

for 1 minute and to revise and extend his remarks.)

Mr. HAYWORTH. Mr. Speaker, if we could harness some of the wind power this morning, we could solve our energy problem. If we could take the blame game and convert it to Btus, we would have energy to last for a long time.

Mr. Speaker, we ought to bring in a lot of different people and put them under oath in front of the Committee on Resources, in front of our various oversight committees, and get the answer. I do not countenance any misconduct by anyone, but I will tell you what is interesting: when the Governor of California had a chance to put emergency generators online, he said, Oh, no. If those folks are not going to be union employees, I do not want to see those generators.

When the Governor of California had a chance to work out these problems, he took \$1 million from the same utility companies my friend from Oregon rails against. When the Governor of California had a chance to step forward and solve this problem, he went on Jay Leno. What is next, a Letterman appearance with stupid gubernatorial tricks?

We have got real problems. Let us solve the problem. We can all yell and scream.

TIME TO SIGN ENERGY DISCHARGE PETITION

(Mr. McDERMOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McDERMOTT. Mr. Speaker, the last speaker certainly makes a good case for wind power.

There is an opportunity today for Members to sign the discharge petition to return this country to cost-based power, not power determined by gougers in the energy industry. We have seen on the west coast 400 percent profit for Texas companies selling energy. Now, 400 percent profit is a little bit over the top. Most of us who believe in the free enterprise system think that maybe 10 or 20 percent is not too bad. But they want unlimited ability.

Mr. Speaker, the oil dynasty of Cheney and Bush and Evans have selected the people to run the Federal Energy Regulatory Commission. Whenever you hear anybody say FERC, they are talking about people appointed by the Bush people to control and allow the industry to actually not control the energy industry.

Now, you would say it is a west coast problem, that it is always Democrats. New York is doing it now, and they are fearful of what it is going to be without cost-based power. It is time to sign the discharge petition.

CONTROLLING THE ENERGY CRISIS

(Mr. GIBBONS asked and was given permission to address the House for 1

minute and to revise and extend his remarks.)

Mr. GIBBONS. Mr. Speaker, no one doubts and no one questions that we need a balanced, comprehensive responsible energy policy in this Nation. By importing nearly 60 percent of our domestic oil from foreign countries, we are leaving our Nation's security vulnerable to the whims of these importing countries.

We must increase the supply of domestic energy and promote conservation as a form of safe and reliable power, while at the same time promoting a clean and healthy environment.

Along with conservation efforts, technological advancements will allow us to meet our energy needs for decades, even centuries to come. New technologies, like gasoline-electric hybrid cars, clean coal, hydrogen fuel, second-generation geothermal, and other such innovations will allow us to avoid problems like those in California, while ensuring a clean environment as our legacy for our children.

Mr. Speaker, California's fast-paced society is not capable of supporting itself through energy shortages and rolling blackouts. Neither is the rest of the country. However, since Governor Gray Davis has been showing more interest in his political consultants rather than his constituents, the crisis in his homeland has begun spreading like a catastrophe and has put the Nation on the brink of engulfing other States. It is time to take action now.

SUPPORT THE BIPARTISAN PATIENTS' BILL OF RIGHTS

(Mr. BROWN of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of Ohio. Mr. Speaker, let us get down to basics. Some health plans systematically obstruct, delay and deny care. Some health plans provide excuses instead of coverage. The bipartisan Patients' Bill of Rights has enough teeth in it to deter health plans from cheating their enrollees and enough definition in it to protect health plans and employers from frivolous lawsuits.

Yesterday, my Republican colleagues, the gentleman from Kentucky (Mr. FLETCHER), the gentleman from Louisiana (Mr. TAUZIN) and the gentleman from California (Mr. THOMAS), introduced legislation endorsed by President Bush and written by the largest insurance companies in the country. It does not give enrollees the right to sue. The language is drafted so that the right to sue cannot actually be exercised.

