

three small water systems in the region which are currently operating out of compliance with the EPA's Surface Water Treatment Rule. Others are nearing non-compliance, and one has been issued an administrative rule by the Montana Department of Environmental Quality to begin water treatment as soon as possible.

This bill helps us to realize that simply maintaining a small town or district's water system can be so expensive and filled with red tape that its users can hardly afford it. Under current law even if small systems are able to be developed, they must be continually monitored and the results reported. That may not be a problem in a larger community with a sizeable tax base and a labor pool, but in a rural setting those expenses and responsibilities are spread between so few people that it can quickly become a major problem. I know rural Montana. I can tell you our very smallest towns are hurting. They are deeply affected by a lagging agricultural economy, and the inability to provide water for any number of reasons could be enough to shut a small town down. Is that what we want? I don't think so. One of the ways we can address that problem is with the development of regional water systems, which are more efficient, and easier to manage.

I truly believe it is time to stand up and face our commitments to Indian Country and rural America head on. This bill is the perfect opportunity for that, because it uses the teamwork of committed citizens and builds on the system they have developed. This is a very good example of cooperation between tribal and non-tribal entities, and of what happens when people come to the table ready to find a solution.

This project has been a long time coming. The State of Montana committed to it in 1997 with a promise of \$10 million for construction, and by providing technical assistance through the Montana Department of Environmental Quality. Initial federal assistance followed in the form of an appropriation of \$300,000 for engineering and planning for fiscal year 2000. The report was completed and the preliminary engineering is complete. With the passage of the water compact settling the water rights between the Chippewa Cree Tribe and Montana, P.L. 106-163 signed by President Clinton in 1999, the stage was set for this project to be built.

All the bases have been covered and it is time to authorize this project. There is a real need for a less burdensome way to manage the water needs of the area. The Rocky Boy's Reservation is in need of an expanded water source and system, and smaller water districts and municipalities are also struggling to stay in operation. The best way to solve both these problems at once is to build an efficient regional water system. I propose we do just that and show our commitment to rural America.
