sizes.

Subpart C—Skip Lot Sampling and Inspection Procedures

§ 42.120 Description and qualification.

Skip lot sampling and inspection procedures are special procedures for inspecting stationary lots in which only one-half or one-fourth of the lots offered for inspection are formally inspected. Skip lot sampling and inspection procedures may be instituted only when all of the following conditions are met:

(a) When authorized by the Administrator and acceptable to the user and producer, if different from the user.

(b) When inspection is origin inspection (see § 42.102).

(c) When all lots can be expected to be of essentially the same quality.

(d) When lots from the producer are currently on, or eligible to be on, either normal or reduced inspection.
§ 42.121 Sampling and inspection procedures.

(a) Following skip lot procedure authorization, inspect every lot consecutively offered for inspection using normal inspection procedures as set forth in Subpart B of this part. When 10 consecutive lots are acceptable, inspect only one-half of the lots offered for inspection using normal inspection procedures. While on the one-half inspection rate, when 10 consecutively inspected lots are acceptable, inspect only one-fourth of the lots offered for inspection using normal inspection procedures. While on the one-half or one-fourth inspection rate, if any formally inspected lot is unacceptable, revert immediately to the inspection of every lot using normal inspection procedures and recommence the above procedure. See § 42.123 for a flow diagram of the skip lot sampling plan.

(b) Two exceptions to the procedures in paragraph (a) of this section are as follows:

(1) The skip lot sampling and inspection rate of one-half can be instituted immediately if the lots from the producer are currently on, or eligible to be on, reduced inspection and all other conditions in § 42.120 are met. After skip lot sampling and inspection begins, however, only normal inspection is permitted.

(2) While inspecting every lot consecutively as offered for inspection, i.e., while not on the one-half or one-fourth sampling and inspection rate, if requirements for switching from normal to tightened inspection are met as specified in § 42.108 then skip lot procedures terminate, tightened inspection is initiated, and stationary lot sampling and inspection procedures in Subpart B are instituted. Skip lot procedures may be instituted again only when all conditions of § 42.120 are met.

(c) All lot selections for the one-half and one-fourth inspection rates must be strictly random (for example, not every other lot or every fourth lot). Use of random number tables, coin flipping, or numbered cards is encouraged.

(d) Preliminary scanning procedures (see § 42.105) shall be used on all lots scheduled for formal inspection and also shall be used on lots not scheduled for inspection ("skipped" lots) whenever the inspector feels such action is prudent to further insure the acceptability of such lots.

§ 42.122 Applicability of other procedures.

Whenever appropriate, the procedures for classifying and recording defects in § 42.106 and for appeal inspections in § 42.108 also apply to skip lot sampling and inspection.
§ 42.123 Flow diagram for skip lot sampling and inspection.

![Flow diagram](image_url)

**Notes:**
1. Only normal inspection is permitted.
2. All lot selections for the one-half and one-fourth sampling rates must be strictly random (for example, not every other lot or every fourth lot).
3. Two exceptions to the procedures shown above are as follows:
   (a) The skip lot sampling and inspection rate of one-half can be instituted immediately if the lots from the producer are currently on, or eligible to be on, reduced inspection and all other conditions in § 42.120 are met. When skip lot inspection begins, however, only normal inspection is permitted.
   (b) While inspecting every lot consecutively as offered for inspection, i.e., while not on the one-half or one-fourth rate, if requirements for switching from normal to tightened inspection are met as specified in § 42.108 then skip lot procedures terminate.

Subpart D—On-Line Sampling and Inspection Procedures

**Authority:** Sec. 203, 205, 60 Stat. 1087, as amended, 1900, as amended (7 U.S.C. 1622, 1624).

**Source:** 45 FR 69428, Oct. 21, 1980, unless otherwise noted. Redesignated at 46 FR 63203, Dec. 31, 1981.
§ 42.130 Description and qualifications.