The Republican bill is a sham. I ask President Bush to work with us to put insurance interests aside, to put campaign contributions from insurance interests aside, to work with us in the bipartisan Patients' Bill of Rights. That is the bill that protects patients. That

is the bill that restores the patient-physician relationship.

SUPPORT PRESIDENT'S SOUND ENERGY PLAN

(Mr. RYUN of Kansas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RYUN of Kansas. Mr. Speaker, President Bush has outlined what I think is a sound energy policy that is both forward thinking and sensible, but opponents of his plan sound like a broken record, accusing the President of being anti-environment.

The assertion that we must choose between sound energy policy and healthy environment is simply not true. As an example, we need to look no further than the clean air standards set up in the early nineties. Regulations for fuel resulted in refineries using additives that produced clean air, but polluted the groundwater. That is, until the development of ethanol.

Ethanol is a biofuel that is produced from corn and grain sorghum. It protects our quality of air by reducing tailpipe emissions and greenhouse emissions. And as an added bonus, ethanol can provide help for our economy, especially our American farmers, and not for OPEC. I, for one, would rather depend upon the good graces of a Kansas farmer than foreign oil producers.

Mr. Speaker, I urge my colleagues to support the President's sound energy policy.

REDUCING SUPPLY TO INCREASE PRICES

(Mr. TIERNEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TIERNEY. Mr. Speaker, people this morning have been talking about the energy situation, and I think it is important to talk calmly for a moment about some of the things that have been happening.

I happen to be a member of the Subcommittee on Energy of the Committee on Government Reform, and we have had hearings with the American Petroleum Institute and others from the industry testifying before us. Also, Senator WYDEN in the Senate has taken testimony on this matter.

It is important for the American people to know that there is strong evidence that the industry acted to make sure that they reduced supply so that they could raise costs. Senator WYDEN had thick documents, which I have just put on record in our committee hearing, showing over the last decade of the nineties there was too much refinery backlog for the companies, so they acted, or at least indicated they were going to act, to make sure that those refineries shrunk. Over 50 of them have closed.

Therefore, we did not have the kind of supply that we needed; and of

course, that drove up demand and drove up price. Now that that is up there, the companies will tell you the reason we do not have enough fuel at reasonable prices is because we do not have enough refineries.

Now they are looking for the triple play. Instead of producing more and getting that in the pipeline and having more refineries, they now want to do away with environmental regulations. This is not something we should allow to happen. We should keep our eye on that industry and make sure we get something done for the consumer.

CALIFORNIA ENERGY CRISIS

(Mr. HERGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HERGER. Mr. Speaker, we have an energy crisis. Eight years of Clinton-Gore no-growth energy and Federal environmental policies have left us facing frequent shortages.

In my home State of California, the population has grown by 4 million people over 10 years. The economy has doubled in half that time. Sadly, the radical environmentalists have prevented the construction of new power plants.

The equation is simple: more people and no power plants equal blackouts. Rather than place blame, President Bush has proposed a responsible solution that seeks to address our dire situation, increase supply while offering incentives to reduce demand.

While California is already the most energy efficient State in the country, the President's comprehensive policy will promote new power plant construction. It is not necessarily political, but it recognizes that there are no quick fixes to the years of policies that forced us deep into the dark.

SUPPORT BIPARTISAN PATIENT PROTECTION ACT

(Ms. DELAURO asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. DELAURO. Mr. Speaker, Americans need a Patients' Bill of Rights. Every single day we hear stories of patients whose health has been seriously jeopardized because their health plan has denied coverage. Each day 35,000 patients experience a delay in needed care and 7,000 patients per day are denied referral to a medical specialist.

Doctors are unable to make the best medical decisions for their patients because their hands are tied by the insurance companies. What we need to do is to return those medical decisions back to doctors and patients and out of the hands of insurance companies. We need a Patients' Bill of Rights that grants access to specialists, allows patients to choose their own doctors, lifts physician gags that prohibit doctors from talking about medical options, allows

for access to emergency rooms, and, yes, holds HMOs accountable for negligent actions.

