

the CervidTB Stat-Pak® test must be classified as suspects, and supplemental tests must be applied.

(3) If the herd is not identified as the source herd, the herd will be released from quarantine if the herd is given a whole herd test and is found negative for tuberculosis. The herd will then return to the herd classification status in effect before the herd was quarantined.

(g) *Newly assembled herds.* (1) A newly assembled herd will be classified as having the herd status of the herd from which the captive cervids originated. If the herd is assembled from captive cervids from more than one herd, it will be classified as having the herd status of the originating herd with the lowest status. A newly assembled herd will also assume the testing schedule of the herd status it is given. Captive cervids in the herd must have no exposure to captive cervids from a herd of lesser status than the herd of origin determining the status of the newly assembled herd or to any tuberculous livestock.

(2) A herd newly assembled on premises where a tuberculous herd has been depopulated must be given two consecutive annual whole herd tests. The first test must be administered at least 6 months after the assembly of the new herd. If the whole herd tests are not conducted within the indicated time-frame, the herd will be quarantined. If the herd tests negative to the two whole herd tests, there are no further requirements. If any captive cervid in the herd responds on one of the whole herd tests, the herd will be subject to the provisions of paragraph (a) or (b) of this section. If the premises has been vacant for more than 1 year preceding the assembly of the new herd on the premises, these requirements may be waived if the risk of tuberculosis transmission to the newly assembled herd is deemed negligible by cooperating State and Federal animal health officials.

[65 FR 63517, Oct. 23, 2000, as amended at 71 FR 24806, Apr. 27, 2006; 78 FR 1723, Jan. 9, 2013]

**§ 77.40 Procedures for and interstate movement to necropsy and slaughter.**

(a) *Procedures for necropsy and slaughter.* (1) A necropsy must be performed

by or under the supervision of a veterinarian who is employed by USDA or employed by the State in which the captive cervid was classified, and who is trained in tuberculosis necropsy procedures.

(2) If, upon necropsy, a captive cervid is found without evidence of *M. bovis* infection by histopathology and culture, the captive cervid will be considered negative for tuberculosis.

(3) Reactors, suspects, and exposed captive cervids may be slaughtered only at a recognized slaughtering establishment, as defined in § 77.20.

(b) *Interstate movement to necropsy or slaughter—(1) Permit.* Any reactor, suspect, or exposed captive cervid to be moved interstate to necropsy or slaughter must be accompanied by a permit issued by a representative of APHIS, a State representative, or an accredited veterinarian. The captive cervid must remain on the premises where it was identified as a reactor, suspect, or exposed captive cervid until a permit for its movement is obtained. No stopover or diversion from the destination listed on the permit is allowed. If a change in destination becomes necessary, a new permit must be obtained from a cooperating State or Federal animal health official or an accredited veterinarian before the interstate movement begins. The permit must list:

- (i) The classification of the captive cervid (reactor, suspect, or exposed);
- (ii) The reactor eartag number or, for suspects and exposed captive cervids, the official eartag or other approved identification number;
- (iii) The owner's name and address;
- (iv) The origin and destination of the captive cervids;
- (v) The number of captive cervids covered by the permit; and
- (vi) The purpose of the movement.

(2) *Identification of reactors.* Reactors must be tagged with an official eartag attached to the left ear and bearing a serial number and the inscription "U.S. Reactor," and either:

- (i) Branded with the letter "T" high on the left hip near the tailhead and at least 5 by 5 centimeters (2 by 2 inches) in size; or
- (ii) Permanently identified by the letters "TB" tattooed legibly in the

left ear, sprayed on the left ear with yellow paint, and either accompanied directly to necropsy or slaughter by an APHIS or State representative or moved directly to necropsy or slaughter in a vehicle closed with official seals. Such official seals must be applied and removed by an APHIS representative, State representative, accredited veterinarian, or an individual authorized for this purpose by an APHIS representative.

(3) *Identification of exposed captive cervids.* Exposed captive cervids must be identified by an official eartag or other approved identification and either:

(i) Branded with the letter “S” high on the left hip near the tailhead and at least 5 by 5 centimeters (2 by 2 inches) in size; or

(ii) Either accompanied directly to necropsy or slaughter by an APHIS or State representative or moved directly to necropsy or slaughter in a vehicle closed with official seals. Such official seals must be applied and removed by an APHIS representative, State representative, accredited veterinarian, or an individual authorized for this purpose by an APHIS representative.

[65 FR 63517, Oct. 23, 2000, as amended at 78 FR 2068, Jan. 9, 2013]

**§ 77.41 Cleaning and disinfection of premises, conveyances, and materials.**

All conveyances and associated equipment, premises, and structures that are used for receiving, holding, shipping, loading, unloading, and delivering captive cervids in connection with their interstate movement and that are determined by cooperating State and Federal animal health officials to be contaminated because of occupation or use by tuberculous or reactor livestock must be cleaned and disinfected under the supervision of the cooperating State or Federal animal health officials. Such cleaning and disinfecting must be done in accordance with the procedures approved by the cooperating State or Federal animal health officials. Cleaning and disinfection must be completed before the premises, conveyances, or materials may again be used to convey, hold, or

in any way come in contact with any livestock.

**PART 78—BRUCELLOSIS**

**Subpart A—General Provisions**

Sec.

- 78.1 Definitions.
- 78.2 Handling of certificates, permits, and “S” brand permits for interstate movement of animals.
- 78.3 Handling in transit of cattle and bison moved interstate.
- 78.4 [Reserved]

**Subpart B—Restrictions on Interstate Movement of Cattle Because of Brucellosis**

- 78.5 General restrictions.
- 78.6 Steers and spayed heifers.
- 78.7 Brucellosis reactor cattle.
- 78.8 Brucellosis exposed cattle.
- 78.9 Cattle from herds not known to be affected.
- 78.10 Official vaccination of cattle moving into and out of Class B and Class C States or areas.
- 78.11 Cattle moved to a specifically approved stockyard not in accordance with this part.
- 78.12 Cattle from quarantined areas.
- 78.13 Other movements.
- 78.14 Rodeo cattle.
- 78.15–78.19 [Reserved]

**Subpart C—Restrictions on Interstate Movement of Bison Because of Brucellosis**

- 78.20 General restrictions.
- 78.21 Bison steers and spayed heifers.
- 78.22 Brucellosis reactor bison.
- 78.23 Brucellosis exposed bison.
- 78.24 Bison from herds not known to be affected.
- 78.25 Other movements.
- 78.26–78.29 [Reserved]

**Subpart D—Restrictions on Interstate Movement of Swine Because of Brucellosis**

- 78.30 General restrictions.
- 78.31 Brucellosis reactor swine.
- 78.32 Brucellosis exposed swine.
- 78.33 Sows and boars.
- 78.34 Other movements.
- 78.35–78.39 [Reserved]

**Subpart E—Designation of Brucellosis Areas**

- 78.40 Designation of States/areas.
- 78.41 State/area classification.
- 78.42 Quarantined areas.
- 78.43 Validated brucellosis-free States.