(a) In many instances, food containers are loaded directly into carriers immediately after final packaging. This situation makes stationary lot sampling and inspection impractical. For such circumstances, the optional procedure for on-line sampling and inspection using cumulative sum sampling plans is provided. On-line sampling and inspection is a procedure in which subgroups of sampling units are selected randomly from predesignated portions of production. The acceptability of the portions of production is determined by inspecting, at the time of the sampling, the subgroups which represent these portions. On-line sampling and inspection contrasts with stationary lot procedures in which sample units are selected randomly and inspected and lot acceptability determinations are made only after lot production is completed.

(b) On-line sampling and inspection procedures may be instituted only when all of the following conditions are met:

(1) When authorized by the Administrator and acceptable to the user and producer, if different from the user.
(2) When inspection is origin inspection (see § 42.102).
(3) When previous production lots from the producer are currently on, or eligible to be on, either normal or reduced inspection. (When shifting from stationary lot sampling and inspection to on-line sampling and inspection, normal on-line inspection shall be initially used.)
(4) When inspection of the containers is performed at a point after which all condition of container related characteristics are fixed and will not be subject to change during final handling.

§ 42.131 Selection of samples.

(a) Prior to commencement of on-line sampling and inspection, the total amount of production for a given day or shift is predicted and is then subdivided into conveniently designated portions of production approximately equal in size. Portions may be designated by sequential numbers (e.g., containers 1 through 500 are portion 1, containers 501 through 1000 are portion 2, etc.) or by time intervals (e.g., the first half hour of production is portion 1, the second half hour of production is portion 2, etc.) during which the containers are identified by individual production codes for each time interval.

(b) Determine the number of sample units in a subgroup as follows:

<table>
<thead>
<tr>
<th>Type of Inspection and Number of Sample Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal—25</td>
</tr>
</tbody>
</table>

(c) Subgroups are drawn randomly from portions of production throughout the production process and are inspected for defects. The drawing of sampling units may be done in either of two ways: (1) The number of sample units (13, 25 or 50) comprising a subgroup may be drawn at the same time from a randomly chosen point in the production of each portion, or (2) sample units may be drawn individually, but in a random manner, throughout the production of each portion. At least 6 subgroups must be obtained during each basic inspection period regardless of the system used to designate portions of production.

(d) A shift to on-line sampling plans from stationary lot sampling plans (or vice versa) during a basic inspection period is not permitted.

§ 42.132 Determining cumulative sum values.

(a) The parameters for the on-line cumulative sum sampling plans for AQL’s applicable to origin inspection are as follows:

<table>
<thead>
<tr>
<th>Acceptable quality levels</th>
<th>Normal</th>
<th>Tightened</th>
<th>Reduced</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>T</td>
<td>L</td>
<td>S</td>
</tr>
<tr>
<td>0.25</td>
<td>0.05</td>
<td>0.95</td>
<td>0.35</td>
</tr>
<tr>
<td>1.5</td>
<td>0.5</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>6.5</td>
<td>2</td>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>
§ 42.135 Normal, tightened or reduced on-line inspection.

(a) Normal, tightened and reduced on-line sampling plans are specified in § 42.132 (Determining cumulative sum values). Normal plans shall be used except when the history of inspection permits reduced inspection or requires tightened inspection.

(b) Switching rules: Normal on-line inspection procedures shall be followed except when conditions in paragraph (b) (1) or (3) of this section are applicable or unless otherwise specified. Application of the following switching rules will be restricted to the inspection of production for one applicant at a single production location and will be based upon records of original inspections of production (excluding resubmitted portions previously rejected and reworked) at that same location.