These patient protections are long overdue. The Republican leadership has watered down meaningful bipartisan legislation to protect another special interest, the managed care organizations. They want to give HMOs special protection from lawsuits, while weakening patients' ability to hold health plans accountable.

Vote for Dingell-Norwood. Support the bipartisan Patient Protection Act. In the long run, it will help the American people.

BECOMING ENERGY SELF-RELIANT

(Mr. REHBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REHBERG. Mr. Speaker, let us put all the political posturing and gamesmanship aside and be honest: the major causes of high energy prices this summer will be the lack of domestic energy production and the absence of new investments in the electricity generation facilities needed to meet the growth experienced over the last decade.

That is why becoming more energy self-reliant is so important. If we want an uninterrupted supply of energy, then we need more American oil, American gas, and clean coal. In Montana alone, we have several hundred years' worth of natural gas and coal deposits. Current estimates place coal resources for eastern Montana at about 50 billion tons, two-thirds of which is low-sulfur, clean-burning coal.

In developing these resources, it is important that we keep in mind that America has some of the highest environmental standards and most advanced technology in the world. Our strict laws do a good job of ensuring our environment is protected.

The bottom line is this: relying upon our own energy resources is cleaner and safer than importing energy from countries with inferior technology and scant environmental oversight.

SUPPORT A REAL PATIENTS' BILL OF RIGHTS

(Ms. CARSON of Indiana asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. CARSON of Indiana. Mr. Speaker, as many of you know, when I was elected to the United States Congress, prior to being sworn in, I had to walk into a hospital in Indianapolis, Indiana, and announce that I believed I was on the verge of a heart attack. Because I was an elected Member of Congress, I did not have to get permission from anybody to get the best medical services that Indianapolis, Indiana, had to offer. That is why I stand before you today on behalf of all of the people who seek the services from HMOs who do

not happen to be a Member of the United States Congress.

The President of the United States claims credit for the HMO reform bill that passed in Texas when he was Governor. You would think that a person who claims credit for an issue would work hard to put it into practice at his new job.

It is not right for the HMOs to take money from people they are supposed to serve and then deny them the service when those same people need help.

We need to pass the Patients' Bill of Rights bill that would hold health plans accountable when they harm a patient, protect patients from paying out of pocket for emergency room services, provide an independent appeal process, and guarantee that treatment decisions are based on medical, and not financial, concerns. Those were included in the Texas law.

The President needs to stop trying to negotiate away from his own law, and support the same bill he said he supported in Texas, the Dingell-Ganske-Norwood Patients' Bill of Rights.

A BALANCED APPROACH TO ENERGY

(Mrs. WILSON asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. WILSON. Mr. Speaker, it costs \$1.60 cents a gallon when I filled up my tank on the corner of Alameda and 4th Street this weekend. Anybody in this country that pays a utility bill or put gas in the tank within the last month knows we have an energy crunch in this country. It is worse in the West, but it affects everybody.

I think everybody, most everybody, knows that Band-aids are not answers, and there are not any quick fixes that are going to solve the problems of energy in this country. We need a balanced, long-term approach, no Band-aids, no quick fixes, to give us stability in our energy markets.

I think it is too important to do anything but the right thing. That is going to require all of us to work together to do the right thing. We need to start with conservation. We made tremendous progress in this country with conservation in the last 20 years; and we are not going back, and nobody wants to. But we also have to increase the supplies of energy in this country, responsibly explore for energy in nonpark land, and give ourselves a mix of supply. It is only the balanced approach that will give us the energy that we need.

BAN DRILLING FOR OIL AND GAS UNDER GREAT LAKES

(Mr. STUPAK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STUPAK. Mr. Speaker, I rise today to remind my colleagues that