(1) Normal inspection to reduced inspection. When normal inspection is in effect, reduced inspection shall be instituted provided that reduced inspection is considered desirable by the Administrator and further provided that all of the following conditions are satisfied for each class of defect:

(i) The preceding 40 consecutive portions of production have been on normal inspection and no more than one of these portions has been rejected on original inspection; and

(ii) The total number of defects in the subgroups (1000 sample units) from these preceding 40 consecutive portions of production is less than or equal to the following limit numbers for the specified AQL’s:

<table>
<thead>
<tr>
<th>Acceptable quality levels</th>
<th>Limit No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.25</td>
<td>0</td>
</tr>
<tr>
<td>1.5</td>
<td>9</td>
</tr>
<tr>
<td>6.5</td>
<td>54</td>
</tr>
</tbody>
</table>

(2) Reduced inspection to normal inspection. When reduced inspection is in effect, normal inspection shall be re-instituted if any of the following occurs:

(i) More than one portion of production in any 40 consecutive portions of production is rejected on original inspection; or

(ii) Production becomes irregular (delayed or accelerated); or

(iii) Other valid conditions warrant that normal inspection shall be re-instituted.

(3) Normal inspection to tightened inspection. When normal inspection is in
effect, tightened inspection shall be instituted when two out of five consecutive portions of production have been rejected.

(4) **Tightened inspection to normal inspection.** When tightened inspection is in effect, normal inspection shall be re-instituted when five consecutive portions of production have been considered acceptable.

(c) When the rules require a switch in the inspection status because of one or more classes of defects, all classes of defects shall be inspected under the new inspection criteria. At the option of the user of the service, and when approved by the Administrator, such user may elect to remain on normal inspection when qualified for reduced inspection, or on tightened inspection when qualified for normal inspection.

§ 42.136 Applicability of other procedures.

When appropriate, the procedures for classifying and recording defects in §42.106 and for appeal inspections in §42.108 also apply to on-line sampling and inspection.

Subpart E—Miscellaneous

**AUTHORITY:** Agricultural Marketing Act of 1946, as amended (7 U.S.C. 1621 et seq.).

§ 42.140 Operating Characteristic (OC) curves for on-line sampling and inspection.

(a) This section contains the Operating Characteristic (OC) curve for each of the sampling plans given in Tables I, I-A, II, II-A, III, and III-A. The OC curve and the corresponding sampling plans are listed by AQL.

(b) Different acceptance and rejection criteria are provided for each AQL. The criteria for each AQL must be obtained from the applicable sampling plan tables.

(c) The curves show the ability of the various sampling plans to distinguish between good and bad lots. This can be illustrated by examining OC curve 6 for an AQL of 0.25 defects per hundred units in the Reduced and Normal Inspection Plans. If the quality of the lots submitted for inspection is poorer than the AQL of 0.25 defects per hundred units, fewer lots will be accepted. For example, OC curve 6 shows that when the quality of lots submitted for inspection is 1.0 defects per hundred units, only 26 percent of the lots are expected to be accepted. Conversely when the quality of the lots submitted for inspection is better than the AQL of 0.25 defects per hundred units, most lots are expected to be accepted. For example, the same OC curve 6 shows that when the quality of lots submitted for inspection is 0.10 defects per hundred units, about 99 percent of the lots are expected to be accepted.

(d) The table of sampling plans that correspond to OC curve 6 can be found over the curves for an AQL of 0.25 defects per hundred units in the Reduced and Normal Inspection Plan. An examination of this table reveals that there is one single and one double sampling plan that have OC curves comparable to OC curve 6. The first plan listed is a single plan requiring the inspection of 500 individual containers. Under this plan the lot is accepted as meeting the requirements for an AQL of 0.25 if there are 3 or less defects in the sample or rejected if there are 4 or more defects in the sample. The other double sampling plans operate in a similar manner with the only differences being the sample sizes and acceptance and rejection numbers.

(e) The next plan that is listed in the column headed 6 for an AQL of 0.25 is a double sampling plan that requires the initial inspection of 228 individual containers. The lot will be accepted as meeting the requirements of an AQL of 0.25 if there are no defects in the sample, and rejected if there are 3 or more defects in the sample. In the event that the number of defects is between the acceptance (0) and rejection (3) numbers, additional containers must be inspected. In this case, the table indicates that a total of 516 containers must be inspected before a decision can be made to either accept or reject the lot. This will require the inspection of 288 more containers (516 - 228 = 288).

If there are 3 or less defects in the total sample, the lot will be accepted. If there are 4 or more defects in the total sample, the lot will be rejected. The other double sampling plans operate in a similar manner with the only differences being the sample sizes and acceptance and rejection numbers.

§ 42.141 Obtaining Operating Characteristic (OC) curve information for skip lot sampling and inspection.

The Operating Characteristic (OC) curve information (probability of acceptance) for skip lot sampling and inspection procedures described in §42.121 is easily obtained from the single curve in §42.142. The procedure for using the curve in §42.142 is as follows:

(a) Select any sampling plan for normal condition of container inspection from Table I or Table I-A of §42.109.

(b) For a given Quality of Submitted Lots, 100\(p\), find the Percent of Lots Expected to be Accepted, Pa from the respective OC curve in §42.140.

(c) Refer to §42.142 with this Percent of Lots Expected to be Accepted, Pa, and read the new Percent of Lots Expected to be Accepted, Pas, which results when using these skip lot procedures.

For example, let’s assume the lot size is 6,001 to 12,000 containers, and we use the single sampling plan of size 168 for normal inspection (Table I of §42.109) along with an AQL for total defects of 6.5. The OC curve for this sampling plan is curve N and R3. Also, assume that the quality of the lot is 6.5 defects per hundred units. From curve N and R3, then, the Pa is determined to be 95 percent. Then refer to the graph in §42.142 and locate Pa of 95 percent along the horizontal axis. From this point, proceed vertically to the curve and then horizontally to the left to the vertical axis. From this point on the vertical axis, Pas is determined to be approximately 98\(^{1}\) percent for skip lot sampling and inspection.

\(^{1}\)This slight increase of Pas over Pa results because all the lots offered for inspection are no longer being inspected. Some lots are being “skipped”, and thereby accepted, which would have been rejected if inspected. The largest increase in Pa which will occur using skip lot sampling is approximately 4 percent. It is for this reason that skip lot sampling procedures are applied only in instances where past production quality has been consistently high—as evidenced by the requirement to have 10 consecutively acceptable lots prior to a reduction in sampling rate—and where all requirements in §42.120 also have been met.
§ 42.142 Curve for obtaining Operating Characteristic (OC) curve information for skip lot sampling and inspection.

NOTES: 1. This curve applies only to the specific skip lot sampling and inspection plan described in § 42.121 and § 42.123.
2. Pa and Pas are essentially equal for values under 50 percent.

§ 42.143 Operating Characteristic (OC) curves for on-line sampling and inspection.

(a) This section contains the Operating Characteristic (OC) curve for each of the on-line cumulative sum sampling plans provided in subpart D. The OC curve and the corresponding cumulative sum sampling plans are listed by AQL.

(b) Different plan parameters used to make acceptance and rejection decisions are provided for each AQL.

(c) The curves show the ability of the various cumulative sum sampling plans to distinguish between good and bad portions of production. The interpretation of these curves for portions of production is similar to the interpretation of the OC curves for stationary lots as illustrated in §42.140(c).

PART 43—STANDARDS FOR SAMPLING PLANS

DEFINITIONS

Sec.
43.101 Meaning of words.
43.102 Definitions.

SAMPLING PLANS

43.103 Purpose and scope.
43.104 Master table of single and double sampling plans.
43.105 Operating characteristics (OC) curves.
43.106 Choosing AQL’s and sampling plans.

DEFINITIONS

§ 43.101 Meaning of words.

Words used in this subpart in the singular form shall be considered to impart the plural, or vice versa, as the case may demand.

§ 43.102 Definitions.

Statistical and inspection or sampling terms and their respective definitions that are used in the sampling plans and operating characteristic curves of which are pertinent to the understanding of inspection by attributes follow:

Acceptable quality level (AQL). The AQL is expressed in terms of percent defective or defects per 100 units. Lots having a quality level equal to a specified AQL will be accepted approximately 95 percent of the time when using the sampling plans prescribed for that AQL.

Acceptance number (Ac). The number in a sampling plan that indicates the maximum number of defectives permitted in a sample in order to consider a lot as meeting a specific requirement.

Acceptance sampling. The art or science that deals with procedures in which decisions to accept or reject lots or processes are based on the examination of samples.

Attributes. Refers to the measurement of a given factor noting and recording the presence or absence of some characteristic (attribute) in each of the units in the group under consideration.

Consumer’s risk. The risk a consumer takes that a lot will be accepted by a sampling plan even though the lot does not conform to requirements. In the standards of this subpart this risk is nominally set at ten percent.

Consumer protection. The ability of a sampling plan to reject unacceptable supplies. This is measured as the complement of the probability of acceptance (Pa) for the Limited Quality (LQ) lots. The consumer protection is 90 percent in these standards.

Defect. A failure to meet a requirement imposed on a unit with respect to a single quality characteristic. A unit may contain more than one defect.

Defective. A defective unit; one containing one or more defects with respect to the quality characteristic(s) under consideration.

Inspection. The examination (including testing) of supplies (including, when appropriate, raw materials, components and intermediate assemblies).

(a) Acceptance inspection. An inspection to determine conformance of supplies to specified requirements in order to accept or reject the supplies.

(b) Estimation inspection. In dealing with attributes, an inspection to determine the amount of the supplies conforming to a specified requirement—usually expressed as a percentage.

Inspection by attributes. Inspection whereby either the sample unit is classified as defective or non-defective with respect to a requirement or set of requirements (when on a “defective” basis); or, inspection whereby the number of defects in each sample unit is counted with respect to a requirement or set of requirements (when on a “defect” basis).

Limiting quality (LQ). The LQ is expressed in terms of percent defective or defects per 100 units. Lots inspected under the standards of this subpart that have a ten percent probability of acceptance are referred to as a lot having a quality level equal to LQ.

Lot. A collection of units of the same size, type and style which has been
manufactured or processed under essentially the same conditions. The term shall mean “inspection lot,” i.e., a collection of units of product from which a sample is to be drawn and inspected to determine conformance with the acceptability criteria. An inspection lot may differ from a collection of units designated as a lot for other purposes (e.g., production lot, shipping lot, etc.).

Lot size. The number of units in the lot.

Operating characteristic curve (OC curve). A curve that gives the probability of acceptance as a function of a specific lot quality level.

Probability of acceptance (Pa). For a given sampling plan and a given quality of inspection lots, is that percentage of inspection lots expected to be accepted.

Process capability. Performance of a process under normal operating conditions. The performance is measured with respect to specific characteristics.

Producer's risk. The risk that a producer takes that a lot will be rejected by a sampling plan even though the lot conforms to requirements. In the standards of this subpart this risk is nominally set at five percent.

Random sampling. A process of selecting a sample from a lot whereby each unit in the lot has an equal chance of being chosen. Ordinary haphazard choice is generally insufficient to guarantee randomness. Devices such as tables of random numbers are used to remove subjective biases inherent in personal choice.

Rejection number (Re). The number in a sampling plan that indicates the minimum number of defects or defectives permitted in a sample that will cause a lot to fail a specific requirement.

Sample. Any number of sample units which are to be used for inspection.

Sample size. The number of sample units which are to be included in the sample.

Sample unit. A container, the entire contents of a container, a portion of the contents of a container, a composite mixture of a product, or any other unit of container or commodity to be used for inspection.

Sampling. The act of drawing or selecting sample units from a given lot.

Sampling plan. A specific plan which states the sample size(s), acceptance number(s) and rejection number(s). In the standards of this subpart two types of sampling plans are provided:

(a) Single sampling plan. A sampling inspection scheme in which a decision to accept or reject an inspection lot is based on the inspection of a single sample. A single sampling plan consists of a single sample size with associated acceptance and rejection number(s).

(b) Double sampling plan. A sampling inspection scheme which involves use of two independently drawn but related samples, a first sample (n1) and a second sample which is added to the first to form a total sample size (nt). A double sampling plan consists of a first and total sample size with associated acceptance and rejection number(s). Inspection of the first sample leads to a decision to accept, to reject, or to take a second sample and the examination of a second sample, when required, always leads to a decision to accept or reject.

SAMPLING PLANS

§ 43.103 Purpose and scope.

(a) This subpart contains selected single and double sampling plans for inspection by attributes. They are to serve as a source of plans for developing sound specifications, standards, or sampling and inspection procedures.

(b) The sampling plans of this subpart and corresponding operating characteristic curves are indexed by acceptable quality level, AQL. The AQL's expressed in percent defectives or defects per hundred units are:

<table>
<thead>
<tr>
<th>AQL</th>
<th>Acceptance Number (Ac)</th>
<th>Rejection Number (Re)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.065</td>
<td>0.40 ..........</td>
<td>2.5</td>
</tr>
<tr>
<td>0.10</td>
<td>0.65 ..........</td>
<td>4.0</td>
</tr>
<tr>
<td>0.15</td>
<td>1.0 ...........</td>
<td>5.0</td>
</tr>
<tr>
<td>0.25</td>
<td>1.5 ...........</td>
<td>6.5</td>
</tr>
</tbody>
</table>

§ 43.104 Master table of single and double sampling plans.

(a) In the master table, a sampling plan is selected by first determining the sample size or sizes and AQL to be used. Then find the applicable acceptance (Ac) and rejection (Re) numbers at the intersection of the sample size(s) row and AQL column. These numbers together with the sample size or sizes constitute a sampling plan.
§ 43.105 Operating characteristics (OC) curves.

The OC curves show the ability of the various sampling plans, presented for each AQL, to distinguish between lots of different quality.

§ 43.106 Choosing AQL’s and sampling plans.

(a) The selection of AQL’s and sampling plans for given lot sizes depends on too many factors to permit the issuance of a “pre-selected” standard set of plans for specified lot sizes. Each user of the standards of this subpart should select AQL’s and sampling plans that are tailored to best meet his needs.

(b) Some of the factors that must be considered prior to selecting the AQL’s are:

(1) Class of defects such as major and minor: Major defects would generally require lower AQL’s than those for minor defects;

(2) Process capabilities under good commercial practice with respect to the defects in question: For example, if under normal production processes, the defect level cannot be kept below 2.0 percent defective, the selection of an AQL of 0.15 percent defective, although desirable for the defects in question, may not be practical;

(3) Consumer preferences: These may require higher AQL’s or permit lower AQL’s than process capabilities would indicate; and

(4) Time and cost required to sample and inspect a lot under various AQL’s: The smaller the AQL the more time and cost of inspection.

(c) Some of the factors that may be considered prior to selecting the sampling plans for given lot sizes are:

(1) The applicable AQL(s): The AQL dictates, among other things, the smallest sample size that can be used and the size of the “jumps” from one sample size to the next larger one;

(2) The relative ability of the plans to discriminate between “good” and “bad” lots: Although several plans in these standards have the same AQL, they differ in their ability to reject lots worse than the AQL’s. The OC curve in the standards of this subpart provide the basis for determining the discriminating ability of each plan;

(3) The amount, time, and cost of sampling required;

(4) The size and value of the lots relative to the producer and consumer protection a sampling plan affords: One may be willing to take larger risks of passing “bad” lots that are small or of lesser value than they would for larger more valuable lots;

(5) The knowledge about the lot(s) to be submitted for inspection: Lots consisting of product produced under essentially the same conditions may require smaller sample sizes than those consisting of product produced by different shifts and different raw stock for example; and

(6) The record of the quality level of previously submitted lots: The sample size can be smaller for lots submitted from a supplier with a consistent record of quality levels significantly better than the specified AQL(s) than sample sizes for the supplier whose records show considerable variability in quality, “borderline” supplies or product worse than the AQL.
